

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

DR. WM. SMITH'S CLASSICAL & LATIN DICTIONARIES.

CLASSICAL DICTIONARIES.

A DICTIONARY OF GREEK AND ROMAN ANTIQUITIES. By Various Writers. With 500 Illustrations. (1,300 pp.) Medium 8vo. 28s.

This Work comprehends all the topics of Antiquities, including the Laws, Institutions, and domestic usages of the Greeks and Romans; Painting, Sculpture, Music, the Drama, &c.

A SMALLER DICTIONARY OF ANTIQUITIES FOR JUNIOR CLASSES. Abridged from the above Work. 9th Edition. With 200 Woodcuts. Crown 8vo. 7s. 6d.

A DICTIONARY OF GREEK AND ROMAN BIOGRAPHY AND MYTHOLOGY. By Various Writers. With 564 Illustrations. (3,720 pp.) 3 vols. Medium 8vo. £4. 4s.

This Work contains a history of the Ancient World, civil, literary, and ecclesiastical from the earliest times to the downfall of the Roman Empire.

A DICTIONARY OF GREEK AND ROMAN GEOGRAPHY. By Various Writers. With 4 Maps and 534 Illustrations. (2,512 pp.) 2 vols. Medium 8vo. £2. 16s.

This Work presents the researches of modern scholars and the discoveries of modern travellers, including an account of the political history of both countries and cities, as well as of their geography.

A CLASSICAL DICTIONARY OF BIOGRAPHY, MYTHOLOGY, AND GEOGRAPHY, FOR THE HIGHER FORMS IN SCHOOLS. Condensed from the above Dictionaries. 14th Edition. With 750 Woodcuts. 8vo. 18s.

A SMALLER CLASSICAL DICTIONARY FOR JUNIOR CLASSES. Abridged from the above Work. 16th Edition. With 200 Woodcuts. Crown 8vo. 7s. 6d.

LATIN DICTIONARIES.

A COMPLETE LATIN-ENGLISH DICTIONARY. With Tables of the Roman Calendar, Measures, Weights, and Money. 16th Edition. (1,250 pp.) Medium 8vo. 21s.

This Work holds an intermediate place between the Thesaurus of Forcellini and the ordinary School Dictionaries, performing the same service for the Latin language as Liddell and Scott's Lexicon has done for the Greek. Great attention has been paid to Etymology.

A SMALLER LATIN-ENGLISH DICTIONARY. With a separate Dictionary of Proper Names, Tables of Roman Monies, &c. For JUNIOR CLASSES. Abridged from the above Work. 24th Edition. Square 12mo. 7s. 6d.

A COPIOUS AND CRITICAL ENGLISH-LATIN DICTIONARY. Compiled from Original Sources. 3rd Edition. Medium 8vo. 21s.

This Work is a more complete and perfect English-Latin Dictionary than yet exists. It has been composed from beginning to end precisely as if there had been no work of the kind in our language, and every article has been the result of original and independent research.

A SMALLER ENGLISH-LATIN DICTIONARY FOR JUNIOR CLASSES. Abridged from the above Work. 9th Edition. Square 12mo. 7s. 6d.

JOHN MURRAY, Albemarle Street.

DR. WM. SMITH'S DICTIONARIES OF THE BIBLE AND CHRISTIAN ANTIQUITIES, AND CHRISTIAN BIOGRAPHY.

I.

A DICTIONARY OF THE BIBLE; its Antiquities, Biography, Geography, and Natural History. By Various Writers. Edited by Wm. SMITH, D.C.L. With Illustrations. 3 vols. Medium 8vo. £5. 5s.

The object of this Work is to elucidate the Antiquities, Biography, Geography, and Natural History of the Old Testament, New Testament, and Apocrypha; and not to explain systems of theology, or discuss points of controversial divinity. It has seemed, however, necessary in a 'Dictionary of the Bible,' to give a full account of the Book, both as a whole and in its separate parts. Accordingly, articles are inserted not only upon the general subject, such as 'Bible,' 'Apocrypha,' and 'Canon,' and upon the chief ancient versions, as 'Septuagint' and 'Vulgate,' but also upon each of the separate books.

A CONCISE BIBLE DICTIONARY. Condensed from the above Work for Families and Students. With Illustrations. Medium 8vo. 21s.

A SMALLER BIBLE DICTIONARY. Abridged from the larger Work for Schools and Young Persons. With Illustrations. Crown 8vo. 7s. 6d.

II.

A DICTIONARY OF CHRISTIAN ANTIQUITIES. The History, Institutions, and Antiquities of the Christian Church. By Various Writers. Edited by Wm. SMITH, D.C.L., and Archdeacon CHURTHAM, D.D. With Illustrations. 2 vols. Medium 8vo. £3. 13s. 6d.

This Work is intended to furnish a complete account of the leading Personages, the Institutions, Art, Social Life, Writings, and Controversies of the Christian Church from the time of the Apostles to the age of Charlemagne. It commences at the period at which the 'Dictionary of the Bible' leaves off, and forms a continuation of it. It ceases at the age of Charlemagne, because (as Gibbon has remarked) the reign of this monarch forms the important link of ancient and modern, of civil and ecclesiastical history. It thus stops short of what we commonly call the Middle Ages.

* * *This Work is also issued in 14 Parts, price 5s. each.*

III.

A DICTIONARY OF CHRISTIAN BIOGRAPHY, LITERATURE, SECTS, AND DOCTRINES. By Various Writers. Edited by Wm. SMITH, D.C.L., and Professor WACH, D.D. (to be completed in 4 vols.) Vols. I. and II. Medium 8vo. 31s. 6d. each.

This Work is designed to give a comprehensive account of the Personal, the Literary, the Dogmatic, and the Ecclesiastical Life of the Church during the first eight centuries of Christianity, and, in combination with the 'Dictionary of Christian Antiquities,' it will afford, it is believed, the most complete collection of materials for the Church History of that period which has yet been published, either in England or abroad.

DR. WM. SMITH'S ANCIENT ATLAS.

AN ATLAS OF ANCIENT GEOGRAPHY, Biblical and Classical. Intended to illustrate the 'Dictionary of the Bible' and the 'Classical Dictionaries.' Compiled under the superintendence of Dr. Wm. SMITH and Mr. GEORGE GROVE. With Descriptive Text, Indices, &c. With 43 Maps. Folio, half-bound, £6. 6s.

'The students of Dr. Smith's admirable Dictionaries must have felt themselves in want of an Atlas constructed on the same scale of precise and minute information with the article they were reading. This want has at length been supplied by the superb work before us. The indices are full, the engraving is exquisite, and the delineation of the natural features very minute and beautiful. It may safely be pronounced—and higher praise can scarcely be bestowed—to be a worthy companion of the volumes which it is intended to illustrate.'—GUARDIAN.

J. Y.	JAMES YATES, M.A., F.R.S.

The Articles which have no initials attached to them are written by the Editor.

PREFACE

TO

THE SECOND EDITION.

It was inevitable that many defects should be found in the first Edition of a work like the Dictionary of Greek and Roman Antiquities, embracing a great variety of subjects, written by different persons, and published periodically. Of these no one was more fully aware than the Editor; and accordingly, when the sale of a very large impression rendered the preparation of a second Edition necessary, he resolved to spare no pains and exertions to render the work still more worthy of the approbation with which it had been already received. The following will be found to be the principal improvements in the present Edition.

1. Many of the most important articles are rewritten. This is especially the case in the earlier portion of the work, since it was originally intended to complete it in a much smaller compass than was afterwards found advisable; and accordingly many subjects in the earlier letters of the alphabet were treated in the first Edition with a brevity which prevented the writers from giving a full and satisfactory explanation of several important points.

2. Many subjects which were entirely omitted in the first Edition are here supplied. Any one who has had experience in the arrangement of a work in alphabetical order will not be surprised that there should be many omissions in the first Edition of such a work. Some idea may be formed of the extensive additions made to the work, when it is stated that, including the articles which have been rewritten, the present Edition contains upwards of three hundred pages of entirely new matter.

3. Those articles which have not been rewritten have been carefully revised, and in many of them errors have been corrected, extraneous matter omitted, and much additional information given. In this part of his labours the Editor has received the most valuable assistance from Mr. George Long, Dr. Schmitz, and Mr. Philip Smith.

4. Additional illustrations have been given by means of new woodcuts, wherever the subjects appeared to require them. Many of these new wood-

cuts are of considerable importance, as the reader may see by referring to the articles *Amphitheatrum*, *Aquaeductus*, *Columna*, *Templum*, and many others.

5. An alteration has been made in the arrangement of the work, which will tend to facilitate its use. In the former Edition there was some inconsistency in the use of Greek, Latin, and English words for the names of articles. In the present Edition the Latin language has been always employed for the heading of the articles, except in those subjects connected with Greek Antiquities where no corresponding words existed in Latin; as, for instance, in legal terms, and in the names of magistrates. In these cases the Greek language has been necessarily employed; but, in compliance with a wish expressed by many persons, the Greek words are given in Latin letters, with the Greek characters subjoined.

In conclusion, the Editor has to express his regret that he is unable in any way to make the additions and alterations in the present Edition available to the purchasers of the former one. He had at one time thought of publishing them in a separate form; but he found, as the work proceeded, that this was quite impossible, on account of their great number and length. In fact, the present Edition must be regarded, to a considerable extent, as a new work.

WILLIAM SMITH.

London, August 1st, 1848.

P R E F A C E

TO

T H E F I R S T E D I T I O N .

THE study of Greek and Roman Antiquities has, in common with all other philological studies, made great progress in Europe within the last fifty years. The earlier writers on the subject, whose works are contained in the collections of Gronovius and Grævius, display little historical criticism, and give no comprehensive view or living idea of the public and private life of the ancients. They were contented, for the most part, with merely collecting facts, and arranging them in some systematic form, and seemed not to have felt the want of any thing more: they wrote about antiquity as if the people had never existed; they did not attempt to realise to their own minds, or to represent to those of others, the living spirit of Greek and Roman civilisation. But by the labours of modern scholars life has been breathed into the study: men are no longer satisfied with isolated facts on separate departments of the subject, but endeavour to form some conception of antiquity as an organic whole, and to trace the relation of one part to another.

There is scarcely a single subject included under the general name of Greek and Roman Antiquities, which has not received elucidation from the writings of the modern scholars of Germany. The history and political relations of the nations of antiquity have been placed in an entirely different light since the publication of Niebuhr's Roman History, which gave a new impulse to the study, and has been succeeded by the works of Böckh, K. O. Müller, Wachsmuth, K. F. Hermann, and other distinguished scholars. The study of the Roman law, which has been unaccountably neglected in this country, has been prosecuted with extraordinary success by the great jurists of Germany, among whom Savigny stands preeminent, and claims our profoundest admiration. The subject of Attic law, though in a scientific point of view one of much less interest and importance than the Roman law, but without a competent knowledge of which it is impossible to understand the Greek orators, has also received much elucidation from the writings of Meier, Schömann, Bunsen, Platner, Hudtwalcker, and others. Nor has the private life of the ancients been neglected. The discovery of Herculaneum and Pompeii has supplied

us with important information on the subject, which has also been discussed with ability by several modern writers, among whom W. A. Becker, of Leipzig, deserves to be particularly mentioned. The study of ancient art likewise, to which our scholars have paid little attention, has been diligently cultivated in Germany from the time of Winckelmann and Lessing, who founded the modern school of criticism in art, to which we are indebted for so many valuable works.

While, however, so much has been done in every department of the subject, no attempt has hitherto been made, either in Germany or in this country, to make the results of modern researches available for the purposes of instruction, by giving them in a single work, adapted for the use of students. At present, correct information on many matters of antiquity can only be obtained by consulting a large number of costly works, which few students can have access to. It was therefore thought that a work on Greek and Roman Antiquities, which should be founded on a careful examination of the original sources, with such aids as could be derived from the best modern writers, and which should bring up the subject, so to speak, to the present state of philological learning, would form a useful acquisition to all persons engaged in the study of antiquity.

It was supposed that this work might fall into the hands of two different classes of readers, and it was therefore considered proper to provide for the probable wants of each, as far as was possible. It has been intended not only for schools, but also for the use of students at universities, and of other persons, who may wish to obtain more extensive information on the subject than an elementary work can supply. Accordingly numerous references have been given, not only to the classical authors, but also to the best modern writers, which will point out the sources of information on each subject, and enable the reader to extend his inquiries further if he wishes. At the same time it must be observed, that it has been impossible to give at the end of each article the whole of the literature which belongs to it. Such a list of works as a full account of the literature would require, would have swelled the work much beyond the limits of a single volume, and it has therefore only been possible to refer to the principal modern authorities. This has been more particularly the case with such articles as treat of the Roman constitution and law, on which the modern writers are almost innumerable.

A work like the present might have been arranged either in a systematic or an alphabetical form. Each plan has its advantages and disadvantages, but many reasons induced the Editor to adopt the latter. Besides the obvious advantage of an alphabetical arrangement in a work of reference like the present, it enabled the Editor to avail himself of the assistance of several scholars who had made certain departments of antiquity their particular study. It is quite impossible that a work which comprehends all the subjects included under Greek and Roman Antiquities can be written satisfactorily by any one individual. As it was therefore absolutely necessary to divide the labour, no other arrangement offered so many facilities for the purpose as that which has been adopted; in addition to which, the form of a Dictionary has the additional advantage of enabling the writer to give a complete account of a subject under one head, which cannot so well be done in a systematic work. An example will illustrate what is meant. A history of the patrician and plebeian orders at Rome can

only be gained from a systematic work by putting together the statements contained in many different parts of the work, while, in a Dictionary, a connected view of their history is given from the earliest to the latest times under the respective words. The same remark will apply to numerous other subjects.

Some subjects have been included in the present work which have not usually been treated of in works on Greek and Roman Antiquities. These subjects have been inserted on account of the important influence which they exercised upon the public and private life of the ancients. Thus, considerable space has been given to the articles on Painting and Statuary, and also to those on the different departments of the Drama. There may seem to be some inconsistency and apparent capriciousness in the admission and rejection of subjects, but it is very difficult to determine at what point to stop in a work of this kind. A Dictionary of Greek and Roman Antiquities, if understood in its most extensive signification, would comprehend an account of every thing relating to antiquity. In its narrower sense, however, the term is confined to an account of the public and private life of the Greeks and Romans, and it is convenient to adhere to this signification of the word, however arbitrary it may be. For this reason several articles have been inserted in the work which some persons may regard as out of place, and others have been omitted which have sometimes been improperly included in writings on Greek and Roman Antiquities. Neither the names of persons and divinities, nor those of places, have been inserted in the present work, as the former will be treated of in the "Dictionary of Greek and Roman Biography and Mythology," and the latter in the "Dictionary of Greek and Roman Geography."

The subjects of the woodcuts have been chosen by the writers of the articles which they illustrate, and the drawings have been made under their superintendence.* Many of these have been taken from originals in the British Museum, and others from the different works which contain representations of works of ancient art, as the Museo Borbonico, Museo Capitolino, Millin's *Peintures de Vases Antiques*, Tischbein's and D'Hancarville's engravings from Sir William Hamilton's *Vases*, and other similar works. Hitherto little use has been made in this country of existing works of art, for the purpose of illustrating antiquity. In many cases, however, the representation of an object gives a far better idea of the purposes for which it was intended, and the way in which it was used; than any explanation in words only can convey. Besides which, some acquaintance with the remains of ancient art is almost essential to a proper perception of the spirit of antiquity, and would tend to refine and elevate the taste, and lead to a just appreciation of works of art in general.

Mr. George Long, who has contributed to this work the articles relating to Roman Law, has sent the Editor the following remarks, which he wishes to make respecting the articles he has written, and which are accordingly subjoined in his own words.

"The writer of the articles marked with the letters G. L. considers some apology necessary in respect of what he has contributed to this work. He has never had the advantage of attending a course of lectures on Roman Law, and he has written these articles in the midst of numerous engagements, which left

* The woodcuts have been executed by Mr. John Jackson.

“ little time for other labour. The want of proper materials also was often felt, and it would have been sufficient to prevent the writer from venturing on such an undertaking, if he had not been able to avail himself of the library of his friend, Mr. William Wright, of Lincoln’s Inn. These circumstances will, perhaps, be some excuse for the errors and imperfections which will be apparent enough to those who are competent judges. It is only those who have formed an adequate conception of the extent and variety of the matter of law in general, and of the Roman Law in particular, who can estimate the difficulty of writing on such a subject in England, and they will allow to him who has attempted it a just measure of indulgence. The writer claims such indulgence from those living writers of whose labours he has availed himself, if any of these articles should ever fall in their way. It will be apparent that these articles have been written mainly with the view of illustrating the classical writers; and that a consideration of the persons for whose use they are intended, and the present state of knowledge of the Roman Law in this country, have been sufficient reasons for the omission of many important matters which would have been useless to most readers and sometimes unintelligible.

“ Though few modern writers have been used, compared with the whole number who might have been used, they are not absolutely few, and many of them to Englishmen are new. Many of them also are the best, and among the best, of the kind. The difficulty of writing these articles was increased by the want of books in the English language; for, though we have many writers on various departments of the Roman Law, of whom two or three have been referred to, they have been seldom used, and with very little profit.”

It would be improper to close these remarks without stating the obligations this work is under to Mr. Long. It was chiefly through his advice and encouragement that the Editor was induced to undertake it, and during its progress he has always been ready to give his counsel whenever it was needed. It is therefore as much a matter of duty as it is of pleasure, to make this public acknowledgment to him.

WILLIAM SMITH.

London, April 2nd, 1842.

DICTIONARY

OF

GREEK AND ROMAN ANTIQUITIES.

ABACUS.

ABACUS (ἄβαξ) denoted primarily a square of any material; and was hence applied in various significations:—

1. Architecture it denoted the flat square which constituted the highest member of a capital being placed immediately under the architrave. The annexed figure is drawn from that in the British Museum, which was taken from the temple at Athens, and is a perfect specimen of the capital of a Doric column.

In the more ornamented orders of architecture, as the Corinthian, the sides of the abacus curved inwards, and a rosette or some other ornament was frequently placed in the middle of the face; but the name Abacus was given to the capital thus diversified and enriched, as well as in its simplest form. (Vitruv. iii. 3, iv. 1. § 7.)

2. A painted panel, coffer, or square compartment in the wall or ceiling of a chamber. (Plin. xxxiii. 56, xxxv. 1, 13; Vitruv. vii. 3. Letronne, *Peintur. mur.* p. 476.)

3. A wooden tray, used for a variety of purposes in domestic economy. It was, for instance, given to the *madra* (μάδρα), or tray for kneading dough. (Cratin. *Frag.* p. 27, ed. Runkel; vi. 90, x. 105; Cato, *R. R.* 10; Hesych. *μάδρα*; Schol. in Theocr. iv. 61.)

4. A board, covered with sand or dust, used by geometers for drawing diagrams (Eustath. in 107), and by arithmeticians for the purposes of calculation. (Petr. *Sat.* i. 131.) For the latter purpose perpendicular lines or channels seem to have been drawn in the sand upon the board; but the board had perpendicular wooden dividers, the space on the right hand being intended for units, the next space for tens, the next for hundreds, and so on. Thus was constructed the

ABACUS.

ἄβακτος, ἐφ' οὗ ψηφίζουσιν, "the abacus on which they calculate," i. e. reckon by the use of stones (ψηφοί, *calculi*). (Comp. Pol. v. 26.) The figure following represents the probable form and appearance of such an abacus. The reader will observe, that stone after stone might be put into the right-hand partition until they amounted to 10, when it would be necessary to take them all out as represented in the figure, and instead of them to put one stone into the next partition. The stones in this division might in like manner amount to 10, thus representing $10 \times 10 = 100$, when it would be necessary to take out the 10, and instead of them to put one stone into the third partition, and so on. On this principle the stones in the abacus, as delineated in the figure, would be equivalent to 359,310.

5. A board adapted for playing with dice or counters, resembling a draught-board or backgammon-board. (Caryst. *ap. Ath.* x. p. 435, d; Suet. *Ner.* 22; Macrob. *Sat.* i. 5.) The Greeks had a tradition ascribing this contrivance to Palamedes, hence they called it "the abacus of Palamedes." (Τὸ Παλαμήδειον ἄβακτος, Eustath. in *Od.* i. 107.) [LATRUNCULL]

6. A table or sideboard, chiefly used for the display (*exponere*) of gold and silver cups. The tops of such tables were sometimes made of silver, but more usually of marble, and appear in some cases to have had numerous cells or partitions beneath, in which the plate was likewise placed. The use of abaci was first introduced at Rome from Asia Minor after the victories of Cn. Manlius Vulso, B. C. 187, and their introduction was regarded as one of the marks of the growing luxury of the age.

(Cic. *Verr.* iv. 16, *Tusc.* v. 21; Liv. xxxix. 6; Plin. *H. N.* xxxvii. 6; Petron. 73; Sid. *Apoll.* xvii. 7, 8.) These abaci are sometimes called *mensae Delphicae*. (Cic. *Verr.* iv. 59; Mart. xii. 67; Becker, *Gallus*, vol. i. p. 140.)

7. A part of the theatre on or near the stage.

8. The diminutive ABACULUS (*ἀβακῦλος*) denoted a tile of marble, glass, or any other substance used for making ornamental pavements. They were of various colours. (Plin. *H. N.* xxxvi. 67; Moschion, *ap. Ath.* v. 207, d.) [J. Y.]

ABACTUS VENTER. [ABORTIO.]

ABALIENA'TIO. [MANCIPIUM.]

ABDICA'TIO. [MAGISTRATUS.]

ABOLLA, the Latin form of *ἀβόλλα*, i. e. *ἀναβολή*, a loose woollen cloak. Nonius quotes a passage of Varro to show that it was a garment worn by soldiers (*vestis militaris*), and thus opposed to the toga. Its form and the mode of wearing it are seen in the figures annexed, taken from the bas-reliefs on the triumphal arch of Septimius Severus at Rome.

It was, however, not confined to military occasions, but was also worn in the city. (Suet. *Cal.* 35.) It was especially used by the Stoic philosophers at Rome as the *pallium philosophicum*, just as the Greek philosophers were accustomed to distinguish themselves by a particular dress. (Juv. iv. 75; Mart. iv. 53, viii. 48.) Hence the expression of Juvenal (iv. 75) *facinus majoris abollae* merely signifies, "a crime committed by a very deep philosopher." (Heinrich, *ad Juv. l. c.*; Becker, *Gallus*, vol. ii. p. 99.)

ABORTIO. This word and the cognate word *abortivus*, *abortus*, were applied to a child prematurely born, whence it appears that they were also applied to signify a premature birth brought about designedly. The phrase *abactus venter* in Paulus (*Sent. Recp.* iv. 9) simply means a premature birth. That abortion in the secondary sense of the word was practised among the Romans, appears from various passages and from there being an enactment against it. (Dig. 48. tit. 19. s. 38.) It is not stated at what time a penalty against procuring abortion was established. It is maintained by some modern writers that the practice of abortion became so common among the Romans, that combined with celibacy and other causes it mate-

rially diminished the population of Rome. But this general assertion is not sufficiently proved. The practice of abortion appears not to have been viewed in the same light by the Greeks and Romans as by the Christian nations of modern times. Aristotle in his *Politik* (vii. 14), recommends it on the condition that the child has not yet got sensation and life, as he expresses it. In Plato's *Republic* (v. p. 25), it is also permitted. At Athens, a person who had caused the abortion of a child by means of a potion (*ἀμβλωθρίδιον*), was liable to an action (*ἀμβλώσεως γραφή*), but we do not know what was the penalty in case of conviction: it was certainly not death. There was a speech of Lysias on this subject, which is lost. (*Frag.* p. 8. ed. Reiske.) [G. L.]

ABROGA'TIO. [LEX.]

ABSOLU'TIO. [JUDEX.]

ABSTINENDI BENEFICIUM. [HERES.]

ABUSUS. [USUS FRUCTUS.]

ACAENA (*Ἀκαίνη*, *ἄκαινα*, or in later Greek *ἄκαινα*, in one place *ἄκαινον*) is a very ancient Greek word, for it is said to have been derived from the Thesalians or from the Pelasgians. It seems originally to have meant a pointed stick: thus it was applied both to a goad and to a shepherd's staff. Afterwards it came (like our *pole* and *perch*, and the German *stange*) to mean a measuring rod of the length of ten Greek feet, or, according to Hesychius, 9½ *πῆχεις*, which is the same thing. It was used in measuring land, and thus it resembles the Roman decempeda. It is doubtful whether there was a corresponding square measure. (Schol. in *Apoll. Rhod.* iii. 1326; Suid. s. v.; Hesych. s. v.; Schow, *Hesych. Restit.* p. 648; Olympiodor. *ad Aristot. Meteorolog.* p. 25; Heron. *ap. Salmas. ad Solin.* p. 481; Wurm, *de Pond.* p. 93.) Compare ACNA. [P. S.]

ACA'TIUM. [NAVIS.]

ACCENSI. 1. Public officers who attended on several of the Roman magistrates. They summoned the people to the assemblies, and those who had lawsuits to court; they preserved order in the assemblies and the courts, and proclaimed the time of the day when it was the third hour, the sixth hour, and the ninth hour. An accensus anciently preceded the consul who had not the fasces, and lictors without fasces walked behind him, which custom after being disused was restored by Julius Caesar in his first consulship. (Varr. *L. L.* vii. 58, ed. Müller; Plin. *H. N.* vii. 60; Suet. *Jul.* 20; Liv. iii. 33.) Accensi also attended on the governors of provinces (Cic. *ad Fratr.* i. l. § 4), and were commonly freedmen of the magistrate on whom they attended.

2. A body of reserve troops, who followed the Roman army without having any military duties to perform, and who were taken one by one to supply any vacancies that might occur in the legions. They were according to the census of Servius Tullius taken from the fifth class of citizens. They were placed in battle in the rear of the army, behind the triarii, and seem to have acted sometimes as orderlies to the officers. They were also called *Adscripticii* and in later times *Supernumerarii*. (Fest. s. v. *Accensi*, *Adscripticii*; Liv. i. 43, viii. 8, 10; Veget. ii. 19; Niebuhr, *Rom. Hist.* vol. i. p. 449, &c.)

ACCEPTILA'TIO is defined to be a release by mutual interrogation between debtor and creditor, by which each party is exonerated from the same

This was the invention of Gaius Aquinus, who devised a formula for reducing all and every contract to the stipulation. This being the case, acceptilatio would immediately apply, inasmuch as the matter was by such formula within the general rule of law above mentioned.

The acceptilatio must be absolute and not conditional. A part of a debt or obligation might be paid as well as the whole, provided the thing in its nature capable of division. A creditor could not release a debt by acceptilatio, unless the auctoritas of his tutor, but he could be released from a debt. A woman also could not be released by stipulation without the auctoritas of her husband. The phrase by which a creditor is said to release his debtor by acceptilatio is, *debitori acceptum facere* or *ferre*, or *acceptum habere*. When anything which was done on the behalf of the state, such as a building for instance, was approved by the competent authorities, it was said to be *acceptum ferri*, or *referri*. (Dig. 46. tit. 11. s. 7; Gaius, ii. 84, &c. iii. 169, &c.)

[G. L.]

ACCESSION is a legal term which signifies that things are united in such wise that one is reduced to become a component part of the other; and is considered the principal, and the other is considered to be an accession or addition to it. Sometimes it may be doubtful which is to be considered the principal thing and which the accession. The owner of the principal thing, whichever it may be, is considered the owner of the accession also. The undisputed kind of accessio is that which results from the union of a thing with the ground; and when the union between the ground and the thing is complete, the thing belongs to him who is owner of the ground. Thus if a man builds a building on the ground of another man, the building belongs to the owner of the ground, unless it is a building of a movable nature, as a tent; for the rule of law is, *perficere solo cedit*. A tree belonging to another man, if planted in the ground of another man, belongs to the owner of the ground as soon as it takes root. The same rule applies to seeds sown on the ground.

The same man wrote on the papyrus (chartulae) or on the parchment (pergamena) the material

of every accessio of this kind belongs to the owner of the principal thing: the produce of a beast, the produce of a field, and of a tree belongs to the owner. In some cases one man may have a right to the produce (fructus) of a thing, though the thing belongs to another. [Usus fructus.]

The term accessiones was also applied to those who were sureties or bound for others, as *fidejussores*. (Dig. 45. tit. 1. s. 91.; Puchta, *Cursus der Institutionen*, ii. p. 661; Dig. 41. tit. 1; Gaius, ii. 73, &c. CONFUSIO.)

[G. L.]

ACCLAMATIO was the public expression of approbation or disapprobation, pleasure or displeasure, &c. by loud acclamations. On many occasions, there appear to have been certain forms of acclamations always used by the Romans; as, for instance, at marriages, *Io Hymen, Hymenaeae*, or *Talassio* (explained by Liv. i. 9.); at triumphs, *Io triumphe, Io triumphe*; at the conclusion of plays the last actor called out *Plaudite* to the spectators; orators were usually praised by such expressions as *Bene et praeclare, Belle et festive, Non potest melius*, &c. (Cic. *De Orat.* iii. 26.) Under the empire the name of *acclamationes* was given to the praises and flatteries which the senate bestowed upon the emperor and his family. These acclamationes, which are frequently quoted by the *Scriptores Historiae Augustae*, were often of considerable length, and seem to have been chanted by the whole body of senators. There were regular *acclamationes* shouted by the people, of which one of the most common was *Dii te servent*. (Capitol. *Maxim. duo*, 16, 26, *Gordian. tres*, 11; Lamprid. *Alex. Sever.* 6—12; Vopisc. *Tac.* 4, 5, 7, *Prob.* 11.) Other instances of *acclamationes* are given by Ferrarius, *De Veterum Acclamationibus et Plausu*, in Graevius, *Thesaur. Rom. Antiq.* vol. vi.

ACCUBATIO, the act of reclining at meals. [COENA.]

ACCUBITA, the name of couches which were used in the time of the Roman emperors, instead of the triclinium, for reclining upon at meals. The mattresses and feather-beds were softer and higher, and the supports (*fulcrum*) of them lower in proportion, than in the triclinium. The clothes and pillows spread over them were called *accubitalia*. (Macrob. *Saturnalia*, 10. 25. Schol. ad *Terent.* *Andria*, 10. 25.)

perfumes were burnt. There was a law in the Twelve Tables, which restricted the use of acerrae at funerals. (Cic. *de Leg.* ii. 24.) [J. Y.]

ACETA'BULUM (ἀέτις, ἀέτις-αφον, ἀέτις-αφιον), a vinegar-cup, which, from the fondness of the Greeks and Romans for vinegar, was probably always placed on the table at meals to dip the food in before eating it. The vessel was wide and open above, as we see in the annexed cut, taken from Panofka's work on Greek vases; and the name was also given to all cups resembling it in size and form, to whatever use they might be applied. They were commonly of earthenware, but sometimes of silver, bronze, or gold. (Aristoph. *Av.* 361; Athen. vi. p. 230, xi. p. 494; Quintil. viii. 6.) The cups used by jugglers in their performances were also called by this name. (Sen. *Ep.* 45.)

ACETA'BULUM, a Roman measure of capacity, fluid, and dry, equivalent to the Greek ἀέτις-αφον. It was one-fourth of the hemina; and therefore one-eighth of the sextarius. It contained the weight in water of fifteen Attic drachmae. (Plin. *H. N.* xxi. 34. s. 109.) [P. S.]

ACHAICUM FOEDUS, the Achaean league. In treating of the Achaean league we must distinguish between two periods, the earlier and the later; the character of the former was pre-eminently religious, and that of the latter pre-eminently political.

1. *The earlier period.*—When the Heracleidae took possession of Peloponnesus, which had until then been chiefly inhabited by Achaeans, a portion of the latter, under Tisamenus, turned northwards and occupied the north coast of Peloponnesus, which was called αἰγιαλός, and from which the Ionians, its former inhabitants, were expelled and sought refuge in Attica. The country which was thus occupied by the Achaeans and derived from them its name of Achaia, contained twelve confederate towns, which were governed by the descendants of

Tisamenus, till at length they abolished the kingly rule after the death of Ogyges, and established a democracy. In the time of Herodotus (i. 145; comp. Strab. viii. p. 383, &c.) the twelve towns of which the league consisted were: Pellene, Aegira, Aegae, Bura, Helice, Aegium, Rhypes (Rhypae), Patraeis (ae), Phareis (ae), Olenus, Dyme, and Tritaeeis (Tritaee). After the time of Herodotus, Rhypes and Aegae disappear from the number of the confederated towns, as they had become deserted (Paus. vii. 23. 25; Strab. viii. p. 387), and Ceryneia and Leontium stepped into their place. (Polyb. ii. 41; comp. Paus. vii. 6.) The common place of meeting was Helice, which town, together with Bura, was swallowed up by the sea during an earthquake in B. C. 373, whereupon Aegium was chosen as the place of meeting for the confederates. (Strab. viii. p. 384; Diod. xv. 48; Paus. vii. 24.) The bond which united the towns of the league was not so much a political as a religious one, as is shown by the common sacrifice offered at Helice to Poseidon. This solemn sacrifice was perfectly analogous to that offered by the Ionians at the Panionia, and it is even intimated by Herodotus that it was an imitation of the Ionian solemnity. After the destruction of Helice, and when Aegium had become the central point of the league, the common sacrifice was offered up to the principal divinities of the latter town; that is, to Zeus, surnamed Homagryrius, and to Demeter Panachaëa. (Paus. vii. 24.) In a political point of view the connection between the several towns appears to have been very loose, for we find that some of them acted quite independently of the rest. (Thuc. ii. 9.) The confederation exercised no great influence in the affairs of Greece down to the time when it was broken up by the Macedonians. The Achaeans kept aloof from the restless commotions in the other parts of Greece, and their honesty and sincerity were recognised by the circumstance of their being appointed, after the battle of Leuctra, to arbitrate between the Thebans and Lacedaemonians. (Polyb. ii. 39.) Demetrius, Cassander and Antigonus Gonatas placed garrisons in some of their towns, and in others tyrants rose supported by Macedonian influence. The towns were thus torn from one another, and the whole confederacy destroyed.

2. *The later period.*—When Antigonus in B. C. 281 made the unsuccessful attempt to deprive Ptolemaeus Ceraunus of the Macedonian throne, the Achaeans availed themselves of the opportunity of shaking off the Macedonian yoke, and renewing their ancient confederation. The grand object however now was no longer a common worship, but a real political union among the confederates. The towns which first shook off the yoke of the oppressors, were Dyme and Patrae, and the alliance concluded between them was speedily joined by the towns of Tritaea and Pharae. (Polyb. ii. 41.) One town after another now expelled the Macedonian garrisons and tyrants; and when, in B. C. 277, Aegium, the head of the earlier league, followed the example of the other towns, the foundation of the new confederacy was laid, and the main principles of its constitution were settled, though afterwards many changes and modifications were introduced. The fundamental laws were, that henceforth the confederacy should form one inseparable state, that each town, which should join it, should have equal rights with the others, and that all members, in regard to foreign countries, should be

regarded as dependent, and bound to obey in every respect the federal government, and those officers who were entrusted with the executive. (Polyb. i. 37, &c.) No town therefore was allowed to treat with any foreign power without the sanction of the others. Aegium, for religious reasons, was at first appointed the central point of the league, and retained this distinction until the time of Philipemen, who carried a decree that the meetings might be held in any of the towns of the confederacy. (Liv. xxxviii. 30.) Aegium therefore was the seat of the government, and it was there that the citizens of the various towns met at regular and stated times, to deliberate upon the common affairs of the league, and if it was thought necessary, upon those of separate towns, and even upon individuals, and to elect the officers of the league. After having thus established a firm union among themselves, they zealously exerted themselves in delivering other towns also from their tyrants and oppressors. The league, however, acquired its greatest strength in B.C. 251, when Aratus united Sicyon, his native place, with it, and some years afterwards Corinth also for it. Megara, Troezen, and Epidaurus soon followed their example. Afterwards Aratus persuaded all the more important towns of Peloponnesus to join the confederacy, and the Megalopolis, Argos, Hermione, Phlius, and others were added to it. In a short period the league reached the height of its power, for it embraced Athens, Megara, Aegina, Salamina, and the whole of Peloponnesus, with the exception of Sparta, Elis, Tegea, Orchomenos, and Mantinea. Greece seemed to revive, and promised to become stronger and more united than ever, but it soon was clear that its fresh power was only employed in self-destruction and annihilation. But it would be foreign to the object of this work to enter further into the history of the confederacy: we must confine ourselves to an outline of its constitution, as it existed at the time of its highest prosperity.

Polybius (ii. 38) remarks that there was no other constitution in the world, in which all the members of the community had such a perfect equality of rights, and so much liberty, and, in short, which was so perfectly democratical and so free from all selfish and exclusive regulations, as the Achaean league; for all members had equal rights, whether they had belonged to it for many years, or whether they had only just joined it, and whether they were large or small towns. The common affairs of the confederate towns were regulated at general meetings attended by the citizens of all the towns, and held regularly twice every year, in the spring and in the autumn. These meetings which lasted three days, were held in a grove of Zeus Homagryus in the neighbourhood of Aegium, and near a sanctuary of Demeter Panachaea. (Polyb. ii. 54, iv. 37, v. 1, xxix. 9; Liv. xxxii. 22, xxxviii. 32; Strab. viii. p. 385; Paus. vii. 24.) In cases of urgent necessity, however, extraordinary meetings might be convened, either at Aegium or in any other of the confederate places. (Liv. xxxi. 25; Polyb. xxv. 1, xxix. 8; Plut. Arat. 41.) Every citizen, both rich and poor, who had attained the age of thirty, might attend the assemblies, speak and propose any measure, to which they were invited by a public herald. (Polyb. xxix. 9; Liv. xxxii. 20.) Under these circumstances the assemblies were sometimes of the most unanimous kind, and a wise and experienced man

might find it difficult to gain a hearing among the crowds of ignorant and foolish people. (Polyb. xxxviii. 4.) It is, however, natural to suppose that the ordinary meetings, unless matters of special importance were to be discussed, were attended chiefly by the wealthier classes, who had the means of paying the expenses of their journey, for great numbers lived at a considerable distance from the place of meeting.

The subjects which were to be brought before the assembly were prepared by a council (*Βουλή*), which seems to have been permanent. (Polyb. xxiii. 7, xxviii. 3, xxix. 9; Plut. Arat. 53.) The principal subjects on which the great assembly had to decide were—peace and war (Polyb. iv. 15, &c.); the reception of new towns into the confederacy (Polyb. xxv. 1); the election of the magistrates of the confederacy (Polyb. iv. 37. 82; Plut. Arat. 41); the punishment of crimes committed by these magistrates, though sometimes special judges were appointed for that purpose, as well as the honours or distinctions to be conferred upon them. (Polyb. iv. 14, viii. 14, xl. 5. 8; Paus. vii. 9.) The ambassadors of foreign nations had to appear before the assembly, and to deliver the messages of their states, which were then discussed by the assembled Achaeans. (Polyb. iv. 7, xxiii. 7, &c., xxviii. 7; Liv. xxxii. 9.) The assembly likewise had it in its power to decree, as to whether negotiations were to be carried on with any foreign power or not, and no single town was allowed to send embassies to a foreign power on its own responsibility even on matters of merely local importance, although otherwise every separate town managed its own internal affairs at its own discretion, so long as it did not interfere with the interests of the league. No town further was allowed to accept presents from a foreign power. (Polyb. xxiii. 8; Paus. vii. 9.) The votes in the assembly were given according to towns, each having one vote, whether the town was large or small. (Liv. xxxii. 22, &c.)

The principal officers of the confederacy were. 1. at first two *strategi* (*στρατηγός*), but after the year B.C. 255, there was only one (Strab. viii. p. 385), who in conjunction with an *hipparchos* (*ἵππαρχος*) or commander of the cavalry (Polyb. v. 95, xxviii. 6) and an under-strategus (*ὑποστρατηγός*, Polyb. iv. 59) commanded the army furnished by the confederacy, and was entrusted with the whole conduct of war; 2. a public secretary (*γραμματεὺς*), and 3. ten *demiurgi* (*δημιουργοί*, Strab. l. c.; Liv. xxxii. 22, xxxviii. 30; Polyb. v. 1, xxiii. 10, who calls the *demiurgi* *ἄρχοντες*). These officers seem to have presided in the great assembly, where they probably formed the body of men which Polybius (xxviii. 5) calls the *γενοῦντα*; the *demiurgi* or the *strategus* might convene the assembly, though the latter only when the people were convened in arms and for military purposes. (Polyb. iv. 7; Liv. xxxv. 25.) All the officers of the league were elected in the assembly held in the spring, at the rising of the Pleiades (Polyb. ii. 43, iv. 6. 37, v. 1), and legally they were invested with their several offices only for one year, though it frequently happened that men of great merit and distinction were re-elected for several successive years. (Plut. Arat. 24. 30, Cleom. 15.) If one of the officers died during the period of his office, his place was filled by his predecessor, until the time for the new elections arrived. (Polyb. xl. 2.) The

close union existing among the confederate towns was, according to Polybius (ii. 37), strengthened by their adopting common weights, measures, and coins.

But the perpetual discord of the members of the league, the hostility of Sparta, the intrigues of the Romans, and the folly and rashness of the later strategæ, brought about not only the destruction and dissolution of the confederacy, but of the freedom of all Greece, which with the fall of Corinth, in a. c. 146, became a Roman province under the name of Achaia. (Comp. Schorn, *Gesch. Griechenlands von der Entstehung des Aetol. u. Achäisch. Bundes*, especially pp. 49, &c. 60, &c.; A. Matthiae, *Vermischte Schriften*, p. 239, &c.; Drumann, *Ideen zur Gesch. des Verfalls der Griech. Staaten*, p. 447; Tittmann, *Griech. Staatsverfass.* p. 673, &c.; K. F. Hermann, *Griech. Staatsalterth.* § 185.) [L. S.]

ACHANE (Ἀχαιή), a Persian and Boeotian measure, equivalent to 45 Attic medimni. (Aristot. *ap. Schol. ad Aristoph. Acharn.* 108, 109; Suid. s. v.) According to Hesychius a Boeotian ἀχαιή was equal to one Attic medimnus. [P. S.]

A'CIES. [EXERCITUS.]

ACI'NACES (ἀκινάκης), a Persian sword, whence Horace (*Carm.* i. 27. 5) speaks of the *Medus acinaces*. It was a short and straight weapon, and thus differed from the Roman *sica*, which was curved. (Pollux, i. 138; Joseph. *Ant. Jud.* xx. 7. § 10. [SICA.]) It was worn on the right side of the body (*insignis acinace dextro*, Val. Flacc. *Argon.* vi. 701), whereas the Greeks and Romans usually had their swords suspended on the left side.

The form of the acinaces, with the method of using it, is illustrated by the following Persepolitan figures. In all the bas-reliefs found at Persepolis, the acinaces is invariably straight, and is commonly suspended over the right thigh, never over the left, but sometimes in front of the body. The form of the acinaces is also seen in the statues of the god Mithras, one of which is figured in the cut on the title-page of this work.

A golden acinaces was frequently worn by the Persian nobility, and it was often given to individuals by the kings of Persia as a mark of honour. (Herod. viii. 120; Xen. *Anab.* i. 2. § 27, 8. § 29.)

The acinaces was also used by the Caspii. (Herod. vii. 67.) It was an object of religious worship among the Scythians and many of the northern nations of Europe. (Herod. iv. 62; Comp. Mela, ii. 1; Amm. Marc. xxxi. 2.) [J. Y.]

ACT'SCULUS. [ASCIA.]

ACLIS. [HASTA.]

ACNA or ACNUA (also spelt *agna* and *agnua*) was, according to Varro, the Italian name, and according to Columella, the common Baetican name of the actus quadratus. [ACTUS.] An old writer, quoted by Salmasius, says "agnua habet pedes XIII. cccc," i. e. 14,400 square feet. The name is almost certainly connected with the Greek ἀκναῖα, though the measure is different. (Varro, *R. R.* i. 10. § 2; Colum. *R. R.* v. 2. § 5; Schneider, *Comment. ad U. ec.*; Salmasius, *ad Solin.* p. 481.) [P. S.]

ACO'NTION (ἀκόντιον). [HASTA.]

ACRATISMA (ἀκράτισμα). [CORNA.]

ACROA'MA (ἀκρόαμα), any thing heard, and especially any thing heard with pleasure, signified a play or musical piece; hence a concert of players on different musical instruments, and also an interlude, called *embolia* by Cicero (*pro Sext.* 54), which was performed during the exhibition of the public games. The word is also applied to the actors and musicians who were employed to amuse guests during an entertainment (Cic. *Verr.* iv. 22; *pro Arch.* 9; Suet. *Octav.* 74; Macrobi. *Sat.* ii. 4); and it is sometimes used to designate the *anagnostae*. [ANAGNOSTAE.]

ACROLITHI (ἀκρόλιθοι), statues, of which the extremities (face, feet, and hands, or toes and fingers) only were of marble, and the remaining part of the body of wood either gilt, or, what seems to have been more usual, covered with drapery. The word occurs only in the Greek Anthology (Brunck, *Anal.* vol. iii. p. 155, No. 20; *Anth. Pal.* xii. 40), and in Vitruvius (ii. 8. § 11); but statues of the kind are frequently mentioned by Pausanias (ii. 4. § 1, vi. 25. § 4, vii. 21. §§ 4 or 10, vii. 23. § 5, viii. 25. § 4 or 6, viii. 31. § 1 or 2, and § 3 or 6, ix. 4. § 1.). It is a mistake to suppose that all the statues of this kind belonged to an earlier period. They continued to be made at least down to the time of Praxiteles. (Comp. Jacobs, *Comment. in Anth. Graec.*, vol. iii. Pt. 1. p. 298; and Winckelmann, *Geschichte der Kunst*, B. i. c. 2. § 13.) [P. S.]

ACRO'POLIS (ἀκρόπολις). In almost all Greek cities, which were usually built upon a hill, rock, or some natural elevation, there was a kind of tower, a castle, or a citadel, built upon the highest part of the rock or hill, to which the name of *acropolis* was given. Thus we read of an acropolis at Athens, Corinth, Argos, Messene, and many other places. The Capitolium at Rome answered the same purpose as the Acropolis in the Greek cities; and of the same kind were the tower of Agathocles at Utica (App. *Pun.* 14), and that of Antonia at Jerusalem. (Joseph. *B. J.* v. § 8, *Act. Apostol.* xxi. 34.) At Athens, the Acropolis served as the treasury, and as the names of all public debtors were registered there, the expression of "registered upon the Acropolis" (ἐγγεγραμμένος ἐν Ἀκροπόλει) always means a public debtor (ἐν ἀκροπόλει γεγραμμένοι, Dem. c. *Theocr.* p. 1337. 24; Büchh. *Publ. Econ. of Athens*, p. 388, 2nd edit.).

ACROSTO'LIIUM (ἀκροστόλιον). [NAVIS.]

ACROTE'RIUM (ἀκροτήριον) signifies an extremity of any thing. It is generally used in the plural.

1. In Architecture it seems to have been used originally in the same sense as the Latin *fastigium*,

namely, for the sloping roof of a building, and more particularly for the ornamental front or gable of such a roof, that is, the *pediment*. (Plut. *Cæs.* 63, compared with Cic. *Philipp.* ii. 43, and Suet. *Cæs.* 81.) The usual meaning of *acroteria*, however, is the pedestals placed on the summit of a pediment to receive statues or other ornamental figures. There were three *acroteria*, one above each angle of the pediment. Vitruvius says that those over the outer angles (*acroter. angularia*) should be as high as the apex of the tympanum, and the one over the highest angle one-eighth part higher. (Vitruv. iii. 3, or iii. 5. § 12, ed. Schneider.) Some writers include the statues themselves as well as the bases under the name; but the only authority for this seems to be an error of Salmastius. (*In Ael. Spart. Pæcon. Nig.* 12.) 2. The extremities of the prow of a vessel, which were usually taken from a conquered vessel as a mark of victory: the act of doing so was called *ἀκροτεριάζειν*. (Xen. *Hell.* ii. 3. § 8, vi. 2 § 36; Herod. iii. 59, viii. 121.) 3. The extremities of a statue, wings, feet, hands, &c. (Dem. *c. Timocr.* p. 738; Athen. v. p. 199, c.) [P. S.]

ACTA. 1. Signified the public acts and orders of a Roman magistrate, which after the expiration of his office were submitted to the senate for approval or rejection. (Suet. *Cæs.* 19, 23; Cic. *Phil.* i. 7, &c.) After the death of Julius Cæsar the triumvirs swore, and compelled all the other magistrates to swear, to observe and maintain all his acts (*in acta jurare*, comp. Tac. *Ann.* i. 72; Suet. *Tib.* 67); and hence it became the custom on the accession of each emperor for the new monarch to swear to observe and respect all the acts of his predecessors from Julius Cæsar downwards, with the exception of those who had been branded with infamy after death, such as Nero and Domitian. Every year all the magistrates upon entering upon their office on the 1st of January swore approval of the acts of the reigning emperor: this oath was originally taken by one magistrate in each department on behalf of his colleagues, but subsequently it was the usual practice for each magistrate to take the oath personally. (Dion Cass. xlvii. 18, liii. 28; Tac. *Ann.* xvi. 22, with the Excursus of Lipsius; Dion Cass. lviii. 17, lx. 25.)

2. ACTA FORENSIA were of two kinds: first, those relating to the government, as *leges*, *plebiscita*, *edicta*, the names of all the magistrates, &c., which formed part of the *tabulae publicae*; and secondly, those connected with the courts of law. The acts of the latter kind contained an account of the different suits, with the arguments of the advocates and the decisions of the court. In the time of the republic the names of those who were acquitted and condemned were entered on the records of the court (*in tabulas absolutum non reus habet*, Cic. *ad Fam.* viii. 8. § 3), and it appears from the quotations of Asconius from these Acts, that they must have contained abstracts of the speeches of the advocates as early as the time of Cæsar. (*In Scævrian.* p. 19, in *Milonian.* pp. 32, 44, 47, ed. Orelli.) Under the empire the proceedings of the higher courts seem to have been always preserved, and they are frequently referred to in the Digest. They are sometimes called *Gesta*; and they commenced with the names of the consuls for the year, and the day of the month. (Amm. Marc. xxii. 3; August. *Acta c. Fortun. Manich. Retract.* i. 16; Cod. Theod. 2. tit. 29. a. 3.) Specimens of these Acts are given by Blassonius. (*De*

Formulis, v. § 113.) They were taken by clerks (*ab actis fori*), whose titles and duties occur in Lydus (*de Magistr.* ii. 20, &c.) and the *Notitia Dignitatum*.

3. ACTA MILITARIA, contained an account of the duties, numbers, and expenses of each legion (Veget. ii. 19), and were probably preserved in the military treasury founded by Augustus (Suet. *Aug.* 49; Tac. *Ann.* i. 78; Dion Cass. lv. 25.) The soldiers, who drew up these acts, are frequently mentioned in inscriptions and ancient writers under various titles, as, *librarius legionis*; *actuarius* or *actarius legionis*; *tabularius castrensis*, &c.

4. ACTA SENATUS, called also COMMENTARIUM SENATUS (Tac. *Ann.* xv. 74) and ACTA PATRUM (*Ann.* v. 4), contained an account of the various matters brought before the senate, the opinions of the chief speakers, and the decision of the house. It has been usually inferred from a passage of Suetonius ("Inito honore primus omnium instituit, ut tam senatus quam populi diurna acta conficerentur et publicarentur," *Cæs.* 20), that the proceedings of the senate were not published till the first consulship of Julius Cæsar, b. c. 59; but this was not strictly the case; for not only had the decrees of the senate been written down and published long previously, but the debates on the Catilinarian conspiracy had been widely circulated by Cicero (*p. Sull.* 14, 15.) All that Suetonius means to say is, that the proceedings of the senate, which had been only occasionally published before and by private individuals, were for the first time, by the command of Cæsar, published regularly every day (*senatus acta diurna*) under the authority of government as part of the daily gazette. Augustus forbade the publication of the proceedings of the senate, but they still continued to be preserved, and one of the most distinguished senators, who received the title *ab actis senatus*, was chosen by the emperor to compile the account. (Tac. *Ann.* v. 4, Spart. *Hadr.* 3; Orelli, *Inscr.* No. 2274, 3186.) The persons entrusted with this office must not be confounded with the various clerks (*actuarii, servi publici, scribae, censuales*), who were present in the senate to take notes of its proceedings, and who were only excluded when the senate passed a *senatusconsultum tacitum*, that is, when they deliberated on a subject of the greatest importance, respecting which secrecy was necessary or advisable. (Capit. *Gord.* 12.) It was doubtless from notes and papers of these clerks that the Acts were compiled by the senator, who was entrusted with this office. The Acts were deposited in some of the record offices in particular departments of the public libraries, to which access could only be obtained by the express permission of the praefectus urbi. They were consulted and are frequently referred to by the later historians (Vopisc. *Prob.* 2; Lamprid. *Sever.* 56; Capitol. *Opil. Macr.* 6), and many extracts from them were published in the Acta Diurna. Tacitus and Suetonius never refer to the Acta Senatus as authorities, but only to the Acta Diurna.

5. ACTA DIURNA, a gazette published daily at Rome by the authority of the government during the later times of the republic, and under the empire, corresponding in some measure to our newspapers. (Tac. *Ann.* iii. 3, xiii. 31, xvi. 22.) In addition to the title *Acta Diurna*, we find them referred to under the names of *Diurna*, *Acta Pub-*

lica, Acta Urbana, Acta Rerum Urbanarum, Acta Populi, and they are frequently called simply *Acta*. The Greek writers on Roman history call them *τὰ δημοτικά, τὰ δημόσια δημοκλήματα, τὰ δημόσια γράμματα* and *τὰ κοινὰ δημοκλήματα*. The nature of their contents will be best seen from the following passage of Petronius (c. 53) where in imitation of them is given by the *actuarius* of Trimalchio: — “*Actuaris — tamquam acta urbis recitavit: vii. Kal. Sextilis in praedio Cumano, quod est Trimalchionis, nati sunt pueri xxx., puellae xl.; sublata in horreum ex area tritici millia modium quingenta; boves domiti quingenti. Eodem die Mithridates servus in crucem actus est, quia Gail nostri genio maledixerat. Eodem die in arcam relatum est, quod collocari non potuit, sestertium centies. Eodem die incendium factum est in hortis Pompeianis, ortum ex aedibus Nastae villici. Jam etiam edicta aedilium recitabantur, et saluatorum testamenta, quibus Trimalchio cum elogio exhaeredabatur; jam nomina villicorum et repudiata a circumitore liberta in balneatoris contubernio deprehensa; atriensis Baiae relegatus; jam reus factus dispensator; et iudicium inter cubicularios actum.*” From this passage, and from the numerous passages in ancient writers, in which the *Acta Diurna* are quoted (references to which are given in the works of Le Clerc and Lieberkühn cited below), it would appear that they usually contained the following matters: — 1. The number of births and deaths in the city, an account of the money paid into the treasury from the provinces, and every thing relating to the supply of corn. These particulars would be extracted from the *tabulae publicae*. By an ancient regulation, ascribed to Servius Tullius (Dionys. iv. 15), all births were registered in the temple of Venus, and all deaths in that of Libitina; and we know that this practice was continued under the empire, only that at a later time the temple of Saturn was substituted for that of Venus for the registration of births. (Jul. Cap. *M. Aurel.* 9.) 2. Extracts from the *Acta Forensia*, containing the edicts of magistrates, the testaments of distinguished men, reports of trials, with the names of those who were acquitted and condemned, and likewise a list of the magistrates who were elected. 3. Extracts from the *acta senatus*, especially all the decrees and acclamations [*ACCLAMATIO*] in honour of the reigning emperor. 4. A court circular, containing an account of the births, deaths, festivals, and movements of the imperial family. 5. An account of such public affairs and foreign wars as the government thought proper to publish. 6. Curious and interesting occurrences, such as prodigies and miracles, the erection of new edifices, the conflagration of buildings, funerals, sacrifices, a list of the various games, and especially amatory tales and adventures, with the names of the parties. (Comp. Cic. *ad Fam.* ii. 15.) The fragments of some *Acta Diurna* have been published by Pighius and Dodwell, but their genuineness is too doubtful to allow us to make use of them as authorities.

It is certain that these acts were published under the authority of the government, but it is not stated under whose superintendence they were drawn up. It is probable, however, that this duty devolved upon the magistrates, who had the care of the *tabulae publicae*, namely, the censors under the republic (Liv. iv. 8, xliii. 16), and sometimes the *questores*, sometimes the *praefecti aerarii* under the empire. (Tac. *Ann.* xiii. 28.) By a regulation

of Alexander Severus, seven of the fourteen *cura-tores urbis*, whom he appointed, had to be present when the acts were drawn up. (Lamprid. *Alex. Sev.* 33.) The actual task of compiling them was committed to subordinate officers, called *actuarii* or *actarii*, who were assisted by various clerks, and by reporters (*notarii*), who took down in short-hand the proceedings in the courts, &c. After the acts had been drawn up, they were exposed for a time in some public place in the city, where persons could read them and take copies of them. Many scribes, whom Cicero speaks of under the name of *operarii*, made it their business to copy them or make extracts from them for the use of the wealthy in Rome, and especially in the provinces, where they were eagerly sought after and extensively read. (Cic. *ad Fam.* viii. 1, xiii. 8; Tac. *Ann.* xvi. 22.) After the acts had been exposed in public for a certain time, they were deposited, like the *Acta Senatus*, in some of the record offices, or the public libraries.

The style of the acts, as appears from the passage in Petronius, was very simple and concise. They contained a bare enumeration of facts without any attempt at ornament.

As to the time at which these acts were first composed, there is a considerable variety of opinion among modern writers. It is maintained that the passage of Suetonius (*Caes.* 20), quoted above, does not imply that the acts were first published in the first consulship of Julius Caesar, and that the meaning of it is, “that he first ordained that the *acta diurna* of the senate should be compiled and published just as (*sam quam*) those of the people had been.” But although this interpretation is probably the correct one, still there is no passage in the ancient writers in which the *Acta Diurna* are decisively mentioned, previous to Caesar’s first consulship; for the *diarium* referred to by Sempronius Asellio (Gell. v. 18), which is frequently brought forward as a proof of this early publication, is the journal of a private person. There is likewise no evidence to support an opinion adopted by many modern writers that the publication of the acts first commenced in B. C. 133 to supply the place of the *Annales Maximi*, which were discontinued in that year (Cic. *de Orat.* ii. 12), while on the contrary the great difference of their contents renders it improbable that such was the case. The *Acta Diurna* continued in use to the downfall of the western empire, or at least till the removal of the seat of government to Constantinople, but they were never published at the latter city.

(Lipsius, *Excursus ad Tac. Ann.* v. 4; Ernesti, *Excursus ad Suet. J. Caes.* 20; Schlosser, *Ueber die Quellen der spätern latein. Geschichtsschreiber, besonders über Zeitungen*, &c. in the *Archiv für Geschichte*, pp. 80—106; Prutze, *De Fontibus, quos in conscribendis rebus inde a Tiberio usque ad mortem Neronis gestis auctores veteres secuti videantur*, Halle, 1840; Zell, *Ueber die Zeitungen der alten, Fröburg*, 1834; but the two best works on the subject are, Le Clerc, *Des Journaux chez les Romains*, Paris, 1838, and Lieberkühn, *De Diurnis Romanorum Actis*, Weimar, 1840.)

ACTIA (*Ἀκτία*), a festival of Apollo, celebrated at Nicopolis in Epeirus, with wrestling, musical contests, horse-racing, and sea fights. It was established by Augustus, in commemoration of his victory over Antony off Actium, and was probably the revival of an ancient festival; for

there was a celebrated temple of Apollo at Actium, which is mentioned by Thucydides (i. 29), and Strabo (vii. p. 325), and which was enlarged by Augustus. The games instituted by Augustus were celebrated every four years (*quartaenis*, *ludi quinquennales*); they received the title of a sacred Agon, and were also called Olympia. (Strab. l. 2; Dion Cass. li. 1.; Suet. Aug. 18; Böckh, Corp. Inscr. No. 1720, p. 845; Krause, Olympia, p. 221.)

A'CTIO is defined by Celsus (Dig. 44. tit. 7. s. 51) to be the right of pursuing by judicial means (*judicio*) what is a man's due.

With respect to its subject-matter, the actio was divided into two great divisions, the *in personam actio*, and the *in rem actio*. The *in personam actio* was against a person who was bound to the plaintiff by contract or delict, that is, when the claim against such person was 'dare, facere, praestare oportere'; the *in rem actio* applied to those cases where a man claimed a corporal thing (*corporealis res*) as his property, or claimed a right, as for instance the use and enjoyment of a thing, or the right to a road over a piece of ground (*actus*). The *in rem actio* was called *vindictio*; the *in personam actio* was called in the later law *condictio*, because originally the plaintiff gave the defendant notice to appear on a given day for the purpose of choosing a *iudex*. (Gaius, iv. 5.)

The old actions of the Roman law were called *legis actiones*, or *legitimae*, either because they were expressly provided for by laws (*leges*), or because they were strictly adapted to the words of the laws, and therefore could not be varied. In like manner, the old writs in England contained the matter or claim of the plaintiff expressed according to the legal rule.*

The five modes of proceeding by legal action as named and described by Gaius (iv. 12), were, *sacramento*, *Per iudicis postulationem*, *Per condictioem*, *Per manus iniectionem*, *Per pignoris capionem*.

But these forms of action gradually fell into disuse, in consequence of the excessive nicety required, and the failure consequent on the slightest error in the pleadings; of which there is a notable example given by Gaius himself (iv. 11), in the case of a plaintiff who complained of his vines (*vites*) being cut down, and was told that his action was bad, inasmuch as he ought to have used the term trees (*arbores*) and not vines; because the law of the Twelve Tables, which gave him the action for damage to his vines, contained only the general expression "trees" (*arbores*). The Lex Aebutia and two *Leges Juliae* abolished the old *legitimae actiones*, except in the case of *damnum infectum* [*DAMNUM INFECTUM*], and in matters which fell under the cognizance of the *Centumviri*. [*CENTUMVIRI*.]

In the old Roman constitution, the knowledge of the law was closely connected with the institutes and ceremonial of religion, and was accordingly in the hands of the patricians alone, whose and their clients were obliged to ask in all their legal disputes. Appianus Claudius Caecus, perhaps one of the earliest writers on law, drew up the

various forms of actions, probably for his own use and that of his friends: the manuscript was stolen or copied by his scribe Cn. Flavius, who made it public: and thus, according to the story, the plebeians became acquainted with those legal forms which hitherto had been the exclusive property of the patricians. (Cic. *De Orat.* i. 41, *pro Murena*, c. 11; Dig. l. tit. 2. s. 2. § 7.)

Upon the old legal actions being abolished, it became the practice to prosecute suits according to certain prescribed forms or formulae, as they were called, which will be explained after we have noticed various divisions of actions, as they are made by the Roman writers.

The division of *actiones* in the Roman law is somewhat complicated, and some of the divisions must be considered rather as emanating from the schools of the rhetoricians than from any other source. But this division, though complicated, may be somewhat simplified, or at least rendered more intelligible, if we consider that an action is a claim or demand made by one person against another, and that in order to be a valid legal claim it must be founded on a legal right. The main division of actions must therefore have a reference or analogy to the main division of rights; for in every system of law the form of the action must be the expression of the legal right. Now the general division of rights in the Roman law is into rights of dominion or ownership, which are rights against the whole world, and into rights arising from contract, and quasi contract, and delict. The *actio in rem* implies a complainant, who claims a certain right against every person who may dispute it, and the object and end of the action are to compel an acknowledgment of the right by the particular person who disputes it. By this action the plaintiff maintains his property in or to a thing, or his rights to a benefit from a thing (*servitutes*). Thus the *actio in rem* is not so called on account of the subject-matter of the action, but the term is a technical phrase to express an action which is in no way founded on contract, and therefore has no determinate individual as the other necessary party to the action; but every individual who disputes the right becomes, by such act of disputing, a party liable to such action. The *actio in rem* does not ascertain the complainant's right, and from the nature of the action the complainant's right cannot be ascertained by it, for it is a right against all the world; but the action determines that the defendant has or has not a claim which is valid against the plaintiff's claim. The *actio in personam* implies a determinate person or persons against whom the action lies, the right of the plaintiff being founded on the acts of the defendant or defendants: it is, therefore, in respect of something which has been agreed to be done, or in respect of some injury for which the plaintiff claims compensation. The *actio mixta* of Justinian's legislation (Inst. iv. tit. 6, s. 20) was so called from its being supposed to partake of the nature of the *actio in rem* and the *actio in personam*. Such was the action among co-heirs as to the division of the inheritance, and the action for the purpose of settling boundaries which were confused.

Rights, and the modes of enforcing them, may also be viewed with reference to the sources from which they flow. Thus, the rights of Roman citizens flowed in part from the sovereign power, in part from those to whom power was delegated.

* "Breve quidem cum sit formatum ad similitudinem regulæ juris, quia breviter et paucis verbis intentionem proferentis exponit et explanat, sicut verba juris, rem quæ est breviter enarrat." (Bracton, l. 1.)

That body of law which was founded on, and flowed from the edicts of the praetors, and curule aediles, was called *ius honorarium*, as opposed to the *ius civile*, in its narrower sense, which comprehended the *leges*, *plebiscita*, *senatus consulta*, &c. The *ius honorarium* introduced new rights and modified existing rights; it also provided remedies suitable to such new rights and modifications of old rights, and this was effected by the actions which the praetors and aediles allowed. On this jurisdiction of the praetors and aediles is founded the distinction of actions into *civiles* and *honorariae*, or, as they are sometimes called, *praetoriae*, from the greater importance of the praetor's jurisdiction.

There were several other divisions of actions, all of which had reference to the forms of procedure.

A division of actions was sometimes made with reference to the object which the plaintiff had in view. If the object was to obtain a thing, the action was called *persecutoria*. If the object was to obtain damages (*poena*) for an injury, as in the case of a thing stolen, the action was *poenalis*; for the thing itself could be claimed both by the *vindictio* and the *condictio*. If the object was to obtain both the thing and damages, it was probably sometimes called *actio mixta*, a term which had however another signification also, as already observed. The division of *actiones* into *directae* and *utiles* must be traced historically to the *actiones fictitiae* or fictions by which the rights of action were enlarged and extended. The origin of this division was in the power assumed by the praetor to grant an action in special cases where no action could legally be brought, and in which an action, if brought, would have been *inanis* or *inutilis*. After the decline of the praetor's power, the *actiones utiles* were still extended by the contrivances of the *juris prudentes* and the rescripts of the emperors. Whenever an *actio utilis* was granted, it was framed on some analogy to a legally recognised right of action. Thus, in the examples given by Gaius (iv. 34), he who obtained the *bonorum possessio* by the praetor's edict, succeeded to the deceased by the praetorian and not the civil law: he had, therefore, no direct action (*directa actio*) in respect of the rights of the deceased, and could only bring his action on the fiction of his being what he was not, namely, *heres*.

Actions were also divided into *ordinariae* and *extraordinariae*. The *ordinariae* were those which were prosecuted in the usual way, first before the praetor, *in iure*, and then before the *iudex*, *in iudicio*. When the whole matter was settled before or by the praetor in a summary way, the name *extraordinaria* was applicable to such action. [INTERDICT.]

The term *condictiones* only applies to personal actions; but not to all personal actions. It does not comprehend actions *ex delicto*, nor *bonae fidei actiones*. As opposed to *bonae fidei actiones*, *condictiones* were sometimes called *actiones stricti iuris*. In the *actiones stricti iuris* it appears that the formula of the praetor expressed in precise and strict terms the matter submitted to the *iudex*, whose authority was thus confined within limits. In the *actiones bonae fidei*, or *ex fide bona* (Cic. *Top.* 17), more latitude was given, either by the formula of the praetor, or was implied in the kind of action, such as the action *ex empto*, *vendito*, *locato*, &c., and the special circumstances of the case were to be taken into consideration by the *iudex*. The *actiones*

arbitrariae were so called from the *iudex* in such case being called an arbiter, probably, as Festus says, because the whole matter in dispute was submitted to his judgment; and he could decide according to the justice and equity of the case, without being fettered by the praetor's formula. It should be observed also, that the *iudex* properly could only condemn in a sum of money; but the arbiter might declare that any particular act should be done by either of the parties, which was called his *arbitrium*, and was followed by the *condemnatio* if it was not obeyed.

The division of actions into *perpetuae* and *temporales* had reference to the time within which an action might be brought, after the right of action had accrued. Originally those actions which were given by a *lex*, *senatus consultum*, or an imperial constitution, might be brought without any limitation as to time; but those which were granted by the praetor's authority were generally limited to the year of his office. A time of limitation was, however, fixed for all actions by the late imperial constitutions.

The division of actions into *actiones in ius* and *in factum* is properly no division of actions, but has merely reference to the nature of the formula. In the formula *in factum concepta*, the praetor might direct the *iudex* barely to inquire as to the fact which was the only matter in issue; and on finding the fact, to make the proper *condemnatio*: as in the case of a freedman bringing an action against his patronus. (Gaius, iv. 46.) In the formula *in ius* the fact was not in issue, but the legal consequences of the fact were submitted to the discretion of the *iudex*. The formula *in factum* commenced with the technical expression, *Si paret*, &c., "If it should appear," &c.; the formula *in ius* commenced, *Quod A. A., &c.*, "Whereas A. A. did so and so." (Gaius, iv. 47.)

The actions which had for their object the punishment of crimes, were considered public; as opposed to those actions by which some particular person claimed a right or compensation, and which were therefore called *privatae*. The former were properly called *iudicia publica*; and the latter, as contrasted with them, were called *iudicia privata*. [JUDICIUM.]

The actions called *noxales* arose when a *filius familias* (a son in the power of his father), or a slave, committed a theft, or did any injury to another. In either case the father or owner might give up the wrong-doer to the person injured, or else he must pay competent damages. These actions, it appears, take their name either from the injury committed, or because the wrong-doer was liable to be given up to punishment (*noxae*) to the person injured. Some of these actions were of legal origin, as that of theft, which was given by the Twelve Tables; that of *damnum injuriae*, which was given by the *Aquilia Lex*; and that of *injuriarum et vi bonorum raptorum*, which was given by the edict, and therefore was of praetorian origin. This instance will serve to show that the Roman division and classification of actions varied according as the Roman writers contemplated the sources of rights of action, or the remedies and the modes of obtaining them.

An action was commenced by the plaintiff summoning the defendant to appear before the praetor or other magistrate who had *iurisdictio*: this process was called *in ius vocatio*; and, according to

the laws of the Twelve Tables, was in effect a dragging of the defendant before the praetor if he refused to go quietly. This rude proceeding was modified in later times, and in many cases there could be no *in ius vocatio* at all, and in other cases it was necessary to obtain the praetor's permission under pain of a penalty. It was also established that a man could not be dragged from his own house; but if a man kept his house void, as we should say, being served with a writ, he ran the risk of a kind of sequestration (*actor in bonis mittibatur*). The object of these rules was to make the defendant appear before the competent jurisdiction; the device of entering an appearance for the defendant does not seem to have suggested itself to the Roman lawyers. (Dig. 2. tit. 4.) If the defendant would not go quietly, the plaintiff called on any bystander to witness (*antestari*) that he had been duly summoned, touched the ear of the witness, and dragged the defendant into court. (Hor. *Serm.* i. 9. 75—78; Plautus, *Curcul.* v. 2.) The parties might settle their dispute on their way to the court, or the defendant might be bailed by a vindex. (Cic. *Top.* 2; Gaius, iv. 46; Gellius, xvi. 10.) The vindex must not be confounded with the *vades*. This settlement of disputes on the way was called *transactio in via*, and serves to explain a passage in St. Matthew (v. 25).*

When before the praetor, the parties were said *iure agere*. The plaintiff then prayed for an action, and if the praetor allowed it (*dabat actionem*), he then declared what action he intended to bring against the defendant, which was called *edere actionem*. This might be done in writing, or orally, or by the plaintiff taking the defendant to the *alium*, and showing him which action he intended to rely on. (Dig. 2. tit. 13.) As the formulae comprehended, or were supposed to comprehend, every possible form of action that could be required by a plaintiff, it was presumed that he could find among all the formulae some one which was adapted to his case, and he was accordingly supposed to be without excuse if he did not take pains to select the proper formula. (Cic. *Pro Ros.* Com. c. 8.) If he took the wrong one, or if he claimed more than his due, he lost his cause (*causa cadebat*, Cic. *De Orat.* i. 36); but the praetor sometimes gave him leave to amend his claim or *intentio*. (Gaius, iv. 53, &c.) If, for example, the contract between the parties was for something *in genere*, and the plaintiff claimed something *in specie*, he lost his action: thus the contract might be, that the defendant undertook to sell the plaintiff a quantity of dye-stuff or a slave; if the plaintiff claimed Tyrian purple, or a particular slave, his action was bad; therefore, says Gaius, according to the terms of the contract so ought the claim of the *intentio* to be. As the formulae were so numerous and comprehensive, the plaintiff had only to select the formula which he supposed to be suitable to his case, and it would require no further variation than the insertion of the names of the parties and of the thing claimed, or the subject-matter of the suit, with the amount of damages, &c., as the case might be. When the praetor had granted an action, the plaintiff required the defendant to give

security for his appearance before the praetor (*in iure*) on a day named, commonly the day but one after the *in ius vocatio*, unless the matter in dispute was settled at once. The defendant, on finding a surety, was said *vades dare* (Hor. *Serm.* i. i. 11), *vadimonium promittere*, or *facere*; the surety, *rus*, was said *spondere*; the plaintiff when satisfied with the surety was said, *vadari reum*, to let him go on his sureties, or to have sureties from him. When the defendant promised to appear *in iure* on the day named, without giving any surety, this was called *vadimonium purum*. In some cases *recuperatores* were named, who, in case of the defendant making default, condemned him in the sum of money named in the *vadimonium*.

If the defendant appeared on the day appointed, he was said *vadimonium sistere*; if he did not appear, he was said *vadimonium deseruisse*, and the praetor gave to the plaintiff the *bonorum possessio*. (Hor. *Serm.* i. 9. 36—41; Cic. *Pro P. Quintio*, c. 6.) Both parties, on the day appointed, were summoned by a crier (*præco*), when the plaintiff made his claim or demand, which was very briefly expressed, and may be considered as corresponding to our declaration at law.

The defendant might either deny the plaintiff's claim, or he might reply to it by a plea, *exceptio*. If he simply denied the plaintiff's claim, the cause was at issue, and a *iudex* might be demanded. The forms of the *exceptio* also were contained in the praetor's edict, or upon hearing the facts the praetor adapted the plea to the case. The *exceptio* was the defendant's defence, and was often merely an equitable answer or plea to the plaintiff's legal demand. The plaintiff might claim a thing upon his contract with the defendant, and the defendant might not deny the contract, but might put in a plea of fraud (*dolus malus*), or that he had been constrained to come to such agreement. The *exceptio* was in effect something which negated the plaintiff's demand, and it was expressed by a negative clause: thus, if the defendant asserted that the plaintiff fraudulently claimed a sum of money which he had not given to the defendant, the *exceptio* would run thus: *Si in ea re nihil dolo male Auli Agerii factum sit neque fiat*. Though the *exceptio* proceeded from the defendant, it was expressed in this form, in order to be adapted for insertion in the formula, and to render the *condemnatio* subject to the condition.

Exceptions were *peremptoriae* or *dilatoriae*. Peremptory exceptions were a complete and perpetual answer to the plaintiff's demand, such as an *exceptio of dolus malus*, or of *res iudicata*. Dilatory exceptions were, as the name imports, merely calculated to delay the plaintiff's demand; as, for instance, by showing that the debt or duty claimed was not yet due. Gaius considers the *exceptio litis dividuae* and *rei residuae* (iv. 122) as belonging to this class. If a plaintiff prosecuted his action after a dilatory exception, he lost altogether his right of action. There might be dilatory exceptions also to the person of the plaintiff, of which class is the *exceptio cognitoria*, by which the defendant objects either that the plaintiff is not intitled to sue by a *cognitor*, or that the *cognitor* whom he had named was not qualified to act as a *cognitor*. If the exception was allowed, the plaintiff could either sue himself, or name a proper *cognitor*, as the case might be. If a defendant neglected to take advantage of a peremptory *exceptio*, the praetor

* It is not easy to state correctly the changes in procedure which took place after the abolition of the *legitimae actiones*. Compare Gaius iv. 25, 46.

might afterwards give him permission to avail himself of it; whether he could do the same in the case of a dilatory was a doubtful question. (Gaius, iv. 125.)

The plaintiff might reply to the defendant's *exceptio*, for the defendant by putting in his plea became an actor. [ACTOR.] The defendant's plea might be good, and a complete answer to the plaintiff's demand, and yet the plaintiff might allege something that would be an answer to the plea. Thus, in the example given by Gaius (iv. 126), if an argentarius claimed the price of a thing sold by auction, the defendant might put in a plea, which, when inserted in the formula, would be of this shape: — *Ut ita demum emptor damnetur, si ei res quam emerit, tradita sit*; and this would be in form a good plea. But if the conditions of sale were that the article should not be handed to the purchaser before the money was paid, the argentarius might put in a *replicatio* in this shape: — *Nisi praedictum est ne aliter emptori res traderetur quam si pretium emptor solverit*. If the defendant answered the *replicatio*, his answer was called *duplicatio*; and the parties might go on to the *triplicatio* and *quadruplicatio*, and even further, if the matters in question were such that they could not otherwise be brought to an issue.

The *praescriptio*, which was so called from being written at the head or beginning of the formula, was adapted for the protection of the plaintiff in certain cases. (Gaius, iv. 130, &c.; Cic. *De Orat.* i. 37.) For instance, if the defendant was bound to make to the plaintiff a certain fixed payment yearly or monthly, the plaintiff had a good cause of action for all the sums of money already due; but in order to avoid making his demand for the future payments not yet due, it was necessary to use a *praescriptio* of the following form: — *Ea res agatur cujus rei dies fuit*.

A person might maintain or defend an action by his *cognitor* or *procurator*, or, as we should say, by his attorney. The plaintiff and defendant used a certain form of words in appointing a cognitor, and it would appear that the appointment was made in the presence of both parties. The cognitor needed not to be present, and his appointment was complete when by his acts he had signified his assent. (Cic. *Pro Q. Roscio*, c. 2; Hor. *Serm.* i. 5. 35.) No form of words was necessary for appointing a *procurator*, and he might be appointed without the knowledge of the opposite party.

In many cases both plaintiff and defendant might be required to give security (*satisfare*); for instance, in the case of an *actio in rem*, the defendant who was in possession was required to give security, in order that if he lost his cause and did not restore the thing, nor pay its estimated value, the plaintiff might have an action against him or his sureties. When the *actio in rem* was prosecuted by the *formula petitoria*, that *stipulatio* was made which was called *judicatum solvi*. As to its prosecution by the *sponsio*, see *SPONSIO* and *CENTUMVIRI*. If the plaintiff sued in his own name, he gave no security; nor was any security required, if a cognitor sued for him, either from the cognitor or the plaintiff himself, for the cognitor was personally liable. But if a procurator acted for him, he was obliged to give security that the plaintiff would adopt his acts; for the plaintiff was not prevented from bringing another action when a procurator acted for him. Tutors and

curators generally gave security like procurators. In the case of an *actio in personam*, the same rules applied to the plaintiff as in the *actio in rem*. If the defendant appeared by a cognitor, the defendant had to give security; if by a procurator, the procurator had to give security.

When the cause was brought to an issue, a *judex* or *judices* might be demanded of the praetor who named or appointed a *judex* and delivered to him the formula which contained his instructions. The *judices* were said *dari* or *addici*. So far the proceedings were said to be *in jure*; the prosecution of the *actio* before the *judex* requires a separate discussion. [JUDICIUM.]

The following is an example of a formula taken from Gaius (iv. 47): — *Judex esto. Si paret Aulum Agerium apud Numerium Negidium mensam argenteam deponuisse eamque dolo malo Numerii Negidii Aulo Agerio reddidit non esse quanti ea res erit tantam pecuniam judex Numerium Negidium Aulo Agerio condemnato: si non paret, absolvo*.

The nature of the formula, however, will be better understood from the following analysis of it by Gaius: — It consisted of four parts, the *demonstratio*, *intentio*, *adjudicatio*, *condemnatio*. The *demonstratio* is that part of the formula which explains what the subject-matter of the action is. For instance, if the subject-matter be a slave sold, the *demonstratio* would run thus: — *Quod Aulus Agerius Numerio Negidio hominem vendidit*. The *intentio* contains the claim or demand of the plaintiff: — *Si paret hominem ex jure Quiritium Auli Agerii esse*. The *adjudicatio* is that part of the formula which gives the *judex* authority to adjudicate the thing which is the subject of dispute to one or other of the litigant parties. If the action be among partners for dividing that which belongs to them all, the adjudication would run thus: — *Quantum adjudicari oportet judex Titio adjudicato*. The *condemnatio* is that part of the formula which gives the *judex* authority to condemn the defendant in a sum of money, or to acquit him: for example, *Judex Numerium Negidium Aulo Agerio aesterium milia condemnato: si non paret, absolvo*. Sometimes the *intentio* alone was requisite, as in the formulae called *praedjudiciales* (which some modern writers make a class of actions), in which the matter for inquiry was, whether a certain person was a freedman, what was the amount of a *dos*, and other similar questions, when a fact solely was the thing to be ascertained.

Whenever the formula contained the *condemnatio*, it was framed with the view to pecuniary damages; and accordingly, even when the plaintiff claimed a particular thing, the *judex* did not adjudge the defendant to give the thing, as was the ancient practice at Rome, but condemned him in a sum of money equivalent to the value of the thing. The formula might either name a fixed sum, or leave the estimation of the value of the thing to the *judex*, who in all cases, however, was bound to name a definite sum in the condemnation.

The formula then contained the pleadings, or the statements and counter-statements, of the plaintiff and the defendant; for the *intentio*, as we have seen, was the plaintiff's declaration; and if this was met by a plea, it was necessary that this also should be inserted in the formula. The formula also contained the directions for the *judex*, and gave him the power to act. The English and Roman procedure are severally stated in Mr.

Spence's work on the *Equitable Jurisdiction of the Court of Chancery*, pp. 206—235. The Roman forms of procedure underwent various changes in the course of time, which it is not very easy to describe; but it has been remarked by Hollweg (*Handbuch des Civilprocesses*, p. 19) that the system of procedure maintained itself in all essential particulars unaltered for many centuries, and what we learn from Cicero (B. C. 70) is almost the same as what we learn from Gaius (A. D. 160). Modern writers, however, differ on various points; and the subject requires a complete examination from one who is fully acquainted with the Roman law, and practically versed in the nature of legal proceedings generally.

The following are the principal actions which we read of in the Roman writers, and which are briefly described under their several heads:—*Actio*—*Aquae pluviae arcendae*; *Bonorum vi aptorum*; *Certi et Incerti*; *Commodati*; *Communni dividundo*; *Confessoria*; *Damni injuria dati*; *Dejecti vel effusi*; *Depensi*; *Depositum*; *De dolo malo*; *Emti et venditi*; *Exercitoria*; *Ad Exhibendum*; *Familiae erciscundae*; *Fiduciaria*; *Finiem regundorum*; *Furti*; *Hypothecaria*; *Injuriarum*; *Institoria*; *Judicati*; *Quod jussu*; *Legis Aquiliae*; *Locati et conducti*; *Mandati*; *Mutui*; *Negativa*; *Negotiorum gestorum*; *Noxalis*; *De pignus*; *De peculio*; *Pignoratitia*, or *Pignoratitia*; *Publiciana*; *Quanti minoris*; *Rationibus distrahendis*; *De recepto*; *Redhibitoria*; *Rei uxoriae*, or *Dotis*; *Restitutoria* and *Rescissoria*; *Rutiliana*; *Serviana*; *Pro socio*; *Tributoria*; *Tutela*. [G. L.]

ACTOR signified generally a plaintiff. In a civil or private action, the plaintiff was often called *petitor*; in a public action (*causa publica*), he was called *accusator*. (Cic. *ad Att.* i. 16.) The defendant was called *reus*, both in private and public cases: this term, however, according to Cicero (*De Orat.* ii. 43), might signify either party, as indeed we might conclude from the word itself. In a private action, the defendant was often called *adversarius*, but either party might be called *adversarius* with respect to the other. Originally, no person who was not *sui juris* could maintain an action; a *filius familias*, therefore, and a slave, could not maintain an action; but in course of time certain actions were allowed to a *filius familias* in the absence of his parent or his procurator, and also in case the parent was incompetent to act from madness or other like cause. (Dig. 47. tit. 10. s. 17.) Wards (*puilli*) brought their actions by their tutor (*tutor*); and in case they wished to bring an action against their tutor, the praetor named a tutor for the purpose. (Gaius, i. 184.) *Pergrini*, or aliens, originally brought their action through their patronus; but afterwards in their own name, by a fiction of law, that they were Roman citizens. A Roman citizen might also generally bring his action by means of a cognitor or procurator. [*Actio*.] A *universitas* or corporate body, sued and was sued by their *actor* or *judicus*. (Dig. 3. tit. 4.)

Actor has also the sense of an agent or manager of another's business generally. The *actor publicus* was an officer who had the superintendence or care of slaves belonging to the state. Lipsius says that the *actor publicus* was a slave or freedman. A slave could acquire property for others, though not for himself. In the case mentioned by Pliny (*Ep.* vii.

18), the *actor publicus* was the representative of the community (*respublica*) of Comum. (Tacit. *Ann.* ii. 30, iii. 67; Lips. *Escur.* ad Tacit. *Ann.* ii. 30.) [G. L.]

ACTUARIAE NAVES. [NAVIS.]

ACTUARIAE, or **ACTARIAE**, clerks who compiled the *Acta Publica*. [*Acta*, p. 8, b.] The name is also sometimes given to the *Notarii*, or short-hand writers, who took down the speeches in the senate and the courts (Suet. *Jul.* 55; Sen. *Ep.* 33); respecting whom and the use of shorthand among the Romans, see **NOTARI**.

2. Military officers whose duty it was to keep the accounts of the army, to see that the contractors supplied the soldiers with provisions according to agreement, &c. (Amm. Marc. xx. 5; Cod. 12. tit. 37. s. 5. 16; 12. tit. 49.)

3. The title of certain physicians at the court of Constantinople. [**MEDICUS**.]

ACTUS, a Roman measure of land, which formed the basis of the whole system of land measurement. In that system the name *actus* (from *ago*), which originally meant a way between fields for beasts of burthen to pass (or, as some say, the length of a furrow), was given to such a way when of a definite width and length, and also to a square piece of land of the same length. The former was called *actus minimus* or *simplex*, and was 120 feet (Roman) long by 4 feet wide. (Varro, *L. L.* iv. 4, or v. 34, Müller; Colum. v. 1. § 5, ed. Schneider; Festus, s. v. *iter inter vicinos IV. pedum latum*.) The *actus quadratus*, which was the square unit in the system of Roman land-measurement, was of the same length as the *actus minimus*, and of a width equal to its length: it was thus 120 feet square, and contained 14,400 square feet. It was the half of a juger. (Colum. *l. c.*; Varro, *l. c.*, and *R. R.* i. 10. § 2, ed. Schneider.) The following are the etymological explanations of the word: *Actus vocabatur, in quo boves agerentur cum aratro, uno impetu jundo* (Plin. xviii. 3); *Ut ager quo agi poterat, sic qua agi actus*. (Varro, *L. L.* *l. c.*) The *actus* furnishes an example of the use of the number twelve among the Romans, its length being twelve times the standard **DECEMPEDA**. Columella (*l. c.* § 6) says that the Gauls called the *actus quadratus, aripennis*; but this could only be an approximate identification, for the *actus quadratus* is somewhat smaller than the great French *arpent* and much larger than the small *arpent*. (Compare **ACNA**; Niebuhr, *Hist. of Rome*, vol. ii. Appendix I.) [P. S.]

ACTUS. [**SERVITUTES**.]

ACUS (βελόνη, βελονίς, βελός), a needle, a pin. The annexed figures of needles and pins, chiefly

taken from originals in bronze, vary in length from an inch and a half to about eight inches.

Pins were made not only of metal, but also of wood, bone, and ivory. They were used for the same purposes as with us, and also in dressing the hair. (Mart. xiv. 24.) The mode of plating the hair, and then fastening it with a pin or needle, is shown in the annexed figure of a female head, taken from a marble group which was found at Apt, in the south of France. (Montfaucon, *Ant. Exp. Suppl.* iii. 3.) This fashion has been con-

tinued to our own times by the females of Italy, and of some parts of Germany, as for instance, in the neighbourhood of Coblenz.

ADDICTI. [NEXI.]

ADDICTIO. [ACTIO.]

ADDIX (ἄδιξ, ἄδιξις), a Greek measure of capacity, equal to four χοίνικες. (Hezych. s. v.; Schol. ad Hom. Od. 19.) [P. S.]

ADEIA (ἄδεια), freedom from fear, or security, in any public action. When any one in Athens, who had not the full privileges of an Athenian citizen, such as a foreigner, a slave, &c., wished to accuse a person of any offence against the people, he was obliged to obtain first permission to do so, which permission was called *adeia*. (Plut. *Pericl.* 31.)

An Athenian citizen who had incurred *atimia*, was also obliged to obtain *adeia* before he could take part in public affairs (Plut. *Phoc.* 26); and it was not lawful for any one to propose to the people, that an *atimus* should be restored to his rights as a citizen, or that a public debtor should be released from his debt, till *adeia* had been granted for this purpose by a decree passed in an assembly of 6000 citizens voting secretly by ballot. (Dem. c. *Timocr.* p. 715; Andoc. *de Myst.* p. 36; Böckh, *Public Economy of Athens*, p. 392, 2d ed.)

ADE/PTIO. [LEGATUM.]

ADGNA'TI. [COGNATI.]

ADGNA'TIO. [HERES; TESTAMENTUM.]

ADIT'IO HEREDITATIS. [HERES.]

ADJUDICA'TIO. [ACTIO.]

ADLEC'TI or ALLEC'TI. 1. Those who were chosen to fill up a vacancy in any office or collegium, and especially those who were chosen to fill up the proper number of the senate. As these would be generally equites, Festus (s. v.) defines the *adlecti* to be equites added to the senate: and he appears in this passage to make a difference between the *adlecti* and *conscripti*. But they were probably the same; for in another passage (s. v. *conscripti*), he gives the same definition of the con-

scripti as he had done of the *adlecti*, and Livy (il. 1) says *conscriptos in novum senatum appellabant lectos*.

2. Those persons under the empire who were admitted to the privileges and honours of the praetorship, quaestorship, aedileship, and other public offices, without having any duties to perform. (Capitolin. *Pertin.* 6.) In inscriptions we constantly find, *adlectus inter tribunos, inter quaestores, inter praetores, &c.*

ADLECTOR, a collector of taxes in the provinces in the time of the Roman emperors. (Cod. Theod. 12. tit. 6. s. 12.)

ADMISSIONA'LES were chamberlains at the imperial court, who introduced persons to the presence of the emperor. (Lamprid. *Sever.* 4; *officium admissionis*, Suet. *Vesp.* 14.) They were divided into four classes; the chief officer of each class was called *proximus admissionum* (Amm. Marc. xxii. 7); and the *proximi* were under the *magister admissionum*. (Amm. Marc. xv. 5; Vop. *Aurel.* 12.) The *admissionales* were usually freedmen. (Cod. Theod. 6. tit. 2. s. 12; tit. 9. s. 2; tit. 35. s. 3.)

Friends appear to have been called *amici admissionis primae, secundae, or tertiae*. According to some writers, they were so called in consequence of the order in which they were admitted; according to others, because the *atrium* was divided into different parts, separated from one another by hangings, into which persons were admitted according to the different degrees of favour in which they were held. (Sen. *de Benef.* vi. 33, 34, *Clem.* i. 10.)

ADOLESCENS. [INFANS.]

ADO'NIA (Ἀδώνια), a festival celebrated in honour of Aphrodite and Adonis in most of the Grecian cities, as well as in numerous places in the East. It lasted two days, and was celebrated by women exclusively. On the first day they brought into the streets statues of Adonis, which were laid out as corpses; and they observed all the rites customary at funerals, beating themselves and uttering lamentations. The second day was spent in merriment and feasting; because Adonis was allowed to return to life, and spend half of the year with Aphrodite. (Aristoph. *Pax*, 412, Schol. ad loc.; Plut. *Alcib.* 18, *Nic.* 13.) For fuller particulars respecting the worship and festivals of Adonis, see *Dict. of Biogr.* s. v. *Adonis*.

ADO'PTIO, adoption. 1. GREEK, was called by the Athenians *εισποίησις*, or sometimes simply *ποίησις* or *δέξις*. The Greek writers use *δέξις* also as equivalent to the Roman *adoptio*, and *δεροι* as equivalent to *adoptivi*. (App. B. C. iii. 13, 14.) The adoptive father was said *ποιεῖσθαι, εἰσποιεῖσθαι*, or sometimes *ποιεῖν*; and the father or mother (for a mother after the death of her husband could consent to her son being adopted) was said *ἐκποιεῖν*: the son was said *ἐκποιεῖσθαι*, with reference to the family which he left; and *εἰσποιεῖσθαι*, with reference to the family into which he was received. The son, when adopted, was called *ποιητός, εἰσποιητός, or δερός*: in opposition to the legitimate son born of the body of the father, who was called *γνήσιος*.

A man might adopt a son either in his lifetime or by his testament, provided he had no male offspring and was of sound mind. He might also, by testament, name a person to take his property, in case his son or sons should die under age. (Dem.

κατὰ Στεφάνου Ψευδ. 13.) If he ad male offspring, he could not dispose of his property. This rule of law was closely connected with the rule as to adoption; for if he could have adopted a son when he had male children, such son would have shared his property with the rest of his male children, and to that extent the father would have exercised a power of disposition which the law denied him.

Only Athenian citizens could be adopted; but females could be adopted (by testament at least) as well as males. (Isæus, *Περὶ τοῦ Ἀγρίου Κλήρου*.) The adopted child was transferred from his own family and demus into those of the adoptive father; he inherited his property and maintained the *sacra* of his adoptive father. It was not necessary for him to take his new father's name, but he was registered as his son. The adopted son might return to his former family, in case he left a child to represent the family of his adoptive father: unless he so returned, he lost all right which he might have had on his father's side if he had not been adopted; but he retained all rights which he might have on his mother's side, for the act of adoption had no effect so far as concerned the mother of the adopted person; she still continued his mother after the act of adoption.

The next of kin of an Athenian citizen were entitled to his property if he made no disposition of it by will, or made no valid adoption during his lifetime; they were, therefore, interested in preventing fraudulent adoptions. The whole community were also interested in preventing the introduction into their body of a person who was not an Athenian citizen. To protect the rights of the next of kin against unjust claims by persons who alleged themselves to be adopted sons, it was required that the father should enter his son, whether born of his body or adopted, in the register of his *phratris* (*φρατρικὸν γραμματεῖον*) at a certain time, the Thargelia (Isæus, *Περὶ τοῦ Ἀπολλοδώρ. Κλήρου*, 3, 5), with the privacy of his kinsmen and *phratores* (*γεννῆται, φράτορες*). Subsequently to this, it was necessary to enter him in the register of the adoptive father's demus (*ληξιαρχικὸν γραμματεῖον*), without which registration it appears that he did not possess the full rights of citizenship as a member of his new demus.

If the adoption was by testament, registration was also required, which we may presume that the person himself might procure to be done, if he was of age, or, if not, his guardian or next friend. If a dispute arose as to the property of the deceased (*εἰς τὸν διαδικασίαν*) between the son adopted by testament and the next of kin, there could properly be no registration of the adopted son until the testament was established. If a man died childless and intestate, his next of kin, according to the Athenian rules of succession (Dem. *Πρὸς Λεωχ.* c. 6), took his property by the right of blood (*ἐκ γένεως κατὰ γένος*). Though registration might in this case also be required, there was no adoption properly so called, as some modern writers suppose; for the next of kin necessarily belonged to the family of the intestate.

The rules as to adoption among the Athenians are not quite free from difficulty, and it is not easy to avoid all error in stating them. The general doctrines may be mainly deduced from the orations of Isæus, and those of Demosthenes against Macartatus and Leochares.

2. ROMAN. The Roman term was *adoptio* or *adoptatio*. (Gell. v. 19.) The Roman relation of parent and child arose either from a lawful marriage or from adoption. *Adoptio* was the general name which comprehended the two species, *adoptio* and *adrogatio*; and as the adopted person passed from his own familia into that of the person adopting, *adoptio* caused a *capitis diminutio*, and the lowest of the three kinds. Adoption, in its specific sense, was the ceremony by which a person who was in the power of his parent (*in potestate parentum*), whether child or grandchild, male or female, was transferred to the power of the person adopting him. It was effected under the authority of a magistrate (*magistratus*), the praetor, for instance, at Rome, or a governor (*praeses*) in the provinces. The person to be adopted was mancipated [MANCIPATIO] by his natural father before the competent authority, and surrendered to the adoptive father by the legal form called *in jure cessio*. (Gell. v. 19; Suet. *Aug.* 64.)

When a person was not in the power of his parent (*sui juris*), the ceremony of adoption was called *adrogatio*. Originally, it could only be effected at Rome, and only by a vote of the *populus* (*populi auctoritate*) in the *comitia curiata* (*lege curiata*); the reason of this being that the *caput* or status of a Roman citizen could not, according to the laws of the Twelve Tables, be affected except by a vote of the *populus* in the *comitia curiata*. Clodius, the enemy of Cicero, was adrogated into a plebeian family by a *lex curiata*, in order to qualify himself to be elected a *tribunus plebis*. (Cic. *ad Att.* ii. 7, *p. Dom.*) Females could not be adopted by the *adrogatio*. Under the emperors it became the practice to effect the *adrogatio* by an imperial rescript (*principis auctoritate, ex rescripto principis*); but this practice had not become established in the time of Gaius, or, as it appears, of Ulpian. (Compare Gaius, i. 98, with Gaius as cited in Dig. i. tit. 7. s. 2; and Ulpian, *Frag.* tit. 8.) It would seem, however, from a passage in Tacitus (*Hist.* i. 15), that Galba adopted a successor without the ceremony of the *adrogatio*. By a rescript of the Emperor Antoninus Pius, addressed to the pontifices, those who were under age (*impuberes*), or wards (*pupilli*), could, with certain restrictions, be adopted by the *adrogatio*. If a father who had children in his power consented to be adopted by another person, both himself and his children became in the power of the adoptive father. All the property of the adopted son became at once the property of the adoptive father. (Gaius, ii. 98.) A person could not legally be adopted by the *adrogatio* till he had made out a satisfactory case (*justa, bona, causa*) to the pontifices, who had the right of insisting on certain preliminary conditions. This power of the pontifices was probably founded on their right to preserve the due observance of the *sacra* of each gens. (Cic. *p. Dom.* 13, &c.) It would accordingly have been a good ground of refusing their consent to an *adrogatio*, if the person to be adopted was the only male of his gens, for the *sacra* would in such case be lost. It was required that the adoptive father also had no children, and no reasonable hopes of any; and that he should be older than the person to be adopted. It is generally assumed that all *adrogations* were made before the *curiae*. Gaius, however, and Ulpian use the expressions *per populum, auctoritate populi*, expressions

of very doubtful import with reference to their period. After the comitia curiata fell into disuse, it is most probable that there was no formal assembly of the curiae, and that they were represented by the thirty lictors.

A woman could not adopt a person, for even her own children were not in her power.

The rules as to adoption which the legislation of Justinian established, are contained in the Institutes (i. tit. 11).

The effect of adoption, as already stated, was to create the legal relation of father and son, just as if the adopted son were born of the blood of the adoptive father in lawful marriage. The adopted child was intitled to the name and *sacra privata* of the adopting parent, and it appears that the preservation of the *sacra privata*, which by the laws of the Twelve Tables were made perpetual, was frequently one of the reasons for a childless person adopting a son. In case of intestacy, the adopted child would be the heres of his adoptive father. He became the brother of his adoptive father's daughter, and therefore could not marry her; but he did not become the son of the adoptive father's wife, for adoption only gave to the adopted son the *jura agnationis*. (Gaius, i. 97—107; Dig. i. tit. 7; Cic. *p. Domo*.)

The phrase of "adoption by testament" (Cic. *Brut.* 58) seems to be rather a misapplication of the term; for though a man or woman might by testament name a heres, and impose the condition of the heres taking the name of the testator or testatrix, this so-called adoption could not produce the effects of a proper adoption. It could give to the person so said to be adopted, the name or property of the testator or testatrix, but nothing more. Niebuhr (*Lectures*, vol. ii. p. 100) speaks of the testamentary adoption of C. Octavius by C. Julius Caesar, as the first that he knew of; but the passage of Cicero in the *Brutus* and another passage (*Ad Hirt.* viii. 8), show that other instances had occurred before. A person on passing from one gens into another, and taking the name of his new familia, generally retained the name of his old gens also, with the addition to it of the termination *anus*. (Cic. *ad Att.* iii. 20, and the note of Victorius.) Thus, C. Octavius, afterwards the Emperor Augustus, upon being adopted by the testament of his uncle the dictator, assumed the name of Caius Julius Caesar Octavianus; but he caused the adoption to be confirmed by the curiae. As to the testamentary adoption of C. Octavius, see Drumann, *Geschichte Roms*, vol. i. p. 337, and the references there given. Livia was adopted into the Julia gens by the testament of Augustus (Tac. *Ann.* i. 8); and it was not stated that this required any confirmation. But things were changed then. The *Lex Julia et Papia Poppaea* gave certain privileges to those who had children, among which privileges was a preference in being appointed to the praetorship and such offices. This led to an abuse of the practice of adoption; for childless persons adopted children in order to qualify themselves for such offices, and then emancipated their adopted children. This abuse was checked by a senatus consultum in the time of Nero. (Tac. *Ann.* xv. 19; Cic. *de Off.* iii. 18, *ad Att.* vii. 8; Suet. *Jul. Cues.* 83, *Tib.* 2, &c.; Heinec. *Synagoga*; Dig. 36. tit. 1. a. 63.) [G. L.]

ADORA'TIO (*προσκύνησις*) was paid to the gods in the following manner:—The person

stretched out his right hand to the statue of the god whom he wished to honour, then kissed his hand and waved it to the statue. While doing this he moved round his whole body, for which custom Plutarch (*Nem.* 14) gives some curious reasons; but the true reason probably was, that the person might be the more surely put into communication with the deity, as it was uncertain where he would reveal himself as the *deus praesens*. It was also the practice to have the head and ears covered, so that only the forehead and the face remained uncovered. (Plin. *N. H.* xxviii. 5; Minucius Felix, 2; Lucret. v. 1197.) The *adoratio* differed from the *oratio* or prayers, which were offered with the hands folded together and stretched out to the gods, the natural attitude prescribed by nature to the suppliant, and which we find mentioned by Homer. (*Il.* vii. 177; *ἑντρίδ-ματα χερῶν*, Aesch. *Prom.* 1004; *caelo supinas ferre manus*, Hor. *Carm.* iii. 23. 1.) The adoration paid to the Roman emperors was borrowed from the eastern mode of adoration, and consisted in prostration on the ground, and kissing the feet and knees of the emperor.

ADSTIPULAT'OR. [INTERCESSIO.]

ADULTUS. [INFANS.]

ADULTER'IUM, adultery. I. GREEK.

Among the Athenians, if a man caught another man in the act of criminal intercourse (*μοιχεία*) with his wife, he might kill him with impunity; and the law was also the same with respect to a concubine (*παλλακή*). He might also inflict other punishment on the offender. It appears that among the Athenians there was no adultery, unless a married woman was concerned. (Lysias, *τὴν τοῦ Ἐπαρορθένους φόνου*.) But it was no adultery for a man to have connection with a married woman who prostituted herself, or who was engaged in selling any thing in the agora. (Demosth. *κατὰ Νεαλπας*, c. 18.) The Roman law appears to have been pretty nearly the same. (Paulus, *Sent. Recept.* vi. tit. 26.) The husband might, if he pleased, take a sum of money from the adulterer by way of compensation, and detain him till he found sureties for the payment. If the alleged adulterer had been unjustly detained, he might bring an action against the husband; and, if he gained his cause, he and his sureties were released. If he failed, the law required the sureties to deliver up the adulterer to the husband before the court, to do what he pleased with him, except that he was not to use a knife or dagger. (Demosth. *κατὰ Νεαλπ.* 18.)

The husband might also prosecute the adulterer in the action called *μοιχείας γραφή*. If the act of adultery was proved, the husband could no longer cohabit with his wife under pain of losing his privileges of a citizen (*ἀριμτία*). The adulteress was excluded even from those temples which foreign women and slaves were allowed to enter; and if she was seen there, any one might treat her as he pleased, provided he did not kill her or mutilate her. (Dem. *κατὰ Νεαλπ.* c. 22; Aeschin. *κατὰ Τιμόδωχ.* c. 36.)

2. ROMAN. Adulterium properly signifies, in the Roman law, the offence committed by a man, married or unmarried, having sexual intercourse with another man's wife. Stuprum (called by the Greeks *φθορά*) signifies the commerce with a widow or a virgin. It was the condition of the female which determined the legal character of adultery; there was no adultery unless the female was married. It is stated, however (Dig. 48. tit. 5. s. 13), that a woman might commit adultery whether she was "*justa uxor sive injusta*," the meaning of which is not quite certain; but probably it means whether she was living in a marriage recognised as a marriage by the Roman law or merely by the *jus gentium*. The male who committed adultery was *adulter*, the female was *adultera*. The Latin writers were puzzled about the etymology of the word *adulterium*; but if we look to its various significations besides that of illegal sexual commerce, we may safely refer it to the same root as that which appears in *adulatus*. The notion is that of "growing to," "fixing," or "fastening to," one thing on another and extraneous thing; hence, among other meanings, the Romans used *adulterium* and *adulteratio* as we use the word "adulteration," to express the corrupting of a thing by mixing something with it of less value.

In the time of Augustus a law was enacted (probably a.c. 17), intitled *Lex Julia de Adultæris cœrœndis*, the first chapter of which repealed some prior enactments on the same subject, with the provisions of which prior enactments we are, however, unacquainted. Horace (*Comm.* iv. 6. 21) alludes to the Julian law. In this law, the terms *adulterium* and *stuprum* are used indifferently; but, strictly speaking, these two terms differed as above stated. The chief provisions of this law may be collected from the Digest (48. tit. 5), from Paulus (*Senten. Recapt.* ii. tit. 26, ed. Schulting), and Brissotius (*Ad Legem Juliam De Adultæris*, Lib. Sing.).

It seems not unlikely that the enactments repealed by the Julian law contained special penal provisions against adultery; and it is also not improbable that, by the old law or custom, if the adulterer was caught in the fact, he was at the mercy of the injured husband, and that the husband might punish with death his adulterous wife. (*Diogenes* ii. 25; *Suet.* *Tib.* 35.) It seems, also, that originally the act of adultery might be prosecuted by any person, as being a public offence; but under the emperors the right of prosecution was limited to the husband, father, brother, patron, and avunculus of the adulteress.

By the Julian law, if a husband kept his wife after an act of adultery was known to him, and let the adulterer off, he was guilty of the offence of *lenocinium*. The husband or father in whose power the adulteress was, had sixty days allowed for commencing proceedings against the wife, after which time any other person might prosecute. (*Tacit. Ann.* ii. 85.) A woman convicted of adultery was mulcted in half of her *dos* and the third part of her property (*bona*), and banished (*relegata*) to some miserable island, such as *Scripsa*, for instance. The adulterer was mulcted in half his property, and banished in like manner, but not to the same island as the woman. The adulterer and adulteress were subjected also to civil incapacities; but this law did not inflict the punishment of death on either party; and in those

instances under the emperors in which death was inflicted, it must be considered as an extraordinary punishment, and beyond the provisions of the Julian law. (*Tacit. Ann.* ii. 50, iii. 24; *J. Lips. Excurs. ad Tacit. Ann.* iv. 42; *Noordt, Op. Omn.* i. 286, &c.) But by a constitution of Constantine (*Cod.* ix. 30, if it is genuine), the offence in the adulterer was made capital. By the legislation of Justinian (*Nov.* 134. c. 10), the law of Constantine was probably only confirmed; but the adulteress was put into a convent, after being first whipped. If her husband did not take her out in two years, she was compelled to assume the habit, and to spend the rest of her life in the convent.

The Julian law permitted the father (both adoptive and natural) to kill the adulterer and adulteress in certain cases, as to which there were several nice distinctions established by the law. If the father killed only one of the parties, he brought himself within the penalties of the Cornelian law *De Sicariis*. The husband might kill persons of a certain class, described in the law, whom he caught in the act of adultery with his wife; but he could not kill his wife. The husband, by the fifth chapter of the Julian law, could detain for twenty hours the adulterer whom he had caught in the fact, for the purpose of calling in witnesses to prove the adultery. If the wife was divorced for adultery, the husband was intitled to retain part of the *dos*. (*Ulpian, Fr.* vi. 12.) The authorities for the *Lex Julia de Adultæris*, both ancient and modern, are collected by Rein, *Das Criminalrecht der Römer*, 1844. [G. L.]

ADVERSA'RIA, note-book, memorandum-book, posting-book, in which the Romans entered memoranda of any importance, especially of money received and expended, which were afterwards transcribed, usually every month, into a kind of ledger. (*Tabulas justas, codas accepti et expensi*.) They were probably called *Adversaria*, because they lay always open before the eyes. (*Cic. p. Rosc. Com.* 3; *Prop.* iii. 23. 20.)

ADVERSA'RIUS. [ACTOR.]

ADU'NATI (*ἀδυνάτοι*), persons supported by the Athenian state, who, on account of infirmity or bodily defects, were unable to obtain a livelihood. The sum which they received from the state appears to have varied at different times. In the time of Lysias and Aristotle, one obolus a day was given; but it appears to have been afterwards increased to two oboli. The bounty was restricted to persons whose property was under three minæ. It was awarded by a decree of the people; but the examination of the individuals belonged to the senate of the Five Hundred: the payments were made by *prytaneis*. Peisistratus is said to have been the first to introduce a law for the maintenance of those persons who had been mutilated in war; but, according to others, this provision derived its origin from a law of Solon. (*Plut. Solon.* 31; *Schol. ad Aesch.* vol. iii. p. 738, ed. Reiske; *Aesch. c. Tim.* p. 123; *Harpocrat. Suid. Hesych. s. v.*; *Lysias*, *τὴν τοῦ Ἀδυνάτου*, a speech written for an individual in order to prove that he was intitled to be supported by the state; *Böckh, Public Econ. of Athens*, p. 242, &c. 2nd edit.)

ADVOCATUS seems originally to have signified any person who gave another his aid in any affair or business, as a witness for instance (*Varr. De Re Rust.* ii. c. 5); or for the purpose of aiding and protecting him in taking possession of a piece

of property. (Cic. *pro Caelio*. c. 8.) It was also used to express a person who gave his advice and aid to another in the management of a cause, as a *jurisconsultus* did; but the word did not signify the orator or patronus who made the speech (Cic. *de Orat.* ii. 74) in the time of Cicero. Under the emperors, it signified a person who in any way assisted in the conduct of a cause (Dig. 50. tit. 13. s. 1), and was sometimes equivalent to orator. (Tacit. *Ann.* x. 6.) The advocate had then a fee, which was called *honorarium*. [ORATOR, PATRONUS, LEX CINGLA.]

The *advocatus* is defined by Ulpian (Dig. 50. tit. 13) to be any person who aids another in the conduct of a suit or action; but under the empire the *jurisconsulti* no longer acted as advocates, in the old sense of that term. They had attained a higher position than that which they held under the republic.

The *advocatus fisci* was an important officer established by Hadrianus. (Spart. *Hadrian.* 60.) It was his business to look after the interests of the *fiscus* or the imperial treasury, and, among other things, to maintain its title to *bona caduca*. The various meanings of *advocatus* in the Middle Ages are given by Du Cange, *Gloss.* (Dig. 28. tit. 4. s. 3; Hollweg, *Handbuch des Civilprocesses*, p. 196.) [G. L.]

A'DYTUM. [TEPLUM.]

AEACEIA (*αἰακεία*), a festival of the Aeginetans in honour of Aeacus, the details of which are not known. The victor in the games which were solemnised on the occasion, consecrated his chaplet in the magnificent temple of Aeacus. (Schol. *ad Pind. Ol.* vii. 156, xiii. 155; Müller, *Aeginetia*, p. 140.) [L. S.]

AEDS. [DOMUS; TEPLUM.]

AEDS VITI'OSAE, RUINO'SAE. [DAMNUM INFECTUM.]

AEDI'CU'LAE, signifies in the singular, a room, but in the plural, a small house. It is, however, more frequently used in the sense of a shrine, attached to the walls of temples or houses, in which the statue of a deity was placed. The *aediculae* attached to houses, sometimes contained the penates of the house, but more frequently the guardian gods of the street in which they were placed. (Liv. xxxv. 41; Petron. 29.)

AEDI'LES (*ἀγορανόμοι*). The name of these functionaries is said to be derived from their having the care of the temple (*aedes*) of Ceres. The aediles were originally two in number, and called aediles plebei; they were elected from the plebes, and the institution of the office dates from the same time as that of the *tribuni plebis*, a. c. 494. Their duties at first seem to have been merely ministerial; they were the assistants of the tribunes in such matters as the tribunes entrusted to them, among which are enumerated the hearing of causes of smaller importance. At an early period after their institution (a. c. 446), we find them appointed the keepers of the *senatus consulta*, which the consuls had hitherto arbitrarily suppressed or altered. (Liv. iii. 55.) They were also the keepers of the *plebiscita*. Other functions were gradually entrusted to them, and it is not always easy to distinguish their duties from some of those which belong to the censors; nor to distinguish all the duties of the plebeian and curule aediles, after the establishment of the curule aedileship. They had the general superintendence

of buildings, both sacred and private: under this power they provided for the support and repair of temples, curiae, &c., and took care that private buildings which were in a ruinous state (*aedes vitiosae, ruinosae*) were repaired by the owners, or pulled down. The superintendence over the supply and distribution of water at Rome was, at an early period, a matter of public administration. According to Frontinus, this was the duty of the censors; but when there were no censors, it was within the province of the aediles. The care of each particular source or supply was farmed to undertakers (*redemptores*), and all that they did was subject to the approbation of the censors or the aediles. (*De Aquaeduct. Rom.* lib. ii.) The care of the streets and pavements, with the cleansing and draining of the city, belonged to the aediles, and the care of the *cloacae*. They had the office of distributing corn among the plebes, which was sometimes given gratuitously, sometimes sold at a cheap rate; but this distribution of corn at Rome must not be confounded with the duty of purchasing or procuring it from foreign parts, which was performed by the consuls, quaestors, and praetors, and sometimes by an extraordinary magistrate, as the praefectus annonae. The aediles had to see that the public lands were not improperly used, and that the pasture-grounds of the state were not trespassed on; and they had power to punish by fine any unlawful act in this respect. The fines were employed in paving roads, and in other public purposes. They had a general superintendence over buying and selling, and, as a consequence, the supervision of the markets, of things exposed to sale, such as slaves, and of weights and measures: from this part of their duty is derived the name under which the aediles are mentioned by the Greek writers (*ἀγορανόμοι*). It was their business to see that no new deities or religious rites were introduced into the city, to look after the observance of religious ceremonies, and the celebrations of the ancient feasts and festivals. The general superintendence of police comprehended the duty of preserving order, decency, and the inspection of the baths, and houses of entertainment, of brothels, and of prostitutes. The aediles had various officers under them, as praeco'es, scribae, and viatores.

The Aediles Curules, who were also two in number, were originally chosen only from the patricians, afterwards alternately from the patricians and the plebes, and at last indifferently from both. (Liv. vii. 1.) The office of curule aediles was instituted a. c. 365, and, according to Livy on the occasion of the plebeian aediles refusing to consent to celebrate the *ludi maximi* for the space of four days instead of three; upon which a *senatus consultum* was passed, by which two aediles were to be chosen from the patricians. From this time four aediles, two plebeian and two curule, were annually elected. (Liv. vi. 42.) The distinctive honours of the aediles curules were, the *sella curulis*, from whence their title is derived, the *toga praetexta*, precedence in speaking in the senate, and the *jus imaginum*. (Cic. *Verr.* v. 14.) Only the aediles curules had the *jus edicendi*, or the power of promulgating edicts (Gaius, i. 6); but the rules comprised in their edicts served for the guidance of all the aediles. The edicts of the curule aediles were founded on their authority as superintendents of the markets,

and of buying and selling in general. Accordingly, their edicts had mainly, or perhaps solely, reference to the rules as to buying and selling, and contracts for bargain and sale. They were the foundation of the *actiones aediliciae*, among which are included the *actio redhibitoria*, and *quanti minoris*. (Dig. 21. ii. 1. *De Aedilicio Edicto*; Gell. iv. 2.) A great part of the provisions of the aediles' edict relate to the buying and selling of slaves. The persons half of the plebeian and curule aediles were sacrosancti. (Liv. iii. 55.)

It seems that after the appointment of the curule aediles, the functions formerly exercised by the plebeian aediles were exercised, with some few exceptions, by all the aediles indifferently. Within five days after being elected or entering an office, they were required to determine by lot, or by agreement among themselves, what parts of the city each should take under his superintendence; and each aedile alone had the care of looking after the paving and cleansing of the streets, and other matters, it may be presumed, of the same local character within his district. (*Tabul. Borac. ed. Masoch.*)

In the superintendence of the public festivals and solemnities, there was a further distinction between the two sets of aediles. Many of these festivals, such as those of Flora (Cic. *Verr.* v. 14; Ovid. *Fast.* v. 278, &c.) and Ceres, were superintended by either set of aediles indifferently; but the plebeian games (*plebeii ludi*) were under the superintendence of the plebeian aediles (Liv. xxxi. 44), who had an allowance of money for that purpose; and the fines levied on the pecunarii, and others, seem to have been appropriated to these among other public purposes. (Liv. x. 23; xvii. 6; Ovid. *Fast.* v. 278, &c.) The celebration of the *Ludi magni* or *Romani*, of the *Ludi senici*, and the *Ludi Megalesii* or *Megalenses*, belonged specially to the curule aediles (Liv. xxi. 50; and the *Didascaliae* to the plays of Terence), and it was on such occasions that they often incurred a prodigious expense, with the view of pleasing the people and securing their votes in future elections. This extravagant expenditure of the aediles arose after the close of the second Punic war, and increased with the opportunities which individuals had of enriching themselves after the Roman arms were carried into Greece, Africa, and Spain. Even the prodigality of the emperors hardly surpassed that of individual curule aediles under the republic; such as C. Julius Caesar (Plut. *Caesar*, 5) afterwards the dictator, P. Cornelius Lentulus Spinther; and, above all, M. Aemilius Scaurus, whose expenditure was not limited to bare show, but comprehended objects of public utility, as the reparation of walls, dockyards, ports, and aqueducts. (Cic. *de Off.* ii. 17; Plin. *H. N.* xxxiii. 3, xxxvi. 15.) An instance is mentioned by Dion Cassius (xliii. 48) of the *Ludi Megalesii* being superintended by the plebeian aediles; but it was done pursuant to a senatus consultum, and thus the particular exception confirms the general rule.

In a. c. 45, Julius Caesar caused two curule aediles and four plebeian aediles to be elected; and thenceforward, at least so long as the office of aedile was of any importance, six aediles were annually elected. The two new plebeian aediles were called *Cereales*, and their duty was to look after the supply of corn. Though their office may

not have been of any great importance after the institution of a *praefectus annonae* by Augustus there is no doubt that it existed for several centuries, and at least as late as the time of Gordian.

The aediles belonged to the class of the *minores magistratus*. Dionysius states that the aediles were originally chosen at the *comitia curiata* (ix. 43); but this is not probable. The plebeian aediles were originally chosen at the *comitia centuriata*, but afterwards at the *comitia tributa* (Dionys. vi. 90. ix. 43. 49; Liv. ii. 56, 57), in which *comitia* the curule aediles also were chosen, at the same time (Plut. *Marius*, 5); but it appears that there was a separate voting for the curule and the plebeian aediles, and that the curule aediles were elected first. It appears that until the *lex annalis* was passed, a Roman citizen might be a candidate for any office after completing his twenty-seventh year. This *lex annalis*, which was passed at the instance of the tribune L. Villius Tappulus, a. c. 180, fixed the age at which each office might be enjoyed. (Liv. xl. 44.) The passage of Livy does not mention what were the ages fixed by this law; but it is collected from various passages of Roman writers, that the age fixed for the aedileship was thirty-six. This, at least, was the age at which a man could be a candidate for the curule aedileship, and it does not appear that there was a different rule for the plebeian aedileship. In Cicero's time, the aediles were elected some time in July, the usual place of election was the Field of Mars (*Campus Martius*), and the presiding magistrate was a consul.

The aediles existed under the emperors; but their powers were gradually diminished, and their functions exercised by new officers created by the emperors. After the battle of Actium, Augustus appointed a *praefectus urbi*, who exercised the general police, which had formerly been one of the duties of the aediles. Augustus also took from the aediles, or exercised himself, the office of superintending the religious rites, and the banishing from the city of all foreign ceremonials; he also assumed the superintendence of the temples, and thus may be said to have destroyed the aedileship by depriving it of its old and original function. This will serve to explain the fact mentioned by Dion Cassius (lv. 24), that no one was willing to hold so contemptible an office, and Augustus was therefore reduced to the necessity of compelling persons to take it: persons were accordingly chosen by lot, out of those who had served the office of quaestor and tribune; and this was done more than once. The last recorded instance of the splendours of the aedileship is the administration of Agrippa, who volunteered to take the office, and repaired all the public buildings and all the roads at his own expense, without drawing anything from the treasury. (Dion Cass. xlix. 43; Plin. *H. N.* xxxvi. 15.) The aedileship had, however, lost its true character before this time. Agrippa had already been consul before he accepted the office of aedile, and his munificent expenditure in this nominal office was the close of the splendour of the aedileship. Augustus appointed the curule aediles specially to the office of putting out fires, and placed a body of 600 slaves at their command; but the *praefecti vigili* afterwards performed this duty. In like manner the *curatores viarum* were appointed by him to superintend the roads near the city, and the *quatuorviri* to superintend those

within Rome. The *curatores operum publicorum* and the *curatores aloeis Tiberis*, also appointed by Augustus, stripped the aediles of the remaining few duties that might be called honourable. They lost also the superintendence of wells, or springs, and of the aqueducts. (Frontinus ii. *De Aquaeductibus*.) They retained, under the early emperors, a kind of police, for the purpose of repressing open licentiousness and disorder: thus the baths, eating-houses, and brothels were still subject to their inspection, and the registration of prostitutes was still within their duties. (Tacit. *Annal.* ii. 85.) We read of the aediles under Augustus making search after libellous books, in order that they might be burnt; and also under Tiberius (Tacit. *Ann.* iv. 35.)

The coloniae, and the municipia of the later period, had also their aediles, whose numbers and functions varied in different places. They seem, however, as to their powers and duties, to have resembled the aediles of Rome. They were chosen annually. (*De Aedil. Col.*, &c. Otto. Lips. 1752.)

The history, powers, and duties of the aediles are stated with great minuteness by Schubert, *De Romanorum Aedilibus*, lib. iv. Regimontii, 1828. See also Wunder, *De Romanorum Comitibus Aedilium Curulium*, in his edition of Cicero's Oration Pro Cn. Plancio, Leipzig, 1830. [G. L.]

AEDITUI, AEDITUMI, AEDITIMI (*αἰδίτῃ, αἰδίτῃ, αἰδίτῃ*), persons who took care of the temples, and attended to the cleaning of them. Notwithstanding this menial service, they partook of the priestly character, and are sometimes even called priests by the Greek grammarians. (Suid. Hesych. Etym. M. s. v. *αἰδίτῃ*; Pollux, i. 14.) In many cases they were women, as Timon in Herodotus (vi. 134), who also speaks of her as *αἰδίτῃ*, from which it is clear that in some places several of these priests must have been attached to one and the same temple, and that they differed among themselves in rank. Subsequently the menial services connected with the office of the *Neocori* were left to slaves, and the latter became a title given to priestly officers of high rank, of whom an account is given in a separate article. [NEOCORI.] The aeditui lived in the temples, or near them, and acted as ciceroni to those persons who wished to see them. (Plin. *H. N.* xxxvi. 4. § 10; Cic. *Verr.* iv. 44; Liv. xxx. 17; *Schol. ad Hor. Ep.* ii. l. 230.) In ancient times the aeditui were citizens, but under the emperors freedmen. (Serv. *ad Virg. Aen.* ix. 648.)

AEGINETARUM FERIAE (*Αἰγινητῶν ἑορτή*), a festival in honour of Poseidon, which lasted sixteen days, during which time every family took its meals quietly and alone, no slave being allowed to wait, and no stranger invited to partake of them. From the circumstance of each family being closely confined to itself, those who solemnized this festival were called *μυροφάγοι*. Plutarch (*Quaest. Graec.* 44) traces its origin to the Trojan war, and says that, as many of the Aeginetans had lost their lives, partly in the siege of Troy and partly on their return home, those who reached their native island were received indeed with joy by their kinsmen; but in order to avoid hurting the feelings of those families who had to lament the loss of their friends, they thought it proper neither to show their joy nor to offer any sacrifices in public. Every family, therefore, entertained privately their friends who had returned, and

acted themselves as attendants, though not without rejoicing. [L. S.]

AEGIS (*αἰγίς*), the shield of Zeus, signifies literally a goat-skin, and is formed on the same analogy with *velops*, a fawn-skin. (Herod. iv. 189.) According to ancient mythology, the aegis worn by Zeus was the hide of the goat Amaltheia, which had suckled him in his infancy. Hyginus relates (*Astron. Poet.* 13), that, when he was preparing to resist the Titans, he was directed, if he wished to conquer, to wear a goat-skin with the head of the Gorgon. To this particular goat-skin the term aegis was afterwards confined. Homer always represents it as part of the armour of Zeus, whom on this account he distinguishes by the epithet *aegis-bearing* (*αἰγιοχῶς*). He, however, asserts, that it was borrowed on different occasions both by Apollo (*Il.* xv. 229, 307—318, 360, xxiv. 20), and by Athena (*Il.* ii. 447—449, xviii. 204, xxi. 400).

The skins of various quadrupeds having been used by the most ancient inhabitants of Greece for clothing and defence, we cannot wonder that the goat-skin was employed in the same manner. It must also be borne in mind that the heavy shields of the ancient Greeks were in part supported by a belt or strap (*τελαμὸν, baltus*) passing over the right shoulder, and, when not elevated with the shield, descending transversely to the left hip. In order that a goat-skin might serve this purpose, two of its legs would probably be tied over the right shoulder of the wearer, the other extremity being fastened to the inside of the shield. In combat the left arm would be passed under the hide, and would raise it together with the shield, as is shown in a marble statue of Athena, preserved in the museum at Naples, which, from its style of art, may be reckoned among the most ancient in existence.

Other statues of Athena represent her in a state of repose, and with the goat-skin falling obliquely from its loose fastening over her right shoulder, so as to pass round the body under the left arm. The annexed figure is taken from a colossal statue of Athena at Drapden.

other mode of wearing this garment, also of its expression, is seen in a statue of Athena at Aegina, of still higher antiquity than that last seen, and in the very ancient image of the goddess from the temple of Zeus at Aegina. In all these the ægis covers the right as well as the left shoulder, the breast, and the back, falling behind so as almost to reach the feet. Schornsteiner's *Amalthea*, ii. 215) considers this as the original form of the ægis.

A figure of speech, Homer uses the term to denote not only the goat-skin, which it signifies, but together with it the shield which it belonged. By thus understanding the term it is easy to comprehend both why Athena is said to throw her father's ægis around her (Il. v. 738, xviii. 204), and why on one occasion Apollo is said to hold it in his hand and shake it so as to terrify and confound the enemy (Il. xv. 229. 307—321), and on another occasion to cover with it the dead body of Hector in order to protect it from insult (xxiv. 20). In passages we must suppose the ægis to mean shield, together with the large expanded skin by which it was suspended from the right shoulder.

The Greeks prided themselves greatly on the most splendid ornaments of their shields, they used the ægis to be adorned in a style corresponding to the might and majesty of the father of the gods. In the middle of it was fixed the winged Gorgon's head (Il. v. 741), and its center was surrounded with golden tassels (ægis), each of which was worth a hecatomb (Od. x. 46—449). In the figures above exhibited, serpents of the Gorgon's head are transferred to the border of the skin.

In the later poets and artists, the original conception of the ægis appears to have been forgotten or disregarded. They represent it as a metal plate covered with metal in the form of a shield, not used to support the shield, but extending equally on both sides from shoulder to shoulder; as in the annexed figure, taken from a statue at Florence.

With this appearance the descriptions of the ægis by the Latin poets generally correspond. See *Æn.* viii. 435—438; Val. Flacc. vi. 174; Apoll. Corin. 15; Sil. Ital. ix. 442.)

It is remarkable that, although the ægis properly belonged to Zeus, yet we seldom find it as an attribute of Zeus in works of art. There is, however, in the museum at Leyden, a marble statue of Zeus, found at Utica, in which the ægis hangs over his left shoulder. The annexed figure is taken from an ancient cameo. Zeus is here represented with the ægis wrapt round the fore part of his left arm. The shield is placed underneath it, at his feet.

The Roman emperors also assumed the ægis, intending thereby to exhibit themselves in the character of Jupiter. Of this the armed statue of Hadrian in the British Museum presents an example. In these cases the more recent Roman conception of the ægis is of course followed, coinciding with the remark of Servius (*Æn.* viii. 435), that this breast-armour was called ægis when worn by a god; *lorica*, when worn by a man. (Comp. Mart. vii. 1.) [J. Y.]

AEINAUTAE (*αἰναῦται*), magistrates at Miletus, consisting of the chief men in the state, who obtained the supreme power on the deposition of the tyrants, Thoas and Damasenor. Whenever they wished to deliberate on important matters, they embarked on board ship (hence their name), put out at a distance from land, and did not return to shore till they had transacted their business. (Plut. *Quaest. Graec.* 82.)

AEIPHU'GIA (*αἰψυγία*). [EXSILIUM.]

AEISITI (*αἰσιτίαι*). [PRYTANEIUM.]

AENEATO'RES (*αινατορες*, Amm. Marc. xxiv. 4), were those who blew upon wind instruments in the Roman army, namely, the *bucinatores*, *cornicines*, and *tubicines*, and they were so called because all these instruments were made of *aes* or bronze. (Suet. *Caes.* 52.) Aeneatores were also employed in the public games. (Sen. *Ep.* 84.) A *collegium aeneatorum* is mentioned in inscriptions. (Orelli, *Inscr.* No. 4059.)

AENIGMA (*αἰνίγμα*), a riddle. It appears to have been a very ancient custom among the Greeks, especially at their symposia, to amuse themselves by proposing riddles to be solved. Their partiality for this sort of amusement is attested by the fact that some persons, such as Theodectes of Phaselis and Aristonymus, acquired considerable reputation as inventors and writers of riddles. (Athen. x. pp. 451, 452, xii. p. 538.) Those who were successful in solving the riddle proposed to them received a prize, which had been previously agreed upon by the company, and usually consisted of wreaths, *taeniae*, cakes, and other sweetmeats, or kisses, whereas a person unable to solve a riddle was condemned to drink in one breath a certain quantity of wine, sometimes mixed with salt water. (Athen. x. p. 457; Pollux, vi. 107; Hesych. s. v. *ῥηίδος*.) Those riddles which have come down to us are mostly in hexameter verse, and the tragic as well as comic writers not unfrequently introduced them into their plays. Pollux (*l. c.*) distinguishes two kinds of riddles, the *αἰνίγμα* and *ῥηίδος*, and, according to him, the former was of a jocose and the latter of a serious nature; but in the writers whose works have come down to us, no such distinction is observed; and there are passages where the name *ῥηίδος* is given to the most ludicrous jokes of this kind. (Aristoph. *Vesp.* 20; comp. Becker, *Charicles*, vol. i. p. 473.) The Romans seem to have been too serious to find any great amusement in riddles; and when Gellius (xviii. 2) introduces some Romans at a banquet engaged in solving riddles, we must remember that the scene is laid at Athens; and we do not hear of any Romans who invented or wrote riddles until a very late period. Appuleius wrote a work entitled *Liber Ludicorum et Grifhorum*, which is lost. After the time of Appuleius, several collections of riddles were made, some of which are still extant in MS. in various libraries. [L. S.]

AENUM, or **AHE'NUM** (*sc. vas*), a brazen vessel, used for boiling, is defined by Paullus to be a vessel hanging over the fire, in which water was boiled for drinking, whereas food was boiled in the *cacabus*. (Dig. 33. tit. 7. s. 18. § 3.) This distinction is not, however, always observed; for we read of food being cooked in the *aenum*. (Juv. xv. 81; Ov. *Met.* vi. 645.) The word is also frequently used in the sense of a dyer's copper; and, as purple was the most celebrated dye of

antiquity, we find the expressions *Sidonium aenum*, *Tyrium aenum*, &c. (Ov. *Fast.* iii. 822; Mart. xiv. 133.)

AEO'RA, or **EO'RA** (*αἰώρα, ἐώρα*), a festival at Athens, accompanied with sacrifices and banquets, whence it is sometimes called *εὐθεῖα*. The common account of its origin is as follows:—Icarius was killed by the shepherds to whom he had given wine, and who, being unacquainted with the effects of this beverage, fancied in their intoxication that he had given them poison. Erigone, his daughter, guided by a faithful dog, discovered the corpse of her father, whom she had sought a long time in vain; and, praying to the gods that all Athenian maidens might perish in the same manner, hung herself. After this occurrence, many Athenian women actually hung themselves, apparently without any motive whatever; and when the oracle was consulted respecting it, the answer was, that Icarius and Erigone must be propitiated by a festival. (Hygin. *Poet. Astron.* ii. 4.) According to the *Etymologicum Magnum*, the festival was celebrated in honour of Erigone, daughter of Aegisthus and Clytemnestra, who came to Athens to bring the charge of matricide against Orestes before the Areiopagus; and, when he was acquitted, hung herself, with the same wish as the daughter of Icarius, and with the same consequences. According to Hesychius, the festival was celebrated in commemoration of the tyrant Temaleus, but no reason is assigned. Eustathius (*ad Hom.* pp. 389, 1535) calls the maiden who hung herself Aiora. But as the festival is also called *Ἀλγῆτις* (apparently from the wanderings of Erigone, the daughter of Icarius), the legend which was first mentioned seems to be the most entitled to belief. Pollux (iv. 7. § 55) mentions a song made by Theodorus of Colophon, which persons used to sing whilst swinging themselves (*ἐν ταῖς αἰώρας*). It is, therefore, probable that the Athenian maidens, in remembrance of Erigone and the other Athenian women who had hung themselves, swung themselves during this festival, at the same time singing the above-mentioned song of Theodorus. (See also Athen. xiv. p. 618.) [L. S.]

AERA. [CHRONOLOGIA.]

AERA'RII, a class of Roman citizens, who are said not to have been contained in the thirty tribes instituted by Servius Tullius. It is, however, one of the most difficult points in the Roman constitution to determine who they were; since all the passages in which they are mentioned refer only to the power of the censors to degrade a citizen, for bad conduct, by removing him from his tribe and making him an *aerarian*; but we nowhere find any definition of what an *aerarian* was. The Pseudo-Asconius (*ad Cic. divin. in Caecil.* p. 103, ed. Orelli), says that a plebeian might be degraded by being transferred to the *tabulae Caeritum* and becoming an *aerarius*. The error in this statement is, that not only a plebeian, but a senator and an eque also might become an *aerarian*, while for a plebeian there was no other punishment except that of becoming an *aerarian*. From the Pseudo-Asconius we collect that to have one's name transferred to the tables of the Caerites was equivalent to becoming an *aerarian*; secondly, that an *aerarian* no longer belonged to a century; and, thirdly, that he had to pay the tribute in a different manner from the other citizens. These state-

ments are confirmed by the Scholiasta Crispinus at Hæmæ (Epist. i. 6. 62) and by Gellius (xvi. 13). If we strictly keep to what we there learn, we cannot adopt the opinion that the aerarians consisted of artisans and freedmen (Niebuhr, *Hist. of Rome*, vol. i. p. 472), for some artisans had a very honourable position in the Servian constitution; but there were certain occupations, especially those of retail dealers (*cauponæ*, κἀπηλοι), which were thought degrading, and which were carried on generally by isopolites, who took up their abode at Rome, and the number of this class of persons (*municipes* or *cives sine suffragio*) may have been very great. These people we conceive to have been the *aerarii*, not, indeed, on account of their occupation, but because they were citizens who did not enjoy the suffrage. Hence the *Cærites* were probably the first body of aerarians; and any Roman citizen guilty of a crime punishable by the *censura*, might be degraded to the rank of an aerarian; so that his civic rights were suspended, at least for the time that he was an aerarian. But we cannot suppose that the fact of a Roman citizen engaging in trade brought about such a degradation; for there can be little doubt that the persons constituting the city tribes (*tribus urbanae*) were more or less all engaged in trade and commerce. Hence, to remove a man from a country tribe to a city tribe, cannot have been equivalent to making him an aerarian (Cic. *pro Cluent.* 43), and the latter can have been the case only when he was excluded from *all* the tribes, or when he belonged to a city tribe; so that moving him from his tribe was equivalent to excluding him from all tribes. Persons who were made *infames* likewise became aerarians, for they lost the *jus honorum* and the suffragium. (Augustin. *de Civ. Dei*, ii. 13; Cic. *pro Cluent.* 42.) The two scholiasts above referred to agree in stating that the aerarians had to pay a *tributum pro capite*; and that this tax was considerably higher than that paid by the other citizens, must be inferred from Livy (iv. 24), who states that Æmilius Mamercus was made an aerarian *octuplato censu*. They were not allowed to serve in the legions; but as they nevertheless enjoyed the protection of the state, such a high rate of taxation cannot be considered unjust.

It has been asserted that the *libertini*, as such, belonged to the class of the aerarians; but this opinion is founded upon a wrong statement of Ptolemy (Ptolemy, 7), that freedmen did not obtain the suffrage till the time of Appius Claudius; for Dionysius (iv. 22) informs us that Servius Tullius incorporated them with the city tribes. (Comp. Zonaras, vii. 9; Huschke, *Verfassung des Serv. Tull.* p. 494, &c.; Götting, *Gesch. der Röm. Staatsverf.* p. 260, &c.; Becker, *Handbuch der Röm. Alterth.* vol. ii. pp. 183—196.) [L. S.]

AERARII TRIBUNI. [ANS EQUESTRES; TRIBUNI.]

AERARIUM (τὸ δημόσιον), the public treasury at Rome, and hence the public money itself. After the banishment of the kings the temple of Saturn was employed, upon the proposition of Valerius Poplicola, as the place for keeping the public money, and it continued to be so used till the later times of the empire. (Plut. *Popl.* 12, *Quæst. Rom.* 42; Festus, s. v. *Aerarium*.)* Becker

sides the public money and the accounts connected with its receipts, expenditure, and debtors, various other things were preserved in the treasury; of these the most important were:—1. The standards of the legions (Liv. iii. 69, iv. 22, vii. 23). 2. The various laws passed from time to time, engraved on brazen tables (Suet. *Cæs.* 28). 3. The decrees of the senate, which were entered there in books kept for the purpose, though the original documents were preserved in the temple of Ceres under the custody of the *aediles*. (Joseph. *Ant.* xiv. 10. § 10; Plut. *Cat. Min.* 17; Cic. *de Leg.* iii. 4; Tac. *Ann.* iii. 61.) [ARDILES.] 4. Various other public documents, the reports and despatches of all generals and governors of provinces, the names of all foreign ambassadors that came to Rome [LEGATUS], &c.

The *aerarium* was the common treasury of the state, and must be distinguished from the *publicum*, which was the treasury of the *populus* or the *patricians*. It is mentioned as one of the grievances of the *plebeians* that the booty gained in war was frequently paid into the *publicum* (*redigitur in publicum*), instead of being paid into the *aerarium*, or distributed among the soldiers (Liv. ii. 42); but since we no longer read, after the time of the *decemvirate*, of the booty being paid into the *publicum*, but always into the *aerarium*, it is supposed by Niebuhr that this was a consequence of the *decemviral* legislation. (Niebuhr, *Hist. Rom.* vol. ii. notes 386, 384.) Under the republic the *aerarium* was divided into two parts: the *common* treasury, in which were deposited the regular taxes [TRIBUTUM; VECTIGALIA], and from which were taken the sums of money needed for the ordinary expenditure of the state; and the *sacred* treasury (*aerarium sanctum* or *sanctius*, Liv. xxvii. 10; Flor. iv. 2; Cæsa. *B. C.* i. 14; Cic. *ad Att.* vii. 21), which was never touched except in cases of extreme peril. Both of these treasuries were in the temple of Saturn, but in distinct parts of the temple. The sacred treasury seems to have been first established soon after the capture of Rome by the Gauls, in order that the state might always have money in the treasury to meet the danger which was ever most dreaded by the Romans, — a war with the Gauls. (Appian, *B. C.* ii. 41.) At first, probably part of the plunder which the Romans gained in their wars with their neighbours was paid into this sacred treasury; but a regular means for augmenting it was established in a. c. 357 by the *Lex Manlia*, which enacted that a tax of five per cent. (*vicesima*) upon the value of every manumitted slave should be paid into this treasury. As this money was to be preserved, and therefore space was some object, it had, at least at a later time, either to be paid in gold or was kept in the treasury in gold, since Livy speaks of *aerum vicissimarium* (Liv. vii. 16, xxvii. 10; comp. Cic. *ad Att.* ii. 16). A portion of the immense wealth obtained by the Romans in their conquests in the East was likewise deposited in the sacred treasury; and though we cannot suppose

the architrave are still extant, standing on the Clivus Capitolinus to the right of a person ascending the hill. It was rebuilt by L. Munatius Plancus in the time of Augustus (Suet. *Aug.* 29; Orelli, *Inscr.* No. 590), and again restored by Septimius Severus. (Becker, *Handbuch der Römischen Alterthümer*, vol. i. p. 315.)

* Of this temple three Corinthian pillars with

that it was spared in the civil wars between Marius and Sulla, yet Julius Caesar, when he appropriated it to his own use on the breaking out of the second civil war, A. C. 49, still found in it enormous sums of money. (Plin. *H. N.* xxxiii. 3. s. 17; Dion Cass. xli. 17; Oros. vi. 15; Lucan. iii. 155.)

Upon the establishment of the imperial power under Augustus, there was an important change made in the public income and expenditure. He divided the provinces and the administration of the government between the senate, as the representative of the old Roman people, and the Caesar: all the property of the former continued to be called *aerarium*, and that of the latter received the name of *fiscus*. [FISCUS.] The *aerarium* consequently received all the taxes from the provinces belonging to the senate, and likewise most of the taxes which had formerly been levied in Italy itself, such as the revenues of all public lands still remaining in Italy, the tax on manumissions, the custom-duties, the water-rates for the use of the water brought into the city by the aqueducts, the sewer-rates, &c.

Besides the *aerarium* and the *fiscus*, Augustus established a third treasury, to provide for the pay and support of the army, and this received the name of *aerarium militare*. It was founded in the consulship of M. Aemilius Lepidus and L. Arruntius, A. D. 6, in consequence of the difficulty which was experienced in obtaining sufficient funds from the ordinary revenues of the state to give the soldiers their rewards upon dismissal from service. Augustus paid a very large sum into the treasury upon its foundation, and promised to do so every year. In the Monumentum Ancyranum, Augustus is said to have paid into the treasury in the consulship of Aemilius and Arruntius 170 millions of sesterces; but this sum is probably the entire amount which he contributed to it during his whole reign. As he reigned eight years and a half after the establishment of the treasury, and would probably have made the payments half yearly, he would in that case have contributed ten millions of sesterces every half year. He also imposed several new taxes to be paid into this *aerarium*. (Suet. *Aug.* 49; Dion Cass. lv. 23, 24, 25, 32; *Monumentum Ancyranum*, pp. 32, 65, ed. Franksius and Zumptius, Berol. 1845.) Of these the most important was the *vicesima hereditatum et legatorum*, a tax of five per cent, which had to be paid by every Roman citizen upon any inheritance or legacy being left to him, with the exception of such as were left to a citizen by his nearest relatives, or such as were below a certain amount. (Dion Cass. lv. 25, lvi. 28; Plin. *Paneg.* 37—40; Capitol. *M. Anton.* 11.) This tax was raised by Caracalla to ten per cent, but subsequently reduced by Macrinus to five (Dion Cass. lxxvii. 9, lxxviii. 12), and eventually abolished altogether. (Cod. 6. tit. 33. s. 3.) There was also paid into the *aerarium militare* a tax of one per cent. upon every thing sold at auctions (*centesima rerum venalium*), reduced by Tiberius to half per cent. (*ducentesima*), and afterwards abolished by Caligula altogether for Italy (Tac. *Ann.* i. 78, ii. 42; Suet. *Cal.* 16); and likewise a tax upon every slave that was purchased, at first of two per cent. (*quingagesima*), and afterwards of four per cent. (*quinta et vicesima*) of its value. (Dion Cass. lv. 31; Tac. *Ann.* xiii. 31; Orelli, *Inscr.* No. 3336.) Besides these taxes, no doubt the booty obtained in war and not dis-

tributed among the soldiers was also deposited in the military treasury.

The distinction between the *aerarium* and the *fiscus* continued to exist at least as late as the reign of M. Aurelius (τὸ βασιλικὸν καὶ τὸ δημόσιον, Dion Cass. lxxi. 33; Vulcat. Gallic. *Avid. Cass.* 7); but as the emperor gradually concentrated the administration of the whole empire into his hands, the *aerarium* likewise became exclusively under his control, and this we find to have been the case even in the reign of M. Aurelius, when the distinction between the *aerarium* and the *fiscus* was still retained. (Dion Cass. lxxi. 33.) When the *aerarium* ceased to belong to the senate, this distinction between the *aerarium* and *fiscus* naturally ceased also, as both of them were now the treasury of the Caesar; and accordingly later jurists used the words *aerarium* and *fiscus* indiscriminately, though properly speaking there was no treasury but that of the Caesar. The senate, however, still continued to possess the management of the municipal chest (*arca publica*) of the city. (Vopisc. *Aurelianus.* 20.)

In the time of the republic, the entire management of the revenues of the state belonged to the senate; and under the superintendence and control of the senate the quaestors had the charge of the *aerarium*. [SENATUS; QUÆSTOR.] With the exception of the consuls, who had the right of drawing from the treasury whatever sums they pleased, the quaestors had not the power to make payments to any one, even to a dictator, without a special order from the senate. (Polyb. vi. 12, 13; Liv. xxxviii. 55; Zonar. vii. 15.) In A. C. 45, when no quaestors were chosen, two prefects of the city had the custody of the *aerarium* (Dion Cass. xliii. 48); but it doubtless passed again into the hands of the quaestors, when they were elected again in the following year. In their hands it seems to have remained till A. C. 28, when Augustus deprived them of it and gave it to two prefects, whom he allowed the senate to choose from among the praetors at the end of their year of office; but as he suspected that this gave rise to canvassing, he enacted, in A. C. 23, that two of the praetors in office should have the charge of the *aerarium* by lot. (Suet. *Octav.* 36; Dion Cass. liii. 2, 32; Tac. *Ann.* xiii. 29.) They were called *praetores aerarii* (Tac. *Ann.* i. 75; Frontin. *de Aquas Duct.* 100) or *ad aerarium* (Orelli, *Inscr.* n. 723). This arrangement continued till the reign of Claudius, who restored to the quaestors the care of the *aerarium*, depriving them of certain other offices which they had received from Augustus (Tac. *Ann.* xiii. 29; Suet. *Claud.* 24; Dion Cass. lx. 24); but as their age seemed too young for so grave a trust, Nero took it from them and gave it to those who had been praetors, and who received the title of *praefecti aerarii*. (Tac. *Ann.* xiii. 28, 29.) During the latter part of the reign of Trajan, or the beginning of that of Vespasian, a fresh change seems to have been made, for we read of *praetores aerarii* in the time of the latter (Tac. *Hist.* iv. 9); but in the reign of Trajan, if not before, it was again entrusted to praefects, who appear to have held their office for two years; and henceforth no further change seems to have been made. (Plin. *Paneg.* 91, 92, *Ep.* x. 20; Suet. *Claud.* 24.) They are called in inscriptions *praefecti aerarii Saturni*, and they appear to have had quaestors also to assist them in their duties, as we find mention of *quaes-*

law aerarii Saturni in inscriptions under Hadrian and Severus. (Grutius, *Ans. Inscr.* p. 125. n. 6. p. 131. n. 3; Gruter, p. 1027, n. 4.) These praefects had jurisdiction; and before their court in the temple of Saturn, all informations were laid respecting property due to the aerarium and fiscus. (Plin. *Nat. Hist.* 36; Dig. 49. tit. 14. ss. 13, 15.)

The *aerarium militare* was under the care of distinct praefects, who were first appointed by lot from among those who had filled the office of praetor, but were afterwards nominated by the emperor. (Dion. Cass. l. v. 25; comp. Tac. *Ann.* v. 8.) They frequently occur in inscriptions under the title of *praefecti aerarii militaris*. (Walter, *Geschichte des Römischen Rechts*, pp. 201, &c., 397, &c. 2d edition; Lipsius, *ad Tac. Ann.* xiii. 29.)

AES (χαλκός). These words signify both pure copper and a composition of metals, in which copper is the predominant ingredient. In the latter sense they should not be translated *brass*, but rather *bronze*. Brass is a combination of copper and zinc, while all the specimens of ancient objects formed of the compound material called *aes*, are found upon analysis to contain no zinc; but, with very limited exceptions, to be composed entirely of copper and tin, which mixture is properly called *brass*. Our chief information about the copper and bronze of the ancients is derived from Pliny (*H. N.* xxxiv.). Copper, being one of the most abundant and generally distributed of the metals, was naturally used at a very early period by the Greeks and Romans. Pliny (*H. N.* xxxiv. 1) mentions three of its ores (*lapides aereos*), namely, *malina*, *chalcitis*, and *aerichalcum* or *orichalcum*, into the exact nature of which this is not the place to inquire.

In the most ancient times we can ascend to, the chief supply came from Cyprus, whence the modern name of *copper* is said to be derived. (Comp. Hom. *Od.* i. 184, and Nitzsch's *Note*; Plin. *H. N.* vii. 56. s. 57); but according to an old tradition it was first found in Euboea, and the town of *Chalcis* took its name from a copper-mine. (Plin. *H. N.* ix. 12. s. 21.) It was also found in Asia and the south of Italy, in Gaul, in the mountains of Spain (comp. Paus. vi. 19. § 2), and in the Alps. The art of smelting the ore was perfectly familiar to the Greeks of Homer's time. (Comp. Hesiod. *Theog.* 861—866.)

The abundance of copper sufficiently accounts for its general use among the ancients; money, vases, and utensils of all sorts, whether for domestic or sacrificial purposes, ornaments, arms offensive and defensive, furniture, tablets for inscriptions, musical instruments, and indeed every object to which it could be applied, being made of it. (Hesiod, *Op. & D.* 156, 151; Lucret. v. 1286.) We have a remarkable result of this fact in the use of *χαλκός* and *χαλκίδευς*, where working in iron is meant. (Hom. *Od.* ix. 391; Aristot. *Poët.* 25.) For all these purposes the pure metal would be comparatively useless, some alloy being necessary both to harden it and to make it more fusible. Accordingly, the origin of the art of mixing copper and tin is lost in the mythological period, being ascribed to the Idaean Dactyli. The proportions in which the component parts were mixed seemed to have been much studied, and it is remarkable how nearly they agree in all the specimens that have been analysed. Some bronze nails from the mine of the Treasury of Atreus at Mycenae;

some ancient coins of Corinth; a very ancient Greek helmet, on which is a boustrophedon inscription, now in the British Museum; portions of the breastplates of a piece of armour called the *Bronzes of Siria*, also preserved in our national collection; and an antique sword found in France produced in 100 parts,

87.43 and 88 copper
12.53 and 12 tin
99.96 100

At a later period than that to which some of the above works may be referred, the addition of a variety of metals seems to have been made to the original combination of copper and tin. The writers on art make particular mention of certain of these bronzes which, notwithstanding the changes they underwent by the introduction of novel elements, were still described by the words *χαλκός* and *aes*. That which appears to have held the first place in the estimation of the ancients was the *aes Corinthiacum*, which some pretended was an alloy made accidentally, in the first instance, by the melting and running together of various metals (especially gold and bronze), at the burning of Corinth by Lucius Mummius, in B. C. 146. (Plin. *H. N.* xxxiv. 2. s. 3; Florus, ii. 16.) This account is obviously incorrect, as some of the artists whose productions are mentioned as composed of this highly valued metal, lived long before the event alluded to. Pliny (*l. c.*) particularises three classes of the Corinthian bronze. The first, he says, was white (*candidum*), the greater proportion of silver that was employed in its composition giving it a light colour. In the second sort or quality, gold was introduced, in sufficient quantity to impart to the mixture a strong yellow or gold tint. The third was composed of equal portions of the different metals. Some, however, contend that the *aes Corinthiacum* was no composition of precious metals at all, but merely a very pure and highly refined bronze. (Fiorillo, in the *Kunstblatt*, 1832, No. 97.) The next bronze of note among the ancient Greek sculptors is distinguished by the title of *hepatizon*, which it seems it acquired from its colour, which bore some resemblance to that of the liver (*ἥπαρ*). Pliny says that it was inferior to the Corinthian bronze, but was greatly preferred to the mixtures of Delos and Aegina, which, for a long period, had the highest reputation. The colour of the bronze called *hepatizon* must have been very similar to that of the *cinque cento* bronzes—a dull reddish brown. Before the invention of these sorts of bronze, the first in order of celebrity was the *aes Deliacum*. Its reputation was so great that the island of Delos became the mart to which all who required works of art in metal crowded, and led, in time, to the establishment there of some of the greatest artists of antiquity. (Plin. *l. c.* 2. s. 4.) Next to the Delian, or rather in competition with it, the *aes Aegineticum* was esteemed. No metal was produced naturally in Aegina; but the founders and artists there were most skilful in their composition of bronze. The distinguished sculptors, Myron and Polycleitus, not only vied with one another in producing the finest works of art, but also in the choice of the bronze they used. Myron preferred the Delian, while Polycleitus adopted the Aeginetan mixture. (Plin. *H. N.* xxxiv. 2. s. 5.) From a passage in Plutarch it has been supposed that this far-famed Delian

bronze was of a light and somewhat sickly tint. (See Quatremère de Quincy, *Jupiter Olympien*; Plut. *De Pyth. Orac.* 2.) Plutarch says, that in his time its composition was unknown. For further information on the composition of bronze, see L. Savot (*Nouv. Ant.* p. ii. c. 17), Falbroni (in the *Atti dell' Acad. Ital.* vol. i. pp. 203—245, and *Götting. Gel. Anzeig.* 1811, No. 87), and Winckelmann (*Werke*, vol. v.).

No ancient works in brass, properly so called, have yet been discovered, though it has been affirmed that zinc was found in an analysis made of an antique sword (see Mongez, *Mém. de l'Institut*); but it appeared in so extremely small a quantity, that it hardly deserved notice; if it was indeed present, it may rather be attributed to some accident of nature than to design. On the subject of metals and metallurgy in general, see METALLUM, and for the use of bronze in works of art see STATUARIA. [P. S.]

AES (money, *nummi aënes* or *aerii*). Since the most ancient coins in Rome and the old Italian states, were made of aes, this name was given to money in general, so that Ulpian (Dig. 50. tit. 16. s. 159) says, *Etiā aereos nummos aë dicimus*. (Compare Hor. *Art. Poët.* 345, *Ep.* i. 7. 23.) For the same reason we have *aes alienum*, meaning debt, and *aera* in the plural, pay to the soldiers. (Liv. v. 4; Plin. *H. N.* xxxiv. 1.) The Romans had no other coinage except bronze or copper (*aes*), till a. c. 269, five years before the first Punic war, when silver was first coined; gold was not coined till sixty-two years after silver. (Plin. *H. N.* xxxiii. 13.) For this reason Argentinus, in the Italian mythology, was made the son of Aesculanus. (*Quia prius aerea pecunia in usū esse coepit post argentea*. August. *De Civ. Dei*, iv. 21.) Respecting the Roman copper money, see AS, and respecting the Greek copper money see CHALCOUS. [P. S.]

AES CIRCUMFORANEUM, money borrowed from the Roman bankers (*argentarii*), who had shops in porticoes round the forum. (Cic. *Ad Att.* ii. 1.)

AES EQUESTRE, AES HORDEARIUM, and AES MILITARE, were the ancient terms for the pay of the Roman soldiers, before the regular *stipendium* was introduced. The *aes equestre* was the sum of money given for the purchase of the horse of an eques; the *aes hordearium*, the sum of money paid yearly for the keep of the horse of an eques, in other words the pay of an eques; and the *aes militare*, the pay of a foot soldier. (Gaius, iv. 27.) None of this money seems to have been taken from the public treasury, but to have been paid by certain private persons, to whom this duty was assigned by the state.

The *aes hordearium*, which amounted to 2000 asses, had to be paid by single women (*viduae*, i. e. both maidens and widows) and orphans (*orbi*), provided they possessed a certain amount of property, on the principle, as Niebuhr remarks, that in a military state, the women and children ought to contribute for those who fight in behalf of them and the commonwealth; it being borne in mind, that they were not included in the census. (Liv. i. 43; Cic. *de Rep.* ii. 20.) The equites had a right to distrain (*pignoris capto*) if the *aes hordearium* was not paid. (Gaius, l. c.)

The *aes equestre*, which amounted to 10,000 asses, was to be given, according to the statement

of Livy (l. c.), out of the public treasury (*ex publico*); but as Gaius says (l. c.), that the equites had a right to distrain for this money likewise, it seems impossible that this account can be correct; for we can hardly conceive that a private person had a right of distress against a magistrate, that is, against the state, or that he could distrain any of the public property of the state. It is more probable that this money was also paid by the single women and orphans, and that it was against these that the equites had the same right to distrain, as they had in the case of the *aes hordearium*.

The *aes militare*, the amount of which is not expressly mentioned, had to be paid by the *tribuni aerarii*, and if not paid, the foot soldiers had a right of distress against them. (Cato, *op. Gall.* vii. 10; Varr. *L. L.* v. 181, ed. Müller; Festus, s. v. *aerarii tribuni*; Gaius, l. c.) It is generally assumed from a passage of the Pseudo-Asconius (in *Verr.* p. 167, ed. Orelli), that these *tribuni aerarii* were magistrates connected with the treasury, and that they were the assistants of the quaestors; but Madvig (*De Tribuni Aerarii Disputatio*, in *Opuscula*, vol. ii. pp. 258—261), has brought forward good reasons for believing that the *tribuni aerarii* were private persons, who were liable to the payment of the *aes militare*, and upon whose property a distress might be levied, if the money were not paid. He supposes that they were persons whose property was rated at a certain sum in the census, and that they obtained the name of *tribuni aerarii*, either because they received money from the treasury for the purpose of paying the soldiers, or because, which is the more probable, they levied the *tributum*, which was imposed for the purpose of paying the army, and then paid it to the soldiers. The state thus avoided the trouble of collecting the *tributum* and of keeping minute accounts, for which reason the vectigalia were afterwards farmed, and the foot-soldiers were thus paid in a way similar to the horse-soldiers. These *tribuni aerarii* were no longer needed when the state took into its own hands the payment of the troops [EXERCITUS], but they were revived in a. c. 70, as a distinct class in the commonwealth by the Lex Aurelia, which gave the *judicia* to the senators, equites and *tribuni aerarii*. [TRIBUNI AERARII.] The opinion of Niebuhr (*Hist. of Rome*, vol. i. p. 474.), that the *aes militare* was paid by the *aerarii* [AERARII] is, it must be recollected, merely a conjecture, which, however ingenious, is supported by no ancient authority.

It has been well remarked by Niebuhr (*Hist. of Rome*, vol. ii. p. 442), that the 2000 asses, which was the yearly pay of a horseman, give 200 asses a month, if divided by 10, and that the monthly pay of a foot soldier was 100 asses a month. It must be recollected that a year of ten, and not of twelve months, was used in all calculations of payments at Rome in very remote times.

AES MANUARIUM was the money won in playing with dice, *manibus collectum*. *Manus* was the throw in the game. All who threw certain numbers, were obliged to put down a piece of money; and whoever threw the Venus (the highest throw) won the whole sum, which was called the *aes manuarium*. (Gell. xvii. 13; Suet. *Aug.* 71.)

AES UXORIUM, a tax paid by men who reached old age without having married. It was first imposed by the censors, M. Furius Camillus and M. Postumius, in a. c. 403, but we do not

know whether it continued to be levied afterwards. (Paus. s. v.; Val. Max. ii. 9. § 1; Plut. Camill. 2.) [LEX JULIA ET PAPIA POPPAEA.]

AESTIMATIO LITIS. [JUDEX.]

AEΣYMNĒTES (αισυνμητες, from αἶσα, "a just portion," hence "a person who gives every one his just portion"), originally signified merely a judge in the heroic games, but afterwards indicated an individual who was occasionally invested voluntarily by his fellow-citizens with unlimited power in a Greek state. His power, according to Aristotle, partook in some degree of the nature both of kingly and tyrannical authority; since he was appointed legally and ruled over willing subjects, but at the same time was not bound by any laws in his public administration. (Aristot. Polit. iii. 9. § 5, iv. 8. § 2; Hesych. s. v.) Hence Theophrastus calls the office *ῥητορίας ἀρχή*, and Dionysius (v. 73) compares it with the dictatorship at Rome. It was not hereditary; but it was sometimes held for life, and at other times only till some object was accomplished, such as the reconciling of the various factions in the state, and the like. We have only one express instance in which a person received the title of Aesymnetes, namely, that of Pittacus, in Mytilene, who was appointed to this dignity, because the state had been long torn asunder by the various factions, and who succeeded in restoring peace and order by his wise regulations and laws. (Dionys. v. 73; Strab. xiii. p. 617; Plut. Solon, 4; Diog. Laërt. i. 75; Plehn, *Lesbiaca*, pp. 46, 48.) There were, however, no doubt many other persons who ruled under this title for a while in the various states of Greece, and those legislators bore a strong resemblance to the aesymnetes, whom their fellow-citizens appointed with supreme power to enact laws, as Dracon, Solon, Zaleucus and Charondas. In some states, such as Cyme and Chalcædon, it was the title borne by the regular magistrates. (Wachsmuth, *Hellen. Alterthum*. vol. i. pp. 423, 441, 2d ed.; Tittmann, *Griech. Staatsr.* p. 76, &c.; Schömann, *Antiq. Jur. Publ. Græc.* p. 88; Hermann, *Staatsverf.* § 63.)

AETAS. [INFANS; IMPUBES.]

AETOLICUM FOEDUS. (Κοινὸν τῶν Αἰτωλῶν.) The inhabitants of the southern coast of the country, afterwards called Aetolia, appear to have formed a sort of confederacy as early as the time of Homer. (*Il.* ii. 638, &c., xiii. 217 &c.) In the time of Thucydides (iii. 111), the several Aetolian tribes between the rivers Achelous and Evros, appear to have been quite independent of one another, although they were designated by the common name of Aetolians; but we nevertheless find that, on certain occasions, they acted in concert, as for example, when they sent embassies to foreign powers, or when they had to ward off the attacks of a common enemy. (Thuc. l. c., iii. 95, &c.) It may therefore be admitted that there did not exist any definite league among the tribes of Aetolia, and that it was only their common danger that made them act in concert; but such a state of things, at any rate, facilitated the formation of a league, when the time came at which it was needed. But the league appears as a very powerful one very soon after the death of Alexander the Great, viz. during the Lamian war against Antipater. (Diod. xix. 66, xx. 99.) How far its organisation was then regulated is unknown, though a certain constitution must have existed as early as that time, since we find that Aristotle wrote a work on the

Aetolian constitution. (Strab. vii. p. 321.) But it was certainly wanting in internal solidity, and not based upon any firm principles. In B. C. 204, two of the heads of the confederacy, Dorimachus and Scopas, were commissioned to regulate its constitution, and it was perhaps in consequence of their regulation, that a general cancelling of debts was decreed two years later. (Polyb. xiii. 1, *Frags. Hist.* 68.) The characteristic difference between the Aetolian and Achaean leagues, was that the former originally consisted of a confederacy of nations or tribes, while the latter was a confederacy of towns. Hence the ancient and great towns of the Aetolians, throughout the period of the league, are of no importance and exercise no influence whatever. Even Thermon, although it was the head of the league, and the place where the ordinary meetings of the confederates were held (Polyb. v. 8, xviii. 31, xxviii. 4; Strab. x. p. 463), did not serve as a fortress in times of war, and whenever the Aetolians were threatened by any danger, they preferred withdrawing to their impregnable mountains.

The sovereign power of the confederacy was vested in the general assemblies of all the confederates (κοινὸν τῶν Αἰτωλῶν, *concilium Aetolorum*), and this assembly unquestionably had the right to discuss all questions respecting peace and war, and to elect the great civil or military officers of the league. It is however clear, that those assemblies could not be attended by all the Aetolians, for many of them were poor, and lived at a great distance, in addition to which the roads were much more impassable than in other parts of Greece. The constitution of the league was thus in theory a democracy, but under the cover of that name it was in reality an aristocracy, and the name *Pasaeotism*, which Livy (xxxii. 29) applies to the Aetolian assembly, must be understood accordingly, as an assembly of the wealthiest and most influential persons, who occasionally passed the most arbitrary resolutions, and screened the maddest and most unlawful acts of the leading men under the fine name of a decree of all the Aetolians.

We have already mentioned that the ordinary place of meeting was Thermon, but on extraordinary occasions assemblies were also held in other towns belonging to the league, though they were not situated in the country of Aetolia Proper, e. g. at Heracleia (Liv. xxxiii. 3), Naupactus (xxxv. 12), Hypata (xxxvi. 2, 8), and Lamia (xxxv. 43, 44). The questions which were to be brought before the assembly were sometimes discussed previously by a committee, selected from the great mass, and called Apocleti (ἀποκλήτοι, Suid. s. v.; Liv. xxxvi. 28.) Some writers believe that the Apocleti formed a permanent council, and that the thirty men sent out to negotiate with Antiochus were only a committee of the Apocleti. (Polyb. iv. 9, xi. 10, xxi. 3; Tittmann, *Griech. Staatsverf.* p. 727.)

The general assembly usually met in the autumn, when the officers of the league were elected. (Polyb. iv. 37.) The highest among them, as among those of the Achaean league, bore the title of *στρατηγός*, whose office lasted only for one year. The first whose name is known, was Eurydamus, who commanded the Aetolians in the war against the Galatians. (Paus. x. 16. § 2.) The strategus had the right to convocate the assembly; he presided in it, introduced the subjects for deliberation, and levied the troops. (Liv. xxxviii. 4.) He had his share

of the booty made in war, but was not allowed to vote in decisions upon peace and war. (Liv. xxxv. 25.) This was a wise precaution, as a sanguine strategus might easily have involved the league in wars which would have been ruinous to the nation. His name was signed to all public documents, treaties, and decrees of the general assembly. An exception occurs in the peace with the Romans, because they themselves dictated it and abandoned the usual form. (Polyb. xxii. 15.) Respecting the mode of election, we are informed by Hesychius (*s. v. κρυμὸς παρτίης*), that it was decided by white and black beans, and not by voting, but by drawing lots, so that we must suppose the assembly nominated a number of candidates, who then had to draw lots, and the one who drew a white bean was strategus.

The officers next in rank to the strategus were the hipparchus and the public scribe. (Polyb. xxii. 15; comp. Liv. xxxviii. 11.) We further hear of *σύνεργοι*, who act as arbiters (Böckh, *Corp. Inscr.* vol. ii. p. 633), and *νομορρυθφοί*, who however may have had no more to do with the writing down of laws, than the Athenian nomothetae. (Böckh, *l. c.* pp. 857, 858.)

With the exception of the points above mentioned, the constitution of the Aetolian league is involved in great obscurity. There are, however, two things which appear to have had an injurious effect upon the confederacy, first the circumstance that its members were scattered over a large tract of country, and that besides Aetolia Proper and some neighbouring countries, such as Locris and Thessaly, it embraced towns in the heart of Peloponnesus, the island of Cephalenia in the west, and in the east the town of Cius on the Propontis; in the second place, many of the confederates had been forced to join the league, and were ready to abandon it again as soon as an opportunity offered. (Polyb. iv. 25; comp. xxii. 13, 15; Liv. xxxviii. 9, 11.) The towns which belonged to the league of course enjoyed isopolity; but as it endeavoured to increase its strength in all possible ways, the Aetolians also formed connections of friendship and alliance with other states, which did not join the league. (Polyb. ii. 46.) The political existence of the league was destroyed in a. c. 189 by the treaty with Rome, and the treachery of the Roman party among the Aetolians themselves caused in a. c. 167 five hundred and fifty of the leading patriots to be put to death, and those who survived the massacre, were carried to Rome as prisoners. (Liv. xlv. 31; Justin, xxxiii. 2; comp. Tittmann, *Darstellung der Griech. Staatsverf.* p. 721, &c.; Lucas, *Ueber Polyb. Darstellung des Aetol. Bundes*, Königsberg, 1827, 4to.; K. F. Hermann, *Griech. Staatsalterth.* § 183; Schorn, *Geschichte Griechenl.* p. 25, &c.; Brandtstätter, *Die Gesch. des Aetol. Landes, Volkes und Bundes*, p. 298, &c.) [L. S.]

AETO'MA (*ἀετωμα*). [FASTIGIUM.]

AFFI'NES, AFFI'NITAS, or ADFI'NES, ADFI'NITAS. Affinitas is that relation into which one family comes with respect to another by a marriage between the members of the respective families; but it is used more particularly to express the relation of husband and wife to the cognati of wife and husband respectively. The husband and wife were also affines with respect to their being members of different families; and the betrothed husband and wife (*sponsus, sponsa*) with reference to their intended marriage. Affinitas can only be

the result of a lawful marriage. There are no degrees of affinitas corresponding to those of cognatio, though there are terms to express the various kinds of affinitas. The father of a husband is the *socer* of the husband's wife, and the father of a wife is the *socer* of the wife's husband; the term *socrus* expresses the same affinity with respect to the husband's and wife's mothers. A son's wife is *nurus* or daughter-in-law to the son's parents; a wife's husband is *genet* or son-in-law to the wife's parents.

Thus the *avus, avia* — *pater, mater* — of the wife become by the marriage respectively the *socer magna, prosocrus, or socrus magna* — *socer, socrus* — of the husband, who becomes with respect to them severally progenet and gener. In like manner the corresponding ancestors of the husband respectively assume the same names with respect to the son's wife, who becomes with respect to them *pronurus* and *nurus*. The son and daughter of a husband or wife born of a prior marriage, are called *privignus* and *privigna*, with respect to their step-father or step-mother; and, with respect to such children, the step-father and step-mother are severally called *vitricus* and *noverca*. The husband's brother becomes *levir* with respect to the wife, and his sister becomes *Glos* (the Greek *γδλωρ*). Marriage was unlawful among persons who had become such affines as above-mentioned; and the incapacity continued even after the dissolution of the marriage in which the affinitas originated. (Gaius, i. 63.) A person who had sustained such a *capitis diminutio* as to lose both his freedom and the *civitas*, lost also all his affines. (Dig. 38. tit. 10. a. 4; Böcking, *Institutionen*, vol. i. p. 267.) [G. L.]

AGALMA (*ἀγαλμα*). [STATUARIA.]

AGAMIOU GRAPHE (*ἀγαμιου γραφή*). [MATRIMONIUM.]

AGA'SO, a groom, a slave whose business it was to take care of the horses. The word is also used for a driver of beasts of burthen, and is sometimes applied to a slave who had to perform the lowest menial duties. (Liv. xliii. 5; Plin. H. N. xxxv. 11; Curt. viii. 6; Hor. *Serm.* ii. 8. 72; Pers. v. 76.)

AGATHOERGI (*ἀγαθοεργοί*). In time of war the kings of Sparta had a body-guard of 300 knights (*ἱππεῖς*), of whom the five eldest retired every year, and were employed for one year, under the name of *agathoergi* in missions to foreign states. (Herod. i. 67.) It has been maintained by some writers that the *agathoergi* did not attain that rank merely by seniority, but were selected from the *ἱππεῖς* by the ephors without reference to age. (Ruhnken, *Ad Timaei Lexic. Plat. s. v.*; Hesych. *s. v.*; Bekker, *Anecd.* vol. i. p. 209.)

A'GELA (*ἀγέλαι*), an assembly of young men in Crete, who lived together from their eighteenth year till the time of their marriage. Up to the end of their seventeenth year they remained in their father's house; and from the circumstance of their belonging to no *agela*, they were called *ἀγέλατοι*. They were then enrolled in *agelae*, which were of an aristocratic nature, and gave great power to particular families. An *agela* always consisted of the sons of the most noble citizens, who were usually under the jurisdiction of the father of the youth who had been the means of collecting the *agela*. It was the duty of this person, called *ἀγελάρχης*, to superintend the military and gymnastic exercises of the youths (who were called

bydarras), to accompany them to the chase, and to punish them when disobedient. He was accountable, however, to the state, which supported the *agela* at the public expense. All the members of an *agela* were obliged to marry at the same time. When they ceased to belong to an *agela*, they partook of the public meals for men (*ἀνδρεία*) [*STRUTIA*]. These institutions were afterwards preserved in only a few states of Crete, such for instance as Lyctus. (Ephorus, *ap. Strab.* x. p. 480, &c.; Herod. Pont. c. 3.; Höck, *Crete*, iii. p. 100, &c.; Müller, *Dor.* iv. 5. § 3.; Hermann, *Griech. Staatsverfassung*, § 22.; Wachsmuth, *Hellen. Alterthumskunde*, vol. i. p. 362, 2d ed.; Krause, *Die Gymnastik u. Agonistik d. Hellenen*, p. 690, &c.) At Sparta the youths left their parents' houses at seven years of age and entered the *βοίαι*.

AGERMA (*ἄγρμα* from *ἄγω*), the name of a chosen body of troops in the Macedonian army, consisting of horse-soldiers and foot-soldiers, but usually of the former. It seems to have varied in number; sometimes it consisted of 150 men, at other times of 300, and in later times it contained as many as 1000 or 2000 men. (Diod. xix. 27, 28; Liv. xxxvii. 40; xliii. 51. 58; Curt. iv. 13; Polyb. v. 25, 65, xxxi. 8; Hesyeh. and Suid. a. v.; Bunsen, *ed. Od.* i. p. 1599, 62.)

AGER is the general term for a district or tract of country, which has some definite limits, and belongs to some political society. Ager Romanus is the old territory of the Romans. Agri, in the plural, often means lands in the country as opposed to towns: "est in agris," means "he is in the country:" "mittere in agros," a phrase that occurs in speaking of the agrarian laws, means to assign portions of the Ager Publicus to individuals. (Liv. vi. 17, x. 21.)

Terra is an indefinite term: it is a whole country without reference to political limits, as Terra Italia.

Ager Publicus was the property of the Roman state, part of the Publicum. Ager Privatus was the property of individuals. Some remarks on the general division of land into Publicus and Privatus, and on the nature of land that was Sacer and Religiosus, are contained in the article on the Agrarian Laws. Ager Occupatorius is land occupied by a victorious people when the conquered people had been driven out (*Res Agrariae Auctores*, p. 45, ed. Goes.): the possessions [AGRARIAN LEGES] were included in the Ager Occupatorius. Such land as was restored to those who had lost it by conquest, was called Redditus. The Ager Occupatorius was also called Ager Arcifinius or Arcifinalis, so denominated "ab arcendis hostibus" (p. 38. ed. Goes.). But the terms Ager Arcifinius and Occupatorius do not appear to be exactly equivalent, though some of the writers on the Res Agraria make them so. Ager Arcifinius appears to express the whole of a territory, which had only some natural or arbitrary boundary, and was not defined by measurement (*qui nulla mensura continetur*; Frontinus.) Such were the scattered portions of the Roman Ager Publicus. The Ager Occupatorius might signify so much of the public land included in the Arcifinius as was held by possessors (occupatus), or, as Niebuhr explains it, the term Occupatorius was confined to the public land, strictly so called, and designated the tenure under which it was held.

Frontinus divides lands into three heads (*quali-*

tates): Ager Divisus et Assignatus; Ager mensura comprehensus; Ager Arcifinius. He defines the Arcifinius, as above stated. The Ager mensura comprehensus appears to signify a tract, of which the limits were defined by measurement, which was given in the mass to some community (*cujus modus universus civitati est assignatus*), of which he mentions two examples.

Ager Divisus et Assignatus was public land that was assigned or granted to private persons. The verb *divido*, or some form of it, is used by Livy (iv. 51, v. 30) to express the distribution of the land. The word *assigno* indicates the fixing of the signs or boundaries. Ager Quaestorius was public land, which was sold by the quaestors (pp. 2, 14, ed. Goes.), in square patches, each side of which was the length of ten linear actus: the square consequently contained 100 quadrati actus or fifty jugera.

Ager Limitatus was public land marked out by limites for the purpose of assignment to coloni or others. The limites were drawn with reference to the heavens (p. 150, ed. Goes.); and this mode of dividing the land was founded on the old Etruscan doctrine, for the Etruscans divided the earth into parts, following the course of the sun by drawing a line from east to west, and another from south to north. This was the foundation of the limites of a templum, a term which means the celestial vault, and also so much of the earth's surface as the augur could comprehend in his view. This was the foundation of the Roman Limitatio of land. A line (limes) was drawn through a given point from east to west, which was called the Decumanus, originally Duocimanus* (according to Hyginus), because it divides the earth into two parts: another line was drawn from south to north, which was called Cardo, "a mundi cardine." The length of these two chief limites would be determined by the limits of the land which was to be divided. The points from which the two chief limites were drawn varied according to circumstances. Those which were parallel to the Decumanus were Prorsi, direct; those which were parallel to the Cardo were Transversi, transverse. The limes was therefore a term applied to a boundary belonging to a tract of land, and the centuriae included in it, and is different from finis, which is the limit of any particular property. The Decumani, Cardines, and other limites of a district form an unchangeable kind of network in the midst of the changeable properties which have their several fines (Rudorff). The distance at which the limites were to be drawn, would depend on the magnitude of the squares or centuriae, as they were called, into which it was proposed to divide the tract. The whole tract might not be square: sometimes the Decumani Limites would be only half as long as the Cardines (p. 154. ed. Goes.). Every sixth limes, reckoning from the Decumanus and including it, was wider than the intermediate limites, and these wider limites served as roads, but they were not included under the term of Viae Publicae, though a limes and a via publica might sometimes coincide. (Hyginus, ed. Goes. p. 163.) The narrower limites were called Linearii in the provinces, but in Italy

* Duocimanus, according to Hyginus, was changed into Decimanus; "Decumanus," says Niebuhr, "probably from making the figure of a cross, which resembles the numeral X, like decussatus." Neither explanation is satisfactory.

they were called *Subruncivi*. The *limites* parallel to the *cardo* were drawn in the same way.

The Roman measure of length used for land was the *actus* of 120 feet: the square *actus* was 14,400 square feet; and a *juger* or *jugerum* was two *actus quadrati*. The word *centuria* properly means a hundred of any thing. The reason of the term *centuria* being applied to these divisions may be, that the plebeian centuries contained 100 *actus*, which is 50 *jugera*, the amount contained in the portions put up to sale by the *quaestors*: but *Siculus Flaccus* (p. 15, ed. Goes.) gives a different account. The *centuria* sometimes contained 200 *jugera*, and in later periods 240 and 400. This division into *centuriae* only comprehended the cultivable land. When a colony was founded or a tract of land was divided, that part which did not consist of arable land was the common property of the colony or settlement; and was used as pasture. Such tracts appear to be the *Compascuus Ager* of the *Lex Thoria* (c. 4, &c.). The land that was thus limited, would often have an irregular boundary, and thus many centuries would be incomplete. Such pieces were called *Subseciva*, and were sometimes granted to the colony or community, and sometimes reserved to the state. That such portions existed in some quantity in Italy is shown by the fact of *Vespasian* and *Titus* making sales of them, and *Domitian* is said to have restored them to the possessors.

A plan of each tract of limited land was engraved on metal (*aes*), and deposited in the *tabularium*. This plan (*forma*) showed all the *limites* or *centuriae*, and was a permanent record of the original limitation. Descriptions also accompanied the plan, which mentioned the portions that belonged to different individuals, and other particulars. (*Siculus Flaccus*, *De Divis. et Assig.* ed. Goes., p. 16; and the passages collected by *Brissonius*, *Select. ex Jur. Civil.* iii. c. 5.) Some of these records, which belong to an early period of Roman history, are mentioned by *Siculus Flaccus*, as existing when he wrote (p. 24, ed. Goes.). These registered plans were the best evidence of the original division of the lands, and if disputes could not be settled otherwise, it was necessary to refer to them.

As to the marks by which boundaries were distinguished, they were different in the case of *Ager Arcifinius* and *Ager Limitatus*. In the case of *Ager Arcifinius*, the boundaries were either natural or artificial, as mountain ridges, roads, water sheds, rocks, hills, ramparts of earth, walls of rubble, and so forth: rivers, brooks, ditches and water conduits were also used as boundaries. Marks were also made on rocks, and trees were planted for this purpose, or were left standing (*arbores intactae, antemissae*). Trees were often marked: those which were the common property of two land-owners were marked on both sides; and those which belonged to a single proprietor were marked on the side which was turned from the proprietor's land (*arbores insignes, signatae, notatae*). By cutting off a piece of the bark, a scar would be formed which would answer as a *signum*. In angles, such as a *trifinium* or *quadrifinium*, more special boundary marks were used, for instance, at a *trifinium* three trees would be planted. Taps, or pieces of wood, lead and iron, were also inserted in trees to point to some piece of water as the nearest boundary.

The *Ager Limitatus* was marked in a different way by boundary stones and posts, not by natural

barriers. The boundaries of the territory were marked by *termini*, which received their names under the empire from the emperor who gave the commission for partitioning the land. Accordingly, we find the expressions *Lapides Augustales*, *Tiberiani*, and so forth, mentioned as the *termini* fixed by these emperors for the boundaries of the colonies which they founded. The *Termini Territoriales* marked the limits of the district, the *Pleurici* ran parallel to the *Decumani* and *Cardines*, the *Actuarii Centuriales* were at the angles of the *centuriae*, the *Epipedonici* in the centre of the *centuriae*, the *Proportionales* at the beginning and end of the *jugera*. The boundaries of a property were also marked by *termini*; and the owner of a property might place *termini* within it to mark the pieces into which he divided it for his children.

The *termini* were either posts of wood or stones. In the colonies of *Augustus*, the boundaries of the *centuriae* were marked by stones; those of the several allotments by oak posts (*termini robusti, pali roborei*). Sometimes *pali actuarii* are mentioned, from which it appears that the boundaries of the *centuriae* were sometimes determined by wooden posts. The stones used in a particular limitatio were of the same kind and colour in order to make them more useful as boundary stones. The stones were either polished (*politi, dolati*) or rough hewn (*taxati a ferro*), or in their entire rough state. The size varied from half a foot to two and a half feet, and the larger might sometimes be mistaken by ignorant people for mile stones. The form of the stones also varied, as we see from the representations contained of them in the *MSS.* of the *Agrimensores*. The number of angles varied in those which were angular: some were cylindrical, some pointed, others of a pyramidal form. The head stones at the beginning and end of a boundary were more conspicuous than those which lay between them. Inscriptions and marks were also put on the *termini*. The *termini* on the boundaries of the limited land have often considerable inscriptions; the centurial and pleurite *termini* give the number of the century and the name of the *limes*. Various kinds of marks were also devised to facilitate the ascertaining of boundaries without the trouble of referring to the plan.

These precautions were not all. A stone might be removed and a boundary might thus become uncertain. It was accordingly the practice to bury something under the stone that was not perishable, as bones, embers and ashes from the offering made at the time when the stone was set up. Small coins were also put under it, and fragments of glass, pottery, and the like, which would serve to determine the place of the stone. The same practice is enjoined by the laws of *Manu* (viii. 249, 250, 251), a fact noticed by *Dureau de la Malle*. On the introduction of Christianity, the practice of making such offerings was discontinued, and this kind of evidence was lost. Under the old religion it was also the practice to traverse the boundaries at the *terminalia*, in the month of February. In the case of the territorial boundaries, this was done by the whole community; and pursuant to this old custom, the boundaries of the original territory of Rome, six miles from the city, were traversed at the *terminalia*. Private persons also examined their boundaries at the *terminalia*, and the usual offerings were made. The parish *perambulations* and other *perambula-*

times of modern times bear some resemblance to this Roman usage.

It has been observed that *finis*, a term which expresses the boundary of separate properties, must not be confounded with *limes*; nor must *fundus* be confounded with *locus*. A *fundus* has determinate boundaries (*fines*); a *locus* is indeterminate, and may be part of a *fundus* or comprise more than a *fundus*. A dispute about a *fundus* is a question of property; a dispute about a *locus* or *finis* is a dispute about boundaries.

Niebuhr conjectures "that a *fundus* assigned by the state was considered as one entire farm, as a whole, the limits of which could not be changed." But he adds, "This did not preclude the division of estates, nor even the sale of duodecimal parts of them;" and further, "The sale or transfer of them, when the whole was not alienated, was in parts according to the duodecimal scale." But to this it is replied by Dureau de la Malle, that when there were five, seven or nine heredes, there must be a fractional division. A *fundus* generally had a particular name which was not changed, and it is stated that both in Italy and France many of these properties still have Roman names. But the fact of a *fundus* generally having a name, and the fact of the name being often preserved, does not prove that all *fundi* retained their original limits according to Roman usage; nor does the fact, that there were sometimes two, sometimes three owners of one *fundus* (Dig. 10. tit. 1. s. 4.), prove that a *fundus* never had its limits changed, while it disproves Niebuhr's assertion as to duodecimal parts, unless the halves and thirds were made up of duodecimal parts, which cannot be proved. It seems probable enough, that an original *fundus* would often retain its limits unchanged for centuries. But it is certain that the bounds (*fines*) of private properties often changed. Rudorff remarks: "The boundary of a property is changeable. It may by purchase, exchange, and other alienation, be pushed further, and be carried back." The localities of the great *Cardines*, *Decumani*, and other *Limites*, as the same writer has been already quoted to show, are unchangeable.

The difficulty of handling this subject is very great, owing to the corrupted text of the writers on the *Res Agraria*. The latest edition of these writers is by Goesius, Amsterdam, 1674. A new and corrected edition of these writers with a suitable commentary would be a valuable contribution to our knowledge of the Roman land system. (*Res Agrariae Auctores*, ed. Goes.; Rudorff, *Zeitschrift für Geschichte. Rechtsw.* Ueber die Grünscheidungsklage, vol. x.; Niebuhr, vol. ii. appendix 1; Dureau de la Malle, *Economie Politique des Romains*, vol. ii. p. 166, &c.) [G. L.]

AGER SANCTUS (ἁγῆρος). For an account of the lands in Greece devoted to the service of religion, see TEMENOS; for an account of those in Rome, see SACERDOS.

AGETORIA (ἀγῆροια). [CARNIA.]

AGGER (ἄγῆρος), from *ad* and *gero*, was used in general for a heap or mound of any kind which might be made of stones, wood, earth or any other substance. It was more particularly applied to a mound, usually composed of earth, which was raised round a besieged town, and which was gradually increased in breadth and height, till it equalled or overtopped the walls. Hence we find the expressions *aggere oppidum oppugnare*, *aggere oppidum*

cingere; and the making of the agger is expressed by the verbs *castruere*, *construere*, *facere*, *facere*, &c. Some of these *aggeres* were gigantic works, flanked with towers to defend the workmen and soldiers, and surmounted by parapets, behind which the soldiers could discharge missiles upon the besieged towns. At the siege of Avaricum, Caesar raised in twenty-five days an agger 330 feet broad, and 80 feet high. (*B. G.* vii. 24.) As the agger was sometimes made of wood, hurdles, and similar materials, we sometimes read of its being set on fire. (*Liv.* xxxvi. 23; *Caes. B. G.* vii. 24, *B. C.* ii. 14, 15.) The word agger was also applied to the earthen wall surrounding a Roman encampment, composed of the earth dug from the ditch (*fossa*), which was usually nine feet broad and seven feet deep; but if any attack was apprehended, the depth was increased to twelve feet, and the breadth to thirteen feet. Sharp stakes, &c., were usually fixed upon the agger, which was then called *vallum*. When both words are used (as in *Caesar, B. G.* vii. 72, *agger ac vallum*), the agger means the mound of earth; and the vallum the sharp stakes (*valli*), which were fixed upon the agger.

At Rome, the formidable rampart erected by Servius Tullius to protect the western side of Rome was called *agger*. It extended from the further extremity of the Quirinal to that of the Esquiline. It was fifty feet broad, having a wall on the top, defended by towers, and beneath it was a ditch a hundred feet wide and thirty feet deep. (*Cic. de Rep.* ii. 6; *Dionys.* ix. 68.) Pliny (*H. N.* iii. 5. s. 9) attributes the erection of this rampart to Tarquinius Superbus, but this is in opposition to all the other ancient writers who speak of the matter.

AGITATORRES. [CIRCUS.]

AGMEN. [EXERCITUS.]

AGNATI. [COGNATI.]

AGNOMEN. [NOMEN.]

AGONALIA, or AGONIA (*Ov. Fast.* v. 721), one of the most ancient festivals at Rome, celebrated several times in the year. Its institution, like that of other religious rites and ceremonies, was attributed to Numa Pompilius. (*Macrob. Saturn.* i. 4.) We learn from the ancient calendars that it was celebrated on the three following days, the 9th of January, the 21st of May, and the 11th of December (*a. d. V. Id. Jan.*; XII. *Kal. Jun.*; III. *Id. Dec.*); to which we should probably add the 17th of March (*a. d. XVI. Kal. Apr.*), the day on which the Liberalia was celebrated, since this festival is also called *Agonia* or *Agonium Martiale*. (*Varr. L. L.* vi. 14, ed. Müller; *Macrob. l. c.*; *Kalendarium Vaticanum*.) The object of this festival was a disputed point among the ancients themselves; but as Hartung has observed (*Die Religion der Römer*, vol. ii. p. 33), when it is recollected that the victim which was offered was a ram, that the person who offered it was the rex sacrificulus, and that the place where it was offered was the regia (*Var. L. L.* vi. 12; *Ov. Fast.* i. 333; *Fest. s. v. Agonium*), we shall not have much difficulty in understanding the significance of this festival. The ram was the usual victim presented to the guardian gods of the state, and the rex sacrificulus and the regia could be employed only for such ceremonies as were connected with the highest gods and affected the weal of the whole state. Regarding the sacrifice in this light, we see a reason for its being offered several times in the year.

The etymology of the name was also a subject of much dispute among the ancients; and the various etymologies that were proposed are given at length by Ovid. (*Fast.* i. 319—332.) None of these, however, are at all satisfactory; and we would therefore suggest another. It is well known that the Quirinal hill was originally called *Agonus*, and the Colline gate *Agonensis*. (*Fest. s. vv. Agonium, Quirinalis*; comp. *Dionys. ii.* 37.) What is then more likely than that this sacrifice should have been originally offered on this hill, and should thence have received the name of Agonalia? It is expressly stated that the sacrifice was offered in the *regia*, or the *domus regia*, which in the historical times was situated at the top of the *sacra via*, near the arch of Titus (Becker, *Handbuch d. Röm. Alterth.* vol. i. pp. 237, 238); but in the earliest times the *regia* is stated by an ancient writer to have been upon the Quirinal (*Solin. i.* 21), and this statement seems to render our supposition almost certain. (*Classical Museum*, vol. iv. pp. 154—157.)

The *Circus Agonensis*, as it is called, is supposed by many modern writers to have occupied the place of the present Piazza Navona, and to have been built by the emperor Alexander Severus on the spot where the victims were sacrificed at the Agonalia. Becker (*Ibid.* pp. 668—670) has however brought forward good reasons for questioning whether this was a circus at all, and has shown that there is no authority whatever for giving it the name of *circus Agonensis*.

AGON/ES (*ἀγῶνες*), the general term among the Greeks for the contests at their great national games. [CERTAMINA.] The word was also used to signify law-suits, and was especially employed in the phrase *ἀγῶνες τιμητοί* and *ἐτιμητοί*. [TIMEMA.]

AGONO/THETAE (*ἀγωνοθέται*), were persons, in the Grecian games, who decided disputes and adjudged the prizes to the victors. Originally, the person who instituted the contest and offered the prize was the *agonothetes*, and this continued to be the practice in those games which were instituted by kings or private persons. But in the great public games, such as the Isthmian, Pythian, &c., the *agonothetes* were either the representatives of different states, as the Amphictyons at the Pythian games, or were chosen from the people in whose country the games were celebrated. During the flourishing times of the Grecian republics, the Eleians were the *agonothetes* in the Olympic games, the Corinthians in the Isthmian games, the Amphictyons in the Pythian games, and the Corinthians, Argives, and inhabitants of Cleonae in the Nemean games. The *ἀγωνοθέται* were also called *αἰγυμνήται*, *ἀγωνάρχαι*, *ἀγωνοδίκαι*, *ἀθλοθέται*, *ραβδοῦχοι* or *ραβδονομοί* (from the staff they carried as an emblem of authority), *βραβεῖς*, *βραβεύται*.

AGORA (*ἀγορά*), properly means an assembly of any nature, and is usually employed by Homer for the general assembly of the people. The *agora* seems to have been considered an essential part in the constitution of the early Grecian states, since the barbarity and uncivilised condition of the Cyclops is characterised by their wanting such an assembly. (*Hom. Od. ix.* 112.) The *agora*, though usually convoked by the king, appears to have been also summoned at times by some distinguished chieftain, as for example, by Achilles before Troy.

(*Hom. Il. 4.* 54.) The king occupied the most important seat in these assemblies, and near him sat the nobles, while the people sat in a circle around them. The power and rights of the people in these assemblies have been the subject of much dispute. Platner, Tittman, and more recently Nitzsch in his commentary on the *Odyssey*, maintain that the people was allowed to speak and vote; while Müller (*Dor. iii.* l. § 8), who is followed by Grote (*Hist. of Greece*, vol. ii. p. 91), maintains that the nobles were the only persons who proposed measures, deliberated, and voted, and that the people was only present to hear the debate, and to express its feeling as a body; which expressions might then be noticed by a prince of a mild disposition. The latter view of the question is confirmed by the fact, that in no passage in the *Odyssey* is any of the people represented as taking part in the discussion; while, in the *Iliad*, Ulysses inflicts personal chastisement upon Thersites, for presuming to attack the nobles in the *agora*. (*Il. ii.* 211—277.) The people appear to have been only called together to hear what had been already agreed upon in the council of the nobles, which is called *βουλή* (*Il. ii.* 53, vi. 114, *ῥήτορες βουλευταί*), and *δῶκος* (*Od. ii.* 26), and sometimes even *ἀγορά* (*Od. ix.* 112; *ἀγοραί βουληφόροι*). Justice was administered in the *agora* by the king or chiefs (*Hea. Theog.* 85; *Hom. Il. xviii.* 497, &c. *Od. xii.* 439), but the people had no share in its administration, and the *agora* served merely the purpose of publicity. The common phrases used in reference to the *agora* are *εἰς ἀγορὴν καλεῖν*; *ἀγορὴν ποιεῖσθαι*, *τίθεσθαι*; *εἰς τὴν ἀγορὴν εἰσιέναι*, *ἀγρεύεσθαι*, &c. (Wachsmuth, *Hellen. Alterthumsk.* vol. i. p. 346, 2d ed.; Hermann, *Lehrbuch d. Griech. Staatsalt.* § 55; Grote, *Hist. of Greece*, vol. ii. pp. 91—101.)

Among the Athenians, the proper name for the assembly of the people was *ἐκκλησία*, and among the Dorians *ἀία*. The term *agora* was confined at Athens to the assemblies of the *phylae* and demi. (*Aesch. c. Ctes.* § 27. p. 50. 37; Schömann, *De Comitibus Athen.* p. 27, *Antiq. Jur. Publ. Graec.* pp. 203, 205; Böckh, *Corp. Inscrip.* vol. i. p. 125.) In Crete the original name *ἀγορά* continued to be applied to the popular assemblies till a late period. (Bekker, *Anecd.* vol. i. p. 210.)

A'GORA (*ἀγορά*), was the place of public assembly in a Greek city, both for traffic, and for the transaction of all public business. It answers to the Roman *forum*; and, in fact, it is impossible to keep these two subjects entirely separate.

In the earliest times, the *Agora* was merely an open piece of ground, which was generally in front of the royal palace, and, in sea-port towns, close to the harbour. The *Agora* of Troy was in the citadel. Here, the chiefs met in council, and sat in judgment, and the people assembled to witness athletic games. It was evidently also the place of traffic and of general intercourse: in one passage of Homer, we have a lively picture of the idlers who frequented it. It was enclosed with large stones sunk into the earth, and seats of marble were placed in it for the chiefs to sit in judgment, and it was hallowed by the shrine of one or more divinities. In the *Agora* which Homer particularly describes, — that of the Phaeacians, — there was a temple of Poseidon. (*Hom. Il. ii.* 788, vii. 345, 346, xviii. 497—506, *Od. vi.* 263—285, viii. 16, 109, xvi. 361.)

Out of this simple arrangement arose the magnificent *dypol* of later times, which consisted of an open space, enclosed by porticoes or colonnades, divided into separate parts for the various occupations which were pursued in it, adorned with statues, altars, and temples, and built about with edifices for the transaction of public and private business, and for the administration of justice.

Our information respecting these edifices is rather scanty. The chief authorities are Pausanias and Vitruvius. The existing ruins are in such a state as to give us a very little help.

We have, first of all, in this, as in other departments of architecture, to distinguish the ancient style from that introduced by the Greeks of Ionia after the Persian war, and more especially by Hippodamus of Miletus [see Dict. of Biog. s. v.], whose connection with the building of *dyopod* of a new form is marked by the name Ἰπποδάμεια, which was applied to the Agora in the Peiræus. (Harpocr. s. v. Ἰπποδάμεια.) The general character of the Greek *dyopod* is thus described by Vitruvius (v. 1): — "The Greeks arrange their fora in a square form, with very wide double colonnades, and adorn them with columns set near one another and with stone or marble entablatures, and they make walks in the upper stories."

Among the *tyrolai* described by Pausanias, that of the Eleians is mentioned by him (vi. 24) as being "not on the same plan as those of the Ionians and the Greek cities adjoining Ionia, but it is built in the more ancient fashion, with porticoes separated from one another, and streets between them." But the name of the Agora in our days is *Hippodromos*, and the people of the country exercise their horses there. But of the porticoes, the one towards the south is of the Dorian style of work, and the pillars divide it into three parts (in

this the Hellanodicae generally pass the day): but against these (pillars) they place altars to Zeus... To one going along this portico, into the Agora, there lies on the left, along the further side of this portico, the dwelling of the Hellanodicae (ὁ Ἑλλανοδικεῶν): and there is a street which divides it from the Agora... And near the portico where the Hellanodicae pass the day, is another portico, there being one street between them: this the Eleians call the Corcyracan portico" (because it was built from the tithe of spoil taken from the Corcyræans in war). "But the style of the portico is Dorian and double, having columns on the one side towards the Agora, and on the other side towards the parts beyond the Agora: and along the middle of it is a wall, which thus supports the roof: and images are placed on both sides against the wall." He then proceeds to mention the ornaments of the Agora, namely, the statue of the philosopher Pyrrhon; the temple and statue of Apollo Acesius; the statues of the Sun and Moon; the temple of the Graces, with their wooden statues, of which the dress was gilt, and the hands and feet were of white marble; the temple of Seilenus, dedicated to him alone, and not in common with Dionysus; and a monumental shrine, of peculiar form, without walls, but with oak pillars supporting the roof, which was reported to be the monument of Oxylus. The Agora also contained the dwelling of the sixteen females, who wove in it the sacred robe for Hera. It is worthy of remark that several of these details confirm the high antiquity which Pausanias assigns to this Agora.

Hirt has drawn out the following plan from the description of Pausanias. (*Geschichte der Baukunst bei den Alten*, Taf. xxi. fig. 5.) We give it, not as feeling satisfied of its complete accuracy, but as a useful commentary on Pausanias.

GROUND PLAN OF THE OLD AGORA AT ELIS.

Δ, the chief open space of the agora, called, in the time of Pausanias, *hippodromus*: α, colonnades separated by streets; β: α, the Stoa in which the Hellenodicae sat, divided from the Agora by a street α: γ, the house of the Hellenodicae: ζ, the Tholus: η, the Corycraean Stoa, composed of two parts, c looking into the Agora, and d looked away from it: ε, γ, θ, small temples: ς, statues of the Sun and Moon: ι, monument of Oxylus: κ, house of the sixteen women.

In this Agora the Stoa, B, answers to the later *andron*, and the house C. to the *prytaneion* in other

Greek *agorai*. With respect to the other parts, it is pretty evident that the chief open space, *A*, which Pausanias calls τὸ σταθρον τῆς ἀγορᾶς, was devoted to public assemblies and exercise, and the *stoa* (*a*), with their intervening streets (*b*), to private business and traffic. Hirt traces a resemblance of form between the Eleian agora and the Forum of Trajan. It is evident that the words of Vitruvius, above quoted, refer to the more modern, or Ionian form of the Agora, as represented in the following plan, which is also taken from Hirt (*Geschichte der Baukunst*, xxi. fig. 1):—

PLAN OF A GREEK AGORA, ACCORDING TO VITRUVIUS.

A, the open court, surrounded by double colonnades and shops: B, the Curia: C, the chief temple,

SECTION OF THE SAME.

particular state: in the Agora at Sparta, for example, there were the senate-house of the Gerontes and the places of meeting of the Ephori, the Nomophylaces, and the Bidiaei. 3. The residence of the magistrates for the time being [PRYTANEIUM]. 4. Courts of justice [BASILICA]. 5. The public treasury [THESAURUS]. 6. The prison [CARCER]. 7. The police station, if such a term may be applied to an ancient Agora. At Athens, for example, the station of the thousand Scythian bowmen, who formed the police force of the state, was in the middle of the Agora: this does not, however, seem to have been a permanent building, but only a number of tents. 8. Buildings used for the regulation of the standards of measure, and so forth; such as the building vulgarly called the Temple of the Winds at Athens [HOROLOGIUM], and the Milliarium Aureum at Rome, which seems to have been imitated from a similar standard at Athens [MILLIARIUM]. To these various buildings must be added the works of art, with which the open area and the porticoes of the Agora were adorned; which were chiefly in celebration of gods and heroes who figured in the mythology, of men who had deserved well of the state, of victories and other memorable events, besides those which obtained a place there purely by their merits as master-pieces of art. As a specimen we may take the Agora at Athens, a portico of which, thence called the *στοὰ ποικίλη*, was adorned with the paintings of Polygnotus, Micon, and others,

also used as a treasury: D, the Basilica, or court of justice: X, the Tholus, in connection with the other rooms of the Prytaneium, C, D.

The cut below, which is also from Hirt, represents a section of the Agora made along the dotted line on the plan.

We gain further information respecting the buildings connected with the Agora, and the works of art with which it was adorned, chiefly from the statements of Pausanias respecting those of particular cities, such as Athens (i. 5. § 2), Thebes (ix. 17. § 1), Sicyon (ii. 7. § 7, 9. § 6), Argos (ii. 21), Sparta (iii. 11), Tegea (viii. 47. § 3), Megalopolis (viii. 30. § 2), to which passages the reader is referred for the details. The buildings mentioned in connection with the Agora are:—1. Temples of the gods and shrines of heroes [TEMPLUM], besides altars and statues of divinities. The epithet *ἀγοραῖος* is often applied to a divinity who was thus worshipped in the Agora (Paus. ii. 10.; Aesch. *Eumen.* 976; Soph. *Oed. Tyr.* 161, where mention is made of the circular throne of Artemis in the Agora), and Aeschylus expressly refers to the *θεοὶ ἀγορᾶς ἐπισκόποι* (*Sept. c. Theb.* 271, 272). 2. The Senate-house (*Βουλευτήριον*), and other places for the meetings of the governing bodies, according to the constitution of the

and in which also stood the statues of the ten heroes (*ἄρχηγέται*), after whom the Phylae of Cleisthenes were named, of Solon, of Harmodius, and Aristogeiton, of the orator Lycurgus, and of very many others. It was customary also to build new porticoes out of the spoils taken in great wars, as examples of which we have the Corcyraean portico at Elis, mentioned above, and the Persian portico at Sparta.

The open area of the Agora was originally the place of public assembly for all purposes, and of general resort. Its use for political purposes is described in the preceding article. Here also were celebrated the public festivals. At Sparta, the part of the Agora in which stood the statues of Apollo, Artemis, and Leto, was called *χόρος*, because the choruses of the Ephebi performed their dances there at the festival of the Gymnopaedia. (Paus. iii. 9.) Lastly, it was the place of social and fashionable resort. At Athens, fashionable loungers were called *ἀγᾶλματα ἀγορᾶς*.

Originally the Agora was also the market, and was surrounded with shops, as shown in the above plan. As commerce increased, it was found convenient to separate the traffic from the other kinds of business carried on in the Agora, and to assign to each its distinct place, though this was by no means universally the case. The market, whether identical with, or separate from the Agora for political and other assemblies, was divided into parts for the different sorts of merchandise, each of

courses furnished with colonnades, which the climate rendered necessary, and partly with shops and stalls, partly with temporary booths of wicker-work (*σκηναί*, Harpocr. *s. v.* *σκηνήτης*; Demosth. *de Cor.* p. 284). Each of these parts was called a *συνάλας*. It is generally stated that this term was applied only to that division of the market where meat, fish, and such things were sold; but Becker has shown that it was used also for other parts of the market (*Charities*, vol. i. pp. 268, 269). The several divisions of the market were named according to the articles exposed for sale in them. (Poll. ix. 47, x. 19.) Of these divisions, the following were the most important.

The part in which fish and other delicacies for the table were exposed to sale was called *ἰχθύς*, *ἔρως*, or *ἰχθυόπωλις ἀγορά*, and was the chief centre of business. It was open only for a limited time, the signal for commencing business being given by the sound of a bell, which was obeyed with an eagerness that is more than once pleasantly referred to by the ancient writers. (Plutarch, *Sympos.* iv. 4, 2; Strab. xiv. p. 658.) The carelessness and impositions of the fish-sellers, and the attempts of purchasers to beat them down, are frequently alluded to by the comic poets. (Amphis, *op. Ath.* vi. p. 224, e.; Alexis, *ibid.*; Xenarch. *ibid.* p. 225, c.; Alexis, *ibid.* p. 226, a, b.; comp. Plat. *Leg.* xi. p. 917.) It is not quite clear whether meat, poultry, and so forth, were sold in the same place as the fish, or had a separate division of the market assigned to them. Bread was partly sold in the assigned place in the market, which was perhaps the same as the meal-market (*τὰ ἄλφιστα*), and partly carried round for sale: the sellers were generally women, and were proverbially abusive. (Aristoph. *Ran.* 857, *Vesp.* 1389.) In another part of the market, called *μυρρίναι*, were the women who sold garlands of myrtle and flowers for festivals and parties. (Plut. *Arat.* 6; Aristoph. *Thesm.* 448, 457.) Near these, probably, were the sellers of ribands and fillets for the head. (Demosth. in *Eubul.* p. 1308.) The wholesale traffic in wine, as distinct from the business of the *κρήνη* [CAUPO], was carried on in the market, the wine being brought in from the country in casks, from which it was transferred to amphorae: the process is represented in two pictures at Pompeii. (Alexis, *op. Ath.* x. p. 431, e.; *Mem. Borbon.* vol. iv. Relaz. d. Scav. A., and vol. v. p. 48.) [AMPHORA.] The market for pottery was called *χέραι*; and must not be confounded with the place where cooks sat and offered themselves for hire, with their cooking utensils: this latter place was called *μαγειρεία*. (Poll. ix. 48; Alexis, *op. Ath.* iv. p. 164, f.) In short, every kind of necessary or luxury was exposed for sale in its assigned place. Thus, we find, besides those already mentioned, the market for onions (*τὰ κρόμυα*), for garlic (*τὰ σκερόδα*), for nuts (*τὰ κάρυα*), for apples (*τὰ μήλα*), for fresh cheese (*ὁ χλωρός τυρός*), for oil (*τοῖς λαίον*), for perfumes and unguents (*τὰ μύρα*), for frankincense (*ὁ λιβανωτός*), for spices (*τὰ ἀρώματα*), for couches (*αἱ κλῖναι*), for new and old clothes (*ἀγορὰ ἱματισμῶν*, or *σπειρόπωλις*, Poll. vii. 78), for books (*βιβλιοθήκη*). Lastly, a part of the market was devoted to the money-changers (*τραπεῖται*). [ARGENTARI.] Mention is sometimes made of the women's market, *γυναικεία ἀγορά*, a term which has given rise to much doubt.

(Theophr. *Char.* 2; Poll. x. 18.) The common explanation is, that it was the part of the market to which women resorted to purchase what they wanted for household uses. But it appears clearly that purchases were seldom made in the market by women, and never by free women. The only plausible explanation is, either that a distinct part of the market was assigned to those commodities, the sellers of which were women, such as the *ἀρτοποιίδες*, *λεκιτοπώλιδες*, *ισχαδοπώλιδες*, *στεφανοπώλιδες*, and others, or else that the term was applied to that part of the market where articles for the use of women were sold. But the matter is altogether doubtful. The above list of commodities, sold in the respective divisions of the market, might be still further extended. Indeed, with reference to the Athenian market, to which the description chiefly applies, there can be no doubt that every article of home produce or of foreign commerce from the known world was there exposed for sale. (See Thuc. ii. 18; Xen. *Oecon.* *Ath.* ii. 7; Isocr. *Paneg.* 64; Ath. xiv. p. 640, b, c.)

It is not to be supposed, however, that the sale of these various articles was confined to the market. Frequent mention is made of shops in other parts of the city (e. g. Thuc. viii. 95), and some articles, such as salt fish, seem to have been sold outside the gates. (Aristoph. *Equit.* 1246.)

The time during which the market was frequented was the forenoon; but it is difficult to determine precisely how much of the forenoon is denoted by the common phrases *πλήθουσα ἀγορά*, *περὶ πλήθουσαν ἀγοράν*, *πληθώρα ἀγοράς*. (Herod. ii. 173, vii. 223.) Suidas (*s. v.*) explains *πλήθουσα ἀγορά* as *ὥρα τρίτη*, but elsewhere (*s. v.* *περὶ πλήθ. ἀγ.*) he says that it was either the fourth, or fifth, or sixth hour. We might infer that the whole period thus designated was from nine to twelve o'clock (equinoctial time); but Herodotus, in two passages (iii. 104, iv. 181) makes a distinction between *πλήθουσα ἀγορά* and *μεσημβρία*. (Comp. Liban. *Ep.* 1084.) The time of the conclusion of the market was called *ἀγορὰς διάλυσις* (Herod. iii. 104, comp. Xenoph. *Oecon.* 12, 1; and for a further discussion respecting the time of the full market, see Duker, *ad Thuc.* viii. 92; Wesseling, *ad Diod.* Sic. xiii. 48; Perizon. *ad Aelian.* V. H. xii. 30; Gesner and Reiz, *ad Lucian.* *Philops.* 11, vol. iii. p. 38; Bähr, *ad Herod.* ii. 173.) During these hours the market was a place not only of traffic but of general resort. Thus Socrates habitually frequented it as one of the places where he had the opportunity of conversing with the greatest number of persons. (Xen. *Mem.* i. l. § 10; Plat. *Apol.* p. 17.) It was also frequented in other parts of the day, especially in the evening, when many persons might be seen walking about or resting upon seats placed under the colonnades. (Demosth. in *Con.* p. 1258; Pseudo-Plut. *Vit. X. Or.* p. 849, d.; Lucian. *Jup. Trag.* 16, vol. ii. p. 660.) Even the shops themselves, not only those of the barbers, the perfumers, and the doctors, but even those of the leather-sellers and the harness-makers, were common places of resort for conversation; and it was even esteemed discreditable to avoid them altogether. (Aristoph. *Plut.* 337, *Av.* 1439; Xen. *Mem.* iv. 2. § 1; Lysias, in *Pancl.* pp. 730, 732, *de Inval.* p. 754; Demosth. in *Aristog.* p. 786.)

The persons who carried on traffic in the market were the country people (*ἀγοραῖοι*), who brought

in their commodities into the city, and the retail dealers (καπηλαιοί) who exposed the goods purchased of the former, or of producers of any kind (αὐτοπώλαι), or of foreign merchants (ἐμπόροι), for sale in the markets. (Plat. *de Repub.* ii. p. 371; Xen. *Mem.* iii. 7. § 6; Plut. *Arat.* 8; CAUPO.) A certain degree of disgrace was attached to the occupation of a retail dealer, though at Athens there were positive enactments to the contrary. (Andoc. *de Myst.* p. 68; Aristot. *de Repub.* i. 10, iii. 5; Plat. *Leg.* xi. pp. 918, 919; Diog. Laërt. i. 104, ix. 66; Aristoph. *Eq.* 181; Demosth. *c. Eubul.* 30, p. 1303.) There is an interesting but very difficult question as to the effect which the occupation of selling in the market had upon the social position of women who engaged in it. (Demosth. *in Neaer.* p. 1367; Lys. *in Theomn.* p. 361; Plut. *Sol.* 23; Harpocr. and Suid. *s.v.* Πωλώσι; Becker, *Charikles*, vol. i. pp. 260—266.) The wholesale dealers also sold their goods by means of a sample (δεῖγμα), either in the market, or in the place called δεῖγμα, attached to the port. (Harpocr. *s.v.* δεῖγμα; Poll. ix. 34; Plut. *Demosth.* 23; Plat. *Leg.* vii. p. 788; Diphil. *ap. Ath.* xi. p. 499, e.; Böckh, *Econ. of Ath.* p. 58, 2d ed.) The retail dealers either exposed their goods for sale in their shops, or hawked them about. (Aristoph. *Acharn.* 33; Plut. *Apophth. Lacon.* 62, p. 236.) The privilege of freely selling in the market belonged to the citizens: foreigners had to pay a toll. (Demosth. *in Eubul.* p. 1308; Böckh, *Econ. of Ath.* p. 313.)

Most citizens either made their own purchases in the market (Aeschin. *c. Timarch.* p. 87; Aristoph. *Lysistr.* 555—559), or employed a slave, who was called, from his office, ἀγοραστής (Xen. *Mem.* i. 5. § 2; comp. *Ath.* iv. p. 171; Poll. iii. 126; Terent. *Andr.* ii. 2. 31.) Sometimes female slaves performed this office (Lysias, *de Caed. Eratostr.* p. 18, comp. p. 11), but such an appearance in public was not permitted to any free woman, except a courtesan (Machon, *ap. Ath.* xiii. p. 580.) The philosopher Lynceus, of Samos, wrote a book for the guidance of purchasers in the market. (*Ath.* vi. p. 228.) It was esteemed disreputable for people to carry home their purchases from the markets, and there were therefore porters in attendance for that purpose, who were called προβνειακοί, παυδαριώτες, and παῖδρες. (Theophrast. *Char.* xvii.—xxii.; Hesych. *s.v.* προβνειακοί.) The preservation of order in the market was the office of the AGORANOMI.

Both the architectural details of the Agora and the uses of its several parts might be further illustrated by the remains of the ἀγορά or ἀγοραί (for it is even doubtful whether there were two or only one) at Athens; but this would lead us too far into topographical details. This part of the subject is fully discussed in the following works: Leake, *Topography of Athens*; Krause, *Hellas*, vol. ii.; Müller, in Ersch and Gruber's *Encyclopädie*, art. *Attica*; Hirt, *Lehre d. Gebäude*, ch. v. supp. 1; Wachsmuth, *Hellen. Alterthumsk.* vol. i. supp. 6, b, 2d ed.

For the whole subject the chief modern authorities are the following:—Hirt, *Lehre d. Gebäude d. Griechen und Römern*, ch. v.; Stieglitz, *Archäol. d. Baukunst*; Wachsmuth, *Hellenische Alterthumskunde*; Böckh, *Public Oeconomy of Athens*; and especially Becker, *Charikles*, 4th scene, vol. i. pp. 236—296, in the original. [P.S.]

AGORANOMI (ἀγορανόμοι) were public functionaries in most of the Grecian states, whose duties corresponded in many respects to those of the Roman aediles; whence Greek writers on Roman affairs call the aediles by this name. Under the Roman empire, the agoranomi were called λογισταί (Schol. *ad Aristoph. Acharn.* 688): they enjoyed in later times great honour and respect, and their office seems to have been regarded as one of the most honourable in the Greek states. We frequently read in inscriptions of their being rewarded with crowns, of which many instances are given by Müller. (*Aeginetica*, p. 138.) They were called by the Romans *curatores reipublicae*. (Cod. 1. tit. 54. s. 3.)

Agoranomi existed both at Sparta and Athens. Our knowledge of the Spartan agoranomi is very limited, and derived almost entirely from inscriptions. They stepped into the place of the ancient *Empelori* (ἐμπέλαιοι) in the time of the Romans. They formed a collegium (συναρχία) with one at their head, called πρέσβυς (Böckh, *Corp. Inscr.* vol. i. p. 610; and Sauppe in *Rheinisches Museum*, vol. iv. p. 159, New Series.) The Athenian agoranomi were regular magistrates during the flourishing times of the republic. They were ten in number, five for the city and five for the Peiraeeus, and were chosen by lot, one from each tribe. (Dem. *c. Timocr.* p. 735; Aristoph. *Acharn.* 689.) The reading in Harpocration (*s.v.* ἀγορανόμοι), which mentions twenty agoranomi, fifteen for the city, and five for the Peiraeeus, is false. (Böckh, *Corp. Inscr.* vol. i. p. 337.)

The principal duty of the agoranomi was, as their name imports, to inspect the market, and to see that all the laws respecting its regulation were properly observed. They had the inspection of all things which were sold in the market, with the exception of corn, which was subject to the jurisdiction of the σιτοφύλακες. [ΣΙΤΟΦΥΛΑΚΕΣ.] The agoranomi had in fact chiefly to attend to retail-trade (καπηλεία): wholesale-trade was not much carried on in the market-place, and was under the jurisdiction of the ἐπιμεληταὶ τοῦ ἔμπορου. They regulated the price and quantity of all things which were brought into the market, and punished all persons convicted of cheating, especially by false weights and measures. They had in general the power of punishing all infraction of the laws and regulations relating to the market, by inflicting a fine upon the citizens, and personal chastisement upon foreigners and slaves, for which purpose they usually carried a whip. They had the care of all the temples and fountains in the market-place, and received the tax (ἐνικὸν τέλος) which foreigners and aliens were obliged to pay for the privilege of exposing their goods for sale in the market. (Schol. *ad Aristoph. Acharn.* 689; Plat. *Leg.* vi. p. 763, viii. p. 849, xi. pp. 917, 918; Liban. *Declam.* 46; ἀγορὰς τέλος, Aristoph. *Acharn.* 861, and Schol.; Phot. *s.v.* κατὰ τὴν ἀγορὰν.) The public prostitutes were also subject to their regulations, as was the case at Corinth (Justin. xxi. 5.), and they fixed the price which each prostitute was to take. (Suid. and Zonar. *s.v.* διὰγραμμα.) The duties of the agoranomi resembled those of the astynomi. [ASTYNOMI.] (Meier, *Att. Process.* pp. 89—92; Böckh, *Publ. Econ. of Athens*, pp. 48, 333, 2nd ed.)

AGRAPHIU GRAPHE' (ἀγραφήιον γραφή). The names of all persons at Athens who owed any

sum of money to the state (οἱ τῷ δημοσίῳ ὀφείλονται) were registered by the praetores (πράκτορες), upon tablets kept for that purpose in the temple of Athena, on the Acropolis (Dem. c. *Aristog.* i. p. 791; Harpoc. and Suidas, s. v. *νευθεγγραφή*); and hence the expression of being registered on the Acropolis (*ἐγγεγραμμένος ἐν Ἀκροπόλει*) always means being indebted to the state. (Dem. c. *Theocr.* p. 1337.) Whoever paid his fine after registration was erased, either wholly or in part, according to the amount paid; but if a person's name was improperly erased, he was subject to the action for non-registration (*ἀγραφίου γραφή*), which was under the jurisdiction of the thesmothetae. If an individual was not registered, he could only be proceeded against by *ἐνδείξις*, and was not liable to the *ἀγραφίου γραφή*. (Dem. in *Theocr.* p. 1338.) Hesychius, whose account has been followed by Hemsterhuis and Weseling, appears to have been mistaken in saying that the *ἀγραφίου γραφή* could be instituted against debtors, who had not been registered. (Meier, *Att. Process.* pp. 353, 354; Böckh, *Publ. Econ. of Athens*, pp. 388, 389, 2nd ed.)

AGRAPOU METALLOU GRAPHE' (*ἀγράφου μετάλλου γραφή*) was an action brought before the thesmothetae at Athens, against an individual, who worked a mine without having previously registered it. The state required that all mines should be registered, because the twenty-fourth part of their produce was payable to the public treasury. (Böckh, *Publ. Econ. of Athens*, p. 664, 2nd ed.; Meier, *Att. Process.* p. 354.)

AGRARIAE LEGES. "It is not exactly true that the agrarian law of Cassius was the earliest that was so called: every law by which the commonwealth disposed of its public land, bore that name; as, for instance, that by which the domain of the kings was parcelled out among the commonalty, and those by which colonies were planted. Even in the narrower sense of a law whereby the state exercised its ownership in removing the old possessors from a part of its domain, and making over its right of property therein, such a law existed among those of Servius Tullius." (Niebuhr, *Rom. Hist.* vol. ii. p. 129, transl.)

The complete history of the enactments called agrarian laws, either in the larger and more correct sense, or in the narrower sense of the term, as explained in this extract, would be out of place here. The particular objects of each agrarian law must be ascertained from its provisions. But all these numerous enactments had reference to the public land; and many of them were passed for the purpose of settling Roman colonies in conquered districts, and assigning to the soldiers, who formed a large part of such colonists, their shares in such lands. The true meaning of all or any of these enactments can only be understood when we have formed a correct notion of property in land, as recognised by Roman law. It is not necessary, in order to obtain this correct notion, to ascend to the origin of the Roman state, though if a complete history of Rome could be written, our conception of the real character of property in land, as recognised by Roman law, would be more enlarged and more precise. But the system of Roman law, as it existed under the emperors, contained both the terms and the notions which belonged to those early ages, of which they are the most faithful historical monuments. In an

inquiry of the present kind, we may begin at any point in the historical series which is definite, and we may ascend from known and intelligible notions which belong to a later age, towards their historical origin, though we may never be able to reach it.

Gaius (ii. 2, &c.), who probably wrote under the Antonines, made two chief divisions of Roman land; that which was *divini juris*, and that which was *humani juris*. Land which was *divini juris* was either *sacer* or *religiosus*. (Compare Frontinus, *De Re Agraria*, xiii. or p. 42. ed. Goes.) Land which was *sacer* was consecrated to the Dii Superi; land which was *religiosus* belonged to the Dii Manes. Land was made *sacer* by a *lex* or *senatus consultum*; and, as the context shows, such land was land which had belonged to the state (*populus Romanus*). An individual could make a portion of his own land *religiosus* by the interment in it of one of his family: but it was the better opinion that land in the provinces could not thus be made *religiosus*; and the reason given is this, that the ownership or property in provincial lands is either in the state (*pop. Rom.*) or in the Caesar, and that individuals have only the possession and enjoyment of it (*possessio et usus fructus*). Provincial lands were either *stipendiaria* or *tributaria*: the *stipendiaria* were in those provinces which were considered to belong to the Roman state; the *tributaria* were in those provinces which were considered as the property of the Caesar. Land which was *humani juris*, was divided into public and private: public land belonged to the state; private land, to individuals.

It would seem to follow from the legal form observed in making land *sacer*, that it thereby ceased to be *publicus*; for if it still continued *publicus*, it had not changed its essential quality. Niebuhr (*Appendix* i. vol. ii.) has stated that "all Roman land was either the property of the state (common land, domain), or private property, — *aut publicus aut privatus*;" and he adds that "the landed property of the state was either consecrated to the gods (*sacer*), or allotted to men to reap its fruits (*profanus, humani juris*)."
Niebuhr then refers to the view of Gaius, who makes the division into *divini juris* and *humani juris*, the primary division; but he relies on the authority of Frontinus, supported by Livy (viii. 14), as evidence of the correctness of his own division.*

Though the origin of that kind of property

* It is obvious, on comparing two passages in Frontinus (*De Re Agraria* xi. xiii.), that Niebuhr has mistaken the meaning of the writer, who clearly intends it to be inferred that the sacred land was not public land. Besides, if the meaning of Frontinus was what Niebuhr has supposed it to be, his authority is not equal to that of Gaius on a matter which specially belongs to the province of the jurist, and is foreign to that of the agrimensor. The passage of Livy does not prove Niebuhr's assertion. Livy merely states that the temple and grove of Sospita Juno should be common to the Lanuvini municipes and the Roman people; and in what other terms could he express the fact that the temple should be used by both people? That does not prove that a temple was considered the same kind of public property as a tract of unconsecrated land was. The form of dedition in Livy (i. 38) may easily be explained.

called public land must be referred to the earliest ages of the Roman state, it appears from Gaius that under the emperors there was still land within the limits of the empire, the ownership of which was not in the individuals who possessed and enjoyed it, but in the *populus Romanus*, or the Caesar. This possession and enjoyment are distinguished by him from ownership (*dominium*). The term *possessio* frequently occurs in those jurists from whom the Digest was compiled; but in these writers, as they are known to us, it applies only to private land, and the *Ager Publicus* is hardly, if at all, ever noticed by them. Now this term *Possessio*, as used in the Digest, means the possession of *private* land by one who has no kind of right to it; and this *possessio* was protected by the praetor's interdict, even when it was without *bona fides* or *justa causa*: but the term *Possessio* in the Roman historians, Livy for instance, signifies the occupation (*occupatio*) and enjoyment of *public* land; and the true notion of this, the original *Possessio*, contains the whole solution of the question of the Agrarian Laws. For this solution we are mainly indebted to Niebuhr and Savigny.

This latter kind of *Possessio*, that which has private land for its object, is demonstrated by Savigny (the term here used can hardly be said to be too strong) to have arisen from the first kind of *possessio*: and thus it might readily be supposed that the Roman doctrine of *possessio*, as applied to the occupation of private land, would throw some light on the nature of that original *possessio* out of which it grew. In the imperial period, public land had almost ceased to exist in the Italian peninsula, but the subject of possession in private lands had become a well understood branch of Roman law. The remarks in the three following paragraphs are from Savigny's valuable work, *Das Recht des Besitzes* (5th ed. p. 172):—

1. There were two kinds of land in the Roman state, *ager publicus* and *ager privatus*: in the latter alone private property existed. But conformably to the old constitution, the greater part of the *ager publicus* was occupied and enjoyed by private persons, and apparently by the patricians only, or at least by them chiefly till the enactment of the Licinian Rogations; yet the state could resume the land at pleasure. Now we find no mention of any legal form for the protection of the occupier, or Possessor as he was called, of such public land against any other individual, though it cannot be doubted that such a form actually existed. But if we assume that the interdict which protected the possession of an individual in private land, was the form which protected the possessor of the public land, two problems are solved at the same time,—an historical origin is discovered for possession in private land, and a legal form for the protection of possession in public land.

An hypothesis, which so clearly connects into one consistent whole, facts otherwise incapable of such connection, must be considered rather as evolving a latent fact, by placing other known facts in their true relative position, than as involving an independent assumption. But there is historical evidence in support of the hypothesis.

2. The words *possessio*, *possessor*, and *possidere* are the technical terms used by writers of very different ages, to express the occupation and the

enjoyment of the public lands; that is, the notion of occupying and enjoying public land was in the early ages of the republic distinguished from the right of property in it. Nothing was so natural as to apply this notion, when once fixed, to the possession of private land as distinct from the ownership; and accordingly the same technical terms were applied to the possession of private land. Various applications of the word *possessio*, with reference to private land, appear in the Roman law, in the bonorum *possessio* of the praetorian heres and others. But all the uses of the word *possessio*, as applied to *ager privatus*, however they may differ in other respects, agreed in this:—they denoted an actual possession and enjoyment of a thing, without the strict Roman (*Quiritarian*) ownership.

3. The word *possessio*, which originally signified the right of the possessor, was in time used to signify the object of the right. Thus *ager* signified a piece of land, viewed as an object of *Quiritarian* ownership; *possessio*, a piece of land, in which a man had only a bonitarian or beneficial interest, as, for instance, Italian land not transferred by *manipatio*, or land which from its nature could not be the subject of *Quiritarian* ownership, as provincial lands and the old *ager publicus*. *Possessio* accordingly implies *usus*; *ager* implies *proprietas* or ownership. This explanation of the terms *ager* and *possessio* is from a jurist of the imperial times, quoted by Savigny (Javolenus, Dig. 50. tit. 16. s. 115); but its value for the purpose of the present inquiry is not on that account the less. The *ager publicus*, and all the old notions attached to it, as already observed, hardly occur in the extant Roman jurists; but the name *possessio*, as applied to private land, and the legal notions attached to it, are of frequent occurrence. The form of the interdict,—*uti possidetis*,—as it appears in the Digest, is this:—*Uti eas aedes...possidetis...vim fieri veto*. But the original form of the interdict was: *Uti nunc possidetis eum fundum*, &c. (Festus in *Possessio*); the word *fundus*, for which *aedes* was afterwards substituted, appears to indicate an original connection between the interdict and the *ager publicus*.

We know nothing of the origin of the Roman public land, except that it was acquired by conquest, and when so acquired it belonged to the state, that is, to the *populus*, as the name *publicus* (*populicus*) imports; and the original *populus* was the patricians only. We may suppose that in the early periods of the Roman state, the conquered lands being the property of the *populus*, might be enjoyed by the members of that body, in any way that the body might determine. But it is not quite clear how these conquered lands were originally occupied. The following passage from Appian (*Civil Wars*, i. 7) appears to give a probable account of the matter, and one which is not inconsistent with such facts as are otherwise known:—"The Romans," he says, "when they conquered any part of Italy, seized a portion of the lands, and either built cities in them, or sent Roman colonists to settle in the cities which already existed. Such cities they designed to be garrison places. As to the land thus acquired from time to time, they either divided the cultivated part among the colonists, or sold it, or let it to farm. As to the land which had fallen out of cultivation in consequence of war, and which, indeed, was the larger

part, having no time to allot it, they gave public notice that any one who chose might in the meantime cultivate this land, on payment of part of the yearly produce, namely, a tenth of the produce of arable land, and a fifth of the produce of oliveyards and vineyards. A rate was also fixed to be paid by those who pastured cattle (on this undivided land) both for the larger and smaller animals. And this they did with a view to increase the numbers of the Italian people, whom they considered to be most enduring of labour, in order that they might have domestic allies. But it turned out just the contrary of their expectations. For the rich occupied the greater part of this undivided land, and at length, feeling confident that they should never be deprived of it, and getting bold of such portions as bordered on their lands, and also of the smaller portions in the possession of the poor, some by purchase and others by force, they became the cultivators of extensive districts instead of farms. And in order that their cultivators and shepherds might be free from military service, they employed slaves instead of freemen; and they derived great profit from their rapid increase, which was favoured by the immunity of the slaves from military service. In this way the great became very rich, and slaves were numerous all through the country. But this system reduced the number of the Italians, who were ground down by poverty, taxes, and military service; and whenever they had a respite from these evils, they had nothing to do, the land being occupied by the rich, who also employed slaves instead of freemen. This passage, though it appears to contain much historical truth, does not distinctly explain the original mode of occupation; for we can scarcely suppose that there were not some rules prescribed as to the occupation of this undivided land. Livy also gives no clear account of the mode in which these possessions were acquired; though he states in some passages that the conquered lands were occupied by the nobles, and occupation (occupatio) in its proper sense signifies the taking possession of vacant land. As the number of these nobles was not very great, we may easily conceive that in the earlier periods of the republic, they might regulate among themselves the mode of occupation. The complaint against the nobles (patres) shortly before the enactment of the Licinian Rogations was, that they were not content with keeping the land which they illegally possessed (possessio per injuriam agro), but that they refused to distribute among the plebs the vacant land (vacuum agrum) which had then recently been taken from the enemy. (Liv. iv. 51, vi. 5. 37; OCCUPATIO). It probably sometimes happened that public land was occupied, or squatted on (to use a North American phrase), by any adventurer.*

* It is stated in the American Almanac for 1833, that though the new territory of Iowa contains above 20,000 inhabitants, "none of the land has been purchased, the people being all what are termed squatters." The land alluded to is all public land. The squatter often makes considerable improvements on the land which he has occupied, and even sells his interest in it, before any purchase is made of the land. The privilege of pre-emption which is allowed to the squatter, or to the person who has purchased his interest, is

But whatever was the mode in which these lands were occupied, the possessor, when once in possession, was, as we have seen, protected by the praetor's interdict. The patron who permitted his client to occupy any part of his possession as tenant at will (*precario*), could eject him at pleasure by the *interdictum de precario*; for the client did not obtain a possession by such permission of his patron. The patron would, of course, have the same remedy against a trespasser. But any individual, however humble, who had a possession, was also protected in it against the aggression of the rich; and it was "one of the grievances bitterly complained of by the Gracchi, and all the patriots of their age, that while a soldier was serving against the enemy, his powerful neighbour, who coveted his small estate, ejected his wife and children." (Nieb.) The state could not only grant the occupation or possession of its public land, but could sell it, and thus convert public into private land. A remarkable passage in Orosius (Savigny, p. 176, note), shows that public lands, which had been given to certain religious corporations to possess, were sold in order to raise money for the exigencies of the state. The selling of that land which was possessed, and the circumstance of the possession having been a grant or public act, are both contained in this passage.

The public lands which were occupied by possessors, were sometimes called, with reference to such possession, *occupatorii*; and, with respect to the state, *concessi*. Public land which became private by sale was called *questorius*; that which is often spoken of as assigned (*assignatus*), was marked out and divided (*limitatus*) among the plebeians in equal lots, and given to them in absolute ownership, or it was assigned to the persons who were sent out as a colony. Whether the land so granted to the colony should become Roman or not, depended on the nature of the colony. The name *ager publicus* was given to the public lands which were acquired even after the plebs had become one of the estates in the Roman constitution, though the name *publicus*, in its original sense, could no longer be applicable to such public lands. After the establishment of the plebs as an estate, the possession of public land was still claimed as the peculiar privilege of the patricians, as before the establishment of the plebs it seems to have been the only way in which public lands were enjoyed by the *populus*: the assignment, that is the grant by the state of the ownership of public land in fixed shares, was the privilege of the plebs. In the early ages, when the *populus* was the state, it does not appear that there was any assignment of public lands among the *populus*, though it may be assumed that public lands would occasionally be sold; the mode of enjoyment of public land was that of *possessio*, subject to an annual payment to the state. It may be conjectured that this ancient *possessio*, which we cannot consider as having its origin in anything else than the consent of the state, was a good title to the use of the land so long as the annual payments were made. At any rate, the plebs had no claim upon such ancient possessions. But with the introduction of the plebs as a separate estate, and the acquisition of new lands

the only security which either the squatter or the person who purchases from him, has for the improvements made on the land.

by conquest, it would seem that the plebs had as good a title to a share of the newly conquered lands, as the patricians to the exclusive enjoyment of those lands which had been acquired by conquest before the plebs had become an estate; and according to Livy (iv. 49), the plebs founded their claim to the captured lands on their services in the war. The determination of what part of newly conquered lands (arable and vineyards) should remain public, and what part should be assigned to the plebs, which, Niebuhr says, "it need scarcely be observed was done after the completion of every conquest," ought to have been an effectual way of settling all disputes between the patricians and plebs as to the possessions of the former; for such an appropriation, if it were actually made, could have no other meaning than that the patricians were to have as good title to possess their share as the plebs to the ownership of their assigned portions. The plebs at least could never fairly claim an assignment of public land, appropriated to remain such, at the time when they received the share of the conquered lands to which they were intitled. But the fact is, that we have no evidence at all as to such division between lands appropriated to remain public and lands assigned in ownership, as Niebuhr assumes. All that we know is, that the patricians possessed large tracts of public land, and that the plebs from time to time claimed and enforced a division of part of them. In such a condition of affairs, many difficult questions might arise; and it is quite as possible to conceive that the claims of the plebs might in some cases be as ill founded as the conduct of the patricians was alleged to be rapacious in extending their possessions. In the course of time, owing to sales of possessions, family settlements, permanent improvements made on the land, the claims on the land of creditors who had lent money on the security of it, and other causes, the equitable adjustment of rights under an agrarian law was impossible; and this is a difficulty which Appian (i. 10. 18) particularly mentions as resulting from the law of Tib. Gracchus.

Public pasture lands, it appears, were not the subject of assignment.

The property (*publicum*) of the Roman people consisted of many things besides land. The conquest of a territory, unless special terms were granted to the conquered, seems to have implied the acquisition by the Roman state of the conquered territory and all that it contained. Thus not only would land be acquired, which was available for corn, vineyards, and pasture; but mines, roads, rivers, harbours, and, as a consequence, tolls and duties. If a Roman colony was sent out to occupy a conquered territory or town, a part of the conquered lands was assigned to the colonists in complete ownership. [COLONIA.] The remainder, it appears, was left or restored to the inhabitants. Not that we are to understand that they had the property in the land as they had before; but it appears that they were subject to a payment, the produce of which belonged to the Roman people. In the case of the colony sent to Antium, Dionysius (ix. 60) states, "that all the Antiates who had houses and lands remained in the country, and cultivated both the portions that were set aside for them and the portions appropriated to the colonists, on the condition of paying to them a fixed portion of the produce;" in which case, if the historian's

statement is true, all the sums paid by the original landholders were appropriated to the colonists. Niebuhr seems to suppose, that the Roman state might at any time resume such restored lands; and, no doubt, the notion of a possibility of resumption under some circumstances at least was involved in the tenure by which these lands were held; but it may be doubted if the resumption of such lands was ever resorted to except in extraordinary cases, and except as to conquered lands which were the public lands of the conquered state. Private persons, who were permitted to retain their lands subject to the payment of a tax, were not the possessors to whom the agrarian laws applied. In many cases large tracts of land were absolutely seized, their owners having perished in battle or been driven away, and extensive districts, either not cultivated at all or very imperfectly cultivated, became the property of the state. Such lands as were unoccupied could become the subject of possession; and the possessor would, in all cases, and in whatever manner he obtained the land, be liable to a payment to the state, as above-mentioned in the extract from Appian.

This *possessio* was a real interest, for it was the subject of sale: it was the use (*usus*) of the land; but it was not the *ager* or property. The *possessio* strictly could not pass by the testament of the possessor, at least not by the *mancipatio*. (Gaius, ii. 102.) It is not easy, therefore, to imagine any mode by which the possession of the heres was protected, unless there was a legal form, such as Savigny has assumed to exist for the general protection of possessions in the public lands. The possessor of public land never acquired the ownership by virtue of his possession; it was not subject to usucapion. The ownership of the land which belonged to the state, could only be acquired by the grant of the ownership, or by purchase from the state. The state could at any time, according to strict right, sell that land which was only possessed, or assign it to another than the possessor. The possession was, in fact, with respect to the state, *precarium*; and we may suppose that the lands so held would at first receive few permanent improvements. In course of time, and particularly when the possessors had been undisturbed for many years, possession would appear, in an equitable point of view, to have become equivalent to ownership; and the hardship of removing the possessors by an agrarian law would appear the greater, after the state had long acquiesced in their use and occupation of the public land.

In order to form a correct judgment of these enactments which are specially cited as agrarian laws, it must be borne in mind that the possessors of public lands owed a yearly tenth, or fifth, as the case might be, to the state. These annual payments were, it seems, often withheld by the possessors, and thus the state was deprived of a fund for the expenses of war and other general purposes.

The first mention by Livy of conquered land being distributed among the plebs belongs to the reign of Servius Tullius (i. 46, 47). The object of the agrarian law of Sp. Cassius (Liv. ii. 41; Dionys. viii. 70), a. c. 484, is supposed by Niebuhr to have been "that the portion of the *populus* in the public lands should be set apart, that the rest should be divided among the plebeians, that the tithe should again be levied and applied to paying the army." The agrarian law of C. Licinius Stolo (Liv. vi. 36;

Appian, *B. C.* i. 8) a. c. 365, limited each individual's possession of public land to 500 jugera, and imposed some other restrictions; but the possessor had no better title to the 500 jugera which the law left him, than he formerly had to what the law took from him. [LEXES LICINIÆ.] The surplus land was to be divided among the plebeians, as we may assume from this being an agrarian law. The Licinian law not effecting its object, Tib. Sempronius Gracchus, a. c. 133, revived the measure for limiting the possession of public land to 500 jugera. The arguments of the possessors against this measure, as they are stated by Appian (*B. C.* i. 10), are such as might reasonably be urged; but he adds that Gracchus proposed to give to each possessor, by way of compensation for improvements made on the public land, the full ownership of 500 jugera, and half that quantity to each of his sons, if he had any. Under the law of Tiberius Gracchus three commissioners (triumviri) were to be chosen annually by the thirty-five tribes, who were to decide all questions that might arise as to the claims of the state upon lands in the occupation of possessors. The law provided that the land which was to be resumed should be distributed in small allotments among the poorer citizens, and they were not to have the power of alienating their allotments. Gracchus also proposed that the ready money which Attalus III., King of Pergamus, had with all his other property bequeathed to the Roman state, should be divided among the persons who received allotments, in order to enable them to stock their land. Tiberius Gracchus lost his life in a riot a. c. 133; but the senate allowed the commissioners to continue their labours. After the death of Tiberius Gracchus, a tragical event happened at Rome. P. Cornelius Scipio, who had maintained the cause of the possessors, both Roman and Italian, against the measure of Gracchus, was found dead in his bed. Suspicion was strong against the party of Caius Gracchus, the younger brother of Tiberius, whose sister Sempronia was the wife of Scipio, but no inquiry was made into the cause of Scipio's death. Caius Gracchus became a tribune of the plebs, a. c. 123, and he put the law of his brother again in force, for it had virtually been suspended by the senate, a. c. 129, by their withdrawing the powers from the three commissioners, of whom Gracchus was one, and giving them to the consul, C. Sempronius Tuditanus, who, being engaged in the Illyrian war, could not attend to the business. Caius Gracchus proposed the establishment of various colonies under the provisions of the law. To check his power, the senate called in the aid of another tribune, M. Livius Drusus, who outbid Caius in his popular measures. The law of Gracchus proposed that those who received allotments of land should pay the state a small sum in respect of each. Drusus released them from this payment. Caius proposed to found two colonies: Drusus proposed to found twelve, each consisting of three thousand men. Caius Gracchus lost his life in a civil commotion a. c. 121. Shortly after his death, that clause of the Sempronian law which forbade the alienation of the allotments, was repealed; and they forthwith began to fall into the hands of the rich by purchase, or by alleged purchases as Appian obscurely states (*B. C.* i. 27). A tribune, Spurius Borius (Borius is the name in the MSS. of Appian), carried a law to

prevent future divisions of the public land, with a provision that the sums payable in respect of this land to the state, should be formed into a fund for the relief of the poor. But another tribune, Spurius Thorius, a. c. 111, repealed this law as to the tax from the public lands, and thus the plebs lost everything for the future, both lands and poor's money. [LEX THORIA.]

Other agrarian laws followed. In the sixth consulship of Marius, a. c. 100, agrarian laws were carried by the tribune L. Appuleius Saturninus and his party, the object of which was chiefly to provide for the veteran soldiers of Marius. These measures were carried by violence, but they were subsequently declared null. The tribune, M. Livius Drusus the younger, a. c. 91, proposed the division of all the public land in Italy and the establishment of the colonies which had been projected: he was for giving away everything that the state had (*Florus*, iii. 16). This Drusus was also a tool of the senate, whose object was to humble the equestrian order by means of the plebs and the Italian Socii. But the Socii were also interested in opposing the measures of Drusus, as they possessed large parts of the public land in Italy. To gain their consent, Drusus promised to give them the full Roman citizenship. But he and the senate could not agree on all these measures, Drusus was murdered, and the Socii, seeing their hopes of the citizenship balked, broke out in open war (a. c. 90). The measures of Drusus were declared null, and there was no investigation as to his death. The Social or Maric war, after threatening Rome with ruin, was ended by the Romans conceding what the allies demanded. [LEX JULIA.]

The land to which all the agrarian laws, prior to the Thoria Lex, applied, was the public land in Italy, south of the Macra and the Rubico, the southern boundaries of Gallia Cisalpina on the west and east coasts respectively. The Thoria Lex applied to all the public land within these limits, except what had been disposed of by assignation prior to the year a. c. 133, in which Tiberius Gracchus was tribune, and except the Ager Campanus. It applied also to public land in the province of Africa, and in the territory of Corinth. [THORIA LEX.] The object of the agrarian law of P. Servilius Rullus, proposed in the consulship of Cicero a. c. 63, was to sell all the public land both in and out of Italy, and to buy lands in Italy on which the poor were to be settled. Ten commissioners, with extraordinary powers, were to carry the law into effect, and a host of surveyors, clerks, and other officers, were to find employment in this agrarian job. The job was defeated by Cicero, whose three extant orations against Rullus contain most instructive matter on the condition of the Roman state at that time. The tribune Flavius, a. c. 60, at the instigation of Cn. Pompeius, brought forward a measure for providing the soldiers of Pompeius with lands. Cicero was not altogether opposed to this measure, for he wished to please Pompeius. One clause of the law provided that lands should be bought for distribution with the money that should arise in the next five years from the new revenues that had been created by the Asiatic conquests of Pompeius. The law was dropped, but it was reproduced in a somewhat altered shape by C. Julius Caesar in his consulship, a. c. 59, and it included the *Stellatis Ager*

and the Campanus Ager, which all previous agrarian laws had left untouched. The fertile tract of Capua (Campanus Ager) was distributed among 20,000 persons, who had the qualification that the law required, of three or more children. After this distribution of the Campanian land, and the abolition of the port duties and tolls (*portoria*), Cicero observes (*ad Att.* ii. 16), "there was no revenue to be raised from Italy, except the five per cent. (*vicesima*)" from the sale and manumission of slaves.

The lands which the Roman people had acquired in the Italian peninsula by conquest were greatly reduced in amount by the laws of Gracchus and by sale. Confiscations in the civil wars, and conquests abroad, were, indeed, continually increasing the public lands; but these lands were allotted to the soldiers and the numerous colonists to whom the state was continually giving lands. The system of colonisation which prevailed during the republic, was continued under the emperors, and considerable tracts of Italian land were disposed of in this manner by Augustus and his successors. Vespasian assigned lands in Samnium to his soldiers, and grants of Italian lands are mentioned by subsequent emperors, though we may infer that at the close of the second century of our aera, there was little public land left in the peninsula. Vespasian sold part of the public lands called *subseciva*. Domitian gave the remainder of such lands all through Italy to the possessors (*Aggenus*). The conquests beyond the limits of Italy furnished the emperors with the means of rewarding the veterans by grants of land, and in this way the institutions of Rome were planted on a foreign soil. But, according to Gaius, property in the land was not acquired by such grant; the ownership was still in the state, and the provincial landholder had only the *possessio*. If this be true, as against the Roman people or the Caesar, his interest in the land was one that might be resumed at any time, according to the strict rules of law, though it is easily conceived that such foreign possessions would daily acquire strength, and could not safely be dealt with as possessions had been in Italy by the various agrarian laws which had convulsed the Roman state. This assertion of the right of the *populus Romanus* and of the emperors, might be no wrong "inflicted on provincial landowners by the Roman jurisprudence,"* as Niebuhr affirms. The tax paid by the holders of *ager privatus* in the provinces was the only thing which distinguished the beneficial interest in such land from Italic land, and might be, in legal effect, a recognition of the ownership according to Roman law. And this was Savigny's earlier opinion with respect to the tax paid by provincial lands; he considered such tax due to the Roman people as the sovereign or ultimate owner of the lands. His later opinion, as expressed in the *Zeitschrift für*

Geschichtliche Rechtswissenschaft (vol. v. p. 254), is, that under the Caesars a uniform system of direct taxation was established in the provinces, to which all provincial land was subject; but land in Italy was free from this tax, and a provincial town could only acquire the like freedom by receiving the privilege expressed by the term *Jus Italicum*. The complete solution of the question here under discussion could only be effected by ascertaining the origin and real nature of this provincial land-tax; and as it may be difficult, if not impossible, to ascertain such facts, we must endeavour to give a probable solution. Now it is consistent with Roman notions that all conquered land should be considered as the property of the Roman state; and it is certain that such land, though assigned to individuals, did not by that circumstance alone become invested with all the characters of that Roman land which was private property. It had not the privilege of the *Jus Italicum*, and consequently could not be the object of Quiritarian ownership, with its incidents of *mancipatio*, &c. All land in the provinces, including even that of the *liberae civitates*, and the *ager publicus* properly so called, could only become an object of Quiritarian ownership by having conferred upon it the privilege of Italic land, by which it was also released from the payment of the tax. It is clear that there might be and was *ager privatus*, or private property, in provincial land; but this land had not the privileges of Italic land, unless such privilege was expressly given to it, and accordingly it paid a tax. As the notions of landed property in all countries seem to suppose a complete ownership residing in some person, and as the provincial landowner, whose lands had not the privilege of the *Jus Italicum*, had not that kind of ownership which, according to the notions of Roman law, was complete ownership, it is difficult to conceive that the ultimate ownership of provincial lands (with the exception of those of the *liberae civitates*) could reside any where else than in the *populus Romanus*, and, after the establishment of the imperial power, in the *populus Romanus* or the Caesar. This question is, however, one of some difficulty, and well deserves further examination. It may be doubted, however, if Gaius means to say that there could be no Quiritarian ownership of private land in the provinces; at least this would not be the case in those districts to which the *Jus Italicum* was extended. The case of the Reccentoric lands, which is quoted by Niebuhr (*Cic. c. Rullam*, i. 4), may be explained. The land here spoken of was land in Sicily. One object of the measure of Rullus was to exact certain extraordinary payments (*vectigal*) from the public lands, that is, from the possessors of them; but he excepted the Reccentoric lands from the operation of his measure. If this is private land, Cicero argues, the exception is unnecessary. The argument, of course, assumes that there was or might be private land in Sicily; that is, there was or might be land which would not be affected by this part of the measure of Rullus. Now the opposition of public and private land in this passage certainly proves, what can easily be proved without it, that individuals in the provinces owned land as individuals did in Italy; and such land might with propriety be called *privatus*, as contrasted with that called *publicus* in the provinces: in fact, it would not be easy to have found another name for it. But we know

* Niebuhr observes that Frontinus speaks of the "*arva publica* in the provinces, in contradistinction to the *agri privati* there;" but this he certainly does not. This contradistinction is made by his commentator Aggenus who, as he himself says, only conjectures the meaning of Frontinus; and, perhaps, he has not discovered it. (*Rei Agr. Script.* pp. 38. 46, 47.) Savigny's explanation of this passage is contained in the *Zeitschrift für Gesch. Rechtsw.* vol. xi. p. 24.

that *ager privatus* in the provinces, unless it had received the *Jus Italicum*, was not the same thing as *ager privatus* in Italy, though both were private property. Such a passage then as that just referred to in Cicero, leads to no necessary conclusion that the ultimate ownership or dominion of this private land was not in the Roman people.

It only remains briefly to notice the condition of the public land with respect to the *fructus*, or *vectigal* which belonged to the state. This, as already observed, was generally a tenth, and hence the *ager publicus* was sometimes called *decumanus*; it was also sometimes called *ager vectigalis*. The tithes were generally farmed by the *publicani*, who paid their rent mostly in money, but sometimes in grain. The letting was managed by the censors, and the lease was for five years. The form, however, of leasing the tenths was that of a sale, *mancipatio*. In course of time the word *locatio* was applied to these leases. The phrase used by the Roman writers was originally *fructus locatio*, which was the proper expression; but we find the phrase, *agrum fructuum locare*, also used in the same sense, an expression which might appear somewhat ambiguous; and even *agrum locare*, which might mean the leasing of the public lands, and not of the tenths due from the possessors of them. Strabo (p. 622), when speaking of the port duties of Cumæ in Æolia, says they were sold, by which he no doubt means that they were farmed on certain terms. It is, however, made clear by Niebuhr, that in some instances at least the phrase *agrum locare*, does mean the leasing of the tenths; whether this was always the meaning of the phrase, it is not possible to affirm.

Though the term *ager vectigalis* originally expressed the public land, of which the tithe was leased, it afterwards came to signify lands which were leased by the state, or by different corporations. This latter description would comprehend even the *ager publicus*; but this kind of public property was gradually reduced to a small amount, and we find the term *ager vectigalis*, in the later period, applied to the lands of towns which were so leased that the lessee, or those who derived their title from him, could not be ejected so long as they paid the *vectigal*. This is the *ager vectigalis* of the Digest (vi. tit. 3), on the model of which was formed the *emphyteusis*, or *ager emphyteuticarius*. [EMPHYTEUSIS.] The rights of the lessee of the *ager vectigalis* were different from those of a possessor of the old *ager publicus*, though the *ager vectigalis* was derived from, and was only a new form of the *ager publicus*. Though he had only a *jus in re*, and though he is distinguished from the owner (*dominus*), yet he was considered as having the possession of the land. He had, also, a right of action against the town, if he was ejected from his land, provided he had always paid his *vectigal*.

The nature of these agrarian laws, of which the first was the proposed law of Spurius Cassius, and the last, the law of C. Julius Cæsar, B.C. 59, is easily understood. The plebs began by claiming a share in those conquered lands of which the patricians claimed the exclusive enjoyment, subject to a fixed payment to the state. It was one object of the *rogations* of Licinius to check the power of the nobles, and to limit their wealth; and as they had at that time little landed property, this end would be accomplished by limiting their enjoyment of the public land. But a more im-

portant object was to provide for the poorer citizens. In a country where there is little trade, and no manufacturing industry, the land is the only source to which the poorer classes can look for subsistence. Accordingly, at Rome there was a continual demand for allotments, and these allotments were made from time to time. These allotments were just large enough to maintain a man and his family, and the encouragement of population was one of the objects contemplated by these grants of land. (Liv. v. 30.) Rome required a constant supply of soldiers, and the system was well adapted to give the supply. But this system of small holdings did not produce all the results that were anticipated. Poverty and mismanagement often compelled the small owners to sell their lands to their richer neighbours, and one clause of the law of Tib. Gracchus forbade persons selling their allotments. This clause was afterwards repealed, not, as some would suppose, to favour the rich, but simply because the repeal of so absurd an enactment would be beneficial to all parties. In the later republic agrarian laws were considered as one means of draining the city of the scum of the population, which is only another proof of the impolicy of these measures, for the worthless populace of a large city will never make a good agricultural population. (Cic. ad Att. i. 19.) They were also used as means of settling veteran soldiers, who must either be maintained as soldiers, or provided for in some way. Probably from about the close of the second Punic war, when the Romans had large standing armies, it became the practice to provide for those who had served their period by giving them a grant of land (Liv. xxxi. 4); and this practice became common under the later republic and the empire. The Roman soldier always looked forward to a release from service after a certain time, but it was not possible to send him away empty-handed. At the present day none of the powers of Europe which maintain very large armies could safely disband them, for they could not provide for the soldiers, and the soldiers would certainly provide for themselves at the expense of others. It was perhaps not so much a system of policy with the Romans as necessity, which led them from time to time to grant lands in small allotments to the various classes of citizens who have been enumerated.

The effects of this system must be considered from several points of view—as a means of silencing the clamours of the poor, and one of the modes of relieving their poverty, under which aspect they may be classed with the *Leges Frumentariæ*; of diffusing Roman settlers over Italy, and thus extending the Roman power; as a means of providing for soldiers; and as one of the ways in which popular leaders sought to extend their influence. The effects on agriculture could hardly be beneficial, if we consider that the fact of the settlers often wanting capital is admitted by ancient authorities, that they were liable to be called from their lands for military service, and that persons to whom the land was given were often unacquainted with agriculture, and unaccustomed to field labour. The evil that appears in course of time in all states is the poverty of a large number of the people, for which different countries attempt to provide different remedies. The Roman system of giving land failed to remedy this evil; but it

was a system that developed itself of necessity in a state constituted like Rome.

Those who may choose to investigate the subject of the agrarian laws, will find the following references sufficient for the purpose:—Liv. i. 46, 47; ii. 41, 42, 43, 44, 48, 52, 61, 63, iii. 1, 9, iv. 12, 36, 43, 44, 47, 48, 49, 51, 52, 58, v. 24, 30, vi. 5, 6, 16, 21, 35, vii. 16, x. 13, 47, xxxiii. 42, xxxiv. 40; Dionys. ii. 15, viii. 70, &c., ix. 51, &c., x. 36; Plut. *Camillus*, c. 39, *T. Gracchus*, *C. Gracchus*; Appian, *B. C.* i. 7, &c.; Cic. *c. Rullum*; *ad Att.* i. 19, ii. 16; Dion Cass. xxxviii. 1, &c. xlv. 9, &c. xlvii. 14, xlviii. 2; Vell. Pat. ii. 2, 6, 44; Florus, iii. 13, &c.; *Zeitschrift für Geschichtliche Rechtswissenschaft*, Das Ackergesetz von Spurius Thorius, vol. x. by Rudorff; Niebuhr, *Roman History*, vol. ii. p. 129, &c.; Savigny, *Das Recht des Besitzes*, 5th ed.; Classical Museum, Parts V. VI. VII., articles by the author of this article, and an article by Professor Puchta, of Berlin; Political Dictionary, art. *Agrarian Law*, by the author of this article.

[G. L.]

AGRAU/LIA (ἀγραιλία) was a festival celebrated by the Athenians in honour of Agraulos, the daughter of Cecrops. (*Dict. of Biogr. s. v.*) We possess no particulars respecting the time or mode of its celebration; but it was, perhaps, connected with the solemn oath, which all Athenians, when they arrived at manhood (ἐφηβοί), were obliged to take in the temple of Agraulos, that they would fight for their country, and always observe its laws. (Lycurg. *c. Leocr.* p. 189; Dem. *de Legat.* p. 438; Plut. *Alcib.* 15; Stobaeus, *Serm.* xli. 141; Schömann, *De Comititiis*, p. 332; Wachsmuth, *Hellen. Alterth.* vol. i. p. 476, 2nd ed.)

Agraulos was also honoured with a festival in Cyprus, in the month Aphrodisias, at which human victims were offered. (Porphyr. *De Abstin. ab Anim.* i. 2.)

AGRICULTU'RA, agriculture.

Authorities.—When we remember that agriculture, in the most extended acceptance of the term, was for many centuries the chief, we may say, almost the sole peaceful occupation followed by any large portion of the free population in those European nations which first became highly civilised, we shall not be surprised to find that the contemporaries of Cicero were able to enumerate upwards of fifty Greek writers who had contributed to this science. But although the Homeric poems are filled with a series of the most charming pictures derived from the business of a country life, although Hesiod supplies abundance of wise saws and pithy aphorisms, the traditional wisdom accumulated during many successive generations, although Xenophon has bequeathed to us a most graceful essay on the moral beauty of rustic pursuits interspersed with not a few instructive details, and although much that belongs to the Natural History of the subject will be found treasured up in the vast storehouses of Aristotle and Theophrastus, yet nothing which can be regarded in the light of a formal treatise upon the art as exhibited in the pastures and corn-fields of Hellas, has descended to us, except a volume, divided into twenty books, commonly known as the *Geoponica* (Γεωπονικά), whose history is somewhat obscure, but which, according to the account commonly received, was drawn up at the desire of Constantine VI. (A. D. 780—802) by a certain Cassianus Bassus, and consists of extracts from numerous writers, chiefly Greek, many

of whom flourished in the second, third, and fourth centuries. This collection is systematically arranged and comprehends all the chief branches; but it has never been considered of much value, except in so far as it tends to confirm or illustrate the statements found elsewhere. The information conveyed by it is, upon many points, extremely meagre, the materials were worked up at a late period by an editor with whose history and qualifications for his task we are altogether unacquainted, while the most important quotations are taken from authors of whom we know little or nothing, so that we cannot tell whether their precepts apply to the same or to different climates, whether they give us the fruit of their own experience, or, as we have great reason to suspect in many instances, were themselves mere compilers.

The Romans, during the brightest periods of their history, were devotedly attached to the only lucrative profession in which any citizen could embark with honour, and from the first dawn until the decline of their literature, rural economy formed a favourite theme for composition both in prose and verse. The works of the Sallustians, father and son, those of Scrofa Tremellius, of Julius Hyginus, of Cornelius Celsus, of Julius Atticus, and of Julius Gracinius have perished; but we still possess, in addition to Virgil, four "*Scriptores de Re Rustica*," two, at least, of whom were practical men. We have, in the first place, 162 chapters from the pen of the elder Cato (B. C. 234—149), a strange medley, containing many valuable hints for the management of the farm, the olive garden, and the vineyard, thrown together without order or method, and mixed up with medical prescriptions, charms for dislocated and broken bones, culinary receipts, and sacred litanies, the whole forming a remarkable compound of simplicity and shrewdness, quaint wisdom and blind superstition, bearing, moreover, a strong impress of the national character; in the second place, we have the three books of Varro (B. C. 116—28), drawn up at the age of eighty, by one who was not only the most profound scholar of his age, but likewise a soldier, a politician, an enthusiastic and successful farmer; in the third place, the thirteen books of Columella (A. D. 40 [?]), more minute than the preceding, especially in all that relates to the vine, the olive, gardening, and fruit trees, but evidently proceeding from one much less familiar with his subject; and, lastly, the fourteen books of Palladius (a writer of uncertain date who closely copies Columella), of which twelve form a Farmer's calendar, the different operations being ranged according to the months in which they ought to be performed. Besides the above, a whole book of Pliny and many detached chapters are devoted to matters connected with the labours of the husbandman; but in this, as in the other portions of that remarkable encyclopaedia, the assertions must be received with caution, since they cannot be regarded as exhibiting the results of original investigation, nor even a very correct representation of the opinions of others.

We ought not here to pass over unnoticed the great work of Mago the Carthaginian, who, as a native of one of the most fertile and carefully cultivated districts of the ancient world, must have had ample opportunities for acquiring knowledge. This production, extending to twenty-eight books, had attained such high fame that, after the de-

of Carthage, it was translated into Latin of the senate; a Greek version, with added probably omissions, was executed by of Utica, and published in twenty books a century before the commencement of and this, again, was a few years afterwards into six books by Diophanes of and presented to King Deiotarus. In us, Cato, Varro, and Columella will be supports, although references will be made illustrations drawn from the other sources above. (Varr. *R. R.* i. 1; Col. *R. R.* i. 1; N. xviii. 3; Proleg. *ad Geopon.* in ed.

Division of the Subject.

Economy may be treated of under two heads —

riculture proper (*Agricultura*), or the art the soil.

e management of stock (*Pastio*).

A. AGRICULTURA.

ulture proper teaches the art of raising the ops necessary for the sustenance and comon and of the domestic animals, in such a hat the productive energies of the soil fully developed but not exhausted nor l, and teaches, farther, how this may be shed with the least possible expenditure l. The crops to which the Greeks and chiefly directed their attention were — ent kinds of grain, such as wheat and leguminous vegetables cultivated for their ch as beans, peas, and lupines; herbs cut r forage, such as grass, tares, and lucerne; as which furnished the raw material for le fabrica, such as hemp and flax. 2. Fruit specially the vine, the olive, and the fig. en stuffs. — For the second of these di- refer to the articles *OLIVUM* and *VINUM*; shall not touch at all upon gardening, since re details connected with this topic are of : no service in illustrating the classica y.

ulture in its restricted sense comprehends edge

the subject of our operations, that is, the *modus, praeidium*), which must be considered.

reference to its situation and soil (*quo malis*), and b. with reference to the dwell- re and standing (*villa et stabula*).

Of the instruments (*instrumenta*) required rm the various operations (*quae in fundo t ac debent esse cultus causa*), these in- ts being twofold, a. men (*homines*); and b. stants of men (*adminicula hominum*), viz. : animals (*boves, equi, canes, &c.*) together als (*instrumenta*), properly so called, such as and harrows.

Of the operations themselves, such as g, harrowing, and sowing (*quae in fundo ussae sint faciendae*), and of the time when e to be performed (*quo quidquid tempore semiat*).

Of the object of these operations, viz. the : plants considered with reference to their varieties, and habita. Under this head we o conveniently include what is termed the of crops, that is, the order in which they succeed each other upon the same ground.

I. a. COGNITIO FUNDI

(*Knowledge of the Farm*). In selecting a farm, the two points which first demanded attention were, 1. The healthiness of the situation (*salubritas*), a matter of the greatest anxiety in Italy, where the ravages of malaria appear to have been not less fatal in ancient than they have proved in modern times; and, 2. The general fertility of the soil. It was essential to be fully satisfied upon both of these particulars; for to settle in a pestilential spot was to gamble with the lives and property of all concerned (*non aliud est atque alea domini vitae et rei familiaris*), and no man in his senses would undertake to till land which was not likely to yield a fair return for his outlay of money and labour (*fructus pro impensa ac labore*). The next object of solicitude was a good aspect. The property was, if possible, to have a southerly exposure, to be sheltered by a wooded hill from the sweep of boisterous and cutting winds, and not to be liable to sudden misfortunes (*ne calamitosum siet*), such as inundations or violent hail storms. It was highly important that it should be in the vicinity of a populous town (*oppidum validum*), or if not, that it should be readily accessible either by sea, or by a navigable stream (*amnis qua naues ambulant*), or by a good well frequented road (*via bona celeberrima*); that there should be an abundant supply of water (*bonum aquarium*); that it should be so situated that the proprietor, if he did not live upon the estate, might be able to give active and constant personal superintendence; and, finally, that it should be moderate in size, so that every portion might be brought into full cultivation (*laudatio ingentia rura — Exiguum colito*).

These preliminary matters being ascertained, the soil might be considered in reference a. to its general external features (*forma*), b. to its internal qualities (*qualis sit terra*).

a. In so far as its external features were concerned it might be flat (*solum campestre*), or upland rolling ground (*collinum*), or high lying (*montanum*), or might comprise within its limits all three, which was most desirable, or any two of them. These variations would necessarily exercise important influence on the climate, on the description of crops which might be cultivated with advantage, and on the time chosen for performing the various operations, the general rule being that as we ascend the temperature falls, that corn and sown crops in general (*segetes*) succeed best on plains, vineyards (*vineae*) on gentle slopes, and timber trees (*silvae*) upon elevated sites, and that the different labours of the rustic may be commenced earlier upon low than upon high ground. When flat it was better that it should incline gently and uniformly in one direction (*aequaliter in unam partem vergens*) than be a dead level (*ad libellam aequum*), for in the latter case the drainage being necessarily imperfect, it would have a tendency to become swampy; but the worst form was when there were converging slopes, for there the water collected into pools (*lacunae*).

b. In so far as its internal qualities were concerned, soil might be classed under six heads forming three antagonistic pairs: —

1. The deep and fat (*pingue*), 2. The shallow and lean (*macrum, jejunum*), 3. The loose (*solu-*

tum), 4. The dense (*spissum*), 5. The wet (*humidum, aquosum, uliginosum*), 6. The dry (*siccum*), while the endless gradations and combinations of which the elementary qualities were susceptible produced all the existing varieties. These are named sometimes from their most obvious constituents, the stony (*lapidosum*), the gravelly (*glareosum*), the sandy (*arenosum*), the mortary (*subulosum*), the chalky (*cretosum*), the clayey (*argillosum*); sometimes from their colour, the black (*nigrum*), the dark (*pullum*), the grey (*subalbum*), the red (*rubicundum*), the white (*album*); sometimes from their consistency, the crumbling (*putre, friabile, cineritium*), as opposed to the tenacious (*densum, crassum, spissum*); sometimes from their natural products, the grassy (*graminosum, herbosum*), the weedy (*spurcum*); sometimes from their taste, the salt (*salsum*), the bitter (*amarum*); *rubrica* seems to have been a sort of red chalky clay, but what the epithets *rudecta* and *materina* applied to earth (*terra*) by Cato may indicate, it is hard to determine (Cato 34; comp. Plin. *H. N.* xviii. 17). The great object of the cultivator being to separate the particles as finely as possible (*neque enim aliud est colere quam resolvere et fermentare terram*), high value was attached to those soils which were not only rich, but naturally pulverulent. Hence the first place was held by *solum pingue et putre*, the second by *pinguius densum*, while the worst was that which was at once dry, tenacious, and poor (*siccum pariter et densum et macrum*). The ancients were in the habit of forming an estimate of untied ground, not only from the qualities which could be detected by sight and touch, but also from the character of the trees, shrubs, and herbage growing upon it spontaneously, a test of more practical value than any of the others enumerated in the second Georgic (177—258.)

When an estate was purchased, the land might be either in a state of culture (*culta novalis*), or in a state of nature (*rudis ager*).

The comparative value of land under cultivation estimated by the crops which it was capable of bearing, is fixed by Cato (1), according to the following descending scale:—

1. Vineyards (*vimca*), provided they yielded good wine in abundance.
2. Garden ground well supplied with water (*hortus irriguus*).
3. Osier beds (*salicetum*).
4. Olive plantations (*oletum*).
5. Meadows (*pratium*).
6. Corn land (*campus frumentarius*).
7. Groves which might be cut for timber or fire-wood (*silva caedua*).
8. *Arbustum*. This name was given to fields planted with trees in regular rows. Upon these vines were trained, and the open ground cultivated for corn or leguminous crops in the ordinary manner, an arrangement extensively adopted in Campania, and many other parts of Italy in modern times, but by no means conducive to good husbandry.
9. Groves yielding acorns, beech-mast, and chestnuts (*glan-daria silva*). The fact that in the above scale, corn land is placed below meadows may perhaps be regarded as an indication that, even in the time of Cato, agriculture was upon the decline among the Romans.

When waste land was to be reclaimed, the ordinary procedure was to root out the trees and brushwood (*fruteta*), by which it might be encumbered, to remove the rocks and stones which would impede the labours of men and oxen, to destroy by

fire or otherwise troublesome weeds, such as ferns and reeds (*filices, junci*), to drain off the superfluous moisture, to measure out the ground into fields of a convenient size, and to enclose these with suitable fences. The three last-mentioned processes alone require any particular notice, and we therefore subjoin a few words upon DRAINS, LAND-MEASURES, FENCES.

DRAINS (*fossae, sulci atrecti, insilia*) were of two kinds:—

1. Open (*patentes*).
2. Covered (*caecae*).

1. *Fossae patentes*, open ditches, alone were formed in dense and chalky soil. They were wide at top, and gradually narrowed in wedge fashion (*imbricatus supinis similes*) as they descended.

2. *Fossae caecae*, covered drains, or *sivers* as they are termed in Scotland, were employed where the soil was loose, and emptied themselves into the *fossae patentes*. They were usually sunk from three to four feet, were three feet wide at top and eighteen inches at bottom; one half of the depth was filled up with small stones or sharp gravel (*nuda glareas*), and the earth which had been dug out, was thrown in above until the surface was level. Where stones or gravel could not readily be procured, green willow poles were introduced, crossing each other in all directions (*quoquo versus*), or a sort of rope was constructed of twigs twisted together so as to fit exactly into the bottom of the drain; above this the leaves of some of the pine tribe were trodden down, and the whole covered up with earth. To prevent the apertures being choked by the falling down of the soil, the mouths were supported by two stones placed upright, and one across (*utilissimum est....ora earum binis utrimque lapidibus statuminari et alio superintegi*). To carry off the surface-water from land under crop, open furrows (*sulci aquarii, elices*) were left at intervals, which discharged themselves into cross furrows (*colliquias*) at the extremities of the fields, and these again poured their streams into the ditches. (Cat. 43. 155; Col. ii. 2. 8; xi. 2; Pallad. vi. 3; Plin. *H. N.* xviii. 6. 19. 26; Virg. *Georg.* i. 113.)

MEASURES OF LAND.—The measure employed for land in Latium was the *jugerum*, which was a double *actus quadratus*, the *actus quadratus*, anciently called *acna*, or *acnua*, or *ognua*, being a square, whose side was 120 Roman feet. The subdivisions of the *as* were applied to the *jugerum*, the lowest in use being the *scripulum*, a square whose side was ten feet. 200 *jugera* formed a *centuria*, a term which is said to have arisen from the allotments of land made by Romulus to the citizens, for these being at the rate of 2 *jugera* to each man, 200 *jugera* would be assigned to every hundred men. Lastly, four *centuriae* made a *vultus*. We thus have the following table:—

1 scripulum	= 100 square feet, Roman measure.
144 scripula	= 1 actus = 14,400 square feet.
2 actus	= 1 jugerum = 28,800 square feet.
200 jugera	= 1 centuria.
4 centuriae	= 1 saltus.

Now, since three *actus quadrati* contained 4800 square yards, and since the English imperial acre contains 4840 square yards, and since the Roman foot was about $\frac{1}{8}$ of an inch less than the imperial foot, it follows that the Roman *juger* was less than $\frac{1}{8}$ of an imperial acre by about 500 square yards.

In Campania the measure for land was the

versus quadratus, a square whose side was 100 feet, the words *actus* and *versus* marking the ordinary length of furrow in the two regions. (Varr. *R. R.* i. 10, *L. L.* iv. 4; Col. v. 1; Plin. *H. N.* xviii. 3.)

FURCÆ (*aspe*, *sapimentum*) were of four kinds:—
1. *Sapimentum naturale*, the quickest hedge (*vix aspe*).

2. *Sapimentum agreste*, a wooden paling made with upright stakes (*pali*) interlaced with brush-wood (*virgultis implicatis*), or having two or more cross-spars (*amices*, *longaria*) passed through holes drilled in the stakes, after the manner of what are now termed *fences* (*palis latis perforatis et per ea foramina trajectis longariis fere bis aut ternis*).

3. *Sapimentum militare*, consisting of a ditch (*fossa*) with the earth dug out and thrown up inside so as to form an embankment (*agger*), a fence used chiefly along the sides of public roads or on the banks of rivers.

4. *Sapimentum fabrilis*, a wall which might be formed either of stones (*maceria*), as in the vicinity of Tusculum, or of baked bricks as in the north of Italy, or of unbaked bricks as in Sabinnum, or of masses of earth and stone pressed in between upright boards (*in formis*), and hence termed *formaci*. These last were common in Spain, in Africa, and near Tarentum, and were said to last for centuries uninjured by the weather. (Varr. i. 14; Plin. *H. N.* xxxv. 14; comp. Col. v. 10, x. 3; Pallad. i. 34; vi. 3.)

Finally, after the land had been drained, divided, and fenced, the banks which served as boundaries, and the road-sides were planted with trees, the elm and the poplar being preferred, in order to secure a supply of leaves for the stock and timber for domestic use. (Cat. 6.)

I. b. VILLA RUSTICA.

In erecting a house and offices, great importance was attached to the choice of a favourable position. The site selected was to be elevated rather than low, in order to secure good ventilation and to avoid all danger of exhalations from running or stagnant water; under the brow of a hill, for the sake of shelter; facing the east so as to enjoy sunshine in winter and shade in summer; near, but not too near to a stream, and with plenty of wood and pasture in the neighbourhood. The structures were to be strictly in proportion to the extent of the farm; for if too large, the original out is heavy, and they must be kept in repair at a great expense; if too small, the various products would run the risk of being injured by the want of proper receptacles (*ita edifices ne villa fundum parat neve fundus villam*, Cat. *R. R.* 3). The buildings were usually arranged round two courts, with a tank in the centre of each, and divided into three parts, named according to the purposes for which they were destined. 1. (*Pars*) *Urbana*. 2. (*Pars*) *Rustica*. 3. (*Pars*) *Fructuaria*.

1. *Urbana*. This comprehended that part of the building occupied by the master and his family, consisting of eating rooms (*coenationes*) and sleeping apartments (*cubicula*), with different aspects for summer and winter, baths (*balnearia*), and peristyles or promenades (*ambulationes*). Columella recommends that this portion of the mansion should be made as commodious as the means of the proprietor will permit, in order that he himself may be tempted to spend more time there, and that the

lady of the family (*matrona*) may be more willing to bear her husband company.

2. *Rustica*. This comprehended that part of the building occupied by the servants, consisting of a large and lofty kitchen (*culina*), to which they might at all times resort, baths (*balneae*) for their use on holidays, sleeping closets (*cellae*) for the *servi soluti*, a gaol (*ergastulum*) under ground for the *servi vincti*. In this division were included also the stables, byres, sheds, folds, courts, and enclosures of every description (*stabula*, *bulbilia*, *septa*, *ovilia*, *cortes*) for the working oxen (*domiti boves*), and other stock kept at home, together with a magazine or storehouse (*horreum*) where all the implements of agriculture (*omne rusticum instrumentum*) were deposited, and within this, a lock-up room for the reception of the iron tools (*ferramenta*). In so far as the distribution of rooms was concerned, the overseer (*villicus*) was to have his chamber beside the main entrance (*janua*), in order that he might observe all who came in or went out, the book-keeper (*procurator*) was to be placed over the gate, that he might watch the *villicus* as well as the others, while the shepherds (*opiliones*), oxmen (*bulbuli*), and such persons were to be lodged in the immediate vicinity of the animals under their charge.

3. *Fructuaria*. This comprehended that part of the building where the produce of the farm was preserved, consisting of the oil cellar (*cella olearia*), the press-house (*cella torcularia*), the vault for wines in the caak (*cella vinaria*), the boiling-room for inspissating must (*defrutatoria*), all of which were on the ground floor, or a little depressed below the level of the soil. Above were hay-lofts (*foenilia*), repositories for chaff, straw, leaves, and other fodder (*palearia*), granaries (*horrea*, *granaria*), a drying-room for newly cut wood (*fumarium*) in connection with the rustic bath flues, and store-rooms (*apothecae*) for wine in the amphora, some of which communicated with the *fumarium*, while others received the jars whose contents had been sufficiently mellowed by the influence of heat.

In addition to the conveniences enumerated above, a mill and bake house (*pistrinum et furnum*) were attached to every establishment; at least two open tanks (*piacinae*, *lacus sub dio*), one for the cattle and geese, the other for steeping lupines, osiers, and objects requiring maceration; and, where there was no river or spring available, covered reservoirs (*cisternae sub tectis*) into which rain water was conveyed for drinking and culinary purposes. (Cat. 3, 4, 14; Varr. i. 11—14; Col. i. 6; Geopon. ii. 3.)

II. INSTRUMENTA.

The instrumenta employed to cultivate the ground were two-fold: a. Persons (*homines*); b. Aids to human toil (*admiracula hominum*), namely, oxen and other animals employed in work; together with tools (*instrumenta*), in the restricted sense of the word.

II. a. HOMINES.

The men employed to cultivate a farm might be either, 1. free labourers (*operarii*), or 2. slaves (*servi*).

1. *Free labourers*. Cato considers the facility of procuring persons of this description, whom in one place he calls *mercenarii polidiores*, as one of the

circumstances that ought to weigh with a purchaser in making choice of a farm; for although a large proportion of the work upon great estates was, during the later ages at least of the Roman republic, always performed by slaves, it was considered advantageous to employ hirelings for those operations where a number of hands were required for a limited period, as in hay-making, the corn harvest, and the vintage, or, according to the cold-blooded recommendation of Varro, in unhealthy situations where slaves would have died off fast, entailing a heavy loss on their owner. *Operarii* consisted either of poor men with their families, who were hired directly by the farmer, or of gangs (*conductitiae liberorum operae*) who entered into an engagement with a contractor (*mercenarius*), who in his turn bargained with the farmer for some piece of work in the slump, or lastly, of persons who had incurred debt which they paid off in work to their creditors. This, which was an ordinary practice in the earlier ages of the Roman republic, seems in later times to have been confined to foreign countries, being common especially in Asia and Illyria. Free labourers worked under the inspection of an overseer (*prae-fectus*), whose zeal was stimulated by rewards of different kinds.

2. Slaves (*servi*). Rustic slaves were divided into two great classes, those who were placed under no direct personal restraint (*servi soluti*), and those who worked in fetters (*servi vincti*) when abroad, and when at home were confined in a kind of prison (*ergastulum*), where they were guarded and their wants supplied by a gaoler (*ergastularius*). Slaves, moreover, in large establishments, were ranked in bodies according to the duties which they were appointed to perform, it being a matter of obvious expediency that the same individuals should be regularly employed in the same tasks. Hence there were the ox-drivers (*bubulci*), who for the most part acted as ploughmen also (*aratores*), the stable-men (*jugarii*), who harnessed the domestic animals and tended them in their stalls, the vine-dressers (*vinitorum*), the leaf-strippers (*frondatores*), the ordinary labourers (*mediastini*), and many other classified bodies. These, according to their respective occupations worked either singly, or in small gangs placed under the charge of inspectors (*magistri operum*). When the owner (*dominus*) did not reside upon the property and in person superintend the various operations in progress, the whole farming establishment was under the control of a general overseer (*villicus, actor*), himself a slave or freedman, who regulated the work, distributed food and clothing to the labourers, inspected the tools, kept a regular account of the stock, performed the stated sacrifices, bought what was necessary for the use of the household, and sold the produce of the farm, for which he accounted to the proprietor, except on very extensive estates where there was usually a book-keeper (*procurator*) who managed the pecuniary transactions, and held the *villicus* in check. With the *villicus* was associated a female companion (*contubernalis mulier*) called *villica*, who took charge of the female slaves, and the indoor details of the family. The duties and qualifications of a *villicus* will be found enumerated in Cat. c. 5, and Colum. i. 8; comp. Geopon. ii. 44, 45.

The food of the slaves composing the household

(*familia*) was classed under three heads, 1. *Cibaria*. 2. *Vinum*. 3. *Pulmentarium*.

1. *Cibaria*. The *servi compediti*, being kept constantly in confinement, received their food in the shape of bread at the rate of 4 pounds (Roman pound = 1½ oz. avoirdupois) per diem in winter, and 5 pounds in summer, until the figs came in, when they went back to 4 pounds. The *servi soluti* received their food in the shape of corn, at the rate of 4 modii (pecks) of wheat per month in winter, and 4½ in summer. Those persons, such as the *villicus*, the *villica*, and the shepherd (*opilio*), who had no hard manual labour to perform, were allowed about one fourth less.

2. *Vinum*. The quantity of wine allowed varied much according to the season of the year, and the severity of the toil imposed, but a *servus solutus* received about 8 amphorae (nearly 48 imperial gallons) a year, and a *servus compeditus* about 10 amphorae, besides *lora* [see VINUM] at discretion for three months after the vintage.

3. *Pulmentarium*. As *pulmentaria* they received olives which had fallen from the trees (*oleae caducae*), then those ripe olives (*oleae tempestivae*), from which the least amount of oil could be expressed, and, after the olives were all eaten up, salt fish (*halec*), and vinegar (*acetum*). In addition to the above, each individual was allowed a sextarius (very nearly an imperial pint) of oil per month, and a modius of salt per annum.

The clothing (*vestimenta*) of the rustic labourers was of the most coarse description, but such as to protect them effectually from cold and wet, enabling them to pursue their avocations in all weathers. It consisted of thick woollen blanket shirts (*tunicae*), skin coats with long sleeves (*pellis manicatae*), cloaks with hoods (*saga cucullata, cuculiones*), patch-work wrappers (*centones*) made out of the old and ragged garments, together with strong sabots or wooden shoes (*sculponeae*). A tunic was given every year, a *sagum* and a pair of *sculponeae* every other year.

The number of hands required to cultivate a farm, depended almost entirely on the nature of the crops.

An arable farm of 200 jugers where the ordinary crops of corn and leguminous vegetables were raised required two pairs of oxen, two *bubulci* and six ordinary labourers, if free from trees, but if laid out as an arbutum, three additional hands.

An olive garden of 240 jugers required three pairs of oxen, three asses for carrying manure (*asini ornati distellarii*), one ass for turning the mill, five score of sheep, a *villicus*, a *villica*, five ordinary labourers, three *bubulci*, one ass-driver (*asinarius*), one shepherd (*opilio*), one swineherd (*subulcus*); in all twelve men and one woman.

A vineyard of 100 jugers required one pair of oxen, one pair of draught asses (*asini plostrarii*), one mill ass (*asinus molaris*), a *villicus*, a *villica*, one *bubulcus*, one *asinarius*, one man to look after the plantations of willows used for withes (*salicarius*), one *subulcus*, ten ordinary labourers; in all fifteen men and one woman. (Cat. 5, 56—59, 10, 11; Varr. i. 19; Colum. i. 7, 8, ii. 12.)

In what has been said above, we have assumed that the proprietor was also the farmer, but it was by no means uncommon to let (*locare*) land to a tenant (*colitor, partarius*, Cat.; *colonus*, Varr. Colum.), who paid his rent either in money (*pensio*; *ad pecuniam numeratam conductus*), as seems to

have been the practice when Columella wrote, or by making over to the landlord a fixed proportion of the produce (*non annuo sed partibus locare*), according to the system described by Cato, and alluded to by the younger Pliny. These *coloni* sometimes tilled the same farm from father to son for generations (*coloni indigenae*), and such were considered the most desirable occupants, since they had a sort of hereditary interest in the soil, while on the other hand frequent changes could scarcely fail to prove injurious. The worst tenants were those who did not cultivate in person, but, living in towns (*urbani coloni*), employed gangs of slaves. Upon the whole Columella recommends the owner of an estate to keep it in his own hands, except when it is very barren, the climate unhealthy, or the distance from his usual place of abode so great that he can seldom be upon the spot. Cato gives a table of the proportion which the *particularis* ought to pay, according to the nature of the crop, and the fertility of the region; but as he says nothing with regard to the manner in which the cost of cultivation was divided between the parties, his statement gives us no practical insight into the nature of these leases (Cat. 136, 137; Colum. i. 7, Plin. *Epp.* ix. 37, comp. iii. 19.)

II. b. ADMINICULA HOMINUM.

The domestic animals employed in labour, and their treatment will be considered under the second great division of our subject, *Pastio*, or the management of stock.

The tools (*instrumenta*) chiefly used by the farmer were the plough (*aratrum*), the grubber (*irpes*), harrows (*cratae, cratae dentatae*), the rake (*rastrum*), the spade (*ligo, pala*), the hoe (*sarcolum, bidens, sarra* [?]), the spud or weeding-hook (*rumco*), the scythe and sickle (*fala*), the thrashing-machine (*pileolum Poeniceum, tribulum*), the cart (*plastrum*), the axe (*securis, dolabra*). These will be described as we go along in so far as may be necessary to render our observations intelligible, but for full information the reader must consult the separate articles devoted to each of the above words.

III. THE OPERATIONS OF AGRICULTURE.

The most important operations performed by the husbandman were:—1. Ploughing (*aratio*). 2. Mowing (*stercoratio*). 3. Sowing (*satio*). 4. Harrowing (*ocatio*). 5. Hoeing (*sarratio*). 6. Weeding (*rumcoatio*). 7. Reaping (*messio*). 8. Thrashing (*tritura*). 9. Winnowing (*ventilatio*). 10. Storing up (*conditio*).

The Flamen who offered sacrifice on the Cerealia to Ceres and Tellus, invoked twelve celestial patrons of these labours by the names *Vervactor*; *Reparator*; *Imporcitor*; *Inisor*; *Oborator*; *Occator*; *Sarritor*; *Subramcoator*; *Messor*; *Convector*; *Conditio*; *Promitor*; significant appellations which will be clearly understood from what follows. The functions of the last deity alone do not fall within our limits; but we shall add another to the list in the person of *Stercoratus*. (*Serv. ad Virg. Georg. i. 21*; Plin. *H. N.* xvii. 9; Lactant. i. 20; Macrobi. *Sat. i. 7*; Prudent. *Peristeph.* iii. 449; Augustin. *de C. Dei.* xviii. 15.)

1. Ploughing (*aratio*).

The number of times that land was ploughed, varying from two to nine, as well as the season at

which the work was performed, depended upon the nature of the soil and the crop for which it was prepared. The object of ploughing being to keep down weeds, to pulverise the earth as finely as possible (*Virg. Georg. ii. 204*), and to expose every portion of it in turn to the action of the atmosphere, the operation was repeated again and again (*Virg. Georg. i. 47*), until these objects were fully attained. When stiff low-lying soil (*campus uliginosus*) was broken up for wheat, it was usual to plough it four times, first (*proscindere*) as early in spring as the weather would permit (*Virg. Georg. i. 63*), after which the land was termed *tractatum*, and hence the god *Vervactor*; for the second time (*offringere, iterare, vervacta subigere*), about the summer solstice, under the patronage of the god *Reparator*, and on this occasion the field was cross-ploughed (*Virg. Georg. i. 97*); for the third time (*tertiare*), about the beginning of September; and for the fourth time, shortly before the equinox, when it was ribbed (*lirare*) for the reception of the seed, the ribbing being executed under favour of the god *Imporcitor*, by adding two mouldboards to the plough (*aratrum curvatum*), one on each side of the share. (*Varr. i. 29*; Pallad. i. 43.) Rich soil on sloping ground was ploughed three times only, the ploughing in spring or at the beginning of September being omitted; light (*aridis*) moist soil also three times, at the end of August, early in September, and about the equinox; whilst the poorest hill soil was ploughed twice in rapid succession, early in September, so that the moisture might not be dried up by the summer heat. (*Virg. Georg. i. 70*.)

The greatest care was taken not to plough ground that had been rendered miry by rain, nor that which after a long drought had been wetted by showers which had not penetrated beyond the surface (*Col. ii. 4*; Pallad. ii. 3); but whether this last is really the *terra cariosa* of Cato, as Columella seems to think, is by no means clear. (*Cat. v. 34*; comp. Plin. *H. N.* xvii. 5.)

With regard to the depth to which the share was to be driven, we have no very precise directions; but Columella recommends generally deep ploughing (*ii. 2. § 23*; comp. Plin. *H. N.* xviii. 16) in preference to mere scratching (*scarificatio*) with light shares (*arignis vomeribus et dentalibus*).

The plough was almost invariably drawn by oxen, although Homer (*Il. x. 351*; *Od. viii. 124*) prefers mules, yoked close together in such a manner as to pull by their necks and not by the horns, guided and stimulated chiefly by the voice. The lash was used very sparingly, and the young steer was never pricked by the goad (*stimulus*), since it was apt to render him restive and unmanageable. The animals were allowed to rest at the end of each furrow, but not to stop in the middle of it: when unharnessed, they were carefully rubbed down, allowed to cool, and watered, before they were tied up in the stall, their mouths having been previously washed with wine. (*Col. ii. 2*.)

The ploughman (*bubulcus*) was required to make perfectly straight and uniform furrows (*sulco vario ne arces*), so close to each other as altogether to obliterate the mark of the share, and was particularly cautioned against missing over any portion of the ground, and thus leaving *scamna*, that is, masses of hard unstirred earth (*scabi crutum solum et immotum relinquit, quod agricolae scomum so-*

cont). The normal length of a furrow was 120 feet, and this is the original import of the word *actus*. A distinction is drawn between *versus* and *versura*, the former being properly the *furrow*, the latter the extremity of the furrow, or the turning point; but this is far from being strictly observed. (Col. ii. 5. §§ 27, 28.)

Four days were allowed for the four ploughings of a juger of rich low-lying land (*jugum talis agri quatuor operis expeditur*). The first ploughing (*proscissio*) occupied two days, the second (*iteratio*) one day, the third (*tertiatio* [?]) three fourths of a day, and ribbing for the seed one fourth of a day (*in liram satum redigitur quadrante operae*). The same time is allowed for the three ploughings of rich upland soil (*colles pinguis soli*) as for the four ploughings of the uliginous campus, the fatigue being much greater, although the difficulties presented by the acclivity were in some measure relieved by ploughing hills in a slanting direction, instead of straight up and down. (Cat. 61; Varr. i. 27, 29; Col. ii. 2, 4; Plin. H. N. xviii. 19, 20, 26; Pallad. i. 6, ii. 3, viii. 1, x. 1; Geopon. ii. 23; and comp. Hom. Il. xiii. 704; xviii. 370, 540; Od. v. 127.)

2. Manuring (*stercoratio*).

Manure (*fmus, stercus*). The manure chiefly employed was the dung of birds and of the ordinary domestic animals (*stercus columbinum, bubulum, ovillum, caprinum, suillum, equinum, asinum, &c.*). This differed considerably in quality, according to the source from which it was procured; and hence those who raised different kinds of crops are enjoined to keep the different sorts of dung separate, in order that each might be applied in the most advantageous manner. That derived from pigeon-houses (*columbariis*), from aviaries where thrushes were fattened (*ex aviariis turdorum et merularum*), and from birds in general, except water-fowl, was considered as the hottest and most powerful, and always placed apart, being sown by the hand exactly as we deal with guano at the present moment. The ancient writers very emphatically point out the necessity of procuring large supplies of manure, which the Romans regarded as under the especial patronage of a god named *Stercutius*, and farmers were urged to collect straw, weeds, leaves of all sorts, hedge clippings, and tender twigs, which were first used to litter the stock, and then, when mixed with ashes, sweepings of the house, road-scrappings, and filth of every description, served to swell the dunghills (*sterguilinia*). These were at least two in number, one being intended for immediate use, the other for the reception of fresh materials, which were allowed to remain for a year; dung, when old and well rotted, being accounted best for all purposes, except for top-dressing of meadows, when it was used as fresh as possible. The dunghills were formed on ground that had been hollowed out and beaten down or paved, so that the moisture might not escape through the soil, and they were covered over with brushwood or hurdles to prevent evaporation. In this way the whole mass was kept constantly moist, and fermentation was still further promoted by turning it over very frequently and incorporating the different parts.

The particular crops to which manure was chiefly applied will be noticed hereafter; but in so far as regards the time of application it was laid down in

September or October, on the ground that was to be autumn sown; and in the course of January or February, on the ground that was to be spring sown. A full manuring (*stercoratio*) for a juger of land on an upland slope (*quod spissius stercoratur*) was 24 loads (*velae*), each load being 80 modii or pecks; while for low-lying land (*quod rarius stercoratur*) 18 loads were considered sufficient. The dung was thrown down in small heaps of the bulk of five modii, it was then broken small, was spread out equally and ploughed in instantly that it might not be dried up by the rays of the sun, great care being taken to perform these operations when the moon was waning, and if possible with a west wind. According to the calculations of Columella, the live-stock necessary for a farm of two hundred jugers ought to yield 1440 loads per year; that is, enough for manuring 60 jugers at the rate of 24 loads to the juger. In what proportions this was distributed is nowhere very clearly defined, and must necessarily have varied according to circumstances. If we take two statements of Cato in connection with each other, we shall be led to conclude that he advises one half of the whole manure made upon a farm to be applied to the raising of green crops used as fodder (*pabulum*), one-fourth to the top-dressing of meadows, and the remaining fourth to the olives and fruit-trees. Columella recommends the manuring of light soil (*cassilis terra*) before the second ploughing; but when rich lands were summer fallowed previous to a corn crop, no manure was considered requisite. (Hom. Od. xvii. 297, Theophrast. II. 4. A. iii. 25; Cat. 5, 7, 29, 36, 37, 61; Varr. i. 13, 38; Colum. ii. 5, 6, 9, 10, 14, 15, xi. 2; Pallad. i. 33, x. 1; Cic. de Senect. 15; Plin. H. N. xvii. 9, xviii. 19, 23; Geopon. ii. 21, 22.)

The system of manuring by penning and feeding sheep upon a limited space of ground was neither unknown nor neglected, as we perceive from the precepts of Cato (30), Varro (ii. 2. § 12), and Pliny (H. N. xviii. 53), all of whom recommend the practice.

The ashes obtained by burning weeds, bushes, prunings, or any sort of superfluous wood, were found to have the best effect (Virg. Georg. i. 81; Colum. ii. 15; Plin. xvii. 9; Geopon. xii. 4), and sometimes, as we know from Virgil (Georg. i. 84), it was deemed profitable to set fire to the stubble standing in the fields. (Plin. H. N. xviii. 30.) Caustic lime was employed as a fertiliser by some of the tribes of Transalpine Gaul in the time of Pliny, but in Italy its application seems to have been very limited and to have been confined to vines, olives, and cherry-trees. (Cat. 38; Pallad. i. 6; Plin. H. N. xvii. 9, xviii. 25, 30.)

Marl also (*marga*) of different kinds was known to the Greeks, was applied by the Megareneses to wet cold lands, and was extensively employed in Gaul and Britain; but not being found in Italy, did not enter into the agricultural arrangements of the Latins. Pliny devotes several chapters to an elaborate discussion upon these earths, of which he describes various sorts which had been made the subject of experiment, classifying them according to their colour, their constitution, and their qualities; the white (*alba*), the red (*rufa*), the dove-coloured (*columbina*), the clayey (*argillacea*), the sandy (*arenacea*), the stony (*tophacea*), the fat (*pinguis*), and the caustic [?] (*aspera*). Some of them we recognise at once, as for example, the fat white clayey marl chiefly used in Britain, the ef-

facts of which were believed to endure for eighty years. (Plin. *H. N.* xvii. 5, 8; comp. Varro, i. 7, *In Gallia Transalpinia intus ad Rhenum aliquot regiones accessi... ubi agros stercorarent candida fumica creta.*)

Somewhat analogous to the use of marl was the system strongly recommended by Theophrastus and Columella, but condemned by Pliny, of combining soils in which some quality existed in excess, with those possessing opposite characters—dry gravel with chalky clay, or heavy wet loam with sand,—the object being frequently attained to a certain extent by subsoil ploughing, which was greatly approved of as a means of renovating fields exhausted by severe cropping. (Theophrast. II. *Φ.* A. iii. 25; Colum. ii. 15; Plin. *H. N.* xvii. 5.)

When ordinary manures could not be procured in sufficient quantity, a scheme was resorted to which was at one time pursued in this country, and is still adopted with considerable success in many parts of Italy and in the sandy tracts of southern France. The field was sown about the middle of September with beans or lupines, which were ploughed into the ground the following spring, in all cases before the pod was fully formed, and at an earlier stage of their growth on light than on stiff soils. Nay, many crops, such as beans, peas, lupines, vetches, lentils (*ervilia*, *cicerula*), even when allowed to come to maturity, were supposed to exercise an ameliorating influence, provided their roots were immediately buried by the plough, although perhaps in this case the beneficial effect may have resulted from the manure applied before they were sown. On the other hand, corn in general, poppies, fennugreek, and all crops pulled up by the roots, such as cicer and flax, were supposed to exhaust (*were*) the soil, which then required either repose or manure to restore its power. (Theophrast. II. *Φ.* A. viii. 9; Cat. 37; Var. i. 23; Colum. ii. 13—15, xi. 2; Pallad. i. 6, vi. 4, x. 9; Plin. *H. N.* xvii. 9, xviii. 10. 14—16.)

3. Sowing (*satio*)

May be considered under three heads. 1. The time of sowing. 2. The manner of sowing. 3. The choice, preparation, and quantity of the seed.

1. The seed-time (*sementis*) κατ' ἔξοχην, commenced at the autumnal equinox, and ended fifteen days before the winter solstice. Few, however, began before the setting of the Pleiades (23d October), unless on cold wet ground, or in those localities where bad weather set in soon; indeed, it was an old proverb that, while a late sowing often disappointed the hopes of the husbandman, an early one never realised them (*maturam sationem saepe desipere solere, seram nunquam quin mala sit*); and the Virgilian maxim is to the same purpose. Spring sowing (*trimestris satio*) was practised only in very deep stiff land, which would admit of being cropped for several years in succession (*restibilis ager*), or where, from peculiar circumstances connected with the situation or climate, such as the great inclemency of the winters, it was impossible for the farmer to sow in autumn; and hence, generally speaking, was resorted to very sparingly, and for the most part from necessity rather than inclination.

2. We can infer from incidental notices in agricultural writers, that the seed was committed to the ground in at least three different modes.

a. The seed was cast upon a flat surface finely

pulverised by the plough and harrow, and then covered up by ribbing the land (*tertio cum arant, jacto semine, boves lirare dicuntur*). (Var. i. 29; comp. Colum. ii. 13.)

b. The land was ribbed, the seed was then dropped upon the tops of the *lirae* or elevated ridges, according to our fashion for turnips, *LIRAS autem rustici vocant easdem porcos cum sic aratum est, ut inter duos latius distantes sulcos, medius cumulus siccam eodem frumentis praebeat*. (Colum. ii. 4. § 8.) This plan was followed on wet land to secure a dry bed for the seed, which would probably be covered up by hand-rakes (*rastris*).

c. The land was ribbed as in the former case; but the seed, instead of being dropped upon the ridge of the *lira*, was cast into the depression of the furrow, and might be covered up either by the harrow or by ploughing down the middle of the *lira*. This was practised on light, sloping, and therefore dry, land (*neque in lira sed sub sulco talis ager seminandus est*, Colum. ii. 4. § 11).

It will be seen clearly that, whichever of the above modes was adopted, the seed would spring up in regular rows, as if sown by a drill, and that only one half of the land would be covered with seed. In point of fact, the quantity of seed sown on a given extent of ground was not above half of what we employ.

Vetches, fennugreek, and some other crops, as will be noticed below, were frequently thrown upon land unprepared (*cruda terra*), and the seeds then ploughed in. The seed seems to have been cast out of a three-peck basket (*trimodium salariam*, sc. *cortem*), which from superstitious motives was frequently covered over with the skin of a hyaena. Pliny points out how necessary it was that the hand of the sower should keep time with his stride, in order that he might scatter the grains with perfect uniformity.

3. The points chiefly attended to in the choice of seed corn were, that it should be perfectly fresh and free from mixture or adulteration, and of an uniform reddish colour throughout its substance. When the crop was reaped, the largest and finest ears were selected by the hand, or, where the produce was so great as to render this impossible, the heaviest grains were separated by a sieve (*quidquid cateratur cospiterio expurgandum erit*) and reserved. In addition to these precautions it was not unusual to doctor seeds of all sorts (*medicare semina*) by sprinkling them with an alkaline liquor (*nitrum*, i. e. probably carbonate of soda), or with the deposit left by newly expressed oil (*amurca*), or by steeping them in various preparations, of which several are enumerated by Columella and Pliny; the object being twofold, in the first place to increase the quantity and quality of the produce, and in the second place to protect it from the ravages of vermin, especially the little animal called *curculio*, probably the same insect with our weevil.

The quantity of seed sown varied according to the soil, the situation, the season, and the weather, the general rule being that less was required for rich and finely pulverised (*pingue et pitre*), or light and sharp (*gracile*), or thin poor soil (*macrum, aride*) than for such as was stiff and heavy (*crassum, cretaceum*), or moderately tenacious; less for an open field than for an *arbutum*, less at the beginning of the season than towards the close (although this is contradicted by Pliny, *H. N.* xviii. 24), and

less in rainy than in dry weather, maxims which are fully explained by the authorities quoted below. The average amount of seed used for the three principal species of grain—wheat, spelt and barley—was respectively, five, ten, and six modii per juger. (Xenoph. *Oecon.* 17; Theophrast. ii. 6. and iii. 25; Cat. 34, 35; Varr. i. 29, 34, 40, 52; Colum. ii. 2, 3, 8, 9, 10, 13, xii. 2; Pallad. i. 6, 34, x. 2; Virg. *Georg.* i. 193, 219, 225; Plin. *H. N.* xiv. 21, xvi. 27, xviii. 24, 73; Geopon. ii. 15—20.)

4. Harrowing (*occatio*)

Might be performed at two different periods: after the first or second ploughing, in order to powder the soil completely; and after sowing, in order to cover up the seed. When the land was encumbered with roots and deep-seated weeds, a grubber (*græps*, Cat. 10. Varr. *L. L.* iv. 31) formed of a strong plank set with iron spikes was employed, but in ordinary cases wicker hurdles (*vimineæ crates*), sometimes fitted with teeth (*dentatæ*), were dragged over the ground; or the clods were broken with hand-rakes (*rastra*). The seed, as we have seen above, being for the most part ploughed in, and the operation for that reason placed under the patronage of a god *Obarator*, the second harrowing (*iteratio*) was omitted, except where the surface still rose in lumps (Virg. *Georg.* i. 104); but since it was the duty of a good farmer to have his fields in the best order before he began to sow, the older Roman writers considered harrowing after sowing as a proof of bad husbandry.—“*Veteres Romani diserunt male subactum agrum, qui satis frugibus occandus sit.*” (Colum. ii. 4, 13, xi. 2; Plin. *H. N.* xviii. 20; Virg. *Georg.* i. 94, 104.)

5. Hoeing (*sarritio*).

The next care, after covering up the seed, was to loosen the earth round the roots of the young blades, in order that air and moisture might gain free access and enable them to send forth more numerous and more vigorous shoots and fibres (*ut fructificare possint*). This process was termed *σκαλεια*, *sarritio*, or *sarculatio*, and was carried on by hand with an instrument called *sarculum*, the form of which is not known. Corn was usually hoed twice, for the first time in winter, as soon as it fairly covered the ground (*cum sata sulcos contoverint*), provided there was no frost; and for the second time in spring, before the stalk became jointed (*antequam seges in articulum eat*); great care being taken at all times not to injure the root. On the first occasion, and then only, where the ground was dry and the situation warm, the plants, in addition to a simple hoeing (*plana sarritio*), were earthed up (*adobruere*). Columella recommends *sarritio* for almost all crops, except lupines; but authorities differed much as to the necessity or propriety of performing the operation in any case, and those who advocated its expediency most warmly, agreed that the periods at which it ought to be executed, and the number of times that it ought to be repeated, must depend upon the soil, climate, and a variety of special circumstances. (Cat. 37; Varr. i. 18, 29, 36; Colum. ii. 11, xi. 2; Plin. *H. N.* xviii. 21, 26; Geopon. ii. 24; comp. Plaut. *Capt.* iii. 5. 3; Virg. *Georg.* i. 155.)

6. Weeding (*runcatio*).

Hoeing was followed by weeding (*βοτάνισμός*,

runcatio), which in the case of grain crops took place immediately before they began to blossom, or immediately after the flower had passed away. The weeds were either pulled up by the roots (*evulsis inutitibus herbis*), or cut over with a bill-hook, which Palladius terms *runcos*. (Cat. 37; Varr. i. 30; Colum. ii. 11, xi. 2; Pallad. i. sub. fin.; Plin. *H. N.* xviii. 21; Geopon. ii. 24.)

But after the farmer had laboured with unremitting zeal in cleaning and pulverising the soil, in selecting and medicating the seed, in hoeing the young blades, and in extirpating the common noxious weeds (*lolium, tribuli, lappæ, cardui, rubi, avena*), the safety of the crop was threatened by a vast number of assailants (*tum variae illudant pestes*); such as worms of various kinds (*vermiculi*) attacking both root and ear, caterpillars (*uricæ*), spiders (*phalangia*), snails (*limacæ, cochleæ*), mice (*mures*), moles (*talpæ*), and the whole race of birds, besides which, each kind of plant was believed to have its own special vegetable enemy, which, if not carefully watched, would spring up, choke, and destroy it. The most formidable of these pests are enumerated by Pliny (*H. N.* xviii. 17), who proposes sundry precautions and remedies, of which many are ridiculous superstitions. But the foe dreaded above all others in the vineyard and the cornfield was a peculiar blight or mildew termed *robigo*, which wrought such havoc in damp low-lying situations that it was regarded as a manifestation of wrath on the part of a malignant spirit, whose favour the rustic sought to propitiate by the annual festival of the *Robigalia*. [*ROBIGALIA*.]

Another danger of an opposite description arose from the grain shooting up so rapidly that the stalk was likely to become immoderately long and weak. The danger in this case was averted by pasturing down the too luxuriant herbage with sheep (*luxuriam segetum tenera depascit in herba*), or by dragging over it an iron-toothed harrow (*cratis et hoc genus dentatæ stilis ferreis*), by which it was said to be combed (*pectinari*). (Plin. *H. N.* xviii. 17. 21; Virg. *Georg.* i. 151.)

7. Reaping (*messio*).

The corn was reaped as soon as it had acquired a uniform yellow tint, without waiting until it had become dead ripe, in order to avoid the loss sustained by shaking, and by the ravages of animals. The necessity of pursuing this course with regard to barley, is especially insisted upon; but is quite at variance with modern practice. (Colum. ii. 9.)

Varro describes three distinct methods of reaping (*tria genera messionis*).

1. That followed in Umbria, where the stalk was shorn close to the ground with a hook (*fala*); each handful was laid down; and when a number of these had accumulated, the ears were cut off, thrown into baskets (*cortæ*), and sent to the thrashing-floor, the straw (*stramentum*) being left upon the field, and afterwards gathered into a heap.

2. That followed in Picenum, where they used a small iron saw (*serrula ferrea*) fixed to the extremity of a crooked wooden handle (*ligneum incurvum batillum*); with this they laid hold of a bundle of ears which were cut off, the straw being left standing to be mown subsequently.

3. That followed in the vicinity of Rome and

most other places, where the stalks were grasped in the left hand and cut at half their height from the ground, the whole of the portion detached being conveyed in baskets to the thrashing-floor, and the part left standing being cut afterwards.

The last two methods only are particularly noticed by Columella, who describes the instruments employed in the second under the names of *pectines* and *mergi* [æ?] (*multi mergis, alii pectinibus apicem ipsum legendis*); and those employed in the third as *falces vericulatæ* (*multi falcibus vericulatis, aliqui in eis rostratis vel denticulatis medium culmum secant*); a series of terms which have never been very satisfactorily explained. In addition to the above, Pliny and Palladius describe a reaping-machine worked by oxen, which was much used in the extensive level plains of the Gauls. Virgil (*Georg.* i. 316), perhaps, alludes to binding up the corn in sheafs; but his words are not so clear upon this point as those of Homer in the charming picture of a harvest-field contained in the eighteenth book of the *Iliad*. (Varr. i. 50; Colum. ii. 20; Plin. *H. N.* xviii. 30; Pallad. vii. 2; Geopon. ii. 25; comp. Hom. *Il.* xi. 67, xviii. 550.)

8. Thrashing (*tritura*).

After the crop had been properly dried and hardened (*torrefacta*) by exposure to the sun, it was conveyed to the thrashing-floor (*θλας, θλωθ, or θλωθ, area*). This was an open space, on some elevated spot over which the wind had free course, of a circular form, slightly raised in the centre to allow moisture to run off. The earth was compressed by heavy rollers (*gravi cylindro, molari lapide*), pounded with rammers (*pavicularis*), and reduced to a solid consistency with clay and chaff, so as to present an even unyielding surface; or, better still, paved with hard stones. Here the corn was spread out and beaten with flails (*baculis excutere, fustibus cadere, perticis flagellare*); or more commonly, except when the ears alone had been brought from the field, trodden out (*exterere*) by the feet of a number of men or horses, who were driven backwards and forwards within the ring. To produce the effect more easily and more perfectly, the axle were frequently yoked to a machine (*tribulum, tribula, trabea, traba*), consisting of a board made rough by attaching to it stones or pieces of iron, and loaded with some heavy weight; or, what was termed a Punic wain (*plotellum Poenicum*) was employed, being a set of toothed rollers covered with planks, on which sat the driver who guided the team.

Attached to the area was a huge shed or half-enclosed barn (*ambularium*), of sufficient dimensions to contain the whole crop. Here the corn was dried in unfavourable seasons before being thrashed, and thither it was hurriedly conveyed for shelter when the harvest work was interrupted by any sudden storm. (Cat. 91, 129; Varr. i. 13, 51, 52; Colum. i. 6, ii. 19; Pallad. i. 36, viii. 1; Plin. *H. N.* xviii. 29, 30; Hom. *Il.* xiii. 588; xx. 495; xxi. 77; Virg. *Georg.* i. 178; Geopon. ii. 26.)

9. Winnowing (*ventilatio*).

When the grain was mixed with chaff, it was laid down in small piles upon the area, in order that the lighter particles might be borne away by the passing breeze; but when the wind was not sufficiently strong, it became necessary to winnow (*ventilare*) it. This was effected by a labourer

(*ἀικμητήρ, ventilator*) who tossed it up from a sieve (*σάππυς, capisterium*) or shovel (*πύλον, ventillabrum*), when the heavy portion fell down in a heap, and the chaff floated off through the air. When it was intended to keep the corn for any length of time, it was common to repeat the process (*repurgare, repolire*), that it might be thoroughly cleaned. (Varr. i. 52; Colum. ii. 9. 20; comp. Hom. *Il.* v. 499; xiii. 588.)

10. Preservation of Corn (*de frumento servando*).

After the corn had been thrashed out and winnowed, or at least the ears separated from the stalk, the next care was to store up (*condere*) the grain in fitting repositories (*granaria, horrea*). The great object in view being to preserve it from becoming mouldy or rotten, and to protect it from the ravages of vermin, especially the weevil (*curculio*), we find that very great diversity of opinion existed as to the means by which those ends might best be attained. By some the store-houses were built with brick walls of great thickness, for the purpose, it would seem, of securing a uniform temperature, and had no window or aperture, except a hole in the roof, through which they were filled. Others, again, raised these structures aloft on wooden columns, and allowed currents of air to pass through on all sides and even from below; while others admitted particular winds only, such, namely, as were of a drying character. Many plastered the walls with a sort of hard stucco worked up with amurca, which was believed to act as a safeguard against vermin, while others considered the use of lime under any form as decidedly injurious. These and many different opinions, together with receipts for various preparations wherewith to sprinkle the corn, will be found detailed in the authorities cited below, among whom Pliny very sensibly observes that the principal consideration ought to be the condition of the grain itself when housed; since, if not perfectly dry, it must of necessity breed mischief. In many countries, as in Thrace, Cappadocia, Spain, and Africa, the corn was laid up in pits (*scrubitus*) sunk in a perfectly dry soil and well lined with chaff, a practice now extensively adopted in Tuscany. Wheat in the ear (*cum spica sua*) might, according to Varro, if the air was excluded, be preserved in such receptacles for fifty years, and millet for an hundred. (Cat. 92; Varr. i. 57; Colum. i. 6; Pallad. i. 19; Plin. *H. N.* xviii. 30; Geopon. ii. 27—31.)

IV. CROPS.

Crops, as already remarked, may be divided into four classes:—1. Grain or corn crops. 2. Leguminous crops, or pulse. 3. Crops cut green for forage. 4. Crops which supplied the raw materials for the textile fabrics. We might extend the number of classes did we purpose to treat of certain plants, such as poppies (*papavera*) and *sesamum*, raised to a small extent only, and confined to particular localities; but our limits do not permit us to embrace so wide a field of inquiry.

In addition to the above, much attention was devoted to what may be termed secondary crops; those, namely, which did not afford directly food or clothing for man or beast, but which were required in order to facilitate the cultivation and collection of the primary crops. Thus, beds of willows (*salicta*) for baskets and wicker, and of

reeds (*arundineta*) for vine-props, were frequently in favourable situations very profitable, just as land in certain districts of Kent yields a large return when planted with young chestnuts for hop-poles.

1. *Corn Crops (frumenta).*

The word applied in a general sense to denote what we now call "the cereal grasses" was *frumenta*; but of these wheat being by far the most important, it is not wonderful that the term in question should be employed frequently to denote wheat specially, and occasionally in such a manner as to exclude other kinds of grain, as when Pliny remarks, "*calamus altior frumento quam hordeo*," meaning "in wheat the stalk is longer than in barley." The only *frumenta* which it will be necessary for us to consider particularly in this place are—

a. *Triticum* and *Far*; b. *Hordeum*; c. *Panicum* and *Milium*.

a. *Triticum* and *Far*. No one entertains any doubt that *triticum* (*τροπὸν* in Greek, and by the later writers *σῖτος*) is the generic name for the grain which we denominate *wheat*; but when we proceed to examine the different species or varieties, we are involved in many difficulties, for the botanical descriptions transmitted to us by the ancients are in all cases so imperfect, and in many instances so directly at variance with each other, that it becomes almost impossible to identify with certainty the objects to which they refer, with those familiar to ourselves. Columella (ii. 6; comp. Dioscorid. ii. 107; Theophr. *H. P.* viii. 1. 4), who attempts a systematic classification, assigns the first place among "*frumenta*" to *Triticum* and *Semen adonum*, each of which contained several species or varieties. Among many different kinds of *triticum* he denotes the following only deserving of particular notice:—

1. *Robus*, possessing superior weight and brilliancy (*νῖτορ*).

2. *Siligo*, very white, but deficient in weight. (Colum. ii. 9, § 13; Plin. *H. N.* xviii. 8.)

3. *Trimestre* (*τροπυναῖος* & *τροπυνος*), a sort of *siligo*, receiving its name from lying three months only in the ground, being spring-sown. We find this kind sometimes denominated *διμνος* also, since in very warm situations it came to maturity in two months after it was sown.

Among the different kinds of *Semen adonum*, the following are particularly noticed:—

1. *Far Clusinum*, distinguished by its whiteness.

2. *Far veniculum rutilum*. } Both heavier than

3. *Far veniculum candidum*. } the *Clusinum*.

4. *Halicrastrum* or *Semen trimestre*, very heavy and of fine quality. Here we must remark that although *robus*, *siligo*, and *trimestre* are set down as particular species or varieties of the more general term *triticum*, which is used in contradistinction to *semen adonum*, it is much more usual to find *triticum* used in a restricted sense to denote ordinary winter wheat, in opposition to both *siligo* and *adonum*, and hence Pliny declares that the most common kinds of grain were "*Far*, called *adonum* by the ancients, *siligo*, and *triticum*."

Now, with regard to the three kinds of *triticum* enumerated above, we shall have little difficulty in deciding that they were not distinct species, but merely varieties of the same species; for we are assured by Columella (ii. 9), that *triticum*, when sown in wet land, passed in the course of three

years into *siligo*, and by Pliny (xviii. 8) that *siligo*, in most parts of Gaul, passed, at the end of two years, into *triticum*; again, Columella, in describing *trimestre*, admits (although contradicted by Plin. *H. N.* xviii. 7) that it is a variety of *siligo*, while modern experience teaches us that winter and spring wheats are convertible by subjecting them to peculiar modes of cultivation. Hence we conclude that *robus* and *siligo* were varieties of what is now termed by botanists *Triticum hybernum*, and that *trimestre* was a variety of our *Triticum aestivum*, which is itself a variety of the *hybernum*.

The question with regard to *Far*, *Adonum*, *Semen adonum*, *Semen*, *Adonum*, names used indifferently by the Latin writers, does not admit of such an easy solution. But after a careful examination of the numerous, vague, perplexing, and contradictory statements scattered over the classics, the discussion of which separately would far exceed our limits, we may with considerable confidence decide that *far* was a variety of the Greek *ῥέα* or *ῥέα*, and of the modern *Triticum spelta*, if not absolutely identical with one or both. *Spelt*, which is fully recognised by botanists as a distinct species of *triticum*, is much more hardy than common wheat, succeeding well in high exposed situations where the latter would not ripen, and its chaff adheres with singular firmness to the grain, both of which circumstances were prominent characteristics of *far*. (Colum. ii. 8; Plin. *H. N.* xviii. 7, 8, 30.) Indeed, it was found impossible to get rid of the thick double case in which it was enclosed, by the ordinary modes of thrashing; therefore it was stored up with the chaff attached (*convenit cum palea sua conditi et stipula tantum et aristis liberatur*); and when used as food it was necessary to pound it in a mortar, or rub it in a mill of a peculiar construction, in order to separate the tenacious husks—a process altogether distinct from grinding, and indicated by the words *pinsere*, *pistura*, *pistores*. (Cat. 2; Plin. *H. N.* xviii. 10.) The idea entertained by some commentators, that the distinction between *triticum* and *far* consisted in the circumstance that the latter was awned while the former was beardless, is altogether untenable; for not only does Pliny say expressly in one passage (xviii. 10), *far sine aristis est*, and in another (xviii. 30), as distinctly that *far* had *aristae*, but it is perfectly clear from Varro (i. 48; compare Plin. *H. N.* xviii. 7), that ordinary *triticum* had a beard, and from Pliny that *siligo* was generally, although not uniformly, without one—a series of assertions whose contradictory nature need occasion no surprise, since it is now well known that this, like colour, is a point which does not amount to specific difference, for white, red, awned, and beardless wheats are found to change and run into each other, according to soil, climate, and mode of culture. Another fact noticed by Pliny, to which, if correct, botanists seem not to have given due attention, is, that *triticum* had four joints in its stalk, *far* six, and barley eight.

All agree that *triticum* (we shall use the word hereafter in the restricted sense of common winter-wheat) succeeded best in dry, slightly elevated, open ground, where the full influence of the sun's rays was not impeded by trees, while *siligo* and *far* were well adapted for low damp situations and stiff clayey soils (Cato 34, 35; Var. i. 9; Colum. ii. 6; Plin. xviii. 8). The sowing of winter wheat (*satio autumnalis*) whether *triticum*, *siligo*, or *adonum*, commenced for the most part, according to the

Virgilian precept, after the morning setting of the Pleiades, that is, by the Roman calendar (ix. Kal. Nov.), after the 24th of October, and was always concluded before the 9th of December, it being a maxim strictly observed among prudent husbandmen to abstain from all field work for fifteen days before, and fifteen days after the winter solstice. In wet or light soils, however, and in all exposed situations, where it was important that the roots should have a firm hold of the ground before the rains and frosts set in, the sowing was frequently completed by the end of September.

Spring sowing (*datio trimestris*) was practised only when the farmer had been prevented by accidental circumstances from completing his work in autumn; or in those localities where, from the extreme cold and heavy snows, it was feared that the young blades would be destroyed in winter; or finally, where, from the depth and stiffness of the soil (*crassitudine*), it might be cropped repeatedly without a fallow. In every case it was considered advisable to throw the seed as soon as the weather would permit, that is, in ordinary seasons, early in March. The quantity of seed required was from four to six modii of *triticeum* or *siligo* to the juger according as the soil was rich or poor; and from nine to ten modii of far. To understand this difference, we must recollect that the far was stored up and sown out in its thick huaks; and, therefore, would occupy almost twice as much space as when dressed like the *triticeum*. The various operations performed upon the above quantity of seed before it could be brought to the thrashing-floor, required ten days and a half of work.—Four for the ploughman (*tubulus*); one for the harrower (*oculator*); three for the hoer (*arritor*), two days on the first occasion, and one on the second; one for the weeder (*remitor*); one and a half for the reaper (*messor*).

The finest Italian wheat weighed from twenty-five to twenty-six pounds the modius, which corresponds to upwards of seventy English pounds swardspeis to the imperial bushel, the Roman pound being very nearly 11·8 oz. avoird., and the modius 99119 of an imperial peck. The lightest was that brought from Gaul and from the Chersonese. It did not weigh more than twenty pounds the modius. Intermediate were the Sardinian, the Alexandrian, the Sicilian, the Boeotian, and the African, the two last approaching most nearly in excellence to the Italian.

The proportion which the produce bore to the seed sown varied, when Cicero and Varro wrote, in the richest and most highly cultivated districts of Sicily and Italy from 8 to 10 for 1; 15 for 1 was regarded as an extraordinary crop obtained in a few highly favoured spots only, while in the age of Columella, when agriculture had fallen into decay, the average return was less than 4 for 1. Parts of Egypt, the region of Byzantium in Africa, the neighbourhood of Garada in Syria, and the territory of Sybaris were said to render a hundred or even a hundred and fifty fold; but these accounts were in all likelihood greatly exaggerated. (Cic. in *Verr.* iii. 47; Varr. i. 44; Colum. iii. 3. § 4; Plin. *H. N.* xviii. 21.)

Far is uniformly represented as having been the first species of grain ever cultivated in Italy, and as such was employed exclusively in religious ceremonies. Hence also *farina* became the generic term for flour or meal whether derived from far, from *triticeum*, or from any other cereal. Thus we

read of *triticea farina*, *siliginea farina*, *hordeacea farina*, even *avenacea farina* (Plin. *H. N.* xviii. 9, xx. 13, xxii. 25). In the expressions *far triticeum*, *far hordeaceum* found in Columella (viii. 5, 11), *far* is evidently used for *farina*, and we shall see that even *siligo* is in like manner used to denote, not only the solid grain, but the flour produced by grinding it. This being premised, we may proceed to examine the meaning of the terms *pollen*, *amilago* s. *simila*, *cibarium*, *siligo*, *flos*, *alica*, *amylum*, *granea*, &c., several of which have never been clearly explained. Here again we can give the result only of an investigation, in the course of which we are obliged to thread our way through statements at once obscure and irreconcilable. Regarding *triticeum* and *siligo* as two well distinguished varieties of wheat, their products when ground were thus classed by millers:—

From *triticeum*,

1. *Pollen*, the finest flour dust, double dressed.
2. *Simila*, or *Similago*, the best first flour.
3. *Cibarium secundarium*, second flour.
4. *Furfures*, bran.

From *siligo*,

1. *Siligo*, the finest double-dressed flour, used exclusively for pastry and fancy bread.
2. *Flos (siliginis)*, first flour.
3. *Cibarium secundarium*, second flour.
4. *Furfures*, bran.

It would appear that Celsus (ii. 18), considering wheat generally as *triticeum*, called the finest and purest flour *siligo*; ordinary flour, *simila*; the whole produce of the grain, bran, and flour mixed together, *abstrypus*. (Plin. *H. N.* xviii. 8, 9, 10, 11.)

Alica is placed by Pliny among the different kinds of corn (xviii. 7), and is probably the same with the *Halicastrum*, *Alicastrum*, or spring-sown far of Columella. But *alica* is also used to denote, not only the grain, but a particular preparation of it, most clearly described in another passage of Pliny (xviii. 11). The finest was made from Campanian sea, which was first rubbed in a wooden mortar to remove the huak, and then (*arcussis tunicis*) the pure grain (*nudata medulla*) was pounded. In this manner three sorts were produced and classed according to their fineness, the *minimum*, the *secundarium*, and the coarsest or *aphaerema*, and each was mixed with a kind of fine white chalk, found between Naples and Puteoli, which became intimately amalgamated with it (*transit in corpus, coloremque et ténacitatem affert*). This compound was the principle ingredient in a sort of porridge also called *alica*, while *alicarius*, signifying properly one who pounded *alica*, frequently denotes a miller in general. (Plin. *H. N.* xviii. 7, 11, 29, xxii. 25; Cat. 76; Cels. vi. 6; Mart. ii. 37, xiii. 6; Geopon. iii. 7.)

Amylum is starch, and the modes of preparing it are described by Cato (87), and Pliny (*H. N.* xviii. 7).

Granea was wheat, not ground, but merely divested of its huak, and made into a sort of porridge by boiling it in water and then adding milk. (Cat. 86.)

b. *Hordeum* s. *Ordeum* (κριθή; κριθή, Hom.). Next in importance to *triticeum* and *adorum*, was *hordeum* or barley, which was a more appropriate food for the lower animals than wheat, was better

for man when made into *polesta* than wheat of an indifferent quality, and furnished excellent straw and chaff (*stramentum, palea*).

The species most generally cultivated, termed *hexastichum* or *cantherinum*, was, we can scarcely doubt, identical with what we now call *bar* or *bigg*, the *Hordeum hexastichon* or six-rowed barley of botanists. It was sown after the vernal equinox (hence called *τριμήνη*, Theophr. *H. P.* viii. 1), upon land that had been twice ploughed, at the rate of five modii to the juger; succeeded best in a dry, loose, rich soil; and being an exhausting crop, the land from which it had been reaped was summer fallowed, or recruited by manure. It was cut as soon as it was ripe; for the stalk being brittle, was liable to be beaten down; and the grain not being enclosed in an outer husk, was easily shaken.

Another species, termed *Galaticum* or *distichum*, the same apparently with the modern *Hordeum vulgare*, or with the *Hordeum distichum*, varieties of the common two-rowed barley, was remarkable for its weight and whiteness, and answered well for mixing with wheaten flour in baking bread for slaves. It was sown in autumn, winter or early spring, at the rate of six modii to the juger. Five modii of seed hordeum required six days and a half of labour to bring it to the thrashing-floor; viz. ploughing three days, harrowing (*occulatoria opera*) one, hoeing (*sarritoria*) one and-a-half, reaping (*messoria*) one.

Pliny speaks of hordeum as the lightest of all frumenta, weighing only 15 pounds to the modius (Roman pound=11·8 oz. avoird.). In mild climates it might be sown early in autumn. (Theophr. *H. P.* viii. 1; Cat. 35; Varr. i. 34; Colum. ii. 9. §§ 14, 15, 16; Virg. *Georg.* i. 210; Plin. *H. N.* xviii. 7, 10; Geopon. ii. 14.)

c. Panicum and *Milium* are commonly spoken of together, as if they were only varieties of the same grain. The first is in all probability the *Panicum miliaceum* or common *millet* of botanists, the *ἔλνμος* or *μέλινη* of the Greeks; the second is perhaps the *Setaria Italica* or Italian *millet*, which corresponds to the description of *κέρχρος*; while the species noticed by Pliny as having been brought from India less than ten years before the period when he wrote it, we can scarcely doubt, the *Sorghum vulgare*, or *Durra* of the Arabs.

Panicum and *milium* were sown in spring (Virg. *Georg.* i. 216), towards the end of March, at the rate of four sextarii (pints) only to the juger, but they required repeated hoeing and weeding to keep them clean. They succeeded well in light loose soil, even on sand if well irrigated; and as soon as the ears were fairly formed, they were gathered by the hand, hung up to dry in the sun, and in this state would keep for a longer period than any other grain. *Milium* was baked into bread or cakes, very palatable when eaten hot; and both *panicum* and *milium* made good porridge (*puls*). Although not much used by the population of Italy, except perhaps in Campania, they formed a most important article of food in the Gauls, in Pontus, in Sarmatia, and in Ethiopia. (Cat. 6; Colum. ii. 9. § 17; Plin. *H. N.* xviii. 7, 10, 26; Pallad. iv. 3; Geopon. ii. 38; Theophr. *Π. Φ. Α.* ii. 17, *H. P.* viii. 3; Dioscor. ii. 119.)

Secale, rye, the *Secale cereale* of botanists, is not mentioned by any of the Greek writers unless it

be the *βρίσα* described by Galen (*De Aliment. Facult.* i. 2) as cultivated in Thrace and Macedonia (but this, in all probability, was a coarse variety of spelt), nor by Cato, Varro, Columella, nor Palladius. Pliny alone (*H. N.* xviii. 40) speaks of it, and in the following terms:—"Secale Taurini sub Alpibus Asiæ vocant, deterrimum, et tantum ad arcendam famem: foecunda sed gracili stipula, nigritia triste, sed pondere præcipuum. Admisceatur huic far ut mitiget amaritudinem ejus; et tamen sic quoque ingratisimum ventri est. Nasceatur qualicunque solo cum centesimo grano, ipsumque pro lactamine est." In the previous chapter he makes it identical with *farrago*, that is, corn sown for the purpose of being cut green as fodder. See remarks upon *Farrago* below.

Avena, the oat (*βρώμος* s. *βρώμος*, Theophr. *H. P.* viii. 4; Dioscorid. ii. 16), the *Avena sativa* of botanists, need scarcely be noticed in this place since it cannot be raised as a grain with any advantage in a climate so warm as that of Greece or of Italy. Columella (ii. 10. § 9) and Pliny (*H. N.* xviii. 42, *Avena Græca*) recommended that it should be sown for green fodder, and the latter remarks that it became a sort of corn (*frumenti fit instar*) in Germany, where it formed a regular crop, and where oatmeal porridge was a national dish (*neque alia pulle vivant*, *H. N.* xviii. 44. § 1. comp. iv. 27, vi. 35). In another passage (*H. N.* xxii. 68) the same author prescribes oatmeal (*avenacea farina*) steeped in vinegar as a remedy for spots on the skin. The *Avena* condemned as a troublesome weed by Cato (*R. R.* xxxvii. § 5) and Virgil (*steriles avenae*, *G. i.* 154) is, probably, the *Avena fatua* of botanists, although Pliny (*H. N.* xviii. 44. § 1) makes no distinction between this and the cultivated kind.

Other cereals we may dismiss very briefly.

Oryza (*ὄρυζα*, *δρυζον*), rice, was imported from the East, and was much esteemed for making gruel (*ptisana*).

Zea (*ζέα*, *ζεΐα*), *Olyra* (*ὄλυρα*), *Tīphe* (*τίφη*), and *Arinca*, of which the first two are named by Homer, must be regarded as varieties of the *Triticum Spelta* or *Fur* (Herod. ii. 36; Theophr. *H. P.* ii. 5, viii. 9; Dioscorid. ii. 110; Galen. *de Aliment. Facult.* i. 2, 13). The statements found in the eighteenth book of Pliny's Natural History in reference to these four are altogether unintelligible when compared with each other. He evidently copied, as was too often his custom, from a number of discordant authorities without attempting to reconcile or thinking it necessary to point out their contradictions. In one place (xviii. 20. § 4) he says distinctly that *Arinca* is the *Olyra* of Homer, and in another he seems to say (xviii. 11) that *Olyra* in Egypt became *Fur* (*fur in Egypto ex olyra conficitur*). Now we know from Herodotus (ii. 36) that in his time *Olyra* and *Zea* were considered synonymous, and that these exclusively were cultivated by the Egyptians. Hence we shall be led to conclude that the wheat which has been raised recently from the seeds discovered in the mummy cases is in reality the ancient *Zea* or *Olyra*, and from its appearance we should further be induced to identify it with the *Triticum ramosum* of Pliny (*H. N.* xviii. 21).

With regard to *Irio* and *Horminum*, of which the former seems to have been called *ἐρύσιμον* by the Greeks, both enumerated by Pliny among *frumenta*, although he afterwards somewhat quali-

for this assertion, we do not hazard a conjecture. (Plin. *H. N.* xviii. 10. § 1—22, xxii. 75.)

We may conclude this section with an enumeration of the technical terms employed to denote the different parts of an ear and stalk of corn.

The whole ear was named *spica*; the beard or awn *arista*; the ear, when beardless, *spica musica*, the white solid substance of the grain, *intimum solidum*—*nudata medulla*—*grannum*; the husk which immediately envelopes the granum, *gluma*, with which *cortex*, *tunica*, *folliculus*, are used as synonymous; the outer husk *acus*; the outer husk with the short straw attached, *palea*; the stem, *stipula*, *culmus*, to which *scapus*, *caulis* correspond in leguminous plants; the knots or joints in the stem, *geniculi*, *articuli*; the sheath-like blade in the stem from which the ear issues forth, *vagina*.

2. Leguminous Crops (χέρσρα, Legumina).

The vegetables falling properly under this head, chiefly cultivated by the ancients, were: *a. Faba*; *b. Lupinus*; *c. Lens* s. *Lenticula*; *d. Cicer*; *e. Cicerula*; *f. Phaseolus*; *g. Pisum*; to which, in order to avoid multiplying subdivisions, we may add *Napi* and *Rapa*, since in common with the legumina they served as food both for men and cattle.

a. Faba. The ancient *fabā*, the *κνύδος* of the Greeks, notwithstanding all that has been urged to the contrary, was certainly one of the varieties of our common field bean, the *Vicia Faba*, or *Faba vulgaris arvensis* of botanists. It required either rich and strong, or well manured land. If sown upon moist low-lying ground that had remained long unoccupied (*desertum*), no previous preparation was necessary; but the seed was scattered and at once ploughed in; the field was then ribbed and finally harrowed (*cum semen crudo solo ingesserimus, inarabamus, importatumque occubimus*), the object being to bury the seed as deep as possible. But if beans were to be sown upon land from which a corn crop had been just reaped (*restitilis ager*), after the stubble was cleared away, manure was spread at the rate of twenty four vehes to the juger, and then the remaining operations were the same as above. Rich land required from four to six modii to the juger, poorer soil somewhat more. A portion of the seed was committed to the ground about the middle (*media sementi*), the remainder at the end of the corn-sowing season (*septimontialis satio*). Virgil (*Georg.* i. 215), indeed, following the practice of his own district, directs that beans should be sown in spring; but this was disapproved of in the rest of Italy because the stalks (*caules*—*fabalia*), the pods (*siliquæ*), and the husks (*acus fabaginum*), all of which were of great value as food for cattle, were less luxuriant in the spring-sown (*trimestris faba*) than in the autumnal crop. Columella recommends that beans should be hoed three times, in which case they required no weeding. When they had arrived at maturity, they were reaped close to the ground, were made up into sheaves (*fasciculi*), were thrashed by men who tossed the bundles with forks, trampled them under foot, and beat them with flails (*baculis*), and finally, were cleaned by winnowing. The harvest took place in Central Italy about the end of May, and hence the first of June was named *Calendæ Fabariae*, because on that day new beans were used in sacred rites. From four to six modii of seed required two days' work

of the ploughman, if the land was newly broken up, but only one if it had been cropped the previous season; harrowing occupied one day and a half, the first hoeing one day and a half, the second and third each one day, reaping one day; in all, seven or eight days.

Bean meal (*lomentum*, *σμήγμα*) was baked into bread or cakes (*ἄρτος κνύματος*), especially if mixed with the flour of wheat or millet; when made into porridge (*fabacia*, *puls fabata*), it was accounted an acceptable offering to the gods and termed *Refreica*,—a name properly applied to the beans brought home and set apart for holy purposes. (Hom. *II.* xiii. 589; Cat. 35; Varr. i. 44; Colum. ii. 10, 12; Pallad. ii. 9, vii. 3; Plin. *H. N.* xvii. 5, xviii. 12, xix. 3; Geopon. ii. 35; Dioscorid. ii. 127; Theophr. *H. P.* iv. 2, vii. 3, viii. 1; comp. Fest. s. v. *Refreica*; Gell. iv. 11, x. 15; Macrobi. Sat. i. 12; Cic. *de Div.* i. 30; Ov. *Fast.* v. 436.)

b. Lupinus, the *δέφυος* of the Greeks, seems to include the *Lupinus albus*, the *L. luteus*, and the *L. pilosus* of botanists, the common white, yellow, and rose lupines of our gardens. The first of the above species was that chiefly cultivated by the Romans, and is pronounced by Columella to be the most valuable of the legumina, because it demanded very little labour, was a sure crop, and instead of exhausting, actually refreshed and manured the land. Steeped in water and afterwards boiled, it formed an excellent food for oxen in winter, and might be used even for man during periods of scarcity. It could be sown as soon as thrashed, might be cast upon ground unprepared by ploughing or any other operation (*crudis novallibus*), and was covered up anyhow, or not covered up at all, being protected by its bitterness from the attacks of birds and other animals.

The proper season for sowing was early in autumn, in order that the stalks might acquire vigour before the cold weather set in; the quantity of seed was ten modii to the juger, and the crop was reaped after it had remained a year in the ground. It succeeded well in any dry light land, but not in wet tenacious soil. Ten modii required in all only three days' work; one for covering up, one for harrowing, and one for reaping, and of these operations, the two first might, if there was a press of work, be dispensed with. (Cat. v. 35; Colum. ii. 10, 16, xi. 2; Pallad. i. 6, ii. 9, vi. 3, vii. 3, ix. 2; Plin. *H. N.* xviii. 14; Geopon. ii. 39; Virg. *Georg.* i. 75.)

c. Lens s. *Lenticula*, the *φακός* of the Greeks, the modern *Ercum Lens*, *Vicia Lens*, or Lentile, was sown twice a year, late in autumn (*per mediam sementim*) and early in spring, on dry light soil, in the proportion of rather more than a modius to the juger. It was recommended to mix the seed with dry manure, and after leaving it in this state for four or five days, then to scatter it. A modius and a half required eight days' work—ploughing, three; harrowing, one; hoeing, two; weeding, one; pulling, one. (Cat. 35; Virg. *Georg.* i. 228; Colum. ii. 10, 12; xi. 2; Plin. *H. N.* xviii. 12, 31; Pallad. xii. 11; Theophr. *H. P.* viii. 3; Dioscorid. ii. 129; Geopon. ii. 37; comp. Martial. xiii. 9. 1; Gell. xviii. 8.)

d. Cicer, the *ἐπίεινθος* of the Greeks. The *Cicer arietinum* (*κρίδος*) and the *Cicer Punicum*, varieties of our common chick-pea, were sown in rich soil, during the month of March, in the proportion of three modii to the juger, the seeds

having been previously steeped to make them germinate more readily. The crop was considered injurious to the soil, and therefore avoided by prudent husbandmen. Three modii of Cicer required four days for ploughing and sowing, two days for harrowing, one day for hoeing, one day for weeding, and three days for pulling (*velluntur tribus*). (Colum. ii. 10, 12; Plin. *H. N.* xviii. 12; Dioscorid. ii. 126; Theophr. viii. 1, 3, 5, 6; Geopon. ii. 36.)

e. Cicerula, the *λάβρος* of the Greeks, the *Lathyrus sativus* of botanists, which Pliny seems to regard as a small variety of the *Cicer*, was sown in good land either at the end of October or at the beginning of the year, in the proportion of three modii to the juger. None of the legumina proved less hurtful to the ground, but it was rarely a successful crop, for it suffered most from the dry weather and hot winds which usually prevailed when it was in flower. Four modii of *Cicerula* required six days' work—ploughing, three; harrowing, one; weeding, one; pulling, one. (Colum. ii. 10, 12; Plin. *H. N.* xviii. 12; Pallad. ii. 5, iii. 4; Theophr. *H. P.* viii. 3; comp. Plutarch. *Quæst. Rom.*)

f. Phaselus a. *Phaseolus* (φασήλος; φασόλος; φασόλος), the common kidney-bean, succeeded best in rich land regularly cropped, and was sown towards the end of October in the proportion of four modii to the juger. These four modii required three or four days' work,—ploughing, one or two, according to the soil; harrowing, one; reaping, one. The pods of the phaselus were sometimes eaten along with the seeds, according to our own custom. (Virg. *Georg.* i. 227; Colum. ii. 10, 12, xi. 2; Plin. *H. N.* xviii. 12; Pallad. ix. 12; x. 1.)

g. Pisum (πίσον; πῖσος; πῖσος), the common field pea, succeeded best in a loose soil, a warm situation, and a moist climate. It was sown immediately after the autumnal equinox, in the proportion of rather less than four modii to the juger, and cultivated exactly in the same manner as the *phaselus*. (Colum. ii. 10, 13; Plin. *H. N.* xviii. 7, 12; Theophr. *H. P.* iii. 27, viii. 3, 5.)

Napus, the *Bovinis* of Dioscorides, is the modern Rape, the *Brassica rapa* of botanists. *Rapum*, the *γογγυλῖς* of Theophrastus, is the modern Turnip, the *Brassica Napus* of botanists. The value of these plants was in a great measure overlooked by the earlier Roman writers, while the Greeks regarded them too much in the light of garden herbs; but Pliny enlarges upon their merits, and by the Gauls beyond the Po, who wintered their oxen upon them, their culture was deemed next in importance to that of corn and wine. They were highly useful as food for man, for cattle, and even for birds; both the leaf and bulb were available; being very hardy, they could be left in the ground, or would keep well if stored up, and thus one crop might be made to hold out until another came in. They required loose, well-pulverised, and highly-manured soil. Rapa succeeded best in low, moist situations, and were sown at the end of June after five ploughings (*quinto sulco*); napi, which were more adapted for dry sloping land, at the end of August or the beginning of September, after four ploughings (*quarto sulco*); both, however, in warm and well-watered spots might be sown in spring. A juger required four sextarii (about four imperial pints) of turnip seed and five of

rape seed, because the *napus* does not, like the *rapum*, expand into an ample bulb (*non in eam-rem latescit*), but sends a thin root straight down (*sed tenuem radicem deorsum agit*). *Columella*, however, distinctly states that the *rapum* and *napus* passed into each other, under the influence of a change of soil or climate. *Rapina* is the term for a bed or field of turnips. (Dioscorid. ii. 134, 136; Cat. v. 35; Colum. ii. 10; Plin. *H. N.* xviii. 13.)

3. Green Forage Crops (*Pabula*).

This term included all those crops which were cut green and employed exclusively as forage for the lower animals. The most important were:—*a. Medica*. *b. Foenum Græcum*. *c. Vicia*. *d. Cicera*. *e. Ervum*, *Ervilia*. *f. Farrago*, *Ocy-mum*. *g. Foenum*. The description of the last will involve an account of the system pursued in the management of meadows.

a. Medica (Μηδική sc. πῶς) the modern Lucerne. The most important of all the plants cultivated for stock exclusively was *Medica*, so called because introduced into Greece during the Persian wars. When once properly sown, it would last for many years, might be cut repeatedly during the same season, renovated rather than exhausted the soil, was the best fattener of lean cattle, the best restorative for those that were sick, and so nourishing that a single juger supplied sufficient food for three horses during a whole year. Hence the greatest care was bestowed upon its culture.

The spot fixed upon, which was to be neither dry nor spongy, received a first ploughing about the beginning of October, and the upturned earth was allowed to be exposed to the weather for the winter; it was carefully ploughed a second time, at the beginning of February, when all the stones were gathered off, and the larger clods broken by the hand; in the month of March it was ploughed for a third time and harrowed. The ground thus prepared was divided into plots or beds (*aræas*) as in a garden, each fifty feet long and ten feet broad, so that ready access might be gained by the walks between for supplying water and extirpating the weeds. Old dung was then spread over the whole, and the sowing took place at the end of April, a cythus (about $\frac{1}{3}$ of an imperial pint) of seed being allowed for each bed of the dimensions described above. The seed was immediately covered in with wooden rakes (*ligneis rastellis*), and the operations of hoeing and weeding were performed repeatedly with wooden implements. It was not cut for the first time until it had dropped some of its seed, but afterwards might be cut as tender as the farmer thought fit. After each cutting it was well watered, and as soon as the young blades began to sprout, every weed was sedulously removed. Managed in this manner it might be cut six times a year for ten (Pliny says thirty) years. It was necessary to use caution in giving it at first to cattle, since it was apt to inflate them, and make blood too rapidly, but when they were habituated to its use it might be supplied freely. It is very remarkable that this species of forage, to which so much importance was attached by the Romans, has altogether disappeared from Italy. We are assured by M. Chateauvieux that not a single plant of it is now to be seen. (Varr. i. 42; Colum. ii. 10, 28; Virg. *Georg.* i. 215; Pallad. iii. 6, v. 1;

Plin. *H. N.* xviii. 16; Dioscorid. ii. 177; Theophr. *H. P.* viii. 7.)

b. *Foenum-Græcum*, variously termed τῆλιν, *Boükepas*, *κερατίν* and *αλγυκεpas*, the *Trigonella fœnum Græcum*, or common Fenugreek of botanists, was called *Siliqua* by country people, and succeeded best when totally neglected, care being taken in the first place not to bury the seed deep (*scurifications seritur*). Six or seven modii, which was the allowance for a juger, required two days for sowing and one for reaping. (Cat. 35; Colum. ii. 10, xi. 2; Plin. *H. N.* xviii. 16, xxiv. 19; Dioscorid. ii. 124; Theophr. *H. P.* iii. 17, viii. 8.)

c. *Vicia* (ὀσάκων, the *Βικίον* of Galen), some one of the varieties of the *Vicia sativa*, the Vetch or Summer (or Winter) Tare of botanists. It might be sown on dry land at different periods of the year, usually about the autumnal equinox when intended for green fodder; in January or later, when raised for seed. (But see Plin. *H. N.* xviii. 15.) The quantity required in the former case was seven modii to the juger, in the latter six. Particular care was taken not to cast the seed when there was dew or moisture of any sort upon the surface of the ground; the period of the day selected for the operation was therefore some hours after sunrise, and no more was scattered than could be covered up before night. It required little labour—ploughing two days, harrowing one, reaping one; in all, four days' work for six or seven modii. (Cat. 35; Varr. i. 31; Virg. *Georg.* i. 75; Colum. ii. 10, § 29, 12, § 3; Plin. *H. N.* xviii. 15; comp. *Or. Fœst.* v. 267.)

d. *Cicera*, the *ἔχρος* of Theophrastus, the *Lastrum Cicera* of botanists, was sown after one or two ploughings (*primo vel altero sulco*), in the month of March, the quantity of seed varying, according to the richness of soil, from two and a half to four modii for the juger. In southern Spain it was given to the cattle crushed (*cicera frusa*), steeped in water, and then mixed with chaff. Twelve pounds of *ervum* were considered equivalent to sixteen of *cicera*, and sufficient for a yoke of oxen.

Cicera was cultivated for its seed also, and formed a not unpalatable food for man, differing little if at all in taste from the *cicerula*, but being of a darker colour. (Colum. ii. 11, § 1, 12; Pallad. iv. 6; Plin. *H. N.* xviii. 12; Theophr. *H. P.* iv. 2.)

e. *Ervum*, *Ervilia*, the *ὀρεβος* of Dioscorides, are apparently varieties of the *Ervum Ervile*, or Wild Tare of botanists. *Ervum* succeeded best in poor dry land; might be sown at any time between the autumnal equinox and the beginning of March, at the rate of five modii to the juger, and demanded little care. The above quantity required six days' labour—ploughing and sowing two, harrowing one, being one, weeding one, reaping one. (Varr. i. 32; Virg. *Ed.* iii. 100; Colum. ii. 10, § 34, 11, § 11, 12, § 3, 13, § 1, vi. 3, xi. 2; Pallad. ii. 8; Plin. *H. N.* xviii. 15; Theophr. *H. P.* ix. 22; Dioscorid. ii. 131; comp. Plaut. *Mostell.* i. 1.)

f. *Farrago*, *Ocymum*. On comparing the various authorities quoted at the end of this paragraph, although they abound in contradictions, we shall be led to conclude—

1. That *farrago* was the general term employed to denote any kind of corn cut green for fodder. The name was derived from *far*, the refuse of that grain being originally sown for this purpose (*farrago excrementis farris prædensis seritur*), but afterwards rye (*secale*), oats (*avenae*), and barley, were employed; the last-mentioned being, in the estimation of Columella, the best; and these grains were not always sown alone, but frequently with an admixture of the vetch and various legumina. Hence *farrago* is used by Juvenal to denote a confused medley of heterogeneous topics.

2. That as *farrago* properly denoted corn cut green for fodder, so *ocymum* was the name given to plants of the bean kind, when used in the same manner, before they came to maturity, and formed pods. Manlius Sura gives the proportions of ten modii of beans, two of vetches, and two of ervilias to the juger; and this combination was said to be improved by the addition of *Avena Græca*, sown in autumn; it was the first crop available in the early part of the year, and hence, of the three forms *ocinum*, *ocimum*, *ocymum*, we can scarcely doubt that the last is the most accurate, and that the name was given on account of the rapidity of its growth in spring. From the expression of Pliny, "Apud antiquos erat pabuli genus quod Cato *Ocymum* vocat," and the silence of Columella, who mentions the garden herb *ocymum* (basil) only, we infer that this sort of pabulum was little used after the time of Varro. The notion of Gesner that *ocymum* is clover, the *ὀκυτόων τριπτόηλον* of Callimachus, is directly at variance with the statements of Pliny, who mentions *trifolium* as a distinct plant. (Cat. 27, 53, 54; Varr. i. 23, 31; Colum. ii. 10, § 31, 35, xi. 3, § 29; Plin. *H. N.* xviii. 16.)

g. *Fœnum, Prata*. So much importance was attached to stock, that many considered a good meadow as the most valuable species of land, requiring little trouble or outlay, subject to none of the casualties to which other crops were exposed, affording a sure return every year, and that twofold, in the shape of hay and of pasture. The meadows were of two kinds, the Dry Meadow (*siccaneum pratium*) and the Irrigated or Water Meadow (*pratium riguum*). The hay produced from a meadow whose own rich natural moisture did not require an artificial stimulus was the best. Any land which declined with a gentle slope, if either naturally rich and moist, or capable of irrigation, might be laid down as a meadow, and the most approved method of procedure was the following:—The land having been thoroughly ploughed and well laboured in summer, was in autumn sown with rapa, or napi or beans, the following year with wheat, and in the third year, all trees, bushes, and rank weeds having been extirpated, with the vetch (*vicia*) mixed with grass seeds. The clods were broken down with rakes, the surface accurately levelled by wicker hurdles, so that the scythe of the mower (*fœniseca*) might nowhere encounter any obstacle. The vetches were not cut until they had arrived at maturity and begun to drop their seed; and after they had been removed, the grass, when it had attained to a proper height, was mown and made into hay. Then the irrigation commenced, provided the soil was stiff, for in loose earth it was necessary to allow the grass roots to obtain a firm hold. For the first year no stock were permitted to graze lest their feet should poach up the soft ground, but the young blades were cut from time to time. In the second year, after the hay-making was over, if the ground was moderately dry and hard, the smaller animals were admitted, but no

horses or oxen until the third. About the middle of February in each year, an abundant top-dressing of manure mixed with grass-seeds was applied to the upper part of the field, the benefit of which was extended to the lower portions by the flow either of natural rain or of artificial streams. When old meadows became mossy, the best remedy was to sprinkle ashes copiously, which in many cases killed the moss; but when this failed, the most sure plan was to break up the land afresh, which, having lain long undisturbed, was sure to afford abundant crops.

In making hay, the grass was to be cut (*falcibus subsecari*) before the stem had begun to lose its natural moisture, while the seed was not yet perfectly ripe; and in drying, it was essential to avoid the two extremes of exposing it for too long or too short a time to the sun and air. In the former case, the juices were sucked out, and it became little better than straw; in the latter, it was liable to ferment, heat, and take fire. After being properly turned over with forks (*furcillis versari*) it was collected and laid in regular swathes (*coartabimus in strigam*), and then bound into sheaves or bundles (*atque ita maniplos vincimus*). The loose stalks were next raked together (*rastellis eruti*) and the whole crop (*foenisicia*) carried home and stored in lofts, or, if this was not convenient, built up in the field into conical ricks (*in metas extrui conveniet*). Lastly, the inequalities passed over by the mowers (*quae foenisices praeferunt*) were cut close and smooth (*sicilienda prutis, id est, fulcibus consecranda*), an operation termed *sicilire prutum*, the gleanings thus obtained, which formed a sort of aftermath, being called *foenum cordum*, or *sicilimenta*. (Cat. 5, 8, 9, 29, 50; Varr. i. 7, 49; Colum. ii. 16—18; Pallad. ii. 2, iii. 1, iv. 2, x. 10.)

4. Crops affording Materials for textile Fabrics.

Of these, the most important were, *a. Cannabis* : *b. Linum*.

a. Cannabis (κάνναβις, κάνναβος) the *Cannabis sativa*, or Common Hemp of botanists, required rich, moist, well-watered, deeply trenched, and highly manured land. Six grains were sown in every square foot of ground during the last week in February, but the operation might be delayed for a fortnight if the weather was rainy. Columella is unable to give any details with regard to the amount of time and labour necessary for raising a crop of hemp. (Varr. i. 23; Colum. ii. 10, 12, 21; Plin. *H. N.* xix. 9; Dioscorid. iii. 165.)

b. Linum (λίνον), the *Linum usitatissimum*, or Common Flax of botanists, being regarded as a very exhausting crop, was altogether avoided, unless the soil happened to be peculiarly suitable, or the price which it bore in the district very inviting (*nisi pretium prociat*). It was sown from the beginning of October until the end of the first week in December, in the proportion of eight modii to the juger, and sometimes in February at the rate of ten modii. On account of its scourging qualities (Virg. *Georg.* i. 77), it was generally grown upon rich land, such being less liable to be seriously injured, but some sowed it very thick upon poor land, in order that the stalks might be as thin, and therefore the fibres as delicate as possible. (Virg. *Georg.* i. 212; Colum. ii. 10, 14; Plin. *H. N.* xvii. 9, xix. 1; Pallad. xi. 2; Geopon. ii. 10; Dioscorid. ii. 125; Theophr. *H. P.* viii. 7.)

Succession or Rotation of Crops.

It is evident from the instructions given by Columella (ii. 4) for ploughing the best land, that a summer fallow usually preceded a corn crop. For since the first ploughing was early in spring, the second in summer, and the third in autumn, it is impossible that a crop could have been raised upon the ground during any portion of the period here indicated; and the same author expressly states elsewhere (ii. 9), in accordance with the Virgilian precept (*G. i. 71*), that the land upon which wheat (*far*, *siligo*) was grown ought to repose every other year; in which case, however, manure might be dispensed with. Nor did this plan apply to corn alone, for it would seem to have been the general practice to permit nearly one half of the farm to remain at rest, while the productive energies of the other moiety were called into action. It will be seen from the calculations with regard to time and labour for an arable farm containing 200 jugers (Colum. ii. 12), that 100 jugers only were sown in autumn, 50 with wheat, 50 with leguminous or green crops; and if spring-sowing was resorted to, which was by no means general, 30 more, so that out of 200 jugers, at least 70, and more frequently 100, were left fallowed.

There were, indeed, exceptions to this system. Some land was so peculiarly deep and rich that it might be cropped for two or more years in succession (*terra restibilis*); but in this case it was relieved by varying the crop, the field from which winter wheat (*far*) had been reaped being highly manured and sown immediately with beans, or the ground which had borne lupines, beans, vetches, or any renovating crop, was allowed to lie fallow during winter and then sown with spring-wheat (*far*) (Virg. *Georg.* i. 73; comp. Plin. *H. N.* xviii. 21), while a third rotation, still more favourable, was to take two leguminous or renovating crops after one exhausting or corn crop. In Campania, the extraordinary fertility of the soil allowed them to tax its energies much more severely, for there it was common to sow barley, millet, turnips (*rapa*), and then barley or wheat again, the land receiving manure before the millet and turnips, but never remaining vacant; while that peculiarly favoured district near Naples, called the *Campi Laborini*, or *Terrae Laboriae*, now the *Terra di Lavoro*, yielded an uninterrupted series of corn crops, two of far, and one of millet, without a moment of repose (*seritur toto anno, panico semel, bis farre*). (Cat. 35; Varr. i. 44; Virg. *Georg.* i. 71, &c.; Colum. ii. 9, 10, 12; Plin. *H. N.* xviii. 21, 23.)

It will be proper, before bringing this part of the subject to a close, to explain a word which may occasion embarrassment in consequence of its signification being variously modified by the Roman agricultural writers. This is the adjective *novalis*, which frequently appears as a substantive, and in all the three genders, according as *ager*, *terra*, or *solum* is understood.

1. The original meaning of *novalis* or *novale*, looking to its etymology, must have been, *land newly reclaimed from a state of nature*; and in this sense it is used by Pliny (*H. N.* xvii. 5), *Tulis* (sc. odor) *fore est in novilibus caesa retlere sylva*. (Comp. Callistr. in Pand. xlvii. 21. 3.)

2. Varro, in his treatise *De Lingua Latina* (v. 39; comp. vi. 59, ed. Müller), places *novalis ager*.

land which is allowed occasionally to repose, in opposition to *restabilis ager*, land which is cropped unceasingly, — *Ager restabilis qui restituitur ac reseritur quotquot annis; contra qui intermittitur a novando novalis*, — and hence Pliny (*H. N.* xviii. 19), *Novale est quod alternis annis reseritur*.

3. Varro, in his *Treatise De Re Rustica* (i. 29), defines *Seges* to mean a field which has been ploughed and sown; *arvum*, a field ploughed but not yet sown; *novalis ubi satum fuit antequam secunda aratione renovetur*, ambiguous words which may be interpreted to denote a field which has borne a crop, but which has not been ploughed for a second crop; in which case it will be equivalent to a fallow field.

4. Columella, in one passage (vi. præf. § 1), employs *novale solum* for new or virgin land untouched by the plough; for in contrasting the tastes of the agriculturist and the grazier, he remarks that the former delights *quam maxime subacto et purro solo*, the latter *novali graminosoque*; and Varro (ii. præf. § 4) in like manner places *novalis* as pasture land, in opposition to *seges*, as corn land, — *bos domitus cassus fit ut commodius nascatur frumentum in segete et pabulum in novali*.

5. Columella, in another passage, places *culta novalis*, land under tillage in a general sense, in opposition to *rudis ager*, land in a state of nature; and thus we must understand the *haec tam culta novalis* in Virgil's first *Elogue* (v. 71), and *tensas novales*, the cultivated fields from which a crop has been reaped, — a phrase which forms the connecting link between this meaning and that noticed above under 3. (Comp. Pallad. i. 6, ii. 10.)

B. PASTIO.

The second great department of our subject is *Pastio*, s. *Res Pastorica*, s. *Scientia Pastoralis*, these terms being all alike understood to denote the art of providing and feeding stock so as to yield the most ample profit.

But *Pastio* must be considered under the twofold forms of

- a. *Pastio Agrestis* s. *Res Pecuarica*, and
- ß. *Pastio Villatica*.

The former comprehending the management of cattle, sheep, horses, &c.; the latter of poultry, game, fish, bees, and some other animals to be noticed hereafter.

a. PASTIO AGRESTIS S. RES PECUARICA.

Contains three heads:

I. *Minores Pecudes*, including, 1. Sheep; 2. Goats; 3. Swine.

II. *Majores Pecudes*, including, 1. Kine; 2. Horses; 3. Asses; 4. Mules. Varro indeed, for no reason apparently except to preserve a sort of numerical symmetry, places mules in the third division, but as they evidently belong to the same class as horses and asses, we have to this extent departed from his arrangement.

III. Animals provided not for the profit which they yield directly in the market, but necessary for the proper maintenance of the foregoing: these are —

1. Dogs (*canes*); 2. Feeders (*pastores*).

Again, in each of these nine subdivisions (with the exception of mules who do not breed) attention must be directed to nine different circumstances, of which four are to be considered in the purchase of stock (*in pecore parando*), four in the

feeding of stock (*in pecore pascendo*), while the ninth, of a more general character, relates to number (*de numero*).

The four circumstances which demand attention in purchasing stock are, a. The age of the animal (*aetas*). b. His points (*cognitio formae*) by which we determine whether he is good of his kind. c. His breeding (*quo sit semine*), by which we determine whether he is of a good kind. d. The legal forms (*de jure in parando*) essential to render a sale valid, and the warranty which the buyer may demand (*quemadmodum quomque pecudem emi oporteat civili jure*).

The four circumstances to be considered after a breeding stock has been acquired are, e. The mode of feeding (*pastio*) in answer to the questions *where, when, and with what* (*in quo, quando, et quibus*). f. The impregnation of the female, the period of gestation, and her treatment while pregnant, all of which are embodied in the word *foetura*. g. The rearing of the young (*nativitas*). h. The preservation of their health, and treatment when diseased (*de sanitate*).

i. The ninth and last inquiry (*de numero*) relates to the number of flocks and herds which can be maintained with advantage in a given space, the number of individuals which it is expedient to combine into one flock or herd, and the proportions to be observed with regard to the sex and age of the members of each flock and herd.

In following the divisions and topics indicated above, we omit the discussions on the diseases of stock and their remedies, which abound in the agricultural writers, and which form the subject of an elaborate treatise (*Mulo-medicina* s. *De Arte Veterinaria*), bearing the name of *Vegetius*, which is probably a translation or compilation from the works of the Greek *ἰατρίαι*, or veterinary surgeons, executed at a late period.

I. MINORES PECUDES.

1. Sheep (*pecus ovillum* s. *oviarium*) were divided into two classes with reference to their wool.

(1.) *Pecus hirtum*, whose fleeces were not protected artificially.

(2.) *Pecus Tarentinum* s. *Pecus Graecum* s. *Oves pellitae* s. *Oves lectae*, whose fleeces were protected from all external injury by skin jackets. Their wool being thus rendered finer, and being more easily scoured and dyed, brought a higher price than any other.

Sheep were likewise divided into two classes according as they were home-fed or reared in extensive and distant pastures; we first consider them under this point of view.

Home-fed sheep (*greges villatici*) were allowed to pasture in the fields around the farm during a portion of the year, wherever the nature of the country and the system of cultivation pursued rendered this practicable, or, more frequently, were kept constantly confined in sheds (*stabula* — *septa* — *ovilia*), built in warm and sheltered situations, with hard floors sloping outwards to prevent the accumulation of moisture, which was regarded as particularly injurious to both the feet and the fleece. They were fed upon cistus, lucerne, barley, and leguminous seeds, or when such rich and succulent food could not be obtained, on hay, bran, chaff, grape husks, and dry leaves, especially those of the elm, oak, and fig, being at all

times plentifully supplied with salt. They were littered with leaves and twigs, which were frequently changed, and the pens were kept carefully clean.

The more numerous flocks which were reared in extensive pastures (*qui in salibus pascuntur*) usually passed the winter in the low plains upon the coast, and were driven by regular drift roads (*calles publicae*) in summer to the mountains of Central Italy, just as in modern times vast droves pass every autumn from the Abruzzi to seek the more genial climate of Puglia or the Maremma. Those who were employed to watch them (*opiliones*) being often at a great distance from home were furnished with beasts of burden for transporting the materials required in the construction of folds and huts, at their halting places, and all the stores necessary for themselves and their charge. The sheep were usually collected every night to secure them against robbers and beasts of prey; in summer they fed in the morning and evening, and reposed during the noontide heat in sheltered spots, while in winter they were not allowed to go out until the frost was off the ground. The flocks were often very numerous, containing sometimes 15,000 head, one shepherd (*opilio*) being allowed to every five or six score.

The breeds most prized by the early Romans were the Calabrian, the Apulian, which were short woolled (*breves villo*), the Milesian, and, above all, the Tarentine; but in the time of Columella those of Cisalpine Gaul from the vicinity of Altinum (Mart. xiv. 153), and those from the Campi Marci round Parma and Mutina were especially esteemed. The system of crossing was by no means unknown; for M. Columella, the uncle of the author, produced an excellent variety by crossing the *testas oves* of Cadix with some wild rams from Africa, and again crossing their progeny with the Tarentines. In purchasing stock attention was always paid to the localities where they were to be maintained; thus sheep of large size (*procerae oves*) were naturally deemed best fitted for rich plains, stout compact animals (*quadratae*) for light hilly soils, and the smaller kinds (*aequae*) for mountainous regions, just as in this country the Leicester are kept with greatest advantage in the low-lying luxuriant pastures of Lincolnshire, Cheviots in the grass hills from which they derive their name, and the black-faced on the lofty mountains of Wales and Scotland. As to colour, pure white was most sought after; but certain natural tints, such as the dark grey (*pullus*), which distinguished the flocks of Pollentia in Liguria (*fuscique feras Pollentia villi*, Silius, viii. 599), the yellowish brown (*fuscus*) in those of Corduba (so often celebrated by Martial. v. 37, viii. 2, 8, ix. 62, xiv. 188; comp. Juv. xii. 40), and the red brown (*ruber*) in some of the Asiatic varieties, were highly prized.

The points characteristic of a good animal and the warranty usually required of the seller will be found fully detailed in Varro (ii. 2) and Columella (vii. 2, 3).

Those which were smooth and bare under the belly (*ventre glabro*), anciently called *apicae*, were always rejected, and particular care was taken that the fleece of the ram should be perfectly pure, or at least uniform in colour, his tongue also being examined in order to ascertain that it was not black or spotted, since such defects would have

been transmitted to his progeny. (Virg. Georg. iii. 387; Colum. vii. 3.)

Ewes were not considered fit for breeding until they were two years old, and they continued to produce until they had reached the age of seven: rams (*arietes*) were believed to be in vigour from three years old until eight. The most favourable period for impregnation in the case of ewes that had not previously brought forth, was the latter end of April, about the Palilia (21st April); for others, from the setting of Arcturus (13th May) to the setting of the Eagle (23d July); and, since the period of gestation was about 150 days, the earliest lambs (*agni, agnae*) would be yearned in September, the latest about the middle of December, these being, as was remarked by Celsus, the only animals produced with advantage in midwinter. Ewes when about to lamb (*incentes*) were placed apart, constantly watched, and assisted in parturition. As soon as they had brought forth, the first milk which was of a thick consistence, and called *colostra*, was carefully withdrawn, being considered injurious in all animals, and productive of a disease named *colostratio*. The lambs were now tended with the greatest solicitude, were generally kept in the house near a fire for some days, were not allowed to go forth to pasture for a considerable time, but were partially reared by the hand on the most tender and nourishing food, being finally weaned at the age of four months. Those lambs which were carried in the womb longer than the regular time were termed *choridi*; those born late in the season, *serotini*; those which, in consequence of their mothers being unable to supply milk, were suckled by others, *subrami*. Castration was not performed upon such as were intended for wethers (*vervaces*) until five months old. The males set apart to supply the deficiencies in the breeding flock (*quos arietes submitters volent*) were selected from the progeny of such ewes as usually gave birth to twins, those which were polled (*mutili*) being preferred on the whole to those with horns (*cornuti*).

The management of *oves pellitae* differed from that of the ordinary *greges villatici* merely in the amount of care with which they were tended. They were furnished with an ample supply of the most nutritious food, each individual receiving daily in winter three sextarii (pints) of barley or of beans crushed in their pods (*fresae cum visis valculis fabae*), in addition to hay, lucerne, dry or green cytissus, and other fodder. Their stalls were usually paved with stone, and kept scrupulously clean; they seldom left the house, and, when allowed to pasture, it was looked upon as essential that the ground should be free from bushes and briars of every description which might tear their fleece or its covering. The jackets were frequently taken off to cool the animals, the wool was combed out at least thrice a year, and well washed and anointed with oil and wine. The wethers were killed at two years old, their skin being then in perfection.

Sheep-shearing (*tonsura*) commenced in warm districts in April; but in cold situations was deferred until the solstice. A fine day was chosen, and the operation was performed before the sun had attained to its full power, in order that the sheep might not be hot and the wool not moist. The most careful placed a rug under the animal (*segeticalis subjectis oves tondere solent*) that no portion of the clip

might be lost or damaged (*ne quasi Acci intereant*). The wool, when fresh shorn and still impregnated with the sweat of the animal, was called *lana secunda*; the fleeces when rolled up were termed *scabra*, or *volamina*. *Oves kirtae*, when shorn, were immediately smeared with wine and oil, to which white wax and hog's lard were occasionally added; while the jackets of the *oves pelinae* were anointed with the same mixture, and then replaced on the animals. Instead of this, some rubbed in a wash composed of equal parts of boiled lupine juice, lees of old wine, and amurca. Any wound inflicted during the process was dressed with tar (*pis liquida*). On the fourth day they were bathed, if possible, in the sea; if not, in rain-water mixed with salt. In Spain and some other places it was customary to shear the sheep twice a year, under the belief that the additional labour was more than compensated by the increased quantity of wool. The ancient practice of plucking the wool instead of shearing it, still lingered in certain districts even when Pliny wrote. (Varr. ii. 1. § 5, 16, 20, ii. 2; Colum. i. Praef. § 26, vii. 2, 3, 4, xi. 2 § 14; Plin. H. N. viii. 47, 48; Pallad. ii. 16, v. 7, vi. 8, vii. 6, viii. 4, xii. 13.)

2. Goats (*pecus caprina*) were divided into two classes, the *genus mutilum* of *capripilum*, the polled and thin haired, and the *genus cornutum* or *mutum*, the horned and shaggy; but there does not appear to have been any difference in the mode of rearing them, nor indeed do they seem to have been kept distinct; but it was considered advisable that the old he-goat, the *dus gregis*, should be *mutus*, because he was then less troublesome and pugnacious.

The points characteristic of a good animal will be found enumerated in Varro (ii. 3, § 2—5) and in Columella (vii. 6). The most high bred had always two long flaps of skin (*verruculae, lacinae*) depending from the throat. One peculiarity connected with sales was that they were never warranted in good health, for they were believed to be always more or less labouring under fever.

The management of goats was in most respects the same as that of sheep, except that, although intolerant of frost and cold, they thrive better in mountainous craggy ground or among copsewood, where they browsed with great eagerness on the young twigs, than in open grassy plains. Both from their wandering nature and their liability to contract disease when crowded in pens, not more than fifty were kept together in a flock under the charge of the same goatherd (*caprarius*), the proportion of one male (*caper, kircus*) to about fifteen females (*caprae, capellae*) being commonly observed.

When in stalls (*caprilia*), the aloping floor was usually formed out of the native rock or paved with smooth stones, for no litter was placed beneath their feet. The houses were swept out daily: and it was deemed essential to their health that no moisture or dirt of any kind should be allowed to accumulate. The she-goat was capable of breeding from one year old until eight; but the progeny of a mother under three years old were not worth keeping permanently, but sold off. The best time for impregnation was the end of autumn; for the period of gestation being five months, the kids (*lodi*) were thus born in spring. If the dam was of a good stock, she generally produced two or even three at a birth, which were weaned at the

end of three months, and then transferred at once to the flock (*submittuntur et in grege incipiunt esse*).

The hair (*pili*) of goats was shorn or plucked (*capras vellere* is the technical phrase) out regularly, and used in the manufacture of coarse stuffs (*usum in castrorum et miseris volamina nautia, — pilos ministrant ad usum nauticum et ad bellica tormenta*). The cloths woven from this material were termed *Cilicia*, because the goats in the southern and central provinces of Asia Minor, like the modern Angora species, were remarkable for the length of their hair. (*In Cilicia circaque Syries villo tonsili vestiuntur*, are the words of Pliny, who here alludes to the goats from the Cinypts in Libya, the "Cinyphii hirci" of Virgil.) (Colum. i. Praef. § 26, vii. 6; Plin. H. N. viii. 50; Pallad. xii. 13; Varr. ii. 3, ii. 1. § 5, 28.)

3. Swine (*pecus suillum*) were divided into two classes, the *suus densae*, usually black in colour, thickly covered with bristles; and the *suus glabrae*, generally white, and comparatively smooth; but there seems to have been little difference in the management of the two breeds, except that the former was the more hardy.

The points characteristic of a good animal, and the warranty usually required by the purchaser, will be found in Varro (ii. 4), Columella (vii. 9), and Palladius (iii. 26).

During a great portion of the year, wherever it was practicable, they were driven out to feed early in the morning in woods where acorns, beech-mast, wild fruits, and berries abounded; and in the middle of the day they reposed, if possible, in swampy ground, where they had not only water but mud also wherein to wallow; in the cool of the evening they fed again, were taught to assemble when the swineherd (*subulcus*) sounded his horn, and were then driven home to the farm. In winter they were not allowed to go forth when frost was hard upon the ground. When kept in the house, their chief food was acorns, or when the supply of these failed, beans, barley, and other kinds of grain and pulse. The number in each herd varied from 100 to 150, or even more, according to circumstances and the means of the proprietor, and the proportion of one boar to ten sows was usually observed.

The sows were not considered fit for breeding until upwards of a year old, and continued prolific to the age of seven; boars (*verres*) were in full vigour from one year old till four; the best time for impregnation was from the middle of February up to the vernal equinox, the period of gestation was four months, and the pigs being weaned at the end of two, a double farrow might be procured in a year.

Each breeding sow (*acrofa*) brought up her pigs (*porcus, porca, porcullus*) in a separate sty (*ara*), constructed in such a manner that the superintendent (*custos, porculator*) might easily see into the interior and thus be prepared to relieve the progeny, which were in constant danger of being crushed by the weight of the mother who was supposed to bring forth as many young as she had teats, and was capable of suckling eight at first, but when they increased in size it was deemed advisable to withdraw one half of that number. Sucking pigs (*lactantes*) when ten days old were accounted pure for sacrifice, and hence were anciently termed *acres*; after the suckling time (*nucricatus, porculation*), which lasted two months, was over, they were denomi-

nated *delici*, and sometimes *nefrendes*, because not yet able to crunch hard food. The males not reserved for breeding were castrated when from six to twelve months old, and were then termed *majales*. (Varr. ii. 4; Colum. vii. 9, Praef. i. § 26; Plin. H. N. viii. 51; Pallad. iv. 26.)

II. MAJORES PECUDES.

1. Kine (*pecus bubulum*, *armentum bubulum*) were divided into classes, according as they were kept at home and employed in the labours of the farm (*boves domiti*), or pastured in large herds (*armenta*).

Boves domiti, wherever the nature of the soil and the mode of culture pursued permitted, were allowed to pasture; since growing grass (*viride pabulum*) was considered the most suitable of all food; when this could not be supplied, it became necessary to stall-feed them (*alere ad praeseptia*); but they were allowed to stand in the open air during the hot weather, while in winter they were kept in spacious byres (*stabula, consepia*) built with a southerly aspect so as to be sheltered from cold winds, the floors being hard and sloping to prevent moisture from being absorbed, and to allow it to run off freely, while to promote the warmth and comfort of the animals they were bedded with abundance of litter (*stramentum pecori et bubus diligenter subternatur*, Cat. 5.), usually straw, or leaves, such as those of the ilex, which were supposed to yield little nourishment. Their staple food from the middle of April until the middle of June was vetches, lucerne, clover, and other fodder cut green; from the middle of June to the beginning of November the leaves of trees, those of the elm, the oak, and the poplar being regarded as the best; from the beginning of November until April meadow hay (*foenum pratense*), and, where hay could not be procured, chaff, grape husks, acorns, and dry leaves were substituted mixed with barley, or with some of the leguminous seeds, such as beans, lupines, or chick-peas previously steeped in water (*maeridae*), or crushed (*fresae*). When an ox was fed upon hay, from 30 to 40 pounds weight (Roman pound = 11½ oz. avoird.) was an ample allowance, except during the months of November and December, that is, during the ploughing and sowing season, when they received from the feeder (*pabulatorius*) as much food of the most nutritious kind as they could consume. Lumps of salt placed near the *consepia* proved very attractive to the animals and conduced to their health.

Large herds were pastured chiefly in woods where there was abundance of grass, leaves, and tender twigs, shifting to the coast in winter and to the cool shady hills in summer, under the charge of herdsmen (*armentarii*), a class altogether distinct from the *bubulci*, or hinds, who worked and tended the *boves domestici*. The common number in a herd was from 100 to 120, the animals were carefully inspected every year, and the least promising (*rejioulae*) weeded out. The proportion of two bulls, a yearling and a two-year old, to 60 or 70 cows was usually observed, but Columella doubles the number of males. The Umbrian oxen, especially those on the Clitumnus, were the largest and finest in Italy; those of Etruria, Latium, and Gaul were smaller, but strongly made and well adapted for labour; those of Thrace were valued for sacrificial purposes in consequence of being for the most part pure white; but the cattle of Epirus, the most im-

portant pastoral district of the Roman world, were superior to all others.

The points characteristic of a good animal, and the warranty usually demanded by the buyer, will be found fully detailed in Varro (ii. 5), in Columella, who here copies the description of the Carthaginian Mago (vi. 1, 20, 21), and in Palladius (iv. 11, 12).

Cows (*vaccas*) were not fit for breeding until they were upwards of two years old, and they continued to produce until they had reached the age of ten. Considerable variation is to be found in the agricultural writers as to the age at which the bulls arrived at full vigour, Varro considering that they might be employed when a year old, Columella and Pliny recommending that they should be kept until four. The former, however, is the precept of the practical man, and is consonant with modern experience. The time of gestation being nearly ten (lunar) months, the most favourable period for impregnation was from the middle of June to the end of July, for thus the calves (*vituli*) would be born when spring was well advanced (*maturo vere*). When parturition was approaching, the pregnant cow (*horda vacca*) was carefully watched, fed richly, and protected from the assaults of the gad-fly and other tormenting assailants; the calf for some time after its birth was allowed to suck freely, but as it increased in strength was tempted with green food, in order that it might in some degree relieve the mother, and after six months had elapsed, was fed regularly with wheat bran, barley meal, or tender grass, and gradually weaned entirely. Castration was performed at the age of two years. The vituli intended for labour were to be handled (*tractari*) from an early age to render them tame, but were not to be broken in to work (*domari*) before their third, nor later than their fifth year. The method of breaking (*domituras*) those taken wild from the herd is fully described by Columella (vi. 2), and Palladius fixes the end of March as the time most appropriate for commencing the operation. The members of a herd, according to age and sex, were termed, *Vitulus, Vitula; Juvenius, Juvenca; Bos novellus, Buculus; Bos vetulus, Taurus, Vacca*; a barren cow was named *Taura*. (Cat. 5, 30; Varr. ii. 1, 5; Colum. vi. 1—3, 20—24; Plin. H. N. viii. 45; Pallad. iv. 11, 12, vi. 7, viii. 4.)

2. Horses (*pecus equinum* s. *equitum*, *armentum equinum*) are divided by Columella into *Gomeroci*, blood horses; *Mulares*, horses adapted for breeding mules; *Vulgares*, ordinary horses.

The points of a horse, the method of ascertaining his age up to seven years old, and the warranty usually given by the seller, are detailed in Varro (ii. 7. § 4, 5, 6) in Columella (vi. 29), and in Palladius (iv. 13).

Horses either pastured in grass fields or were fed in the stable upon dry hay (*in stabulis ac praeseptibus*), to which barley was added when the animal was required to undergo any extraordinary fatigue. Brood mares were frequently kept in large troops which shifted, like sheep and oxen, from the mountains to the coast, according to the season; two mounted men being attached to each herd of fifty. The mare (*equa*) was considered fit for breeding at two years old, and continued prolific up to the age of ten; the stallion (*admisarius*) remained in vigour from three years old until

twenty, but when young was limited to twelve or fifteen females. The period of gestation being twelve lunar months and ten days, the best time for impregnation was from the vernal equinox to the summer solstice, since parturition would then take place during the most favourable season. High bred mares were not allowed to produce more than once in two years. Ten days after birth the foal (*pulus equinus, æquuleus*) was permitted to accompany its dam to pasture; at the age of five months, it was customary to begin feeding them with barley-meal and bran, and when a year old, with plain unground barley; but the best colts were allowed to continue sucking until they had completed two years, and at three years they were broken in for the toil to which they were destined, whether for racing (*ad cursuram*), for draught (*ad rhedam*), for carrying burthens (*ad vecturam*), or for military service (*ad epheppism*), but they were not regularly worked until four off.

Race and war horses were not castrated; but the operation was frequently performed on those destined for the road, from the conviction that the gelding (*castratus*), while less bold and spirited was more safe and tractable (*in viis habere maluit placide*).

It is to be observed that horses were, and indeed are, very little used for agricultural purposes in Italy and Southern Europe, the ordinary toils being carried on almost exclusively by oxen, and hence they never were by any means objects of such general interest to the farmer as among ourselves.

We may remark that Varro, Columella, and many other writers, repeat the absurd story embellished by the poetry of Virgil, that mares in some districts of Spain became pregnant by the influence of a particular wind, adding that the colts conceived in this manner did not live beyond the age of three years. (Varr. i. Praef. § 26, ii. 1. § 18, 7. § 7; Colum. vi. 27, 29; Plin. H. N. viii. 42; Pallad. iv. 13.)

3. *Asses (asinus, asina)* were divided into two classes, the *Genus mansuetum*, or common domestic quadruped (*asinus, asellus*), and the *Genus ferum*, the wild ass (*onager, onagrus*), which was common in Phrygia and Lyconia, was easily tamed and made an excellent cross.

The most celebrated breeds were those of Arcadia and of Reate. The latter was so highly esteemed in the time of Varro, that a single individual of this stock had been known to fetch sixty thousand sesterces (about 500*l.* sterling), and a team of four, as much as four hundred thousand (upwards of 3300*l.* sterling). Such animals were of course delicately nurtured, being fed chiefly upon *for* and barley bran (*farfurum ordeaceum*). The inferior description of asses (*minor asellus*) were valued by farmers because they were very hardy, not subject to disease, capable of enduring much toil, required little food and that of the coarsest kind, such as the leaves and twigs of thorny shrubs, and might be made serviceable in various ways, as in carrying burthens (*aselli dossuarii*), turning corn mills and even in ploughing, where the soil was not stiff. The time of impregnation, the period of gestation, and the management of the foals (*pulli*), were the same as in horses. They were seldom kept in sufficient numbers to form a herd. (Varr. ii. 1. § 14, ii. 6; Colum. vii. 1; Plin. H. N. viii. 43; Pallad. iv. 14.)

4. *Mules. Mulus and Mula* were the general terms for the hybrid between a horse and an ass, but in practice a distinction was drawn between *Muli* and *Hiami*. *Hiami* were the progeny of a stallion and a she-ass, *Muli* of a male ass and a mare. The latter were larger in proportion, and more esteemed than the former. A cross sometimes was formed between the mare and the onager as a matter of curiosity.

Uncommon care was taken by breeders of mules in the selection of the parents. A strong large-boned mare, powerful rather than swift, was usually chosen. The male asses at their birth were removed from their mother, suckled by mares, reared upon the most nourishing food (hay and barley), and attained to full vigour when three years old. A good *admissarius* from Arcadia or Reate was worth from thirty to forty thousand sesterces (250*l.* to 330*l.* sterling). The period of gestation was observed to be a little longer than in the case of the pure horse or ass, extending to thirteen lunar months; in all other respects their management, habits, and mode of sale were the same.

The great use of mules was in drawing travelling carriages (*hinc enim binis conjunctis omnia vehicula in viis ducuntur*); they were also employed, like asses, in carrying burdens upon pack saddles (*distellae*), and in ploughing light land. The finer kinds, when kept in herds, were driven in summer from the rich plains of Rosea on the Volturnus to the Montes Gurgures. (Varr. ii. 1. § 16, ii. 8; Colum. vi. 86, 87; Plin. H. N. viii. 44; Pallad. iv. 14.)

III.

1. *Dogs (canes)* were divided into three classes: a. *Canes Villatici*, watch-dogs, whose office was to guard farm-houses against the aggressions of thieves.

b. *Canes Pastorales* a. *Canes Pecuarii*, to protect the flocks and herds from robbers and wild beasts. Each opilio was generally attended by two of these, equipped with spiked collars (*mollium*), to serve as a defence in their encounters with wolves and other adversaries.

c. *Canes Venatici*. Sporting dogs.

Varro and Columella describe minutely the points of the first two classes, with which alone the former was concerned, and these seem to be identical with the animals employed for the same purpose at the present day in the Abruzzi. They were fed upon barley meal and whey, or in places where no cheese was made, on wheaten bread moistened with the warm liquor in which beans had been boiled. (Varr. ii. 9; Colum. vii. 12.)

2. *Feeders (pastores)*.

The flocks and herds which fed in the immediate neighbourhood of the farms were usually tended by old men, boys, or even women; but those which were driven to distant and mountainous pastures were placed under the care of persons in the vigour of life, who always went well armed and were accompanied by beasts of burden (*jumenta dossuaria*), carrying all the apparatus and stores required during a protracted absence; the whole body of men and animals being under the command of an experienced and trustworthy individual, styled *Magister Pecoris*, who kept all the accounts and possessed a competent knowledge of the veterinary art.

We may conclude this part of the subject with a few words upon the management of dairy pro-

dmoe, which was treated as a distinct science (*vropoda*) by the Greeks, who wrote many treatises upon the topic.

Cheese-making commenced in May, and the method followed by the Romans was substantially the same as that now practised. The milk unskimmed was used as fresh as possible, was slightly warmed, the rennet (*coagulum*) was then added; as soon as the curd formed, it was transferred to baskets (*fecellae, calathi*) or wooden chesets (*formae*) perforated with holes, in order that the whey (*aerum*) might drain off quickly, and was pressed down by weights to hasten the process. The mass was then taken out of the frame, sprinkled with salt, and placed upon a wicker crate or wooden board in a cool dark place; when partially dried, it was again pressed more powerfully than before, again salted and again shelved,—operations which were repeated for several days until it had required a proper consistency. It might be flavoured with thyme, with pine cones, or any other ingredient, by mixing the condiments with the warm milk.

The rennet or coagulum was usually obtained from the stomach of the hare, kid, or lamb (*coagulum leporinum, hœdium, agninum*), the two former being preferred to the third, while some persons employed for the same purpose the milky juice expressed from a fig-tree branch, vinegar, and a variety of other substances.

The cheeses from cows' milk (*casei bubuli*) were believed to contain more nourishment, but to be more indigestible than those from ewes' milk (*casei ovilli*); the least nourishing and most digestible were those from goats' milk (*casei caprini*), the new and moist cheeses in each case being more nourishing (*magis alibiles*), and less heavy (*is corpore non resides*), than those which were old and dry.

Butter is mentioned by Varro (ii. 2. § 16), but seems to have been scarcely used as an article of food (Varro. ii. 1. § 28. 11; Colum. vii. 8; Plin. H. N. xi. 96, xxiv. 98, xxv. 39, xxviii. 34; Pallad. vi. 9).

β. VILLATICA PASTIO.

Villaticae Pastiones, from which many persons towards the close of the republic and under the empire derived large revenues, were separated into two departments, according to the names given to the buildings or enclosures adapted to the different animals:—

I. *Aviaria* s. *Ornithones*.

II. *Vivaria*.

I. *Aviaria* s. *Ornithones*, in the most extended acceptance of the term, signified receptacles for birds of every description, whether wild or tame, terrestrial or amphibious, but it is frequently and conveniently employed in a more limited sense to denote the structures formed for birds caught in their wild state by the fowler (*asepe*), from whom they were purchased, and then shut up and sold at a profit after they became fat.

In this way we may distinguish between, a. *Cohors in plano*, b. *Columbarium*, c. *Ornithon*, of which the first two only were known to the earlier Romans.

a. *Cohors in plano*, was the poultry-yard including the houses and courts destined for those domestic fowls which were bred and fed on the farm, and which were not able or not permitted to fly abroad. Of these the chief were, 1. Barn-

door fowls or chickens (*gallinae*). 2. Guinea fowls (*gallinae Numidicae* s. *Africanas*). 3. Pheasants (*phasiani*). 4. Peacocks (*pavones*). 5. Geese (*anserae*). 6. Ducks (*anates*). 7. Teal (?) (*querquedulae*).

b. *Columbarium*, the dove-cote.

c. The *Ornithon* proper, the inmates of which were chiefly, 1. Thrushes and blackbirds (*turdæ, merulas*), especially the former. 2. Quails (*coturnices*). 3. Turtledoves (*turturæ*). 4. Ortolans (?) (*miliaria*), all of which are in Italy birds of passage arriving in great flocks at particular seasons.

II. In like manner the term *Vivaria*, which may be employed to denote all places contrived for the reception of animals used for food or which supplied articles of food and did not fall under the denomination of *pecudes* or *aves*, must be separated into those designed for the reception of land animals, and those for fishes.

a. *Leporaria*, *Apiaria*, *Coclearia*, *Gliraria*, and b. *Piscinae*.

a. *Leporaria*. The animals kept in *leporaria* were chiefly, 1. Hares and rabbits (*leporæ*). 2. Various species of deer (*cervi, capreae, oryxes*). 3. Wild boars (*apri*), and under the same category rank, 4. Bees (*apes*). 5. Snails (*cochleae*). 6. Dormice (*gliræ*).

b. *Piscinae* or fish-ponds, divided into—

1. *Piscinae aquas dulcis*, fresh-water ponds; and 2. *Piscinae aquas salas*, salt-water ponds.

We commence then with a description of the inhabitants of the *Cohors in plano* and their dwelling.

I. AVIARIA.

I. a. *Cohors in plano*.

In the science of rearing poultry (*Ratio Cohortalis, ôpviôtopéφia*), three precepts were of general application. The birds were to be kept scrupulously clean, were to be abundantly supplied with fresh air and pure water, and were to be protected from the attacks of weasels, hawks, and other vermin. The two former objects were attained by the choice of a suitable situation, and by incessant attention upon the part of the superintendents (*curatores, custodes*); the latter was effected by overlaying the walls of the houses and courts, both inside and out, with coats of smooth hard plaster or stucco, and by covering over the open spaces with large nets.

Again, the attention of those who desired to rear poultry with profit was chiefly occupied by five considerations: 1. The choice of a good breeding stock (*de genere*). 2. The impregnation of the hens (*de foetura*). 3. The management of the eggs during incubation (*de ovie*). 4. The rearing of the pullets (*de pullis*). 5. Fattening them for the market (*de fartura*), this last process being, however, frequently conducted not by the farmer (*rusticus*), but by persons who made it their sole occupation (*fartores*).

1, 2. Chickens (*gallinae*). Of the different species of domestic fowls, the most important were *gallinae*, which were divided into three classes:—a. *Gallinae Villaticae* s. *Cohortales*, the common chicken. b. *Gallinae Africanas* s. *Numidicae*, the same probably with the *μελεαυπίδες* of the Greeks, the distinctions pointed out by Columella scarcely amounting to a specific difference; and c. *Gallinae Rusticae*. The last were found in great abundance in the *Insula Gallinaria*, but it is so difficult to

determine from the descriptions transmitted to us what they really were, that we know not whether we ought to regard them as pheasants, as red-legged partridges, as wood-grouse, or as some species of game different from any of these. The *Africane*, always scarce and dear, were treated almost exactly in the same manner as peacocks, and never became of importance to the farmer; the *Rusticas* are little spoken of except as objects of curiosity, and Columella declares that they would not breed in confinement (*in servitutis non foecunt*). We therefore confine our observations to the *Vil-litane*.

Among the breeds celebrated for fighting were the Tanagria, the Rhodian, and the Chalcidian; but these were not the most profitable for the market. The points of a good barn-door fowl are minutely described by Varro, Columella, and Palladius, who all agree in recommending the breeder to reject such as were white, for they were more delicate and less prolific than those whose plumage was darker. Some were permitted to roam about (*vagare*) during the day, and pick up what they could, but the greater number were constantly shut up (*clausae*) in a poultry yard (*gallinarium*, *peribolus*), which was an enclosed court (*septum*) with a warm aspect, strewn with sand or ashes wherein they might wallow, and covered over with a net. It contained hen-houses (*coenae*) to which they retired at night and roosted upon poles stretched across (*periticae*) for their convenience, nests (*cubilia*) for the laying hens being constructed along the walls. The whole establishment was under the control of a poultry man (*ovarius*, *custos* a *curator gallinarium*), who occupied an adjoining hut, usually assisted by an old woman and a boy, for the flocks were often very large, containing upwards of two hundred. The proportion of one cock (*gallus*) to five hens was commonly observed, the males not required for breeding being killed young or made into capons (*capri*). Their food consisted of barley with the husk removed (*hordeum pinnatum*), millet, vetches, and lentils, when these articles could be procured cheap, but when too dear, they were supplied with the refuse of wheat, bran with a little of the flour adhering, the seeds of cytissus, and the like.

The laying season began in January and continued until the autumnal equinox. From twenty-five to thirty eggs, the number being increased or diminished according as the weather was hot or cold, were placed beneath a clogging hen (*gallina glaucens*) from one to two years old, who was kept constantly shut up except at feeding time, or even furnished with food while on the nest. The curator made his rounds regularly during the twenty days of incubation, turning the eggs, that they might all receive equal heat, and rejecting those which upon examination were found to contain no embryos. Such as were not required for hatching, were preserved by rubbing them with strong brine, and then storing them up in chaff or bran. The chicks for fifteen days were fed by hand on pamenta mixed with nasturtium (*crass*) seed.

Chickens, when fattened for sale, were shut up in dark narrow cribs, light and motion being unfavourable to the process; or each bird was swung separately in a basket, with a small hole at each end, one for the head, the other for the rump, and bedded upon the softest hay or chaff, but so

cramped in space that he could not turn round. In this state they were crammed with wheat, linseed, barley meal kneaded with water into small lumps (*turnadae*), and other farinaceous food, the operation requiring from twenty to twenty-five days. (Var. iii. 9; Colum. viii. 2, &c. 12; Plin. H. N. x. 21; Pallad. i. 27, 29.)

3. Pheasants (*phasiani*) are not mentioned among domestic poultry by Varro or Columella, but find a place in the compilation of Palladius, who directs that young birds, that is, those of a year old, should be selected as breeders in the proportion of one cock to two hens, and that the eggs should be hatched by barn-door fowls. The chicks were to be fed for the first fortnight on cold boiled barley lightly sprinkled with wine, afterwards upon bruised wheat, locusts, and ant's eggs, and were to be prevented from having access to water. They became fat in thirty days if shut up and crammed with wheat flour made up into small lumps (*turnadae*) with oil. (Pallad. i. 29.)

4. Peacocks (*pavones*, *pavi*, *pavae*) are said to have been first introduced as an article of food by Q. Hortensius at a banquet on the installation of an augur (*augurum adititium coena*). They speedily became so much in request that soon afterwards a single full-grown bird sold for fifty denarii (upwards of a guinea and a half), and a single egg for five (upwards of three shillings), while one breeder, M. Aufidius Lurco, derived an income of 60,000 sesterces (about 500*l.* sterling) from this source alone. The most favourable situations for rearing peacocks were afforded by the small rocky but well-wooded islets off the Italian coast, where they roamed in freedom without fear of being lost or stolen, provided their own food, and brought up their young. Those persons who could not command such advantage, kept them in small enclosures roofed over, or under porticoes, perches (*periticae*) being supplied for them to roost upon, with a large grassy court in front, surrounded by a high wall and shaded by trees. They were fed upon all kinds of grain but chiefly barley, did not arrive at full maturity for breeding until three years old, when one cock was allowed to five hens, and care was taken to supply each bird with a separate nest (*discreta cubilia*). The hatching process was most profitably performed by common barn-door fowls, for in this way the pea-hen laid three times in a season, first five eggs (*ova pavonina*), then four, and lastly two or three, but if allowed to incubate herself could rear only one brood. In the time of Varro, three chicks (*pulli pavonini*) for each full-grown bird were considered a fair return. (Var. iii. 6; Colum. viii. 11; Pallad. i. 28; Plin. x. 20; comp. Jur. l. 143.)

5. Geese (*anser*) were easily reared, but were not very profitable and somewhat troublesome, for a running stream or a pond with a good supply of herbage was essential, and they could not be turned out to graze in the vicinity of growing crops, which they tore up by the roots, at the same time destroying vegetation by their dung. Birds for breeding were always selected of a large size and pure white, the grey variety (*varii vel fusci*) being regarded as inferior on the supposition that they were more nearly allied to the wild species. Their food consisted of clover, fenugreek, lettuce, together with leguminous plants, all of which were sown for their use, and especially an herb called *scépis* by the Greeks, which seems to have been

a sort of endive. Impregnation took place about mid-winter, one gander being allowed to three females, who when the laying season, which was early in spring, approached, were shut up in a structure (*χρησθόσκεσιον*) consisting of a court (*κόρος*), surrounded by a high wall with a portico inside containing receptacles (*haræ, cellæ, speluncæ*), from two to three feet square, built of hewn stone or brick, well lined with chaff, for the eggs. Incubation, according to the weather, lasted from twenty-five to thirty days, during which period the mothers were supplied by the custos with barley crushed in water. The goslings remained in the house for about ten days, and were fed upon penta, poppy seed, and green cresses (*nasturtium*) chopped in water, after which they were taken out in fine weather to feed in marshy meadows and pools. It was found in practice most advantageous to employ barn-door hens to hatch the eggs, since they made more careful mothers; and in this case the goose would lay three times in a season, first five eggs, then four, and lastly three.

Goslings, when from four to six months old, were shut up to fatten in dark warm coops (*aginarium*), where they were fed with barley pottage and fine flour moistened with water, being allowed to eat and drink three times a day as much as they could swallow. In this way they became fit for the market in two months or less. A flock of geese furnished not only eggs but feathers also, for it was customary to pluck them twice a year, in spring and autumn, and the feathers were worth five denarii (about three shillings and fourpence) a pound. (Varro, iii. 10; Colum. viii. 15; Plin. H. N. x. 22; Pallad. i. 30.)

6. Ducks (*anates*). The duck-house (*νησθότροφεῖον*) was more costly than the *chenoboscium*, for within its limits were confined, not only ducks, but *querquedulae, phalerides, boscaes* (whatever these may have been), and similar birds which seek their food in pools and swamps. A flat piece of ground, if possible marshy, was surrounded by a wall fifteen feet high, well stuccoed within and without, along the course of which upon an elevated ledge (*crepidæ*) a series of covered nests (*lectæ cubilia*) were formed of hewn stone, the whole open space above being covered over with a net or trellis work (*clatris superpositis*). A shallow pond (*piscina*) was dug in the centre of the enclosure, the margin formed of *opus signinum*, and planted round with shrubs; through this flowed a small stream which traversed the court in a sort of canal into which was thrown food for the inmates, consisting of wheat, barley, millet, acorns, grape skins, small crabs or cray fish, and other water animals. The eggs were generally hatched by common hens, the precautions taken during incubation and the rearing of the ducklings being the same as in the case of pullets. (Var. iii. 11; Colum. viii. 15.)

I. δ. Columbarium.

Pigeons (*columbus, columba*). Varro distinguishes two species or varieties, the one *Genus nasatilis* s. *agrestis*, probably the *Columba livia* of naturalists, which was shy and wild, living in lofty turrets (*sublimis turriculæ*), flying abroad without restraint, and generally of a darkish colour, dappled, and without any admixture of white, the other kind more tame (*olementius*), feeding about the doors of the farm, and for the most part white. Be-

tween these a cross breed (*miscellum*) was usually reared for the market in a lofty edifice (*νεσιροπορροφεῖον; νεσιροπεδον*), constructed for the purpose. These buildings, placed under the charge of a *columbarius*, were frequently large enough to contain 5000, were vaulted, or roofed in with tiles, and furnished with one small entrance, but well lighted by means of large barred or latticed windows (*fenestras Punicas, s. reticulatas*). The walls, carefully stuccoed, were lined from top to bottom with rows of round-shaped nests with a single small aperture (*columbaria*), often formed of earthenware (*ictitia*), one being assigned to every pair, while in front of each row a plank was placed upon which the birds alighted. A copious supply of fresh water was introduced for drinking and washing; their food, consisting of the refuse of wheat (*accrata tritici*), millet, vetches, peas, kidney-beans, and other leguminous seeds, was placed in narrow troughs ranged round the walls, and filled by pipes from without. Those pigeons, which were kept in the country, being allowed to go out and in at will, supported themselves for a great part of the year upon what they picked up in the fields, and were regularly fed (*acceptant conditiua cibaria*) for two or three months only; but those in or near a town were confined in a great measure to the *νεσιροπορροφεῖον*, lest they should be snared or destroyed. They were very fruitful, since one pair would rear eight broods of two each in the course of a year, and the young birds (*pulli*) very speedily arrived at maturity, and began forthwith to lay in their turn. Those set aside for the market had their wing feathers plucked out and their legs broken, and were then fattened upon white bread previously chewed (*manducato candido forciunt pane*).

A handsome pair of breeding pigeons of a good stock would fetch at Rome, towards the close of the republic, two hundred *sesterces* (upwards of a guinea and a half); if remarkably fine, as high as a thousand (nearly eight guineas); and as much as sixteen hundred (more than thirteen pounds) was a price sometimes asked, while Columella speaks of four thousand (upwards of thirty pounds) having been given in his time; and some persons were said to have a hundred thousand (nearly a thousand pounds sterling) invested in this kind of property. The instinct which teaches pigeons to return to the place where they have been fed was remarked by the ancients, who were wont, for the sake of amusement, to bring them to the theatres and there let them loose. (Varr. iii. 7; Colum. viii. 8; Plin. H. N. x. 62, 74, xi. 64, xviii. 42; Pallad. i. 24.)

I. α. Ornithon, Aviarius (*ὀρνιθοτροφεῖον*).

Ornithones, in the restricted sense, were divided into two classes: 1. Those constructed for pleasure merely being designed for the reception of nightingales and other singing birds. 2. Those for profit, in which thousands of wild birds were confined and fattened. Varro gives a very curious and minute description of an *ornithon* belonging to the first class, which he himself possessed, and Lucullus endeavoured to combine the enjoyment of both, for he had a triclinium constructed in his Tuscan villa inside of an *ornithon*, delighting to behold one set of birds placed upon the table ready for his repast, while others were fluttering at the windows by which the room was lighted. *Ornithones* of the second class, with which alone we are

at present concerned, were kept by poulterers (*macellarii*), and others in the city, but the greater number were situated in Sabinum, because thrushes were most abundant in that region. These huge cages were formed by enclosing a space of ground with high walls and covering it in with an arched roof. Water was introduced by pipes, and conducted in numerous narrow channels, the windows were few and small, that light might be excluded as much as possible, and that the prisoners might not pine from looking out upon the open country, where their mates were enjoying freedom. Indeed, so sensitive were thrushes, and so apt to despond when first caught, that it was the practice to shut them up for some time with other tame individuals of their own kind (*veterani*), who acted as decoys (*allectores*), in reconciling them to captivity. In the interior of this building numerous stakes (*pali*) were fixed upright, upon which the birds might alight; long poles also (*porticæ*) were arranged in an inclined position resting against the walls with spars nailed in rows across, and lofts were constructed, all for the same purpose. Two smaller apartments were attached, one in which the superintendent (*curator*) deposited the birds which died a natural death, in order that he might be able to square accounts with his master, the other, called the *seclusionarium*, communicating with the great hall by a door, into which those birds wanted for the market were driven from time to time, and killed out of sight, lest the others might droop on witnessing the fate of their companions.

Millet and wild berries were given freely, but their chief food consisted of dry figs carefully peeled (*diligenter pinsita*) and kneaded with far or pollen into small lumps, which were chewed by persons hired to perform this operation. The birds usually kept in an ornithon have been mentioned above, but of these by far the most important were thrushes, which made their appearance in vast flocks about the vernal equinox, and seem to have been in great request; for out of a single establishment in Sabinum, in the time of Varro, five thousand were sometimes sold in a single year at the rate of three denarii a head, thus yielding a sum of 60,000 sesterces, about five hundred pounds sterling.

The manure from ornithones containing thrushes and blackbirds was not only a powerful stimulant to the soil, but was given as food to oxen and pigs, who fattened on it rapidly.

Turtle doves (*turturæ*, dim. *turturillæ*) belonged to the class which did not lay eggs in captivity (*ne parit nec excludit*), and consequently, as soon as caught, were put up to fatten (*volatūra ita ut capitur farturæ destinatur*). They were not however confined in an ordinary ornithon but in a building similar to a dove-cote, with this difference, that the interior, instead of being fitted up with columbaria, contained rows of brackets (*maxillæ*), or short stakes projecting horizontally from the wall and rising tier above tier. Over each row, the lowest of which was three feet from the ground, bempen mats (*tegeticulæ cannabineæ*) were stretched, on which the birds reposed day and night, while nets were drawn tight in front to prevent them from flying about, which would have rendered them lean. They fattened readily in harvest time, delighting most in dry wheat, of which one-half modius per day was sufficient for 120 turtles, or in millet moistened with sweet wine. (Varr. iii. 8; Colum. viii. 9; Pallad. i. 25; Plin. H. N. x. 24,

34, 35, 53, 58, 74; comp. Plaut. Mostell. i. l. 44; Juv. vi. 38.)

II. VIVARIA.

II. a. Leporaria.

Leporaria anciently were small walled paddocks, planted thickly with shrubs to give shelter; and intended, as the name implies, for the reception of animals of the hare kind; viz. 1. The common grey hare (*Italicum hoc nostrum*, sc. genus). 2. The mountain or white hare from the Alps, seldom brought to Rome (*toti candidi sunt*). 3. Rabbits (*cuniculi*), believed to be natives of Spain. These, at least the first and third, bred rapidly, were caught occasionally, shut up in boxes, fattened and sold. In process of time, the name *leporarium* was changed for the more appropriate term *diaporphosetor*, since a variety of wild animals, such as boars (*apri*), stags (*cervi*), and roe deer (*capreæ*), were procured from the hunter (*venator*), and shut up in these parks, which now embraced several acres even in Italy, while in the provinces, especially Transalpine Gaul, they frequently comprehended a circuit of many miles of hill and swamp, glade and forest. This space was, if possible, fenced by a wall of stone and lime, or of unburnt brick and clay, or, where the extent rendered even the latter too costly, by a strong paling (*vacoræ*) formed of upright stakes (*stipites*) drilled with holes (*per latus efforantur*), through which poles (*amiles*) were passed horizontally, the whole of oak or cork tree timber, braced and, as it were, latticed by planks nailed diagonally (*seris transversis clatrare*), much in the fashion of wooden hurdles. Even in the largest enclosures it was necessary to support the animals in winter, and in those of moderate size they were frequently tamed to such an extent, that they would assemble at the sound of a horn to receive their food. (Varr. iii. 12; Colum. ix. 1; Plin. H. N. viii. 52.)

Bees (*apæ*). The delight experienced in the management of these creatures is sufficiently proved by the space and care devoted to the subject in Virgil, and by the singularly minute instructions contained in the agricultural writers, especially in Columella, who derived his materials from the still more elaborate compilations of Hyginus and Celsus, the former being the author of a regular bee calendar, in which the various precepts for the guidance of the bee fancier (*mellarius, apiarius; μελιουργός, meliturgus*) were arranged in regular order according to the seasons and days of the year. The methods which the ancients describe differ little, even in trifling details, from those followed by ourselves, although in some respects our practice is inferior, since they never destroyed a hive for the sake of its contents, but abstracted a portion of the honey only, always leaving a sufficient supply for the support of the insects in winter; and the same swarm, occasionally reinforced by young recruits, might thus continue for ten years, which was regarded as the limit. Our superior knowledge of natural history has however enabled us to determine that the chief of the hive is always a female, not a male (*rex*) as was the general belief; to ascertain the respective duties performed by the queen, the working bees, and drones (*fuci s. fures*), which were unknown or confounded; and to reject the absurd fancy, to which however we are indebted for the most charming episode in the Georgics, which originated with the Greeks, and is repeated

with unhesitating faith by almost every authority, that swarms are produced by spontaneous generation from the putrescent carcase of an ox (*ex bubulo corpore putrefacto*); and hence they were commonly termed *βοογόνας* by the poets, and by Archelaus *βόας φθιμένης πεπονημένα τέκνα*.

The early Romans placed the hives in niches, hollowed out of the walls of the farm-house itself, under the shelter of the eaves (*subter subgrundas*), but in later times it became more common to form a regular apiary (*apiarium, alvearium, mellarium; μελιττοροφείον, μελιττήρη*), sometimes so extensive, as to yield 5000 pounds of honey in a season. This was a small enclosure in the immediate vicinity of the villa, in a warm and sheltered spot, as little subject as possible to great variations of temperature, or to disturbances of any description from the elements or from animals; and carefully removed from the influence of foetid exhalations, such as might proceed from baths, kitchens, stables, dunghills, or the like. A supply of pure water was provided, and plantations were formed of those plants and flowers to which they were most attached, especially the cytisus and thyme, the former as being conducive to the health of bees, the latter as affording the greatest quantity of honey (*optimum ad melificium*). The yew was carefully avoided, not because in itself noxious to the swarm, but because the honey made from it was poisonous. (*Sic mea Cyprinae fugiant exomina lincei*.) The hives (*alvi, alvei, alvearia, κηφείας*), if stationary, were built of brick (*domiculis lateribus facta*) or baked dung (*ex fimo*), if moveable, and these were considered the most convenient, were hollowed out of a solid block, or formed of boards, or of wicker work, or of bark, or of earthenware, the last being accounted the worst, because more easily affected by heat or cold, while those of cork were accounted best. They were perforated with two small holes for the insects to pass in and out, were covered with moveable tops to enable the mellarius to inspect the interior, which was done three times a month, in spring and summer, for the purpose of removing any filth which might have accumulated, or any worms that might have found entrance; and were arranged, but not in contact, in rows one above another, care being taken that there should not be more than three rows in all, and that the lowest row should rest upon a stone parapet, elevated three feet from the ground, and coated with smooth stucco to prevent lizards, snakes, or other noxious animals from climbing up.

When the season for swarming arrived, the movements which indicated the approaching departure of a colony (*examen*) were watched unremittingly, and when it was actually thrown off, they were deterred from a long flight by casting dust upon them, and by tinkling sounds, being at the same time tempted to alight upon some neighbouring branch by rubbing it with balm (*apiastrum, μελισσόφυλλον, α. μέλιον, α. μελιφύλλον*), or any sweet substance. When they had all collected, they were quietly transferred to a hive similarly prepared, and if they showed any disinclination to enter were urged on by surrounding them with a little smoke.

If quarrelsome, their pugnacity was repressed by sprinkling them with honey water (*mella*); if lazy, they were tempted out by placing the sweet-smelling plants they most loved, chiefly apiastrium or thyme, in the immediate vicinity of the hive,

recourse being had at the same time to a slight fumigation. If distracted by sedition in consequence of the presence of two pretenders to the throne, the rivals were caught, examined, and the least promising put to death. In bad weather, those stricken down and disabled by cold or sudden rain were tenderly collected, placed in a spot warmed by artificial heat, and as they revived laid down before their hives. When the weather for any length of time prevented them from going abroad, they were fed upon honey and water, or upon figs boiled in must and pounded into a paste.

The honey harvest (*mellatio, mellis vindemia, castratio alcorum, dies castrandis, μελιττωσις*), according to Varro, took place three times a year, but more usually twice only, in June and October; on the first visitation four-fifths, at the second two-thirds of the honey was abstracted; but these proportions varied much according to the season, and the strength of the particular hive. The system pursued was very simple; the moveable top was taken off, or a door contrived in the side opened, the bees were driven away by a smoking apparatus, and the mellarius cut out with peculiarly formed knives as much of the contents as he thought fit.

The comb (*favus, niplon*), which was the product of their industry, was composed of wax (*cera, κηρός*) formed into hexagonal cells (*sex angulis cella*), the geometrical advantages of which were soon discovered by mathematicians, containing for the most part honey (*mel, μέλι*), but also the more solid sweet substance commonly called bee-bread (*propolis, πρόπολις*), the classical name being derived, it is said, from the circumstance that it is found in greatest abundance near the entrance. The combs were cemented together, and the crevices in the hive daubed over with a glutinous gum, the erithææ (*ἐριθακή*) of Varro and his Greek authorities, which seems to be the same with what is elsewhere termed *melligo* (*μελίτρωμα*).

Columella and Palladius describe ingenious plans for getting possession of wild swarms (*apes sylvestres, feræ, rusticae*, as opposed to *urbanae, civiores*); and Pliny notices the humble bees which constructed their nests in the ground, but seems to suppose that they were peculiar to a district in Asia Minor. The marks which distinguish the varieties of the domestic species will be found detailed by the different authorities quoted below. (Aristot. *Hist. Anim.* v. ix.; Aelian. *de Anim.* i. 59, 60, v. 10, 11; Var. ii. 5, iii. 3, 16; Virg. *Georg.* iv.; Colum. ix. 3. &c., xi. 2; Plin. *H. N.* xi. 5, &c.; Pallad. i. 37—39, iv. 15, v. 8, vi. 10, vii. 7, ix. 7, xi. 13, xii. 8.)

Snails (*cochleæ*). Certain species of snails were favourite articles of food among the Romans, and were used also medicinally in diseases of the lungs and intestines. The kinds most prized were those from Reate, which were small and white; those from Africa of middling size, and very fruitful; those called *solitanae*, also from Africa, larger than the former; and those from Illyria, which were the largest of all. The place where they were preserved (*cochlearium*) was sheltered from the sun, kept moist, and not covered over, nor walled in, but surrounded by water, which prevented the escape of the inmates who were very prolific, and required nothing except a few laurel leaves and a little bran. They were fattened by shutting them up in a jar smeared with boiled must and flour, and perforated with holes to admit air. It has been

recorded that an individual named Fulvius Hirpinus constructed, near Tarquinii, the first cochlearium ever formed in Italy, a short time before the civil war between Caesar and Pompey. (Varr. iii. 14; Plin. *H. N.* ix. 56, xxx. 7, 15; comp. Ballast. *Jag.* 93.)

Dormice (*gliræ*) were regarded as articles of such luxury that their use as food was forbidden in the sumptuary laws of the more rigid censors; but, notwithstanding, a *glirarium* became a common appendage to a villa. It was a small space of ground surrounded with a smooth wall of polished or stuccoed stone, planted with acorn-bearing trees to yield food, and containing holes (*coet*) for rearing the young. They were fattened up in earthen jars (*dolia*) of a peculiar construction, upon chestnuts, walnuts, and acorns. (Varr. iii. 15; Plin. *H. N.* ix. 57; comp. Martialis, iii. 58, xiii. 59; Petron. 31; Amm. Marc. xviii. 4.)

II. b. Piscinas.

Lastly, we may say a few words upon artificial fish ponds, which were of two kinds—freshwater ponds (*piscinas dulces*), and salt water ponds (*piscinas salices* or *maritimæ*).

The former, from an early period, had frequently been attached to ordinary farms, and proved a source of gain; the latter were unknown until the last half century of the republic, were mere objects of luxury, and were confined for the most part to the richest members of the community, to many of whom, such as Hirrus, Philippus, Lucullus, and Hortensius, who are sneeringly termed *piscinarii* by Cicero, they became objects of intense interest. These receptacles were constructed at a vast cost on the sea-coast, a succession being frequently formed for different kinds of fish, and the most ingenious and elaborate contrivances provided for the admission of the tide at particular periods, and for regulating the temperature of the water; large sums were paid for the stock with which they were filled, consisting chiefly of mullets and murennæ; and a heavy expense was incurred in maintaining them, for fishermen were regularly employed to catch small fry for their food, and when the weather did not permit such supplies to be procured, salt anchovies and the like were purchased in the market. For the most part they yielded no return whatever, during the lifetime at least of the proprietors, for the inmates were regarded as pets, and frequently became so tame as to answer to the voice and eat from the hand. When sales did take place the prices were very high. Thus Hirrus, who, on one occasion, lent Caesar 6,000 murennæ, at a subsequent period obtained 4,000,000 of sesterces (upwards of 30,000*l.*) for an ordinary villa, chiefly in consequence of the ponds and the quantity of fish they contained.

A certain Sergius Orata, a short time before the Mæric War, formed artificial oyster-beds (*ostreastrum*) from which he obtained a large revenue. He first asserted and established the superiority of the shell-fish from the Lucrine Lake, which have always maintained their celebrity, although under the empire less esteemed than those from Britain. (Varr. *R. R.* iii. 17; Colum. viii. 16, 17; Plin. *H. N.* ix. 54, 55; Cic. *ad Att.* i. 19.)

Of modern treatises connected with the subject of this article the most important is Dickson's *Husbandry of the Ancients*, 2 vols. 8vo. 1788,

the work of a Scotch clergyman, who was well acquainted with the practical details of agriculture and who had studied the Latin writers with great care, but whose scholarship was unfortunately so imperfect that he was in many instances unable to interpret correctly their expressions. Many useful and acute observations will be found in the "*Economie Politique des Romains*" by Dureau de la Malle, 2 tomes, 8vo. Paris, 1840, but he also is far from being accurate, and he is embarrassed throughout by very erroneous views with regard to the rate of interest among the Romans, and by the singular misconception that from the expulsion of the kings until the end of the second Punic war, the law forbade any Roman citizen to possess more than 7 jugers of land. (Vol. ii. p. 2.) Those who desire to compare the agriculture of modern Italy with ancient usages will do well to consult Arthur Young's "*Travels in Italy*," and the Appendix of Symonds; the "*Agriculture Toscane*" of J. C. L. Simonde, 8vo. Genève, 1801; and "*Lettres écrites d'Italie à Charles Pictet par M. Lullin de Chateaufieux*," 8vo. Paris. 2nd ed. 1820. [W. R.]

AGRIMENSORES. At the foundation of a colony and the assignation of lands the auspices were taken, for which purpose the presence of the augur was necessary. But the business of the augur did not extend beyond the religious part of the ceremony: the division and measurement of the land were made by professional measurers. These were the *Finitores* mentioned in the early writers (Cic. *c. Rullum*, ii. 13; Plautus, *Poenulus*, Prolog. 49), who in the later periods were called *Mensores* and *Agrimensores*. The business of a *Finitor* could only be done by a free man, and the honourable nature of his office is indicated by the rule that there was no bargain for his services, but he received his pay in the form of a gift. These *Finitores* appear also to have acted as judges, under the name of *arbitri*, in those disputes about boundaries which were purely of a technical, not a legal, character.

Under the empire the observance of the auspices in the fixing of camps and the establishment of military colonies was less regarded, and the practice of the *Agrimensores* was reduced to a system by Julius Frontinus, Hyginus, Siculus Flaccus, and other Gromatic writers, as they are sometimes termed. As to the meaning of the term *Groma*, and the derived words, see Faccioliati, *Lexicon*, and the Index to Goossius, *Rei Agrariæ Scriptores*. The teachers of geometry in the large cities of the empire used to give practical instruction on the system of gromatics. This practical geometry was one of the *liberalia studia* (Dig. 50. tit. 13. a. 1); but the professors of geometry and the teachers of law were not exempted from the obligation of being *tutores*, and from other such burdens (*Frug. Vat.* § 150), a fact which shows the subordinate rank which the teachers of elementary science then held.

The *Agrimenor* could mark out the limits of the centuriæ, and restore the boundaries where they were confused, but he could not assign (*assignare*) without a commission from the emperor. Military persons of various classes are also sometimes mentioned as practising surveying, and settling disputes about boundaries. The lower rank of the professional *Agrimenor*, as contrasted with the *Finitor* of earlier periods, is shown by the fact that in the imperial period there might be a contract with an *Agrimenor* for paying him for his services.

The Agrimensor of the later period was merely employed in disputes as to the boundaries of properties. The foundation of colonies and the assignation of lands were now less common, though we read of colonies being established to a late period of the empire, and the boundaries of the lands must have been set out in due form. (Hyginus, p. 177, ed. Goes.) Those who marked out the ground in camps for the soldiers' tents are also called Mensores, but they were military men. (Vegetius, *De Re Militari*, ii. 7.) The functions of the Agrimensor are shown by a passage of Hyginus (*De Controvers.* p. 170): in all questions as to determining boundaries by means of the marks (*signa*), the area of surfaces, and explaining maps and plans, the services of the Agrimensor were required: in all questions that concerned property, right of road, enjoyment of water, and other easements (*servitutes*) they were not required, for these were purely legal questions. Generally, therefore, they were either employed by the parties themselves to settle boundaries, or they received their instructions for that purpose from a judex. In this capacity they were advocati. But they also acted as judges, and could give a final decision in that class of smaller questions which concerned the quinquage paces of the Mamillia Lex [*LEX MAMILLA*], as appears from Frontinus (pp. 63, 75, ed. Goes.). Under the Christian emperors the name Mensores was changed into Agrimensores to distinguish them from another class of Mensores, who are mentioned in the codes of Theodosius and Justinian (vi. 34, xii. 28). By a rescript of Constantine and Constantine (A. D. 344) the teachers and learners of geometry received immunity from civil burdens. According to a constitution of Theodosius and Valentinian (A. D. 440) as given in the collection of Gossius (p. 344), they received jurisdiction in questions of Alluvio; but Rudorff observes, "that the decisive words 'ut iudicio agrimensoris finiatur,' and 'haec agrimensorum semper esse iudicia' are a spurious addition, which is not found either in Nov. Theod. Tit. 20, nor in L. 3. C. De Alluv. (Cod. Just. vii. tit. 41)." According to another constitution of the same emperors, the Agrimensor was to receive an aureus from each of any three bordering proprietors whose boundaries he settled, and if he set a limes right between proprietors, he received an aureus for each twelfth part of the property through which he restored the limes. Further, by another constitution of the same emperors (Gossius, p. 343), the young Agrimensores were to be called "clarissimi" while they were students, and when they began to practise their profession, spectabiles. All this, which is repeated by modern writers, is utterly incredible. (Rudorff, p. 420, &c., and the notes.)

(Rudorff, *Ueber die Feldmesser*, Zeitschrift für Geschichte, Rechtsw. vol. x. p. 412, a clear and exact exposition; Niebuhr, vol. ii. appendix 2; Dureau de la Malle, *Economie Politique des Romains*, vol. i. p. 179; the few remarks of the last writer are of no value.) [G. L.]

AGRIONIA (*Ἀγρίωνια*), a festival which was celebrated at Orchomenus, in Boeotia, in honour of Dionysus, surnamed *Ἀγρίδιος*. It appears from Plutarch (*Quaest. Rom.* 102), that this festival was solemnized during the night only by women and the priests of Dionysus. It consisted of a kind of game, in which the women for a long time acted as if seeking Dionysus, and at last called out to one

another that he had escaped to the Muses, and had concealed himself with them. After this they prepared a repast; and having enjoyed it, amused themselves with solving riddles. This festival was remarkable for a feature which proves its great antiquity. Some virgins, who were descended from the Minyans, and who probably used to assemble around the temple on the occasion, fled and were followed by the priest armed with a sword, who was allowed to kill the one whom he first caught. This sacrifice of a human being, though originally it must have formed a regular part of the festival, seems to have been avoided in later times. One instance, however, occurred in the days of Plutarch. (*Quaest. Graec.* 38.) But as the priest who had killed the woman was afterwards attacked by disease, and several extraordinary accidents occurred to the Minyans, the priest and his family were deprived of their official functions. The festival, as well as its name, is said to have been derived from the daughters of Minyas, who, after having for a long time resisted the Bacchanalian fury, were at length seized by an invincible desire of eating human flesh. They therefore cast lots on their own children, and as Hippasus, son of Leucippe, became the destined victim, they killed and ate him, whence the women belonging to that race were at the time of Plutarch still called the destroyers (*ῥαεῖαι* or *αἰολαῖαι*) and the men mourners (*φλοεῖς*). (Müller, *Die Myser*, p. 166. &c.; K. F. Hermann, *Lehrbuch d. gotteshistorischen Alterthümer d. Griechen*, § 63. n. 13.) [L. S.]

AGRO/NOMI (*Ἀγρόνομοι*), are described by Aristotle as the country police, whose duties corresponded in most respects to those of the astynomi in the city [*Ἀστυνόμοι*], and who performed nearly the same duties as the hylori (*ἡλωροί*). (*Polit.* vi. 5.) Aristotle does not inform us in what state they existed; but from the frequent mention of them by Plato, it appears probable that they belonged to Attica. (*Plat. Legg.* vi. pp. 617, 618; Timaeus, *Lex. s. v.* and Ruhnken's note, in which several passages are quoted from Plato.)

AGRO/TÉRAS THU/SIA (*Ἀγροτέρης Θυσίας*), a festival celebrated every year at Athens in honour of Artemis, surnamed Agrotera (from *ἄγρος*, chase). It was solemnized, according to Plutarch (*De Malign. Herod.* 26), on the sixth of the month of Boedromion, and consisted in a sacrifice of 500 goats, which continued to be offered in the time of Xenophon. (*Xenoph. Anab.* iii. 2. § 12.) Aelian (*V. H.* ii. 25) places the festival on the sixth day of Thargelion, and says that 300 goats were sacrificed; but as the battle of Marathon which gave rise to this solemn sacrifice, occurred on the sixth of Boedromion, Aelian's statement appears to be wrong. (*Plut. De Glor. Athen.* 7.)

This festival is said to have originated in the following manner:—When the Persians invaded Attica, Callimachus, the polemarch, or, according to others, Miltiades, made a vow to sacrifice to Artemis Agrotera as many goats as there should be enemies slain at Marathon. But when the number of enemies slain was so great, that an equal number of goats could not be found at once, the Athenians decreed that 500 should be sacrificed every year. This is the statement made by Xenophon; but other ancient authors give different accounts. The Scholiast on Aristoph. (*Equisit.* 666) relates that the Athenians, before the battle, promised to sacrifice to Artemis one ox for every enemy slain; but when

the number of oxen could not be procured, they substituted an equal number of goats. [L. S.]

AGYRMUS (*ἀγρμύς*). [ÆLUSINIA.]

AGYRTAE (*ἀγέρται*), mendicant priests, who were accustomed to travel through the different towns of Greece, soliciting alms for the gods whom they served. These priests carried, either on their shoulders or on beasts of burthen, images of their respective deities. They appear to have been of Oriental origin, and were chiefly connected with the worship of Isis, Opis and Arge (Herod. iv. 35), and especially of the great mother of the gods; whence they were called *μυρρηγότροι*. They were generally speaking, persons of the lowest and most abandoned character. They undertook to inflict some grievous bodily injury on the enemy of any individual who paid them for such services, and also promised, for a small sum of money, to obtain forgiveness from the gods whom they served, for any sins which either the individual himself or his ancestors had committed. (Plat. *Rep.* ii. p. 364, b.; Plut. *Superst.* c. 3; Zosim. i. 11; Max. Tyr. xix. 3; Athen. vi. p. 266, d; Origen, *c. Cel.* i. p. 8; Phil. *Leg.* ii. p. 792; Ruhnken, *ad Timaei Læ. s. v. ἀγέρτορας* et *ἐγερτορας*; K. F. Hermann, *Lehrbuch d. gottesdienstlichen Alterthümer d. Griechen*, § 42, n. 13.)

These mendicant priests came into Italy, but at what time is uncertain, together with the worship of the gods whom they served. (Cic. *De Leg.* ii. 16; Heindorf, *ad Hor. Serm.* i. 2. 2.)

AHE/NUM. [ÆNUM.]

AIKIAS DIKE (*αἰκίας δίκη*), an action brought at Athens, before the court of the Forty (*οἱ τετρακκοῦντα*), against any individual, who had struck a citizen of the state. Any citizen, who had been thus insulted, might proceed in two ways against the offending party, either by the *αἰκίας δίκη*, which was a private action, or by the *βέβηκος γράφη*, which was looked upon in the light of a public prosecution, since the state was considered to be wronged in an injury done to any citizen. It appears to have been a principle of the Athenian law, to give an individual, who had been injured, more than one mode of obtaining redress. If the plaintiff brought it as a private suit, the defendant would only be condemned to pay a fine, which the plaintiff received; but if the cause was brought as a public suit, the accused might be punished even with death, and if condemned to pay a fine, the latter went to the state.

It was necessary to prove two facts in bringing the *αἰκίας δίκη* before the Forty. First, That the defendant had struck the plaintiff, who must have been a free man, with the intention of insulting him (*ἐπ' βέβηκος*), which, however, was always presumed to have been the intention, unless the defendant could prove that he only struck the plaintiff in joke. Thus Ariston, after proving that he had been struck by Conon, tells the judges that Conon will attempt to show that he had only struck him in play. (Dem. *c. Conon.* p. 1261.) Secondly, It was necessary to prove that the defendant struck the plaintiff first, and did not merely return the blows which had been given by the plaintiff (*ἀρχῶν χειρὶν ὀδῶν*, or merely *ὀδῶν ἀρχῶν*, Dem. *c. Boeot.* p. 1141, 1151.)

In this action, the sum of money to be paid by the defendant as damages was not fixed by the laws; but the plaintiff assessed the amount according to the injury, which he thought he had received, and

the judges determined on the justice of the claim. It was thus an assessed action, and resembled the procedure in public causes. The orations of Demosthenes against Conon, and of Isocrates against Lochites, were spoken in an action of this kind, and both of these have come down to us; and there were two orations of Lysias, which are lost, relating to the same action, namely, against Theopompus and Hippocrates. (Harpocrat. *s. v. αἰκίας*; Meier, *Att. Process.* p. 547, &c.; Büchh, *Publ. Econ. of Athens*, pp. 352, 364, 372, 374, 2nd ed.)

AITHOUSA (*αἶθουσα*), a word only used by Homer, is probably for *αἶθουσα σῶα*, a portico exposed to the sun. From the passages in which it occurs, it seems to denote a covered portico, opening on to the court of the house, *αἶθλα*, in front of the vestibule, *πρόθυρον*. Thus a chariot, leaving the house, is described as passing out of the *πρόθυρον* and the *αἶθουσα*. (*Il.* xxiv. 323; *Od.* iii. 493, xv. 146, 191.) The word is used also in the plural, to describe apparently the porticoes which surrounded the *αἶθλα*. (*Il.* vi. 243; *Od.* viii. 57.) It was in such a portico that guests were lodged for the night. (*Od.* iii. 399, vii. 345.) It was also the place of reception for people flocking to the palace on a public occasion (*Il.* xxiv. 239; *Od.* viii. 57); and hence perhaps the epithet *ἐπὶ θύραις*, which Homer usually connects with it. [P. S.]

ALA, a part of a Roman house. [DOMUS.]

ALA, ALARES, ALA/RIL. These words, like all other terms connected with Roman warfare, were used in different or at least modified acceptations at different periods.

Ala, which literally means *a wing*, was from the earliest epochs employed to denote the wing of an army, and this signification it always retained, but in process of time was frequently used in a restricted sense.

1. When a Roman army was composed of Roman citizens exclusively, the flanks of the infantry when drawn up in battle array were covered on the right and left by the cavalry; and hence *Ala* denoted the body of horse which was attached to and served along with the foot-soldiers of the legion. (See Cincius, *de Re Militari*, who, although he flourished a. c. 200, is evidently explaining in the passage quoted by Anlus Gellius, xvi. 4, the original acceptation of the term.)

2. When, at a later date, the Roman armies were composed partly of Roman citizens and partly of *Socii*, either *Latini* or *Italici*, it became the practice to marshal the Roman troops in the centre of the battle line and the *Socii* upon the wings. Hence *ala* and *alaris* denoted the contingent furnished by the allies, both horse and foot, and the two divisions were distinguished as *dextera ala* and *sinistra ala*. (Liv. xxvii. 2, xxx. 21, xxxi. 21; Lips. *de Milit. Rom.* ii. dial. 7. We find in Liv. x. 40, the expression *cum cohortibus alariis*, and in x. 43, *D. Brutum Scævam legatum cum legione prima et decem cohortibus alariis equitibusque ire . . . jussit*.)

3. When the whole of the inhabitants of Italy had been admitted to the privileges of Roman citizens the terms *alaris*, *cohortes alariæ* were transferred to the foreign troops serving along with the Roman armies. In Cæsar (*B. G.* i. 51) we see the *Alaris* expressly distinguished from the *legionarii*, and we find the phrase (*B. C.* i. 73) *cohortes alariæ et legionariæ*, while Cicero (*ad Rom.* ii. 17) speaks of the *Alaris Transpadani*.

4. Lastly, under the empire, the term *ala* was applied to regiments of horse, raised it would seem with very few exceptions in the provinces, serving apart from the legions and the cavalry of the legions. It is to troops of this description that Tacitus refers when (*Ann.* xv. 10) he mentions *Alares Pannonii robor equitatus*.

Some further details on this subject are given under *EXERCITUS*. [W. R.]

ALABARCHES (*ἀλαρχης*), appears to have been the chief magistrate of the Jews at Alexandria; but whose duties, as far as the government was concerned, chiefly consisted in raising and paying the taxes. (*Joseph. Ant.* xviii. § 1, xix. § 1, xx. § 2; *Euseb. H. E.* ii. 5.) Hence, Cicero (*ad Att.* ii. 17) calls Pompey alabarches from his raising the taxes. The etymology of this word is altogether uncertain, and has given rise to great disputes; some modern writers propose, but without sufficient reason, to change it, in all the passages in which it occurs, into *arabarches*. The question is fully discussed by Stursius. (*De Dialect. Macedon. et Alexandrin.* p. 65, &c.)

ALABASTRUM and **ALABASTER** (*ἀλάβαστρον, ἀλάβαστρος*), a box or vase for holding perfumes and ointments; so called because they were originally made of alabaster, of which the variety, called onyx-alabaster, was usually employed for this purpose. (*Plin. H. N.* xiii. 2. a. 3, xxxvi. 8. a. 12.) They were, however, subsequently made of other materials, as, for instance, gold (*χρυσεία ἀλάβαστρα*). Such vases are first mentioned by Herodotus (iii. 20), who speaks of an "alabaster-box of perfumed ointment" (*μύρου ἀλάβαστρον*), as one of the presents sent by Cambyses to the Ethiopian king; and after his time they occur both in Greek and Roman writers. (*Aristoph. Acharn.* 1053; *Aelian, V. H.* xii. 18; *Martial*, xi. 8; *Matth.* xxvi. 7; *Mark*, xiv. 3; *Luke*, vii. 37.) These vessels were of a tapering shape, and very often had a long narrow neck, which was sealed; so that when the woman in the Gospels is said to break the alabaster-box of ointment for the purpose of anointing Christ, it appears probable that she only broke the extremity of the neck, which was thus closed.

ALABASTRITES. [*ALABASTER*.]

ALAEA (*Ἀλαία*), games which were annually celebrated at the festival of Athena, surnamed *Alaea*, near Tegea, in the neighbourhood of the magnificent temple of the same goddess. (*Paus.* viii. 47. § 8.) [L. S.]

ALARII. [*ALA*.]

ALAUDE, a Gaulish word, the prototype of the modern French *Alouette*, denoting a small crested bird of the lark kind which the Latins in allusion to its tuft denominated *Galerita*. The name *alanda* was bestowed by Julius Caesar on a legion of picked men, which he raised at his own expence among the inhabitants of Transalpine Gaul, about the year B. C. 55, not as erroneously asserted by Gibbon, during the civil war; which he equipped and disciplined after the Roman fashion; and on which in a body, he at a subsequent period bestowed the freedom of the state. This seems to have been the first example of a regular Roman legion levied in a foreign country and composed of barbarians. The designation was, in all probability, applied from a plume upon the helmet, resembling the "apex" of the bird in question, or from the general shape and appearance

of the head-piece. Cicero in a letter to Atticus, written in B. C. 44, states that he had received intelligence that Antonius was marching upon the city "cum legione alaudarum," and from the Philippics we learn that by the *Lex Judiciaria* of Antonius even the common soldiers of this corps (*Alaudas — manipulares ex legione Alaudarum*) were privileged to act as judges upon criminal trials, and enrolled along with the veterans in the third decuria of judges, avowedly, if we can trust the orator, that the framer of the law and his friends might have functionaries in the courts of justice upon whose support they could depend.

That the legion *Alauda*, was numbered V. is proved by several inscriptions, one of them belonging to the age of Domitian in honour of a certain Cn. Domitius, who among many other titles is styled *TRIB. MIL. LEG. V. ALAUDAR.* It had however disappeared from the army list in the time of Dion Cassius, that is, in the early part of the third century, for the historian, when giving a catalogue of such of the twenty-three or twenty-five legions which formed the establishment of Augustus, as existed when he wrote, makes no mention of any fifth legion except the *Quinta Macedonica*. (*Sueton. Jul.* 24; *Caesar, B. C.* i. 39; *Plin. H. N.* xi. 44; *Cic. Philipp.* i. 8. § 20, v. 5. § 12, xiii. 2. § 3, 18. § 37; *Gruter, Corp. Inscript.* *Lat.* cccclii. 1, dxxliv. 2, dxxlix. 4, dlix. 7; *Orelli, Inscript.* *Lat.* n. 773.) [W. R.]

ALBOGALERUS. [*APRUX*.]

ALBUM is defined to be a tablet of any material on which the praetor's edicts, and the rules relating to actions and interdicts, were written. [*EDICTUM*.] The tablet was put up in a public place in Rome, in order that all persons might have notice of its contents. According to some authorities, the album was so called, because it was either a white material, or a material whitened, and of course the writing would be a different colour. According to other authorities, it was so called because the writing was in white letters. If any person wilfully altered or erased (*rasavit, corripuit, mutavit*) any thing in the album, he was liable to an action *albi corripiti*, and to a heavy penalty. (*Dig.* 2. tit. i. a. 7, 9.)

Probably the word *album* originally meant any tablet containing any thing of a public nature. Thus, Cicero informs us that the *Annales Maximi* were written on the album by the pontifex maximus. (*De Orat.* ii. 12.) But, however this may be, it was in course of time used to signify a list of any public body; thus we find the expression, *album senatorium*, used by Tacitus (*Ann.* iv. 42), to express the list of senators, and corresponding to the word *leucoma* used by Dion Cassius (lv. 3). The phrase *album decurionum* signifies the list of decurions whose names were entered on the album of a municipium, in the order prescribed by the *lex municipalis*, so far as the provisions of the *lex* extended. (*Dig.* 50. tit. 3.) *Album judicum* is the list of judges. (*Suet. Claud.* 16.) [JUDEX.] [G. L.]

ALCATHOEA (*ἀλκαθόια*). The name of games celebrated at Megara, in commemoration of the Eleian hero Alcathous, son of Pelops, who had killed a lion which had destroyed Euippus, son of King Megareus. (*Pind. Isthm.* viii. 148; *Paus.* i. 42. § 1.) [L. S.]

ALEA, gaming, or playing at a game of chance of any kind. Hence, *alea*, *aleator*, a gambler, a

gambler. Playing with *tali* or *tesserae* was generally understood; because these were by far the most common games of chance among the Romans. [TALUS; TESSERA.]

Gaming was considered disreputable at Rome; and hence *aleator* was used as a term of reproach. (Cic. in *Oct.* ii. 10, *ad Att.* xiv. 5.) It was also forbidden at Rome by special laws, during the times of the republic, and under the emperors (*causita legibus alea*). (Hor. *Carm.* iii. 24. 58; Cic. *Philipp.* ii. 23; Ov. *Trist.* ii. 470, &c., Dig. 11. tit. 5.) We have, however, no express information as to the time when these laws were enacted or the exact provisions which they contained. There are three laws mentioned in the Digest (*l. a.*) forbidding gambling, the *Leges Titia, Publicia, and Cornelia*, and likewise a *senatus consultum*, and the praetor's edictum. At what time the two former laws were passed is quite uncertain; but the *Lex Cornelia* was probably one of the laws of the dictator Sulla, who, we know, made several enactments to check the extravagance and expense of private persons. [SUMTUA.] Some writers infer from a passage of Plautus (*Mil. Glor.* ii. 2. 9) that gaming must have been forbidden by law in his time; but the *lex talaris* in this passage seems rather to refer to the laws of the game than to any public enactment. Some modern writers, however, read *lex aleatoria* in this passage. The only kinds of gaming allowed by the law were, first, playing at table for the different articles of food, and playing for money at games of strength, such as hurling the javelin, running, jumping, boxing, &c. (Dig. *l. a.*) Those who were convicted of gaming were condemned to pay four times the sum they had staked (Pseudo-Ascon. in Cic. *Div.* § 24. p. 110. ed. Oralli), and became infamous in consequence. We know that *infamia* was frequently a consequence of a judicial decision [INFAMIA]; and we may infer that it was in this case from the expression of Cicero. ("Hominem lege, quae est de alea, condemnatum, in integritate restituit." Cic. *Phil.* ii. 23.) Justinian forbade all gaming both in public and in private. (Cod. 8. tit. 43.) Games of chance were, however, tolerated in the month of December at the Saturnalia, which was a period of general relaxation (Mart. iv. 14, v. 84; Gell. xviii. 13; Suet. *Aug.* 71); and among the Greeks, as well as the Romans, public opinion allowed old men to amuse themselves in this manner. (Eurip. *Med.* 67; Cic. *Senect.* 16.) Under the empire gambling was carried to a great height, and the laws were probably little more than nominal. Many of the early emperors, Augustus, Caligula, Claudius, Vitellius, and Domitian, were very fond of gaming, and set but an evil example to their subjects in this matter. (Suet. *Aug.* 70, 71; Dion Cass. lix. 22; Suet. *Cal.* 41, *Claud.* 33; Dion Cass. lx. 2; Suet. *Dom.* 21.) Professed gamblers made a regular study of their art; and there were treatises on the subject, among which was a book written by the emperor Claudius. (Ov. *Trist.* ii. 471; Suet. *Claud.* 38.) Alea sometimes denotes the implement used in playing, as in the phrase *jacta alea est*, "the die is cast," uttered by Julius Caesar, immediately before he crossed the Rubicon (Suet. *Jul.* 32); and it is often used for chance, or uncertainty in general. (Hor. *Carm.* ii. l. 6; Cic. *Div.* ii. 15.) Respecting the enactments against gambling, see Rein, *Criminalrecht der Römer*, p. 383.

ALEAIA ('Αλλαια), a festival celebrated to the honour of Athena Alea at Tegea with games and contests, of which we find mention in inscriptions. (Paus. viii. 47, § 3; Krause, *Die Gymnastik u. Agonistik d. Hellenen*, pp. 734—736; K. F. Hermann, *Lehrbuch d. gottesdienstlichen Alterthümer d. Griechen*, § 51, n. 11; comp. HALOTIA.)

ALI' CULA (ἄλλυξ or ἄλλυξ), an upper dress, which was, in all probability, identical with the chlamys, although Hesychius explains it as a kind of chiton (Euphor. *Fr.* 112, *ap.* Meineke, *Anal. Alex.* p. 137; Callim. *Fr.* 149, *ap.* Nauck, *Opusc.* vol. ii. p. 86; Hesych. s. v.; Suid. s. v. ἄλλυξ and ἑρβεργί; Müller, *Arch. d. Kunst*, § 337, n. 6; Martial, xii. 83.) [P. S.]

ALIMENTARII PUERI ET PUELLAE.

In the Roman republic, the poorer citizens were assisted by public distributions of corn, oil, and money, which were called *congiaria*. [CONGIARIUM.] These distributions were not made at stated periods, nor to any but grown-up inhabitants of Rome. The Emperor Nerva was the first who extended them to children, and Trajan appointed them to be made every month, both to orphans and to the children of poor parents. The children who received them were called *pueri et puellae alimentarii*, and also (from the emperor) *pueri puellaeque Ulpiani*; and the officers who administered the institution were called *quaestores pecuniae alimentariae, quaestores alimentorum, procuratores alimentorum, or praefecti alimentorum*.

The fragments of an interesting record of an institution of this kind by Trajan have been found at Velleia, near Placentia, from which we learn the sums which were thus distributed, and the means by which the money was raised. A similar institution was founded by the younger Pliny, at Comum. (Plin. *Epist.* vii. 18, i. 8; and the inscription in Oralli, 1172.) Trajan's benevolent plans were carried on upon a larger scale by Hadrian and the Antonines. Under Commodus and Pertinax the distribution ceased. In the reign of Alexander Severus, we again meet with *alimentarii pueri and puellae*, who were called *Mammacani*, in honour of the emperor's mother. We learn, from a decree of Hadrian (Ulp. in *Dig.* 34. tit. l. s. 14), that boys enjoyed the benefits of this institution up to their eighteenth, and girls up to their fourteenth year; and, from an inscription (Fabretti, 235, 619), that a boy four years and seven months old received nine times the ordinary monthly distribution of corn. (Aurel. *Viet. Epist.* xii. 4; Capitolin. *Aur. P.* 8, *M. Aur.* 26, *Part.* 9; Spart. *Had.* 7; Lamprid. *Sev. Alex.* 57; Oralli, *Inscr.* 3364, 3365; Fabretti, 234, 617; Rasche, *Lex. Univ. Rei Num.* s. v. *Tivola Italica*; Eckhel, *Doct. Num. Vet.* vol. vi. p. 408; F. A. Wolf, *Von einer milden Stiftung Trajans*.) [P. S.]

ALI'PILUS, a slave, who attended on bathers, to remove the superfluous hair from their bodies. (Sen. *Ep.* 56; Pignor. *de Serv.* 42.) [P. S.]

ALIPTAE (ἀλειπταί) among the Greeks, were persons who anointed the bodies of the athletes, preparatory to their entering the palaestra. The chief object of this anointing was to close the pores of the body, in order to prevent excessive perspiration, and the weakness consequent thereon. To effect this object, the oil was not simply spread over the surface of the body, but also well rubbed into the skin. The oil was mixed with fine

African sand, several jars full of which were found in the baths of Titus, and one of these is now in the British Museum. This preparatory anointing was called ἡ παρασκευαστικὴ τρίψις. The athlete was again anointed after the contest, in order to restore the tone of the skin and muscles, this anointing was called ἡ ἀποθεραπευεῖς. He then bathed, and had the dust, sweat, and oil scraped off his body, by means of an instrument similar to the strigil of the Romans, and called στλεγγίς, and afterwards ξύστρον. The aliptae took advantage of the knowledge they necessarily acquired of the state of the muscles of the athlete, and their general strength or weakness of body, to advise them as to their exercises and mode of life. They were thus a kind of medical trainers. *λατραεῖνται*. (Plut. *de Twend. San.* 16. p. 430; Celsus, i. 1; Plin. *H. N.* xxix. 1, 2.) Sometimes they even superintended their exercises, as in the case of Milesias. (Pindar, *Olym.* viii. 54–71; and Böckh's note.) [ATHLETÆ.] The part of the palaestra in which the athlete was anointed was called ἀλειπτήριον.

Among the Romans, the aliptae were slaves who scrubbed and anointed their masters in the baths. They, too, like the Greek ἀλειπται, appear to have attended to their masters' constitution and mode of life. (Cic. *ad Fam.* i. 9, 35; Senec. *Ep.* 56; Juvenal, *Sat.* iii. 76, vi. 422; Pignor. *de Serv.* p. 81.) They were also called *unctores*. They used in their operations a kind of scraper called a strigil, towels (*lintea*), a cruise of oil (*guttus*), which was usually of horn, a bottle [AMFULLA], and a small vessel called *lenticula*. [BATHA.]

The apartment in the Greek palaestra where the anointing was performed was called ἀλειπτήριον, that in the Roman baths was called *unctuarium*. [P. S.]

ALLUVIO. "That," says Gaius (ii. 70, &c.), "appears to be added to our land by alluvio, which a river adds to our land (*ager*) so gradually that we cannot estimate how much is added in each moment of time; or, as it is commonly expressed, it is that which is added so gradually as to escape observation. But if a river (at once) takes away a part of your land, and brings it to mine, this part still remains your property." There is the same definition by Gaius in his *Res Coticidias* (Dig. 41. tit. l. a. 7), with this addition:—"If the part thus suddenly taken away should adhere for a considerable time to my land, and the trees on such part should drive their roots into my land, from that time such part appears to belong to my land." The *acquisitio per alluvionem* was considered by the Roman jurists to be by the *jus gentium*, in the Roman sense of that term; and it was comprehended under the general head of *Accessio*. A man might protect his land against loss from the action of a river by securing the banks of his land (Dig. 43. tit. 15; *De Ripa Munienda*), provided he did not injure the navigation.

If an island was formed in the middle of a river, it was the common property of those who possessed lands on each bank of the river; if it was not in the middle, it belonged to those who possessed lands on that bank of the river to which it was nearest. (Gaius, ii. 72.) This is explained more minutely in the Digest (41. tit. l. a. 7). A river means a public river (*flumen publicum*).

According to a constitution of the Emperor

Antoninus Pius, there was no *jus alluvionis* in the case of *agri limitati*, for a certain quantity (*certain cuique modus*) was assigned by the form of the *centuriæ*. (Dig. 41. tit. l. a. 16; comp. Aggenus Urbicus, in Frontin. *Comment. De Alluvione*, pars prior, ed. Goes; and AGRÆ.) *Circumalluvio* differs from *alluvio* in this, that the whole of the land in question is surrounded by water, and subject to its action. Cicero (*De Orat.* i. 38) enumerates the *jura alluvionum* and *circumalluvionum* as matters included under the head of *causæ centumvirales*.

The doctrine of *alluvio*, as stated by Bracton in the chapter *De acquirendo Rerum Dominio* (fol. 9), is taken from the Digest (41. tit. l. a. 7), and is in several passages a copy of the words of Gaius, as cited in the Digest. [G. L.]

ALOA or HALOA (Ἄλωα, Ἄλῳα), an Attic festival, but celebrated principally at Eleusis, in honour of Demeter and Dionysus, the inventors of the plough and protectors of the fruits of the earth. It took place every year after the harvest was over, and only fruits were offered on this occasion, partly as a grateful acknowledgment for the benefits the husbandman had received, and partly that the next harvest might be plentiful. We learn from Demosthenes (*c. Neæor.* p. 1385), that it was unlawful to offer any bloody sacrifice on the day of this festival, and that the priests alone had the privilege to offer the fruits. The festival was also called *Θαλόσια* (Hesych. s. v.), or *συγκομιστήρια*. [L. S.]

ALO'GIUO GRAPHE' (ἀλογίου γραφή), an action which might be brought before the *logistæ* (λογισταί) at Athens, against all persons who neglected to pass their accounts, when their term of office expired. (Suid. Hesych. Etymol. s. v.; Pollux, viii. 54; Meier, *Att. Process.* p. 363.)

ALTARE. [ARA.]

ALUTA. [CALCEUS.]

ALYTAE (ἀλῦται). [OLYMPIA.]

AMANUENSIS, or AD MANUM SERVUS, a slave, or freedman, whose office it was to write letters and other things under his master's direction. The amanuensis must not be confounded with another sort of slaves, also called *ad manum servi*, who were always kept ready to be employed in any business. (Suet. *Cæs.* 74, *Aug.* 67, *Ner.* 44, *Tit.* 3, *Vesp.* 3; Cic. *De Orat.* iii. 60, 225; Pignor. *De Servis*, 109.) [P. S.]

AMARY'NTHIA, or AMARY'SIA (Ἀμαρύνθια, or Ἀμαρύσια), a festival of Artemis Amarynthia, or Amarysia, celebrated, as it seems, originally at Amarynthus in Euboea, with extraordinary splendour; but it was also solemnized in several places in Attica, such as Athmonæ (Paus. i. 31. § 3); and the Athenians held a festival, as Pausanias says, in honour of the same goddess, in no way less brilliant than that in Euboea. (Hesych. s. v. Ἀμαρύνθια.) The festival in Euboea was distinguished for its splendid processions; and Strabo himself (x. p. 448) seems to have seen, in the temple of Artemis Amarynthia, a column on which was recorded the splendour with which the Eretrians at one time celebrated this festival. The inscription stated, that the procession was formed of three thousand heavy-armed men, six hundred horsemen, and sixty chariots. (Comp. Schol. *ad Pind. Ol.* xiii. 159.) [L. S.]

AMBARVA'LIA. [ARVALES FRATRES.]

A'MBITUS, which literally signifies "a going about," cannot, perhaps, be more nearly expressed than by our word *canvassing*. After the plebs had

formed a distinct estate at Rome, and when the whole body of the citizens had become very greatly increased, we frequently read, in the Roman writers, of the great efforts which it was necessary for candidates to make, in order to secure the votes of the citizens. At Rome, as in every community into which the element of popular election enters, solicitation of votes, and open or secret influence and bribery, were among the means by which a candidate secured his election to the offices of state. The elections recurred annually, and candidates had plenty of practice in the various modes of corruption.

Whatever may be the authority of the piece intitled "Q. Ciceronis de Petitione Consulatus ad M. Tullium Fratrem," it seems to present a pretty fair picture of those arts and means, by which a candidate might lawfully endeavour to secure the votes of the electors, and also some intimation of those means which were not lawful, and which it was the object of various enactments to repress.

A candidate was called *petitor*; and his opponent with reference to him, *competitor*. A candidate (*candidatus*) was so called from his appearing in the public places, such as the forum and Campus Martius, before his fellow-citizens, in a whitened toga. On such occasions, the candidate was attended by his friends (*deductores*), or followed by the poorer citizens (*sectatores*), who could in no other manner show their good will or give their assistance. (Cic. *pro Murena*, c. 34.) The word *assiduus* expressed both the continual presence of the candidate at Rome, and his continual solicitations. The candidate, in going his rounds or taking his walk, was accompanied by a *nomenclator*, who gave him the names of such persons as he might meet; the candidate was thus enabled to address them by their name, an indirect compliment which could not fail to be generally gratifying to the electors. The candidate accompanied his address with a shake of the hand (*presatio*). The term *benignitas* comprehended generally any kind of treating, as shows, feasts, &c. Candidates sometimes left Rome, and visited the colonies and municipia, in which the citizens had the suffrage; thus Cicero proposed to visit the Cisalpine towns, when he was a candidate for the consulship. (Cic. *ad Att.* i. 1.)

That ambitus, which was the object of several penal enactments, taken as a generic term, comprehended the two species, — *ambitus* and *largitiones* (bribery). *Liberalitas* and *benignitas* are opposed by Cicero, as things allowable, to *ambitus* and *largitio*, as things illegal. (Cic. *de Orat.* ii. 25; and compare *pro Murena*, c. 36.) The word for *ambitus* in the Greek writers is *δυναστευς*. Money was paid for votes; and in order to insure secrecy and secure the elector, persons called *interpretes* were employed to make the bargain, *sequestres* to hold the money till it was to be paid (Cic. *pro Cluent.* 26), and *disiutores* to distribute it. (Cic. *ad Att.* i. 16.) The offence of ambitus was a matter which belonged to the *judicia publica*, and the enactments against it were numerous. The earliest enactment that is mentioned simply forbade persons "to add white to their dress," with a view to an election. (a.c. 432; Liv. iv. 25.) This seems to mean using some white sign or token on the dress, to signify that a man was a candidate. The object of the law was to check *ambitio*, the name for going about to canvass, in place of which ambitus was subsequently employed.

Still the practice of using a white dress on occasion of canvassing was usual, and appears to have given origin to the application of the term *candidatus* to one who was a petitioner. (*Oratio ambitio*, Persius, Sat. v. 177; Polyb. x. 4. ed. Bekker.) A Lex Poetelia (a.c. 368; Liv. vii. 15) forbade candidates canvassing on market days, and going about to the places in the country where people were collected. The law was passed mainly to check the pretensions of *novi homines*, of whom the nobles were jealous. By the Lex Cornelia Baebia (a.c. 181) those who were convicted of ambitus were incapacitated from being candidates for ten years. (Liv. xl. 19; *Schol. Bob.* p. 361.) The Lex Acilia Calpurnia (a.c. 67) was intended to suppress treating of the electors and other like matters: the penalties were fine, exclusion from the senate, and perpetual incapacity to hold office. (Dion Cass. xxxvi. 21.) The Lex Tullia was passed in the consulship of Cicero (a.c. 63) for the purpose of adding to the penalties of the Acilia Calpurnia. (Dion Cass. xxxvii. 29; Cic. *pro Murena*, c. 23.) The penalty under this lex was ten years' exile. This law forbade any person to exhibit public shows for two years before he was a candidate. It also forbade candidates hiring persons to attend them and be about their persons. In the second consulship of M. Licinius Crassus and Cn. Pompeius Magnus (a.c. 55) the Lex Licinia was passed. This lex, which is entitled De Sodalitia, did not alter the previous laws against bribery; but it was specially directed against a particular mode of canvassing, which consisted in employing agents (*sodales*) to mark out the members of the several tribes into smaller portions, and to secure more effectually the votes by this division of labour. This distribution of the members of the tribes was called *decuratio*. (Cic. *pro Plancio*, c. 18.) It was an obvious mode of better securing the votes; and in the main is rightly explained by Rein, but completely misunderstood by Wunder and others. Drumann (*Geschichte Roms*, vol. iv. p. 93) confounds the *decuratio* with the *coëtio* or coalition of candidates to procure votes. The mode of appointing the judges in trials under the Lex Licinia was also provided by that lex. They were called *Judices Editicii*, because the accuser or prosecutor nominated four tribes, and the accused was at liberty to reject one of them. The judges were taken out of the other three tribes; but the mode in which they were taken is not quite clear. The penalty under the Lex Licinia was exile, but for what period is uncertain. The Lex Pompeia (a.c. 52), passed when Pompeius was sole consul for part of that year, appears to have been rather a measure passed for the occasion of the trials then had and contemplated than any thing else. It provided for the mode of naming the judges, and shortened the proceedings. When C. Julius Caesar obtained the supreme power in Rome, he used to recommend some of the candidates to the people, who, of course, followed his recommendation. As to the consulship, he managed the appointments to that office just as he pleased. (Suet. *Caes.* c. 41.) The Lex Julia de Ambitu was passed (a.c. 18) in the time of Augustus, and it excluded from office for five years (Dion Cass. liv. 16; Suet. *Oct.* 34) those who were convicted of bribery. But as the penalty was milder than those under the former laws, we must conclude that they were repealed

in whole or in part. Another Lex Julia de Ambitu was passed (B.C. 8; Dion Cass. iv. 5) apparently to amend the law of B.C. 18. Candidates were required to deposit a sum of money before canvassing, which was forfeited if they were convicted of bribery. If any violence was used by a candidate, he was liable to exile (*aquae et ignis interdictio*).

The popular forms of election were observed during the time of Augustus. Under Tiberius they ceased. Tacitus (*Annal.* i. 15) observes:—"The comitia were transferred from the campus to the patres," the senate.

While the choice of candidates was thus partly in the hands of the senate, bribery and corruption still influenced the elections, though the name of ambitus was, strictly speaking, no longer applicable. But in a short time, the appointment to public offices was entirely in the power of the emperors; and the magistrates of Rome, as well as the populus, were merely the shadow of that which had once a substantial form. A Roman jurist, of the imperial period (Modestinus), in speaking of the Julia Lex de Ambitu, observes, "This law is now obsolete in the city, because the creation of magistrates is the business of the princeps, and does not depend on the pleasure of the populus; but if any one in a municipium should offend against this law in canvassing for a sacerdotium or magistratus, he is punished, according to a senatus consultum, with infamy, and subjected to a penalty of 100 aurei." (Dig. 48. tit. 14.)

The laws that have been enumerated are probably all that were enacted, at least all of which any notice is preserved. Laws to repress bribery were made while the voting was open; and they continued to be made after the vote by ballot was introduced at the popular elections by the Lex Gabinia (B.C. 139). Rein observes that "by this change the control over the voters was scarcely any longer possible; and those who were bribed could not be distinguished from those who were not." One argument in favour of ballot in modern times has been that it would prevent bribery; and probably it would diminish the practice, though not put an end to it. But the notion of Rein that the bare fact of the vote being secret would increase the difficulty of distinguishing the bribed from the unbribed is absurd; for the bare knowledge of a man's vote is no part of the evidence of bribery. It is worth remark that there is no indication of any penalty being attached to the receiving of a bribe for a vote. The utmost that can be proved is, that the *divisores* or one of the class of persons who assisted in bribery were punished. (Cic. *pro Plancio*, c. 23, *pro Murena*, c. 23.) But this is quite consistent with the rest: the briber and his agents were punished, not the bribed. When, therefore, Rein, who refers to these two passages under the Lex Tullia, says: "Even those who received money from the candidates, or at least those who distributed it in their names, were punished," he couples two things together that are entirely of a different kind. The proposed Lex Aulidia (Cic. *ad Att.* i. 16) went so far as to declare that if a candidate promised money to a tribe and did not pay it, he should be unpunished; but if he did pay the money, he should further pay to each tribe (annually?) 8000 sesterces as long as he lived. This absurd proposal was not carried; but it shows clearly

enough that the principle was to punish the briber only.

The trials for ambitus were numerous in the time of the republic. A list of them is given by Rein. The oration of Cicero in defence of L. Murena, who was charged with ambitus, and that in defence of Cn. Plancius, who was tried under the Lex Licinia, are both extant. (Rein, *Criminalrecht der Römer*, where all the authorities are collected; Cic. *Pro Plancio*, ed. Wunder.) [G. L.] AMBLO'SEOS GRAPHE' (*ἀμβλώσεως γράφη*). [ABORTIO.]

AMBROSIA (*ἀμβρόσια*), festivals observed in Greece, in honour of Dionysus, which seem to have derived their name from the luxuries of the table, or from the indulgence of drinking. According to Tzetzes on Hesiod (*Op. et D.* v. 504) these festivals were solemnised in the month of Lenæon, during the vintage. (Etym. M. s. v. *Ἀμβρόσιον*, p. 564. 7; G. E. W. Schneider, *Ueber das Attische Theaterwesen*, p. 43; K. F. Hermann, *Lehrb. d. gotteshist. Alterth. d. Griechen*, § 58. n. 7.) [L. S.]

AMBUBAIAE, female musicians from Syria, who gained their living by performing in public, at Rome, especially in the Circus. Their name is derived from the Syrian word *ambub* or *ambub*, a flute. Their moral condition was that which females of their class generally fall into. The Bayaderes of India will perhaps give the best idea of what they were. (Hor. *Sat.* i. 2. 1, with Heindorf's Note; Juvenal, iii. 62; Suet. *Nor.* 27; *Priapeia*, 26; Petron. lxxiv. 13.) [P. S.]

AMBU'RBIUM, or AMBURBIA'LE, a sacrifice which was performed at Rome for the purification of the city, in the same manner as the *ambarvalia* was intended for the purification of the country. The victims were carried through the whole town, and the sacrifice was usually performed when any danger was apprehended in consequence of the appearance of prodigies, or other circumstances. (Obseq. *De Prodig.* c. 43; Apul. *Metamorph.* iii. ab init. p. 49, Bipont.; Lucan. i. 593.) Scaliger supposed that the *amburbium* and *ambarvalia* were the same; but their difference is expressly asserted by Servius (*ad Virg. Ecl.* iii. 77), and Vopiscus (*amburbium celebratum, ambarvalia promissa*; Aurel. c. 20).

AMENTUM. [HASTA.]

AMICTORIUM, a linen covering for the breasts of women, probably the same as the strophium. [STROPHIUM.] (Mart. xiv. 149.) In later times it seems to have been used in the same sense as Amictus. (Cod. Theod. 8. tit. 5. s. 48.) [AMICTUS.]

AMICTUS, AMI'CULUM. The verb *amicire* is commonly opposed to *induere*, the former being applied to the putting on of the outer garment, the *chlamys*, pallium, *laena*, or *toga* (*ἡδύς*, *ἡδύς*); the latter, to the putting on of the inner garment, the *tunica* (*χιτών*). In consequence of this distinction, the verbal nouns, *amicitus* and *inductus*, even without any further denomination of the dress being added, indicate respectively the outer and the inner clothing. (See Tibull. i. 9. 13.; Corn. Nep. *Cimon*, 4, *Dal.* 3. § 2; Virg. *Aen.* iii. 545 v. 421, compared with Apoll. Rhod. ii. 30.) Sometimes, however, though rarely, *amicire* and *induere* are each used in a more general way, so as to refer to any kind of clothing.

In Greek *amicire* is expressed by *ἐφέννυσθαι*, *ἀμφέννυσθαι*, *ἀμπεχέσθαι*, *ἐπιβάλλεσθαι*, *περι-*

βάλλουσιν: and *ἐκδιδόντες*. Hence came *ἐφεστρίαι*, *ἀμπεχόνται*, *ἐπιβλήματα* and *ἐπιβάλλαιον*, *περιβλήματα* and *περιβάλλαιον*, an outer garment, and *ἐσθμα*, an inner garment, a tunic, a shirt. [J.Y.]

AMMA (ἄμμα), a Greek measure of length, equal to forty *πῆχες* (cubits), or sixty *πόδες* (feet). It was used in measuring land. (Herod. *De Mensuris*.) [P.S.]

AMNESTIA (ἀμνηστία), is a word used by the later Greek writers, and from them borrowed by the Romans, to describe the act or arrangement by which offences were forgotten, or regarded as if they had not been committed, so that the offender could not be called to account for them. The word is chiefly used with reference to the offences committed, or alleged to have been committed, against the laws, during those conflicts of opposing factions which so often occurred in the Greek republics, and in which the victorious party usually took a sanguinary vengeance upon its opponents. So rare, indeed, were the exceptions to this course of vengeance, that there is only one case of amnesty in Greek history, which requires any particular notice. This was the amnesty which terminated the struggle between the democratical and oligarchical parties at Athens, and completed the revolution by which the power of the Thirty Tyrants was overthrown, B.C. 403. It was arranged by the mediation of the Spartan king Pausanias, and extended to all the citizens who had committed illegal acts during the recent troubles, with the exception of the Thirty and the Eleven, and the Ten who had ruled in Peisistratus; and even they were only to be excepted in case of their refusal to give an account of their government; their children were included in the amnesty, and were permitted to reside at Athens. An addition was made to the oath of the senators, binding them not to receive any *ἀνδισίαι* or *ἀπαγογῆς* on account of anything done before the amnesty, the strict observance of which was also imposed by an oath upon the *δικασταί*. (Xen. *Hellen.* ii. 4. §§ 38—45; Andoc. *de Myst.* p. 44; Dem. in *Boeot.* p. 1018; Nepos, *Thyrsibul.* 8, who makes a confusion between the Ten Tyrants of Peisistratus and the Ten who succeeded the Thirty in the city; Taylor, *Lysias Vita*; Wachsmuth, *Hellen. Alterth.* vol. i. pp. 646, 647, new edition; Hermann, *Polit. Antiq. of Greece*, § 169.)

The form of the word is incorrectly given in some modern works as *ἀμνηστία*. But even the genuine form only belongs to later Greek; being used only by Plutarch (*Cic.* 42, *Anton.* 14), Herodian (iii. 4. § 17, v. 4. § 18, viii. 12. § 6), Philo, and still later writers. The better writers used *ἀμνηστία*, and the verbal form is *ὁ ἀμνηστιαίνων*. Respecting the supposed allusion to the word by Cicero, see Facciolati, s.v. [P.S.]

AMPHIARAIA (ἀμφιαραία), games celebrated in honour of the ancient hero Amphiaraus, in the neighbourhood of Oropus, where he had a temple with a celebrated oracle. (*Schol. ad Pind. Ol.* vii. 154; the rites observed in his temple are described by Pausanias (i. 34. § 3; K. F. Hermann, *Lehrb. d. gottesdienstl. Alterth. d. Griechen*, § 68. n. 1.) [L.S.]

AMPHICTYONES ('Αμφικτυόνες), members of an *Amphictyonia* ('Αμφικτυονία or 'Αμφικτυονία). Institutions called Amphictyonic appear to have existed in Greece from time immemorial. Of their nature and object history gives us only a general

idea; but we may safely believe them to have been associations of originally neighbouring tribes, formed for the regulation of mutual intercourse, and the protection of a common temple or sanctuary, at which the representatives of the different members met, to transact business and celebrate religious rites and games. This identity of religion, coupled with near neighbourhood, and that too in ages of remote antiquity, implies in all probability a certain degree of affinity, which might of itself produce unions and confederacies amongst tribes so situated, regarding each other as members of the same great family. They would thus preserve among themselves, and transmit to their children, a spirit of nationality and brotherhood; nor could any better means be devised than the bond of a common religious worship, to counteract the hostile interests which, sooner or later, spring up in all large societies. The causes and motives from which we might expect such institutions to arise, existed in every neighbourhood; and accordingly we find many *Amphictyonias* of various degrees of importance, though our information respecting them is very deficient.

Thus we learn from Strabo, that there was one of some celebrity whose place of meeting was a sanctuary of Poseidon (Müller, *Dorians*, ii. 10. § 5; Strab. viii. p. 574) at Calauria, an ancient settlement of the Ionians in the Saronic Gulf. The original members were Epidaurus, Hermione, Nauplia, Prasias in Laconia, Aegina, Athens, and the Boeotian Orchomenus (Thirlwall, *Hist. of Greece*, vol. i. p. 375); whose remoteness from each other makes it difficult to conceive what could have been the motives for forming the confederation, more especially as religious causes seem precluded by the fact, that Troezen, though so near to Calauria, and though Poseidon was its tutelary god, was not a member. In after times, Argos and Sparta took the place of Nauplia and Prasias, and religious ceremonies were the sole object of the meetings of the association. There also seems to have been another in Argolis (Strab. l.c.; Pausan. iv. 5) distinct from that of Calauria, the place of congress being the *Ἡραῖον*, or temple of Hera. Delos, too, was the centre of an Amphictyony—the religious metropolis, or *ἱερὴ πόλις* of the neighbouring Cyclades, where deputies and embassies (*ἀσπυλῆς*) met to celebrate religious solemnities, in honour of the Dorian Apollo, and apparently without any reference to political objects. (Müller, ii. 3. § 7; Callim. *Hymn.* 325.)

The system indeed was by no means confined to the mother country; for the federal unions of the Dorians, Ionians, and Aeolians, living on the west coast of Asia Minor, seem to have been Amphictyonic in spirit, although modified by exigencies of situation. Their main essence consisted in keeping periodical festivals in honour of the acknowledged gods of their respective nations. Thus the Dorians held a federal festival, and celebrated religious games at Triopium, uniting with the worship of their national god Apollo that of the more ancient and Pelagic Demeter. The Ionians met for similar purposes in honour of the Heliconian Poseidon* at Mycale,—their place of assembly being called the Panionium, and their festival Panionia. The twelve towns of the Aeolians assembled at Gryneia, in honour of Apollo. (Herod. i. 144, 148,

* Poseidon was the god of the Ionians, as Apollo of the Dorians. Müller, *Dor.* ii. 10. § 5

149; Dionys. iv. 25.) That these confederacies were not merely for offensive and defensive purposes, may be inferred from their existence after the subjugation of these colonies by Croesus; and we know that Halicarnassus was excluded from the Dorian union, merely because one of its citizens had not made the usual offering to Apollo of the prize he had won in the Triopic contests. A confederation somewhat similar, but more political than religious, existed in Lycia (Strab. xiv. p. 664): it was called the "Lycian system," and was composed of twenty-three cities.

But besides these and others, there was one Amphictyony of greater celebrity than the rest, and much more lasting in its duration. This was by way of eminence called the Amphictyonic league; and differed from the other associations in having two places of meeting, the sanctuaries of two divinities. These were the temple of Demeter, in the village of Anthela, near Thermopylae (Herod. vii. 200), where the deputies or representatives met in autumn; and that of Apollo at Delphi, where they assembled in spring. The connection of this Amphictyony with the latter not only contributed to its dignity, but also to its permanence. With respect to its early history, Strabo (ix. p. 420) says, that even in his days it was impossible to learn its origin. We know, however, that it was originally composed of twelve *tribes* (not cities or states, it must be observed), each of which tribes contained various independent cities or states. We learn from Aeschines (*De F. L.* § 122, ed. Bekker), a most competent authority (a. c. 343), that eleven of these tribes were as follows:—The Thessalians, Boeotians (not Thebans only), Dorians, Ionians, Perrhaebians, Magnetae, Locrians, Oetaeans or Ainiates, Phthiots or Achaeans of Phthia, Malians, or Melians, and Phocians; other lists (Paus. x. 8. § 2) leave us in doubt whether the remaining tribe were the Dolopes or Delphians; but as the Delphians could hardly be called a distinct tribe, their nobles appearing to have been Dorians, it seems probable that the Dolopes were originally members, and afterwards supplanted by the Delphians. (Titmann, pp. 39, 43.) The preponderance of the Thessalian and northern nations of Greece proves the antiquity of the institution, no less than eight of the twelve tribes being of the Pelasgic race: and the fact of the Dorians standing on an equality with such tribes as the Malians, shows that it must have existed before the Dorian conquest of the Peloponnesus which originated several *states* more powerful, and therefore more likely to have sent their respective deputies, than the tribes mentioned. The Thessalians indeed in all probability joined the league about twenty years before that event, when they settled in Thessaly, after quitting Thesprotia in Epeirus, and the date of the origin of the league itself has been fixed (Clinton, *F. H.* vol. i. p. 66) between the 60th and 80th years from the fall of Troy. That it existed moreover before the Ionian migration, may be inferred from the Ionians of Asia having a vote, acquired without doubt when in the country, and from the statement of Tacitus (*Annal.* iv. 14): "Samii decreto Amphictyonum nitebantur, quia praecipuum fuit rerum omnium iudicium, qua tempestate Graeci, conditis per Asiam urbibus, ora maris potiebantur."

We learn from Aeschines (*l. c.*), that each of the twelve Amphictyonic tribes had two votes in congress, and that deputies from such towns as

(Dorium and*) Cytinium had equal power with the Lacedaemonians, and that Eretria and Prizae, Ionian colonies, were on a par with Athens (*ισόφθοι τοῖς Ἀθηναίοις*). It seems therefore to follow, either that each Amphictyonic tribe had a cycle (Strab. ix. p. 420; Pausan. x. 8. § 2), according to which its component states returned deputies, or that the vote of the tribe was determined by a majority of votes of the different states of that tribe. The latter supposition might explain the fact of there being a larger and smaller assembly—a *βουλὴ* and *ἐκκλησία*—at some of the congresses, and it is confirmed by the circumstance that there was an annual election of deputies at Athens, unless this city usurped functions not properly its own.

The council itself was called *Pylaea* (*Πυλαία*) from its meeting in the neighbourhood of Pylae (Thermopylae), but the same name was given to the session at Delphi as well as to that at Thermopylae. It was composed of two classes of representatives, one called *Pythagoras* (*Πυθαγόραι*), the other *Hieromnemones* (*Ἱερομνήμονες*). Of the former, three were annually elected at Athens to act with one Hieromnemon appointed by lot. (Aristoph. *Nubes*, v. 607.) That his office was highly honourable we may infer from the oath of the Heliasts (Dem. *c. Timocr.* § 170, ed. Bekker), in which he is mentioned with the nine archons. On one occasion we find that the president of the council was a Hieromnemon, and that he was chosen general of the Amphictyonic forces, to act against the Amphissians. (Titmann, p. 87.) Hence it has been conjectured that the Hieromnemones, also called *ἱερογραμματεῖς*, were superior in rank to the *pythagorae*. (Titmann, pp. 84, 86.) Aeschines also contrasts the two in such a way as to warrant the inference that the former office was the more permanent of the two. Thus he says (*c. Ctes.* § 115, ed. Bekker), "When Diognetus was Hieromnemon, ye chose me and two others *Pythagorae*." He then contrasts "the Hieromnemon of the Athenians with the *Pythagorae* for the time being." There is even good reason for supposing that the Hieromnemon was elected for life (Clinton, *F. H.* vol. iii. p. 621; Titmann, *l. c.*), although some writers are of a different opinion. (Schömann, *de Comit.* p. 392.) Again, we find inscriptions (Böckh, *Inscr.* 1171), containing surveys by the Hieromnemones, as if they formed an executive; and that the council concluded their proceedings on one occasion (Aesch. *c. Ctes.* § 124), by resolving that there should be an extraordinary meeting previously to the next regular assembly, to which the Hieromnemones should come with a decree to suit the emergency, just as if they had been a standing committee. Their name implies a more immediate connection with the temple; but whether they voted or not upon matters in general is doubtful: from the two Amphictyonic decrees quoted below, we might infer that they did not, while the inscriptions (1688 and 1699), quoted by Schömann (p. 392), and the statement of Demosthenes (*pro Corona*. § 277, ed. Bekker), lead to a contrary conclusion. The narrative of Aeschines (*c. Ctes.* § 121) implies that they were more peculiarly the representatives of their constituent states. Probably the respective functions of the two classes

* There is a doubt about the reading.—See Thuc. iii. 95; Titmann, p. 52.

of representatives were not strictly defined, and varied at different times, if indeed they are always correctly distinguished by the authors who allude to them. The *ἐκαλησία*, or general assembly, included not only the classes mentioned, but also those who had joined in the sacrifices and were consulting the god, and as there was a large multitude annually collected at the Amphictyonic session at Thermopylae, it was probably numerously attended. (Hesychius, *ad Soph. Trach.* v. 639.) It was convened on extraordinary occasions by the chairman of the council (Ὁ τὰς γυνύμας ἐπιτηρήσας, Aesch. l. c.).

Of the duties of this latter body nothing will give us a clearer view than the oaths taken and the decrees made by it. The oath was as follows (Aesch. *De F. L.* § 121): "They would destroy no city of the Amphictyons, nor cut off their streams in war or peace; and if any should do so, they would march against him and destroy his cities; and should any pillage the property of the god, or be privy to or plan any thing against what was in his temple at Delphi, they would take vengeance on him with hand and foot, and voice, and all their might." There are two decrees given by Demosthenes, both commencing thus (*Dem. de Cor.* § 197): — "When Cleinagoras was priest (*ιερεὺς*), at the spring meeting, it was resolved by the pylagorae and the assessors of the Amphictyons, and the general body of them," &c. The resolution in the second case was, that as the Amphissians continued to cultivate "the sacred district," Philip of Macedon should be requested to help Apollo and the Amphictyons, and that he was thereby constituted absolute general of the Amphictyons. He accepted the office, and soon reduced the offending city to subjection. From the oath and the decrees, we see that the main duty of the deputies was the preservation of the rights and dignity of the temple at Delphi. We know, too, that after it was burnt down (a. c. 548), they contracted with the Alcmaeonidae for the rebuilding (Herod. ii. 180, v. 62); and Athenaeus (a. c. 160) informs us (iv. p. 173, b) that in other matters connected with the worship of the Delphian god they condescended to the regulation of the minutest trifles. History, moreover, teaches that if the council produced any palpable effects, it was from their interest in Delphi; and though it kept up a standing record of what ought to have been the international law of Greece, it sometimes acquiesced in, and at other times was a party to, the most iniquitous and cruel acts. Of this the case of Crissa is an instance. This town lay on the Gulf of Corinth, near Delphi, and was much frequented by pilgrims from the West. The Crissaeans were charged by the Delphians with undue exactions from these strangers, and with other crimes. The council declared war against them, as guilty of a wrong against the god. The war lasted ten years, till, at the suggestion of Solon, the waters of the Pleistus were turned off, then poisoned, and turned again into the city. The besieged drank their fill, and Crissa was soon razed to the ground; and thus, if it were an Amphictyonic city, was a solemn oath doubly violated. Its territory—the rich Crissaeon or Cirrhaean plain—was consecrated to the god, and curses imprecated upon any one who should till or dwell in it. Thus ended the First Sacred War (a. c. 586), in which the Athenians and Amphictyons were the instruments of Delphian vengeance. (Paus. x. 37. § 4;

Clinton, *F. H.* vol. ii. p. 196; Aeschin. c. *Ctes.* § 109.) The Second, or Phocian War (a. c. 356), was the most important in which the Amphictyons were concerned (Thirlwall, *Hist. of Greece*, vol. v. p. 263—372); and in this the Thebans availed themselves of the sanction of the council to take vengeance on their enemies, the Phocians. To do this, however, it was necessary to call in Philip of Macedon, who readily proclaimed himself the champion of Apollo, as it opened a pathway to his own ambition. The Phocians were subdued (a. c. 346), and the council decreed that all their cities, except Abae, should be razed, and the inhabitants dispersed in villages not containing more than fifty inhabitants. Their two votes were given to Philip, who thereby gained a pretext for interfering with the affairs of Greece; and also obtained the recognition of his subjects as Hellenes. To the causes of the Third Sacred War allusion has been made in the decrees quoted by Demosthenes. The Amphissians tilld the devoted Cirrhaean plain, and behaved, as Strabo (ix. p. 419) says, worse than the Crissaeans of old (*χείρους ἦσαν περὶ τοὺς ξένους*). Their submission to Philip was immediately followed by the battle of Chaeroneia (a. c. 338), and the extinction of the independence of Greece. In the following year, a congress of the Amphictyonic states was held; in which war was declared as if by united Greece against Persia, and Philip elected commander-in-chief. On this occasion the Amphictyons assumed the character of national representatives as of old, when they set a price upon the head of Ephialtes, for his treason to Greece at Thermopylae, and erected monuments in honour of the Greeks who fell there. Herodotus indeed (vii. 214, 228), speaking of them in reference to Ephialtes, calls them of τῶν Ἑλλήνων Πυλαγόροι.

We have sufficiently shown that the Amphictyons themselves did not observe the oaths they took; and that they did not much alleviate the horrors of war, or enforce what they had sworn to do, as proved by many instances. Thus, for instance, Mycenae was destroyed by Argos (a. c. 468), Thespieae and Plataeae by Thebes, and Thebes herself swept from the face of the earth by Alexander (*ἐκ μέσης τῆς Ἑλλάδος ἀναιρεθεῖσα*, Aeschin. c. *Ctes.* § 133). Indeed, we may infer from Thucydides (i. 112), that a few years before the Peloponnesian war, the council was a passive spectator of what he calls ὁ ἱερὸς πόλεμος, when the Lacedaemonians made an expedition to Delphi, and put the temple into the hands of the Delphians, the Athenians, after their departure, restoring it to the Phocians; and yet the council is not mentioned as interfering. It will not be profitable to pursue its history further; it need only be remarked, that Augustus wished his new city, Nicopolis (A. D. 31), to be enrolled among its members; and that Pausanias, in the second century of our era, mentions it as still existing, but deprived of all power and influence. In fact, even Demosthenes (*De Pace*, p. 63), spoke of it as the shadow at Delphi (*ἡ ἐν Δελφοῖς σκιά*). In the time of Pausanias, the number of Amphictyonic deputies was thirty.

There are two points of some interest, which still remain to be considered; and first, the etymology of the word Amphictyon. We are told (Harpocrat. s. v.) that Theopompus thought it derived from the name of Amphictyon, a prince of Thessaly, and the supposed author of the institution. Others, as Anaximenes of Lampascus, connected it

with the word ἀμυκτιῶνες, or neighbours. Very few, if any, modern scholars doubt that the latter view is correct; and that Amphictyon, with Hellen, Dorus, Ion, Xuthus, Thessalus, Larissa the daughter of Pelasgus, and others, are not historical, but mythic personages — the representatives, or poetic personifications, of their alleged foundations, or offspring. As for Amphictyon (Thirlwall, *Hist. of Greece*, vol. i. p. 373), it is too marvellous a coincidence that his name should be significant of the institution itself; and, as he was the son of Deucalion and Pyrrha, it is difficult to guess of whom his council consisted. (*Philol. Museum*, vol. ii. p. 359.) Besides, though Herodotus (i. 56) and Thucydides (i. 3) had the opportunity, they yet make no mention of him. We may conclude therefore, that the word should be written amphictiony*, from ἀμυκτιῶνες, or those that dwell around some particular locality.

The next question is one of greater difficulty; it is this: — Where did the association originate? — were its meetings first held at Delphi, or at Thermopylae? There seems a greater amount of evidence in favour of the latter. In proof of this, we may state the preponderance of Thessalian tribes from the neighbourhood of the Maliac bay, and the comparative insignificance of many of them; the assigned birthplace and residence of the mythic Amphictyon, the names Pythagorae and Pylaea. Besides, we know that Thessaly was the theatre and origin of many of the most important events of early Greek history; whereas, it was only in later times, and after the Dorian conquest of Peloponnesus, that Delphi became important enough for the meetings of such a body as the Amphictyonic; nor if Delphi had been of old the only place of meeting, is it easy to account for what must have been a loss of its ancient dignity. But whatever was the cause, we have still the fact, that there were two places of congress; to account for which, it has been supposed that there were originally two confederations, afterwards united by the growing power of Delphi, as connected with the Dorians, but still retaining the old places of meeting. We must, however, admit that it is a matter of mere conjecture whether this were the case or not, there being strong reasons in support of the opinion that the Dorians, on migrating southwards, combined the worship of the Hellenic Apollo with that of the Pelasgian Demeter, as celebrated by the Amphictyons of Thessaly. Equally doubtful is the question respecting the influence of Acrisius, king of Argos (Schol. ad *Eurip. Orest.* 1094; Callim. *Epig.* xli. ; Strab. ix. p. 420); and how far it is true that he first brought the confederacy into order, and determined other points connected with the institution. We may however remark that his alleged connection with it is significant of a Pelasgic element in its conformation. (Thirlwall, *Hist. of Greece*, cc. x. xliii.; Heeren, *Polit. Hist. of Greece*, c. 7; St. Croix, *Des Anciens Gouvernemens Fédératifs*; Tittmann, *Ueber den Bund der Amphictyonen*; Müller, *Dorians*, book ii. 3. §. 5; *Phil. Mus.* vol. i. p. 324; Hermann, *Manual of the Polit. Antiq. of Greece*, § 11—14; Wachsmuth, *Hellenische Alterthums-kunde*; Niebuhr, *Hist. of Rome*, vol. i. p. 31. transl.) [R. W.]

* Thus Pindar (*Nem.* vi. 42), Ἐν ἀμυκτιόνων ταυροφόνῳ τριετηρίδι: see Böckh ad locum.

AMPHIDRO'MIA (ἀμφιδρόμια), a family festival of the Athenians at which the newly born child was introduced into the family, and received its name. No particular day was fixed for this solemnity; but it did not take place very soon after the birth of the child, for it was believed that most children died before the seventh day, and the solemnity was therefore generally deferred till after that period, that there might be at least some probability of the child remaining alive. According to Snidas, the festival was held on the fifth day, when the women who had lent their assistance at the birth washed their hands, but this purification preceded the real solemnity. The friends and relations of the parents were invited to the festival of the amphidromia, which was held in the evening, and they generally appeared with presents, among which are mentioned the cuttle-fish and the marine polyp. (Hesych. and Harpocr. s. v.) The house was decorated on the outside with olive branches when the child was a boy, or with garlands of wool when the child was a girl; and a repast was prepared, at which, if we may judge from a fragment of Ephippus in Athenaeus (ix. p. 370; comp. ii. p. 65), the guests must have been rather merry. The child was then carried round the fire by the nurse, and thus, as it were, presented to the gods of the house and to the family, and at the same time received its name, to which the guests were witnesses. (Isaeus, *De Pyrrhi Haered.* p. 34. s. 30. Bekker.) The carrying of the child round the hearth was the principal part of the solemnity, from which its name was derived. But the Scholiast on Aristophanes (*Lysistr.* 758) derives its name from the fact that the guests, whilst the name was given to the child, walked or danced around it. This festival is sometimes called from the day on which it took place; if on the seventh day, it is called ἑβδομαί or ἑβδομας; if on the tenth day, δεκάτη, &c. (Hesych. and Aristoph. *Av.* 923; K. F. Hermann, *Lehrb. d. gottesdienstlichen Alterthümer d. Griechen*, § 48. n. 6.) [L. &.]

AMPHIMALLUM. [TAPES.]

AMPHIORCIA or AMPHOMO'SIA (ἀμφιορκία or ἀμφομοσία), the oath which was taken, both by the plaintiff and defendant, before the trial of a cause in the Athenian courts, that they would speak the truth. (Hesych. Suid.) According to Pollux (viii. 10), the amphiorcia also included the oath which the judges took, that they would decide according to the laws; or, in case there was no express law on the subject in dispute, that they would decide according to the principles of justice.

AMPHIPROSTYLOS. [TEMPLUM.]

AMPHISBETES/SIS (ἀμφισβήτησις.) [HERES.]

AMPHITAPAE. [TAPES.]

AMPHITHALAMUS. [DOMUS]

AMPHITHEATRUM (ἀμφιθέατρον) was a description of building arranged for the exhibition of combats of gladiators, and wild beasts, and ships, which constituted the *ludi amphitheatrales*. [GLADIATORS; VENATIO; NAUMACHIA.]

I. *Its History.* — Such exhibitions — which were peculiar to the Romans, and which were unknown to the Greeks till the Romans introduced them — originally took place in the FORUM and the CIRCUS, the shows of gladiators being given in the former, and those of wild beasts in the

latter; indeed the amphitheatre itself is sometimes called *circus*. The shape of the circus, however, was much better fitted for the chariot races, for which it was at first designed, than for the gladiatorial combats, and the more wholesale slaughter of animals, which, in process of time, came to be the favourite amusements of the Romans. For these purposes, the circus was too long and too narrow, and the spina was a great impediment, so that a new form of building was required, which should accommodate a multitude of spectators in such a manner as that all might have a good view of the space occupied by the combatants, which space too required to be of quite a different shape from the circus, as the combatants were to be kept as much as possible in the same place. The idea of such a building was suggested, as the name (from *ἀμφί*, on both sides, *θέατρον*, a theatre) seems to imply, by the existing theatre: indeed, the first amphitheatre of which we have any account—that of C. Scribonius Curio—was, literally, a double theatre*, being composed of two theatres, placed on pivots, so that they could be turned round, spectators and all, and placed either back to back, forming two separate theatres for dramatic exhibitions, or face to face, forming an amphitheatre, for the shows of gladiators and wild beasts. This edifice, which was erected by Curio (the celebrated partisan of Caesar), for the celebration of his father's funeral games, is described and somewhat vehemently commented upon by Pliny. (*H. N.* xxxvi. 15. a. 24. § 8.) The next amphitheatre, and apparently the first to which the name was applied, was built by Julius Caesar himself, during his perpetual dictatorship, in a. c. 46 (Dion Cass. xliii. 22, who thus describes the building: *Θέατρον τι κυρτῆγερὸν, ὃ καὶ ἀμφιθέατρον ἐκ τοῦ πέρι παρὰ ἄλλων ἔδρας ἄνευ σκηνῆς ἔχει προσεβλήθη*). This, however, was still only of wood, a material which was frequently used for theatres, and which was, therefore, naturally adopted for amphitheatres, but which sometimes proved inadequate to support the weight of the immense body of spectators, and thus occasioned serious accidents. For example, we are told that a wooden amphitheatre, which was built at Fidenæ in the reign of Tiberius by Atilius, a freedman, gave way, in consequence of the imperfections in the foundation and in the joints of the timbers, and buried either 20,000 or 50,000 spectators in its ruins. (Suet. *Tiber.* 40; Tac. *Ann.* iv. 63.) These wooden buildings were, of course, also exposed to great danger from fire; thus a wooden amphitheatre at Placentia was burned in the civil war between Otho and Vitellius. (Tac. *Hist.* ii. 20.)

It was not, however, till the fourth consulship of Augustus, a. c. 30, that a more durable amphitheatre, of stone, was erected by Statilius Taurus, in the Campus Martius. (Dion Cass. li. 23; Suet. *Octav.* 29; Tac. *Ann.* iii. 72; Strab. vi. p. 236.) But, since this building was destroyed by fire, it must be supposed that only the shell was of stone, and the seats and staircases of wood. This edifice was the only

one of the kind until the building of the Flavian amphitheatre. It did not satisfy Caligula, who commenced an amphitheatre near the Septa; but the work was not continued by Claudius. (Dion Cass. lix. 10; Suet. *Cal.* 18, 21.) Nero too, in his second consulship, a. d. 57, erected a vast amphitheatre of wood, but this was only a temporary building. (Suet. *Ner.* 12; Tac. *Ann.* xiii. 31.) The amphitheatre of Taurus was destroyed in the burning of Rome, a. d. 64 (Dion Cass. lxi. 18), and was probably never restored, as it is not again mentioned. It is still a question with the topographers whether any traces of it are now visible. (Comp. Becker, *Handb. d. Röm. Alter.* vol. i. pp. 642, 643, and Ulrichs, *Beschreibung Roms.* pp. 53, 54.†)

The erection of an amphitheatre in the midst of Rome, proportioned to the magnitude of the city, was among the designs of Augustus, who delighted in the spectacles of the venatio, and especially in the uncommon species and immense number of the animals exhibited in them; so that, as he himself informs us, in one of his venationes there were no less than 3500 animals slaughtered. (Suet. *Vesp.* 9; Aur. Vict. *Epit.* l; *Monum. Ancyr.*) It was not, however, till the reigns of Vespasian and Titus, that the design of Augustus was carried into effect by the erection of the *Amphitheatrum Flavium*, or, as it has been called since the time of Bede, the *Colosseum* or *Coliseum*, a name said to be derived from the Colossus of Nero, which stood close by.

This wonderful building, which for magnitude can only be compared to the pyramids of Egypt, and which is perhaps the most striking monument at once of the material greatness and the moral degradation of Rome under the empire, was commenced by Vespasian, but at what precise time is uncertain; for the genuineness of the medal, which is quoted by Lipsius, as placing its commencement in his eighth consulship, a. d. 77, is more than doubtful. (Rasche, *Lex. Univ. Rei Num.* vol. v. pt. 2. p. 1017; Eckhel, *Doctr. Num. Vet.* vol. vi. p. 840.) It was completed by Titus, who dedicated it in a. d. 80, when 5000 animals of different kinds were slaughtered. (Suet. *Tit.* 7; Dion Cass. lxxvi. 25.) From the somewhat obscure account of an old writer (*Catal. Imp. Vienn.* p. 243, Ronc.), we learn that Vespasian carried the building so far as to dedicate the first three ranges of seats, that Titus added two ranges more, and that Domitian completed the building *usque ad clypea*. Without professing to be able to explain these statements fully, we may observe that it is extremely probable, as will be seen more clearly from the description of the building, that Titus would dedicate the amphitheatre as soon as it was fit for use, without waiting for the final completion of the upper and less essential parts.

There is an ecclesiastical tradition, but not entitled to much credit, that the architect of the *Coliseum* was a Christian, and afterwards a martyr, named Gaudentius, and that thousands of the captive Jews were employed in its erection.

The Flavian amphitheatre, from its enormous

* As a mere matter of etymology, the word *θέατρον* (a place for beholding), would more strictly apply to the *amphitheatre*, which was intended exclusively for spectacle, while the *theatre*, which was for recitations accompanied by music, might be at least as fitly described by the word *φθεῖον*.

† In the lower eastern angle of the walls of Aurelian, near the church of S. Croce, are the remains of an amphitheatre, of brick, called in the *Notitia*, the *Amphitheatrum Castrense*. Its date is very uncertain. (See further Becker, *Handb. d. Röm. Alter.* vol. i. pp. 549, &c.)

size, rendered the subsequent erection of any other such building in Rome perfectly unnecessary. It became the spot where prince and people met together to witness those sanguinary exhibitions, the degrading effects of which on the Roman character can hardly be over-estimated. It was thoroughly repaired by Antoninus Pius. (Capit. *Ant. Pi.* 8.) In the reign of Macrinus, on the day of the Vulcanalia, it was struck by lightning, by which the upper rows of benches were consumed, and so much damage was done to other parts of the structure, that the games were for some years celebrated in the Stadium. (Dion Cass. lxxviii. 25.) Its restoration was commenced by Elagabalus and completed by Alexander Severus. (Lamprid. *Heliog.* 17; *Alar. Sev.* 24.) It was again struck by lightning in the reign of Decius (Hieron. p. 475), but was soon restored, and the games continued to be celebrated in it down to the sixth century. The latest recorded exhibition of wild beasts was in the reign of Theodoric. Since that time it has been used sometimes in war as a fortress, and in peace as a quarry, whole palaces, such as the Cancellaria and the Palazzo Farnese, having been built out of its spoils. At length the popes made efforts to preserve it: Sixtus V. attempted to use it as a woollen factory, and to convert the arcades into shops; Clement XI. enclosed the lower arcades, and, in 1750, Benedict XIV. consecrated it to Christians who had been martyred in it. The best accounts of the building are contained in the following works: Lipsius de *Amphitheatro*; Nibby, dell' *Amfiteatro Flavio*, a supplement to Nardini, vol. i. p. 233, in which we have the most complete historical account; Fea, *Notizie degli scavi nell' Amfiteatro Flavio*; Bunsen, *Beschreibung d. Stadt Rom.* vol. iii. p. 319, &c.; Cressy and Taylor, *The Architectural Antiquities of Rome*; Maffei, *Verona Illustrata*; Stieglitz, *Archäol. d. Baukunst*; Hirt, *Geschichte d. Baukunst bei den Alten*.

II. *Description of the Flavian Amphitheatre.* — Notwithstanding the damages of time, war, and spoliation, the Flavian amphitheatre still remains complete enough to give us a fair idea, excepting in some minor details, of the structure and arrangements of this description of building. The notices of the ancient authors are extremely scanty; and Vitruvius of course fails us here altogether; indeed, this description of building was so completely new in his time, that only once does the bare word *amphitheatrum* occur in his book (i. 7). We derive important aid from the remains of amphitheatres in the provinces of the ancient Roman empire. We shall first describe the Coliseum, and then mention the chief points of difference between it and these other amphitheatres.

The very site of the Flavian amphitheatre, as of most others, furnishes an example of the prodigal contempt of labour and expense which the Roman emperors displayed in their great works of architecture. The Greeks, in choosing the sites of their theatres, almost always availed themselves of some natural hollow on the side of a hill; but the Roman amphitheatres, with few exceptions, stand upon a plain. The site of the Coliseum was in the middle of the city, in the valley between the Caelius, the Esquiline, and the Velia, on the marshy ground which was previously the pond of Nero's palace, *stagnum Neronis* (Suet. *Vesp.* 9; Martial. *de Spect.* ii. 5). No mere measures can give an adequate conception of this vast structure, the dimensions

and arrangements of which were such as to furnish seats for 87,000 spectators, round an arena large enough to afford space for the combats of several hundred animals at once, for the evolutions of mimic sea-fights, and for the exhibition of artificial forests; with passages and staircases to give ingress and egress, without confusion, to the immense mass of spectators, and others for the attendants on the arena; dens for the thousands of victims devoted to destruction; channels for the rapid influx and outlet of water when the arena was used for a *naumachia*; and the means for the removal of the carcases, and the other abominations of the arena. Admirable pictures of the magnitude and magnificence of the amphitheatre and its spectacles are drawn in the *Essays* of Montaigne (iii. 6.), and in the latter part of Gibbon's twelfth chapter. As a general description of the building the following passage of Gibbon is perfect: — "It was a building of an elliptic figure, founded on four-score arches, and rising, with four successive orders of architecture, to the height of 140 [157] feet. The outside of the edifice was incrustured with marble, and decorated with statues. The slopes of the vast concave, which formed the inside, were filled and surrounded with sixty or eighty rows of seats, of marble likewise, covered with cushions, and capable of receiving with ease about 80,000 spectators. Sixty-four *vomitories* (for by that name the doors were very aptly distinguished), poured forth the immense multitude; and the entrances, passages, and staircases, were contrived with such exquisite skill, that each person, whether of the senatorial, the equestrian, or the plebeian order, arrived at his destined place without trouble or confusion. Nothing was omitted, which, in any respect, could be subservient to the convenience and pleasure of the spectators. They were protected from the sun and rain by an ample canopy, occasionally drawn over their heads. The air was continually refreshed by the playing of fountains, and profusely impregnated by the grateful scent of aromatics. In the centre of the edifice, the *arena*, or stage, was strewn with the finest sand, and successively assumed the most different forms. At one moment it seemed to rise out of the earth, like the garden of the Hesperides, and was afterwards broken into the rocks and caverns of Thrace. The subterraneous pipes conveyed an inexhaustible supply of water; and what had just before appeared a level plain, might be suddenly converted into a wide lake, covered with armed vessels, and replenished with the monsters of the deep. In the decoration of these scenes, the Roman emperors displayed their wealth and liberality; and we read on various occasions that the whole furniture of the amphitheatre consisted either of silver, or of gold, or of amber. The poet who describes the games of Carinus, in the character of a shepherd, attracted to the capital by the fame of their magnificence, affirms that the nets designed as a defence against the wild beasts were of gold wire; that the porticoes were gilded; and that the *belt* or circle which divided the several ranks of spectators from each other, was studded with a precious mosaic of beautiful stones."

The following ground-plan, external elevation, and section, are from Hirt, and contain of course some conjectural details. The ground plan is so arranged as to exhibit in each of its quarters the plan of each of the stories: thus, the lower right

AMPHITHEATRUM.

AMPHITHEATRUM.

85

hand quarter shows the true *ground-plan*, or that of the lowest story; the next on the left shows a plan of the erections on the level of the second row of exterior columns, as well as the seats which sloped down from that level to the lower one; the next quarter shows a similar plan of the third order,

and the upper right-hand quarter exhibits a view of the interior as it would appear to an eye looking vertically down upon it. The dotted lines on the arena are the radii, and their points of intersection the centres, of the several arcs which make up the ellipses.

GROUND PLAN OF THE FLAVIAN AMPHITHEATRE.

LONGITUDINAL ELEVATION OF THE FLAVIAN AMPHITHEATRE.

LONGITUDINAL SECTION OF THE FLAVIAN AMPHITHEATRE.

This structure, like all the other existing amphitheatres, is of an elliptical form. It covers nearly six acres of ground. The plan divides itself naturally into two concentric ellipses, of which the inner constituted the *arena* or space for the combats, while the ring between this and the outer circumference was occupied by the seats for the spectators. The lengths of the major and minor axes of these ellipses are, respectively, 287 feet by 180, and 620 feet by 513. The width of the space appropriated to spectators is, therefore, 166½ feet all round the building. The ratio of the diameters of the external ellipse is nearly that of 6 to 5, which becomes exactly the proportion, if we take in the substructions of the foundation. Of course, the ratio of the diameters of the *arena* is different, on account of the diminished size: it is, in fact, nearly as 8 to 5. The minor axis of the *arena* is here, and generally, about one-third of that of the outer ellipse. The material used was stone, in large blocks, fastened together, where necessary, by metal clamps. The exterior was faced with marble and adorned with statues. The external elevation requires little description. It is divided into four stories, corresponding to the tiers of corridors by which access was gained to the seats at different levels. These corridors are connected with the external air by eighty arched openings in each of the three lower stories. To the piers which divide these arches are attached three-quarter columns, that is, columns one-fourth of whose circumference appears to be buried in the wall behind them. Thus, each of the three lower stories presents a continuous façade of eighty columns backed by piers, with eighty open arches between them, and with an entablature continued unbroken round the whole building. The width of the arches is as nearly as possible the same throughout the building, namely, 14 feet 6 inches, except at the extremities of the diameters of the ellipse, where they are two feet wider. Each tier is of a different order of architecture, the lowest being a plain Roman Doric, or perhaps rather Tuscan, the next Ionic, and the third Corinthian. The columns of the second and third stories are placed on pedestals; those of the lowest story are raised from the ground by a few steps. The highest tier is of quite a different character, as it merely consists of a wall, without corridors, against which, instead of columns, are placed pilasters of the Corinthian order; and the wall between them is pierced with windows, in the alternate intercolumniations only, and therefore, of course, forty in number. The whole is crowned with a bold entablature, which is pierced with holes above the brackets which supported the feet of the masts upon which the *velarium* or awning was extended: and above the entablature is a small attic. The total height of that part of the building which remains entire, namely, about three-eighths of the whole circumference, is 157 feet: the stories are respectively about 30, 38, 38, and 44 feet high. The massiveness of the crowning entablature, the height of the upper story, and the great surface of blank wall in its intercolumniations, combine to give the elevation a somewhat heavy appearance; while the projecting cornices of each story, intercepting the view from below, take off very much from the apparent height of the building. Indeed, it would be a waste of words to attempt to specify all the architectural defects of the composition.

The stone used in the building is a species of travertine: some of the blocks are as much as five feet high, and eight or ten feet long; and it is remarkable, that all those which form the exterior have inscribed upon them small numbers or signs, which evidently indicate the place of each in the building, and which prove how great was the care taken to adapt every single stone to the form of the whole edifice. In some parts of the interior large masses of brickwork and tufa are seen: and in the upper part there are fragments of other buildings worked in; but this, no doubt, happened in some of the various repairs.

There are coins extant, bearing on the reverse a view of the amphitheatre, so arranged as to show not only the outside, but a portion of the interior also. It is from them that we learn the fact, that the outer arches of the second and third stories were decorated with statues in their openings, unless, indeed, the figures shown in the arches are meant for rude representations of the people passing through the outer colonnade. These coins also show, on the highest story, in the alternate spaces between the pilasters, circles against the wall, corresponding to the windows in the other alternate spaces; they are, perhaps, the *dyceæ* mentioned by the old author cited above, that is, ornamental metal shields, hung there to decorate the building. There are several coins of Titus and Domitian of this type (Eckhel, *Doctr. Num. Vet.* vol. vi. pp. 357—359, 375). There are similar coins of Gordian, which are, however, very inferior in execution to those of Titus and Domitian. (Eckhel, vol. vii. p. 271.) The coins of Titus and Domitian also show a range of three stories of columns by the side of the amphitheatre, which (though the matter is doubtful) is supposed to represent a colonnade which ran from the palace of Titus on the Esquiline to the amphitheatre, to which it gave access at the northern extremity of its minor axis, as shown on the plan. At the other extremity of this axis was the entrance from the Palatine.

The eighty arches of the lower story (except the four at the extremities of the axes) formed the entrances for the spectators, and gave admission to a corridor, running uninterruptedly round the building, behind which again is another precisely similar corridor. (See the plan and section.) The space behind the second corridor is divided by eighty walls, radiating inwards from the inner piers of the second corridor; which support the structure, and between which are partly staircases leading to the upper stories, and partly passages leading into a third corridor, which, like the first and second, runs round the whole building. Beyond this corridor the radiating walls are again continued, the spaces between them being occupied, as before, partly by staircases leading on the one side to the *podium*, and on the other to the lower range of seats (*macernianum*), and partly by passages leading to a fourth continuous corridor much lower and smaller than the others, which was divided from the *arena* by a massive wall (called *podium*), the top of which formed the place assigned to the spectators of the highest rank. From this fourth corridor there are several entrances to the *arena*; and it is most probable that the whole of the corridor was subservient to the arrangements of the *arena*. (See the lower right-hand quarter of the plan, and the section.) On

the second story we have the two outer colonnades repeated, and the radiating walls of the first block are continued up through this story; and between them are staircases leading out on to the second range of seats, and passages leading into a small inner corridor, from which access is obtained to a sort of terrace (*præcinctio*) which runs round the building between the first and second ranges of seats, and increases the facilities for the spectators getting to their proper places. Sloping down from this *præcinctio* to the level of the top of the *podium*, and supported by the inner series of radiating walls, are the lower series of seats. On the third story (above the floor of which the details are almost entirely conjectural), we have again the double colonnade, the inner wall of which rises immediately behind the top of the second range of seats, with only the interval of a narrow *præcinctio*, to which access was given by numerous doors in the wall just mentioned, which

was also pierced with windows. Above the outer corridor of this story is a mezzanine, or small middle story, in front of which and above the inner colonnade were a few tiers of wooden benches for the lowest class of spectators. Above this mezzanine was a gallery, which ran right round the building, and the front of which is supposed to have been formed by a range of columns. It seems that the terrace formed by the top of this gallery would be also available for spectators. And, lastly, the very summit of the wall was formed into a sort of terrace which was, no doubt, occupied by the men who worked the ropes of the *velarium*. The doors which opened from the staircases and corridors on to the interior of the amphitheatre were designated by the very appropriate name of *vomitoria*. The whole of the interior was called *cavea*. The following section (from Hirt) exhibits these arrangements as clearly as they can be shown without the aid of perspective.

SECTION OF THE CORRIDORS, STAIRS, AND SEATS.

- I. II. III. IV. The four stories of the exterior.
 A. The arena.
 B. The podium.
 C. D. E. F. The four corridors.
 G. H. I. The three maceniana.
 K. The upper gallery; L. The terrace over it

- R. The space on the summit of the wall for the managers of the velarium.
 Z. The steps which surrounded the building on the outside.
 α. Stairs from the third colonnade to the podium.

b. Short transverse steps from the podium to the first maenianum. (Compare the plan.)

c, d. Stairs from the ground story to the second; whence the second maenianum was reached in two ways, c. and g.

e. Steps to the first praecinctio, from which there were short transverse steps (f) to the second maenianum.

g. Stairs leading direct from the corridors of the second story to the second maenianum, through the vomitorium a.

h. Stairs leading from the floor of the second story to the small upper story, whence other stairs (3) led to the third story, from which access was obtained to the upper part of the second maenianum by doors (β) in the inner wall of the second corridor q.

k. Stairs from the second story to the mezzanine, or middle story, whence access was obtained to the third maenianum by passages (γ).

l. Stairs in the mezzanine, leading to the upper part of the third maenianum, and to the gallery K.

m. Steps from the gallery to the terrace over it.

n. Steps from that terrace to the summit.

o. p. Grated openings to light the two inner corridors.

q. See under h.

r. Windows to light the mezzanine.

t. Windows of the gallery.

v. Rest, and w. loop, for the masts of the velarium g.

The arena was surrounded by a wall of sufficient height to guard the spectators against any danger from the wild beasts, namely about fifteen feet. A further protection was afforded, at least sometimes, by a network or trellis of metal; and it is mentioned, as an instance of the profuse ostentation which the emperors were so fond of displaying, that Nero, in his amphitheatre, had this trellis gilt, and its intersections ornamented with bosses of amber. (Plin. *H. N.* xxxvii. 3. s. 11. § 2). The wall just mentioned appears to have been faced with marble, and to have had rollers suspended against it as an additional protection against the possibility of the wild beasts climbing it. (Lips. *de Amph.* 12.) The terrace on the top of this wall, which was called *podium* (a name sometimes also applied to the wall itself), was no wider than to be capable of containing two, or at the most three ranges of moveable seats, or chairs. This, as being by far the best situation for distinctly viewing the sports in the arena, and also more commodiously accessible than the seats higher up, was the place set apart for senators and other persons of distinction, such as the ambassadors of foreign states (Suet. *Octav.* 44; Juv. *Sat.* ii. 143, &c.); the magistrates seem to have sat here in their curule chairs (Lipsius *de Amph.* 11); and it was here, also, that the emperor himself used to sit, in an elevated place called *suggestus* (Suet. *Caes.* 76; Plin. *Paneg.* 51), or *subiculum* (Suet. *Nero*, 12); and likewise the person who exhibited the games, on a place elevated like a pulpit or tribunal (*editoris tribunal*). The vestal virgins also appear to have had a place allotted to them on the podium. (Suet. *Octav.* 44).

Above the podium were the *gradus*, or seats of the other spectators, which were divided into stories called *maeniana*. The whole number of seats is supposed to have been about eighty. The first *maenianum*, consisting of fourteen rows of stone of

marble seats, was appropriated to the equestrian order. The seats appropriated to the senators and equites were covered with cushions (*pulvilli*), which were first used in the time of Caligula. (Juv. *Sat.* iii. 184; Dion, lix. 7.) Then, after a horizontal space, termed a *praecinctio*, and forming a continued landing-place from the several staircases which opened on to it, succeeded the second *maenianum*, where were the seats called *popularia* (Suet. *Domitian.* 4), for the third class of spectators, or the *populus*. Behind this was the second *praecinctio*, bounded by the high wall already mentioned; above which was the third *maenianum*, where there were only wooden benches for the *pullati*, or common people. (Suet. *Octav.* 44.) The open gallery at the top was the only part of the amphitheatre, in which women were permitted to witness the games, except the vestal virgins, and perhaps a few ladies of distinction and influence who were suffered to share the space appropriated to the vestals (Suet. *Octav.* 44). The seats of the *maeniana* did not run in unbroken lines round the whole building, but were divided into portions called *cunei* (from their shape), by short flights of stairs which facilitated the access to the seats. (Suet. *Oct.* 44; Juv. *Sat.* vi. 61.) See the plan, and the annexed section of a small portion of the seats.

Not only were the different ranges of seats appropriated to different classes of spectators, but it is pretty certain also that the different *cunei* of each *maenianum* were assigned to specific portions of the people, who were at once guided to their places by numbers placed over the external arches by which the building was entered: these numbers still exist. The office of preserving order in the distribution of the places was assigned to attendants called *locarii*, and the whole management was under the superintendence of the *villius amphitheatri*.

It only remains to describe the *arena*, or central open space for the combatants, which derived its name from the sand with which it was covered, chiefly for the purpose of absorbing the blood. Such emperors as Caligula, Nero, and Carinus, showed their prodigality by using cinnamon and borax instead of the common sand. It was bounded, as already stated, by the wall of the podium, but in the earlier amphitheatres, in which the podium was probably not so lofty, there were ditches (*euripi*) between it and the arena, which were chiefly meant as a defence against the elephants. The *euripi* were first made by Julius Caesar, and were dispensed with by Nero, in

order to gain space for the spectators. (Suet. *Cæs.* 39; Plin. *H. N.* viii. 7; Lipsius *de Amph.* 12.)

The space of the arena was entirely open, except that perhaps there was, in the centre, an altar of Diana, or Pluto, or of Jupiter Latiaris, on which, it is inferred from some passages of the ancient authors, that a *bestiarius* was sacrificed at the opening of the games; but the evidence is very slight. (Lips. *de Amph.* 4.) There were four principal entrances to it, at the extremities of the axes of the ellipse, by passages which led directly from the four corresponding arches of the exterior: there were also minor entrances through the wall of the *podium*. There is a difficulty about the position of the dens of the wild beasts. The rapidity with which vast numbers of animals were let loose into the arena proves that the dens must have been close to it. The spaces under the seats seem to have been devoted entirely to the passage of the spectators, with only the exception of the innermost corridor, the entrances from which to the arena suggest the probability that it was subsidiary to the arena; but, even if so, it was probably used rather for the introduction and removal of the animals, than for their safe keeping. Some have supposed dens in the wall of the *podium*; but this is quite insufficient. In the year 1813, the arena was excavated, and extensive substructions were discovered, which, it has been supposed, were the dens, from which the animals were let loose upon the arena through trap-doors. The chief difficulty is to reconcile such an arrangement with the fact that the arena was frequently flooded and used for a naval combat, and that too in the intervals between the fights of wild-beasts. (Calpurn. *Eclóg.* vii. 64, 73: the whole poem is a very interesting description of the games of the amphitheatre.) [NAUMACHIA.] All that can be said with any approach to certainty is, that these substructions were either dens for the animals, or channels for water, and possibly they may have been so arranged as to combine both uses, though it is difficult to understand how this could have been managed. The only method of solving the difficulty in those cases in which a *naumachia* took place between the *venationes*, appears to be, to assume that the animals intended for the second *venatio* were kept in the innermost colonnade, or in dens in its immediate vicinity during the *naumachia*; unless, which seems to us quite incredible, there was any contrivance for at the same time admitting the air to, and excluding the water from, their cells beneath the arena. In the amphitheatre at Verona, there are remains of channels for water under the arena, communicating with an opening in its centre; but some antiquaries believe that these were only intended for draining off the rain water.

It is unnecessary to attempt a detailed description of the statues and other ornaments with which the amphitheatre was adorned; but the *velarium*, or awning, by which the spectators were sheltered from the sun, requires some explanation, which will be found under VELUM. The space required for the working of the *velarium*, and the height necessary for keeping it from bending down by its own weight so low as to obstruct the view from the upper benches, are probably the reasons for the great disproportion between the height of the upper part of the amphitheatre, and the small number of spectators accommodated in that part.

The luxurious appliances of fountains of scented water to refresh the spectators, and so forth, are sufficiently described in the passage already quoted from Gibbon. (Comp. Lucan. ix. 808).

III. *Other Amphitheatres.*—The Flavian amphitheatre, as has been already stated, was, from the time of its erection, the only one in Rome; for the obvious reason that it was sufficient for the whole population. The little *Amphitheatrum Cæsarense* was probably only intended for the soldiers of the guard, who amused themselves there with fights of gladiators. But in the provincial cities, and especially the colonies, there were many amphitheatres. Indeed, it is not a little interesting to observe the contrast between the national tastes of the Greeks and Romans, which is indicated by the remains of theatres in the colonies of the former, and of amphitheatres in those of the latter. The immense expense of their construction would, however, naturally prevent the erection of many such buildings as the Coliseum. (Cassiod. *Ep.* v. 42.) The provincial amphitheatres were, probably, like the earlier ones at Rome itself, generally built of wood, such as those at Placentia and Fidenæ, already mentioned. Of these wooden amphitheatres there are of course no remains; but in several of the larger cities of the Roman empire there are important ruins of large amphitheatres of stone. The principal are those at Verona, Paestum, Pompeii, and Capua, in Italy; at Nîmes, Arles, and Frejus, in France; at Pola, in Istria; at Syracuse, Catania, and some other cities in Sicily. They are all constructed on the same general principles as the Coliseum, from which, again, they all differ by the absence of the outermost corridor; and, consequently, their height could not have exceeded three stories; while some of them only had two. Of the Veronese amphitheatre, the outer wall and colonnade are entirely gone, excepting four arches; but the rest of the building is almost perfect. When complete, it had seventy-two arches in the outer circle, and, of course, the same number of radiating walls, with their passages and staircases; the lengths of the axes of the outer ellipse were 500 and 404 feet, those of the arena, 242 and 146. It was probably built under Domitian and Nerva. (Maffei, *Verona Illustrata.*) The next in importance is that at Nîmes, the outer dimensions of which are computed at 434 by 340 feet. "The exterior wall, which is nearly perfect, consists of a ground story and upper story, each pierced with sixty arches, and is surmounted by an attic. Its height, from the level of the ground, is above 70 English feet. The lower or ground story is adorned with pilasters, and the upper with Tuscan or Doric columns. The attic shows the holes destined to receive the posts on which was stretched the awning that covered the amphitheatre. The rows of seats are computed to have been originally 32 in number. There were four principal entrances. The amphitheatre has been computed to hold 17,000 persons: it was built with great solidity, without cement." (*Pen. Cyclop.* art. *Nîmes.*) That at Arles was three stories high, and has the peculiarity of being built on uneven ground, so that the lowest story is, for the most part, below the level of the surface, and the principal entrances are on the second story. (For a detailed description, see Guis, *Description de l'Amphithéâtre d'Arles*, 1665; and *Pen. Cyclop.*

art. *Aries*.) Both these amphitheatres belong probably to the time of the Antonines. (Maffei, *de Amp. Gall.*) The amphitheatre at Pola stands on the side of a hill, and is higher on one side than on the other. There is little to remark respecting the other amphitheatres, except that a fragment of an inscription, found in that at Capua, informs us that it was built under Hadrian, at the cost of the inhabitants of the city, and was dedicated by Antoninus Pius; and, concerning that of Pompeii, that the earthquake, which preceded the eruption by which the city was buried, injured the amphitheatre so much, that antiquarians have been disappointed in looking for any new information from it; there is an excellent description of it in the work entitled *Pompeii*, vol. i. c. 9. There are traces of amphitheatres of a ruder kind, chiefly of earth, in various parts of our own country, as at Dorchester, Silchester, Caerleon, and Redruth.

IV. *Uses of the Amphitheatres.*—This part of the subject is treated of under GLADIATOIRES, NAUMACHIA, and VENATIONES. This is not the place to discuss the influence of the spectacles of the amphitheatre on the character and destinies of the Roman people: some good remarks on the subject will be found in the *Library of Entertaining Knowledge, Menageries*, vol. ii. c. 12. [P. S.]

AMPHOMOSIA. [AMPHIOKIA.]

AMPHORA (ἀμφορεύς, old form ἀμφιφορεύς, Hom. *Il.* xxiii. 107; *Od.* x. 164, *et alib.*; *Schol.* in *Apoll. Rhod.* iv. 1187; Simon. in *Anth. Pal.* xiii. 19). A large vessel, which derived its name from its being made with a handle on each side of the neck (from ἀμφι, *on both sides*, and φέρω *to carry*), whence also it was called *diota*, that is, a vessel with two ears (διωτος, διωτος στάμνος or κδδισκος, Plat. *Hipp. Maj.* p. 288, d.; *Ath.* xi. p. 473; *Moeris s. v. ἀμφορέα*; *Hor. Carm.* i. 9. 8). The form and size varied, but it was generally made tall and narrow, and terminating in a point, which could be let into a stand or into the ground, to keep the vessel upright; several amphorae have been found in this position in the cellars at Pompeii. The following cut represents amphorae from the Townley and Elgin collections in the British Museum.

The usual material of the amphora was earthenware (*Hor. de Ar. Poët.* 21), whence it was also called *testa* (*Curm.* i. 20. 2): but Homer mentions them of gold and of stone (*Il.* xxiii. 92; *Od.* xxiv. 74, xiii. 105): and in later times glass amphorae were not uncommon (*Petron.* 34); several have been found at Pompeii: *Nepos* mentions, as a great rarity, amphorae of onyx, as large as Chian *cadi* (*ap. Plin. H. N.* xxxvi. 7. a. 12). The amphora was often made without handles. The name of the maker, or of the place of manufacture, was sometimes stamped upon them: this is the case with two in the Elgin collection, Nos. 238 and 244. [FICTILE.]

Amphorae were used for the preservation of various things which required careful keeping, such as wine, oil, honey, grapes, olives, and other fruits (*Hom. Il.* xxiii. 170; *Cato, R. R.* x. 2; *Colum. R. R.* xii. 16, 47; *Hor. Epod.* ii. 15; *Cic. c. Verr.* iv. 74); for pickled meats (*Xen. Anab.* v. 4. § 28); and for molten gold and lead (*Herod.* iii. 96; *Nepos, Hann.* 9). There is in the British Museum a vessel resembling an amphora, which contains the fine African sand used by the athletes. It was found, with seventy others, in the baths of Titus, in 1772. Respecting the use of the amphora in the streets of Rome, see *Petron.* 70, 79; *Propert.* iv. 5. 73; *Macrob. Sat.* ii. 12; and the commentators on *Lucretius*, iv. 1023. *Homer* and *Sophocles* mention amphorae as used for cinerary urns (*Il.* xxiii. 91, 92; *Soph. Fr.* 303, *Dind.*); and a discovery was made at Salona, in 1825, which proves that they were used as coffins: the amphora was divided in half in the direction of its length to receive the corpse, and the two halves were put together again and buried in the earth: the skeletons were found still entire. (*Steinbüchel, Alerthum.* p. 67.) Amphorae of particular kinds were used for various other purposes, such as the *amphora nasiterna* for irrigation (*Cato, R. R.* 11. § 3), and the *amphora spartea*, which was perhaps a wicker amphora for gathering grapes in. (*Ibid.* § 2.)

The most important employment of the amphora was for the preservation of wine: its use for this purpose is fully described under VINUM. The following woodcut, taken from a painting on the wall of a house at Pompeii, represents the mode of filling the amphora from a wine-cart.

There is an interesting account of the use of the amphora among the Egyptians, in *Sir G. Wilkinson's Ancient Egyptians*, vol. ii. pp. 157—160.

The name *amphora* was also applied both by the Greeks and the Romans to a definite measure of capacity, which, however, was different among the two peoples, the Roman amphora being only two-thirds of the Greek ἀμφορεύς. In both cases the word appears to be an abbreviation, the full phrase being in Greek ἀμφορεύς μετρητής (*the standard amphora*), and in Latin *amphora quadrantal* (*the cubic amphora*). Respecting the measures themselves, see ΜΕΤΡΕΤΕΣ, QUADRANTAL. At Rome a standard amphora, called *amphora Capitolina*, was kept in the temple of Jupiter on the Capitol (Rhenn. Fann. *de Pond.* 61; Capitol. Marim. 4). The size of ships was estimated by amphorae (Cic. *ad Fam.* xii. 15; Liv. xxi. 63); and the produce of a vineyard was reckoned by the number of *amphorae*, or of *culei* (of twenty *amphorae* each), which it yielded. [P.S.]

AMPLIATIO. [JUDICIUM.]

AMPULLA (ἀλκυθος, βομβύλιος), a bottle, usually made either of glass or earthenware, rarely of more valuable materials. Bottles both of glass and earthenware are preserved in great quantities in our collections of antiquities, and their forms are very various, though always narrow-mouthed, and generally more or less approaching to globular. From their round and swollen shape, Horace applies the word, as the Greeks did ἀλκυθος, to indicate grand and turgid, but empty, language. (Hor. *Ep.* i. 3. 14, *de Ar. Poët.* 97.) Bottles were used for holding all kinds of liquids, and are mentioned especially in connection with the bath. Every Roman took with him to the bath a bottle of oil (*ampulla olearia*), for anointing the body after bathing, and as such bottles frequently contained perfumed oils we read of *ampullae cosmeticæ*. (Mart. iii. 82. 26.) A bottle of this kind is figured under BALNEUM.

The dealer in bottles was called *ampullarius*, and part of his business was to cover them with leather (*corium*). A bottle so covered was called *ampulla rubida*. (Plaut. *Rud.* iii. 4. 51, *Stich.* ii. 1. 77. compared with Festus, s. v. *Rubida*.)

AMPYX, AMPYCTER (ἀμπύξ, ἀμπυκτήρ), called by the Romans *frontale*, was a broad band or plate of metal, which Greek ladies of rank wore upon the forehead as part of the head-dress. (Il. xiii. 468—470; Aeschyl. *Supp.* 431; Theocr. i. 33.) Hence it is attributed to the female divinities. Artemis wears a frontal of gold (χρυσέαν ἀμπύκτα, Eurip. *Hec.* 464); and the epithet χρυσάμπυκτες is applied by Homer, Hesiod, and Pindar to the Muses, the Hours, and the Fates. From the expression τὰν χρυσάμπυκτα ὀφείαν in a fragment of Pindar, we may infer that this ornament was sometimes made of blue steel (κύανος) instead of gold; and the Scholiast on the above cited passage of Euripides asserts, that it was sometimes enriched with precious stones.

The *frontal* of a horse was called by the same name, and was occasionally made of similar rich materials. Hence, in the Iliad, the horses which draw the chariots of Hera and of Ares are called χρυσάμπυκτες.

The annexed woodcut exhibits the frontal on the head of Pegasus, taken from one of Sir William Hamilton's vases, in contrast with the corresponding ornament as shown on the heads of two females in the same collection.

Frontals were also worn by elephants. (Liv. xxvii. 40.) Hesychius (s. v. Ἀνδρίη Νόμψ) sup-

poses the men to have worn frontals in Lydia. They appear to have been worn by the Jews and other nations of the East. (Deut. vi. 8, xi. 18.) [J. Y.]

AMULETUM (περιαπτον, περιαμμα, φυλακτήριον), an amulet. This word in Arabic (Hamalet) means *that which is suspended*. It was probably brought by Arabian merchants, together with the articles to which it was applied, when they were imported into Europe from the East. It first occurs in the Natural History of Pliny.

An amulet was any object—a stone, a plant, an artificial production, or a piece of writing—which was suspended from the neck, or tied to any part of the body, for the purpose of counteracting poison, curing or preventing disease, warding off the evil eye, aiding women in childbirth, or obviating calamities and securing advantages of any kind.

Faith in the virtues of amulets was almost universal in the ancient world, so that the whole art of medicine consisted in a very considerable degree of directions for their application; and in proportion to the quantity of amulets preserved in our collections of antiquities, is the frequent mention of them in ancient treatises on natural history, on the practice of medicine, and on the virtues of plants and stones. Some of the amulets in our museums are merely rough unpolished fragments of such stones as amber, agate, cornelian, and jasper; others are wrought into the shape of beetles, quadrupeds, eyes, fingers, and other members of the body. There can be no doubt that the selection of stones either to be set in rings, or strung together in necklaces, was often made with reference to their reputed virtues as amulets. (Plin. *H. N.* xxv. 9. s. 67, xxix. 4. s. 19, xxx. 10. s. 24., xxxvii. 8. s. 37.) [FASCINUS.] [J. Y.]

AMUSSIS or AMUSSIUM, a carpenter's and mason's instrument, the use of which was to obtain a true plane surface; but its construction is difficult to make out from the statements of the ancient writers. It appears clearly from Vitruvius (i. 6. § 6) that it was different from the *regula* (straight rule), and from the *libella* (plumbline or square), and that it was used for obtaining a truer surface, whether horizontal or perpendicular, than those two instruments together would give. It is defined by the grammarians as a *regula* or *tabula*, made perfectly plane and smooth, and used for making work level and for smoothing stones (*Regula ad quam aliquid exaequatur*, Festus, s. v.; *amussis est aequamentum levigatum, et est apud fabros tabula quaedam, qua utuntur ad saxa leviganda*, Varr. *ap. Non.* i. 28); and another grammarian very clearly

describes it as a plane surface, covered with red ochre, which was placed on work, in order to test its smoothness, which it of course did by leaving the mark of the red ochre on any projections. (*Amussis est tabula rubricata quae demittitur examinandi operis gratia, an rectum opus surgat*, Sisenna, *ap. Charis.* ii. p. 178, Putsch). There was also a difference of opinion among the grammarians, whether the amussis was only an instrument for trying a level, or a tool for actually making one (Festus, *s. v. Examussim*). The amussis was made sometimes of iron (Fest. *ibid.*), and sometimes of marble (Vitruv. l. c.). It gives rise to the adverbs *amussim*, *adamussim*, and *examussim*, meaning with perfect regularity and exactness. (See Forcellini, *Lexicon*.) [P. S.]

AMU'SSIUM. [AMUSSIS.]

ANADE'MA. [MITRA.]

ANADI'KIA (*ἀναδικία*). [APELLATIO.]

ANA'GLYPHA or ANAGLYPTA (*ἀνάγλυφα*, *ἀνάγλυπτα*), chased or embossed vessels made of bronze or of the precious metals, which derived their name from the work on them being in relief, and not engraved. (Plin. *H. N.* xxxiii. 11. s. 49; Virg. *Aen.* v. 267; Martial. iv. 39; CARLATURA; TOREUTICE.) The name was also applied to sculptured gems. [P. S.]

ANAGLYPTA. [ANAGLYPHA.]

ANAGNOSTAE, also called *Lectores*, were slaves, who were employed by the educated Romans in reading to them during meals or at other times. (Cic. *ad Att.* i. 12; Corn. Nep. *Att.* 14; Plin. *Ep.* i. 15, iii. 5, ix. 36.)

ANAGO'GES DIKE' (*ἀναγωγῆς δίκη*). If an individual sold a slave who had some secret disease—such, for instance, as epilepsy—without informing the purchaser of the circumstance, it was in the power of the latter to bring an action against the vendor within a certain time, which was fixed by the laws. In order to do this, he had to report (*ἀνγγεῖν*) to the proper authorities the nature of the disease; whence the action was called *ἀναγωγῆς δίκη*. Plato supplies us with some information on this action; but it is uncertain whether his remarks apply to the action which was brought in the Athenian courts, or to an imaginary form of proceeding. (Plat. *Leg.* xi. p. 916; Hesych. *s. v. ἀναγωγῆς*; Suid. *s. v. ἀναγωγῆς*, *ἀνγγεῖσθαι*; Meier, *Att. Process.* p. 525.)

ANAGO'GIA (*ἀναγωγή*), a festival celebrated at Eryx, in Sicily, in honour of Aphrodite. The inhabitants of the place believed that, during this festival, the goddess went over into Africa, and that all the pigeons of the town and its neighbourhood likewise departed and accompanied her. (Aelian, *Hist. An.* iv. 2, *V. H.* i. 14; Athen. ix. p. 394.) Nine days afterwards, at the so-called *καταγωγή* (return), one pigeon having returned and entered the temple, the rest followed. This was the signal for general rejoicing and feasting. The whole district was said at this time to smell of butter, which the inhabitants believed to be a sign that Aphrodite had returned. (Athen. ix. p. 395; comp. K. F. Hermann, *Lehrb. d. gottesdienst. Alterth. d. Griechen*, § 68. n. 29.) [L. S.]

ANAKEIA (*ἀνάκεια*) or ANAKEION (*ἀνάκειον*), a festival of the Dioscuri, or *Ἀνακτες*, as they were called, at Athens. (Hesych. vol. i. p. 325; Pollux, i. 37.) Athenaeus (*vi.* p. 235) mentions a temple of the Dioscuri called *Ἀνάκειον*, at Athens; he also informs us (*iv.* p. 137) that

the Athenians, probably on the occasion of this festival, used to prepare for these heroes in the Prytaneum a meal consisting of cheese, a barley-cake, ripe figs, olives, and garlic, in remembrance of the ancient mode of living. These heroes however, received the most distinguished honours in the Dorian and Achaean states, where it may be supposed that every town celebrated a festival in their honour, though it may not have been under the name of *ἀνάκεια*. Pausanias (x. 38. 3) mentions a festival held at Amphissa, called that of the *ἀνδκτων παιδων*; but adds that it was disputed whether they were the Dioscuri, the Curetes, or the Cabeiri. (K. F. Hermann, *Lehrb. d. gottesdienst. Alterth. d. Griechen*, § 62. n. 27.) [L. S.]

ANAKEI'MENA (*ἀνακείμενα*). [DONARIA.]

ANAKLETE'RIA (*ἀνακλητήρια*), the name of a solemnity at which a young prince was proclaimed king, and ascended the throne. The name was chiefly applied to the accession of the Ptolemaic kings of Egypt. (Polyb. *Reliq.* xviii. 38, xxviii. 10.) The prince went to Memphis, and was there adorned by the priests with the sacred diadem, and led into the temple of Phtha, where he vowed not to make any innovations either in the order of the year or of the festivals. He then carried to some distance the yoke of Apis, in order to be reminded of the sufferings of man. Rejoicings and sacrifices concluded the solemnity. (Diod. *Fragm.* lib. xxx.) [L. S.]

ANAKLYPTE'RIA. [MATRIMONIUM.]

ANA'KRISIS (*ἀνάκρισις*), the preliminary investigation of a case by a magistrate or archon, before it was brought before the courts of justice at Athens. For the purpose of ascertaining whether the action would lie, both parties, the complainant and defendant, were summoned, separately, and if either of them did not appear without a formal request to have the matter delayed (*ἠνωμοσία*), he tacitly pleaded guilty, and accordingly lost the suit. (Demosth. *c. Theocr.* p. 1324.) The anacrisis began by both the plaintiff and the defendant taking an oath, the former thereby attesting that he had instituted the prosecution with truth and conscientiousness (*πρωμοσία*), and the latter, that to the best of his knowledge he was innocent (*ἀντωμοσία*). (Timaeus, *Lex. Plat.* p. 38, with Ruhnkens's note; Diog. Laert. ii. 40; Plat. *Apol. Socr.* 3.) It was further promised by both, that the subsequent prosecution and defence should be conducted with fairness and justice. (Harpocrat., Suid., Hesych. *s. v. ἀντωμοσία*; Pollux, viii. 122.) If the defendant did not bring forward any objection to the matter being brought before a court of justice, the proceeding was termed *εὐθὺς δίκη*. (Demosth. *c. Phorm.* p. 908, *c. Steph.* p. 1103.) Such objections might be raised in regard to the incompetency of the court to which the matter was to be referred, or in regard to the form in which the accusation was brought forward, and the like (Lys. *c. Pancr.* p. 732; Pollux, viii. 57); they were always looked upon with suspicion (Demosth. *c. Leoch.* p. 1097, *p. Phorm.* p. 944); but, nevertheless, they were not unfrequently resorted to by defendants, either in the form of a *διαμαρτυρία*, or that of a *παραγραφή*. In the case of a *διαμαρτυρία*, the plaintiff had to bring forward witnesses to show that the objections raised by the defendant were unfounded; and if this could not be done, the defendant had a right to bring witnesses to show that his objections

were founded on justice, and in accordance with the laws. But each of the litigant parties might denounce the witnesses of his opponent as false witnesses, and thus a secondary lawsuit might be interwoven with the principal one. If the *διαμαρτυρία* was resorted to in a civil case, the party who made use of it had to deposit a sum of money (*παράκαταβολή*), and when the plaintiff lost his suit, he had to pay to the defendant a fine for having raised an accusation without foundation. In lawsuits about the succession to the property of a person, the *διαμαρτυρία* was the only form in which objections could be raised. (Bekker, *Anecd.* p. 236.) The *παράγραφη* was an objection in writing, which was made by the defendant, without his employing any witnesses, and which was decided upon in court; and in this, also, the loser had to pay a fine to the party that gained the suit. (Pollux, viii. 58.) When the plaintiff gained his case, the prosecution proceeded in its regular course. The *ἀντιγραφή*, however, might be something more than a mere objection, inasmuch as the defendant might turn against the plaintiff, and raise an accusation against him. Such an accusation very commonly consisted in the defendant charging his accuser with having no right to claim the privileges of an Athenian citizen, in consequence of which the latter was prevented from exercising those privileges until he had established his claims to them. This kind of *ἀντιγραφή* was frequently a mere device to annoy the plaintiff.

These are, in general, the proceedings in the *ἀνὰκρισις*: and from what thus took place, it is clear that the main part of the evidence on both sides was brought out in the *ἀνὰκρισις*, and at the regular trial in court the main object was to work upon the minds of the judges through the influence of the orators, with reference to the evidence brought out in the *ἀνὰκρισις*. The latter, therefore, consisted of the simple evidence which required no oratorical discussion, and which was contained, — 1. in laws; 2. in documents; 3. in the statement of free witnesses; 4. in the statement of slaves; and 5. in oaths. In all these kinds of evidence, one party might have recourse to the *πρόκλησις*, that is, call upon the other party to bring forward such other evidence as was not already given. (Demosth. *c. Steph.* p. 1006, *c. Theocr.* p. 987, *c. Pantæn.* p. 978.) There was, however, no strict obligation to comply with such a demand (Demosth. *c. Olymp.* p. 1181), and in certain cases the party called upon might, in accordance with established laws, refuse to comply with the demand; for instance, persons belonging to the same family could not be compelled to appear as witnesses against one another. (Demosth. *c. Tim.* p. 1195.) But if the reading of a document, throwing light upon the point at issue, was refused, the other party might bring in a *δική eis ἑσφαιρὸν κατάδοτασις*.

In regard to the laws which either party might adduce in its support, it must be observed, that copies of them had to be read in the *anacrisis*, since it would have been difficult for any magistrate or judge to fix, at once, upon the law or laws bearing upon the question at issue. In what manner the authorities were enabled to insure faithful and correct copies being taken of the laws, is not known; but it is highly probable that any one who took a copy in the archives, had to get

the signature of some public officer or scribe to attest the correctness of the copy.

Other legal documents, such as contracts (*συνθήκαι, συγγραφαί*), wills, books of accounts, and other records (Demosth. *p. Phorm.* p. 950), not only required the signature and seal of the party concerned, but their authenticity had to be attested by witnesses. (Demosth. *c. Onet.* p. 869.)

Evidence (*μαρτυρία*) was given not only by free-born and grown-up citizens, but also by strangers or aliens (Demosth. *c. Laert.* pp. 927, 929, 930, 937), and even from absent persons evidence might be procured (*ἐκμαρτυρία*, Demosth. *c. Steph.* p. 1130; Pollux, viii. 36), or a statement of a deceased person might be referred to (*ἀκοήν μαρτυρεῖν*, Demosth. *c. Steph.* p. 1130, *c. Leach.* p. 1097). If any one was called upon to bear witness (*καλητένειν*), he could not refuse it; and if he refused, he might be compelled to pay a fine of 1000 drachmae (Demosth. *de Fals. Leg.* pp. 396, 403; Aeschin. *c. Timocr.* p. 71), unless he could establish by an oath (*ἐξωμοσία*), that he was unable to give his evidence in the case. Any one who had promised to bear witness, and afterwards failed to do so, became liable to the action of *δική λεισομαρτυρίου* or *βλάδης*. The evidence of an avowed friend or enemy of either party might be rejected. (Aeschin. *c. Timocr.* p. 72.) All evidence was either taken down in writing as it was given by the witnesses, or in case of its having been sent in previously in writing, it was read aloud to the witness for his recognition, and he had generally to confirm his statement by an oath. (Demosth. *c. Steph.* pp. 1115, 1119, 1130, *c. Con.* p. 1269; comp. Diog. Laert. iv. 7.) The testimony of slaves was valid only when extorted by instruments of torture, to which either one party might offer to expose a slave, or the other might demand the torture of a slave. (Demosth. *c. Nicomach.* p. 1254, *c. Aphob.* p. 855, *c. Onet.* p. 874, *c. Steph.* p. 1135.)

A distinct oath was required in cases where there were no witnesses or documents, but it has been remarked above that oaths were also taken to confirm the authenticity of a document, or the truth of a statement of a witness. [JUSJURANDUM.]

If the evidence produced was so clear and satisfactory, that there was no doubt as to who was right, the magistrate could decide the case at once, without sending it to be tried in a court. During the *anacrisis* as well as afterwards in the regular court, the litigant parties might settle their dispute by an amicable arrangement. (Demosth. *c. Theocrin.* p. 1323, *c. Mid.* p. 529; Aeschin. *de Fals. Leg.* p. 269; Pollux, viii. 143.) But if the plaintiff, in a public matter, dropped his accusation, he became liable to a fine of 1000 drachmae, and incurred partial atimia; in later times, however, this punishment was not always inflicted, and in civil cases the plaintiff only lost the sum of money which he had deposited. When the parties did not come to an understanding during the *anacrisis*, all the various kinds of evidence brought forward were put into a vessel called *ἐχίρος*, which was sealed and entrusted to some officer to be kept until it was wanted on the day of trial. (Demosth. *c. Olymp.* p. 1173; Schol. *ad Aristoph. Vesp.* 1427.) The period between the conclusion of the preliminary investigation and until the matter was brought before a court, was considered to belong to the *anacrisis*, and that period

was differently fixed by law, according to the nature of the charge. In cases of murder, the period was never less than three months, and in others the trial in court commenced on the thirtieth day after the beginning of the anacrisis, as, e. g. in the *δικαὶ ἱεραικά, ἐμπορικά, μεταλλικά*, and *πρωκός* (Harpocrat. s. v. *ἐμνηνοὶ δίκαι*; Pollux, viii. 63, 101), and the day fixed for the trial was called *κύρια τοῦ νόμου*. (Demosth. c. *Mid.* p. 544.) In other cases, the day was fixed by the magistrate who conducted the anacrisis. But either party might petition for a postponement of the trial, and the opposite party might oppose the petition by an oath that the ground on which the delay was sought for, was not valid, or unsatisfactory. (Harpocrat. s. v. *ἀνθραμωσία*; Pollux, viii. 60.) Through such machinations, the decision of a case might be delayed to the detriment of justice; and the annals of the Athenian courts are not wanting in numerous instances, in which the ends of justice were thwarted in this manner for a number of years. (Demosth. c. *Mid.* p. 541; comp. Meier and Schömann, *Der Att. Proc.* p. 622; C. F. Hermann, *Griech. Staatsalt.* § 141; Schömann, *Antiquit. Jur. publ. Græc.* p. 279; Wachsmuth, *Hellen. Alterthumskunde*, ii. p. 262, &c. 2nd edit.) The examination which an archon underwent before he entered on his office, was likewise called *ἀνὰκρισις*. [L. S.]

ANALEMMA (*ἀνάλημμα*), in its original meaning, is any thing raised or supported; it is applied in the plural to walls built on strong foundations. (Hesych. Suid. s. v.) Vitruvius uses the word to describe an instrument which, by marking the lengths of the shadows of a fixed gnomon, showed the different altitudes of the sun at the different periods of the year. (Vitruv. ix. 7, 8. s. 6, 7, Schneider.) It must not be confounded with the modern analemma, which is much more complicated and precise than the instrument described by Vitruvius. [P. S.]

ANAPISMATA. [THEATRUM.]

ANATHEMATA (*ἀναθήματα*) [DONARIA.]

ANATOCISMUS. [FENUS.]

ANAUMACHIOU GRAPHE' (*ἀναυμαχίου γραφή*), was an impeachment of the trierarch who had kept aloof from action while the rest of the fleet was engaged. From the personal nature of the offence and the punishment, it is obvious that this action could only have been directed against the actual commander of the ship, whether he was the sole person appointed to the office, or the active partner of the perhaps many *συντελεῖς*, or the mere contractor (*δὲ μισθωσάμενος*). In a cause of this kind, the strategoi would be the natural and official judges. The punishment prescribed by law for this offence was a modified atimia, by which the criminal and his descendants were deprived of their political franchise; but, as we learn from Andocides, were allowed to retain possession of their property. (*De Myst.* p. 10. 22, ed. Steph.; Petit. *Leg. Att.* p. 667.) [J. S. M.]

ANAXAGOREIA (*ἀναξαγόρεια*), a day of recreation for all the youths at Lampsacus, which took place once every year, in compliance, it was said, with a wish expressed by Anaxagoras, who, after being expelled from Athens, spent the remainder of his life here. This continued to be observed even in the time of Diogenes Laërtius. (*Anaxag.* c. 10.) [L. S.]

ANCHISTEIA (*ἀγκιστεία*). [HERRA.]

ANCI'LE. [SALIL.]

ANCILLA. [SERVUS.]

A'NCORA. [NAVIS.]

A'NKULE (*ἀγκύλη*). [HASTA.]

ANDABATAE. [GLADIATOR.]

ANDREA (*ἀνδρεία*). [SYSSITIA.]

A'NDRIAS (*ἀνδρίας*). [STATUARIA.]

ANDROGEO'NIA (*Ἀνδρογεώνια*), a festival with games, held every year in the Cerameicus at Athens, in honour of the hero Androgeus, son of Minos, who had overcome all his adversaries in the festive games of the Panathenaea, and was afterwards killed by his jealous rivals. (Paus. i. 27 § 9; Apollod. iii. 15. § 7; Hygin. *Fab.* 41; Diod. iv. 60, 61.) According to Hesychius, the hero also bore the name of Eurygyes (the possessor of extensive lands), and under this title games were celebrated in his honour, *δὲ ἐπ' Εὐρυγίην ἀγών*. (Hesych. vol. i. p. 1332; K. F. Hermann, *Gottesdienst. Alterth. d. Griechen*, § 62, n. 22. [L. S.]

ANDROLE'PSIA (*ἀνδροληψία* or *ἀνδρολήψιον*), a legal means by which the Athenians were enabled to take vengeance upon a community in which an Athenian citizen had been murdered. For when the state or city in whose territory the murder had been committed, refused to bring the murderer to trial, the law allowed the Athenians to take possession of three individuals of that state or city, and to have them imprisoned at Athens, as hostages, until satisfaction was given, or the murderer delivered up, and the property found upon the persons thus seized was confiscated. (Demosth. c. *Aristot.* p. 647; Harpocrat. s. v.; Pollux, viii. 40; Suid. and Etym. M. s. v.; Bekker, *Anecd.* p. 213.) The persons entrusted with the office of seizing upon the three hostages, were usually the trierarchs, and the commanders of ships of war. (Demosth. *De Coron. Trier.* p. 1232.) This Athenian custom is analogous to the *darigatio* of the Romans. (Liv. viii. 14.) [L. S.]

ANDRONI'TIS. [DOMUS, GREEK.]

ANGARI'A (*ἀγγαρεία*, Hdt. *ἀγγαρήιον*) is a word borrowed from the Persians, signifying a system of posting, which was used among that people, and which, according to Xenophon, was established by Cyrus. Horses were provided, at certain distances, along the principal roads of the empire; so that couriers (*ἀγγαροί*), who also, of course, relieved one another at certain distances, could proceed without interruption, both night and day, and in all weathers. (Herod. viii. 98; iii. 126; Xen. *Cyrop.* viii. 6. § 17; Suid. s. v.) It may easily be supposed that, if the government arrangements failed in any point, the service of providing horses was made compulsory on individuals; and hence the word came to mean compulsory service in forwarding royal messages; and in this sense it was adopted by the Romans under the empire, and is frequently found in the Roman laws. The Roman *angaria*, also called *angariarum exhibitio* or *præstatio*, included the maintenance and supply, not only of horses, but of ships and messengers, in forwarding both letters and burdens; it is defined as a *personale munus*; and there was no ground of exemption from it allowed, except by the favour of the emperor. (Dig. 50. tit. 4. s. 18. §§ 4, 29; tit. 5. s. 10, 11; 49, tit. 18. s. 4. § 1; Cod. Theod. 8. tit. 5; Cod. Justin. 12. tit. 51.)

According to Suidas, the Persian word was ori-

ginally applied to any bearers of burdens, and next, to compulsory service of any kind. [P. S.]

ANGIPORTUS, or ANGIPORTUM, a narrow lane between two rows of houses; such a lane might have no issue at all, or end in a private house, so as to be what the French call a *cul-de-sac*, or it might terminate at both ends in some public street. The ancients derived the word from *angustus* and *portus*, and explain it as meaning, originally, the narrow entrance to a port. (Fest. p. 17. ed. Müller; Varro, *De L. L.* v. 145, vi. 41; Ulpian, in *Dig. De Signif. Verb.* 59.) The number of such narrow courts, closes, or lanes seems to have been considerable in ancient Rome. (Cic. *de Div.* i. 32, p. *Mil.* 24, *ad Heren.* iv. 51; Plant. *Pseud.* iv. 2. 6, *ap. Nov.* iii. 1; Ter. *Adolph.* iv. 2. 39; Horat. *Carm.* i. 25. 10; Catull. 58. 4.) [L. S.]

ANGUSTUS CLAVUS. [CLAVUS.]

ANNA'LES MA'XIMI. [PONTIFEX.]

ANNO'NA is used to signify, 1. The produce of the year in corn, fruit, wine, &c., and hence, 2. Provisions in general, especially the corn which, in the latter years of the republic, was collected in the storehouses of the state, and sold to the poor at a cheap rate in times of scarcity; and which, under the emperors, was distributed to the people gratuitously, or given as pay and rewards. [CONGIARIUM; FRUMENTATIO; PRÆFECTUS ANNORUM.] [P. S.]

ANNULUS (δακτύλιος), a ring. Every free-man in Greece appears to have used a ring; and, at least in the earliest times, not as an ornament, but as an article for use, as the ring always served as a seal. How ancient the custom of wearing rings among the Greeks was, cannot be ascertained; though it is certain, as even Pliny (*H. N.* xxxiii. 4) observes, that in the Homeric poems there are no traces of it. In works of fiction, however, and in those legends in which the customs of later ages are mixed up with those of the earliest times, we find the most ancient heroes described as wearing rings. (Paus. i. 17. § 3, x. 30. § 2; Eurip. *Iphig. Aut.* 154, *Hippol.* 859.) But it is highly probable that the custom of wearing rings was introduced into Greece from Asia, where it appears to have been almost universal. (Herod. i. 195; Plat. *de Re Publ.* ii. p. 359.) In the time of Solon seal-rings (σφραγίδες), as well as the practice of counterfeiting them, seem to have been rather common, for Diogenes Laërtius (i. 57) speaks of a law of Solon which forbade the artist to keep the form of a seal (σφραγίς) which he had sold. (Instances of counterfeited seals are given in Becker's *Charities*, ii. p. 217.) Whether, however, it was customary as early as the time of Solon to wear rings with precious stones on which figures were engraved, may justly be doubted; and it is much more probable that at that time the figures were cut in the metal of the ring itself, a custom which was never abandoned altogether. Rings without precious stones were called *ἐλπίδοι*, the name of the gem being *ψήφος* or *σφραγίς*. (Artemidor. *Oneirocr.* ii. 6.) In later times rings were worn more as ornaments than as articles for use, and persons now were no longer satisfied with one, but wore two, three, or even more rings; and instances are recorded of those who regularly loaded their hands with rings. (Plat. *Hipp. Min.* p. 368; Aristoph. *Rades.* 632, *Nub.* 332, with the Schol.; Dinarch. *de Demosth.* p. 29; Diog. Laërt. v. 1.) Greek

women likewise used to wear rings, but not so frequently as men; the rings of women also appear to have been less costly than those of men, for some are mentioned which were made of amber, ivory, &c. (Artemid. *L. c.*) Rings were mostly worn on the fourth finger (*τὰρδύκερος*, Plut. *Sympos. Fragm.* lib. iv.; Gellius, x. 10). The Lacedaemonians are said to have used iron rings at all times. (Plin. *H. N.* xxxiii. 4.) With the exception perhaps of Sparta, the law does not appear to have ever attempted in any Greek state to counteract the great partiality for this luxury; and nowhere in Greece does the right of wearing a gold ring appear to have been confined to a particular order or class of citizens.

The custom of wearing rings was believed to have been introduced into Rome by the Sabines, who are described in the early legends as wearing gold rings with precious stones (*gemmati annuli*) of great beauty. (Liv. i. 11; Dionys. ii. 38.) Florus (i. 5) states that it was introduced from Etruria in the reign of Tarquinius Priscus, and Pliny (*L. c.*) derives it from Greece. The fact that among the statues of the Roman kings in the capitol, two, Numa and Servius Tullius, were represented with rings, can scarcely be adduced as an argument for their early use, as later artists would naturally represent the kings with such insignia as characterized the highest magistrates in later times. But at whatever time rings may have become customary at Rome, thus much is certain, that at first they were always of iron, that they were destined for the same purpose as in Greece, namely, to be used as seals, and that every free Roman had a right to use such a ring. This iron ring was used down to the last period of the republic by such men as loved the simplicity of the good old times. Marius wore an iron ring in his triumph over Jugurtha, and several noble families adhered to the ancient custom, and never wore gold ones. (Plin. *H. N.* xxxiii. 6.)

When senators in the early times of the republic were sent as ambassadors to a foreign state, they were during the time of their mission gold rings, which they received from the state, and which were perhaps adorned with some symbolic representation of the republic, and might serve as a state-seal. But ambassadors used gold rings only in public; in private they wore their iron ones. (Plin. xxxiii. 4.) In the course of time it became customary for all the senators, chief magistrates, and at last for the equites also, to wear a gold seal-ring. (Liv. ix. 7. 46, xxvi. 36; Cic. *c. Verr.* iv. 25; Liv. xxiii. 12; Flor. ii. 6.) This right of wearing a gold ring, which was subsequently called the *jus annuli aurei*, or the *jus annulorum*, remained for several centuries at Rome the exclusive privilege of senators, magistrates, and equites, while all other persons continued to use iron ones. (Appian, *de Reb. Pub.* 104.) Magistrates and governors of provinces seem to have had the right of conferring upon inferior officers, or such persons as had distinguished themselves, the privilege of wearing a gold ring. Verres thus presented his secretary with a gold ring in the assembly at Syracuse. (Cic. *c. Verr.* iii. 76, 80, *ad Fam.* x. 32; Suet. *Caes.* 39.) During the empire the right of granting the annulus aureus belonged to the emperors, and some of them were not very scrupulous in conferring this privilege. Augustus gave it to Mena, a freedman, and to

Antonius Musa, a physician. (Dion Cass. xlviii. 48, liii. 30.) In A. D. 22 the emperor Tiberius ordained that a gold ring should only be worn by those ingenui whose fathers and grandfathers had had a property of 400,000 sesteria, and not by any freedman or slave. (Plin. *H. N.* xxxiii. 8.) But this restriction was of little avail, and the ambition for the annulus aureus became greater than it had ever been before. (Plin. *Epist.* vii. 26, viii. 6; Suet. *Galb.* 12. 14; Tacit. *Hist.* i. 13; Suet. *Vitell.* 12; Stat. *Silo.* iii. 3. 143, &c.) The emperors Severus and Aurelian conferred the right of wearing gold rings upon all Roman soldiers (Herodian. iii. 8; Vopisc. *Aurel.* 7); and Justinian at length allowed all the citizens of the empire, whether ingenui or libertini, to wear such rings.

The status of a person who had received the *jus annuli* appears to have differed at different times. During the republic and the early part of the empire the *jus annuli* seems to have made a person ingenuus (if he was a *libertus*), and to have raised him to the rank of *eques*, provided he had the requisite equestrian census (Suet. *Galb.* 10, 14; Tacit. *Hist.* i. 13, ii. 57), and it was probably never granted to any one who did not possess this census. Those who lost their property, or were found guilty of a criminal offence, lost the *jus annuli*. (Juv. *Sat.* xi. 42; Mart. *viii.* 5, ii. 57.) Afterwards, especially from the time of Hadrian, the privilege was bestowed upon a great many freedmen, and such persons as did not possess the equestrian census, who therefore for this reason alone could not have become equites; nay, the *jus annuli* at this late period did not even raise a freedman to the station of ingenuus: he only became, as it were, a half ingenuus (*quasi ingenuus*), that is, he was entitled to hold a public office, and might at any future time be raised to the rank of *eques*. (Jul. Capitol. *Macrin.* 4.) The Lex Visellia (Cod. 9. tit. 21) punished those freedmen, who sued for a public office without having the *jus annuli aurei*. In many cases a *libertus* might through the *jus annuli* become an *eques*, if he had the requisite census, and the princeps allowed it; but the annulus itself no longer included this honour. This difference in the character of the annulus appears to be clear also from the fact, that women received the *jus annuli* (Dig. 40. tit. 10. s. 4), and that Alexander Severus, though he allowed all his soldiers to wear the gold ring, yet did not admit any freedmen among the equites. (Lamprid. *Al. Sev.* 9.) The condition of a *libertus* who had received the *jus annuli* was in the main as follows:—Hadrian had laid down the general maxim, that he should be regarded as an ingenuus, *salvo jure patroni*. (Dig. 40. tit. 10. s. 6.) The patronus had also to give his consent to his freedman accepting the *jus annuli*, and Commodus took the annulus away from those who had received it without this consent. (Dig. 40. tit. 10. s. 3.) Hence a *libertus* with the annulus might be tortured, if, e. g. his patron died an unnatural death, as in case of such a *libertus* dying, his patron might succeed to his property. The freedman had thus during his lifetime only an *imago libertatis*, he was a *quasi ingenuus* but had not the status of an ingenuus (Cod. 6. tit. 8. s. 2; Dig. 40. tit. 10. s. 5), and he died *quasi libertus*. In the reign of Justinian these distinctions were done away with. Isidorus (xix. 32) is probably alluding to the pe-

riod preceding the reign of Justinian, when he says, that freedmen wore gold, freedmen silver and slaves iron rings.

The practical purposes, for which rings, or rather the figures engraved upon them, were used at all times, were the same as those for which we use our seals. Besides this, however, persons, when they left their houses, used to seal up such parts as contained stores or valuable things, in order to secure them from thieves, especially slaves. (Plat. *de Leg.* xii. p. 954; Aristoph. *Thesmoph.* 414, &c.; Plant. *Cas.* ii. 1. 1; Cic. *ad Fam.* xvi. 26, *de Orat.* ii. 61; Mart. ix. 88.) The ring of a Roman emperor was a kind of state-seal, and the emperor sometimes allowed the use of it to such persons as he wished to be regarded as his representatives. (Dion Cass. lvi. 2.) The keeping of the imperial seal-ring was entrusted to an especial officer (*cura annuli*, Just. *Hist.* xliii. 5). The signs engraved upon rings were very various, as we may judge from the specimens still extant: they were portraits of ancestors, or friends, subjects connected with the mythology, or the worship of the gods; and in many cases a person had engraved upon his seal symbolical allusions to the real or mythical history of his family. (Cic. *in Catil.* iii. 5; Val. Max. iii. 5. 1; Cic. *de Finib.* v. 1; Suet. *Tib.* 58. 63; Plin. *H. N.* ii. 7, &c.) Sulla thus wore a ring with a gem, on which Jugurtha was represented at the moment he was made prisoner. (Plin. *H. N.* xxxvii. 4; Plut. *Mar.* 10.) Pompey used a ring on which three trophies were represented (Dion Cass. xliii. 18), and Augustus at first sealed with a sphinx afterwards with a portrait of Alexander the Great, and at last with his own portrait, which was subsequently done by several emperors. (Plin. *H. N.* xxxvii. 4; Suet. *Aug.* 50; Dion Cass. li. 3; Spartian. *Hadr.* 26.) The principal value of a ring consisted in the gem framed in it, or rather in the workmanship of the engraver. The stone most frequently used was the onyx (*σάπφειρος, σαρδύνη*), on account of its various colours, of which the artists made the most skilful use. In the art of engraving figures upon gems, the ancients in point of beauty and execution far surpass every thing in this department that modern times can boast of. The ring itself (*σφραγίδιον*), in which the gem was set, was likewise in many cases of beautiful workmanship. The part of the ring which contained the gem was called *pala*. In Greece we find that some persons fond of show used to wear hollow rings, the inside of which was filled up with a less valuable substance. (Artemid. *l. c.*)

With the increasing love of luxury and show, the Romans, as well as the Greeks, covered their fingers with rings. Some persons also wore rings of immoderate size, and others used different rings for summer and winter. (Quintil. xi. 3; Juv. i. 28; Mart. xi. 59, xiv. 123.)

Much superstition appears to have been connected with rings in ancient as well as in more modern times; but this seems to have been the case in the East and in Greece more than at Rome. Some persons made it a lucrative trade to sell rings, which were believed to possess magic powers, and to preserve those who wore them from external dangers. Such persons are Eudamus in Aristophanes (*Plut.* 883, with the Schol.), and Phertatus in Antiphanes (*ap. Athen.* iii. p. 123). These rings were for the most part worn by the lower

classes, and then not made of costly material, as may be inferred from the price (one drachma) in the two instances above referred to. There are several celebrated rings with magic powers, mentioned by the ancient writers, as that of Gyges which he found in a grave (Plat. *de Republ.* ii. p. 359, &c.; Plin. *H. N.* xxxiii. 4), that of Charicleia (Heliod. *Aeth.* iv. 8), and the iron ring of Socrates (Lucian, *Philop.* 17). Compare Becker, *Charities*, vol. ii. p. 398, &c.; Kirchmann, *de Asmatia*, Slesvig. 1657; P. Burmann, *de Jure Annularum*, Ultraject. 1784. [L. S.]

ANNUS. [CALENDARIUM.]

ANQUISITIO. [JUDEX.]

ANSA'TAE HASTAE. [HASTA.]

ANTAE (*ὑπερσώδες*), were originally posts or pillars flanking a doorway. (Festus, s. v. *Antes*.) They were of a square form, and are, in fact, to be regarded rather as strengthened terminations of the walls than as pillars affixed to them. There is no clear case of the application of the word to detached square pillars, although Nonius explains it by *quadrata columnas* (l. § 124).

The chief use of *antae* was in that form of temple, which was called, from them, *in antis* (*ὑπὸ ὑπερσώδεσσι*), which Vitruvius (iii. 1. a. 2 § 2, Schn.) describes as having, in front, *antae* attached to the walls which enclosed the cells; and in the middle, between the *antae*, two columns supporting the architrave. The ruins of temples, corresponding to the description of Vitruvius, are found in Greece and Asia Minor; and we here exhibit as a specimen a restoration of the front of the temple of Artemis Propylaea, at Eleusis, together with a plan of the pronaos:

A, A, the *antae*; B, B, the *cella*, or *raos*.

Vitruvius gives the following rules for a temple *in antis* of the Doric order:—The breadth should be half the length; five-eighths of the length should be occupied by the *cella*, including its front walls, the remaining three-eighths by the *pronaos* or portico; the *antae* should be of the same thickness

as the columns; in the intercolumniations there should be a marble balustrade, or some other kind of railing, with gates in it; if the breadth of the portico exceeds forty feet, there should be another pair of columns behind those between the *antae*, and a little thinner than they; besides other and minor details. (Vitruv. iv. 4.)

In the pure Greek architecture, the *antae* have no other capitals than a succession of simple mouldings, sometimes ornamented with leaves and arabesques, and no bases, or very simple ones; it is only in the later (Roman) style, that they have capitals and bases resembling those of the columns between them. The *antae* were generally of the same thickness throughout; the only instance of their tapering is in one of the temples of Paestum.

In a Greek private house the entrance was flanked by a pair of *antae* with no columns between them; and the space thus enclosed was itself called *ὑπερσώδες*. (Vitruv. vi. 10. a. 7. § 1. Schn.) So also Euripides uses the term to denote either the pronaos of a temple (*Ip.* in *Taur.* 1126), or the vestibule of a palace. (*Phoen.* 415.)

The following are the chief of the other passages in which *antae* or *ὑπερσώδες* are mentioned:—Eurip. *Androm.* 1121, where *ὑπερσώδες κρημνώδης* signifies the arms suspended from one of the *antae* of the temple; Cratin. *Dionys.* Fr. 9, ap. Pollux. vii. 122, x. 25, Meineke, *Fr. Com. Graec.* vol. ii. p. 42; Xen. *Hier.* xi. 2: Hero, *Ascom.* p. 269; *Inscrip.* ap. Gruter. p. 207. See also Stieglitz, *Archäologie der Baukunst*, vol. i. pp. 236—242. [P. S.]

ANTEAMBULO'NES, were slaves who were accustomed to go before their masters, in order to make way for them through the crowd. (Suet. *Vesp.* 2.) They usually called out *datis locum domino meo*; and if this were not sufficient to clear the way, they used their hands and elbows for that purpose. Pliny relates an amusing tale of an individual who was roughly handled by a Roman knight, because his slave had presumed to touch the latter, in order to make way for his master. (*Ep.* iii. 14.) The term *anteambulones* was also given to the clients, who were accustomed to walk before their patrons when the latter appeared in public. (Martian. ii. 18, iii. 7, x. 74.)

ANTECESSO'RES, called also ANTECURSO'RES, were horse-soldiers, who were accustomed to precede an army on the march, in order to choose a suitable place for the camp, and to make the necessary provisions for the army. They were not merely scouts, like the *speculatores*. (Hirt. *Bell. Afr.* 12, who speaks of *speculatores et antecessores equites*; Suet. *Vitell.* 17; Cæsar. *B. G.* v. 47.) This name was also given to the teachers of the Roman law. (Cod. l. tit. 17. a. 2. § 9. 11.)

ANTECOENA. [CONNA.]

ANTEFIXA, terra-cottas, which exhibited various ornamental designs, and were used in architecture, to cover the frieze (*sophorus*) or cornice of the entablature. (Festus, s. v.) These terra-cottas do not appear to have been used among the Greeks, but were probably Etrurian in their origin, and were thence taken for the decoration of Roman buildings.

The name *antefixa* is evidently derived from the circumstance that they were fixed before the buildings which they adorned; and in many instances they have been found fastened to the frieze with leaden nails. They were formed in

moulds, and then baked by fire; so that the number of them might be increased to any extent. Of the great variety and exquisite beauty of the workmanship, the reader may best form an idea by inspecting the collection of them in the British Museum.

The two imperfect antefixa, here represented, are among those found at Volletri, and described by Carloni. (*Roma*, 1785.)

The first of them must have formed part of the upper border of the frieze, or rather of the cornice. It contains a panther's head, designed to serve as a spout for the rain-water to pass through in descending from the roof. Similar antefixa, but with comic masks instead of animals' heads, adorned the temple of Isis at Pompeii. The second of the above specimens represents two men who have a dispute, and who come before the sceptre-bearing kings, or judges, to have their cause decided. The style of this bas-relief indicates its high antiquity, and, at the same time, proves that the Volsci had attained to considerable taste in their architecture. Their antefixa are remarkable for being painted: the ground of that here represented is blue; the hair of the six men is black, or brown; their flesh red; their garments white, yellow, and red: the chairs are white. The two holes may be observed, by which this slab was fixed upon the building.

Cato the Censor complained that the Romans of his time began to despise ornaments of this description, and to prefer the marble friezes of Athens and Corinth. (*Liv.* xxxiv. 4.) The rising taste which Cato deplored may account for the su-

perior beauty of the antefixa preserved in the British Museum, which were discovered at Rome. A specimen of them is given at the foot of the preceding column. It represents Athena superintending the construction of the ship Argo. The man with the hammer and chisel is Argus, who built the vessel under her direction. The pilot Tiphys is assisted by her in attaching the sail to the yard. Another specimen of the antefixa is given under the article ANTYX.

ANTENNA. [NAVIS.]

ANTEPAGMENTA, doorposts, the jambs of a door. Vitruvius (iv. 6.) gives minute instructions respecting the form and proportions of the antepagmenta in the doors of temples; and these are found in general to correspond with the examples preserved among the remains of Grecian architecture. (See Hirt, *Baukunst nach den Grund-sätzen der Alten*, xvi.) [JANUA.] [J. Y.]

ANTEPILA'NI. [EXERCITUS.]

ANTESIGNA'NI. [EXERCITUS.]

ANTESTA'RI. [ACTIO.]

ANTHESPHO'RIA (ἀνθεσφόρια), a flower-festival, principally celebrated in Sicily, in honour of Demeter and Persephone, in commemoration of the return of Persephone to her mother in the beginning of spring. It consisted in gathering flowers and twining garlands, because Persephone had been carried off by Pluto while engaged in this occupation. (Pollux, i. 37.) Strabo (vi. p. 256) relates that at Hipponium the women celebrated a similar festival in honour of Demeter, which was probably called anthesphoria, since it was derived from Sicily. The women themselves gathered the flowers for the garlands which they wore on the occasion, and it would have been a disgrace to buy the flowers for that purpose. Anthesphoria were also solemnized in honour of other deities, especially in honour of Hera, surnamed 'Αρθία, at Argos (Paus. ii. 22. § 1), where maidens, carrying baskets filled with flowers, went in procession, whilst a tune called *lepdκτωρ* was played on the flute. (Comp. *Etyim. Gud.* p. 57.) Aphrodite, too, was worshipped at Cnossus, under the name 'Αρθία (Hesych. s. v.), and has therefore been compared with Flora, the Roman deity, as the anthesphoria have been with the Roman festival of the *Flortortum*, or *Floralia*. [L. S.]

ANTHESTERIA. [DIONYSIA.]

ANTI'DOSIS (ἀντιδοσις), in its literal and general meaning, "an exchange," was, in the language of the Attic courts, peculiarly applied to proceedings under a law which is said to have originated with Solon. (Demosth. c. *Phaenipp.* init.) By this, a citizen nominated to perform a leiturgia, such as a trierarchy or choregia, or to rank among the property-tax payers in a class disproportioned to his means, was empowered to call upon any qualified person not so charged to take the office in his stead, or submit to a complete exchange of property — the charge in question, of course, attaching to the first party, if the exchange were finally effected. For these proceedings the courts were opened at a stated time every year by the magistrates that had official cognizance of the particular subject; such as the strategi in cases of trierarchy and rating to the property-taxes, and the archon in those of choregia; and to the tribunal of such an officer, it was the first step of the challenger to summon his opponent. (Dem. c. *Phaenipp.* p. 1040; Meier, *Att. Process.* p. 471;

προσπαθεῖσθαι τὴν εἰς ἀντίθεσιν, Lysias *Ἐνὲρ τῷ Ἀδωδρόν*, p. 745.) It may be presumed that he then formally repeated his proposal, and that the other party stated his objections, which, if obviously sufficient in law, might, perhaps, authorise the magistrate to dismiss the case; if otherwise, the legal resistance, and preparations for bringing the cause before the dicasts, would naturally begin here. In the latter case, or if the exchange were accepted, the law directed the challenger to repair to the houses and lands of his antagonist, and secure himself, as all the claims and liabilities of the estate were to be transferred, from fraudulent encumbrances of the real property, by observing what mortgage placards (*ῥοαί*), if any, were fixed upon it, and against clandestine removal of the other effects, by sealing up the chambers that contained them, and, if he pleased, by putting bolts in the mansion. (Dem. c. *Phaeipp.* pp. 1040, 1041.) His opponent was, at the same time, informed, that he was at liberty to deal in like manner with the estate of the challenger, and received notice to attend the proper tribunal on a fixed day, to take the usual oath. The entries here described seem, in contemplation of law, to have been a complete effectuation of the exchange. (Dem. c. *Mid.* p. 540, c. *Phaeipp.* p. 1041. 25), and it does not appear that primarily there was any legal necessity for a further ratification by the dicasts; but, in practice, this must always have been required by the conflict of interests between the parties. The next proceeding was the oath, which was taken by both parties, and purported that they would faithfully discover all their property, except shares held in the silver mines at Laurion; for these were not used to *leiturgia* or property-taxes, nor consequently liable to the exchange. In pursuance of this agreement, the law enjoined that they should exchange correct accounts of their respective assets (*ἀπογραφὰς*) within three days; but in practice the time might be extended by the consent of the challenger. After this, if the matter were still uncompromised, it would assume the shape and follow the course of an ordinary lawsuit [*Δίκη*], under the conduct of the magistrate within whose jurisdiction it had originally come. The verdict of the dicasts, when adverse to the challenged, seems usually to have rendered imperative the first demand of his antagonist, viz. that he should submit to the exchange or undertake the charge in question; and as the alternative was open to the former, and a compromise might be acceded to by the latter, at any stage of the proceedings, we may infer that the exchange was rarely, if ever, finally accomplished. The *irksomeness*, however, of the sequestration, during which the litigant was precluded from the use of his own property, and disabled from bringing actions for embezzlement and the like against others (for his prospective reimbursement was reckoned a part of the sequestered estate, Dem. c. *Apob.* ii. p. 841, c. *Mid.* p. 540), would invariably cause a speedy, perhaps, in most cases, a fair adjustment of the burdens incident to the condition of a wealthy Athenian. (Beckh, *Publ. Econ. of Athens*, pp. 580—583, 2nd ed.) [J. S. M.]

ANTIGONEIA (*ἀντιγόρεια*), sacrifices instituted by Aratus and celebrated at Sicyon with pæans, processions, and contests, in honour of Antigonus Doon, with whom Aratus formed an

alliance for the purpose of thwarting the plans of Cleomenes. (Plut. *Cleom.* 16, *Arat.* 45; Polyb. xxviii. 16, xxx. 20.) [L. S.]

ANTIGRAPHE' (*ἀντιγραφή*), originally signified the writing put in by the defendant, in all causes, whether public or private, in answer to the indictment or bill of the prosecutor. From this signification, it was applied by an easy transition to the substance as well as the form of the reply, both of which are also indicated by *ἀντιμυσία*, which means, primarily, the oath corroborating the statement of the accused. Harpocration has remarked that *antigraphé* might denote, as *antimosia* does in its more extended application, the bill and affidavit of either party; and this remark seems to be justified by a passage of Plato. (*Apolog.* Soc. p. 27. c.) Schömann, however, maintains (*Att. Process.* p. 466) that *antigraphé* was only used in this signification in the case of persons who laid claim to an unassigned inheritance. Here, neither the first nor any other claimant could appear in the character of a prosecutor; that is, no *δίκη* or *ἐγκλημα* could be strictly said to be directed by one competitor against another, when all came forward voluntarily to the tribunal to defend their several titles. This circumstance Schömann has suggested as a reason why the documents of each claimant were denoted by the term in question.

Perhaps the word "plea," though by no means a coincident term, may be allowed to be a tolerably proximate rendering of *antigraphé*. Of pleas there can be only two kinds, the dilatory, and those to the action. The former, in Attic law, comprehends all such allegations as, by asserting the incompetency of the court, the disability of the plaintiff, or privilege of the defendant, and the like, would have a tendency to show that the cause in its present state could not be brought into court (*μη εἰσαγέμενον εἶναι τὴν δίκην*); the latter, everything that could be adduced by way of denial, excuse, justification, and defence generally. It must be, at the same time, kept in mind, that the process called "special pleading," was at Athens supplied by the magistrate holding the *anacrisis*, at which both parties produced their allegations, with the evidence to substantiate them; and that the object of this part of the proceedings was, under the directions, and with the assistance of the magistrate, to prepare and enunciate the question for the dicasts. The following is an instance of the simplest form of indictment and plea:— "Apollodorus, the son of Pasion of Acharnæ, against Stephanus, son of Menecles of Acharnæ, for perjury. The penalty rated, a talent. Stephanus bore false witness against me, when he gave in evidence the matters in the tablets. Stephanus, son of Menecles of Acharnæ. I witnessed truly, when I gave in evidence the things in the tablet." (Dem. in *Steph.* i. p. 1115.) The pleadings might be altered during the *anacrisis*; but once consigned to the *echinus*, they, as well as all the other accompanying documents, were protected by the official seal from any change by the litigants. On the day of trial, and in the presence of the dicasts, the *echinus* was opened, and the plea was then read by the clerk of the court, together with its antagonist bill. Whether it was preserved afterwards as a public record, which we know to have been the case with respect to the *γραφή* in some causes, we are not informed.

From what has been already stated, it will have been observed, that questions requiring a previous decision, would frequently arise upon the allegations of the plea; and that the plea to the action in particular would often contain matter that would tend essentially to alter, and, in some cases, to reverse the relative positions of the parties. In the first case, a trial before the dicasts would be granted by the magistrate whenever he was loth to incur the responsibility of decision; in the second, a cross-action might be instituted, and carried on separately, though, perhaps, simultaneously with the original suit. Cases would also sometimes occur in which the defendant, from considering the indictment as an unwarrantable aggression, or, perhaps, one best repelled by attack, would be tempted to retaliate upon some delinquency of his opponent, utterly unconnected with the cause in hand, and to this he would be, in most cases, able to resort. An instance of each kind will be briefly given, by citing the common *paragraphé*, as a cause arising upon a dilatory plea; a cross-action for assault (*aklas*) upon a primary action for the same (*Dem. in Ev. et Mnesib.* p. 1153); and a *doximasia*, or "judicial examination of the life or morals" of an orator upon an impeachment for misconduct in an embassy (*παρὰπρεσβεία*). (Aesch. in *Timarch.*) All causes of this secondary nature (and there was hardly one of any kind cognisable by the Attic courts, that might not occasionally rank among them) were, when viewed in their relation with the primary action, comprehended by the enlarged signification of *antigraphé*, or, in other words, this term, inexpressive of form or substance, is indicative of a repellent or retaliative quality, that might be incidental to a great variety of causes. The distinction, however, that is implied by *antigraphé*, was not merely verbal and unsubstantial; for we are told, in order to prevent frivolous suits on the one hand, and unfair elusion upon the other, the loser in a *paragraphé*, or cross-action upon a private suit, was condemned by a special law to pay the *ερωσέλια*, rateable upon the valuation of the main cause, if he failed to obtain the votes of one-fifth of the jury, and certain court fees (*πρυτανεία*) not originally incident to the suit. That there was a similar provision in public causes, we may presume from analogy, though we have no authority to determine the matter. (Meier, *Att. Process*, p. 625.) [J.S.M.]

ANTIGRAPHEIS (*ἀντιγραφείς*). [GRAMMATEUS.]

ANTINOEIA (*ἀντινοεία*), annual festivals and quinquennial games, which the Roman emperor Hadrian instituted in honour of his favourite, Antinous, after he was drowned in the Nile, or, according to others, had sacrificed himself for his sovereign, in a fit of religious fanaticism. The festivals were celebrated in Bithynia, and at Mantinea, in which places he was worshipped as a god. (Spartian. *Hadrian*, c. 14; Dion Cass. lxxix. 10; Paus. viii. 9. § 4.) [L.S.]

ANTIPHERNA (*ἀντιφέρνη*). [DOA.]

ANTIQUA'RIL. [LIBRARIL.]

A'NTLIA (*ἀντλία*), any machine for raising water; a pump. The annexed figure shows a machine which is still used on the river Eisach in the Tyrol, the ancient Atagis. As the current puts the wheel in motion, the jars on its margin are successively immersed and filled with water. When they reach the top, the water is sent into

a trough, from which it is conveyed to a distance, and chiefly used for irrigation.

Lucretius (v. 517) mentions a machine constructed on this principle:—"Ut fluvios vernare rotas atque haurstra videmus."

In situations where the water was at rest, as in a pond or a well, or where the current was too slow and feeble to put the machine in motion, it was constructed so as to be wrought by animal force, and slaves or criminals were commonly employed for the purpose (*ἐς ἀντλίαν καταδικασθῆναι*, Artemid. *Oneiroc.* i. 50; in *antliam condemnare*, Suet. *Tib.* 51.). Five such machines are described by Vitruvius, in addition to that which has been already explained, and which, as he observes, was turned *sine operarum calcatura, ipsius fluminis impulsu*. These five were, 1. the tympanum; a tread-wheel, wrought *hominibus calcantibus*; 2. a wheel resembling that in the preceding figure; but having, instead of pots, wooden boxes or buckets (*modioli quadrati*), so arranged as to form steps for those who trod the wheel: 3. the chain-pump: 4. the *cocklea*, or Archimedes' screw: and 5. the *clembica machina*, or forcing-pump. (Vitruv. x. 4—7; Drieberg, *Pneum. Erfindungen der Griechen*, p. 44—50.)

On the other hand, the antlia with which Martial (ix. 19) watered his garden, was probably the pole and bucket universally employed in Italy, Greece, and Egypt. The pole is curved, as shown in the annexed figure; because it is the stem of a

fir, or some other tapering tree. The bucket, being attached to the top of the tree, bends it by its weight; and the thickness of the other extremity serves as a counterpoise. The great antiquity of this method of raising water is proved by representations of it in Egyptian paintings. (Wilkinson, *Manners and Cust. of Anc. Egypt*, ii. 1—4; see also *Pitt. d'Ercole*, vol. i. p. 257.) [J. Y.]

ANTOMOSIA (ἀντομία). [ANAKRISIS, p. 92, a; PARAGRAPH.]

ANTYX (ἀντύξ, probably allied etymologically to ἀντύξ), the rim or border of any thing, especially of a shield, or chariot. The rim of the large round shield of the ancient Greeks was thinner than the part which it enclosed. Thus the ornamental border of the shield of Achilles, fabricated by Hephaestus, was only threefold, the shield itself being sevenfold. (*Il.* xviii. 479; comp. xx. 275.) See examples of the *antyx* of a shield in woodcuts to ANTEFIXA, ARMA, CLYPEUS.

On the other hand, the *antyx* of a chariot must have been thicker than the body to which it was attached, and to which it gave both form and strength. For the same reason, it was often made double, as in the chariot of Hera. (*Δοιά δὲ πεπλομένη ἀντύξ ἐστὶ*, *Il.* v. 728.) It rose in front of a chariot in a curved form, on which the reins might be hung. (*Il.* v. 262, 322.) A simple form of it is exhibited in the annexed woodcut from the

work of Carloni. Sometimes antyx is used to signify the chariot itself. [J. Y.]

APA/GELI (ἀπάγελος). [AGELA.]

APAGO/GE (ἀπαγωγή). [ENDEIXIS.]

APATU'RIA (ἀπατούρια), was a political festival, which the Athenians had in common with all the Greeks of the Ionian name (Herod. i. 147), with the exception of those of Colophon and Ephesus. It was celebrated in the month of Pyanepsion, and lasted for three days. The origin of this festival is related in the following manner:—About the year 1100 B. C., the Athenians were carrying on a war against the Boeotians, concerning the district of Cilaenae, or, according to others, respecting the little town of Oenoe. The Boeotian Xanthius, or Xanthus, challenged Thymoetes, king of Attica, to single combat; and when he refused, Melanthus, a Messenian exile of the house of the Nelida, offered himself to fight for Thymoetes, on condition that, if victorious, he should be the successor to Thymoetes. The offer was accepted; and when Xanthius and Melanthus began the engagement, there appeared behind Xanthius a man in the γρυή, the skin of a black she-goat. Melanthus reminded his adversary that he was violating the laws of single combat by

having a companion, and while Xanthius looked around, Melanthus slew the *deceased* Xanthius. From that time, the Athenians celebrated two festivals, the Apaturia, and that of Dionysus Melanaegia, who was believed to have been the man who appeared behind Xanthus. This is the story related by the Scholiast on Aristophanes. (*Acharn.* 146.) This tradition has given rise to a false etymology of the name ἀπατούρια, which was formerly considered to be derived from ἀπαρά, to deceive. All modern critics, however (Müller, *Dorians*, i. 5. 4; Welcker, *Äschyl. Tril.* p. 288), agree that the name is composed of α=ἄμα, and τούρια, which is perfectly consistent with what Xenophon (*Hellen.* i. 7. § 8) says of the festival: Ἐν οἷς (ἀπατούριος) οἱ τε πατέρες καὶ οἱ συγγενεῖς ξυνέουσιν ὁπλοῦν αἰετοῖς. According to this derivation, it is the festival at which the phratræ met, to discuss and settle their own affairs. But, as every citizen was a member of a phratra, the festival extended over the whole nation, who assembled according to phratræ. Welcker (*Äschyl. s. Trilog.* p. 200), on account of the prominent part which Dionysus takes in the legend respecting the origin of the Attic Apaturia, conceives that it arose from the circumstance that families belonging to the Dionysian tribe of the Aegicores had been registered among the citizens.

The first day of the festival, which probably fell on the eleventh of the month of Pyanepsion, was called *δοπρία*, or *δόπρεια* (Athen. iv. p. 171; Hesych. and Suid. s. v.); on which every citizen went in the evening to the phratrum, or to the house of some wealthy member of his own phratra, and there enjoyed the supper prepared for him. (*Aristoph. Acharn.* 146.) That the cup-bearers (οἰκίστραι) were not idle on this occasion, may be seen from Photius (*Lexic. s. v. Δοπρία*).

The second day was called ἀνέφθουρις (ἀνέφθου) from the sacrifice offered on this day to Zeus, surnamed Φεδρῖος, and to Athena, and sometimes to Dionysus Melanaegia. This was a state sacrifice, in which all citizens took part. The day was chiefly devoted to the gods, and to it must, perhaps, be confined what Harpocration (s. v. Δαμῆρας) mentions, from the Atthis of Istrus, that the Athenians at the apaturia used to dress splendidly, kindle torches on the altar of Hephaestus, and sacrifice and sing in honour of him. Proclus on Plato (*Tim.* p. 21. A), in opposition to all other authorities, calls the first day of the Apaturia ἀνέφθουρις, and the second *δοπρία*, which is, perhaps, nothing more than a slip of his pen.

On the third day, called κοῦπερις (κοῦπος), children born in that year, in the families of the phratræ, or such as were not yet registered, were taken by their fathers, or in their absence by their representatives (κύριοι), before the assembled members of the phratra. For every child a sheep or goat was sacrificed. The victim was called μέϊον, and he who sacrificed it μετὰ γυνεὶ (μετὰ γυνεῖν). It is said that the victim was not allowed to be below (Harpocrat. Suid. Phot. s. v. Μέϊον), or, according to Pollux (iii. 52), above, a certain weight. Whenever any one thought he had reason to oppose the reception of the child into the phratra, he stated the case, and, at the same time, led away the victim from the altar. (Demosth. c. *Macart.* p. 1054.) If the members of the phratra found the objections to the reception of the child to be sufficient the vic-

tim was removed; when no objections were raised, the father, or he who supplied his place, was obliged to establish by oath that the child was the offspring of free-born parents, and citizens of Athens. (Isaeus, *De Haeredit. Citron.* p. 100. §19; Demosth. c. *Eubul.* p. 1315.) After the victim was sacrificed, the phratores gave their votes, which they took from the altar of Jupiter Phratrius. When the majority voted against the reception, the cause might be tried before one of the courts of Athens; and if the claims of the child were found unobjectionable, its name, as well as that of the father, was entered in the register of the phratría, and those who had wished to effect the exclusion of the child were liable to be punished. (Demosth. c. *Macart.* p. 1078.) Then followed the distribution of wine, and of the victim, of which every phrator received his share; and poems were recited by the elder boys, and a prize was given to him who acquitted himself the best on the occasion. (Plat. *Tim.* p. 21, b.) On this day, also, illegitimate children on whom the privileges of Athenian citizens were to be bestowed, as well as children adopted by citizens, and newly created citizens were introduced; but the last, it appears, could only be received into a phratría when they had previously been adopted by a citizen; and their children, when born by a mother who was a citizen, had a legitimate claim to be inscribed in the phratría of their grandfather, on their mother's side. (Platner, *Beiträge*, p. 168.) In later times, however, the difficulties of being admitted into a phratría seem to have been greatly diminished.

Some writers have added a fourth day to this festival, under the name of *ἑρῆδα* (Heaych. s. v. *Ἀνατομία*; and Simplicius on *Aristot. Phys.* iv. p. 167. a); but this is no particular day of the festival, for *ἑρῆδα* signifies nothing else but a day subsequent to any festival. (See Rhunken, *Ad Tim. Les. Plat.* p. 119.) [L. S.]

APAU'LIA. [MATRIMONIUM.]

APELEUTHERI (*Ἀρελευθερίαι*). [LIBERTY.]

APERTA NAVIS. [NAVIS.]

APEX, a cap worn by the flamines and salii at Rome. The essential part of the apex, to which alone the name properly belonged, was a pointed piece of olive-wood, the base of which was surrounded with a lock of wool. This was worn on the top of the head, and was held there either by fillets only, or, as was more commonly the case, by the aid of a cap, which fitted the head, and was also fastened by means of two strings or bands, which were called *apiculae* (Festus, s. v.), or *offendices* (Festus, s. v.), though the latter word is also interpreted to mean a kind of button, by which the strings were fastened under the chin. (Comp. Serv. *ad Virg. Aen.* ii. 683, viii. 664, x. 270.)

The flamines were forbidden by law to go into public, or even into the open air without the apex (Gell. x. 15), and hence we find the expression of *alicui apicem dialium imponere* used as equivalent to the appointment of a flamen dialis. (Liv. vi. 41.) Sulpicius was deprived of the priesthood, only because the apex fell from his head whilst he was sacrificing. (Val. Max. i. 1. § 4.)

Dionysius (ii. 70) describes the cap as being of a conical form. On ancient monuments we see it round as well as conical. From its various forms, as shown on bas-reliefs and on coins of the Roman emperors, who as priests were entitled to wear it,

we have selected six for the annexed woodcut. The middle figure is from a bas-relief, showing one of the salii with a rod in his right hand. The Albogalerus, or albus galerus was a white cap worn by the flamen dialis, made of the skin of a white victim sacrificed to Jupiter, and had the apex fastened to it by means of an olive-twig. (Festus, s. v. *albogalerus*; Gell. x. 15.)

From apex was formed the epithet *apicatus*, applied to the flamen dialis by Ovid (*Fast.* iii. 197).

APHLASTON (*Ἀφλαστον*). [NAVIS.]

APHORMES DIKE' (*Ἀφορμῆς δίκη*), was the action brought against a banker or money-lender (*τραπεζίτης*), to recover funds advanced for the purpose of being employed as banking capital. Though such moneys were also styled *παρκαταθήκαι*, or deposits, to distinguish them from the private capital of the banker (*ἰδία ἀφορμή*), there is an essential difference between the actions *ἀφορμῆς* and *παρκαταθήκαι*, as the latter implied that the defendant had refused to return a deposit intrusted to him, not upon the condition of his paying a stated interest for its use, as in the former case, but merely that it might be safe in his keeping till the affairs of the plaintiff should enable him to resume its possession in security. [PARACATATHEKE'.] The former action was of the class *πρὸς τιμὰν*, and came under the jurisdiction of the *θεσμοθetae*. The speech of Demosthenes in behalf of Phormio was made in a *παρογραφή* against an action of this kind. [J. S. M.]

APHRACUS. [NAVIS.]

APHRODISIA (*Ἀφροδίσια*), festivals celebrated in honour of Aphrodite, in a great number of towns in Greece, but particularly in the island of Cyprus. Her most ancient temple was at Paphos, which was built by Aërias or Cinyras, in whose family the priestly dignity was hereditary. (Tacit. *Hist.* ii. 3, *Annal.* iii. 62; Maxim. Tyr. *Serm.* 88.) No bloody sacrifices were allowed to be offered to her, but only pure fire, flowers, and incense (Virg. *Aen.* i. 116); and therefore, when Tacitus (*Hist.* ii. 3) speaks of victims, we must either suppose, with Ernesti, that they were killed merely that the priest might inspect their intestines, or for the purpose of affording a feast to the persons present at the festival. At all events, however, the altar of the goddess was not allowed to be polluted with the blood of the victims, which were mostly he-goats. Mysteries were also celebrated at Paphos in honour of Aphrodite; and those who were ini-

tated offered to the goddess a piece of money, and received in return a measure of salt and a phallus. In the mysteries themselves, they received instructions ἐν τῇ τέχνῃ μοιχεύειν. A second or new Paphos had been built, according to tradition, after the Trojan war, by the Arcadian Agapenor; and, according to Strabo (xiv. p. 683), men and women from other towns of the island assembled at New Paphos, and went in solemn procession to Old Paphos, a distance of sixty stadia; and the name of the priest of Aphrodite, ἀφροδίτης (Hesych. s. v.), seems to have originated in his heading this procession. Aphrodite was worshipped in most towns of Cyprus, and in other parts of Greece, such as Cythera, Sparta, Thebes, Elia, &c.; and though no Aphrodisia are mentioned in these places, we have no reason to doubt their existence; we find them expressly mentioned at Corinth and Athens, where they were chiefly celebrated by the numerous prostitutes. (Athen. xiii. pp. 574, 579, xiv. p. 659.) Another great festival of Aphrodite and Adonis in Sestos is mentioned by Musæus. (*Hero and Leand.* 42.) [L. S.]

APLUSTRE. [NAVIS.]
APOCLETI (ἀποκλητός). [ANTOLEUM FOR-
DUS, p. 27. b.]

APODECTAE (ἀποδέκται), the Receivers, were public officers at Athens, who were introduced by Cleisthenes in the place of the ancient colacretæ (κολακρέται). They were ten in number, one for each tribe, and their duty was to receive all the ordinary taxes and distribute them to the separate branches of the administration, which were entitled to them. They accordingly kept lists of persons indebted to the state, made entries of all moneys that were paid in, and erased the names of the debtors from the lists. They had the power to decide causes connected with the subjects under their management; though if the matters in dispute were of importance, they were obliged to bring them for decision into the ordinary courts. (Pollux, viii. 97; Etymolog. Mag. Harpocrat. Suid. Hesych. s. v.; Aristot. Pol. vi. 8; Dem. c. Timocr. pp. 750, 762; Aesch. c. Ctes. p. 375; Böckh, *Publ. Econ. of Athens*, p. 159, 2nd ed.)

APOGRAPHÆ (ἀπογραφῆ), is literally "a list, or register;" but in the language of the Attic courts, the terms ἀπογράφειν and ἀπογράφεσθαι had three separate applications:—1. 'Απογραφῆ was used in reference to an accusation in public matters, more particularly when there were several defendants; the denunciation, the bill of indictment, and enumeration of the accused, would in this case be termed ἀπογραφῆ, and differ but little, if at all, from the ordinary *graphê*. (Andoc. *de Myst.* 13; Antiph. *de Chorast.* 783.) 2. It implied the making of a solemn protest or assertion before a magistrate, to the intent that it might be preserved by him, till it was required to be given in evidence. (Dem. in *Phœn.* 1040.) 3. It was a specification of property, said to belong to the state, but actually in the possession of a private person; which specification was made, with a view to the confiscation of such property to the state. (*Lys. de Aristoph. Bonis.*)

The last case only requires a more extended illustration. There would be two occasions upon which it would occur; first, when a person held public property without purchase, as an intruder; and secondly, when the substance of an individual was liable to confiscation in consequence of a judi-

cial award, as in the case of a declared state debtor. If no opposition were offered, the ἀπογραφῆ would attain its object, under the care of the magistrate to whose office it was brought; otherwise, a public action arose, which is also designated by the same title.

In a case of the first kind, which is said in some cases to have also borne the name *ρόβος* ἔχει τὰ χρήματα καὶ τόσα ταῦτα εἶναι, the claimant against the state had merely to prove his title to the property; and with this we must class the case of a person that impugned the ἀπογραφῆ, whereby the substance of another was, or was proposed to be, confiscated, on the ground that he had a loan by way of mortgage or other recognised security upon a portion of it; or that the part in question did not in any way belong to the state debtor, or person so mulcted. This kind of opposition to the ἀπογραφῆ is illustrated in the speech of Demosthenes against Nicostratus, in which we learn that Apollodorus had instituted an ἀπογραφῆ against Arethusius, for non-payment of a penalty incurred in a former action. Upon this, Nicostratus attacks the description of the property, and maintains that three slaves were wrongly set down in it as belonging to Arethusius, for they were in fact his own.

In the second case, the defence could of course only proceed upon the alleged illegality of the former penalty; and of this we have an instance in the speech of Lysias, for the soldier. There Polyænus had been condemned by the generals to pay a fine for a breach of discipline; and, as he did not pay it within the appointed time, an ἀπογραφῆ to the amount of the fine was directed against him, which he opposes, on the ground that the fine was illegal. The ἀπογραφῆ might be instituted by an Athenian citizen; but if there were no private prosecutor, it became the duty of the demarchi to proceed with it officially. Sometimes, however, extraordinary commissioners, as the συλλογῆς and ἡγηταί, were appointed for the purpose. The suits instituted against the ἀπογραφῆ belonged to the jurisdiction of the Eleven, and for a while to that of the Syndici. (Ἰπὸς τοῖς συνδικαῖς ἀπὸ γραφῆς ἀπογράφων, Lysurg. quoted by Harpocration.) The further conduct of these causes would, of course, in a great measure depend upon the claimant being, or not being, in possession of the proscribed property. In the first case the ἀπογράφων, in the second the claimant, would appear in the character of a plaintiff. In a case like that of Nicostratus above cited, the claimant would be obliged to deposit a certain sum, which he forfeited if he lost his cause (παρακαταβολή); in all, he would probably be obliged to pay the costs or court fees (πρυτανεία) upon the same contingency.

A private citizen, who prosecuted an individual by means of ἀπογραφῆ, forfeited a thousand drachmæ, if he failed to obtain the votes of one-fifth of the dicasts, and reimbursed the defendant his prytaneia upon acquittal. In the former case, too, he would probably incur a modified atimia, i. e. a restriction from bringing such actions for the future. [J. S. M.]

APOKERUXIS (ἀποκρυψίς), implies the method by which a father could at Athens dissolve the legal connection between himself and his son; but as it is not mentioned by any of the orators or the older writers, it could rarely have taken

place. According to the author of the declamation on the subject (*Ἀποκηρυγόμενος*), which has generally been attributed to Lucian, substantial reasons were required to insure the ratification of such extraordinary severity. Those suggested in the treatise referred to are, deficiency in filial attention, riotous living, and profligacy generally. A subsequent act of pardon might annul this solemn rejection; but if it were not so avoided, the son was denied by his father while alive, and disinherited afterwards. It does not, however, appear that his privileges as to his tribe or the state underwent any alteration. The court of the archon must have been that in which causes of this kind were brought forward, and the rejection would be completed and declared by the voice of the herald (*ἀποκηρύξαι*). It is probable that an adoptive father also might resort to this remedy against the ingratitude of a son. (Meier, *Att. Process*, p. 432, &c.) [J. S. M.]

APOLLEIPSIS (*ἀπόλειψις*). [DIVORTIUM.]

APOLLINARES LUDI. [LUDI.]

APOLLO'NIA (*Ἀπολλωνία*) is the name of a propitiatory festival solemnized at Sicyon, in honour of Apollo and Artemis, of which Pausanias (ii. 7. § 7) gives the following account:—Apollo and Artemis, after the destruction of the Python, had wished to be purified at Sicyon (*Aegialea*); but being driven away by a phantom (whence in after-times a certain spot in the town was called *Φόβος*), they proceeded to Carmanos in Crete. Upon this the inhabitants of Sicyon were attacked by a pestilence, and the seers ordered them to appease the deities. Seven boys and the same number of girls were ordered to go to the river Sythas, and bathe in its waters; then to carry the statues of the two deities into the temple of Peitho, and from thence back to that of Apollo. Similar rites, says Pausanias, still continue to be observed; for at the festival of Apollo, the boys go to the river Sythas, and carry the two deities into the temple of Peitho, and thence back to that of Apollo.

Although festivals under the name of Apollonia, in honour of Apollo, are mentioned in no other place, still it is not improbable that they existed under the same name in other towns of Greece. [L. S.]

APOPEMPSIS (*ἀποπέμψις*). [DIVORTIUM.]

APOPHANSIS, or APOPHASIS (*ἀπόφανσις* or *ἀπόφασις*), was the proclamation of the decision which the majority of the judges came to at the end of a trial, and was thus also used to signify the day on which the trial took place. (Dem. c. *Everget*. p. 1153; *Lex Rhetor.* p. 210.) The word was also employed to indicate the account of a person's property, which was obliged to be given when an *antidosis* was demanded. [ANTIDOSIS.]

APO'PHORA (*ἀποφορά*), which properly means "produce or profit" of any kind, was used at Athens to signify the profit which accrued to masters from their slaves. It thus signified the sum which slaves paid to their masters when they laboured on their own account, and the sum which masters received when they let out their slaves on hire either for the mines or any other kind of labour, and also the money which was paid by the state for the use of the slaves who served in the fleet. (Dem. c. *Aphob.* i. p. 819, c. *Nicostr.* p. 1253; *Andoc. De Myst.* p. 19; *Xen. Rep. Ath.* i. 11; Böckh, *Publ. Econ. of Athens*, p. 72, 2nd ed.) The term *apophora* was also applied to the money which was paid by the allied states to Sparta, for

the purpose of carrying on the war against the Persians. When Athens acquired the supremacy, these moneys were called *φόροι*. (Böckh, *Ibid.* p. 396.)

APOPHORE'TA (*ἀποφόρητα*), presents which were given to friends at the end of an entertainment, to take home with them. These presents were usually given on festival days, especially during the Saturnalia. Martial gives the title of *Apophoreta* to the fourteenth book of his Epigrams, which contains a number of epigrams on the things usually given away as *apophoreta*. (Suet. *Vesp.* 19; *Cal.* 55; *Octav.* 75.)

APOPHRADES HEMERAI (*ἀποφράδες ἡμέραι*), unlucky or unfortunate days (*diēs nefastæ*), on which no public business, nor any important affairs of any kind, were transacted at Athens. Such were the last three days but one of every month, and the twenty-fifth day of the month Thargelion, on which the Plynteria were celebrated. (*Etyim. Mag.* p. 131; *Plut. Alcib.* 34; *Lucian, Pseudolog.* 13; Schömann, *De Comititiis*, p. 50.)

APORRHETA (*ἀπορήτα*), literally "things forbidden," has two peculiar, but widely different, acceptations in the Attic dialect. In one of these it implies contraband goods, an enumeration of which at the different periods of Athenian history, is given by Böckh (*Publ. Econ. of Athens*, p. 53, 2nd ed.); in the other, it denotes certain contumelious epithets, from the application of which both the living and the dead were protected by special laws. (Meier, *Att. Process.* p. 482.) Among these, *ἀνδροφόρος*, *πατραλοῖας*, and *μητραλοῖας* are certainly to be reckoned; and other words, as *βίβλασις*, though not forbidden *nominatim* by the law, seem to have been equally actionable. The penalty for using these words was a fine of 500 drachmae (*Isoc. in Loch.* p. 396), recoverable in an action for abusive language (*κακηγορίας*). It is surmised that this fine was incurred by Meidias in two actions on the occasion mentioned by Demosthenes (*in Mid.* pp. 540, 543; see also Hudtwalcker, *De Dialect.* p. 150). [J. S. M.]

APOSTA'SIOU DIKE' (*ἀποστασίου δίκη*). This is the only private suit which came, as far as we know, under the exclusive jurisdiction of the polemarch. (Aristot. *De Ath. Rep.* quoted by Harpocrat.) It could be brought against none but a freedman (*ἀπελευθερος*), and the only prosecutor permitted to appear was the citizen to whom he had been indebted for his liberty, unless this privilege was transmitted to the sons of such former master. The tenor of the accusation was, that there had been a default in duty to the prosecutor; but what attentions might be claimed from the freedman, we are not informed. It is said, however, that the greatest delict of this kind was the selection of a patron (*προστάτης*) other than the former master. If convicted, the defendant was publicly sold; but if acquitted, the unprosperous connection ceased for ever, and the freedman was at liberty to select any citizen for his patron. The patron could also summarily punish the above-mentioned delinquencies of his freedman by private incarceration without any legal award. (*Petit Leg. Attic.* p. 261.) [J. S. M.]

APOSTOLEIS (*ἀποστολαίς*), ten public officers at Athens, whose duty it was to see that the ships were properly equipped and provided by those who were bound to discharge the trierarchy.

They had the power, in certain cases, of imprisoning the trierarchs who neglected to furnish the ships properly (Dem. *pro Cor.* p. 262); and they constituted a board, in conjunction with the inspectors of the docks (*οἱ τῶν νεωρίων ἐπιμεληταί*), for the prosecution of all matters relating to the equipment of the ships. (Dem. *c. Euryg.* p. 1147; Meier, *Att. Process.* p. 112; Böckh, *Publ. Econ. of Athens*, p. 543.)

APOTHECA (*ἀποθήκη*), a place in the upper part of the house, in which the Romans frequently placed the earthen amphorae in which their wines were deposited. This place, which was quite different from the *cella vinaria*, was above the *fumarium*; since it was thought that the passage of the smoke through the room tended greatly to increase the flavour of the wine. (Colum. i. 6. § 20; Hor. *Carm.* iii. 8. 11, *Sat.* ii. 5. 7, and Heindorf's note.) The position of the apotheca explains the expression in Horace (*Carm.* iii. 21. 7), *Decemda, testis*. (Comp. Becker, *Gallus*, vol. ii. p. 169.)

APOTHEOSIS (*ἀποθέωσις*), the enrolment of a mortal among the gods. The mythology of Greece contains numerous instances of the deification of mortals; but in the republican times of Greece we find few examples of such deification. The inhabitants of Amphipolis, however, offered sacrifices to Brasidas after his death (Thuc. v. 11); and the people of Eggeste built an *heroon* to Philippos, and also offered sacrifices to him on account of his personal beauty. (Herod. v. 47.) In the Greek kingdoms, which arose in the East on the dismemberment of the empire of Alexander, it does not appear to have been uncommon for the successor to the throne to have offered divine honours to the former sovereign. Such an apotheosis of Ptolemy, king of Egypt, is described by Theocritus in his 17th Idyl. (See Casanbon's note on *Suet. Jul. Cæs.* 88.)

The term apotheosis, among the Romans, properly signified the elevation of a deceased emperor to divine honours. This practice, which was common upon the death of almost all the emperors, appears to have arisen from the opinion, which was generally entertained among the Romans, that the souls or manes of their ancestors became deities; and as it was common for children to worship the manes of their fathers, so it was natural for divine honours to be publicly paid to a deceased emperor, who was regarded as the parent of his country. This apotheosis of an emperor was usually called *consecratio*; and the emperor who received the honour of an apotheosis, was said *in decorem suum referri*, or *consecrari*. In the earliest times Romulus is said to have been admitted to divine honours under the name of Quirinus (Plut. *Rom.* 27, 28; Liv. i. 16; Cic. *de Rep.* ii. 10); but none of the other Roman kings appears to have received this honour, and in the republican times we also read of no instance of an apotheosis. Julius Caesar was deified after his death, and games were instituted to his honour by Augustus (Suet. *Jul. Cæs.* 88); and the example thus set was followed in the case of the other emperors.

The ceremonies observed on the occasion of an apotheosis have been minutely described by Herodian (iv. 2) in the following passage:—"It is the custom of the Romans to deify those of their emperors who die, leaving successors; and this rite they call apotheosis. On this

occasion a semblance of mourning, combined with festival and religious observance, is visible throughout the city. The body of the dead they honour after human fashion, with a splendid funeral; and making a waxen image in all respects resembling him, they expose it to view in the vestibule of the palace, on a lofty ivory couch of great size, spread with cloth of gold. The figure is made pallid, like a sick man. During most of the day senators sit round the bed on the left side, clothed in black; and noble women on the right, clothed in plain white garments, like mourners, wearing no gold or necklaces. These ceremonies continue for seven days; and the physicians severally approach the couch, and looking on the sick man, say that he grows worse and worse. And when they have made believe that he is dead, the noblest of the equestrian and chosen youths of the senatorial orders take up the couch, and bear it along the Via Sacra, and expose it in the old forum. Platforms like steps are built upon each side; on one of which stands a chorus of noble youths, and on the opposite, a chorus of women of high rank, who sing hymns and songs of praise to the deceased, modulated in a solemn and mournful strain. Afterwards they bear the couch through the city to the Campus Martius, in the broadest part of which a square pile is constructed entirely of logs of timber of the largest size, in the shape of a chamber, filled with faggots, and on the outside adorned with hangings interwoven with gold and ivory images and pictures. Upon this, a similar but smaller chamber is built, with open doors and windows, and above it, a third and fourth, still diminishing to the top, so that one might compare it to the light-houses which are called Phari. In the second story they place a bed, and collect all sorts of aromatics and incense, and every sort of fragrant fruit or herb or juice; for all cities, and nations, and persons of eminence emulate each other in contributing these last gifts in honour of the emperor. And when a vast heap of aromatics is collected, there is a procession of horsemen and of chariots around the pile, with the drivers clothed in robes of office, and wearing masks made to resemble the most distinguished Roman generals and emperors. When all this is done, the others set fire to it on every side, which easily catches hold of the faggots and aromatics; and from the highest and smallest story, as from a pinnacle, an eagle is let loose to mount into the sky as the fire ascends, which is believed by the Romans to carry the soul of the emperor from earth to heaven; and from that time he is worshipped with the other gods."

In conformity with this account, it is common to see on medals struck in honour of an apotheosis an altar with fire on it, and an eagle, the bird of Jupiter, taking flight into the air. The number of medals of this description is very numerous. We can from these medals alone trace the names of sixty individuals, who received the honours of an apotheosis, from the time of Julius Caesar to that of Constantine the Great. On most of them the word *CONSECRATIO* occurs, and on some Greek coins the word *ΑΘΙΕΘΩΣΙΣ*. The following woodcut is taken from an agate, which is supposed to represent the apotheosis of Germanicus. (Montfaucon, *Ant. Expl.* Suppl. vol. v. p. 137.) In his left hand he holds the cornucopia, and Victory is placing a laurel crown upon him.

A very similar representation to the above is found on the triumphal arch of Titus, on which Titus is represented as being carried up to the skies on an eagle. There is a beautiful representation of the apotheosis of Augustus on an onyx-stone in the royal museum of Paris.

Many other monuments have come down to us, which represent an apotheosis. Of these the most celebrated is the bas-relief in the Townley gallery in the British Museum, which represents the apotheosis of Homer. It is clearly of Roman workmanship, and is supposed to have been executed in the time of the Emperor Claudius.

The wives, and other female relations of the emperor, sometimes received the honour of an apotheosis. This was the case with Livia Augusta, with Poppaea the wife of Nero, and with Faustina the wife of Antoninus. (Suet. *Claud.* 11; Dion Cass. xl. 5; Tac. *Ann.* xvi. 21; Capitolin. *Anton. Philos.* 26.)

APPARITOR'ES, the general name for the public servants of the magistrates at Rome, namely, the ACCENSES, CARNIFEX, COACTORES, INTERPRETES, LICTORES, PRÆCONES, SCRIBÆ, STATOR, STRATOR, VIATORES, of whom an account is given in separate articles. They were called apparitores because they were at hand to execute the commands of the magistrates (*quod eis apparebant ut præsto erant ad obsequium*, Serr. *Ad Virg. Æn.* xii. 850; Cic. *pro Cluent.* 53; Liv. i. 8). Their service or attendance was called *apparitio*. (Cic. *ad Fam.* xiii. 54, *ad Qu. Fr.* i. l. § 4.) The servants of the military tribunes were also called apparitores. We read that the Emperor Severus forbade the military tribunes to retain the apparitores, whom they were accustomed to have. (Lamprid. *Sever.* 52.)

Under the emperors, the apparitores were divided into numerous classes, and enjoyed peculiar privileges, of which an account is given in Just. Cod. 12. tit. 52—59.

APPELLATIO. 1. GREEK (*ἔφεσις*, or *ἀνδίκη*). Owing to the constitution of the Athenian tribunals, each of which was generally appropriated to its particular subjects of cognisance, and therefore could not be considered as homogeneous with or subordinate to any other, there was little opportunity for bringing appeals properly so called. It is to be observed also, that in general a cause was finally and irrevocably decided by the verdict of the dicasts (*δικὴ ἀπορρογῆς*). There were, however, some exceptions, in which appeals and new trials might be resorted to.

A new trial to annul the previous award might

be obtained, if the loser could prove that it was not owing to his negligence that judgment had gone by default, or that the dicasts had been deceived by false witnesses. And upon the expulsion of the thirty tyrants, a special law annulled all the judgments that had been given during the usurpation. (Dem. c. *Timocr.* p. 718.) The peculiar title of the above-mentioned causes was *ἀνδικοί δίκαι*, which was also applied to all causes of which the subject-matter was by any means again submitted to the decision of a court.

An appeal from a verdict of the heliasts was allowed only when one of the parties was a citizen of a foreign state, between which and Athens an agreement existed as to the method of settling disputes between individuals of the respective countries (*δίκαι ἀπὸ συμβόλων*). If such a foreigner lost his cause at Athens, he was permitted to appeal to the proper court in another state, which (*ἐκκλητος πόλις*) Böckh, Schömann, and Hudtwalcker suppose to have been the native country of the litigant. Platner, on the other hand, arguing from the intention of the regulation, viz. to protect both parties from the partiality of each other's fellow-citizens, contends that some disinterested state would probably be selected for this purpose. The technical words employed upon this occasion are *ἐκκαλεῖν*, *ἐκκαλεῖσθαι*, and *ἡ ἐκκλητος*, the last used as a substantive, probably by the later writers only, for *ἔφεσις*. (Harpocr. *Hudtw. De Diast.* p. 125.) This as well as the other cases of appeal are noticed by Pollux (viii. 62, 63) in the following words:—"Ἐφεσις is when one transfers a cause from the arbitrators (*διαγῆται*), or archons, or men of the township (*δημόται*) to the dicasts, or from the senate to the assembly of the people, or from the assembly to a court (*δικαστήριον*), or from the dicasts to a foreign tribunal; and the cause was then termed *ἐφέσιμος*. Those suits were also called *ἐκκληται δίκαι*. The deposit staked in appeals, which we now call *παράβολον*, is by Aristotle styled *παράβολον*. The appeals from the *diastetae* are generally mentioned by Dem. c. *Aphob.* p. 862; c. *Boeot. de Dota*, pp. 1013, 1017, 1024; and Hudtwalcker supposes that they were allowable in all cases except when the *μη οὐρα δίκη* was resorted to. [DIKE.]

It is not easy to determine upon what occasions an appeal from the archons could be preferred; for after the time of Solon their power of deciding causes had degenerated into the mere presidency of a court (*ἡγεμονία δικαστηρίου*), and the conduct of the previous examination of causes (*ἀνέκρισις*). It has been also remarked (Platner, *Proc. and Klag.* vol. i. p. 243), that upon the plaintiff's suit being rejected in this previous examination as unfit to be brought before a court, he would most probably proceed against the archon in the assembly of the people for denial of justice, or would wait till the expiration of his year of office, and attack him when he came to render the account of his conduct in the magistracy (*εἰδέναι*). (Antiph. *De Chores.* p. 788.) An appeal, however, from the archons, as well as from all other officers, was very possible when they imposed a fine of their own authority and without the sanction of a court; and it might also take place when the king archon had by his sole voice made an award of dues and privileges (*γέρας*) contested by two priesthoods or sacerdotal races. (*Len. Rhetoricum*, pp. 219, 19.)

The appeal from the *demotae* would occur, when a person hitherto deemed one of their members, had been declared by them to be an intruder and no genuine citizen. If the appeal were made, the *demotae* appeared by their advocate as plaintiff, and the result was the restitution of the franchise, or thenceforward the slavery of the defendant.

It will have been observed, that in the three last cases, the appeal was made from few or single or local judges to the *heliasts*, who were considered the representatives of the people or country. With respect to the proceedings, no new documents seem to have been added to the contents of the *echinus* upon an appeal; but the *anacrisis* would be confined merely to an examination, as far as was necessary, of those documents which had been already put in by the litigants.

There is some obscurity respecting the two next kinds of appeal that are noticed by Pollux. It is conjectured by Schömann (*Att. Process*, p. 771) that the appeal from the senate to the people refers to cases which the former were for various reasons disinclined to decide, and by Platner (vol. i. p. 427), that it occurred when the senate was accused of having exceeded its powers.

Upon the appeal from the assembly to court, there is also a difference of opinion between the two last-mentioned critics, Schömann maintaining (*Att. Process*, p. 771) that the words of Pollux are to be applied to a voluntary reference of a cause by the assembly to the *dicasts*, and Platner suggesting the possible case of one that incurred a *præjudicium* of the assembly against him (*προβολή, καταχειρονομία*) calling upon a court (*δικαστήριον*) to give him the opportunity of vindicating himself from a charge that his antagonist declined to follow up. Platner also supposes the case of a magistrate summarily deposed by the assembly, and demanding to prove his innocence before the *heliasts*. [J.S.M.]

2. ROMAN. The word APPELLATIO, and the corresponding verb *appellare*, are used in the early Roman writers to express the application of an individual to a magistrate, and particularly to a tribune, in order to protect himself from some wrong inflicted, or threatened to be inflicted. It is distinguished from *provocatio*, which in the early writers is used to signify an appeal to the *populus* in a matter affecting life. It would seem that the *provocatio* was an ancient right of the Roman citizens. The surviving Horatius, who murdered his sister, appealed from the *duumviri* to the *populus*. (Liv. i. 26.) The *decemviri* took away the *provocatio*; but it was restored by a *lex consularis de provocazione*, and it was at the same time enacted that in future no magistrate should be made from whom there should be no appeal. On this Livy (iii. 55) remarks, that the plebes were now protected by the *provocatio* and the *tribunicium auxilium*; this latter term has reference to the *appellatio* properly so called (iii. 13. 56). Appian (Liv. iii. 56) applied (*appellavit*) to the tribunes; and when this produced no effect, and he was arrested by a viator, he appealed (*provocavit*). Cicero (*De Orat.* ii. 48) appears to allude to the re-establishment of the *provocatio*, which is mentioned by Livy (iii. 55). The complete phrase to express the *provocatio* is *provocare ad populum*; and the phrase which expresses the *appellatio*, is *appellare*, and in the later writers *appellare ad*. It appears that a person might *appellare* from one magistrate to another of equal rank; and, of course,

from an inferior to a superior magistrate; and from one tribune to another.

The appeals which have here been referred to, were limited to criminal matters. In civil suits there was not, and could not be any appeal under the republic, for the purpose of revising and altering a decision, for each magistrate had power to decide finally within the limits of his jurisdiction: and as a general rule, the sentence of a *judex* could not be reversed by the magistrate who appointed the *judex*. The only mode in which a person could have relief, in such cases, was by the intercession of a superior magistrate, or the *appellatio* of the tribunes which would be in the nature of a stay of execution. The *In integrum restitutio* also existed under the republic.

When the supreme power became vested in the emperors, the terms *provocatio* and *appellatio* lost their original signification. Thus Gellius (iv. 14) has used *provocatio* for *appellatio*. In the Digest (49. tit. 1. *De Appellationibus*) *provocatio* and *appellatio* are used indiscriminately, to express what we call an appeal in civil matters: but *provocatio* seems so far to have retained its original meaning as to be the only term used for an appeal in criminal matters. The emperor centred in himself both the power of the *populus* and the veto of the tribunes; but the appeal to him was properly in the last resort. Augustus (Sueton. *Octavianus*, 33) established a system of regular appeals from litigant parties at Rome to the *Praetor Urbanus*, as in the provinces to the governors. Nero (Sueton. *Nero*, 17) enacted that, all appeals from *privati* (Tacit. *Annal.* xiv. 28) *judices* should be to the senate. *Appellatio* among the later Roman jurists, then, signifies an application for redress from the decision of an inferior to a superior, on the ground of wrong decision, or other sufficient ground. According to Ulpian (Dig. 49. tit. 1), appeals were common among the Romans, "on account of the injustice or ignorance of those who had to decide (*judicantes*), though sometimes an appeal alters a proper decision, as it is not a necessary consequence that he who gives the last gives also the best decision." This remark must be taken in connection with the Roman system of procedure, by which such matters were referred to a *judex* for his decision, after the pleadings had brought the matter in dispute to an issue. From the emperor himself there was, of course, no appeal; and by a constitution of Hadrian, there was no appeal from the senate to the emperor. The emperor, in appointing a *judex*, might exclude all appeal and make the decision of the *judex* final. M. Aurelius by a rescript (Dig. 49. tit. 1. s. 1, 21) directed an appeal from the judgment of a *judex* to the magistrate who had appointed the *judex*. The appeal, or *libellus appellatorius*, showed who was the appellant, against whom the appeal was, and what was the judgment appealed from.

Appellatio also means to summon a party before a *judex*, or to call upon him to perform something that he has undertaken to do. (Cic. *Ad Att.* i. 8.) The debtor who was summoned (*appellatus*) by his creditor, and obeyed the summons, was said *respondere*.

The system of *appellationes* as established under the empire was of very extensive application, and was not limited to matters of criminal and civil procedure. A person might appeal in matters that related to the *fiscus*, to penalties and fines, and

to civil offices and burdens. This subject is fully treated by Hollweg, *Handbuch des Civilprocesses*, p. 350. [G.L.]

APPLICATIONIS JUS. [EXILIUM.]

APROSTA'SIOU GRAPHE' (*ἀπροστασίον γραφή*), an action falling under the jurisdiction of the polemarch, which was brought against those metoeki, or resident aliens, who had neglected to provide themselves with a patron (*προστάτης*). This action is stated to have been also brought against those metoeki, who exercised the rights of full citizens, or did not pay the *μετοίκιον*, a tax of twelve drachmae exacted from resident aliens; but Meier has remarked that this action was only applicable in such cases, provided that the metoeki had no patron. (Harpocrat.; Zonar.; Suid.; and the other grammarians; Meier, *Att. Process*, p. 315, &c.)

APSIS or ABSIS (*ἀψίς*), in its literal meaning from *ἀπτε*, is a fastening of any kind; for example, the meshes of a net. (Hom. *Il.* v. 487.) It was applied specially to the joining together the extremities of a piece of wood, so as to give it the shape of a bow; and hence it came to signify anything of that shape, such as a bow, an arch, or a wheel. (Hes. *Op.* 424; Herod. iv. 72.) A potter's wheel is described, in the Anthology, as *κύκλος ἀψίδος*. The next transition of meaning is to anything vaulted (for example, *ἡ ὑπερπavla ἀψίς*, the vault of heaven, Plat. *Phaedr.* p. 247, b.); and in this sense it was adopted in architecture, first, for any building or portion of a building of a circular form, or vaulted (Plin. *Epist.* ii. 17. § 18), and more especially for the circular and vaulted end of a Basilica. (Paul. Nol. *Ep.* 12; Augustin, *Ep.* 203; Isid. *Orig.* xv. 8.) For other applications of it, all with the general meaning of a vault or curve, see Forcellini. [P. S.]

AQUAEDUCTUS (*ἰδρυαγωγία*), literally, a water-conduit, would, of course, properly describe any channel for the passage of water; but the word is used especially for the magnificent structures by means of which Rome and other cities of the Roman empire were supplied with water, and which may be described in general terms as a channel, constructed as nearly as possible with a regular declivity from the source whence the water was derived to the place where it was delivered, carried through hills by means of tunnels, and over valleys upon a substruction of solid masonry or arches.

The aqueduct is mentioned by Strabo as among the structures which were neglected by the Greeks, and first brought into use by the Romans (v. p. 235). It will presently be seen that this statement requires some slight modification; but, if understood of the grand structures we have referred to, it is true enough that the Greeks (before the Roman conquest) had none such, and for the obvious reason, that they had no need of them. There is no occasion to discuss the possibility or impossibility of constructing aqueducts without arches, which is the reason alleged by some writers for their not being used by the Greeks; there is reason enough in the physical geography of the country. Springs (*κρήναι*, *κρουνὶ*) were sufficiently abundant to supply the great cities with water; and great attention was paid to the preservation and adornment of them; they were converted into public fountains by the formation of a head for their waters, and the erection of an

ornamental superstructure; and were dedicated to some god or hero. Pausanias (x. 4. § 1) considers no place to deserve the name of *cité*, which has not such a fountain. We are indebted to the same author and other Greek writers for accounts of some of the most celebrated fountains; such as that of Theagenes, at Megara (Paus. i. 40. § 1); those of Peirene and Lerna at Corinth, where there were many other fountains, as well as a Roman aqueduct erected by Hadrian (ii. 3. §§ 2, 3, 5; 4. § 5); that in the grove of Aesculapius at Epidaurus (ii. 17. § 5); and several others (iv. 31, 32, 34, vii. 5, 21, viii. 13), of which we need only mention the *Ἐνεακρουνὸς* at Athens, which was constructed by Peisistratus and his sons, and of which Thucydides records the interesting fact, marking the transition from the natural springs to the artificial fountain, and showing the importance attached even to the former, that "it was called Callirhoë formerly, when the springs were visible (*φανερὰν τῶν πηγῶν ὁρᾶν*), Thuc. ii. 15; Paus. i. 14. § 1): to this enumeration might be added the springs of salt-water in certain temples; as in those of Erechtheus at Athens, and of Poseidon Hippius at Mantinea. (Paus. i. 26. § 5, viii. 10. § 4.)

In these cases we have no reason to suppose that there was any thing more than a fountain over or close to the springs, forming a head for the water derived, either immediately, or by very short channels, from them. But we are not without examples of constructions more nearly approaching the Roman aqueducts in kind, though not in degree. That the Greeks, at a very early period, had some powers of hydraulic engineering is shown by the drainage tunnels of the lake Copais, and the similar works of Phacax at Agrigentum [*MISSARIUM*]; and we have an instance of a channel for water being carried through a mountain, to supply the city of Samos. The height of the mountain was 150 orguæ (900 Greek feet); the length of the tunnel was seven stadia (7-8ths of a Roman mile, or about 1420 yards); its section was a square of eight Greek feet. The actual channel for the water was cut below this, and was, if the text is right, thirty Greek feet deep, and three wide; the water passed through pipes (*διὰ σωλήνων*) from a copious spring, and was thus brought to the city. (Herod. iii. 60.) Müller conjectures that the work was one of those executed by Polycrates (*Archæol. d. Kunst*, § 81).

The chief regulations among the Greeks respecting fountains and springs, whether in town or country, were the following:—Water might be fetched from the public fountains or wells to a distance of four stadia; beyond this, persons must dig their own wells; but if any one dug to a depth of ten orguæ (or, according to Plato, *μέχρι τῆς κεφαλίδος τῆς*) without finding water, he was permitted to take from his neighbour's well a pitcher of six *obols* twice a day (Plut. *Sol.* 23; Plat. *Leg.* viii. p. 844, a, b).

The Romans were in a very different position, with respect to the supply of water, from most of the Greek cities. They, at first, had recourse to the Tiber, and to wells sunk in the city; but the water obtained from those sources was very unwholesome, and must soon have proved insufficient, from the growth of the population, to say nothing of the supplies afterwards required for the *naumachiae* and public baths. It was this neces-

sity that led to the invention of aqueducts, in order to bring pure water from a considerable distance, from the hills, in fact, which surround the Campagna. The date of the first aqueduct is assigned by Frontinus to the year A. V. C. 441, or A. C. 313 (*De Aquaed. Urb. Rom.* 4, p. 14, ed. Adler); and the number of aqueducts was gradually increased, partly at the public expense, and partly by the munificence of individuals, till, in the time of Procopius, they amounted to fourteen; and, even before they were all erected, they might well excite the admiration which Pliny expresses with respect to the Claudian aqueduct, in the following passage (*H. N.* xxxvi. 15. s. 24):—"But if any one will carefully calculate the quantity of the public supply of water, for baths, reservoirs, houses, trenches (*cunips*), gardens, and suburban villas; and, along the distance which it traverses, the arches built, the mountains perforated, the valleys levelled; he will confess that there never was any thing more wonderful in the whole world."

But why did the Romans waste so much money and labour on works, the purpose of which might have been effected much more scientifically by the simple plan of laying pipes along the ground? Of course, it is easy to give the unthinking answer, that they were ignorant of the laws of hydrostatics, and did not know that water finds its own level! It is truly marvellous that such an absurd notion should ever have been entertained, and yet it is the common explanation of the fact of their building aqueducts instead of laying down water-pipes. If it were at all necessary to prove that a nation, so far advanced in civilisation as the Romans, or indeed that any individual arrived at years of discretion, had discovered that water finds its own level, the proof might be supplied from passages in Latin authors*, from the whole arrangements for the distribution of the water of the aqueducts, and from the

very existence of their numerous fountains; as a decisive ocular demonstration, we have given above a section of one of the many fountains still existing at Pompeii. Another reason assigned for the construction of aqueducts by the Romans is their want of the materials, and the manufacturing skill, to make pipes of a sufficient size; combined, on the other hand, with the love of magnificence and the ostentatious disregard of expense, by which the architectural works of the empire are characterised. Some weight should doubtless be assigned to these considerations, although, in fact, the Romans made use of pipes as well as aqueducts; but the great point is, that it has been too hastily assumed that the aqueduct is an unscientific mode of conveying water to a large city from distant sources; or that it is peculiar to the ancients. London itself is chiefly supplied by an aqueduct, for such is the New River in principle, although the country through which it flows is such as not to require arches and tunnels like those of the Roman aqueducts; and the remark would apply to several other great cities. The whole matter is a question of the balance of advantages. On the one hand there is the expense of the aqueduct: on the other, the enormous pipes which would be required for the conveyance of an equal quantity of water, their liability to get obstructed, and to yield at the joints, the loss by friction, especially in the bends, and the unequal pressure of the water. In fact, the most recent feat of engineering science in this department is exactly a return to the Roman aqueduct, which has been preferred to any other plan for conveying water in large quantities a considerable distance, over great inequalities of ground: we refer to the aqueduct, begun in 1837 and finished in 1842, by which the water of the river Croton is conveyed a distance of forty miles, for the supply of New York, and which is thus described:—"An artificial channel, built with square stones, supported on solid masonry, is carried over valleys, through rivers, under hills, on arches and banks, or through tunnels and bridges, over these forty miles. Not a pipe, but a sort of condensed river, arched over to keep it pure and safe, is made to flow at the rate of a mile and a half an hour towards New York." A more exact description of an ancient Roman aqueduct could not easily be given. (See *Illustrations of the Croton Aqueduct*, by F. B. Tower, 1843.)

The detailed description of the arrangements of the aqueduct will be better understood, after an enumeration of the principal aqueducts by which water was conveyed to Rome across the Campagna.

They were fourteen in number; and only four of them belong to the time of the republic, while five were built in the reigns of Augustus and Claudius. Our knowledge of the subject is derived almost entirely from the treatise *De Aquaeductibus Urbis Romae*, by S. Julius Frontinus, who was *curator aquarum* (keeper of the aqueducts) under Nerva and Trajan. It should be observed that the *Aquaeductus* is often called simply *Aqua*.

1. The *Aqua Appia* was begun by the censor Appius Claudius Caecus (to whom also Rome was indebted for her first great road), in A. C. 313. Its sources were near the *Via Praenestina*, between the seventh and eighth milestones, and its termination was at the *salinae*, by the *Porta Trigemina*.

a, a, The ascending pipe.

b, b, The basin, made of blocks of travertine.

* Vitruvius not only expressly states the law (viii. 6, s. 6), but describes one form of the aqueduct in which it was practically applied (viii. 7, s. 6), as will be seen below. Pliny also, in describing the passage of water through pipes, states the law in these very distinct terms:—"Subit altitudinem exortus sui." (*H. N.* xxxi. 6. s. 31.)

Its length was 11,190 *passus*, for 11,130 of which it was carried under the earth, and for the remaining 60 *passus*, within the city, from the *Porta Capena* to the *Porta Trigemina*, it was on arches. The distribution of its water began from the *Clivus Publicius*. (Frontin. 5; Liv. ix. 29; Diod. xx. 36; Aur. Vict. *Vir. Illust.* 34, who confounds it with the *Anio*.) No traces of it remain.

2. The *Anio Vetus* was commenced forty years later, a. c. 273, by the censor M. Curius Dentatus, and was finished by M. Fulvius Flaccus. The expense was defrayed out of the spoils taken from Pyrrhus. The water was derived from the river Anio, above Tibur, at a distance of twenty Roman miles from the city; but, on account of its windings, its actual length was forty-three miles, of which length less than a quarter of a mile only (namely, 221 *passus*) was above the ground. There are considerable remains of this aqueduct on the Aurelian wall, near the *Porta Maggiore*, and also in the neighbourhood of Tivoli. It was built of blocks of peperino stone, and the water-course was lined with a thick coating of cement. (Front. 6; Aur. Vict. *Vir. Ill.* 43.)

3. The *Aqua Marcia*, one of the most important of the whole, was built by the praetor Q. Marcus Rex, by command of the senate, in a. c. 144. The want of a more plentiful supply of water had been long felt, especially as that furnished by the *Anio Vetus* was of such bad quality as to be almost unfit for drinking; and, in a. c. 179, the censors, M. Aemilius Lepidus and M. Flaccus Nobilior, had proposed the erection of a new aqueduct; but the scheme had been defeated, in consequence of Licinius Crassus refusing to let it be carried through his lands. (Liv. xl. 51.) The two existing aqueducts had also fallen into decay by neglect, and had been much injured by private persons drawing off the water at different parts of their courses. The senate therefore commissioned the praetor Marcus to repair the old aqueducts, and to build a third, which was named after him. Some writers have pretended that the original construction of this aqueduct is to be ascribed to Ancus Marcius, alleging a passage of Pliny (*H. N.* xxxi. 3. s. 24), and a medal of the Marcian gens, family Philippus, which bears on the obverse a head with the legend ANCV, and on the reverse a representation of an aqueduct, with the letters AQVA between the arches, supporting an equestrian statue with the legend PHILLIPVS; but those who know any thing of the history of Roman family records will understand that this medal bears no evidence to the point in question, and is simply a perpetuation of two of the greatest distinctions of the *Marcia gens*, their alleged descent from Ancus, and the aqueduct which bore their name; and Pliny's opinion is simply one of his ludicrous blunders, arising probably from his confounding Marcus Rex with the king Ancus Marcius. (Eckhel, *Doctr. Num. Vet.* vol. v. p. 248.)

This aqueduct commenced at the side of the *Via Valeria*, thirty-six miles from Rome; its

length was 61,710 *passus*, of which only 7463 were above ground; namely, 528 on solid substructions, and 6935 on arches. It was high enough to supply water to the summit of the Capitoline Mount. It was repaired by Agrippa in his aedileship, a. c. 33 (see below, No. 5.), and the volume of its water was increased by Augustus, by means of the water of a spring 800 *passus* from it: the short aqueduct which conveyed this water was called the *Aqua Augusta*, but is never enumerated as a distinct aqueduct. Pliny states that the water of the *Aqua Marcia* was the coldest and most wholesome of all which was brought to Rome; and Vitruvius and other writers refer to the excellence of the water as being proverbial. Several arches of the *Aqua Marcia* are still standing. (Frontin. 12; Plin. *H. N.* xxxi. 3. s. 24, who differs from Frontinus in some of the details; Strab. v. p. 240; Vitruv. viii. 3. § 1; Dion Cass. xlix. 42; Plut. *Coriol.* 1; Propert. iii. 22, 24; Martial. vi. 42. 16; Stat. *Silo.* i. 5, 25.)

4. The *Aqua Tepula*, which was built by the censor Cn. Servilius Caepio and L. Cassius Longinus in a. c. 127, began at a spot in the Lucullan or Tuscan land, two miles to the right of the tenth milestone on the *Via Latina*. It was afterwards connected with

5. The *Aqua Julia*. Among the splendid public works executed by Agrippa in his aedileship, a. c. 33, was the formation of a new aqueduct, and the restoration of all the old ones. From a source two miles to the right of the twelfth milestone of the *Via Latina*, he constructed his aqueduct (the *Aqua Julia*) first to the *Aqua Tepula*, in which it was merged as far as the reservoir (*piscina*) on the *Via Latina*, seven miles from Rome. From this reservoir the water was carried along two distinct channels, on the same substructions (which were probably the original substructions of the *Aqua Tepula*, newly restored), the lower channel being called the *Aqua Tepula*, and the upper the *Aqua Julia*; and this double aqueduct again was united with the *Aqua Marcia*, over the watercourse of which the other two were carried. The monument erected at the junction of these three aqueducts, is still to be seen close to the *Porta S. Lorenzo*. It bears an inscription referring to the repairs under Caracalla. (See the woodcut below, p. 112.) The whole course of the *Aqua Julia*, from its source, amounted to 15,426 *passus*, partly on massive substructions, and partly on arches. (Frontin. 8, 9, 19.)

6. The *Aqua Virgo* was built by Agrippa, to supply his baths. From a source in a marshy spot by the eighth milestone on the *Via Collatina*, it was conducted by a very circuitous route, chiefly under the ground, to the *M. Pincius*, whence it was carried on arches to the *Campus Martius*. Its length was 14,105 *passus*, of which 12,865 were underground; in its subterranean course it received the water of numerous springs; and its water was as highly esteemed for bathing as that of the *Aqua Marcia* was for drinking. It is one of the two aqueducts on the left bank of the Tiber, which are still in use, though on a much-diminished scale. (See below.) The origin of its name is variously explained. (Frontin. 10; Dion Cass. liv. 11; Plin. *H. N.* xxxi. 8. s. 25; Cassiod. *Var.* vii. 6; Ovid, *Trist.* iii. 12. 22; Martial. v. 20. 9, vi. 42. 18, xi. 47. 6.)

7. The *Aqua Alentina* (sometimes called also *Aqua Augusta*), on the other side of the Tiber, was constructed by Augustus from the *Lacus Alentinus* (*Lago di Martignano*), which lay 6500 *passus* to the right of the fourteenth milestone on the *Via Claudia*, to the part of the *Regio Transiberina* below the *Janiculus*. Its length was 22,172 *passus*, of which only 358 were on arches; and its water was so bad that it could only have been intended for the supply of Augustus's *Naumachia*, and for watering gardens. Its reservoir was 1800 feet long by 1200 wide. (Frontin. 11.)

8, 9. The two most magnificent aqueducts were the *Aqua Claudia* and the *Anio Novus* (or *Aqua Aniensis Nova*), both commenced by Caligula in A. D. 36, and finished by Claudius in A. D. 50. The water of the *Aqua Claudia* was derived from two copious and excellent springs, called *Caesulus* and *Quertius*, near the thirty-eighth milestone on the *Via Sublaccensis*, and it was afterwards increased by a third spring, *Albudinus*. Its water was reckoned the best after the *Marcia*. Its length was 46,406 *passus* (nearly 46½ miles), of which 9567 were on arches. Of a still greater length was the *Anio Novus*, which began at the forty-second milestone, on the *Via Sublaccensis*, and received in addition, at the thirty-eighth milestone, opposite the sources of the *Aqua Claudia*, a stream called the *Rivus Herculanensis*. It was the longest and the highest of all the aqueducts, its length being nearly 59 miles (58,700 *passus*), and some of its arches 109 feet high. In the neighbourhood of the city these two aqueducts were united, forming two channels on the same arches, the *Claudia* below and the *Anio Novus* above. An interesting monument connected with these aqueducts, is the gate now called *Porta Maggiore*, which was originally a magnificent double arch, by means of which the aqueduct was carried over the *Via Labicana* and the *Via Praenestina*. The *Porta Labicana* was blocked up by Honorius; but the arch has been lately cleared of his barbarous constructions. Over the double arch are three inscriptions, which record the names of Claudius as the builder, and of Vespasian and Titus as the restorers of the aqueduct. (See the woodcut below.) By the side of this arch the aqueduct passes along the wall of Aurelian for some distance, and then it is continued upon the *Arxus Neroniani* or *Castimontani*, which were added by Nero to the original structure, and which terminated at the temple of Claudius, which was also built by Nero, on the *Caetius*, where the water was probably conveyed to a *castellum* already built for the *Aqua Julia*, and for a branch of the *Aqua Marcia*, which had been at some previous time continued to the *Caetius*: the monument called the Arch of Dolabella is probably a remnant of this common *castellum*. (Becker, *Handb. d. Röm. Alterth.* vol. i. pp. 498—502.)

These nine aqueducts were all that existed in the time of Frontinus, who thus speaks of them collectively, in terms which can hardly be thought exaggerated: — “*Tot aquarum tam multis necessariis molibus pyramidas videlicet otiosas compares, aut inertia et fama celebrata opera Græcorum.*” It has been calculated that these nine aqueducts furnished Rome with a supply of water equal to that carried down by a river thirty feet broad by six deep, flowing at the rate of thirty inches a second. There was also another aqueduct, not

reckoned with the nine, because its waters were no longer brought all the way to Rome:

10. This was the *Aqua Crabra*, which had its source near that of the *Julia*, and which was originally carried right through the *Circus Maximus*; but the water was so bad, that Agrippa would not bring it into the *Julia*, but abandoned it to the people of the *Tusculan* land; hence it was called *Aqua Damnata*. At a later period, part of its water was brought into the *Aqua Julia*. (Frontin. 9.) Considerable traces of it remain.

There are still four aqueducts of later construction to be added to the list.

11. The *Aqua Trajana* was brought by Trajan from the *Lacus Sabatinus* (now *Bracciano*), to supply the *Janiculus* and the *Regio Transiberina*. Its construction is recorded on coins of gold, silver, and bronze, of the years 111 and 112 A. D. (Eckhel, *Doctr. Num. Vet.* vi. pp. 425, 428). Trajan also restored and improved the other aqueducts, especially the *Anio Novus*. (Frontin. 92, 93.)

12. The *Aqua Alexandrina* was constructed by Alexander Severus; its source was in the lands of Tusculum, about fourteen miles from Rome, between Gabii and the Lake Regillus. Its small height shows that it was intended for the baths of Severus, which were in one of the valleys of Rome. (Lamprid. *Alex. Sev.* 25; Fabretti, *Diss.* i. § 23.)

13. The *Aqua Septimiana*, built by Septimius Severus, was, perhaps, only a branch of the *Aqua Julia*, formed by the emperor to bring water to his baths. (Fabretti, *Diss.* iii. § 285.)

14. The *Aqua Algentia* had its source at *M. Algidus* by the *Via Tusculana*, 9000 *passus* from Rome, according to Fabretti; but more probably 15,000. Its builder is unknown.

These seem to have been the fourteen aqueducts, which were still preserved in use at Rome in the time of Procopius (*Goth.* i. 19); but there is a doubt respecting some of the last five. Thus the *Epilogus* to the *Notitia* mentions the *Ciminia*, the *Severiana*, and the *Antonina*, and makes the whole number nineteen; while Aurelius Victor enumerates twenty. The account of Procopius seems the most exact, and the excess in the other statements may be explained from the enumeration of the small accessory branches of the chief aqueducts: for the *Aqua Jovia* of Bunsen there is no sufficient authority. (Becker, *Handb. d. Röm. Alterth.* vol. i. p. 707.)

Great pains were taken by successive emperors to preserve and repair the aqueducts. From the Gothic wars downwards, they have for the most part shared the fate of the other great Roman works of architecture; their situation and purpose rendering them peculiarly exposed to injury in war; but still their remains form the most striking features of the Campagna, over which their lines of ruined arches, clothed with ivy and the wild fig-tree, radiate in various directions. Three of them still serve for their ancient use; and these three alone, according to Tournon, supply the modern city with a quantity of water much greater than that which is furnished to Paris by the Canal de l'Ourcq, for a population six times as large. They are:—(1.) The *Aqua Virgine*, the ancient *Aqua Virgo*, which was restored by Pope Pius IV. and further embellished by Benedict XIV. and Clement XIII. The chief portion of its waters gush out through the beautiful *Fontana di Trevi*, but it also supplies twelve other public fountains,

and the greater part of the lower city. (2.) The *Aqua Felice*, named after the conventual name of its restorer Sixtus V. (Fra Felice) is, probably, a part of the ancient *Aqua Claudia*, though some take it for the *Alexandrina*. It supplies twenty-seven public fountains, and the eastern part of the city. (3.) The *Aqua Paola*, the ancient *Aleisina*, supplies the *Transvere* and the Vatican, and feeds, among others, the splendid fountains before St. Peter's. Of the ruins of the other aqueducts the most extensive, within Rome, are those of the *Arcus Neroniani*, and of the *Aqua Crabra*; the most interesting are the *Porta Maggiore*, with the two channels of the *Aqua Claudia* and *Anio Novus*, and the remains of the triple aqueduct of Agrippa by the *Porta S. Lorenzo*. The following woodcut (after Hirt) represents restored sections of them, preserving their relative proportions:—

Fig. 1.—Section of the *Porta Maggiore* at Rome: a. the *Aqua Claudia*; b. the *Anio Novus*; c. openings to give vent to the air.

Fig. 2.—Section of the triple aqueduct of Agrippa: a. the *Aqua Marcia*; b. the *Aqua Tepula*; c. the *Aqua Julia*. The two latter are of brick and vaulted over. The air-vents are also shown.

The magnificence displayed by the Romans in their public works of this class, was by no means confined to the capital; for aqueducts more or less stupendous were constructed by them in various and even very remote parts of the empire,—at Athens, Corinth, Catania, Salona, Nicomedia, Ephesus, Smyrna, Alexandria in the Troad, Syracuse, Metz, Clermont in Auvergne, Nîmes (the Pont du Gard), Lyon, Evora, Merida, and Segovia. Those at Ephesus and Alexandria were built by

Hadrian and Herodes Atticus, and that at Athens was commenced by Hadrian and finished by Antoninus Pius, who also built those at Corinth and Nicomedia. That at Evora, which was built by Quintus Sertorius, is still in good preservation; and at its termination in the city has a very elegant *castellum* in two stories, the lower one of which has Ionic columns. Merida in Spain, the *Augusta Emerita* of the Romans, who established a colony there in the time of Augustus, has among its other antiquities the remains of two aqueducts, of one of which thirty-seven piers are standing, with three tiers of arches; while of the other there are only two which form part of the original construction, the rest being modern. But that of Segovia, for which some Spanish writers have claimed an antiquity anterior to the sway of the Romans in Spain, is one of the most perfect and magnificent works of the kind anywhere remaining. It is entirely of stone, and of great solidity, the piers being eight feet wide and eleven in depth; and, where it traverses a part of the city, the height is upwards of a hundred feet, and it has two tiers of arches, the lowermost of which are exceedingly lofty.

We proceed to describe in detail the construction and arrangements of Roman aqueducts. There are three matters to be considered: the source from which the water was derived; the aqueduct itself, by which it was conveyed; and the reservoir in which it was received, and from which it was distributed for use.

(1.) *The Sources*.—It is unnecessary to follow Vitruvius into the minute rules which he lays down for the discovery of springs, where they were not naturally visible, and for testing the quality of the water: it is enough to refer to his statements as showing the importance attached to these points. (Vitruv. viii. 1.) It was also necessary that the springs should have such an elevation, as that, after allowing for the fall necessary to give the channel its proper inclination, the water should enter the final reservoir at a sufficient height to permit of its distribution for public and private use; for there were no engines used, as in modern waterworks, to raise the water to a higher elevation than that at which it was required. When the source had been fixed upon, whether it was an open spring (*fons*), or one got at by sinking a well (*puteus*), a head was dug for the water, and inclosed with a wall; and, if necessary, the supply was increased by digging channels from neighbouring springs: the rules for these operations also are minutely laid down by Vitruvius (viii. 7. a. 6. §§ 12–15).

(2.) *The Channel, or Aqueduct itself*.—In order to convey the water from its source to its destination, a channel was constructed, having a slight, and, as nearly as possible, a uniform declivity. An elaborate description of the means adopted to secure this object is quite needless for readers of the present day, as they were almost precisely

* Though the word *aquaeductus* is applied generally to the whole structure, yet in its special and proper meaning it seems only to have signified that part of the work in which the water-channel was carried over a valley, on arches or on solid substructions: a channel on the surface of the ground was properly called *rius*; and one beneath the surface, *rius subterraneus*, or *cuniculus*.

similar to those with which we are familiar in our railways: hills were pierced through by tunnels, and valleys crossed either by solid substructions or arches of masonry, according to the height required; and of these arches there were often two tiers, and sometimes even three. The channel itself (*specus, canalis*) was a trough of brick or stone, lined with cement, and covered with a coping, which was almost always arched; and the water either ran directly through this trough, or it was carried through pipes laid along the trough. When the channel was carried beneath the surface, if the hill through which it passed was of rock, it was merely cut in the rock; but if of earth or sand, it was constructed of blocks of stone.

The following woodcut represents a portion of a double-arched aqueduct, and shows a section of the *specus* (a): *b b* are projecting blocks, which are often seen in such positions, and which were doubtless the supports for the centerings used in building the arches.

The object of covering the *specus* was to exclude the sun and rain, and other corruptions and obstructions; but it was necessary to provide a vent for the air, which otherwise would have been compressed to such a degree as to burst the walls or roof of the *specus*. These vent-holes were made at regular intervals in the roof of the *specus*, *a*, when another channel passed over it, in the side. They are represented in the sections, given above, of the *Aqua Claudia, Marcia*, &c. To ventilate the subterranean channel of an aqueduct, a shaft (*puteus*) of masonry was carried to the surface of the ground at intervals of an *actus*, or 120 Roman feet (or two *actus*, according to Pliny, who calls them *laminæ*), as shown in the following woodcut (after Hirt), which represents the plan, longitudinal section, and transverse section, of part of a *rius subterraneus*, the ruins of which still exist at Palmyra.

The *rius subterraneus* possessed the advantage over the *aquaeductus* of being less exposed to variations of temperature, and more secure from injury; on the other hand, it was of course more difficult to get at when it required repairs. A reference to the account given above, of the Roman

aqueducts, will show how large a portion of them was subterranean.

a, The water-course; *b*, steps giving access to it; *c*, the shaft; *d, e*, section of the *specus* and shaft; *f*, transverse section of them.

Instead of, or within, the *specus*, pipes (*fulvae, tubuli*), were often used for the passage of the water. They were of lead, or terra-cotta (*fictiles*), and sometimes, for the sake of economy, of leather. The rules which Vitruvius lays down apply particularly to leaden pipes, although he gives the preference to the earthen ones, chiefly on the ground that the water which passed through them was more wholesome. The pipes were made in lengths not less than ten feet, and of various widths, which were denominated in the manner explained under *FISTULA*. They were cemented together at the joints, which in earthen pipes were made to overlap, and when the water was first let in, ashes were mixed with it, in order that they might settle in the joints and stop them more completely. The use of pipes permitted variations to be made in the construction of the aqueduct: namely, the water could be carried round, instead of through a hill, if the circuit was not too great; and in very wide valleys, the costly structure of arches could be dispensed with. In this case, a low horizontal substruction was made across the bottom of the valley, and the pipe was brought down the one slope, along this substruction, and up the opposite slope, to a height, of course, somewhat less than that of the opposite side. The horizontal part of the pipe across the bottom of the valley (*oculus*), had ventilating openings for the escape of the air. At the bendings, instead of the pipe, an elbow was bored in a solid piece of stone, into which the ends of the adjacent pieces of pipe were securely cemented. (For further details, see Vitruvius.) In those places where the pipes were laid on the surface, reservoirs were sometimes made, at intervals of 200 *actus* (24,000 feet), in order that, if a part of the pipe needed repair, the supply of water might not be entirely cut off. The advantage in the use of pipes, according to Vitruvius, was the facility of repairing them.

The slope (*fastigium*), on which the aqueduct was built, in order to give the water a proper fall (*libramensum*), ought not, says Vitruvius, to be less than half a foot in every 100 feet (1 in 200); but Pliny only allows a *scillius* (a quarter of an inch) in 100 feet. The great circuit, which most of the aqueducts of Rome made, was taken chiefly (as is the case with the New River), to prevent the too rapid descent of the water. There is, however, a considerable variation in their declivities: for example, the *Aqua Marcia* and the

Aqua Claudia, though of such different heights at Rome, have their sources at the same elevation.

At convenient points on the course of the aqueduct, and especially near the middle and end, there was generally a reservoir (*piscina*, *piscina limosa*) in which the water might deposit any sediment that it contained. The construction of these reservoirs will be understood from the following woodcut, which represents a restored section of one which still exists.

The water flowed from the aqueduct *a* into the first upper chamber, thence down and up again through the openings *b*, *c*, *e*, into the second upper chamber, out of which it passed into the continuation of the aqueduct *f*, having deposited its sediment in the two lower chambers, which could be cleaned out by the door *d*. The *piscina* was not always vaulted: Hirt, from whose work the above cut is taken, gives also an engraving of an open *piscina*. These reservoirs were not always used: for example, the *Aqua Virgo* and the *Alsietinu* were without them. They were especially necessary when the water was conveyed through pipes. They were also used as reservoirs for the supply of the neighbouring country, chiefly for the purposes of irrigation.

The details, which we have now been noticing, are minutely described by Frontinus, and by Vitruvius* (viii. c. 7. s. 6), and briefly by Pliny (H. N. xxxi. 6. s. 31).

(3.) *The Termination of the Aqueduct, and the Arrangements for the Distribution of its Water.*—The water thus conducted to the city was received, when it reached the walls, in a vast reservoir called *castellum*, which formed the head of water and also served the purpose of a meter. The more ancient name in use, when the aqueducts were first constructed, was *dividiculum*. (Fest. s. v.) From this principal *castellum* the water flowed into other *castella*, whence it was distributed for public and private use. The term *castellum* is sometimes also applied to the intermediate reservoirs already mentioned.

The chief *castellum* was, externally, a highly decorated building; for example, that of Hadrian, at Athens, was adorned with Ionic pillars, and that at Evora, in Portugal, had the form of a circular temple. Internally, there was generally one vast chamber, with a vaulted roof supported by massive pillars, into which the water flowed from

* The particular attention which Vitruvius pays to the conveyance of water through pipes, warrants the supposition that in his time, when some of the most important of the aqueducts were not yet erected, that method was very largely employed.

the aqueduct, and from which it was conducted through pipes of fixed dimensions, into three smaller reservoirs, which were, however, so arranged, that the middle one was only supplied from the overflow of the other two. Of these three reservoirs, the two outer supplied respectively the public baths and the private houses, and the middle one the public ponds and fountains (*lacus et salientes*): so that, in case of a deficient supply for useful purposes, none would be wasted on the fountains; the arrangement also enabled a proper account to be kept of the quantity supplied for private use, for the protection of the revenue derived from this source. (Vitruv. viii. 7. s. 6. §§ 1, 2.)

The minor *castella*, which received the water from this chief head, were distributed over the city, in such a manner that the *Aqua Appia* supplied seven *regiones* by means of twenty *castella*; the *Anio Vetus*, ten *regiones* through thirty-five *castella*; the *Marcia*, ten *regiones* through fifty-one *castella*; the *Tepula*, four *regiones* through fourteen *castella*; the *Julia*, seven *regiones* through seventeen *castella*; the *Virgo*, three *regiones* through eighteen *castella*; the *Claudia* and the *Anio Vetus*, ninety-two *castella*. (Frontin. 79—86.) For an account of the parts of the city supplied by the different aqueducts, see Becker, *Handb. d. Röm. Alterth.* vol. i. pp. 707, 708.

The subjoined plan and elevation represent a ruin still remaining at Rome, commonly called the "Trophies of Marius," which is generally considered to have been the *castellum* of an aqueduct.

It is now much dilapidated, but was tolerably entire about the middle of the 16th century, as may be seen by the drawing published by Gamucci (*Antichità di Roma*, iii. p. 100), from which this restoration is made. The trophies, then remaining in their places, from which the monument derives its modern appellation, are now placed on the Capitol. The ground plan is given from an excavation made some years since by the students of the French Academy; it explains part of the internal construction, and shows the arrangement adopted for disposing of the superfluous water of an aqueduct. The general stream of water is first divided by the round projecting buttress into two courses, which subdivide themselves into five minor streams, and finally fall into a reservoir.

The *castella* were divided into two classes, the *publica* and *privata*.

The *castella publica* were again subdivided into six classes, which furnished water for the following uses:—(1.) The Praetorian camp (*castra*); (2.) the ponds and fountains (*lacus et salientes*); (3.) the circus, naumachiae, and amphitheatres (*munera*); (4.) the baths, and the service of certain important handicrafts, such as the fullers, dyers, and tanners (*opera publica*); (5.) irregular distributions made by the special order of the emperor (*nomine Caesaris*); (6.) extraordinary grants to private individuals by the favour of the prince (*beneficia Caesaris*). The distribution under each of these heads is described by Frontinus (3, 78).

The *castella privata* were, as the name implies, for the supply of private houses. When a supply of water from the aqueducts was first granted for private uses, each person obtained his quantum by inserting a branch pipe, as we do, into the main; which was probably the custom in the age of Vitruvius, as he makes no mention of private reservoirs. Indeed, in early times, all the water brought to Rome by the aqueducts was applied to public purposes exclusively, it being forbidden to the citizens to divert any portion of it to their own use, except such as escaped by flaws in the ducts or pipes, which was termed *aqua caduca*. (Frontin. 94.) But as even this permission opened a door for great abuses from the fraudulent conduct of the *aquarii*, who damaged the ducts for the purpose of selling the *aqua caduca*, and as the subsequent method of supply required the main-pipe to be punctured in too many places (Frontin. 27), a remedy was sought by the institution of *castella privata*, and the public were henceforward forbidden to collect the *aqua caduca*, unless permission was given by special favour (*beneficium*) of the emperor. (Frontin. 111.) The *castella privata* were built at the joint expense of the families supplied by them; but they were considered as public property, and were under the control of the *curatores aquarum*. (Frontin. 106.) The right of water (*ius aquae impetratae*) did not follow the heir or purchaser of the property, but was renewed by grant upon every change in the possession. (Frontin. 107.)

The leaden cisterns, which each person had in his own house to receive the water laid on from the *castellum privatum*, were called *castella domestica*.

All the water which entered the *castellum* was measured, at its ingress and egress, by the size of the tube through which it passed. The former was called *modulus acceptorius*, the latter *erogatorius*. To distribute the water was termed *erogare*; the distribution, *erogatio*; the size of the tube, *fistularum* or *modulorum capacitas*, or *lumen*. The smaller pipes which led from the main to the houses of private persons, were called *punctae*; those inserted by fraud into the duct itself, or into the main after it had left the *castellum*, *fistulae illicitae*.

The *erogatio* was regulated by a tube called *calix*, of the diameter required, and not less than a foot in length, attached to the extremity of each pipe, where it entered the *castellum*; it was probably of lead in the time of Vitruvius, such only being mentioned by him; but was made of bronze (*aeneus*) when Frontinus wrote, in order to check the roguery of the *aquarii*, who were able to increase or diminish the flow of water from the reservoir by compressing or extending the lead.

As a further security, the *calix* was stamped. Pipes which had no *calix*, were termed *solutae*. Frontinus also observes that the velocity of the water passing through the *calix*, and, consequently, the quantity given out, could be varied according to the angle which the *calix* made with the side of the reservoir: its proper position was, of course, horizontal.

It is evident how watchful an oversight must have been required to keep the aqueducts in repair, to regulate their use, and to prevent the fraudulent abstraction of their water. Under the republic, this office was discharged, sometimes, by the censors, but more generally by the aediles (Cic. ad Div. viii. 6), and sometimes a special overseer was appointed. (Frontin. 95, 119.) Augustus first established the office of *curator* (or *praefectus*) *aquarum* (Suet. Octav. 37), the duties of which are minutely described by Frontinus (99), who seems, while he held the office, to have performed it with the utmost zeal: among other cares, he had plans and models made of the whole course of all the aqueducts (17, 64). The *curatores aquarum* were invested with considerable authority. They were attended outside the city by two lictors, three public slaves, a secretary, and other attendants.

In the time of Nerva and Trajan, a body of four hundred and sixty slaves were constantly employed under the orders of the *curatores aquarum* in attending to the aqueducts. They were divided into two families, the *familia publica*, established by Agrippa, and the *familia Caesaris*, added by Claudius; and they were subdivided into the following classes:—1. The *villici*, whose duty it was to attend to the pipes and *calices*. 2. The *castellarii*, who had the superintendence of all the *castella*, both within and without the city. 3. The *circuitoires*, so called because they had to go from post to post, to examine into the state of the works, and also to keep watch over the labourers employed upon them. 4. The *silicarii*, or paviours, who had to remove and relay the pavement when the pipes beneath it required attention. 5. The *tectores*, who had charge of the masonry of the aqueducts. These and other workmen appear to have been included under the general term of *AQUARII* (Cod. xii. tit. 42 or 43. s. 10; Frontin. 116, 117.) The following are the most important works on the Roman aqueducts:—Frontinus, *de Aquaeductibus Urbis Romae*; Fabretti, *de Aquis et Aquaeductibus Veteris Romae*; Stieglitz, *Archäologie der Baukunst*; Hirt, *Geschichte d. Baukunst*; Platner and Bunsen, *Beschreibung d. Stadt Rom*; Becker, *Handbuch d. Römischen Alterthümer*, vol. i.) [P. S.]

AQUAE DUCTUS. [SERVITUDES.]

AQUAE ET IGNIS INTERDICTIO. [EXSILIUM.]

AQUAE HAUSTUS. [SERVITUDES.]

AQUAE PLUVIAE ARCENTDAE ACTIO.

That water was called *aqua pluvia* which fell from the clouds, and overflowed in consequence of showers, and the prevention of injury to land from such water was the object of this action. The action *aquae pluviae* was allowed between the owners of adjoining land, and might be maintained either by the owner of the higher land against the owner of the lower land, in case the latter by any thing done to his land (*manu facto opere*) prevented the water from flowing naturally from the higher to the lower

land; or by the owner of the lower land against the owner of the higher land, in case the latter did any thing to his land by which the water flowed from it into the lower land in a different way from what it naturally would. In the absence of any special custom or law to the contrary, the lower land was subject to receive the water which flowed naturally from the upper land; and this rule of law was thus expressed,—*ager inferior superiori servit*. The fertilising materials carried down to the lower land were considered as an ample compensation for any damage which it might sustain from the water. Many difficult questions occurred in the application to practice of the general rules of law as to aqua pluvia; and, among others, this question,—What things done by the owners of the land were to be considered as preventing or altering the natural flow of the waters? The conclusion of Ulpian is, that acts done to the land for the purposes of cultivation were not to be considered as acts interfering with the natural flow of the waters. Water which increased from the falling of rain, or in consequence of rain changed its colour, was considered within the definition of aqua pluvia; for it was not necessary that the water in question should be only rain water, it was sufficient if there was any rain water in it. Thus, when water naturally flowed from a pond or marsh, and a person did something to exclude such water from coming on his land, if such marsh received any increase from rain water, and so injured the land of a neighbour, the person would be compelled by this action to remove the obstacle which he had created to the free passage of the water.

This action was allowed for the special protection of land (*ager*): if the water injured a town or a building, the case then belonged to *flumina* and *stillicidia*. The action was only allowed to prevent damage, and therefore a person could not have this remedy against his neighbour, who did any thing to his own land by which he stopped the water which would otherwise flow to that person's land and be profitable to it. The title in the Digest contains many curious cases. (Dig. 39. tit. 3; Cic. *Pro Murena*. 10, *Topic*. 9; Boëthius, *Comment. in Cic. Top.* iv. 9.) [G. L.]

AQUARIII, were slaves who carried water for bathing, &c. into the female apartments: they were also called *aquarioli*, and were held in great contempt. (Juv. vi. 332; Festus, s. v. and Müller's Note; Hieron. *Ep.* 27; Jul. Paul. iii. 7.) Becker imagines that the name was also applied to slaves who had the care of the fountains and ponds in gardens. (*Gallus*, vol. i. p. 288.) The *aquarii* were also public officers who attended to the aqueducts under the *aediles*, and afterwards under the *curatores aquarum*. (Cic. *ad Fam.* viii. 6; Zeno, *Cod. Just.* xi. tit. 42; AQUAEDUCTUS.) [P. S.]

A'QUILA. [SIGNA MILITARIA.]

ARA (*Βαυῖς*, *εὐχάρα*, *δευτήριον*), an altar. Altars were in antiquity so indispensable a part of the worship of the gods, that it seemed impossible to conceive of the worship of the gods without altars. Thus we have the amusing syllogism in Lucian, *εἰ γὰρ εἰσὶ βαυῖς, εἰσὶ καὶ θεοί· ἀλλὰ μὴν εἰσὶ βαυῖς, εἰσὶν ἔρα καὶ θεοί* (*Jupiter Trag.* c. 51). In reference to the terms, *βαυῖς* properly signifies any elevation, and hence we find in Homer *τεπὸς βαυῖς*, but it afterwards came to be applied to an elevation used for the worship of the gods, and hence an altar. *Ἐσχάρα* was in

the limited sense of an altar for burnt-offerings. In Latin *ara* and *altare* are often used without any distinction, but properly *ara* was lower than *altare*: the latter was erected in honour of the superior gods, the former in honour of the inferior, heroes and demigods. Thus we read in Virgil (*Ecl.* v. 65):—

“En quattuor aras:

Ecce duas tibi, Daphni; duas, altaria, Phoebo.”

On the other hand, sacrifices were offered to the infernal gods, not upon altars, but in cavities (*scrobes*, *scrobiculi*, *βόθροι*, *λάκκοι*) dug in the ground. (Festus, s. v. *Altaria*.)

As among the ancients almost every religious act was accompanied by sacrifice, it was often necessary to provide altars on the spur of the occasion, and they were then constructed of earth, soda, or stones, collected on the spot. When the occasion was not sudden, they were built with regular courses of masonry or brickwork, as is clearly shown in several examples on the column of Trajan at Rome. See the left-hand figure in the woodcut annexed. The first deviation from this absolute simplicity of form consisted in the addition of a base, and of a corresponding projection at the top, the latter being intended to hold the fire and the objects offered in sacrifice. These two parts are so common as to be almost uniform types of the form of an altar, and will be found in all the figures inserted underneath.

Altars were either square or round. The latter form, which was the less common of the two, is exemplified in the following figures.

In later times altars were ornamented with festoons and garlands of flowers; and the altar represented in the next cut shows the manner in which these festoons were suspended. They were also adorned with sculpture; and some were covered with the works of the most celebrated artists of antiquity. The first cut above exhibits a specimen of the elaborate style, the outline of an Etruscan altar, in contrast with the unadorned altar. If an altar was erected before a statue of a god, it was always to be lower than the statue before which it

was placed (Vitruv. iv. 9). Of this we have an example in a medallion on the Arch of Constantine at Rome, representing an altar erected before a statue of Apollo. See the annexed cut.

It was necessary that an altar should be built in the open air, in order that the steam of the sacrifice might be wafted up to heaven, and it might be built in any place, as on the side of a mountain, on the shore of the sea, or in a sacred grove. But as the worship of the gods was in later times chiefly connected with temples, altars became an indispensable part of the latter, and though there could be altars without temples, there could hardly be temples without altars. The altars of burnt-offerings, at which animal sacrifices were presented, were erected before the temples (*βασιλειῶν*, Aesch. *Suppl.* 497), as shown in the woodcut in the article *ANTAE*; but there were also altars, on which incense was burnt and bloodless sacrifices offered, within the temple, and principally before the statue of the divinity to whom they were dedicated. All altars were places of refuge. The supplicants were considered as placing themselves under the protection of the deities to whom the altars were consecrated; and violence to the unfortunate, even to slaves and criminals, in such circumstances, was regarded as violence towards the deities themselves. It was also the practice among the Greeks to take solemn oaths at altars, either taking hold of the altar or of the statue of the god. Cicero (*pro Balb.* 5) expressly mentions this as a Greek practice. (Comp. K. F. Hermann, *Gottesdienst. Alterth. d. Griechen*, § 17, and § 22. n. 9.)

ARAEOSTYLOS. [TEMPLUM.]

ARATEIA (*ἀράτεια*), two sacrifices offered every year at Sicyon in honour of Aratus, the general of the Achaeans, who after his death was honoured by his countrymen as a hero, in consequence of the command of an oracle. (Paus. ii. 9. § 4.) The full account of the two festive days is preserved in Plutarch's *Life of Aratus* (c. 53). The Sicyonians, says he, offer to Aratus two sacrifices

every year: the one on the day on which he delivered his native town from tyranny, which is the fifth of the month of Daisius, the same which the Athenians call Anthesterion; and this sacrifice they call *σάρρηια*. The other they celebrate in the month in which they believe that he was born. On the first, the priest of Zeus offered the sacrifices; on the second, the priest of Aratus, wearing a white ribbon with purple spots in the centre, songs being sung to the lyre by the actors of the stage. The public teacher (*γυμνασιάρχος*) led his boys and youths in procession, probably to the heroum of Aratus, followed by the senators adorned with garlands, after whom came those citizens who wished to join the procession. The Sicyonians still observe, he adds, some parts of the solemnity, but the principal honours have been abolished by time and other circumstances. (Wachsmuth, *Hellen. Alterth.* vol. ii. p. 528.) [L.S.]

ARATRUM (*ἀροτρον*), a plough. The Greeks appear to have had from the earliest times diversities in the fashion of their ploughs. Hesiod (*Op. et Dies*, 432) advises the farmer to have always two ploughs, so that if one broke the other might be ready for use; and they were to be of two kinds, the one called *αὐτόθρονον*, because in it the plough-tail (*γῆης, βuris, βuris*) was of the same piece of timber with the share-beam (*ἄλυσμα, dous, dentale*) and the pole (*ῥύμος, λοτοβοεύς, lemo*); and the other called *πηκτόν*, i. e. compacted, because in it the three above-mentioned parts, which were moreover to be of three different kinds of timber, were adjusted to one another, and fastened together by means of nails (*γόμεφοισιν*). (Comp. Hom. *Il.* x. 353, xiii. 703.)

The method of forming a plough of the former kind was by taking a young tree with two branches proceeding from its trunk in opposite directions, so that whilst in ploughing the trunk was made to serve for the pole, one of the two branches stood upwards and became the tail, and the other penetrated the ground, and, being covered sometimes with bronze or iron, fulfilled the purpose of a share. This form is exhibited in the uppermost figure of the annexed woodcut, taken from a medal. The

next figure shows the plough still used in Mysia, as described and delineated by Sir C. Fellows. It is a little more complicated than the first plough, inasmuch as it consists of two pieces of timber instead of one, a handle (*ἐχέταλη, stiva*) being inserted into the larger piece at one side of it. Sir C. Fellows

(*Excursion in Asia Minor*, 1838, p. 71) observes that each portion of this instrument is still called by its ancient Greek name, and adds, that it seems suited only to the light soil prevailing where he observed it, that it is held by one hand only, that the form of the share (*θῦνις*) varies, and that the plough is frequently used without any share. "It is drawn by two oxen, yoked from the pole, and guided by a long reed or thin stick (*καρπύριος*), which has a spud or scraper at the end for cleaning the share." See the lowest figure in the woodcut.

Another recent traveller in Greece gives the following account of the plough which he saw in that country—a description approaching still nearer to the *πικρὸν ἄροτρον* of Homer and Hesiod. "It is composed," says he, "of two curved pieces of wood, one longer than the other. The long piece forms the pole, and one end of it being joined to the other piece about a foot from the bottom, divides it into a share, which is cased with iron, and a handle. The share is, besides, attached to the pole by a short cross-bar of wood. Two oxen, with no other harness than yokes, are joined to the pole, and driven by the ploughman, who holds the handle in his left hand, and the goad in his right." (Hobhouse, *Journey through Albania, &c.*, vol. i. p. 140.) A view of the plain of Elis, representing this plough in use, is given by Mr. Stanhope in his *Olympia* (p. 42).

The yoke and pole used anciently in ploughing did not differ from those employed for draught in general. Consequently they do not here require any further description. [JUGUM.] To the bottom of the pole, in the compacted plough, was attached the *plough-tail*, which, according to Hesiod, might be made of any piece of a tree (especially the *πῖνος*, i. e. the *flex*, or *holm-oak*), the natural curvature of which fitted it to this use. But in the time and country of Virgil pains were taken to force a tree into that form which was most exactly adapted to the purpose. (*Georg.* i. 169, 170.) The upper end of the buris being held by the ploughman, the lower part, below its junction with the pole, was used to hold the *share-beam*, which was either sheathed with metal, or driven bare into the ground, according to circumstances.

To these three continuous and most essential parts, the two following are added in the description of the plough by Virgil:—

1. The *earth-boards*, or *mould-boards* (*auræ*), rising on each side, bending outwardly, in such a manner as to throw on either hand the soil which had been previously loosened and raised by the share, and adjusted to the share-beam which was made double for the purpose of receiving them:—

"*Binæ auræ, duplici aptantur dentalia dorso.*"

According to Palladius (i. 43), it was desirable to have ploughs both with earth-boards (*aurita*) and without them (*simplicia*).

2. The *handle* (*stiva*), which is seen in Fellows's woodcut, and likewise in the following representation of an ancient Italian plough. Virgil considers this part as used to turn the plough at the end of the furrow. "*Stivaque, quæ curvus a tergo torquet imos.*" Servius, however, in his note on this line explains *stiva* to mean "the handle by which the plough is directed." It is probable that, as the *dentalia*, i. e. the two share-beams, which Virgil supposes were in the form of the Greek letter Δ, which he describes by *duplici dorso*,

the buris was fastened to the left share-beam, and the stiva to the right, so that, instead of the simple plough of the Greeks, that described by Virgil, and used, no doubt, in his country (see the following woodcut), was more like the modern Lancashire plough, which is commonly held behind with both hands. Sometimes, however, the stiva (*ἐχέτης*, Hes. *Op. et Dies*, 467) was used alone and instead of the tail, as in the Mysian plough above represented. To a plough so constructed the language of Columella was especially applicable, "*Aratro stivæ pæne rectus innititur*" (i. 9); and the expressions of Ovid, "*Stivæque innixus arator*" (*Mel.* viii. 218), and "*Inde premens stivam designat moenia sulco.*" (*Fast.* iv. 825.) In place of "*stiva*," Ovid also uses the less appropriate term "*capulus*" (*Ep. de Ponto*, i. 8. 61); "*Ipse manu capulum preni moderatus aratri.*" When the plough was held either by the stiva alone, or by the buris alone, a piece of wood (*manicula*) was fixed across the summit, and on this the labourer pressed with both hands. Besides guiding the plough in a straight line, his duty was to force the share to a sufficient depth into the soil. Virgil alludes to this in the phrase "*Depresso aratro*" (*Georg.* i. 45). The cross-bar, which is seen in Mr. Fellows's drawing, and mentioned in Sir J. C. Hobhouse's description, and which passes from the pole to the share for the purpose of giving additional strength, was called *σπάρθην*, in Latin *fulcrum*. The coulter (*cutter*, Plin. *H. N.* xviii. 48) was used by the Romans as it is with us. It was inserted into the pole so as to depend vertically before the share, cutting through the roots which came in its way, and thus preparing for the more complete loosening and overturning of the soil by the share.

About the time of Pliny two small wheels (*rotæ*, *rotulæ*) were added to the plough in Rhaetia; and Servius (l. c.) mentions the use of them in the country of Virgil. The annexed woodcut shows the form of a wheel-plough, as represented on a piece of engraved jasper, of Roman workmanship. It also shows distinctly the *temo* or pole, the coulter or *cutter*, the *dentalia* or share-beam, the *buris* or plough-tail, and the handle or *stiva*.

(Caylus, *Rec. d'Ant.* v. pl. 83. No. 6.) It corresponds, in all essential particulars, with the

plough now used about Mantua and Venice, of which an engraving is given above. 1. Buriā. 2. Temo. 3. Dentale. 4. Culter. 5. Vomer. 6. Aurea.

Respecting the operation of ploughing, see *AGRICULTURA*, p. 49. [J. Y.]

A'RBITER. [JUDEX.]

ARBITR'ARIA A'CTIO. [ACTIO.]

ARCA, a chest or coffer. — 1. A chest, in which the Romans were accustomed to place their money: the phrase *ex arca solvere* had the meaning of paying in ready money. (Comp. Cic. *ad Att.* i. 9.) These chests were either made of or bound with iron, or other metals. (Juv. xi. 26, xiv. 259.) The name *arca* was usually given to the chests in which the rich kept their money, and was opposed to the smaller *loculi* (Juv. i. 89), *sacculus* (Juv. xi. 26), and *crumena*.

2. *Arca publica* was used under the empire to signify the city-funds, which were distinct from the *acerrarium* and the *fiscus*, and the administration of which belonged to the senate. (Vopisc. *Aurel.* 20.) The name *arca* was, however, also used as equivalent to *fiscus*, that is, the imperial treasury: thus, we read of the *arca frumentaria*, *arca olearia*, *arca vinaria*, &c. (Symm. x. 33; compare Dig. 50. tit. 4. s. 1.)

3. *Arca* also signified the coffin in which persons were buried (Aur. Vict. *De Vir.* ill. 42; Lucan, viii. 736), or the bier on which the corpse was placed previously to burial. (Dig. 11. tit. 7. s. 7.)

4. It was also a strong cell made of oak, in which criminals and slaves were confined. (Cic. *Pro Milon.* c. 22; Festus, s. v. *Robur*.)

A'RCERA, a covered carriage or litter, spread with cloths, which was used in ancient times in Rome, to carry the aged and infirm. It is said to have obtained the name of *arcera* on account of its resemblance to an *arca*. (Varr. *L. L.* v. 140, ed. Müller; Gell. xx. 1.)

ARCHEION (ἀρχεῖον) properly means any public place belonging to the magistrates (comp. Herod. iv. 62), but was more particularly applied at Athens to the archive office, where the decrees of the people and other state documents were preserved. This office is sometimes called merely τὸ ἀρχεῖον. (Dem. *de Cor.* p. 275.) At Athens the archives were kept in the temple of the mother of the gods (μῆτρον), and the charge of it was intrusted to the president (ἐπιστάτης) of the senate of the Five-hundred. (Dem. *de Fals. Leg.* p. 381, in *Aristot.* i. p. 799; Paus. i. 3. § 4.)

ARCHIA'TER (ἀρχίατρος, compounded of ἀρχός or ἀρχων, a chief, and ἱατρός, a physician), a medical title under the Roman emperors, the exact signification of which has been the subject of much discussion; for while some persons interpret it "the chief of the physicians" (*quasi ἀρχων τῶν ἱατρῶν*) others explain it to mean "the physician to the prince" (*quasi τοῦ ἀρχοντος ἱατρός*). Upon the whole it seems tolerably certain that the former is the true meaning of the word, and for these reasons: — 1. From its etymology it can hardly have any other sense, and of all the words similarly formed (ἀρχιτέκτων, ἀρχιτέλειος, ἀρχιπέλοπος, &c.) there is not one that has any reference to "the prince." 2. We find the title applied to physicians who lived at Edessa, Alexandria, &c., where no king was at that time reigning. 3. Galen (*de Ther. ad Pis.* c. 1, vol. xiv. p. 211, ed. Kühn) speaks of Andromachus

being appointed "to rule over" the physicians (ἀρχεῖν, i. e., in fact, to be "archiater." 4. Augustine (*De Civit. Dei*, iii. 17) applies the word to Aesculapius, and St. Jerome (metaphorically of course) to our Saviour (xiii. *Homil. in S. Luc.*), in both which cases it evidently means "the chief physician." 5. It is apparently synonymous with *protomedicus*, *supra medicos*, *dominus medicorum*, and *superpositus medicorum*, all which expressions occur in inscriptions, &c., and also with the title *Rais 'ala 'l-atbbā*, among the Arabians. 6. We find the names of several persons who were physicians to the emperor, mentioned without the addition of the title *archiater*. 7. The *archiatri* were divided into *Archiatři sancti palatii*, who attended on the emperor, and *Archiatři populares*, who attended on the people; so that it is certain that all those who bore this title were not "physicians to the prince." The chief argument in favour of the contrary opinion seems to arise from the fact, that of all those who are known to have held the office of *Archiatři* the greater part certainly were also physicians to the emperor; but this is only what might *a priori* be expected, viz. that those who had attained the highest rank in their profession would be chosen to attend upon the prince.*

The first person whom we find bearing this title is Andromachus, physician to Nero, and inventor of the *Theriaca* (Galen. *l. c.*; Erotian. *Lex. Voc. Hippocr. Praef.*): but it is not known whether he had at the same time any sort of authority over the rest of the profession. In fact, the history of the title is as obscure as its meaning, and it is chiefly by means of the laws respecting the medical profession that we learn the rank and duties attached to it. In after times (as was stated above) the order appears to have been divided, and we find two distinct classes of *archiatri*, viz. those of the palace and those of the people. (Cod. Theodos. xiii. tit. 3; *De Medicis et Professoribus*.) The *archiatri sancti palatii* were persons of high rank, who not only exercised their profession, but were judges on occasion of any disputes that might occur among the physicians of the place. They had certain privileges granted to them, e. g. they were exempted from all taxes, as were also their wives and children; they were not obliged to lodge soldiers or others in the provinces; they could not be put in prison, &c.; for though these privileges seem at first to have been common to all physicians (Cod. Just. x. tit. 52. s. 6. *Medicos et maxime Archiatros*), yet afterwards they were confined to the *archiatri* of the palace, and to those of Rome. When they obtained their dismissal from attendance on the emperor, either from old age or any other cause, they retained the title *ex-archiatri*, or *ex-archiatři*. (Cod. x. tit. 52. leg. 6.) The *archiatri populares* were established for the relief of the poor, and each city was to be provided with five, seven, or ten, according to its size. (Dig. 27. tit. 1. s. 6.) Rome had fourteen, besides one for the vestal virgins, and one for the gymnasia. (Cod. Theodos. *l. c.*) They were paid by the government, and were therefore obliged to attend their poor patients gratis; but were allowed to receive fees from the rich. (Cod. Theodos. *l. c.*) The *archiatri populares* were not appointed by the

* Just as in England the President of the College of Physicians is (or used to be) *ex-officio* physician to the sovereign.

governors of the provinces, but were elected by the people themselves. (Dig. 50. tit. 9. a. l.) The office appears to have been more lucrative than that of *archiatri sancti palatii*, though less honourable. In later times, we find in Cassiodorus (see Meibom. *Comment. in Cass. Formul. Archiatr.* Helmst. 1668) the title "*comes archiatrixorum*," "count of the archiatri," together with an account of his duties, by which it appears that he was the arbiter and judge of all disputes and difficulties, and ranked among the officers of the empire as a *vicarius* or *dux*. (See Le Clerc, and Sprengel, *Hist. de la Méd.* Further information on the subject may be found in several works referred to in the Oxford edition of Theophilus *De Corp. Hum. Fabr.* p. 275; and in Goldhorn, *De Archiatriis Romanis et eorum Origine usque ad finem imperii Romani Occidentalis*, Lips. 1841.) [W. A. G.]

ARCHIMIMUS. [MIMUS.]

ARCHITECTURA (*ἀρχιτεκτονία*, *ἀρχιτεκτονική*), in its widest sense, signifies all that we understand by architecture, and by civil and military engineering: in its more restricted meaning, it is the science of building according to the laws of proportion and the principles of beauty. In the former sense, it has its foundation in necessity: in the latter, upon art taking occasion from necessity. The hut of a savage is not, properly speaking, a work of architecture; neither, on the other hand, is a building in which different and incongruous styles are exhibited side by side. An architectural construction, in the artistic sense, must possess not only utility, but beauty, and also unity: it must be suggestive of some idea, and referable to some model.

The architecture of every people is not only a most interesting branch of its antiquities, but also a most important feature in its history; as it forms one of the most durable and most intelligible evidences of advancement in civilization. If the Greek and Roman literature and history had been a blank, what ideas of their knowledge, and power, and social condition would their monuments have still suggested to us! What a store of such ideas is even now being developed from the monuments of Asia, Egypt, and America!

The object of the present article is to give a very compendious account of the history and principles of the art, as practised by the Greeks and Romans. The details of the subject will be, for the most part, referred to their separate and proper heads. The lives of the architects will be found in the *Dictionary of Greek and Roman Mythology and Biography*.

It is well observed by Stieglitz that architecture has its origin in nature and religion. The necessity for a habitation, and the attempt to adorn those habitations which were intended for the gods, are the two causes from which the art derives its existence. In early times we have no reason to suppose that much attention was paid to domestic architecture, but we have much evidence to the contrary. The resources of the art were lavished upon the temples of the gods; and hence the greater part of the history of Grecian architecture is inseparably connected with that of the temple, and has its proper place under *TEMPLUM*, and the subordinate headings, such as *COLUMNA*, under which heads also the different orders are described.

But, though the first rise of architecture, as a fine art, is connected with the temple, yet, viewed

as the science of construction, it must have been employed, even earlier, for other purposes, such as the erection of fortifications, palaces, treasuries, and other works of utility. Accordingly, it is the general opinion of antiquaries, that the very earliest edifices, of which we have any remains, are the so-called Cyclopean works, in which we see huge unsquared blocks of stone built together in the best way that their shapes would allow; although it can be proved, in some instances, that the rudeness of this sort of work is no sufficient proof of its very early date, for that it was adopted, not from want of skill, but on account of the object of the work, and the nature of the materials employed. (Bunbury, *On Cyclopean Remains in Central Italy*, in the *Classical Museum*, vol. ii.) [MURUS.] The account of the early palaces cannot well be separated from that of domestic architecture in general, and is therefore given under *DOMUS*; that of erections intended, or supposed to be intended, for treasuries, will be found under *THESAURUS*.

In addition to these, however, there are other purposes, for which architecture, still using the term in its lower sense, would be required in a very early stage of political society; such as the general arrangement of cities, the provision of a place for the transaction of public business, with the necessary edifices appertaining to it [AGORA, FORUM], and the whole class of works which we embrace under the head of civil engineering, such as those for drainage [CLOACA, EMISSARIUS], for communication [VIA, PONS], and for the supply of water [AQUADUCTUS]. The nature of these several works among the Greeks and Romans, and the periods of their development, are described under the several articles. Almost equally necessary are places devoted to public exercise, health, and amusement, GYMNASIUM, STADIUM, HIPPODROMUS, CIRCUS, BALNEUM, THEATRUM, AMPHITHEATRUM. Lastly, the skill of the architect has been from the earliest times employed to preserve the memory of departed men and past events; and hence we have the various works of monumental and triumphal architecture, which are described under the heads FUNUS, ARCUS, COLUMNA.

The materials employed by the architect were marble or stone, wood, and various kinds of earth, possessing the property of being plastic while moist and hardening in drying, with cement and metal clamps for fastenings: the various metals were also extensively used in the way of ornament. The details of this branch of the subject are given in the descriptions of the several kinds of building.

The principles of architectural science are utility, proportion, and the imitation of nature. The first requisite is that every detail of a building should be subordinate to its general purpose. Next, the form of the whole and of its parts must be derived from simple geometrical figures; namely, the straight line, the plane surface, and regular or symmetrical rectilinear figures, as the equilateral or isosceles triangle, the square or rectangle, and the regular polygons; symmetrical curves, as the circle and ellipse; and the solids arising out of these various figures, such as the cube, the pyramid, the cylinder, the cone, the hemisphere, &c. Lastly, the ornaments, by which these forms are relieved and beautified, must all be founded either on geometrical forms or on the imitation of nature.

To this outline of the purposes and principles of

the art, it only remains to subjoin a brief sketch of its history, which Hirt and Müller divide into five periods: the first, which is chiefly mythical, comes down to the time of Cypselus, Ol. 30, A. C. 660 (Müller brings this period down to the 50th Olympiad, A. C. 580): the second period comes down to the termination of the Persian war, Ol. 75. 2, A. C. 478 (Müller brings it down to Ol. 80, A. C. 460): the third is the brilliant period from the end of the Persian war to the death of Alexander the Great, Ol. 114, A. C. 323 (Müller closes this period with the death of Philip, Ol. 111, A. C. 336): the fourth period is brought down by Hirt to the battle of Actium, A. C. 31, but by Müller only to the Roman conquest of Greece, A. C. 146; the latter division has the convenience of marking the transition from Greek to Roman architecture: Hirt's fifth period is that of the Roman empire, down to the dedication of Constantinople, A. D. 330; while Müller's fifth period embraces the whole history of Roman architecture, from the time when it began to imitate the Greek, down to the middle ages, when it became mingled with the Gothic: Hirt's division requires us to draw a more definite line of demarcation than is possible, between the Roman and Byzantine styles, and also places that line too early.

The characteristics of these several periods will be developed under the articles which describe the several classes of buildings: they are therefore noticed in this place with the utmost possible brevity. Our information respecting the first period is derived from the Homeric poems, the traditions preserved by other writers, and the most ancient monuments of Greece, Central Italy, and the coast of Asia Minor. Strongly fortified cities, palaces, and treasures, are the chief works of the earlier part of this period; and to it may be referred most of the so-called Cyclopean remains; while the era of the Dorian invasion marks, in all probability, the commencement of the Dorian style of temple architecture. The principal names of artists belonging to this period are Daedalus, Eurycalus, Hyperbius, Docius, and some others. In the second period the art made rapid advances under the powerful patronage of the aristocracies in some cities, as at Sparta, and of the tyrants in others, as Cypselus at Corinth, Theages at Megara, Cleisthenes at Sicyon, the Peisistratids at Athens, and Polycrates at Samos. Architecture now assumed decidedly the character of a fine art, and became associated with the sister arts of sculpture and painting, which are essential to its development. The temples of particular deities were enriched and adorned by presents, such as those which Croesus sent to the Pythian Apollo. Magnificent temples sprung up in all the principal Greek cities; and while the Doric order was brought almost, if not quite, to perfection, in Greece Proper, in the Doric colonies of Asia Minor, and in Central Italy and Sicily, the Ionic order appeared, already perfect at its first invention, in the great temple of Artemis at Ephesus. The ruins still existing at Paestum, Syracuse, Agrigentum, Selinus, Aegina, and other places, are imperishable monuments of this period. Nor were works of utility neglected, as we see in the fountain of the Peisistratids at Athens, the aqueduct at Samos [Ἀγαιοπόρτος], the sewers (ὀρύγματα) and baths (καλυμνίσματα) at Agrigentum. To this period also belong the great works of the Roman kings. The

commencement of the third and most brilliant period of the art was signalized by the rebuilding of Athens, the establishment of regular principles for the laying out of cities by Hippodamus of Miletus, and the great works of the age of Pericles, by the contemporaries of Pheidias, at Athens, Eleusis, and Olympia; during its course every city of Greece and her colonies was adorned with splendid edifices of every description; and its termination is marked by the magnificent works of Deinocrates and his contemporaries at Alexandria, Antioch, and other cities. The first part of the fourth period saw the extension of the Greek architecture over the countries conquered by Alexander, and, in the West, the commencement of the new style, which arose from the imitation, with some alterations, of the Greek forms by Roman architects, to which the conquest of Greece gave, of course, a new impulse. By the time of Augustus, Rome was adorned with every kind of public and private edifice, surrounded by villas, and furnished with roads and aqueducts; and these various erections were adorned by the forms of Grecian art; but already Vitruvius begins to complain that the purity of that art is corrupted by the intermixture of heterogeneous forms. This process of deterioration went on rapidly during the fifth period, though combined at first with increasing magnificence in the scale and number of the buildings erected. The early part of this period is made illustrious by the numerous works of Augustus, and his successors, especially the Flavii, Nerva, Trajan, Hadrian, and the Antonines, at Rome and in the provinces; but from the time of the Antonines the decline of the art was rapid and decided. In one department, a new impulse was given to architecture by the rise of Christian churches, which were generally built on the model of the Roman Basilica. One of the most splendid specimens of Christian architecture is the church of S. Sophia at Constantinople, built in the reign of Justinian, A. D. 537, and restored, after its partial destruction by an earthquake, in 554. But, long before this time, the Greco-Roman style had become thoroughly corrupted, and that new style, which is called the Byzantine, had arisen out of the mixture of Roman architecture with ideas derived from the Northern nations. It is beyond our limits to pursue the history of this and later styles of the art.

Of the ancient writers, from whom our knowledge of the subject is derived, the most important is, of course, Vitruvius. The following are the principal modern works on the general subject: — Winckelmann, *Anmerkungen über die Baukunst der Alten*, 1762; Stieglitz, *Archäologie der Baukunst*, 1801, and *Geschichte der Baukunst*, 1827; Hirt, *Baukunst nach den Grundsätzen der Alten*, 1809, and *Geschichte der Baukunst bei den Alten*, 1821; Müller, *Handbuch der Archäologie der Kunst*, 1825; the various works of travels, topography, and antiquities, such as those of Stuart, Chandler, Clarke, Dodwell, &c., all the most important of which will be found cited by the authorities referred to; and, for Central Italy, Müller's *Etrusker*, and Abeken's *Mittelitalien vor der Römischen Herrschaft*. [P. S.]

ARCHITHEO/RUS. [DELIA.]

ARCHON (ἄρχων). The government of Athens appears to have gone through the cycle of changes, which ancient history records as the lot of many other states. It began with monarchy; and

after passing through a dynasty* and aristocracy, ended in democracy. Of the kings of Athens, considered as the capital of Attica, Theseus may be said to have been the first; for to him whether as a real individual or a representative of a certain period, is attributed the union of the different and independent states of Attica under one head. (Thuc. ii. 15.) The last was Codrus; in acknowledgment of whose patriotism in meeting death for his country, the Athenians are said to have determined that no one should succeed him with the title of βασιλεύς, or king. It seems, however, equally probable, that it was the nobles who availed themselves of this opportunity to serve their own interests, by abolishing the kingly power for another, the possessors of which they called ἄρχοντες, or rulers. These for some time continued to be, like the kings of the house of Codrus, appointed for life: still an important point was gained by the nobles, the office being made ἀνεύθυνος, or accountable (Paus. iv. 5. § 4; Dem. c. Neaer. p. 1370; Aristot. Polit. ii. 9; Böckh, *Pub. Econ. of Athens*, vol. ii. p. 27. 1st ed.), which of course implies that the nobility had some control over it; and perhaps, like the barons of the feudal ages, they exercised the power of deposition.

This state of things lasted for twelve reigns of archons. The next step was to limit the continuance of the office to ten years, still confining it to the Medontidae, or house of Codrus, so as to establish what the Greeks called a dynasty, till the archonship of Eryxias, the last archon of that family elected as such, and the seventh decennial archon. (Clinton, *F. H.*, vol. i. p. 182.) At the end of his ten years (B. C. 684), a much greater change took place: the archonship was made annual, and its various duties divided among a college of nine, chosen by suffrage (χειροτονία) from the Eupatridae, or Patricians, and no longer elected from the Medontidae exclusively. This arrangement continued till the timocracy established by Solon, who made the qualification for office depend not on birth, but property, still retaining the election by suffrage, and, according to Plutarch, so far impairing the authority of the archons and other magistrates, as to legalise an appeal from them to the courts of justice instituted by himself. (*Ὅσα ταῖς ἀρχαῖς ἔταξε κρῖναι, δημοῖος καὶ περὶ ἐκείνων εἰς τὸ δικάσθηριον ἐφέσεις ἔθηκεν, Plut. Solon. 18.) The election by lot is believed to have been introduced by Cleisthenes (B. C. 508; Herod. vi. 109); for we find this practice existing shortly after his time; and Aristotle (Polit. ii. 9) expressly states that Solon made no alteration in the αἰρεσις, or mode of election, but only in the qualification for office. If, however, there be no interpolation in the oath of the Heliasts (Dem. c. Timocr. p. 747), we are forced to the conclusion that the election by lot was as old as the time of Solon; but the authority of Aristotle and other evidence strongly incline us to some such supposition, or rather leave no doubt of its necessity. The last change is supposed to have been made by Aristides (Γράφει ψήφισμα κοινῇ εἶναι τὴν πολιτείαν, καὶ τοὺς ἀρχοντας ἐξ Ἀθηναίων πάντων αἰρεῖσθαι, Plut. Arist. 22), who, after the battle of Plataea (B. C. 479),

abolished the property qualification, throwing open the archonship and other magistracies to all the citizens, that is, to the Thetes, as well as the other classes, the former of whom were not allowed by Solon's laws to hold any magistracy at all; in conformity with which, we find that, even in the time of Aristides, the archons were chosen by lot from the wealthiest class of citizens (οἱ πεντακοσιομέδιμνοι, Plut. Arist. ad init.).

Still, after the removal of the old restrictions, some security was left to insure respectability; for, previously to an archon entering on office, he underwent an examination called the ἀνέκρισις (Pollux, viii. 85; Deinark. c. Aristot. p. 107; τοὺς ἐνέα ἀρχοντας ἀνακρίνει εἰ γυρίας εἰ ποιοῦσιν, Dem. c. Eubul. p. 1320), as to his being a legitimate and a good citizen, a good son, and qualified in point of property: εἰ τὸ τίμημα ἔστω αὐτοῦ; was the question put. Now, there are (Schömann, *De Comitibus*, p. 312.; Böckh, vol. ii. p. 277) strong reasons for supposing that this form of examination continued even after the time of Aristides; and if so, it would follow that the right in question was not given to the Thetes promiscuously, but only to such as possessed a certain amount of property. But even if it were so, it is admitted that this latter limitation soon became obsolete; for we read in Lysias (Ἐν τῷ τοῦ Ἀδυνάτου, p. 169), that a needy old man, so poor as to receive a state allowance, was not disqualified from being archon by his indigence, but only by bodily infirmity; freedom from all such defects being required for the office, as it was in some respects of a sacred character. Yet, even after passing a satisfactory ἀνέκρισις, each of the archons, in common with other magistrates, was liable to be deposed, on complaint of misconduct made before the people, at the first regular assembly in each prytany. On such an occasion, the ἐπιχειροτονία, as it was called, took place; and we read (Dem. c. Theocrin. p. 1330; Pollux, viii. 95; Harp. in Κυρία Ἐκκλησία) that, in one case, the whole body of Θεσμοθέται was deprived of office (ἀπεχειροτονήθη), for the misbehaviour of one of their body: they were, however, reinstated, on promise of better conduct for the future.

With respect to the later ages of Athenian history, we learn from Strabo (ix. 1), that even in his day, the Romans allowed the freedom of Athens; and we may conclude that the Athenians would fondly cling to a name and office associated with some of their most cherished remembrances. That the archonship, however, though still in existence, was merely honorary, we might expect from the analogy of the consulate at Rome; and, indeed, we learn that it was sometimes filled by strangers, as Hadrian and Plutarch. Such, moreover, was the democratical tendency of the assembly and courts of justice established by Solon, that, even in earlier times, the archons had lost the great political power which they at one time possessed (Thuc. i. 126), and that, too, after the division of their functions amongst nine. They became, in fact, not as of old, directors of the government; but merely municipal magistrates, exercising functions and bearing titles which we will proceed to describe.

It has been already stated, that the duties of the single archon were shared by a college of nine. The first or president of this body was called ὁ ἀρχων, by way of pre-eminence; and sometimes

* By this is meant that the supreme power, though not monarchical, was confined to one family.

ἰεῖς ἀπὸ τοῦ ἔτους ἀρχὸν from the year being distinguished by and registered in his name. The second was styled δ βασιλεὺς, or the king archon; the third, δ πολέμαρχος, or commander-in-chief; the remaining six, οἱ δεσμοβέται, or legislators. As regards the duties of the archons, it is sometimes difficult to distinguish what belonged to them individually and what collectively. It seems, however, that a considerable portion of the judicial functions of the ancient kings devolved upon the *Archon Eponymus*, who was also constituted a sort of state protector of those who were unable to defend themselves. (Dem. c. *Macar. Némus*, p. 1076; Pollux, viii. 89.) Thus he had to superintend orphans and their estates, heiresses, families losing their representatives (οἰκοὶ οἱ ἐξερημόμενοι), widows left pregnant, and to see that they were not wronged in any way. Should any one do so, he was empowered to inflict a fine of a certain amount, or to bring the parties to trial. Heiresses, indeed, seem to have been under his peculiar care; for we read (Dem. c. *Macar.* p. 1069), that he could compel the next of kin either to marry a poor heiress himself, even though she were of a lower class, or to portion her in marriage to another. Again we find (*Id.* p. 1055; Pollux, viii. 62) that, when a person claimed an inheritance or heiress adjudged to others, he summoned the party in possession before the archon eponymus (Ἐπιδικαστὰς) who brought the case into court, and made arrangements for trying the suit. We must, however, bear in mind that this authority was only exercised in cases where the parties were citizens, the polemarch having corresponding duties when the heiress was an alien. It must also be understood that, except in very few cases, the archons did not decide themselves, but merely brought the causes into court, and cast lots for the dicasts who were to try the issue. (Dem. c. *Steph.* ii. p. 1136.) Another duty of the archons was to receive εἰσαγγελίαι (Harpocr. s. v.), or informations against individuals who had wronged heiresses, children who had maltreated their parents, guardians who had neglected or defrauded their wards. (Κάκωσις ἐπικλήρου, γονέων, ὀρφανῶν. Dem. c. *Macar.* p. 1069; Schömann, p. 181.) Informations of another kind, the ἐνδείξεις καὶ φάσις, were also laid before the eponymus, though Demosthenes (c. *Timocr.* p. 707) assigned the former to the thesmothetae. (ΕΝΔΕΙΞΙΣ.) The last office of the archon which we shall mention was of a sacred character; we allude to his superintendence of the greater Dionysia and the Thargelia, the latter celebrated in honour of Apollo and Artemia. (Pollux, viii. 89.)

The functions of the βασιλεὺς, or *King Archon*, were almost all connected with religion: his distinguishing title shows that he was considered a representative of the old kings in their capacity of high priest, as the Rex Sacrificulus was at Rome. Thus he presided at the Lenæan, or older Dionysia; superintended the mysteries and the games called λαμπαδοφορία, and had to offer up sacrifices and prayers in the Eleusinium, both at Athens and Eleusis. Moreover, indictments for impiety, and controversies about the priesthood, were laid before him; and, in cases of murder, he brought the trial into the court of the Areiopagus, and voted with its members. His wife, also, who was called βασιλευσα or βασίλισσα, had to offer certain sacrifices, and therefore it was required that she should be a

citizen of pure blood, without stain or blemish. His court was held in what was called ἡ τοῦ βασιλέως σιτόδ. (Dem. c. *Lacr.* p. 940; c. *Androt.* p. 601; c. *Neacr.* p. 1370; Lysias, c. *Andoc.* p. 103, where the duties are enumerated; Elmaley, *Ad Aristoph. Achar.* 1143, et Scholia; Harpocr. s. v. Ἐπιμελητὴς τῶν μυστηρίων; Plato, *Euthyphr.* ad init. et *Theat.* ad fin.; Pollux, viii. 90.)

The *Polemarch* was originally, as his name denotes, the commander-in-chief (Herod. vi. 109, 111; Pollux, viii. 91); and we find him discharging military duties as late as the battle of Marathon, in conjunction with the ten στρατηγοί: he there took, like the kings of old, the command of the right wing of the army. This, however, seems to be the last occasion on record of this magistrate appointed by lot, being invested with such important functions; and in after ages we find that his duties ceased to be military, having been in a great measure transferred to the protection and superintendence of the resident aliens, so that he resembled in many respects the praetor peregrinus at Rome. In fact, we learn from Aristotle, in his "Constitution of Athens," that the polemarch stood in the same relation to foreigners as the archon to citizens. (Demosth. c. *Lacr.* p. 940; Arist. apud Harpocr. s. v.; Pollux, viii. 91, 92.) Thus, all actions affecting aliens, the isoteles and proxeni, were brought before him previously to trial; as, for instance, the δίκη ἀποστασίου against a foreigner, for living in Athens without a patron; so was also the δίκη ἀποστασίου against a slave who failed in his duty to the master who had freed him. Moreover, it was the polemarch's duty to offer the yearly sacrifice to Artemia, in commemoration of the vow made by Callimachus, at Marathon, and to arrange the funeral games in honour of those who fell in war. These three archons, the ἐπώνυμος, βασιλεὺς, and πολέμαρχος, were each allowed two assessors to assist them in the discharge of their duties.

The *Thesmothetae* were extensively connected with the administration of justice, and appear to have been called legislators (Thirlwall, *Hist. of Greece*, vol. ii. p. 17), because in the absence of a written code, they might be said to make laws, or *desmoi*, in the ancient language of Athens, though in reality they only declared and explained them. They were required to review, every year, the whole body of laws, that they might detect any inconsistencies or superfluities, and discover whether any laws which were abrogated were in the public records amongst the rest. (Aeschin. c. *Ctesiph.* p. 59.) Their report was submitted to the people, who referred the necessary alterations to a legislative committee chosen for the purpose, and called νομοθέται.

The chief part of the duties of the thesmothetae consisted in receiving informations, and bringing cases to trial in the courts of law, of the days of sitting in which they gave public notice. (Pollux, viii. 87, 88.) They did not try them themselves; but seem to have constituted a sort of grand jury, or inquest. Thus they received ἐνδείξεις against parties who had not paid their fines, or owed any money to the state; and in default of bringing the former parties to trial, they lost their right of going up to the Areiopagus at the end of their year of office. (Dem. c. *Meid.* p. 529; c. *Macar.* p. 1075; c. *Timocr.* 707; Böckh, vol. i. p. 59, vol. ii. p. 72.) Again, indictments for personal injuries

(ὄψεως γραφαί) were laid before them, as well as informations against olive growers, for rooting up more trees than was allowed to each proprietor by law. So, too, were the indictments for bribing the Heliaea, or any of the courts of justice at Athens, or the senate, or forming clubs for the overthrow of the democracy, and against retained advocates (συνήγοροι) who took bribes either in public or private causes. Again, an information was laid before them if a foreigner cohabited with a citizen, or a man gave in marriage as his own daughter the child of another, or confined as an adulterer one who was not so. They also had to refer informations (εἰσαγγελίαι) to the people; and where an information had been laid before the senate, and a condemnation ensued, it was their duty to bring the judgment into the courts of justice for confirmation or revision. (Dem. c. *Steph.* ii. p. 1137; c. *Neaer.* pp. 1351, 1363, 1368, c. *Timocr.* p. 720; Pollux, viii. 88; Böckh, vol. i. pp. 259, 317.)

A different office of theirs was to draw up and ratify the σύμβολα, or agreements, with foreign states, settling the terms on which their citizens should sue and be sued by the citizens of Athens. In their collective capacity, the archons are said to have had the power of death in case an exile returned to an interdicted place: they also superintended the ἐπιχειρονομία of the magistrates, held every prytany (ἐπερωτώσι εἰ δοκεῖ καλῶς ἄρχειν), and brought to trial those whom the people deposed, if an action or indictment were the consequence of it. Moreover, they allotted the dicasts or jurymen, and probably presided at the annual election of the strategi and other military officers. (Pollux, viii. 87, 88; Harpocr. s. v. *Καραχειρονομία*: Schömann, p. 231; Dem. c. *Aris.* p. 630.)

We may here remark, that it is necessary to be cautious in our interpretation of the words ἀρχή and ἄρχοντες, since in the Attic orators they have a double meaning, sometimes referring to the archons peculiarly so called, and sometimes to any other magistracy. Thus in Isaeus (*De Cleonymi Haered.*) we might on a cursory perusal infer, that when a testator left his property away from his heir-at-law, by what was technically called a δόσις (Harpocr. s. v.; Isaeus, *περὶ κληρῶν*), the archon took the original will into custody, and was required to be present at the making of any addition or codicil to it. A more accurate observation proves that by εἰς τῶν ἀρχόντων is meant one of the ἀστυνόμοι, who formed a magistracy (ἀρχή) as well as the nine archons.

A few words will suffice for the privileges and honours of the archons. The greatest of the former was the exemption from the trierarchies—a boon not allowed even to the successors of Harmodius and Aristogeiton. As a mark of their office, they wore a chaplet or crown of myrtle; and if any one struck or abused one of the thesmothetae or the archon, when wearing this badge of office, he became ἄτιμος, or infamous in the fullest extent, thereby losing his civic rights. (Böckh, vol. ii. p. 322; Dem. c. *Lept.* pp. 462, 464, 465, c. *Meid.* p. 524; Pollux, viii. 86.) The archons, at the close of their year of service, were admitted among the members of the Areiopagus. [AREIOPAGUS.]

The Archon Eponymus being an annual magistrate at Athens, like the consul at Rome, it is manifest that a correct list of the archons is an

important element in the determination of Athenian chronology. Now from Creon (B.C. 684), the first annual archon, to Comias (B.C. 560), we have the names of about twenty-four. From B.C. 560 to the invasion of Xerxes (B.C. 480), the names and years of about twenty-four more have been determined. From B.C. 480 to 292, Diodorus and Dionysius Halicarnassus furnish an almost unbroken succession for a period of nearly 200 years. The names, so far as they are known, are given by Clinton (*F. H.*), who remarks that the compiler of the Parian marbles places the annual archons one year too high respectively. He also states (vol. ii. p. 12) that the best list is that of Corsini, who however is surpassed by Wesseling within the period embraced by the remains of Diodorus. [R.W.]

ARCHO'NES (ἀρχόντες). [TELONES.]

ARCIFI'NIUS AGER. [AGER.]

ARCUS (also fornix, Virg. *Aen.* vi. 631; Cic. in *Verr.* i. 7; *καμάρα*), an arch. It is possible to give an arched form to the covering of any opening by placing horizontal courses of stones projecting over one another, from both sides of the opening, till they meet at top, and then cutting the ends of the projecting stones to a regular curve, as shown below. This form is found in the most ancient architecture of nearly all nations, but it does not constitute a true arch. A true arch is formed of a series of wedge-like stones, or of bricks, supporting each other, and all bound firmly together by their mutual pressure.

It would seem that the arch, as thus defined, and as used by the Romans, was not known to the Greeks in the early periods of their history, otherwise a language so copious as theirs, and of such ready application, would not have wanted a name properly Greek by which to distinguish it. But the constructive principle, by which an arch is made to hold together, and to afford a solid resistance against the pressure upon its circumference, was known to them even previously to the Trojan war, and its use is exemplified in two of the earliest buildings now remaining—the chamber built at Orchomenus, by Minyas, king of Boeotia, described by Pausanias (ix. 38), and the treasury of Atreus at Mycenae. (Paus. ii. 16.) Both these works are constructed under ground, and each of them consists of a circular chamber formed by regular courses of stones laid horizontally over each other, each course projecting towards the interior, and beyond the one below it, till they meet in an apex over the centre, which was capped by a large stone, and thus resembled the inside of a dome. Each of the horizontal courses of stones formed a perfect circle, or two semicircular arches joined together, as the subjoined plan of one of these courses will render evident.

It will be observed that the innermost end of each stone is bevelled off into the shape of a wedge, the apex of which, if continued, would meet in the centre of the circle, as is done in forming an arch; while the outer ends against the earth are left rough, and their interstices filled up with small irregular-shaped stones, the immense size of the principal stones rendering it unnecessary to continue the sectional cutting throughout their whole length. Indeed, if these chambers had been constructed upon any other principle, it is clear that the pressure of earth all around them would have caused them to collapse. The method of construction here described was communicated to the writer

of the present article by the late Sir William Gell. Thus it seems that the Greeks did understand the constructive principle upon which arches

are formed, even in the earliest times; although it did not occur to them to divide the circle by a diameter, and set the half of it upright to bear a superincumbent weight. But they made use of a contrivance even before the Trojan war, by which they were enabled to gain all the advantages of our archway in making corridors, or hollow galleries, and which in appearance resembled the pointed arch, such as is now termed Gothic. This was effected by cutting away the superincumbent stones in the manner already described, at an angle of about 45° with the horizon. The mode of construction and appearance of such arches is represented in the annexed drawing of the walls of Tiryns, copied from Sir William Gell's *Argolis*. The gate of Signia (*Segni*) in Latium exhibits a similar example.

The principle of the true arch seems to have been known to the Romans from the earliest period: it is used in the *Cloaca Maxima*. It is most probably an Etruscan invention. The use of it constitutes one leading distinction between Greek and Roman architecture, for by its application the Romans were enabled to execute works of far bolder construction than those of the Greeks

— to erect bridges and aqueducts, and the most durable and massive structures of brick. The Romans, however, never used any other form of arch than the semicircle. [A. R.]

ARCUS TRIUMPHALIS (a triumphal arch), was a structure peculiar to the Romans, among whom it seems to have taken its origin from the *Porta Triumphalis*, the gate by which a general celebrating a triumph led his army into the city, on which occasions the gate was adorned with trophies and other memorials of the particular victory celebrated. In process of time other arches were erected, both at Rome and in the provinces, to celebrate single victories, the memorials of which were carved upon them or fixed to them, and these remained as permanent monuments. They even came to be erected in memory of a victory for which there had been no triumph; nay, even to commemorate other events than victories. That at Ancona, for example, was erected in honour of Trajan, when he had improved the harbour of the city at his own expense.

Triumphal arches were insulated structures built across the principal streets of the city, and, according to the space of their respective localities, consisted of either a single arch-way, or of a central one for carriages, with two smaller ones on each side for foot passengers, which sometimes have side communications with the centre arch. Sometimes there were two arches of equal height, side by side. Each front was ornamented with trophies and bas-reliefs, which were also placed on the sides of the passages. Both façades had usually columns against the piers, supporting an entablature, surmounted by a lofty attic, on the front of which was the inscription, and on the top of it bronze chariots, war-horses, statues, and trophies.

Stertinius is the first upon record who erected any thing of the kind. He built an arch in the Forum Boarium about B.C. 196, and another in the Circus Maximus, each of which was surmounted by gilt statues. (Liv. xxxiii. 27.) Six years afterwards, Scipio Africanus built another on the Clivus Capitolinus, on which he placed seven gilt statues and two figures of horses (Liv. xxvii. 3); and in B.C. 121, Fabius Maximus built a fourth in the Via Sacra, which is called by Cicero (*in Verr. i. 7*) the *Forum Fabianum*. None of these remain, the Arch of Augustus at Rimini being one of the earliest among those still standing. That these erections were either temporary or very insignificant, may be inferred from the silence of Vitruvius, who says nothing of triumphal arches. We might be sure, from the nature of the case, that such structures would especially mark the period of the empire.

There are twenty-one arches recorded by different writers as having been erected in the city of Rome, five of which now remain:—1. *Arcus Drusi*, which was erected to the honour of Nero Claudius Drusus on the Appian way. (Suet. *Claud. l.*) 2. *Arcus Titii*, at the foot of the Palatine, which was erected to the honour of Titus, after his conquest of Judaea, but was not finished till after his death; since in the inscription upon it he is called *Divus*, and he is also represented as being carried up to heaven upon an eagle. The bas-reliefs of this arch represent the spoils from the temple of Jerusalem carried in triumphal procession; and are among the best

specimens of Roman sculpture. This arch has only a single opening, with two columns of the Roman or composite order on each side of it. 3. *Arcus Septimii Severi*, which was erected by the senate (A. D. 203) at the end of the Via Sacra, in honour of that emperor and his two sons, Caracalla and Geta, on account of his victories over the Parthians and Arabians. 4. *Arcus Galieni*, erected to the honour of Gallienus by a private individual, M. Aurelius Victor. 5. *Arcus Constantini*, which is larger and more profusely ornamented than the Arch of Titus. It was erected by the senate in honour of Constantine, after his victory over Maxentius. It consists of three arches, with columns against each front, and statues on the entablatures over them, which, with the other sculptured ornaments, originally decorated the arch of Trajan. [P. S.]

ARCUS (*βίος, τόξον*), the bow used for shooting arrows, is one of the most ancient of all weapons, but is characteristic of Asia rather than of Europe. Thus in the description given by Herodotus (vii. 61—80) of the various nations composing the army of Xerxes, we observe that nearly all the troops without exception used the bow. The Scythians and Parthians were the most celebrated archers in the East, and among the Greeks the Cretans, who frequently served as a separate corps in the Greek armies, and subsequently also among the auxiliary troops of the Romans. (Comp. Xen. *Anab.* i. 2. § 9; Liv. xlii. 35.)

The form of the Scythian and Parthian bow differed from that of the Greeks. The former was in the shape of a half-moon, and is shown in the upper of the two figures here exhibited, which is taken from one of Sir W. Hamilton's fictile vases. (Comp. *Arm.* Marc. xxii. 8.) The Greek bow, on the other hand, the usual form of which is shown

in the lower of the preceding figures, has a double curvature, consisting of two circular portions united in the middle (*ᾤηχvus*). According to the description in Homer (*Il.* iv. 105—126), the bow was made of two pieces of horn, hence frequently called *κέρας* and *cornu*. The bow-string (*νευρά*) was twisted, and was frequently made of thongs of leather (*νεῦρα βόεια*). It was always fastened to one end of the bow, and at the other end there hung a ring or hook (*κορώνη*), usually made of metal (*χρυσήν*), to which the string was attached, when the bow was to be used. In the same passage of Homer we have a description of a man preparing to shoot, and this account is illustrated by the following outline of a statue belonging to the group of the Aeginetan marbles. The bow, placed in the hands of this statue, was probably of bronze, and has been lost.

When not used, the bow was put into a case (*τοξοθήκη, γυμνός, Corymbus*), which was made of leather, and sometimes ornamented (*φασινός*, Hom. *Od.* xxi. 54). The bow-case is very conspicuous in the sculptured bas-reliefs of Persepolis. It frequently held the arrows as well as the bow, and on this account is often confounded with the *Pharetra* or quiver. Though its use was comparatively rare among the Greeks and Romans, we find it exhibited in a bas-relief in the Museo Pio-Clementino (vol. iv. tav. 43), which is copied in the annexed cut.

ARDA'LION (*ἀρδάλιον*). [FUNUS.]

A'REA. [AGRICULTURA, p. 44.]

AREIOPAGUS. The Areiopagus (*δ' Ἀρεῖος πάγος*, or hill of Ares), at Athens, was a rocky eminence, lying to the west of, and not far from the Acropolis. To account for the name, various stories were told. Thus, some said that it was so called from the Amazons, the daughters of Ares, having encamped there when they attacked Athens; others again, as Aeschylus, from the sacrifices there offered by them to that god; while the more received opinion connected the name with the legend of Ares having been brought to trial there by Poseidon, for the murder of his son Halirrhottus. (Dem. c. *Aristocr.* p. 642; Aeschyl. *Evam.* 659.) To none, however, of these legends did the place owe its fame, but rather to the council (*Ἡ ἐν Ἀρεῖῳ πάγῳ βουλὴ*), which held its sittings there, and was sometimes

called 'H ἄρα Βουλή, to distinguish it from the senate of Five Hundred, which sat in the Cerameicus within the city. That it was a body of very remote antiquity, acting as a criminal tribunal, was evidently believed by the Athenians themselves. In proof of this, we may refer to the express assertions of the orators, and the legend of Orestes having been tried before the council for the murder of his mother—a trial which took place before Athena, and which Aeschylus represents as the origin of the court itself. Again, we find that even before the first Messenian war (B. C. 740) began, the Messenians offered to refer the points in dispute to the Argive Amphictiony, or the Athenian Areiopagus (Paus. iv. 5. § 1; Thirlwall, *Hist. Greece*, vol. i. p. 345), because this body was believed to have had jurisdiction in cases of manslaughter (βίαιαι φονικαί), "from of old."

There is sufficient proof, then, that the Areiopagus existed before the time of Solon, though he is admitted to have so far modified its constitution and sphere of duty, that he might almost be called its founder. What that original constitution was, must in some degree be left to conjecture, though there is every reason to suppose that it was aristocratical, the members being taken, like the Ephetae, from the noble patrician families (ἀριστοκράται). We may remark that, after the time of Solon, the Ephetae, fifty-one in number, sat collectively in four different courts, and were charged with the hearing of such cases of accidental or justifiable homicide as admitted of or required expiation, before the accused could resume the civil and religious rights he had lost: a resumption impossible in cases of wilful murder, the capital punishment for which could only be escaped by banishment for life, so that no expiation was required or given. (Müller, *Esamen*. § 64; Pollux, viii. 125.) Now the Ephetae formerly administered justice in five courts, and for this and other reasons it has been conjectured that they and the Areiopagus then formed one court, which decided in all cases of murder, whether wilful or accidental. In support of this view, it has been urged that the separation of functions was rendered necessary by that change of Solon which made the Areiopagus no longer an aristocratic body, while the Ephetae remained so, and as such were competent to administer the rights of expiation, forming, as they did, a part of the sacred law of Athens, and therefore left in the hands of the old patricians, even after the loss of their political privileges. On this point we may remark, that the connection insisted on may to a great extent be true; but that there was not a complete identity of functions is proved by Plutarch (*Solon*. c. 19), in a quotation from the laws of Solon, showing that even before that legislator the Areiopagites and Ephetae were in some cases distinct.

It has been observed, in the article ARCHON, that the principal change introduced by Solon in the constitution of Athens, was to make the qualification for office depend not on birth but property; also that, agreeably to his reforms, the nine archons, after an unexceptionable discharge of their duties, "went up" to the Areiopagus, and became members of it for life, unless expelled for misconduct. (Deinar. c. *Demosth.* p. 97; Plut. *Sol.* c. 18.)

The council then, after his time, ceased to be aristocratic in constitution; but, as we learn from Attic writers, continued so in spirit. In fact,

Solon is said to have formed the two councils, the senate and the Areiopagus, to be a check upon the democracy; that, as he himself expressed it, "the state, riding upon them as anchors, might be less tossed by storms." Nay, even after the archons were no longer elected by suffrage but by lot, and the office was thrown open by Aristides to all the Athenian citizens, the "upper council" still retained its former tone of feeling. We learn, indeed, from Isocrates (*Areiop.* p. 147), that no one was so bad as not to put off his old habits on becoming an Areiopagite; and though this may refer to private rather than public conduct, we may not unreasonably suppose that the political principles of the younger would always be modified by the older and more numerous members—a modification which, though continually less in degree, would still be the same in direction, and make the Areiopagus what Pericles found it, a counteracting force to the democracy. Moreover, besides these changes in its constitution, Solon altered and extended its functions. Before his time it was only a criminal court, trying cases of "wilful murder and wounding, of arson and poisoning" (Pollux, viii. 117; *Dem. c. Arist.* p. 627), whereas he gave it extensive powers of a censorial and political nature. Thus we learn that he made the council an "overseer of everything, and the guardian of the laws," empowering it to inquire how any one got his living, and to punish the idle. (Plutarch. *Solon*. c. 22; Isoc. *l. c.*)

We learn from other authorities that the Areiopagites were "superintendents of good order and decency," terms rather unlimited and undefined, as it is not improbable Solon wished to leave their authority. There are, however, recorded some particular instances of its exertion. (Athen. iv. pp. 167, c.—168, b. vi. p. 245, c. ed. Dindorf; Pollux, viii. 112.) Thus we find that they called persons to account for extravagant and dissolute living, and that too even in the later days of Athenian history. On the other hand, they occasionally rewarded remarkable cases of industry, and, in company with certain officers called γυναικοκόμοι, made domiciliary visits at private entertainments, to see that the number of guests was not too large, and also for other purposes. But their censorial and political authority was not confined to matters of this subordinate character. We learn from Aristotle (Plut. *Themis*. c. 10; see Büchh, vol. i. p. 208), that at the time of the Median invasion, when there was no money in the public treasury, the Areiopagus advanced eight drachmae a man to each of the sailors—a statement which proves that they had a treasury of their own, rather than any control over the public finances, as some have inferred from it. (Thirlwall, *Hist. Greece*, vol. iii. app. 1.) Again, we are told (Lycurg. c. *Leoc.* p. 154) that at the time of the battle of Chaeroneia, they seized and put to death those who deserted their country, and that they were thought by some to have been the chief preservation of the city.

It is probable that public opinion supported them in acts of this kind, without the aid of which they must have been powerless for any such objects. In connection with this point, we may add that when heinous crimes had notoriously been committed, but the guilty parties were not known, or no accuser appeared, the Areiopagus inquired into the subject, and reported (ἀποφαίνειν) to the

specimens of Roman sculpture. This arch has only a single opening, with two columns of the Roman or composite order on each side of it. 3. *Arcus Septimii Severi*, which was erected by the senate (A. D. 203) at the end of the Via Sacra, in honour of that emperor and his two sons, Caracalla and Geta, on account of his victories over the Parthians and Arabians. 4. *Arcus Galieni*, erected to the honour of Gallienus by a private individual, M. Aurelius Victor. 5. *Arcus Constantini*, which is larger and more profusely ornamented than the Arch of Titus. It was erected by the senate in honour of Constantine, after his victory over Maxentius. It consists of three arches, with columns against each front, and statues on the entablatures over them, which, with the other sculptured ornaments, originally decorated the arch of Trajan. [P. S.]

ARCUS (*βίος, τόξον*), the bow used for shooting arrows, is one of the most ancient of all weapons, but is characteristic of Asia rather than of Europe. Thus in the description given by Herodotus (vii. 61—80) of the various nations composing the army of Xerxes, we observe that nearly all the troops without exception used the bow. The Scythians and Parthians were the most celebrated archers in the East, and among the Greeks the Cretans, who frequently served as a separate corps in the Greek armies, and subsequently also among the auxiliary troops of the Romans. (Comp. Xen. *Anab.* i. 2. § 9; Liv. xlii. 35.)

The form of the Scythian and Parthian bow differed from that of the Greeks. The former was in the shape of a half-moon, and is shown in the upper of the two figures here exhibited, which is taken from one of Sir W. Hamilton's fictile vases. (Comp. *Azm.* Marc. xxii. 8.) The Greek bow, on the other hand, the usual form of which is shown

in the lower of the preceding figures, has a double curvature, consisting of two circular portions united in the middle (*πῆχυς*). According to the description in Homer (*Il.* iv. 105—126), the bow was made of two pieces of horn, hence frequently called *κέρας* and *cornu*. The bow-string (*νευρά*) was twisted, and was frequently made of thongs of leather (*νεῦρα βόεια*). It was always fastened to one end of the bow, and at the other end there hung a ring or hook (*κορώνη*), usually made of metal (*χρυσῆν*), to which the string was attached, when the bow was to be used. In the same passage of Homer we have a description of a man preparing to shoot, and this account is illustrated by the following outline of a statue belonging to the group of the Aeginetan marbles. The bow, placed in the hands of this statue, was probably of bronze, and has been lost.

When not used, the bow was put into a case (*τοξοθήκη, γυρτός, Corytus*), which was made of leather, and sometimes ornamented (*φαινός*, Hom. *Od.* xxi. 54). The bow-case is very conspicuous in the sculptured bas-reliefs of Persepolis. It frequently held the arrows as well as the bow, and on this account is often confounded with the *Pharetra* or quiver. Though its use was comparatively rare among the Greeks and Romans, we find it exhibited in a bas-relief in the Museo Pio-Clementino (vol. iv. tav. 43), which is copied in the annexed cut.

ARDA'LION (*ἀρδάλιον*). [FURN.]

A'REA. [AGRICULTURE, p. 44.]

AREIOPAGUS. The Areiopagus (*δ' Ἀρείου πάγος*, or hill of Ares), at Athens, was a rocky eminence, lying to the west of, and not far from the Acropolis. To account for the name, various stories were told. Thus, some said that it was so called from the Amazons, the daughters of Ares, having encamped there when they attacked Athens; others again, as Aeschylus, from the sacrifices there offered by them to that god; while the more received opinion connected the name with the legend of Ares having been brought to trial there by Poseidon, for the murder of his son Halirrhothius. (Dem. c. *Aristocr.* p. 642; Aeschyl. *Eum.* 659.) To none, however, of these legends did the place owe its fame, but rather to the council (*Ἡ ἐν Ἀρείῳ πάγῳ βουλὴ*), which held its sittings there, and was sometimes

just decisions. The process was as follows:—The king archon (Pollux, viii. 90) brought the case into court, and sat as one of the judges, who were assembled in the open air, probably to guard against any contamination from the criminal. (Antiphon, *De Caede Herod.* p. 130; Dem. c. *Arist.* l. c.; Pollux, viii. 33.) The accuser, who was said *eis* "Ἀρειὸν πάγον ἐπισκήπτειν, first came forward to make a solemn oath (δυσμυσία) that his accusation was true, standing over the slaughtered victims, and imprecating extirpation upon himself and his whole family, were it not so. The accused then denied the charge with the same solemnity and form of oath. Each party then stated his case with all possible plainness, keeping strictly to the subject, and not being allowed to appeal in any way to the feelings or passions of the judges (ὑπομυθεῖσθαι οὐκ ἔστιν οὐδὲ οἰκτιρεῖσθαι. *Aristot. Rhét.* i. 1; Pollux, viii. 117.) After the first speech (μετὰ τὸν πρῶτον λόγον), a criminal accused of murder might remove from Athens, and thus avoid the capital punishment fixed by Draco's *Θεσμοί*, which on this point were still in force. Except in cases of parricide, neither the accuser nor the court had power to prevent this; but the party who thus evaded the extreme punishment was not allowed to return home (φεύγει ἀεσπυρίαν), and when any decree was passed at Athens to legalise the return of exiles, an exception was always made against those who had thus left their country (οἱ ἐξ Ἀρείου πάγου φεγόντες). See Plato, *Leyes*, ix. 11.

The reputation of the Areiopagus as a criminal court was of long continuance, as we may learn from an anecdote of Aulus Gellius, who tells us (xii. 7) that C. Dolabella, proconsul of the Roman province of Asia, referred a case which perplexed himself and his council to the Areiopagus (*ut ad iudices graviore exercitatioresque*); they ingeniously settled the matter by ordering the council to appear that day 100 years (*centesimo anno adeas*). They existed in name, indeed, till a very late period. Thus we find Cicero mentions the council in his letters (*Ad Fam.* xiii. 1; *Ad Att.* i. 14, v. 11); and under the emperors Gratian and Theodosius (A. D. 380), "Πούφις Φήστος is called proconsul of Greece, and an Areiopagite. (Meunnius, *Areiop.*)

Of the respectability and moral worth of the council, and the respect that was paid to it, we have abundant proof in the writings of the Athenian orators, where, indeed, it would be difficult to find it mentioned except in terms of praise. Thus Lysias speaks of it as most righteous and venerable (c. *Andoc.* p. 104; compare *Aesch.* c. *Timar.* 12; *Isocr. Areiop.* 148); and so great was the respect paid to its members, that it was considered rude in the demus laughing in their presence, while one of them was making an address to the assembly on a subject they had been deputed to investigate. This respect might, of course, facilitate the resumption of some of their lost power, more especially as they were sometimes trusted with inquiries on behalf of the state, as on the occasion to which we have just alluded, when they were made a sort of commissioners, to inquire into the state of the buildings about the Pnyx, and decide upon the adoption or rejection of some proposed alterations. Isocrates, indeed, even in his time, when the previous inquiry or *became* had fallen into disuse, speaks well of

their moral influence; but shortly after the age of Demetrius Phalereus, a change had taken place; they had lost much of their respectability, and were but ill fitted to enforce a conduct in others which they did not observe themselves. (*Athen.* iv. p. 167.)

The case of St. Paul (*Act.* xvii. 22.) is generally quoted as an instance of their authority in religious matters; but the words of the sacred historian do not necessarily imply that he was brought before the council. It may, however, be remarked, that they certainly took cognizance of the introduction of new and unauthorized forms of religious worship, called *ἐπιθερα λέπῃ*, in contradistinction to the *παρεια* or older rites of the state. (*Harpocrat. s. v. Ἐπιθεροί*; *Leopral*; Schömann, *De Comitiis*, p. 286. transl.) There was also a tradition that Plato was deterred from mentioning the name of Moses as a teacher of the unity of the Godhead, by his fear of the Areiopagus. (Justin Martyr, *Cohor. ad Græc.* p. 22.)

With respect to the number of the Areiopagus in its original form, a point of no great moment, there are various accounts; but it is plain that there could have been no fixed number when the archons became members of this body at the expiration of their year of office. Lysias, indeed, speaks of them (Περὶ τοῦ Σηκου, pp. 110, 111; see *Argem. Orat.* c. *Androt.*) as forming a part of the Areiopagus even during that time; a statement which can only be reconciled with the general opinion on the subject, by supposing that they formed a part of the council during their year of office, but were not permanent members till the end of that time, and after passing a satisfactory examination. [R. W.]

ARE'NA. [AMPHITHEATRUM.]

ARETA'LOGI, a class of persons whose conversation formed one of the entertainments of the Roman dinner-tables. (*Suet. Octav.* 74.) The word literally signifies persons who discourse about virtue; and the class of persons intended seem to have been poor philosophers, chiefly of the Cynic and Stoic sects, who, unable to gain a living by their public lectures, obtained a maintenance at the tables of the rich by their philosophical conversation. Such a life would naturally degenerate into that of the parasite and buffoon; and accordingly we find these persons spoken of contemptuously by Juvenal, who uses the phrase *mandas aretalogus*: they became a sort of scurræ. (*Juv. Sat.* xv. 15, 16; comp. *Cassaubon. ad Suet. l. c.*; and *Ruperti* and *Heinrich, ad Juv. l. c.*) [P. S.]

A'RGEI. We learn from Livy (i. 22) that Numa consecrated places for the celebration of religious services, which were called by the pontifices "argei." Varro calls them the chapels of the argei, and says they were twenty-seven in number, distributed in the different districts of the city. We know but little of the particular uses to which they were applied, and that little is unimportant. Thus we are told that they were solemnly visited on the Liberalia, or festival of Bacchus; and also, that whenever the flamen dialis went (*iviit*) to them, he was to adhere to certain observances. They seem also to have been the depositories of topographical records. Thus we read in Varro,—*In sacris Argeorum scriptum est sic: Oppius mons princeps, &c.*, which is followed by a description of the neighbourhood. There was a tradition that these argei were named from the chieftains who came with Hercules, the Argive,

demus. The report or information was called *ἀρόφαις*. This was a duty which they sometimes undertook on their own responsibility, and in the exercise of an old-established right, and sometimes on the order of the demus. (Deinarch. *c. Dem.* p. 97; Schömann, *De Comitibus*, p. 217, transl.) Nay, to such an extent did they carry this power, that on one occasion they apprehended an individual (Antiphon) who had been acquitted by the general assembly, and again brought him to a trial, which ended in his condemnation and death. (Dem. *De Cor.* pp. 271, 272; Deinarch. *c. Dem.* p. 98.) Again, we find them revoking an appointment of the people whereby Aeschines was made the advocate of Athens before the Amphictionic council, and substituting Hyperides in his room. In these two cases also, they were most probably supported by public opinion, or by a strong party in the state. (Dem. *l. c.*)

They also had duties connected with religion, one of which was to superintend the sacred olives growing about Athens, and try those who were charged with destroying them. (Lysias, *Περὶ τοῦ Σικουῦ*, p. 110.) We read, too, that in the discharge of their duty as religious censors, they on one occasion examined whether the wife of the king archon was, as required by law, an Athenian; and finding she was not, imposed a fine upon her husband. (Dem. *c. Neaer.* p. 1372.) We learn from the same passage, that it was their office generally to punish the impious and irreligious. Again we are told, though rather in a rhetorical way, that they relieved the needy from the resources of the rich, controlled the studies and education of the young, and interfered with and punished public characters as such. (Isocr. *Areiop.* p. 151.)

Independent, then, of its jurisdiction as a criminal court in cases of wilful murder, which Solon continued to the Areiopagus, its influence must have been sufficiently great to have been a considerable obstacle to the aggrandisement of the democracy at the expense of the other parties in the state. In fact, Plutarch (*Solon.* c. 18), expressly states that Solon had this object in view in its reconstruction; and accordingly, we find that Pericles, who never was an archon or Areiopagite, and who was opposed to the aristocracy for many reasons, resolved to diminish its power and circumscribe its sphere of action. His coadjutor in this work was Ephialtes, a statesman of inflexible integrity, and also a military commander. (Plut. *Cim.* 7, *Peric.* 10, 13.) They experienced much opposition in their attempts, not only in the assembly, but also on the stage, where Aeschylus produced his tragedy of the Eumenides, the object of which was to impress upon the Athenians the dignity, the sacredness, and constitutional worth of the institution which Pericles and Ephialtes wished to reform. He reminds the Athenians that it was a tribunal instituted by their patron goddess Athena, and puts into her mouth a popular harangue full of warnings against innovations, and admonishing them to leave the Areiopagus in possession of its old and well grounded rights, that under its watchful guardianship they might sleep in security. (Müller, *Eum.* § 35.) Still the opposition failed: a decree was carried, about B. C. 458, by which, as Aristotle says, the Areiopagus was "mutilated," and many of its hereditary rights abolished. (Arist. *Pol.* ii. 9; Cic. *De Nat. Deor.* ii. 29, *De Rep.* i. 27.)

Cicero, who in one place speaks of the council as governing Athens, observes in another that from that time all authority was vested in the ecclesia, and the state robbed of its ornament and honour. Plutarch (*Cimon*, 15) tells us that the people deprived the Areiopagus of nearly all its judicial authority (*τὰς κρίσεις πλὴν ὀλίγων ἀνδράς*), establishing an unmixed democracy, and making themselves supreme in the courts of justice, as if there had formerly been a superior tribunal. But we infer from another passage, that the council lost considerable authority in matters of state; for we learn that Athens then entered upon a career of conquest and aggrandisement to which she had previously been a stranger; that, "like a rampant horse, she would not obey the reins, but snapped at Euboea, and leaped upon the neighbouring islands." These accounts in themselves, and as compared with others, are sufficiently vague and inconsistent to perplex and embarrass; accordingly, there has been much discussion as to the precise nature of the alterations which Pericles effected; some, amongst whom we may mention Müller (*Eum.* § 37), are of opinion that he deprived the Areiopagus of their old jurisdiction in cases of wilful murder, and one of his chief arguments is that it was evidently the design of Aeschylus to support them in this prerogative, which therefore must have been assailed. For a sufficient answer to this, we would refer our readers to Bishop Thirlwall's remarks (*Hist. of Greece*, vol. iii. p. 24), merely stating in addition, that Demosthenes (*c. Aristocr.* p. 641) * expressly affirms, that neither tyrant nor democracy had ever dared to take away from them this jurisdiction. In addition to which it may be remarked, that the consequences ascribed to the innovation do not indicate that the Areiopagus lost its authority as a criminal tribunal, but rather that it was shorn of its power as superintending the morals and conduct of the citizens, both in civil and religious matters, and as exercising some control over their decisions. Now an authority of the former kind seems far removed from any political influence, and the popular belief as to its origin would have made it a dangerous object of attack, to say nothing of the general satisfaction the verdicts had always given. We may observe, too, that one of the chief features of a democracy is to make all the officers of the state responsible; and that it is not improbable that one of the changes introduced by Ephialtes was, to make the Areiopagus, like other functionaries, accountable to the demus for their administration, as, indeed, we know they afterwards were. (Aesch. *c. Ctes.* p. 56; Böckh, vol. i. p. 353.) This simple regulation would evidently have made them subservient, as they seem to have been, to public opinion; whereas no such subserviency is recorded in criminal matters, their tribunal, on the contrary, being always spoken of as most just and holy; so much so, that Demosthenes says (*c. Arist.* pp. 641, 642) that not even the condemned whispered an insinuation against the righteousness of their verdicts. Indeed, the proceedings before the Areiopagus, in cases of murder, were by their solemnity and fairness well calculated to insure

* For an able vindication of this statement of Demosthenes, the reader is referred to Hermann, *Opusc.* vol. iv. p. 299.

just decisions. The process was as follows:—The king archon (Pollux, viii. 90) brought the case into court, and sat as one of the judges, who were assembled in the open air, probably to guard against any contamination from the criminal. (Anuphon, *De Cæde Herod.* p. 130; Dem. c. *Arist.* l. c.; Pollux, viii. 33.) The accuser, who was said *eis* "Ἀρεῖον πάγον ἐπισκήπτειν, first came forward to make a solemn oath (δυσμυσία) that his accusation was true, standing over the slaughtered victims, and imprecating extirpation upon himself and his whole family, were it not so. The accused then denied the charge with the same solemnity and form of oath. Each party then stated his case with all possible plainness, keeping strictly to the subject, and not being allowed to appeal in any way to the feelings or passions of the judges (ἡρώμεναι/σέσθαι οὐκ ἐξήν οὐδὲ ὀλερ/σέσθαι. *Aristot. Rhet.* i. 1; Pollux, viii. 117.) After the first speech (μετὰ τὸν πρότερον λόγον), a criminal accused of murder might remove from Athens, and thus avoid the capital punishment fixed by Draco's *Θεσμοί*, which on this point were still in force. Except in cases of parricide, neither the accuser nor the court had power to prevent this; but the party who thus evaded the extreme punishment was not allowed to return home (φεύγει/ἀσέφυγος), and when any decree was passed at Athens to legalise the return of exiles, an exception was always made against those who had thus left their country (οἱ ἐξ Ἀρείου πάγου φεύγοντες). See Plato, *Leyes*, ix. 11.

The reputation of the Areiopagus as a criminal court was of long continuance, as we may learn from an anecdote of Aulus Gellius, who tells us (xii. 7) that C. Dolabella, proconsul of the Roman province of Asia, referred a case which perplexed himself and his council to the Areiopagus (οἱ *ad iudices graviores æroclatioresque*); they ingeniously settled the matter by ordering the parties to appear that day 100 years (*centesimo anno ædese*). They existed in name, indeed, till a very late period. Thus we find Cicero mentions the council in his letters (*Ad Fam.* xiii. 1; *Ad Att.* i. 14, v. 11); and under the emperors Gratian and Theodosius (A. D. 380), 'Πολύβιος Φήγοτος is called proconsul of Greece, and an Areiopagite. (*Memoria, Areiop.*)

Of the respectability and moral worth of the council, and the respect that was paid to it, we have abundant proof in the writings of the Athenian orators, where, indeed, it would be difficult to find it mentioned except in terms of praise. Thus Lysias speaks of it as most righteous and venerable (c. *Andoc.* p. 104; compare *Aesch. c. Timar.* 12; *Isocr. Areiop.* 148); and so great was the respect paid to its members, that it was considered rude in the demus laughing in their presence, while one of them was making an address to the assembly on a subject they had been deputed to investigate. This respect might, of course, facilitate the resumption of some of their lost power, more especially as they were sometimes intrusted with inquiries on behalf of the state, as on the occasion to which we have just alluded, when they were made a sort of commissioners, to inquire into the state of the buildings about the Prytæ, and decide upon the adoption or rejection of some proposed alterations. Isocrates, indeed, even in his time, when the previous inquiry or inquiry had fallen into disuse, speaks well of

their moral influence; but shortly after the age of Demetrius Phalereus, a change had taken place; they had lost much of their respectability, and were but ill fitted to enforce a conduct in others which they did not observe themselves. (*Athen.* iv. p. 167.)

The case of St. Paul (*Act.* xvii. 22.) is generally quoted as an instance of their authority in religious matters; but the words of the sacred historian do not necessarily imply that he was brought before the council. It may, however, be remarked, that they certainly took cognisance of the introduction of new and unauthorized forms of religious worship, called *ἐπιθέραι λέγῃ*, in contradistinction to the *πάτρια* or older rites of the state. (*Harpocrat. s. v. Ἐπιθέραι: Ἐσπρά;* Schömann, *De Comitiis*, p. 286. transl.) There was also a tradition that Plato was deterred from mentioning the name of Moses as a teacher of the unity of the Godhead, by his fear of the Areiopagus. (*Justin Martyr, Cohor. ad Græc.* p. 22.)

With respect to the number of the Areiopagus in its original form, a point of no great moment, there are various accounts; but it is plain that there could have been no fixed number when the archons became members of this body at the expiration of their year of office. Lysias, indeed, speaks of them (Περὶ τοῦ Σηκοῦ, pp. 110, 111; see *Aryum. Orat. c. Androt.*) as forming a part of the Areiopagus even during that time; a statement which can only be reconciled with the general opinion on the subject, by supposing that they formed a part of the council during their year of office, but were not permanent members till the end of that time, and after passing a satisfactory examination. [R. W.]

ARE'NA. [AMPHITHEATRUM.]

ARETA'LOGI, a class of persons whose conversation formed one of the entertainments of the Roman dinner-tables. (*Suet. Octav.* 74.) The word literally signifies *persons who discourse about virtue*; and the class of persons intended seem to have been poor philosophers, chiefly of the Cynic and Stoic sects, who, unable to gain a living by their public lectures, obtained a maintenance at the tables of the rich by their philosophical conversation. Such a life would naturally degenerate into that of the parasite and buffoon; and accordingly we find these persons spoken of contemptuously by Juvenal, who uses the phrase *mandas aretalogus*: they became a sort of *sourras*. (*Juv. Sat.* xv. 15, 16; comp. *Casaubon. ad Suet. l. c.*; and *Ruperti and Heinrich, ad Juv. l. c.*) [P. S.]

A'RGEI. We learn from Livy (i. 22) that Numa consecrated places for the celebration of religious services, which were called by the pontifices "argei." Varro calls them the chapels of the argei, and says they were twenty-seven in number, distributed in the different districts of the city. We know but little of the particular uses to which they were applied, and that little is unimportant. Thus we are told that they were solemnly visited on the Liberalia, or festival of Bacchus; and also, that whenever the flamen dialis went (*ivit*) to them, he was to adhere to certain observances. They seem also to have been the depositories of topographical records. Thus we read in Varro,—*In sacris Argeorum scriptum est sic: Oppius mons princeps, &c.*, which is followed by a description of the neighbourhood. There was a tradition that these argei were named from the chieftains who came with Hercules, the Argive,

to Rome, and occupied the Capitoline, or, as it was anciently called, Saturnian hill. It is impossible to say what is the historical value or meaning of this legend; we may, however, notice its conformity with the statement that Rome was founded by the Pelasgians, with whom the name of Argos was connected. (Varr. *L. L.* v. 45, ed. Müller; *Ov. Fast.* iii. 791; Gell. x. 15; Niebuhr, *Rom. Hist.* vol. i. p. 214.)

The name *argei* was also given to certain figures thrown into the Tiber from the Sublician bridge, on the Ides of May in every year. This was done by the pontifices, the vestals, the praetors, and other citizens, after the performance of the customary sacrifices. The images were thirty in number, made of bulrushes, and in the form of men (*εἰδὲς ἀνδρῆκεα, praeconum simulacra viro-rum*). Ovid makes various suppositions to account for the origin of this rite; we can only conjecture that it was a symbolical offering to propitiate the gods, and that the number was a representative either of the thirty patrician curiae at Rome, or perhaps of the thirty Latin townships. Dionysius of Halicarnassus states (i. 19, 38) that the custom continued to his times, and was instituted by Hercules to satisfy the scruples of the natives when he abolished the human sacrifices formerly made to Saturn. (Varr. *L. L.* vii. 44; *Ov. Fast.* v. 621; *Plut. Quaest. Rom.* p. 102, Reiske; Arnold, *Rom. Hist.* vol. i. p. 67; Bunsen and Platner, *Beschreibung Roms*, vol. i. p. 688—702.) [R. W.]

ARGENTARIII (*τραπεῖται*), bankers or money changers. 1. GREEK. The bankers at Athens were called *τραπεῖται* from their tables (*τράπεζαι*) at which they sat, while carrying on their business. Public or state banks seem to have been a thing unknown in antiquity, though the state must have exercised some kind of superintendence, since without it it is scarcely possible to conceive how persons could have placed such unlimited confidence in the bankers, as they are known to have done at Athens. They had their stands or tables in the market place (*Plat. Apol.* p. 17, *Hipp. Min.* p. 368), and although the banking and money changing business was mostly carried on by *μέτοικοι*, or resident aliens and freedmen, still these persons do not seem to have been looked upon with any disrespect, and the business itself was not disreputable. Their principal occupation was that of changing money at an agio (*Isocrat. Tropes.* 21; *Dem. De fals. Leg.* p. 376, c. *Polycl.* p. 1218; *Pollux*, iii. 84, vii. 170); but they frequently took money, at a moderate premium, from persons who did not like to occupy themselves with the management of their own affairs. Thus the father of Demosthenes, e. g., kept a part of his capital in the hands of bankers. (*Dem. c. Aphob.* i. p. 816.) These persons then lent the money with profit to others, and thus, to a certain degree, obtained possession of a monopoly. The greater part of the capital with which they did business in this way, belonged to others (*Dem. p. Phorm.* p. 948), but sometimes they also employed capital of their own. Although their sole object was pecuniary gain (*Dem. p. Phorm.* p. 953), and not by any means to connect themselves with wealthy or illustrious families, yet they acquired great credit at Athens, and formed business connections in all the principal towns of Greece, whereby their business was effectually supported. (*Dem. p. Phorm.* p. 958, c. *Polycl.* p. 1224.) They

even maintained so great a reputation that not only were they considered as secure merely by virtue of their calling, but such confidence was placed in them, that sometimes business was transacted with them without witnesses (*Isocr. Tropes.* 2), and that money and contracts of debt were deposited with them, and agreements were concluded or cancelled in their presence. (*Dem. c. Callip.* p. 1243, c. *Dionysod.* p. 1287.) The great importance of their business is clear from the immense wealth of Pasion, whose bank produced a net annual profit of 100 minae. (*Dem. p. Phorm.* p. 946.) There are, however, instances of bankers losing everything they possessed, and becoming utterly bankrupt. (*Dem. p. Phorm.* p. 959, c. *Steph.* i. p. 1120.) That these bankers took a high interest when they lent out money, scarcely needs any proof, their loans on the deposits of goods are sufficient evidence. (*Dem. c. Nicom.* p. 1249.) Their usual interest was 36 per cent., an interest that scarcely occurs any where except in cases of money lent on bottomry. The only instance of a bank recognized and conducted on behalf of the state occurs at Byzantium, where at one time it was let by the republic to capitalists to farm. (*Arist. Oecon.* ii. p. 283; comp. Böckh, *Publ. Econom. of Athens*, p. 126, &c. 2d edit.)

2. ROMAN. The *Argentarii* at Rome were also called *argenteae mensae exercitores, argenti distractores* and *negotiatores stipis argentariae*. (Orelli, *Inscript.* n. 4060.) They must be distinguished from the *mensarii* or public bankers, though even the ancients confound the terms, as the *mensarii* sometimes did the same kind of business as the *argentarii*, and they must also be distinguished from the *nummularii*. [*MENSARII; NUMMULARII*] The *argentarii* were private persons, who carried on business on their own responsibility, and were not in the service of the republic; but the shops or *tabernae* which they occupied and in which they transacted their business about the forum, were state property. (*Dig.* 18. tit. 1. s. 32; *Liv.* xl. 51.) As their chief business was that of changing money, the *argentarii* probably existed at Rome from very early times, as the intercourse of the Romans with other Italian nations could not well exist without them; the first mention, however, of their existing at Rome and having their shops or stalls around the forum, occurs about B. C. 350, in the wars against the Samnites. (*Liv.* vii. 21.) The business of the *argentarii*, with which that of the *mensarii* coincided in many points, was very varied, and comprised almost every thing connected with money or mercantile transactions, but it may be divided into the following branches. 1. *Permutatio*, or the exchange of foreign coin for Roman coin, in which case a small agio (*collybus*) was paid to them. (*Cic. in Verr.* iii. 78.) In later times when the Romans became acquainted with the Greek custom of using bills of exchange, the Roman *argentarii*, e. g., received sums of money which had to be paid at Athens, and then drew a bill payable at Athens by some banker in that city. This mode of transacting business is likewise called *permutatio* (*Cic. ad Att.* xii. 24, 27, xv. 15; comp. v. 15, xi. 1, 24, *ad Fam.* ii. 17, iii. 5, *ad Quint. Frat.* i. 3, p. *Rebir.* 14), and rendered it necessary for the *argentarii* to be acquainted with the current value of the same coin in different places and at different

times. (See the comment, on Cic. *pro Quinct.* 4.) 2. The keeping of sums of money for other persons. Such money might be deposited by the owner merely to save himself the trouble of keeping it and making payments, and in this case it was called *depositum*; the argentarius then paid no interest, and the money was called *vacuus pecunia*. When a payment was to be made, the owner either told the argentarius personally or he drew a cheque. (Plant. *Curcul.* ii. 3. 66, &c., iii. 66, iv. 3. 3, &c.) Or the money was deposited on condition of the argentarius paying interest; in this case the money was called *creditum*, and the argentarius might of course employ the money himself in any lucrative manner. (Suet. *Aug.* 39.) The argentarius thus did almost the same sort of business as a modern banker. Many persons entrusted all their capital to them (Cic. *p. Cæc.* 6), and instances in which the argentarii made payments in the name of those whose money they had in hand, are mentioned very frequently. A payment made through a banker was called *per mensam, de mensa, or per mensæ scripturam*, while a payment made by the debtor in person was a payment *ex arca or de domo*. (Plant. *Curcul.* v. 3. 7, &c., 43, *Captio.* ii. 3. 89; Cic. *ad Att.* i. 9, *Top.* 3; Schol. *ad Horat. Sat.* ii. 3. 69; Senec. *Epist.* 26; Gaius, iii. 131.) An argentarius never paid away any person's money without being either authorised by him in person or receiving a cheque which was called *perscriptio*, and the payment was then made either in cash, or, if the person who was to receive it, kept an account with the same banker, he had it added in the banker's book to his own deposit. This was likewise called *perscribere* or simply *scribere*. (Plant. *Asin.* ii. 4. 30, &c., *Curcul.* v. 2. 20; Donat. *ad Terent. Phorm.* v. 7. 28, &c., *ad Adelph.* ii. 4. 13; Cic. *ad Att.* iv. 18, ix. 12, xii. 51, *Philipp.* v. 4, in *Ferr.* v. 19; Horat. *Sat.* ii. 3. 76.) It also occurs that argentarii made payments for persons who had not deposited any money with them; this was equivalent to lending money, which in fact they often did for a certain per centage of interest. (Plant. *Curc.* iv. 1. 19, 2. 22, *Truc.* i. 1. 51, &c., *Epist.* i. 2. 40; Tac. *Ann.* vi. 17.) Of all this business, of the receipts as well as of the expenditure, the argentarii kept accurate accounts in books called *codices, tabulae or rationes* (Plin. *H. N.* ii. 7), and there is every reason for believing that they were acquainted with what is called in book-keeping double entry. When an argentarius settled his accounts with persons with whom he did business, it was done either in writing or orally, both parties meeting for the purpose (Dig. 2. tit. 14. s. 47. § 1, 14. tit. 3. s. 20; Plant. *Aul.* iii. 5. 53, &c.), and the party found to be in debt paid what he owed, and then had his name effaced (*nomen expungere* or *expungere*) from the banker's books. (Plant. *Cist.* i. 3. 41; Cic. *ad Att.* xvi. 6.) As the books of the argentarii were generally kept with great accuracy, and particularly in regard to dates, they were looked upon as documents of high authority, and were appealed to in the courts of justice as unexceptionable evidence. (Cic. *p. Cæc.* 6; Gellius, xiv. 2.) Hence the argentarii were often concerned in civil cases, as money transactions were rarely concluded without their influence or co-operation. Their *codices* or *tabulae* could not be withheld from a person who in court referred to them for the purpose of

maintaining his cause, and to produce them was called *adere* (Dig. 2. tit. 13. s. 1. § 1), or *proferre codicem* (2. tit. 13. s. 6. §§ 7, 8). 3. Their connection with commerce and public auctions. This branch of their business seems to have been one of the most ancient. In private sales and purchases, they sometimes acted as agents for either party (*interpretes*, Plant. *Curc.* iii. 1. 61), and sometimes they undertook to sell the whole estate of a person, as an inheritance. (Dig. 5. tit. 3. s. 18, 46. tit. 3. s. 88.) At public auctions they were almost invariably present, registering the articles sold, their prices, and purchasers, and receiving the payment from the purchasers. (Cic. *p. Cæc.* 4, 6; Quintil. xi. 2; Suet. *Ner.* 5; Gaius, iv. 126; Capitolin. *Aston.* 9.) At auctions, however, the argentarii might transact business through their clerks or servants, who were called *coactores* from their collecting the money. 4. The testing of the genuineness of coins (*probatio nummorum*). The frequent cases of forgery, as well as the frequent occurrence of foreign coins, rendered it necessary to have persons to decide upon their value, and the argentarii, from the nature of their occupation, were best qualified to act as probatores; hence they were present in this capacity at all payments of any large amount. This, however, seems originally to have been a part of the duty of public officers, the *mensarii* or *nummularii*, until in the course of time the opinion of an argentarius also came to be looked upon as decisive; and this custom was sanctioned by a law of Marius Gratidianus. (Plin. *H. N.* xxiii. 9; comp. Cic. *ad Att.* xii. 5; Dig. 46. tit. 3. s. 39.) 5. The *solidorum venditio*, that is, the obligation of purchasing from the mint the newly coined money, and circulating it among the people. This branch of their functions occurs only under the empire. (Symmach. *Epist.* ix. 49; Procop. *Anecd.* 25; comp. Salmasius, *De Usum.* c. 17. p. 504.)

Although the argentarii were not in the service of the state, they existed only in a limited number, and formed a collegium, which was divided into *societates* or corporations, which alone had the right to admit new members of their guild. (Orelli, *Inscript.* n. 913, 995.) It appears that no one but free men could become members of such a corporation, and whenever slaves are mentioned as argentarii, they must be conceived as acting only as servants, and in the name of their masters, who remained the responsible parties even if slaves had transacted business with their own peculium. (Dig. 2. tit. 13. s. 4. § 3, 14. tit. 3. s. 19.) With regard to the legal relation among the members of the corporations, there existed various regulations; one member (*socius*), for example, was responsible for the other. (Auct. *ad Herenn.* ii. 13; Dig. 2. tit. 14. ss. 9, 25, 27.) They also enjoyed several privileges in the time of the empire, and Justinian, a particular patron of the argentarii, greatly increased these privileges (Justin. *Nov.* 136); but dishonest argentarii were always severely punished (Suet. *Galb.* 10; Auson. *Epigr.* 15), and in the time of the emperors, they were under the superintendence of the *praefectus urbi*. (Dig. 1. tit. 12. s. 1. § 9.)

As regards the respectability of the argentarii, the passages of the ancients seem to contradict one another, for some writers speak of their occupation as respectable and honourable (Cic. *p. Cæc.* 4; Aurel. Vict. 72; Suet. *Vesp.* 1; Acron. *ad Horat.*

Sat. i. 6. 86), while others speak of them with contempt (*Plaut. Curc.* iv. 2. 20, *Casin.* Prol. 25, &c.; *Trucul.* i. 1. 47); but this contradiction may be easily reconciled by distinguishing between a lower and a higher class of argentarii. A wealthy argentarius who carried on business on a large scale, was undoubtedly as much a person of respectability as a banker in modern times; but others who did business only on a small scale, or degraded their calling by acting as usurers, cannot have been held in any esteem. It has already been observed that the argentarii had their shops round the forum (*Liv.* ix. 40, xxvi. 11, 27; *Plaut. Truc.* i. 1. 51; *Terent. Phorm.* v. 8. 28, *Adelph.* ii. 4. 13); hence to become bankrupt, was expressed by *foro cedere*, or *abire*, or *foro mergi*. (*Plaut. Epid.* i. 2. 16; *Dig.* 16. tit. 3. a. 7. § 2.) The shops or booths were public property, and built by the censors, who sold the use of them to the argentarii. (*Liv.* xxxix. 44, xl. 51, xli. 27, xlv. 16; comp. J. G. Sieber, *Dissertat. de Argentariis*, Lipsiae, 1737; H. Hubert, *Disput. juridicae III. de Argentariis veterum*, Traject. 1739; W. T. Kraut, *De Argentariis et Nummulariis*, Göttingen, 1826.) [L. S.]

ARGENTUM (*ἀργυρος*), silver, one of the two metals which, on account of their beauty, their durability, their density, and their rarity, have been esteemed in all civilised countries, and in all ages, as precious, and which have, on account of the above qualities and the facility of working them, been used for money. The ancients were acquainted with silver from the earliest known periods. (Pliny ascribes its discovery to Erichthonius or to Aeacus, *H. N.* vii. 56. a. 57.) It is constantly mentioned in Homer; but in a manner which proves that it was comparatively scarce. It was much more abundant in Asia than in Greece Proper, where there were not many silver mines. The accounts we have of the revenues of the early Lydian and Persian kings, and of the presents of some of them, such as Gyges and Croesus, to Pytho and other shrines, prove the great abundance of both the precious metals in Western Asia. Of this wealth, however, a very large proportion was laid up in the royal and sacred treasuries, both in Asia and in Greece. But in time, and chiefly by the effects of wars, these accumulations were dispersed, and the precious metals became commoner and cheaper throughout Greece. Thus, the spoils of the Asiatics in the Persian wars, and the payment of Greek mercenaries by the Persian kings, the expenditure of Pericles on war and works of art, the plunder of the temple of Delphi by the Phocians, the military expenses and wholesale bribery of Philip, and, above all, the conquests of Alexander, caused a vast increase in the amount of silver and gold in actual circulation. The accounts we have of the treasures possessed by the successors of Alexander would be almost incredible if they were not perfectly well attested.

It was about this time also that the riches of the East began to be familiar to the Romans, among whom the precious metals were, in early times, extremely rare. Very little of them was found in Italy; and though Cisalpine Gaul furnished some gold, which was carried down by the Alpine torrents, it contained but a very small proportion of silver. The silver mines of Spain had been wrought by the Carthaginians at a very early period; and from this source, as well as

from the East, the Romans no doubt obtained most of their silver as an article of commerce. But when first Spain and then Greece, Asia Minor, and Syria, were brought beneath the Roman power, they obtained that abundant supply both of silver and gold which formed the instrument of the extravagance and luxury of the later republic and the empire. "The value of the precious metals did not, however, fall in proportion to their increase, as large quantities, wrought for works of art, were taken out of circulation." (Böckh.)

The relative value of gold and silver differed considerably at different periods in Greek and Roman history. Herodotus mentions it (iii. 95) as 13 to 1; Plato (*Hipp.* c. 6. p. 231), as 12 to 1; Menander (*op. Polluc.* ix. 76), as 10 to 1; and Livy (xxxviii. 11), as 10 to 1, about a.c. 189. According to Suetonius (*Jul. Caes.* 54), Julius Caesar, on one occasion, exchanged silver for gold in the proportion of 9 to 1; but the most usual proportion under the early Roman emperors was about 12 to 1; and from Constantine to Justinian about 14 to 1, or 15 to 1. The proportion in modern times, since the discovery of the American mines, has varied between 17 to 1 and 14 to 1.

Silver Mines and Ores. — In the earliest times the Greeks obtained their silver chiefly as an article of commerce from the Phocaeans and the Samnians; but they soon began to work the rich mines of their own country and its islands. The chief mines were in Siphnos, Thessaly, and Attica. In the last-named country, the silver mines of Laurion furnished a most abundant supply, and were generally regarded as the chief source of the wealth of Athens. We learn from Xenophon (*Œcog.* iv. 2), that these mines had been worked in remote antiquity; and Xenophon speaks of them as if he considered them inexhaustible. In the time of Demosthenes, however, the profit arising from them had greatly diminished; and in the second century of the Christian era they were no longer worked. (*Paus.* i. 1. § 1.) The Romans obtained most of their silver from the very rich mines of Spain, which had been previously worked by the Phoenicians and Carthaginians, and which, though abandoned for those of Mexico, are still not exhausted. The ore from which the silver was obtained was called *silver earth* (*ἀργυρίτις γῆ*, or simply *ἀργυρίτις*, *Xen. Œcog.* i. 5, iv. 2). The same term (*terra*) was also applied to the ore by the Romans.

A full account of all that is known respecting the ores of silver known to the ancients, their mining operations, and their processes for the reduction of the ores, is given by Böckh. (*Dissertation on the Silver Mines of Laurion*, §§ 3, 4, 5.)

Uses of Silver. — By far the most important use of silver among the Greeks was for money. It was originally the universal currency in Greece. Mr. Knight, however, maintains (*Prol. Hom.*) that gold was coined first because it was the more readily found, and the more easily worked; but there are sufficient reasons for believing that, until some time after the end of the Peloponnesian war, the Athenians had no gold currency. [AURUM.] It may be remarked here that all the words connected with money are derived from *ἀργυρος*, and not from *χρυσός*, as *καταργησάμεν*, "to bribe with money;" *ἀργυροποιός*, "a money-changer," &c.; and *ἀργυρος* is itself not unfrequently used to signify money in general (*Soph.*

Antiq. 295), as *aes* is in Latin. At Rome, on the contrary, silver was not coined till a. c. 269, before which period Greek silver was in circulation at Rome; and the principal silver coin of the Romans, the *denarius*, was borrowed from the Greek *drachma*. For further details respecting silver money, see NUMMUS, DENARIUS, DRACHMA.

From a very early period, silver was used also in works of art. Its employment for ornamenting arms, so often referred to by Homer, belongs to this head. The use of it for mere purposes of luxury and ostentation, as in plate, seems to have become generally prevalent about the close of the Peloponnesian wars (*Athen.* vi. p. 229, f.), but much more so from the time of Alexander, after which it becomes so common as hardly to need any proof or illustration,—more common indeed than with us. (*Cic. in Verr.* iv. 21.) The Romans distinguished between plain and chased silver vessels by calling the former *pura* or *levia* (*Plin. Ep.* iii. 1; *Juv. ix.* 141, xiv. 62; *Mart. iv.* 38), and the latter *caelata*, *aspera*, or *torrenata*. [CARLATURA; TORREUTIC.]

The chief ancient authorities respecting silver, as well as gold, are the 3d, 4th, and 5th books of Strabo, the 5th of Diodorus, especially cc. 27 and 36, and the 33d of Pliny, from c. 6. s. 31; of modern works the most important are Böckh's *Public Economy of Athens*, Bk. i. cc. 1—3, with the supplementary *Dissertation on the Silver Mines of Laurion*, and Jacob's *History of the Precious Metals*. [P. S.]

ARGIAS GRAPHE' (*ἀργίας γραφή*), that is, an action for idleness. Vagrants and idlers were not tolerated at Athens from very early times, and every person was obliged to be able to state by what means he supported himself. (*Herod.* ii. 177; *Diod.* i. 77.) According to some (*Plut. Sol.* 37, *Pollux.* viii. 42), even Draco had enacted laws against idleness, while, according to others, Solon, in his legislation, borrowed these laws from the Egyptians, and others again state that Peisistratus was the first who introduced them at Athens. (*Plut. Sol.* 31.) In accordance with this law, which is called *ἀργίας νόμος*, all poor people were obliged to signify that they were carrying on some honourable business by which they gained their livelihood (*Dem. c. Eubul.* p. 1308; *Isocrat. Areopag.* 17; *Dionys.* xx. 2); and if a person by his idleness injured his family, an action might be brought against him before the archon eponymus not only by a member of his family, but by any one who chose to do so. (*Lexic. Seguer.* p. 310.) At the time when the Areiopagus was still in the full possession of its powers, the archon seems to have laid the charge before the court of the Areiopagus. If the action was brought against a person for the first time, a fine might be inflicted on him, and if he was found guilty a second or third time, he might be punished with *ἀργία*. (*Pollux.* viii. 42.) Draco had ordained atimia as the penalty even for the first conviction of idleness. (*Plut., Poll. ll. cc.*) This law was modified by Solon, who inflicted atimia only when a person was convicted a third time, and it is doubtful as to whether in later times the atimia was inflicted at all for idleness. As the Areiopagus was entrusted with the general superintendence of the moral conduct of citizens, it is probable that it might interfere in cases of *ἀργία*, even when no one came forward to bring an action against a person guilty of

it. (*Val. Max.* ii. 6; *Platner, Process.* ii. p. 180, &c.; *Meier und Schoemann, Att. Proc.* pp. 193, 298, &c.; *Böckh, Publ. Econ.* p. 475, 2d edit.) According to Aelian (*V. H.* iv. 1), a similar law existed also at Sardes. [L. S.]

ARGU'RIOU DIKE' (*ἀργυρίου δίκη*), a civil suit of the class *πρὸς τινα*, and within the jurisdiction of the thesmothetae, to compel the defendant to pay monies in his possession, or for which he was liable, to the plaintiff. This action is casually alluded to in two speeches of Demosthenes (*in Boeot.* p. 1002, *in Olympiodor.* p. 1179), and is treated of at large in the speech against Callippus. [J. S. M.]

ARGYRA'SPIDES (*ἀργυροσπίδες*), a division of the Macedonian army of Alexander the Great, who were so called because they carried shields covered with silver plates. They were picked men, and were commanded by Nicanor, the son of Parmenion, and were held in high honour by Alexander. After the death of Alexander they followed Eumenes, but afterwards they deserted to Antigonus, and delivered Eumenes up to him. Antigonus, however, soon broke up the corps, finding it too turbulent to manage. (*Diod.* xvii. 57, 58, 59, xviii. 63, xix. 12, 41, 43, 48; *Justin.* xii. 7; *Curtius.* iv. 13. § 27; *Plutarch, Eumenes.* 13, &c.; *Droysen, Nachfolg. Alex.* passim.) The Greek kings of Syria seem to have had a corps of the same name in their army: Livy mentions them as the royal cohort in the army of Antiochus the Great. (*Liv.* xxxvii. 40; *Polyb.* v. 79.) The Emperor Alexander Severus, among other things in which he imitated Alexander the Great, had in his army bodies of men who were called *argyroaspides* and *chrysoaspides*. (*Lamprid. Alex. Sec.* 50.) [P. S.]

ARGYROCOPEION (*ἀργυροκοπεῖον*), the place where money was coined, the mint, at Athens. It appears to have been in or adjoining to the chapel (*ἱερόν*) of a hero named Stephanephorus, in which were kept the standard weights for the coins, just as at Rome in the sanctuary of Juno Moneta. [*ΜΟΝΕΤΑ.*] (*Pollux.* vii. 103; *Harpocrat.*; *Suid.*; *Böckh, Corp. Inscr.* vol. i. p. 164, and the explanation of that inscription in his *Public Economy of Athens*, p. 144, 2d ed.; comp. *TALENTUM.*) [P. S.]

ARIADNEIA (*ἀριadneia*), festivals solemnised in the island of Naxos in honour of Ariadne, who, according to one tradition, had died here a natural death, and was honoured with sacrifices, accompanied by rejoicing and merriment. (*Plut. Thea.* 20.) Another festival of the same name was celebrated in honour of Ariadne in Cyprus, which was said to have been instituted by Theseus in commemoration of her death in the month of Gorpiaeus. The Amathusians called the grove in which the grave of Ariadne was shown, that of Aphrodite-Ariadne. This is the account given by Plutarch (*Thea.* 20) from Paeon, an Amathusian writer. (*Comp. C. F. Hermann, Lehrs. des Gottesdienstl. Alterthümer*, § 65. n. 12.) [L. S.]

ARIES (*ἄριος*), the battering-ram, was used to shake, perforate, and batter down the walls of besieged cities. It consisted of a large beam, made of the trunk of a tree, especially of a fir or an ash. To one end was fastened a mass of bronze or iron (*κεφαλὴ, ἐμβολή, προτομή*), which resembled in its form the head of a ram. The upper figure in the annexed woodcut is taken from the bas-reliefs on the column of Trajan at Rome. It shows the

aries in its simplest state, and as it was borne and impelled by human hands, without other assistance. In an improved form, the ram was surrounded with iron bands, to which rings were attached for the purpose of suspending it by ropes or chains from a beam fixed transversely over it. See the lower figure in the woodcut. By this contrivance the soldiers were relieved from the necessity of supporting the weight of the ram, and they could with ease give it a rapid and forcible motion backwards and forwards.

The use of this machine was further aided by placing the frame in which it was suspended upon wheels, and also by constructing over it a wooden roof, so as to form a "testudo" (χελώνη κριοφόρος, Appian, *Bell. Mith.* 73; *testudo arietaria*, Vitruv. x. 19), which protected the besieging party from the defensive assaults of the besieged. Josephus, who gives a description of the machine (*B. J.* iii. 7. § 19), adds, that there was no tower so strong, no wall so thick, as to resist the force of this machine, if its blows were continued long enough. The beam of the aries was often of great length, e. g. 80, 100, or even 120 feet. The design of this was both to act across an intervening ditch, and to enable those who worked the machine to remain in a position of comparative security. A hundred men, or even a greater number, were sometimes employed to strike with the beam.

The aries first became an important military engine in the hands of the Macedonians, at the time of Philip and Alexander the Great, though it was known at a much earlier period. (Comp. Thuc. ii. 76.) Vitruvius speaks (*l. c.*) of Polydus, a Thessalian, in the time of Philip, who greatly improved the machine, and his improvements were carried out still further by Diades and Chaereas, who served in the campaigns of Alexander the Great. The Romans learnt from the Greeks the art of building these machines, and appear to have employed them for the first time to any considerable extent in the siege of Syracuse in the second Punic war. [HELLEPOLIS.]

ARISTOCRATIA (ἀριστοκρατία), a term in common use among Greek writers on politics, though rarely employed by historians, or otherwise than in connection with political theories. It signifies literally "the government of the best men," and as used by Plato, Aristotle, Polybius, &c., it meant (in reference to a state where political power was not shared by the bulk of the community, but was in the hands of a privileged class,

existing along with a class personally free, and possessed of civil rights, but excluded from the exercise of the highest political functions) the government of a class whose supremacy was founded not on wealth merely, but on personal distinction (ὅπου μὴ μόνον πλουσίῳν ἀλλὰ καὶ ἀριστοῦν ἀιροῦνται τὰς ἀρχάς, Aristot. *Pol.* iv. 5. p. 127, ed. Göttl. 'Ἡ ἀριστοκρατία βούλεται τὴν ὑπεροχὴν ἀκονέμεν τοῖς ἀρίστοις τῶν πολιτῶν, Ibid. p. 128). That there should be an aristocracy, moreover, it was essential that the administration of affairs should be conducted with a view to the promotion of the general interests, not for the exclusive or predominant advantage of the privileged class. (Aristot. *Pol.* iii. 5, p. 83, ed. Göttl.; Plat. *Pol.* p. 301, a.) As soon as the government ceased to be thus conducted, or whenever the only title to political power in the dominant class was the possession of superior wealth, the constitution was termed an oligarchy (ὀλιγαρχία), which, in the technical use of the term, was always looked upon as a corruption (παρέκβασις, Aristot. *Pol.* iii. 5. p. 84, ed. Göttl.) of an aristocracy. (Comp. Plat. *l. c.*; Arist. *Pol.* iv. 3. pp. 117, 118, ed. Göttl. iv. 6, ἀριστοκρατίας γὰρ ὅρος ἀρετῆς, ὀλιγαρχίας δὲ πλοῦτος.) In the practical application of the term aristocracy, however, the personal excellence which was held to be a necessary element was not of a higher kind than what, according to the deeply-seated ideas of the Greeks, was commonly hereditary in families of noble birth (Plat. *Menex.* p. 237, a., *Cratyl.* p. 394, a.; Aristot. *Pol.* iv. 6, ἡ γὰρ εὐγένεια ἐστὶν ἀρχαῖος πλοῦτος καὶ ἀρετῆς. v. 1, εὐγενεῖς γὰρ εἶναι δοκοῦσιν οἱς ὑπάρχει προγόνων ἀρετῆς καὶ πλοῦτος), and in early times would be the ordinary accompaniments of noble rank, namely, wealth, military skill, and superior education and intelligence (comp. Aristot. *Pol.* iv. 6, εἰδῶσι καλεῖν . . . ἀριστοκρατίας διὰ τὸ μᾶλλον ἀκολουθεῖν παιδείαν καὶ εὐγένειαν τοῖς εὐπορετέροις). It is to be noted that the word ἀριστοκρατία is never, like the English term *aristocracy*, the name of a class, but only of a particular political constitution.

On tracing the historical development of aristocratical government, we meet with a condition of things which may almost be called by that name in the state of society depicted in the Homeric poems, where we already see the power of the kings limited by that of a body of princes or nobles, such as would naturally arise in the infancy of society, especially among tribes in which, from the frequency of wars, martial skill would be a sure and speedy method of acquiring superiority. When the kingly families died out, or were stripped of their peculiar privileges, the supreme power naturally passed into the hands of these princes or chieftains, who formed a body of nobles, whose descendants would of course for the most part inherit those natural, and be also alone in a position to secure those acquired advantages, especially warlike skill, which would form their title to political superiority. Some aristocracies thus arose from the natural progress of society: others arose from conquest. The changes consequent on the rise of the Hellenes, and the Thessalian, Boeotian and Dorian conquests in Greece, established pretty generally a state of things in which we find the political power in the hands of a body of nobles consisting chiefly or entirely of the conquerors, beneath whom is a free population not

possessed of political rights, consisting of the older inhabitants of the land, together with, in most instances, a body of serfs attached to the domains of the nobles. These last are described under various names, as *Εὐπρωπίδαι* in Attica, or *Γαυρόποι* as in Syracuse and several of the Doric states. From the superior efficiency of the cavalry in early times, we also find the nobles as a class bearing the name *Ἱππῆται*, *Ἱππεῖς*, or *Ἱπποδάται* (as in Chalcia, Herod. v. 77), since, generally speaking, they alone had wealth sufficient to enable them to equip themselves for that kind of service; and in most states the first great advance of the commonalty in power arose from their gaining greater efficiency as heavy-armed foot soldiers; that force, when properly organised and armed, being found more than a match for cavalry. (See especially Arist. *Pol.* iv. 3, 10; K. F. Hermann, *Griech. Staatsalterth.* c. iii. §§ 55—59; Wachsmuth, *Hellen. Alterthumsk.* vol. i. c. 3. §§ 30, 31; Thirlwall, *Hist. of Greece*, vol. i. c. 10. p. 394, &c.) Compare the articles *EUPATRIDAE*, *ΓΕΝΟΜΟΙ*, *PATRICII*. [C. P. M.]

ARMA, ARMATU'RA (*ἄπλα*, Hom. *ἄρτεα*, *τένχεα*), arma, armour. Homer describes in various passages the entire suit of armour of some of his greatest warriors, viz. of Achilles, Patroclus, Agamemnon, Menelaus and Paris (*Il.* iii. 328—339, iv. 132—138, xi. 15—45, xvi. 130—142, xix. 364—391); and we observe that it consisted of the same portions which were used by the Greek soldiers ever after. Moreover, the order of putting them on is always the same. The heavy-armed warrior, having already a tunic around his body, and preparing for combat, puts on,—first, his greaves (*κνημῖδες*, *ocreae*); secondly, his cuirass (*δῶρα*, *lorica*), to which belonged the *μίτρη* underneath, and the *ζώνη* (*ζώνη*, *cingulum*) above; thirdly, his sword (*εἰς*, *ensis*, *gladius*) hung on the left side of his body by means of a belt which passed over the right shoulder; fourthly, the large round shield (*ἀσπίς*, *dosis*, *clipeus*, *scutum*), supported in the same manner; fifthly, his helmet (*κόρυς*, *curopa*, *casca*, *galea*); sixthly and lastly, he took his spear (*ῥαχός*, *δόρυ*, *hasta*), or, in many cases, two spears (*δοῦρε δύω*). The form and use of these portions are described in separate articles under their Latin names. The annexed woodcut exhibits them all in the form of a Greek warrior attired for battle, as shown in Hope's *Costume of the Ancients* (i. 70).

Those who were defended in the manner which has now been represented, are called by Homer *ἰσχυροὶ*, from their great shield (*δοῦρις*); also *ἐγχεμέχοι*, because they fought hand to hand with their adversaries; but much more commonly *πρώμοι*, because they occupied the front of the army; and it is to be observed that these terms, especially the last, were honourable titles, the expense of a complete suit of armour (*πανοπλία*, Herod. i. 60) being of itself sufficient to prove the wealth and rank of the wearer, while his place on the field was no less indicative of strength and bravery.

In later times, the heavy-armed soldiers were called *ὀπλίται*, because the term *ἄπλα* more especially denoted the defensive armour, the shield and thorax. By wearing these they were distinguished from the light-armed, whom Herodotus (ix. 62, 63), for the reason just mentioned, calls *ἀνοπλοὶ*, and who are also denominated *ψιλοὶ*, and *γυμνοὶ*, *γυμῆται*, or *γυμῆται*. Instead of being defended

by the shield and thorax, their bodies had a much lighter covering, sometimes consisting of

skins, and sometimes of leather or cloth; and instead of the sword and lance, they commonly fought with darts, stones, bows and arrows, or slings.

Besides the heavy and light-armed soldiers, the *ὀπλίται* and *ψιλοὶ*, who in general bore towards one another the intimate relation now explained, another description of men, the *τελασται*, also formed a part of the Greek army, though we do not hear of them in early times. Instead of the large round shield, they carried a smaller one called the *πέλτη*, and in other respects their armour was much lighter than that of the hoplites. The weapon on which they principally depended was the spear.

The Roman soldiers had different kinds of arms and armour; but an account of the arms of the different kinds of troops cannot be separated from a description of the troops of a Roman army, and the reader is therefore referred to *EXERCITUS*. We need only give here the figure of a Roman soldier taken from the arch of Septimus Severus at Rome. On comparing it with that of the Greek hoplite in the other cut, we perceive that the several parts of the armour correspond, excepting only that the Roman soldier wears a dagger (*μάχαιρα*, *pugio*) on his right side instead of a sword on his left, and instead of greaves upon his legs, has *femoralia* and *caligae*. All the essential parts of the Roman heavy armour (*lorica*, *ensis*, *clipeus*, *galea*, *hasta*) are mentioned together in an epigram of Martial (ix. 57); and all except the spear in a well known passage (*Ep.* vi. 14—17) of St. Paul, whose enumeration exactly coincides with the figures on the arch of Severus, and who makes mention not only of greaves, but of shoes or sandals for the feet.

The soft or flexible parts of the heavy armour were made of cloth or leather. The metal principally used in their formation was that compound of copper and tin which we call bronze, or more

properly bell-metal. [AÆA.] Hence the names for this metal (χαλκός, *ass*) are often used to mean

armour, and the light reflected from the arms of a warrior is called *ἀργή χαλκή* by Homer, and *luz aëna* by Virgil. (*Aen.* ii. 470.) Instead of copper, iron afterwards came to be very extensively used in the manufacture of arms, although articles made of it are much more rarely discovered, because iron is by exposure to air and moisture exceedingly liable to corrosion and decay. Gold and silver, and tin unmixed with copper, were also used, more especially to enrich and adorn the armour. [J. Y.]

ARMA'RIUM, originally a place for keeping arms, afterwards a cupboard, set upright in the wall of a room, in which were kept not only arms, but also clothes, books, money, ornaments, small images and pictures, and other articles of value. The armarium was generally placed in the atrium of the house. (Dig. 38. tit. 10. s. 3; Cic. *Pro Cluent.* 64; Petron. *Sat.* 29; Plin. *H. N.* xxix. 5. s. 32, xxxv. 2.) The divisions of a library were called *armaria*. (Vitruv. vii. *Præf.*; Vopisc. *Tac.* 8.) We find *armarium distegum* mentioned as a kind of sepulchre in an inscription in Gruter (p. 383. No. 4). For other passages see Forcellini, s. v.

[P. S.]

ARMILLA (ῥάλιον, ῥέλιον, or ῥέλλιον, ῥάλιδον, ἄμφιδέται), a bracelet or armband, worn both by men and women. It was a favourite ornament of the Medes and Persians (Herod. viii. 113, ix. 80; Xen. *Anab.* i. 2. § 27); and in Europe was also worn by the Gauls and Sabines. (Gell. ix. 13; Liv. i. 11.) Bracelets do not appear to have been worn among the Greeks by the male sex, but Greek ladies had bracelets of various materials, shapes, and styles of ornament. The bracelet was sometimes called *σφιγκτήρ* (from σφίγγω), in Latin *spinther* or *spinter* (Plant. *Menæch.* iii. 3), which derived its name from its keeping its place by compressing the arm of the wearer. Bracelets seem to have been frequently made without having their ends joined; they were then curved, so as to require,

when put on, to be slightly expanded by having their ends drawn apart from one another; and, according to their length, they went once, twice, or thrice round the arm, or even a greater number of times. As they frequently exhibited the form of serpents, they were in such cases called *snakes* (ὄφεις) by the Athenians (Hesych. s. v. ὄφεις). Twisted bracelets of the kind described above often occur on Greek painted vases. See the annexed cut from Sir William Hamilton's great work, vol. ii. pl. 35.

Bracelets were likewise worn at Rome by ladies of rank, but it was considered a mark of effeminacy for men in an ordinary way to use such female ornaments. (Suet. *Cal.* 52, *Ner.* 30.) They were, however, publicly conferred by a Roman general upon soldiers for deeds of extraordinary merit (Liv. x. 44; Plin. *H. N.* xxxiii. 2; Festus, s. v.); in which case they were worn as a mark of honour, and probably differed in form from the ordinary ornaments of the kind. See the cut below.

The following cuts exhibit Roman bracelets. The first figure represents a gold bracelet discovered at Rome on the Palatine Mount. (Caylus, *Rec. d'Ant.* vol. v. pl. 93.) The rosette in the middle is composed of distinct and very delicate leaves. The two starlike flowers on each side of it have been repeated where the holes for securing them are still visible. The second figure represents

called 'H ἄνω βουλή, to distinguish it from the senate of Five Hundred, which sat in the Cerameicus within the city. That it was a body of very remote antiquity, acting as a criminal tribunal, was evidently believed by the Athenians themselves. In proof of this, we may refer to the express assertions of the orators, and the legend of Orestes having been tried before the council for the murder of his mother—a trial which took place before Athena, and which Aeschylus represents as the origin of the court itself. Again, we find that even before the first Messenian war (B. C. 740) began, the Messenians offered to refer the points in dispute to the Argive Amphictiony, or the Athenian Areiopagus (Paus. iv. 5. § 1; Thirlwall, *Hist. Greece*, vol. i. p. 345), because this body was believed to have had jurisdiction in cases of manslaughter (δίκας φονικὰς), "from of old."

There is sufficient proof, then, that the Areiopagus existed before the time of Solon, though he is admitted to have so far modified its constitution and sphere of duty, that he might almost be called its founder. What that original constitution was, must in some degree be left to conjecture, though there is every reason to suppose that it was aristocratical, the members being taken, like the Ephetae, from the noble patrician families (ἀριστοκράτης). We may remark that, after the time of Solon, the Ephetae, fifty-one in number, sat collectively in four different courts, and were charged with the hearing of such cases of accidental or justifiable homicide as admitted of or required expiation, before the accused could resume the civil and religious rights he had lost: a resumption impossible in cases of wilful murder, the capital punishment for which could only be escaped by banishment for life, so that no expiation was required or given. (Müller, *Elemen.* § 64; Pollux, viii. 125.) Now the Ephetae formerly administered justice in five courts, and for this and other reasons it has been conjectured that they and the Areiopagus then formed one court, which decided in all cases of murder, whether wilful or accidental. In support of this view, it has been urged that the separation of functions was rendered necessary by that change of Solon which made the Areiopagus no longer an aristocratic body, while the Ephetae remained so, and as such were competent to administer the rights of expiation, forming, as they did, a part of the sacred law of Athens, and therefore left in the hands of the old patricians, even after the loss of their political privileges. On this point we may remark, that the connection insisted on may to a great extent be true; but that there was not a complete identity of functions is proved by Plutarch (*Solon.* c. 19), in a quotation from the laws of Solon, showing that even before that legislator the Areiopagites and Ephetae were in some cases distinct.

It has been observed, in the article ARCHON, that the principal change introduced by Solon in the constitution of Athens, was to make the qualification for office depend not on birth but property; also that, agreeably to his reforms, the nine archons, after an unexceptionable discharge of their duties, "went up" to the Areiopagus, and became members of it for life, unless expelled for misconduct. (Deinar. c. *Demosth.* p. 97; Plut. *Sol.* c. 18.)

The council then, after his time, ceased to be aristocratic in constitution; but, as we learn from Attic writers, continued so in spirit. In fact,

Solon is said to have formed the two councils, the senate and the Areiopagus, to be a check upon the democracy; that, as he himself expressed it, "the state, riding upon them as anchora, might be less tossed by storms." Nay, even after the archons were no longer elected by suffrage but by lot, and the office was thrown open by Aristides to all the Athenian citizens, the "upper council" still retained its former tone of feeling. We learn, indeed, from Isocrates (*Areiop.* p. 147), that no one was so bad as not to put off his old habits on becoming an Areiopagite; and though this may refer to private rather than public conduct, we may not unreasonably suppose that the political principles of the younger would always be modified by the older and more numerous members—a modification which, though continually less in degree, would still be the same in direction, and make the Areiopagus what Pericles found it, a counteracting force to the democracy. Moreover, besides these changes in its constitution, Solon altered and extended its functions. Before his time it was only a criminal court, trying cases of "wilful murder and wounding, of arson and poisoning" (Pollux, viii. 117; Dem. c. *Arist.* p. 627), whereas he gave it extensive powers of a censorial and political nature. Thus we learn that he made the council an "overser of everything, and the guardian of the laws," empowering it to inquire how any one got his living, and to punish the idle. (Plutarch, *Solon.* c. 22; Isoc. l. c.)

We learn from other authorities that the Areiopagites were "superintendents of good order and decency," terms rather unlimited and undefined, as it is not improbable Solon wished to leave their authority. There are, however, recorded some particular instances of its exertion. (Athen. iv. pp. 167, c.—168, b. vi. p. 245, c. ed. Dindorf; Pollux, viii. 112.) Thus we find that they called persons to account for extravagant and dissolute living, and that too even in the later days of Athenian history. On the other hand, they occasionally rewarded remarkable cases of industry, and, in company with certain officers called γυναικονόμοι, made domiciliary visits at private entertainments, to see that the number of guests was not too large, and also for other purposes. But their censorial and political authority was not confined to matters of this subordinate character. We learn from Aristotle (Plut. *Themis.* c. 10; see Böckh, vol. i. p. 208), that at the time of the Median invasion, when there was no money in the public treasury, the Areiopagus advanced eight drachmae a man to each of the sailors—a statement which proves that they had a treasury of their own, rather than any control over the public finances, as some have inferred from it. (Thirlwall, *Hist. Greece*, vol. iii. app. 1.) Again, we are told (Lycurg. c. *Leoc.* p. 154) that at the time of the battle of Chaeroneia, they seized and put to death those who deserted their country, and that they were thought by some to have been the chief preservation of the city.

It is probable that public opinion supported them in acts of this kind, without the aid of which they must have been powerless for any such objects. In connection with this point, we may add that when heinous crimes had notoriously been committed, but the guilty parties were not known, or no accuser appeared, the Areiopagus inquired into the subject, and reported (ἀποφαίνουσιν) to the

There was an Egyptian measure of the same name, of which there were two sorts, the old and the new artaba. (Didymus, c. 19.) The old artaba contained $4\frac{1}{2}$ Roman modii = 72 sextarii = 9 gallons nearly, according to most writers; but Galen (c. 5) makes it exactly 5 modii. It was about equal to the Attic metretres; and it was half of the Ptolemaic medimnus, which was to the Attic medimnus as 3 : 2. The later and more common Egyptian artaba contained $3\frac{1}{2}$ modii = $53\frac{1}{2}$ sextarii = $6\frac{1}{2}$ gallons about, which is so nearly the half of the Persian, that we may fairly suppose that in reality it was the half. It was equal to the Olympic cubic foot. (Rhenn. Fann. *Carmen de Pond. et Mens.* v. 89, 90; Hieron. *Ad Ezech.* 5; Böckh, *Metrolog. Unterruch.* pp. 242, &c., 285; *Publ. Econ. of Ath.* p. 93, 2nd ed.; Wurm, *De Pond.*, &c. p. 133.) [P. S.]

ARTEMISIA (ἄρτεμισία), one of the great festivals celebrated in honour of Artemis in various parts of Greece, in the spring of the year. We find it mentioned at Syracuse in honour of Artemis Potamia and Soteria. (Pind. *Pyth.* ii. 12.) It lasted three days, which were principally spent in feasting and amusements. (Liv. xxv. 23; Plut. *Marcell.* 18.) Bread was offered to her under the name of Ἀρτυία. (Hesych. s. v.) But these festivals occur in many other places in Greece, as at Delphi, where, according to Hegesander (Athen. vii. p. 325), they offered to the goddess a mullet on this occasion; because it appeared to hunt and kill the sea-hare, and thus bore some resemblance to Artemis, the goddess of hunting. The same name was given to the festivals of Artemis in Cyrene and Ephesus, though in the latter place the goddess was not the Grecian Artemis, but a deity of Eastern origin. (Dionys. iv. 25; Achill. *Tat.* vi. 4, vii. 12, viii. 17; Xenoph. *Ephes.* i. 2.) [L. S.]

ARURA (ἄρουρα), a Greek measure of surface, which would appear, from its name, to have been originally the chief land-measure. It was, according to Suidas, the fourth part of the ἀλέθρον. The ἀλέθρον, as a measure of length, contained 100 Greek feet; its square therefore = 10,000 feet, and therefore the arura = 2500 Greek square feet, or the square of 50 feet.

Herodotus (ii. 168) mentions a measure of the same name, but apparently of a different size. He says that it is a hundred Egyptian cubits in every direction. Now the Egyptian cubit contained nearly $17\frac{1}{2}$ inches (Hussey, *Ancient Weights*, &c. p. 237); therefore the square of $100 \times 17\frac{1}{2}$ inches, i.e. nearly 148 feet, gives approximately the number of square feet (English) in the arura, viz. 21,904. (Wurm, *De Pond. &c.* p. 94.) [P. S.]

ARUSPEX. [HARUSPEX.]

ARVALES FRATRES. The fratres arvales formed a college or company of twelve in number, and were so called, according to Varro (*De Ling. Lat.* v. 85, Müller), from offering public sacrifices for the fertility of the fields. That they were of extreme antiquity is proved by the legend which refers their institution to Romulus, of whom it is said, that when his nurse Acca Laurentia lost one of her twelve sons, he allowed himself to be adopted by her in his place, and called himself and the remaining eleven "Fratres Arvales." (Gell. vi. 7.) We also find a college called the *Sodales Titii*, and as the latter were confessedly of Sabine origin, and instituted for the purpose of keeping up the Sabine religious rites (Tac. *Ann.* i. 53), there is some

reason for the supposition of Niebuhr (*Rom. Hist.* vol. i. p. 303), that these colleges corresponded one to the other—the Fratres Arvales being connected with the Latin, and the Sodales Titii with the Sabine, element of the Roman state, just as there were two colleges of the *Luperci*, namely, the *Fabii* and the *Quinctilii*, the former of whom seem to have belonged to the Sabines.

The office of the fratres arvales was for life, and was not taken away even from an exile or captive. They wore, as a badge of office, a chaplet of ears of corn (*spicea corona*) fastened on their heads with a white band. (Plin. *H. N.* xviii. 2.) The number given by inscriptions varies, but it is never more than nine; though, according to the legend and general belief, it amounted to twelve. One of their annual duties was to celebrate a three days' festival in honour of Dea Dia, supposed to be Ceres, sometimes held on the xvi., xiv., and xiii., sometimes on the vi., iv., and iii. Kal. Jun., i.e. on the 17th, 19th, and 20th, or the 27th, 29th, and 30th of May. Of this the master of the college, appointed annually, gave public notice (*indicoabat*) from the temple of Concord on the capitol. On the first and last of these days, the college met at the house of their president, to make offerings to the Dea Dia; on the second they assembled in the grove of the same goddess, about five miles south of Rome, and there offered sacrifices for the fertility of the earth. An account of the different ceremonies of this festival is preserved in an inscription, which was written in the first year of the Emperor Elagabalus (A. D. 218), who was elected a member of the college under the name of M. Aurelius Antoninus Pius Felix. The same inscription contains a hymn, which appears to have been sung at the festival from the most ancient times. (Marini, *Atti e Monumenti degli Arvali*, tab. xli.; Orelli, *Corp. Inscr.* nr. 2270; Klausen, *De Carmine Fratrum Arvalium*.)

Besides this festival of the Dea Dia, the fratres arvales were required on various occasions, under the emperors, to make vows and offer up thanksgivings, an enumeration of which is given in Forcellini. (*Lex. s. v.*) Strabo, indeed (v. 3), informs us that, in the reign of Tiberius, these priests (*teporumhuores*) performed sacrifices called the *Ambarvalia* at various places on the borders of the ager Romanus, or original territory of Rome; and amongst others, at Festi, a place between five and six miles from the city, in the direction of Alba. There is no boldness in supposing that this was a custom handed down from time immemorial, and moreover, that it was a duty of this priesthood to invoke a blessing on the whole territory of Rome. It is proved by inscriptions that this college existed till the reign of the Emperor Gordian, or A. D. 325, and it is probable that it was not abolished till A. D. 400, together with the other colleges of the Pagan priesthoods.

The private ambarvalia were certainly of a different nature from those mentioned by Strabo, and were so called from the victim (*hostia ambarvalis*) that was slain on the occasion being led three times round the cornfields, before the sickle was put to the corn. This victim was accompanied by a crowd of merry-makers (*chorus et socii*), the reapers and farm-servants dancing and singing, as they marched along, the praises of Ceres, and praying for her favour and presence, while they offered her the libations of milk, honey, and wine.

just decisions. The process was as follows:—The king archon (Pollux, viii. 90) brought the case into court, and sat as one of the judges, who were assembled in the open air, probably to guard against any contamination from the criminal. (Antiphon, *De Caede Herod.* p. 180; Dem. *c. Arist.* l. c.; Pollux, viii. 33.) The accuser, who was said *eis* Ἀρείων πύλον ἐπιστῆναι, first came forward to make a solemn oath (δυσμολία) that his accusation was true, standing over the slaughtered victims, and imprecating extirpation upon himself and his whole family, were it not so. The accused then denied the charge with the same solemnity and form of oath. Each party then stated his case with all possible plainness, keeping strictly to the subject, and not being allowed to appeal in any way to the feelings or passions of the judges (προσμυθεῖσθαι οὐκ ἐξήν οὐδὲ ἐλκεῖν εἶναι. Aristot. *Rhet.* i. 1; Pollux, viii. 117.) After the first speech (μετὰ τὸν πρότερον λόγον), a criminal accused of murder might remove from Athens, and thus avoid the capital punishment fixed by Draco's *Θεσμοί*, which on this point were still in force. Except in cases of parricide, neither the accuser nor the court had power to prevent this; but the party who thus evaded the extreme punishment was not allowed to return home (φύγει δειπόριον), and when any decree was passed at Athens to legalise the return of exiles, an exception was always made against those who had thus left their country (οἱ δὲ Ἀρείου πύλου φύγοντες). See Plato, *Leges*, ix. 11.

The reputation of the Areiopagus as a criminal court was of long continuance, as we may learn from an anecdote of Aulus Gellius, who tells us (xii. 7) that C. Dolabella, proconsul of the Roman province of Asia, referred a case which perplexed himself and his council to the Areiopagus (*ut ad iudices graviore exercitatioresque*); they ingeniously settled the matter by ordering the parties to appear that day 100 years (*centesimo anno adesse*). They existed in name, indeed, till a very late period. Thus we find Cicero mentions the council in his letters (*Ad Fam.* xiii. 1; *Ad Att.* i. 14, v. 11); and under the emperors Gratian and Theodosius (A. D. 380), 'Πολύτρος Φήγορος is called proconsul of Greece, and an Areiopagite. (Meursius, *Areiop.*)

Of the respectability and moral worth of the council, and the respect that was paid to it, we have abundant proof in the writings of the Athenian orators, where, indeed, it would be difficult to find it mentioned except in terms of praise. Thus Lysias speaks of it as most righteous and venerable (*c. Andoc.* p. 104; compare Aesch. *c. Timor.* 12; Isocr. *Areiop.* 148); and so great was the respect paid to its members, that it was considered rude in the demus laughing in their presence, while one of them was making an address to the assembly on a subject they had been deputed to investigate. This respect might, of course, facilitate the resumption of some of their lost power, more especially as they were sometimes intrusted with inquiries on behalf of the state, as on the occasion to which we have just alluded, when they were made a sort of commissioners, to inquire into the state of the buildings about the Pnyx, and decide upon the adoption or rejection of some proposed alterations. Isocrates, indeed, even in his time, when the previous inquiry or *λογισμός* had fallen into disuse, speaks well of

their moral influence; but shortly after the age of Demetrius Phalerenus, a change had taken place; they had lost much of their respectability, and were but ill fitted to enforce a conduct in others which they did not observe themselves. (Athen. iv. p. 167.)

The case of St. Paul (Act. xvii. 22.) is generally quoted as an instance of their authority in religious matters; but the words of the sacred historian do not necessarily imply that he was brought before the council. It may, however, be remarked, that they certainly took cognizance of the introduction of new and unauthorized forms of religious worship, called *ἐνθήρα λερά*, in contradistinction to the *πάτρια* or older rites of the state. (Harpocrat. *s. v.* Ἐνθήροις; *Esop.*; Schömann, *De Comitiis*, p. 286. transl.) There was also a tradition that Plato was deterred from mentioning the name of Moses as a teacher of the unity of the Godhead, by his fear of the Areiopagus. (Justin Martyr, *Cohor. ad Græc.* p. 22.)

With respect to the number of the Areiopagus in its original form, a point of no great moment, there are various accounts; but it is plain that there could have been no fixed number when the archons became members of this body at the expiration of their year of office. Lysias, indeed, speaks of them (Περὶ τοῦ Ἰσχυροῦ, pp. 110, 111; see *Argum. Orat. c. Androt.*) as forming a part of the Areiopagus even during that time; a statement which can only be reconciled with the general opinion on the subject, by supposing that they formed a part of the council during their year of office, but were not permanent members till the end of that time, and after passing a satisfactory examination. [R. W.]

ARE'NA. [AMPHITHEATRUM.]

ARETA'LOGI, a class of persons whose conversation formed one of the entertainments of the Roman dinner-tables. (Suet. *Octav.* 74.) The word literally signifies *persons who discourse about virtue*; and the class of persons intended seem to have been poor philosophers, chiefly of the Cynic and Stoic sects, who, unable to gain a living by their public lectures, obtained a maintenance at the tables of the rich by their philosophical conversation. Such a life would naturally degenerate into that of the parasite and buffoon; and accordingly we find these persons spoken of contemptuously by Juvenal, who uses the phrase *mendaces aretalogus*: they became a sort of *scurræ*. (Juv. *Sat.* xv. 15, 16; comp. Casaubon, *ad Suet.* l. c.; and Ruperti and Heinrich, *ad Juv.* l. c.) [P. S.]

A'RGEI. We learn from Livy (i. 22) that Numa consecrated places for the celebration of religious services, which were called by the pontifices "argei." Varro calls them the chapels of the argei, and says they were twenty-seven in number, distributed in the different districts of the city. We know but little of the particular uses to which they were applied, and that little is unimportant. Thus we are told that they were solemnly visited on the Liberalia, or festival of Bacchus; and also, that whenever the flamen dialis went (*ibit*) to them, he was to adhere to certain observances. They seem also to have been the depositories of topographical records. Thus we read in Varro,—*In sacris Argæorum scriptum est sic: Oppius mons princeps*, &c., which is followed by a description of the neighbourhood. There was a tradition that these argei were named from the chieftains who came with Hercules, the Argive,

were accompanied by a real and corresponding diminution in the value of the as. (*Metrolologische Untersuchungen*, § 28.) It is impossible to give here even a summary of the arguments on both sides: the remarks of Niebuhr and Böckh must themselves be studied. It is by no means improbable that there was some increase in the value of copper during the period before the first Punic war, and also that the fixing of the sextantal standard arose partly out of the relation of value between copper and the silver coinage which had been very lately introduced. On the other hand, it is impossible entirely to reject Pliny's statement that the immediate object of the reductions he mentions was the public gain. Mr. Grote, who sides with Böckh, remarks, that "such a proceeding has been so nearly universal with governments, both ancient and modern, that the contrary may be looked upon as a remarkable exception." (*Classical Museum*, vol. i. p. 82.)

These variations make it impossible to fix any value for the as, except with reference to some more specific standard; and this we find in the denarius. Taking the value of this coin at about 8½ pence [DENARIUS], the as, at the time of the first coinage of the denarius (B. C. 269), was one-tenth of this value, that is, about .85 of a penny or 3.4 farthings; and in the time of the second Punic war, when 16 ases went to the denarius, the as was worth about 2½ farthings. When the silver coinage got thoroughly established, the reckoning was no longer by ases, but by sestertii. [SESTERTIUS.] Also, during the period or periods of reduction, the term *aes grave*, which originally signified the old heavy coins, as opposed to the reduced ases, came to mean any quantity of copper coins, of whatever weight or coinage, reckoned not by tale, but by the old standard of a pound weight to the as; and this standard was actually maintained in certain payments, such as military pay, fines, &c. (Liv. iv. 41, 60, v. 2, xxxii. 26; Plin. l. c.; Sen. ad Hæc. 12; Niebuhr, *Hist. of Rome*, vol. i. pp. 466, 467). This mode of reckoning also supplied a common measure for the money of Rome, and the other states of Italy, which had ases of very various weights, most of them heavier than the Roman. The name of *aes grave* was also applied to the uncoined metal. (Servius, ad Virg. *Aen.* vi. 862; *Massa, aes rude, metallum infectum*, Isidor. xvi. 18, 13.)

The oldest form of the as is that which bears the figure of an animal (a bull, ram, boar, or sow); whence the ancient writers derived the word for money, *pecunia*, from *pecus*, an etymology on which no opinion need be pronounced; but whether this impress was intended to represent property by that form of it which was then most common, or had some mythological meaning, is doubtful. Niebuhr denies the antiquity of this type, but his sole objection is satisfactorily answered by Böckh. The type seems however to have been much less used in the Roman than in some other old Italian coinages; and most of the pieces which bear it are of a rude oblong shape. The next form, and the common one in the oldest Roman ases, is round, and is that described by Pliny (*H. N.* xxxiii. 3. s. 13), as having the two-faced head of Janus on one side, and the prow of a ship on the other (whence the expression used by Roman boys in tossing up, *capita aut nautes*, Macrob. *Sat.* i. 7). The annexed specimen, from the British Museum,

weighs 4000 grains: the length of the diameter in this and the two following cuts is half that of the original coins.

The as was divided into parts, which were named according to the number of ounces they contained. They were the *denarii*, *destrans*, *dodrans*, *bes*, *septuans*, *semis*, *quincunx*, *triens*, *quadrans* or *toruncius*, *sextans*, *sestuncius* or *sestuncia*, and *uncia*, consisting respectively of 11, 10, 9, 8, 7, 6, 5, 4, 3, 2, 1½, and 1 ounces. Of these divisions the following were represented by coins; namely, the *semis*, *quincunx*, *triens*, *quadrans*, *sextans*, and *uncia*. There is a solitary instance of the existence of the *dodrans*, in a coin of the Cassian family, bearing an S and three balls. We have no precise information as to the time when these divisions were first introduced, but it was probably nearly as early as the first coinage of copper money.

The *semis*, *semissis*, or *semi-as*, half the as, or six ounces, is always marked with an S to represent its value, and very commonly with heads of Jupiter, Juno, and Pallas, accompanied by strigils. The *quincunx*, or piece of five ounces, is very rare. There is no specimen of it in the British Museum. It is distinguished by five small balls to represent its value. The *triens*, the third part of the as, or piece of four ounces, is marked with four balls. In the annexed specimen, from the British Museum, the balls appear on both sides, with a

thunderbolt on one side, and a dolphin with a strigil above it on the other. Its weight is 1571 grains.

The *quadrans* or *terticius*, the fourth part of the *as*, or piece of three ounces, has three balls to denote its value. An open hand, a strigil, a dolphin, grains of corn, a star, heads of Hercules, Ceres, &c., are common devices on this coin. Pliny (*H. N.* xxxiii. 3. s. 13) says that both the *triens* and *quadrans* bore the image of a ship. The *sestans*, the sixth part of the *as*, or piece of two ounces, bears two balls. In the annexed specimen, from the British Museum, there is a caduceus and strigil on one side, and a cockle-shell on the other. Its weight is 779 grains.

The *uncia*, one ounce piece, or twelfth of the *as*, is marked by a single ball. There appear on this coin heads of Pallas, of Roma, and of Diana, ships, frogs, and ears of barley. (For other devices, see Eckhel, *Doctr. Num. Vet.*)

After the reduction in the weight of the *as*, coins were struck of the value of 2, 3, 4, and even 10 *ases*, which were called respectively *dussis* or *depondius*, *tressis*, *quadrussis*, and *decussis*. Other multiples of the *as* were denoted by words of similar formation, up to *centussis*, 100 *ases*; but most of them do not exist as coins.

It is a very remarkable fact that, while the duodecimal division of the *as* prevailed among the nations of Italy south of the Apennines, the decimal division was in use to the north of that chain; so that, of the former nations no quincunx has been discovered, of the latter no semia. In Sicily the two systems were mixed. [PONDERA.] For further details respecting the coinage of the other Italian states, see Böckh, *Metrol. Untersuch.* § 27; Abeken, *Mittel-Italien*, and Lepsius, *Ueber die Verbreitung des Italischen Münzsystems von Etrurien aus*.

In certain forms of expression, in which *as* is used for money without specifying the denomination, we must understand the *as*. Thus *deni aeris*, *mille aeris*, *decies aeris*, mean respectively 10, 1000, 1,000,000 *ases*.

The word *as* was used also for any whole which was to be divided into twelve equal parts; and those parts were called *uncias*. Thus the nomenclature of the duodecimal division of the *as* was applied not only to weight and money, but to measures of length, surface, and capacity, to inheritances, interest, houses, farms, and many other things. Hence, for example, the phrases *haeres ex ase*, the heir to a whole estate; *haeres ex dodrans*, the heir to three-fourths, &c. (Cic. *Pro Caelio*, 6; Corn. Nep. *Attic.* 5.) Pliny even uses the phrases *semias Africanus* (*H. N.* xviii. 6. s. 7), and *dodranles et semiancias horarum* (*H. N.* ii. 14. s. 11).

The *as* was also called, in ancient times, *assarius* (α. *assarus*), and in Greek τὸ ἀσσαρίον. According to Polybius (ii. 15) the *assarius* was equal to half the obolus. On the coins of Chios we find ἀσσαρίον, ἀσσαρίου ἡμισυ, ἀσσαρία δύο, ἀσσαρία τρία. (In addition to the works referred to in this article, and those of Hussey and Wurm, much valuable information will be found in the work entitled, *Des Græce del Museo Kircheriano*, &c.

Roma, 1839, 4to.; and in Lepsius's review of it appended to his treatise *Ueber die Tyrrhæner-Peläger*.) [P. S.]

ASCAULES. [TIBIA.]

ASCIA (ἀσκήριον, Hom. *Od.* v. 235), an adze. Muratori (*Ina. Vet. Thes.* i. 534—536) has published numerous representations of the adze, as it is exhibited on ancient monuments. We select the three following, two of which show the instrument itself, with a slight variety of form, while the third represents a ship-builder holding it in his right hand, and using it to shape the rib of a vessel.

We also give another instrument in the above cut taken from a coin of the Valerian family, and called *ascisculus*. It was chiefly used by masons, whence, in the ancient glossaries, *Asciscularius* is translated λατόμος, a stone-cutter.

As to the reason why *Ascia* is represented on sepulchral monuments, see Forcellini, *Lexicon*, s. v. [J. Y.]

ASCLEPIEIA (ἀσκληπεία), the name of festivals which were probably celebrated in all places where temples of Asclepius (Æsculapius) existed. The most celebrated, however, was that of Epidaurus, which took place every five years, and was solemnized with contests of rhapsodists and musicians, and with solemn processions and games. (Schol. ad *Pind. Nem.* iii. 145; Paus. ii. 26. §. 7.) *Ἀσκληπεία* are also mentioned at Lampascus (Böckh, *Corp. Inscr.* vol. ii. p. 1131), and at Athens (Æschin, c. *Ctesiph.* p. 455), which were, probably, like those of Epidaurus, solemnized with musical contests. They took place on the eighth day of the month of Elaphebolion. [L. S.]

ASCOLIASMUS (ἀσκολιασμός), the leaping upon the leathern bag, ἀσκός) was one of the many kinds of amusements in which the Athenians indulged during the Anthesteria and other festivals in honour of Dionysus. The Athenians sacrificed

a he-goat to the god, made a bag out of the skin, smeared it with oil, and then tried to dance upon it. The various accidents accompanying this attempt afforded great amusement to the spectators. He who succeeded was victor, and received the skin as a reward. (Schol. ad Aristoph. *Plut.* 1130; Plat. *Symp.* p. 190; Virg. *Georg.* ii. 384; Pollux, ix. 121; Hesych. s. s. Ἀσεβείας γραφή; Krause, *Gymnastik und Agonistik d. Hellenen*, p. 399, who gives a representation of it from an ancient gem, which is copied in the above cut.)

ASEBEIAS GRAPHE (ἀσεβείας γραφή), was one of the many forms prescribed by the Attic laws for the impeachment of impiety. From the various tenor of the accusations still extant, it may be gathered that this crime was as ill-defined at Athens, and therefore as liable to be made the pretext for persecution, as it has been in all other countries in which the civil power has attempted to reach offences so much beyond the natural limits of its jurisdiction. The occasions, however, upon which the Athenian accuser professed to come forward may be classed as, first, breaches of the ceremonial law of public worship; and, secondly, indications of that, which in analogous cases of modern times would be called heterodoxy, or heresy. The former comprehended encroachment upon consecrated grounds, the plunder, or other injury of temples, the violation of asylums, the interruption of sacrifices and festivals, the mutilation of statues of the gods, the introduction of deities not acknowledged by the state, and various other transgressions peculiarly defined by the laws of the Attic sacra, such as a private celebration of the Eleusinian mysteries and their divulgence to the uninitiated, injury to the sacred olive trees, or placing a suppliant bough (ἱκετήρια) on a particular altar at an improper time. (Andoc. *De Myst.* p. 110.) The heretical delinquencies may be exemplified by the expulsion of Protagoras (Diog. Laërt. ix. 81, 82) for writing "that he could not learn whether the gods existed or not," in the persecution of Anaxagoras (Diog. Laërt. ii. 12), like that of Galileo in after times, for impugning the received opinions about the sun, and the condemnation of Socrates for not holding the objects of the public worship to be gods. (Xen. *Apol. Soc.*) The variety of these examples will have shown that it is impossible to enumerate all the cases to which this sweeping accusation might be extended; and, as it is not upon record that religious Athens (Xen. *Rep. Ath.* iii. 8) was scandalised at the profane jests of Aristophanes, or that it forced Epicurus to deny that the gods were indifferent to human actions, it is difficult to ascertain the limit at which jests and scepticism ended, and penal impiety began.

With respect to the trial, any citizen that pleased ὁ βουλόμενος — which, however, in this as in all other public actions, must be understood of those only who did not labour under an incapacitating disfranchisement (ἀτιμία) — seems to have been a competent accuser; but as the nine archons, and the areiopagites, were the proper guardians of the sacred olives (μυρία, σήκοι, Lysias, Περὶ τοῦ Σηκοῦ, p. 282), it is not impossible that they had also a power of official prosecution upon casually discovering any injury done to their charge.

The cases of Socrates, Aspasia, and Protagoras, may be adduced to show that citizens, resident aliens, and strangers, were equally liable to this

accusation. And if a minor, as represented in the declamation of Antiphon, could be prosecuted for murder (φόνου), a crime considered by the early Greeks more in reference to its ceremonial pollution than in respect of the injury inflicted upon society, it can hardly be concluded that persons under age were incapable of committing, or suffering, for this offence. (Antiph. *Tetral.* ii. p. 674.)

The magistrate, who conducted the previous examination (ἀνέκρισις) was, according to Meier (*Att. Proc.* pp. 300, 304, n. 34) invariably the king archon, but whether the court into which he brought the causes were the areiopagus, or the common heliastic court, of both of which there are several instances, is supposed (Meier, *Att. Proc.* p. 305) to have been determined by the form of action adopted by the prosecutor, or the degree of competency to which the areiopagus rose or fell at the different periods of Athenian history. From the *Apology of Socrates* we learn that the forms of the trial upon this occasion were those usual in all public actions, and that, generally, the amount of the penalty formed a separate question for the dicasts after the conviction of the defendant. For some kinds of impiety, however, the punishment was fixed by special laws, as in the case of persons injuring the sacred olive trees, and in that mentioned by Andocides (*De Myst.* p. 110).

If the accuser failed to obtain a fifth of the votes of the dicasts, he forfeited a thousand drachmae, and incurred a modified ἀτιμία. The other forms of prosecution for this offence were the ἀσυχωγή (Dem. c. *Androt.* p. 601. 26), ἐφ' ἡγήσεως (Meier, *Att. Proc.* p. 246), ἐνδεξις (Andoc. *De Myst.* p. 8), προβολή (Libanius, *Argum. ad Dem.* in *Mid.* 509, 10), and in extraordinary cases εἰσαγγελία (Andoc. *De Myst.* p. 43); besides these, Demosthenes mentions (c. *Androt.* p. 601) two other courses that an accuser might adopt, δικάζεσθαι πρὸς Εὐμολπίδας, and φράζειν πρὸς τὸν βασιλέα, of which it is difficult to give a satisfactory explanation. [J. S. M.]

ASIARCHAE (ἀσιάρχαι), were, in the Roman province of Asia, the chief presidents of the religious rites, whose office it was to exhibit games and theatrical amusements every year, in honour of the gods and the Roman emperor, at their own expense, like the Roman aediles. As the exhibition of these games were attended with great expense, wealthy persons were always chosen to fill this office; for which reason, Strabo says, some of the inhabitants of Tralles, which was one of the most wealthy cities in Asia, were always chosen asiarchs. They were ten in number, selected annually by the different towns of Asia, and approved of by the Roman proconsul; of these, one was the chief asiarch, and frequently but not always, resided at Ephesus. Their office lasted only for a year; but they appear to have enjoyed the title as a mark of courtesy for the rest of their lives. In the other Roman provinces in Asia, we find similar magistrates corresponding to the Asiarchae in proconsular Asia, as for instance the Bithyniarchae, Galatarchae, Lyciarchae, &c. (Strab. xiv. p. 649; Acta, xix. 31., with the notes of Wetstein and Kuinoel; Euseb. *H. E.* iv. 15; Winer, *Biblisches Realwörterbuch*, art. *Asiarchen*.)

ASILLA (ἄσιλλα), a wooden pole, or yoke, held by a man either on his two shoulders, or more commonly on one shoulder only, and used for

carrying burthens. (Aristot. *Rhet.* i. 7.) It is called ἀνδρόπορος by Aristophanes (*Ran.* 8). It deserves mention here chiefly from its frequent occurrence in works of Grecian art, of which some specimens are given in the annexed cut.

ASSA'RIOUS NUMMUS. [As.]

ASSERTOR, or ADSERTOR, contains the same root as the verb *adservare*, which, when coupled with the word *manus*, signifies to lay hold of a thing, to draw it towards one. Hence the phrase *adservare in libertatem*, or *liberali adservare manus*, applies to him who lays his hand on a person reputed to be a slave, and asserts, or maintains his freedom. The person who thus maintained the freedom of a reputed slave was called *adsertor* (Gaius, iv. 14), and by the laws of the Twelve Tables it was enacted in favour of liberty, that such adsertor should not be called on to give security in the sacramenti actio to more than the amount of L. asses. The person whose freedom was thus claimed, was said to be *adservus*. The expressions *liberalis causa*, and *liberalis manus*, which occur in classical authors, in connection with the verb *adservare*, will easily be understood from what has been said. (Terent. *Adelp.* ii. l. 40; Plaut. *Poen.* iv. 2. 88; see also Dig. 40. tit. 12. *De liberali Causa*.) Sometimes the word *adservare* alone was used as equivalent to *adservare in libertatem*. (Cic. *Pro Flacco*, c. 17.)

The expression *asservare in servitutem*, to claim a person as a slave, occurs in Livy (iii. 44, xxxiv. 18.)

[G. L.]

ASSESSOR, or ADSESSOR, literally, one who sits by the side of another. The duties of an assessor, as described by Paulus (Dig. 1. tit. 21. s. l.) related to "cognitiones, postulationes, libelli, edicta, decreta, epistolae;" from which it appears that they were employed in and about the administration of law. The consuls, praetors, governors of provinces, and the judices, were often imperfectly acquainted with the law and the forms of procedure, and it was necessary that they should have the aid of those who had made the law their study. (Cic. *de Oratore*, i. 37, *In Verrum*, ii. 29.) The praefectus praetorio, and praefectus urbi, and other

civil and military functionaries, had their assessores. An instance is mentioned by Tacitus (*Ann.* i. 75) of the Emperor Tiberius assisting at the judicium (*judiciis adsidebat*), and taking his seat at the corner of the tribunal; but this passage cannot be interpreted to mean, as some persons interpret it, that the emperor sat there in the character of an assessor properly so called: the remark of Tacitus shows that, though the emperor might have taken his seat under the name of assessor and affected to be such, he could be considered in no other light than as the head of the state. (Compare Sueton. *Tib. Nero*, 33, *Tib. Claudius*, 12.)

Under the empire the practice of having assessors continued (Plin. *Ep.* i. 20, vi. 11, x. 19; Gellius, i. 22). Suetonius (*Galba*, 14) mentions the case of an assessor being named to the office of praefectus praetorio. The Emperor Alexander Severus gave the assessores a regular salary. (Lamprid. *Alex. Sev.* 46.) Freedmen might be assessores. In the later writers the assessores are mentioned under the various names of *consiliarii*, *juris studiosi*, *comites*, &c. The *juris studiosi*, mentioned by Gellius (xii. 13), as assistant to the judices (*quos adhibere in consilium judicaturi solent*), were the assessores. Sabinus, as it appears from Ulpian (Dig. 47. tit. 10. s. 5), wrote a book on the duties of assessors. The assessors sat on the tribunal with the magistrate. Their advice, or aid, was given during the proceedings as well as at other times, but they never pronounced a judicial sentence. As the old forms of procedure gradually declined, the assessores, according to the conjecture of Savigny (*Geschichte des Röm. Rechts im Mittelalter*, vol. i. p. 79), took the place of the judices. For other matters relating to the assessores, see Hollweg, *Handbuch des Civilprocesses*, p. 152. [G. L.]

ASSI'DUI. [LOCUPLETUS.]

ASTRAGALUS (ἀστράγαλος), literally signifies that particular bone in the ankles of certain quadrupeds, which the Greeks, as well as the Romans, used for dice and other purposes, as described under the corresponding Latin word TALUS.

As a Latin word, *astragalus* is used by Vitruvius, who of course borrowed it from the Greek writers on architecture, for a certain moulding (the astragal) which seems to have derived its name from its resemblance to a string or chain of *tali*; and it is in fact always used in positions where it seems intended to bind together the parts to which it is applied. It belongs properly to the more highly decorated forms of the Ionic order, in which it appears as a lower edging to the larger mouldings, especially the *echinus* (ovolo), particularly in the capital, as shown in the following woodcut, which represents an Ionic capital found in the ruins of the temple of Dionysus at Teos. Still finer examples occur in the capitals of the temples of Erechtheus and Athene Polias, at Athens, where it is seen, too, on the sides of the volutes. It is also often used in the entablature as an edging to the divisions of the cornice, frieze, and architrave. The lower figure in the woodcut represents a portion of the astragal which runs beneath the crowning moulding of the architrave of the temple of Erechtheus. It is taken from a fragment in the British Museum, and is drawn of the same size as the original.

The term is also applied to a plain convex moulding of the same sectional outline as the former, but without the division into links, just like a *torus* on a small scale: in this form it is used

in the Ionic base [SPIRA]. In the orders subsequent to the Ionic, — the Corinthian, Roman Doric, and Composite, — the astragal was very

freely used. The rules for the use of the moulding are given by Vitruvius (iii. 5. § 3, iv. 6. §§ 2, 3, Schneid.). Numerous fine examples of it will be found in the plates of Mauch (*Die Griechischen und Römischen Bau-Ordnungen*, Potsdam, 1845.) [P.S.]

ASTRATEIAS GRAPHE' (*ἀστροτείας γραφή*), was the accusation instituted against persons who failed to appear among the troops after they had been enrolled for the campaign by the generals. (Lys. in *Alc.* pp. 521, 571.) We may presume that the accuser in this, as in the similar action for leaving the ranks (*λειποταξίαν*), was any citizen that chose to come forward (*ὁ βουλόμενος, οἷς ἐξέρσῃ*), and that the court was composed of soldiers who had served in the campaign. The presidency of the court, according to Meier, belonged to the generals. The defendant, if convicted, incurred disfranchisement — *ἀτιμία*, both in his own person and that of his descendants, and there were very stringent laws to punish them if they appeared at the public sacra, to which even women and slaves were admitted. (Andoc. *de Myst.* p. 35; Aesch. in *Ctes.* p. 59; Dem. in *Timoer.* p. 732; Meier, *Att. Process.* p. 363, &c.) [J. S. M.]

ASTROLO'GIA. This word is occasionally employed by the best Latin writers (e. g. Cic. *de Divin.* ii. 42.) to denote *astronomy* in general, and indeed is found in that sense more frequently than *astronomia*, which is of rare occurrence. In the present article, however, we confine ourselves to what is strictly termed *judicial astrology*, and treat of astronomy under *ASTRONOMIA*.

At a period far beyond the records of authentic history a belief arose, which still prevails unshaken in the East, that a mysterious but close connection subsisted between the relative position and movements of the heavenly bodies and the fate of man. In process of time it was maintained that the fortunes of each individual throughout life depended upon the aspect of the sky at the moment of his birth, and especially upon the star which was rising above the horizon at the instant when he saw the light, and upon those which were in its immediate vicinity (*conjunctae*), or removed from it by a sixth, a fourth, or a third part of a great circle of the sphere, or, finally, upon those which were at the opposite extremity of the same diameter (*oppositae*). Few doubted that by observation and deep study persons might acquire the power of expounding these appearances, that

the destiny of the child might be predicted with certainty by those who were skilled to interpret the language of the stars, and that the result of any undertaking might be foretold from the aspect of the firmament when it was commenced. Hence a numerous and powerful class of men arose who were distinguished by various designations. From the country where astronomy was first studied, and their science was first developed, they were called *Chaldaei* or *Babylonii*; from observing the stars, *astronomi*, *astrologi*, *planetarii*; from employing diagrams such as were used by geometricians, *mathematici*; from determining the lot of man at his natal hour, *genethliaci*; from prophesying the consummation of his struggles, *ἀποτελεσματικοί*; while their art was known as *ἀστρολογία*, *μετεωρολογία*, *γενεθλιαλογία*, *ἀποτελεσματική*, *Ἀρσ Chaldaeorum*, *Mathesis*, or, from the tables they consulted, *πινακική*. Their calculations were termed *Babylonii numeri*, *Χαλδαίων μέθοδοι*, *Χαλδαίων ψηφίδες*, *Rationes Chaldaicae*; their responses when consulted *Chaldaeorum monita*, *Chaldaeorum natalicia praedicta*, *Astrologorum praedicta*.

The stars and constellations to which attention was chiefly directed were the planets and the signs of the zodiac, some of which were supposed to exert uniformly a benign influence (*ἀγαθοποιοὶ ἀστέρες*), such as Venus, Jupiter, Luna, Virgo, Libra, Taurus; others to be uniformly malign (*κακοποιοὶ ἀστέρες*), such as Saturnus, Mars, Scorpio, Capricornus; others to be doubtful (*ἐρίκοινοι ἀστέρες*), such as Mercurius. By the combination and conjunction (*συνδρομή*, *constellatio*) or opposition, however, of those benign with those malign, the power of the latter might be neutralised or even reversed, and a most happy horoscope be produced, as in the case of Augustus who was born under Capricornus (Suet. *Aug.* 94), and hence that figure frequently appears on his medals. For the sake of expediting calculations, the rising, setting, movements, and relative positions (*ortus, occasus, motus, vicia, discessionis, coetus, conuentus, concursiones, circuitus, transitus, habitus, forma, positura, positus siderum et spatia*) were carefully registered in tables (*πίνακες*, *ἐφημερίδες*). In so far as the planets were concerned, it was of especial importance to note through what sign of the zodiac they happened to be passing, since each planet had a peculiar sign, called the *domus* or house of the planet, during its sojourn in which it possessed superior power. Thus Libra, Capricornus, and Scorpio were respectively the *houses* of Venus, Saturn, and Mars.

The exact period of birth (*hora genitalis*) being the critical moment, the computations founded upon it were styled *γένεσις* (*genitura*), *ὁροσκοπός* (*horoscopus*), or simply *δέμα*, and the star or stars in the ascendant *sidus natalitium*, *sidera natalitia*.

Astrologers seem to have found their way to Italy even before a free communication was opened up with the East by the Roman conquests in Greece and Asia, since they are mentioned contemptuously by Ennius. (ap. Cic. *De Div.* i. 58.) About a century later the government seem to have become sensible of the inconvenience and danger likely to arise from the presence of such impostors, for in a.c. 139 an edict was promulgated by C. Cornelius Hispanus, at that time praetor, by which the Chaldaeanes were banished from the city, and

ordered to quit Italy within ten days (Val. Max. i. 3. § 2), and they were again banished from the city in a. c. 33, by M. Agrippa, who was then aedile. (Dion Cass. xlix. 1.) Another severe ordinance was levelled by Augustus against this class (Dion Cass. lrv. 1, lrv. 25), but the frequent occurrence of such phrases as "expulsi et mathematici" (Suet. Tib. 36), "pulsis Italia mathematicis" (Tac. Hist. ii. 62), in the historians of the empire prove how firm a hold these pretenders must have obtained over the public mind, and how profitable the occupation must have been which could induce them to brave disgrace, and sometimes a cruel death (Tac. Ann. ii. 32). Notwithstanding the number and stringent character of the penal enactments by which they were denounced, they appear to have kept their ground, and although from time to time crushed or terrified into silence, to have revived with fresh vigour in seasons of confusion and anarchy, when all classes of the community hanging in suspense between hope and fear, were predisposed to yield to every superstitious impulse. It must be remembered also, that the most austere princes did not disdain, when agitated by doubts or excited by ambitious longings, to acquire the principles of the art and to consult its professors, as we may perceive, not to multiply examples, from the well-known story of Tiberius and Thrasyllus (Tac. Ann. vi. 20, 21). Hence Tacitus, after recounting the high promises by which the "mathematici" stimulated Otho to assume the purple, adds in a tone of sorrowful resignation, "genus hominum potentibus infidum, sperantibus fallax, quod in civitate nostra et vetabitur semper et retinebitur." (See Cic. Div. ii. 42, &c.; Gell. xiv. 1; Hor. Carm. ii. 17. 17; Pers. v. 46; Juv. iii. 43, vii. 194, xiv. 248, vi. 563—581; Tac. Ann. ii. 27, 32, iii. 22, iv. 58, vi. 20, xii. 22, 52, 68, xvi. 14, Hist. i. 22, ii. 62; Suet. Tib. 14, 36, Vitell. 14, Nero, 40; Gell. i. 9; Dion Cass. xlix. 43, lvi. 25, lvii. 15, lxx. 1; Zonar. ii. p. 142; Lips. *Excurs. vii. ad Tac. Ann. ii.*; Jani, *Excurs. ad Hor. Carm. ii. 17. 17*; Ruperthi, *Not. ad Tac. Ann. ii. 27*. For the penal enactments, see Rein, *Das Criminalrecht der Römer*, p. 901, &c. Leipzig, 1844. Those who would acquire a knowledge of the technical details of astrology, as practised by the ancients, must peruse the works of Manilius, Julius Firmicus, and Ptolemy.) [W.R.]

ASTRONOMIA, astronomy. It is not proposed in the present article to give a technical history of the rise and progress of astronomy among the ancients, but to confine ourselves to what may be regarded as the popular portion of the science, the observations, namely, upon the relative position and apparent movements of the celestial bodies, especially the fixed stars, which from the earliest epoch engaged the attention of those classes of men who as shepherds or mariners were wont to pass their nights in the open air. We shall consider:—

1. The different names by which the constellations were distinguished among the Greeks and Romans, and the legends attached to each; but we shall not attempt to investigate at length the origin of these names nor the times and places when and where they were first bestowed. The materials for this first section have been carefully collected by Ideler in his essay entitled *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen* (Berlin, 1809), a work which we now

mention specially once for all to avoid the necessity of constant references; in the *Historische Untersuchungen über die astronomischen Beobachtungen der Alten*, by the same author (Berlin, 1806); in a paper by Buttmann *Über die Entstehung der Sternbilder auf der griechischen Sphäre*, contained in the Transactions of the Berlin Academy for 1826; and in the *Geschichte der Astronomie* of Schaubach.

2. The risings and settings of the fixed stars considered with reference to the position of the sun in the ecliptic,—a series of phenomena which recurring regularly every tropical year, served in the most remote ages as the sole guides for the operations of the husbandman, and which, being in later times frequently appealed to by the poets, are sometimes designated the "Poetical Risings and Settings of the Stars." Here we chiefly depend upon the compilations and dissertations, ancient and modern, brought together in the *Uranologion* of Petavius; upon the disquisition by J. F. Pfaff entitled *Commentatio de Orbibus et Occasibus Siderum apud auctores classicos commemoratos* (Gotting. 1786); upon a paper by Ideler, *Ueber den astronomischen Theil der Fasti des Ovid*, in the Transactions of the Berlin Academy for 1822—1823, and on the *Handbuch der Chronologie* by the same author.

3. The division of the year into two, three, or more seasons, according to the risings and settings of particular stars or clusters of stars. The *Handbuch der Chronologie* contains a full examination of all the most important passages from the Greek and Roman authors which bear upon these points.

The determination of the length of the year and the distribution of time into months, days, hours, and other periods, which in some degree belong to the same subject, are treated of separately under the heads of CALENDARIUM and DIES, and confining our attention for the present to the fixed stars (*errones, stellæ erraticæ*, see Gell. xiv. 1), we shall make a few remarks on the bodies of the solar system under PLANETÆ.

I. THE HISTORY AND NAMES OF THE CONSTELLATIONS.

To begin with the two earliest among profane writers, Homer and Hesiod, the former notices the *Bear* or *Waggon*; *Bootes*; *Orion*; the *Dog of Orion*; the *Pleiades*, and the *Hyades*: the latter, *Orion*; *Sirius*; the *Pleiades*; the *Hyades*; and *Arcturus*. We are not entitled to conclude from this that they were not acquainted with the names or forms of any other constellations, but it seems certain that neither the *Little Bear* nor the *Dragon* were known to Homer, for although these remain always above the horizon in the latitude of Greece and Asia Minor, he speaks of the (Great) Bear as the only constellation which never plunges into Ocean's baths; and we are elsewhere, as will be seen below, distinctly told that the *Little Bear* was introduced into Greece from the East by Thales.

Pliny (*H. N.* ii. 6) attributes the invention of the signs of the zodiac to Cleostratus of Tenedos (fl. B. C. 500), and asserts that *Aries* and *Sagittarius* were marked out before the rest. The first distinct information, however, with regard to the Grecian heavens was contained in the *Ἐποικίον* and the *Φαινόμενα* of Eudoxus of Cnidus, who died B. C. 352. Both of these works are, it is true, lost with the exception of a few fragments, but their contents are known to us from the poem of Aratus (fl. A. C. 260),

which, as we are assured in the commentary which bears the name of Hipparchus, does little more than represent in verse, with very few variations, the matter contained in the two treatises named above, especially in the latter. The great popularity enjoyed by the production of Aratus (*Cum sole et luna semper Aratus erit*) must have depended upon the attractions presented by his theme, and certainly not upon the spirit or grace with which that theme was handled. We know the names of thirty-five Greeks who composed commentaries upon it, and we are acquainted with no less than three translations into Latin verse—one by Cicero, of which fragments only remain; another by Caesar Germanicus, of which a considerable portion has been preserved; and a third by Rufus Festus Avienus, which is entire. Virgil borrowed largely from this source in those portions of his *Georgics* which contain references to the heavenly bodies, and particularly in that section which is devoted to prognostics of the weather. There are also valuable Greek scholia ascribed to the younger Theon, but manifestly compounded of materials derived from many different quarters. The work itself is divided into three parts:

1. A description of the constellations, extending to line 454.

2. A short account of the Planets, of the Milky Way, of the Tropical Circles, and of the Equator, followed from v. 559 by a full detail of the stars which rise and set as each sign of the zodiac appears in succession (*συνανατολαί*).

3. At line 733 commences what is frequently regarded as a separate poem, and placed apart under the title *Διουσημεία*, consisting of a collection of the various appearances which enable an observer of nature to predict the weather. It will be seen below that the constellations described by Aratus still retain, with a few variations, the names by which he distinguishes them.

In a little tract ascribed to Eratosthenes (fl. B. C. 230), entitled *Καταστερισμοί*, probably an abridgment of a more complete treatise, in which he details the mythological origin of the constellations, together with the number and place of the stars in each, we find the same forms arranged in the same order as in Aratus, who is followed step by step. The *Bird*, however, is here termed the *Swan*; the *Centaur* is individualised into *Chiron*; and the *Hair of Berenice* appears for the first time, having been introduced by Conon in honour of the sister-wife of Ptolemy Euergetes.

Scientific astronomy commenced at Alexandria in the early part of the third century before our era; and the first steps were made by Timocharis and Aristyllus, who flourished about B. C. 290. They invented the method of determining the places of the fixed stars, by referring them to one of the great circles of the heavens, and for this purpose selected the equator. By them, as we learn from Ptolemy, the right ascension and declination of many stars were observed, among others of *Spica* in the Virgin, which they found to be 8° from the equinox of autumn.

Hipparchus, about 150 years later, followed up the track which they had indicated: his observations extended from B. C. 162 to B. C. 127; and, whether we regard the originality, the magnitude, or the importance of his labours, he is well entitled to be regarded as the father of the science. (See Plin. *H. N.* ii. 26.) In addition to many other

services, he first drew up a regular catalogue of the fixed stars, pointing out their position and magnitude, he first delineated accurately the shape of the constellations, and he first discovered the precession of the equinoxes by comparing his own observations with those of Timocharis and Aristyllus. It is much to be lamented that all the works of so great a man should have perished, with the exception of a commentary in three books upon the description of the fixed stars by Eudoxus and Aratus (*Ἐξηγήσεις τῶν Ἀράτου καὶ Εὐδόξου φαινομένων*), the least valuable perhaps of all his productions. We have, however, every reason to believe that the substance of his most valuable observations has been preserved in the *Almagest* of Ptolemy, which long enjoyed such high fame that all former authors were allowed to sink into oblivion.

The catalogue of the fixed stars by Ptolemy (fl. A. D. 100), contained in the seventh and eighth books of the *Almagest* and derived in all probability in a great measure from that compiled by Hipparchus, long served as the model for all subsequent labours in the same field, and little more than two centuries have elapsed since any attempt was made to supersede it by something more perfect. It embraces 48 constellations (21 northern, 15 southern, and the 12 signs of the zodiac), comprising 15 stars of the first magnitude, 45 of the second, 208 of the third, 474 of the fourth, 217 of the fifth, 49 of the sixth, 9 obscure, and 5 nebulous, in all 1022. These are the constellations, usually denominated the *Old Constellations*, to distinguish them from the additions made in modern times, and these we shall consider in regular order. The stars are enumerated according to the place which they occupy in the figures, the latitude, longitude, and magnitude of each being specified. In connection with many constellations, several stars are mentioned as *ἀποσποροί*, that is, not included within the limits of any one of the figures; among those near the Lion he notices the *Hair of Berenice*, among those near the Eagle the *Antinous*. The single stars and small groups to which particular names are assigned, are, *Arcturus*, the *Lyre*, *Capella*, the *Kids*, the *Eagle*, the *Hyades*, the *Pleiades*, the *Manger*, the *Asses*, *Regulus* (*Βαρύλακος*), *Vindemiatrix*, *Spica*, *Antares*, the *Hound* (he does not give the name *Sirius*), *Canopus*, and *Procyon*.

Among our Greek authorities we must not pass over Geminus, whose work *Εὐκαὶρη εἰς τὰ φαινόμενα* contains in sixteen chapters an exposition of the most striking facts in Astronomy and Mathematical Geography. We know nothing of him personally; but it has been inferred from his book that he was a native of Rhodes, and that he flourished about B. C. 70, at Rome, or at some place under the same parallel. The second chapter treats of the constellations and of those stars and small clusters distinguished by particular names. The *Coma Berenices*, which is not included in the 21 northern constellations of Ptolemy, has here an independent place assigned to it; the *Foal*, or *Little Horse*, is termed *πυρομή τρωῦ καὶ ἱεραρχῶν*, which seems to indicate that it was introduced by Hipparchus; in addition to the 15 Southern Constellations of Ptolemy, we find the *Stream* (*χόρις ὄβανος*) issuing from the urn of Aquarius, and the *Thyrus* of the Centaur. The sixteenth chapter is particularly interesting and valuable, since it contains a *parapegma* or calendar

of the risings and settings of the fixed stars, with prognostics of the weather, according to Meton, Euctemon, Eudoxus, Calippus, and others, the observations of each being quoted separately.

The Romans adopted the knowledge of the stars communicated by the Greeks without in the slightest degree extending it. Only two Latin writers discourse specially on the subject, Manilius and Julius Firmicus, and their treatises belong rather to Judicial Astrology. The poets, however, especially Ovid and Virgil, make frequent allusions to the risings and settings of the fixed stars, to the most remarkable constellations and to the legends attached to them. Cicero, Germanicus, and Avienus, as we have stated above, executed translations of Aratus, while in Vitruvius, Pliny, Columella, Martianus Capella, the Scholiast on Germanicus, and Hyginus, we find a multitude of details. Manilius, it is clear, took Aratus for his guide in so far as the constellations were concerned; for he does not notice the *Hair of Berenice*, the *Foal*, nor the *Southern Crown*.

Pliny speaks of the constellations as seventy-two in number; but he seems to have eked out the sum by counting separately portions of figures, such as the *Pleiades*, the *Hyades*, the *Urn* and the *Stream of Aquarius*, the *Thyrus of the Centaur*, the *Head of Medusa*, the *Scymetar of Perseus*, the *Manger*, the *Two Asse*, *Capella*, the *Kids*, the *Hair of Berenice*, the *Throne of Caesar*, and probably the more conspicuous among the individual stars, such as *Arcturus* and *Sirius*. He sets down the number of observed stars at 1600, which far exceeds the catalogue of Ptolemy.

The Scholia on Germanicus do not constitute a regular commentary like the Scholia on Aratus, but are translations from Eratosthenes, with some excerpts, added subsequently perhaps, from the *Sphaera Graeca* et Barbara of Nigidius Figulus and other works on astronomical myths.

The *Poeticon Astronomicum*, which bears the name of Hyginus, is written in the style of Eratosthenes, and is in a great measure borrowed from him. No notice is here taken of the *Foal* nor of the *Southern Crown*, which proves that at the time when it was composed, whenever that may have been, more attention was paid to Aratus than to Hipparchus and Ptolemy.

Names of the Constellations.

In what follows we arrange the constellations, with one or two trifling exceptions, in the order adopted by Ptolemy, enumerating first the twenty-one northern signs; secondly, the twelve zodiacal signs; and lastly, the fifteen southern signs. In each case we give, first, the name by which the constellation is known among ourselves; secondly, the name ascribed to it by Aratus; and lastly, the other Greek and Latin names which most frequently occur or which deserve particular notice.

Northern Signs.

1. THE GREAT BEAR, THE PLOUGH, CHARLES' WAIN, *Ἀρκτος* (*μεγάλη*), *Ἑλίκη* (Arat. 27, &c.), *Major Arctus*, *Major Ursa* (German.), *Hebe* (Cic., Manil. i. 303). The most remarkable cluster in the northern hemisphere both on account of its brilliancy and from the circumstance that it never sinks below the horizon in Europe and those parts of Asia known to the ancients, is that which as early as the time of Homer was known by the

names of *Ἀρκτος*, *The She Bear*, or *Ἀμαζα*, *The Waggon* (Il. xviii. 487, Od. v. 275), which the Romans translated by the equivalent terms *Ursa* and *Plaustrum* or *Currus*. At a later period when the Lesser Bear had been added to the number of the celestial signs, the epithets *μεγάλη* and *μικρά* were applied to them respectively by way of distinction, and in like manner Ovid (*Trist.* iv. 3) speaks of them as *magna minorque feræ*. The ancient Italian name for the seven bright stars which form the most conspicuous portion of the group was *Septem Triones* (Cic.), that is, according to the interpretation of Varro (*L. L.* vi. 4; Gell. ii. 21; Festus, s. v. *Triones*), *The Seven Ploughing Oxen*, an appellation which as well as that of *Ἀμαζα* was extended to the Lesser Bear. Thus Aratus commences his description

ὅσω δὲ μιν ἀμφὶς ἔχουσιν
Ἄρκτος ἄμα τροχῶσιν, τὸ δὲ καλεῖσθαι Ἀμαζαί,
deriving *Ἀμαζαί*, absurdly enough, from *ἄμα*; Virgil celebrates

Arcturum, pluviasque Hyadas, geminosque Triones,
and Vitruvius (ix. 3) not only employs *Septentrio* simply for the Greater Bear, but distinguishes between *Septentrio major* and *Septentrio minor*, and again speaks of the *Arctos*, qui *Septemtriones* dicuntur.

In addition to the above designations we find *Ἑλίκη*, applied to the Greater Bear alone, derived from its sweeping round in a curve (*ἀπὸ τοῦ ἑλίσσασθαι*, Schol. ad Arat. 37), while from the mythical connection established between this constellation and Callisto, daughter of the Arcadian monarch Lycaon, the Latin poets constantly refer to it as *Lycæonis Arctos*; *Parrhasis Arctos*; *Parrhasides stellæ*; *Maenalis Ursa*, &c. The term *Bores Iovis* employed by Propertius (ii. 24. 24), is explained below (No. 5) under *Arctophylax*. For the story of Callisto and her transformation see Ovid. *Met.* ii. 409, *Fast.* ii. 155; Serv. ad Virg. *Georg.* i. 246; Hygin. *Poët. Astron.* ii. 1. 2.

2. THE LESSER OR LITTLE BEAR, *Ἀρκτος* (*μικρά*), *Κυρδοῦρα*, *Κυρδοῦρις* (Arat. 27—308), *Arctus minor* (Cic.), *Cynosura* (Cic. Manil. i. 306). This constellation, we are assured by many authorities (Schol. ad Hom. Il. xviii. 187; Achill. Tat. *Isagog.* in Arat. Phaen. c. 1; Diog. Laërt. i. 23; Hygin. *Poët. Astron.* ii. 2), was first added to the Grecian catalogues by Thales by whom it may possibly have been imported from the East; and while from its close resemblance in form, it shared the names of *Ἀρκτος* and *Ἀμαζα* with its more ancient and majestic companion, it enjoyed exclusively the appellations of *Φοινίκη* and *Κυρδοῦρα*. The former was derived from the circumstance that it was selected by the Phoenicians as the guide by which they shaped their course at sea, the Grecian mariners with less judgment employing Helice for the same purpose (Arat. 37; Erat. Cat. 2; Schol. ad German. p. 89; Hygin. *P. A.* ii. 2). The latter, signifying *canis cauda*, applied by the ancients to the whole figure, and not as in modern times merely to the pole star, seems to have been suggested by the appearance presented by three of the stars which form a circular sweep, bearing some resemblance to the upturned curl of a dog's tail, and will thus be an expression analogous to that of *Helice*. The early astronomers seem to have generally considered that one of the

stars in the Little Bear marked the position of the pole, but it is difficult to determine from their words to which they severally refer. According to Hyginus who, however, seems not to have clearly understood Eratosthenes whom he quotes, one of the three stars forming the tail was called *Polus* and the two others, from circling round it, *Xopevral*, *The Dancers*, the same apparently with the *Ludentes* of the Scholiast on Germanicus.

Those poets who regarded the Great Bear as Callisto represented the Little Bear as her dog; but according to another legend commonly received, the two bears were the two nymphs who acted as nurses in Crete to infant Jove (Arat. 31), and hence the phrase *Cretaeae Arcti* (German.).

3. THE DRAGON, *Ἀρδκων* (Arat. 45), translated by the Latins *Draco* (Cic. German. Vitruv.), *Serpens* (German. Vitruv. Manil. Ovid), and *Anguis* (Virgil. Ovid. Manil.). Servius (*ad Virg. Georg.* i. 205) remarks that there are three *Angues* in the sky, one lying between the Bears:

Maximus hic flexu sinuoso elabitur Anguis
Circum perque duas in morem fluminis Arctos:

(comp. Vitruv. ix. 3): the second grasped by *Ophiucus*: the third, to the south, around the *Crater* and *Corvus*. The superior richness of the Greek language distinguished these as *Ἀρδκων*, *Ὀφίς*, and *Τόρην*. The description of Aratus has been rendered almost verbatim and with great spirit by Virgil in the lines quoted above. Mythologically, the dragon was regarded as the snake which once guarded the apples of the Hesperides, or as a snake snatched by Minerva from the giants and whirled by her aloft to the pole. (Hygin. *P. A.* ii. 3, iii. 2; Serv. *ad Virg. Georg.* i. 244.)

4. *CEPHEUS*, *Κηφείος* (Arat. 163), *Cepheus* (Cic. Vitruv. Manil.), *Ianides Cepheus* (German.). The legends respecting this ill-fated monarch and the other members of his family who beamed in the heavens, *Cassiopeia*, *Perseus*, and *Andromeda*, are detailed at length in the *Catasterisms* of Eratosthenes and in Hyginus.

5. THE BEAR-WARDEN, BOOTES, THE WAGONER, *Ἀρκτοφύλαξ* (Arat. 91), *Arctophylax* (Cic. German. Manil. i. 323), translated by Ovid (*Trist.* i. 10. 15) *Custos Urae*, and by Vitruvius (ix. 3) *Custos Arcti*, or simply *Custos* (l. c.), was denominated also *Βούτης* (Arat. l. c.), *Bootes* (Cic. German. Manil.), l. e. *Bubulcus*, the ox-driver, and according to the Scholiast on Aratus (l. c.) *Τρυγητής*, the vintager. The first name which supposes the constellations to represent a man upon the watch denotes simply the position of the figure with regard to the Great Bear, or when the latter was regarded as Callisto, then *Arctophylax* became her son *Arcaus*, by whom she was hunted and slain; the second name, which is found in Homer (*Od.* v. 272) refers to the *Ἀμαζα*, the imaginary form of *Βούτης* being fancied to occupy the place of the driver of the team; the third name is connected with the period of the heliacal rising of the group which indicated the season of the vintage.

The chief star in the constellation is *ARCTURUS*, *Ἀρκτοῦρος* (Arat. 95), *Arcturus* (Cic. German. Vitruv. Manil.), a word of similar import with *Arctophylax*. It is twice mentioned by Hesiod (*Erg.* 566, 610), and, as we shall see hereafter, occupied a prominent place in the calendars of Greece and Rome. Some late writers, such as the

Scholiast on Germanicus, Hyginus and Martianus Capella, use the name *Arcturus* for the whole constellation, but Aratus, Geminus, and Ptolemy consider it as a single star.

The legends with regard to *Boötes* present many different aspects; by the Greeks he was usually represented as *Arcaus*, the son of Callisto; Ovid in one passage (*Fast.* vi. 235) calls him *Lycaon*, the father of the hapless damsel; by others he was pronounced to be *Icarus* (or *Icarus*) to whom *Bacchus* taught the use of the vine, and then the constellation *Virgo* was his daughter; *Erigone*, and either the greater or the lesser bound, was her dog *Maera* (*Canis Icaricus*, Ov. *Fast.* iv. 939). Hence, too, the Septemtriones are styled *Boötes Iarii* by Propertius (ii. 24. 24).

Homer (*Od.* v. 272) calls *Boötes* *ὑπὲρ δύνων*, from his descending below the horizon in an upright position, and therefore very gradually. Compare Ov. *Fast.* iii. 405; Claud. *Rapt. Proserp.* ii. 190, and the "pigri sarraca Bootae" of Juvenal, v. 23.

6. THE NORTHERN CROWN, *Στέφανος* (Arat. 71), *Corona* (Cic. Vitruv. Manil.), *Ariadnes corona*, *Minos corona*, (German.). Ptolemy distinguishes between the Northern and the Southern Crown (*Στέφανος Βόρειος, νότιος*), and hence the modern name. According to the legend commonly adopted this was the chaplet of *Ariadne* placed by *Bacchus* in the firmament to do honour to his mistress, and hence the epithets applied by Germanicus as quoted above. (Comp. Virg. *Georg.* i. 222; Ov. *Fast.* iii. 460; Manil. i. 330.)

The name *Gemma*, now given to the most resplendent star in the circle, was not known to the Romans.

7. *HERCULES*. The constellation now known by this name is described by Aratus (v. 63) as an unknown or nameless form (*εἰδωλον κίστον; ἀνευθέος εἰδωλον*), which from its resemblance to a man toiling (*μογόντι ἀνδρὶ ἐοικὸς εἰδωλον*) on his knees, was usually called *Ἐργόναυσιν*, which the Romans either expressed in the same letters, *Engonasi* (Manil. v. 645), *Engonasin* (Cic.), or by the translations *Gemiculatus*, *Ingeniculatus* (Vitruv. ix. 3), *Ingeniculus* (Jul. Firm. viii. 17), *Nivus in genibus* (Vitruv. ibid.), *Nixa genu species* (German. Manil. i. 322, v. 645), *Deastro genu nivus* (German.), or simply *Nivus* or *Nivus* (Cic. German.), *Innivus* (Avien. 205), or with reference to the labouring attitude *Defectum sidus*, *Effigies defecta labore* (German.).

According to Avienus (v. 175), the appellation of *Hercules* was bestowed by *Panyasis*, by others it was regarded as *Thesens*, by others as *Ceteus*, son of *Lycaon*, by others as *Prometheus* chained to *Caucasus*. (Hygin. *P. A.* ii. 6, iii. 5.)

8. THE LYRE, *Χέλυς, Λύρα* (Arat. 268), *Lyra* (German. Vitruv. Manil. i. 331), *Fides* (Cic.), *Fidis* (Col. xi. 2. § 43, &c.), *Fidicula* (Plin. *H. N.* xviii. 64, &c.). Ptolemy (φ. Α.) designates as *δ λαμπρὸς τῆς λύρας*, the peculiarly bright star (α *Lyrae*), which renders this constellation so conspicuous; but it appears probable that the simple *Λύρα* among the Greek astronomers, as well as *Fidis* and *Fidicula* among the Latins, was frequently employed to denote this single star, as well as the whole sign. Manilius seems to speak of *Fides* as a constellation distinct from *Lyra*, but the passages are very confused (i. 409; comp. 324, 337). The invention of the Lyre being ascribed to *Mercury*, we naturally find the epithets *Ἑρμῆος*

(ARAT. 674), *Κυλληναῖη* (597), *Mercurialis* (German.), *Cyllenica* (Cic.) attached to it.

9. THE SWAN, "Ὀπίς, ἀόλος ὄπις (ARAT. 273, 275), *Ales* (Cic.), *Volucris*, *Avis* (VITRUV. ix. 4). The Bird is the name given by Aratus and Geminus to the constellation termed by Eratosthenes (c. 25) *Κύνος*, rendered *Cynus* by Germanicus and Manilius, for which the synonym *Olor* is frequently substituted. By mythologists it was regarded as the swan of Leda.

10. CASSIOPIA, *Κασσιόπεια* (ARAT. 189), *Cassiopeia* (Cic. German. Manil. i. 361), *Cassiopea* (VITRUV.). For the myth regarding her, see Hygin. P. A. ii. 10; comp. ARAT. 654; Manil. v. 504; Propert. i. 17. 3; Columell. xi. 2. § 78.

11. PERSEUS, *Περσεύς* (ARAT. 248), *Perseus* (Cic. German. VITRUV. Manil. i. 357, 365), was pictured as bearing in one hand a crooked sword (*ἄρπη*, falx), and in the other the head of the Gorgon Medusa, *Γοργόνιον* (Gemin. Ptolem.), *Gorgoneum caput* (VITRUV. ix. 3), *Gorgonis ora* (Manil. i. 366), *Caput Gorgonis*. (Hygin. P. A. iii. 11).

12. THE CHARIOTEER, *Ἠνίοχος* (ARAT. 156), *Heniochus* (Manil. i. 369), *Auriga* (Cic. German. VITRUV.), *Aurigator* (Avien.), was, according to one legend (German.), *Erichonius*,

Quem primum cursu volitantem Jupiter alto
Quadrijugis conspexit equis. MANIL. i. 370.

According to another (German. *ibid.*) Myrtilus the charioteer of Oenomaus, who betrayed his master to Pelops. (Hygin. *Fab.* 84.)

The brightest star in this constellation (α') was termed ΑΖ (ARAT. 157) by the Greeks, who pictured a goat supported upon the upper part of the left arm of the figure, and by the Romans *Capella* (Ovid. Manil. Plin.) or *Capra* (Cic. VITRUV. Ilor. German. Columell.). The epithet *Ἠλενῆ* in Aratus (164), according to the explanation of his Scholiast, was applied because the αζ rested ἐν τῇς ὠλένης τοῦ Ἠνιόχου, and hence *Olenie*, *Olenium pecus*, *Olenium astrum*. Its helical rising took place soon before the winter solstice, and thus it was termed *signum pluviale*, while the legends declared that this was the very goat Amaltheia who nursed Jupiter upon Mount Ida. Both of these points are touched upon in the couplet of Ovid:

Nascitur Oleniae signum pluviale Capellae,
Illa dati coelum praemia lactis habet.

The two stars (ζ, η') placed by Aratus (166) and Ptolemy on the wrist of Auriga were

THE KIDS, "Ἐριφοί (ARAT. 158), *Hoedi* (Cic. VITRUV. Manil. i. 372), and are said to have been first named by Cleostratus of Tenedos about B.C. 500 (Hygin. P. A. ii. 13). They, as well as Capella, are spoken of as heralds of the storm. (Manil. i. 372; Virg. *Georg.* i. 205, *Aen.* ix. 663; Hor. *Carm.* iii. 1. 28.) The star which marks the northern horn-tip of the Bull was, according to VITRUVIUS (ix. 3), called *Aurige Manus*, since he was supposed to hold it in his hand.

13. THE SERPENT HOLDER, "Ὀφιοῦχος (ARAT. 75), *Ophiacus* (German. VITRUV.), *Anguilenus* (Cic. Manil. v. 384), *Anguifer* (Columell. xi. 2. § 49), *Serpentarius* (Schol. German.), was commonly regarded by mythical writers and poets as Asclepius (Eratosth. c. 6; Ov. *Fast.* vi. 735), and by some as Hercules, not to mention other more obscure legends. (Hygin. P. A. ii. 14, iii. 13.)

14. THE SNAKE, grasped by and surrounding

the figure, was termed ὄπις (ARAT. 86), *Anguis* (Cic. German.), or *Serpens* (Cic. VITRUV.),

Serpentem Graiis Ophiuchus nomine dictus
Dividit, &c. MANIL. i. 338.

and is reckoned as a separate constellation.

15. THE ARROW, "Ὀϊστός (ARAT. 311), *Tóxon* (Eratosth.), *Sagitta* (German. VITRUV.), *Clava sagitta*, *Fulgens sagitta* (Cic.), is distinct from the arrow fitted to the bow of Sagittarius, the archer, in the zodiac. Hence Aratus, after describing the latter, adds

"Ἔστι δέ τις προτέρη βεβλημένος ἄλλος οἰστός
Αἰτὴς ἄτερ τόξου.

(Comp. Cic. 325; German. 683; Manil. i. 349.)

16. THE EAGLE, "Αετός (ARAT. 315), *Aquila* (Cic. VITRUV.), or, in poetical circumlocution, *Jovis armiger* (German. Avien.), *Jovis ales* (German. Manil. i. 350), *Armiger uncus unguibus ales* (German.), *Praepes adunca Jovis* (Ov. *Fast.* vi. 196). The principal star is named specially *αετός* by Ptolemy; but from the circumstance of his placing it among those of the second magnitude, it has been conjectured that it was less bright in his day than at present.

ANTINOUS. Ptolemy, when noticing the stars around the Eagle not properly included within the limits of the constellation, remarks, ἐφ' ὃν δ' Ἀντίνοος, which corroborates the statement of Dion Cassius, that Hadrian assigned a star to his favourite. Antinous, as a separate constellation, was first introduced by Tycho Brahe.

17. THE DOLPHIN, Δελφίς (ARAT. 313), *a. Δελφίν*, *Delphinus* (Cic. German. VITRUV. Manil. i. 353), *Delphin* (German.) was regarded by mythologists as the dolphin which bore Arion.

18. THE LITTLE HORSE, "ἵππου προτομή, literally, the fore quarters of a horse, was unknown to Aratus and Eratosthenes; but appears from the words of Geminus to have been introduced by Hipparchus. It is not noticed by VITRUVIUS nor by Manilius.

19. PEGASUS, "ἵππος (ARAT. 205), *Equus* (Cic. VITRUV. Manil. i. 355), *Sonipes*, *Sonipes ales* (German.). The legends having declared that this was the steed of Bellerophon, the name Pegasus (German. 505) was employed as early as Eratosthenes to distinguish the constellations, but Aratus speaks of it simply as the horse. (Ov. *Fast.* iii. 450.) The figure was supposed to represent the fore quarters only.

20. ANDROMEDA, Ἀνδρομέδῃ (ARAT. 197), *Andromeda a. Andromeda* (Cic. German. VITRUV. Manil. i. 357, 363). Andromeda was the daughter of Cepheus and Cassiopeia, and hence the constellation is termed *Cepheis* by Manilius and Germanicus (i. 443), while in consequence of her deliverance from the sea monster by Perseus we find *Perseus* in the scholiast on Germanicus.

21. THE TRIANGLE, Δελταῖον (ARAT. 235; Cic.), *Deltoium* (German. Manil. i. 360), the *τρίγωνον* of Ptolemy, and hence VITRUV. ix. 3, "Insuper Arietis signum facientes stellae sunt *trigonum* paribus lateribus."

Signs of the Zodiac.

1. THE RAM, Κριός (ARAT. 225), *Aries* (Cic. German. VITRUV. Manil. i. 263), *Laniger* (German. 699; Manil. ii. 546). This was the very golden-fleeced ram which bore away Phryxus and

Helle from the wrath of Ino, and hence the designations in Ovid of *Phryaea Ovis*, *Pecus Athamantidos Helles*.

2. THE BULL, Ταῦρος (Arat. 167), *Taurus* (Cic. German. Vitruv. Manil. i. 264), *Bos* (German. 181), was by some mythologers regarded as the bull into which Jupiter transformed himself to gain Europa; according to others as the cow into which Io was metamorphosed; in either case an object of jealousy to Juno, as indicated by Ovid (*Fast.* iv. 7. 7). In another passage (vi. 712), in reference to the former idea, he speaks of him as *Agenoræus*, while Martial (x. 51) applies the epithet *Tyrius*.

This constellation is chiefly remarkable from including within its limits two small but closely packed clusters of stars, which attracted attention at a very early period, and are distinguished by Homer (*Il.* xviii. 486) and Hesiod (*Erg.* 615) as the *HYADES* and *PLEIADÆS*, names which they still retain unchanged.

The *HYADES*, Ῥάδες (Arat. 173), *Hyades* (German. &c.), situated in the forehead of the figure (ἐν τῇ κεφαλῇ, Arat.; ἐν τῷ βου-κράνῳ, Gemin.), derived their name ἀπὸ τοῦ ὕειν, because the period of their setting in the morning twilight (the end of November) marked the most wet and stormy period of the year. By the Italian peasants they were denominated the *suclæ*, i. e. the little swine, and hence it has been imagined, but probably erroneously, that Ῥάδες is etymologically connected with ῥς (Plin. *H. N.* xviii. 26; Gell. xiii. 9). They set in the evening twilight at Rome, towards the close of the republic, about the 20th of April, and hence were known as the *sidus Parilicium* (or *Palilicium*), the *Parilia* (or *Palilia*), the festival which marked the birth-day of the city, being kept upon the 21st. Ancient astronomers were not agreed as to the number of stars included in the *Hyades* (see Schol. ad Arat.). Thales reckoned two only (viz. α and ε), the two eyes of the bull; Euripides three; Achæus four; Hesiod five; Pherecydes seven. The latter made nymphs of them, and the names have been preserved by Hyginus. One of these, *Thyene*, is put by Ovid (*Fast.* vi. 711) for the whole group, which elsewhere (v. 734) he terms the *Sidus Hyantis*, in allusion to a legend which he had previously (v. 169) recounted.

Still more important were the *PLEIADÆS*, Πλειάδες, Πληϊάδες (Hom. *I. c.* Arat. 255 regards them as a distinct constellation), *Pleiades* (German. &c. &c.), a word for which various etymologies have been proposed, the most reasonable being the verb πλεῖν, their heliacal rising and setting in the first half of May and the beginning of November having been the signal in the early ages of Greece for the mariner to commence and to discontinue his voyages. The form πλειάδες, i. e. the flock of pigeons, probably originated in a corruption. The Italian name was *Vergiliæ* (Cic., *Sidus Vergiliarum* (Vitruv. ix. 2), derived manifestly from their heliacal rising in spring. Aratus notices the circumstance that they are commonly spoken of as the seven stars, although six only are visible, and thus Ovid also

"Quæ septem dici sex tamen esse solent."

The fact is that the cluster consists of six stars, which can be distinctly seen by the naked eye, and of several very small ones, which are tele-

scopic. Under very favourable circumstances, however, one of these may have occasionally been discerned, as Hipparchus states, or, possibly, as we know to have been the case with other fixed stars, one of them may have lost a portion of the lustre which it at one period possessed, and have become nearly or totally invisible. Be this as it may, the disappearance of the seventh Pleiad gave rise to a multitude of legends. By Hesiod they are styled Ἀτλαγενεῖς, *Children of Atlas*, from whom the Roman poets adopted the expression *Atlantides*, the name of the damsels (Arat. 262) being *Alcyone*, *Merope*, *Celaeno*, *Electra*, *Sterope* (or *Asterope*, German.), *Taygete* and *Maia*. Of these six wedded divinities, the seventh a mortal man, and thus her brilliancy became dimmed by the influence of the debasing alliance. One or other of the above names is frequently employed to denote the whole, as *Taygete* (Virg. *Georg.* iv. 232; Ov. *Met.* iii. 594), *Maia* (Virg. *Georg.* i. 225), *Sterope* (Ov. *Trist.* x. 14), and in like manner *Pleiads* or *Pleias* is often used in the singular.

3. THE TWINS, Δίδυμοι (Arat. 147), *Gemini* (Cic. German. Vitruv. Manil. i. 265). The two brightest stars, being supposed to represent Castor and Pollux.

4. THE CRAB, Καρκίνος (Arat. 147), *Cancer* (Cic. Vitruv. German. Manil. i. 265), called *Lernæus* by Columella (x. 313), because, according to the legend, it crawled out of the Lernæan swamp to attack Hercules while he was doing battle with the Hydra. The epithet *Littoreus* in Ovid (*Met.* x. 127) and Manilius (iii. 316) probably refers merely to the ordinary habits of the animal, and not, as Ideler supposes, to the same contest.

Two small stars in this constellation (γ, δ) were called ὄνοι, *Asini* s. *Aselli*, the Donkeys, one being distinguished as the northern (βόρειος), the other as the southern (νότιος), and a nebular brightness between them, φάρνη, *Præsepe*, the Stall or Manger. (Arat. 894, &c.; Plin. *H. N.* xviii. 35; Ptolem.) These seem to form what Manilius calls *Jugulae* (v. 174, and note of Scalig.), although *Jugula* is a name sometimes applied to Orion.

5. THE LION, Λέων (Arat. 149), *Leo* (Cic. German. Vitruv. Manil. i. 266), regarded as the Nemean lion slain by Hercules, and hence constantly termed simply *Nemæus* (e. g. Manil. iii. 409). The bright star now known as *Regulus*, a name introduced by Copernicus, was anciently, as we learn from the scholiast on Aratus, called βασιλικός, and marked the heart of the animal (ἐν τῇ καρδίᾳ). In Pliny it is *Regia* (*H. N.* xviii. 26, 28), in the scholiast on Germanicus, *Tyberone*, which is either a corruption, or arose from his mistaking the meaning of the word in Pliny, who says, "Stella *Regia* appellata Tuberoni in pectore Leonis," i. e. The star on the Lion's heart called *Regia* by Tuberus.

6. THE VIRGIN, Παρθένος (Arat. 96, &c.), *Virgo* (Cic. German. Vitruv. Manil. i. 266), *Erigone* (Manil. ii. 552, et pass.), was mythically regarded as Δίκη, *Justitia*, or *Astræa*, or as *Erigone*, or as *Ceres*, or as *Isis*, or as *Fortuna*, the last name being given to her, according to the scholiast on Germanicus, "because she is a headless constellation."

The brightest star in the constellation is called by Aratus Στάχυς, *Spica* (German. Vitruv.),

Spicus (Cic.), THE CORN EAR, and this the figure is supposed to grasp in her left hand.

The star which marks the right wing (ϵ) was *προσπρυγνήρ* (Arat. 138) α. *προσπρυγνήτης* α. *πρυγνήτης*, translated *Provindemiator*, *Vindemiator* α. *Vindemitor*, and is now known as *Vindemiatrix*, names which it received in consequence of rising shortly before the period of the vintage. (Arat. 138 and schol.; Columell. xi. 2. § 24; Ov. *Fast.* iii. 407; Plin. *H. N.* xviii. 26, 31; Vitruv. ix. 3, says that the Greek name was *προσπρυγνέτος*, and the Roman, *Provindemia Major*.)

7. THE BALANCE was by the earlier Greek astronomers invariably denominated *Χηλαί* (Arat. 89), *Chelae* (Cic. German. Manil. ii. 544, et pass.). THE CLAWS, i. e. of the Scorpion, which stands next in the Zodiac. Geminus, who flourished, it is believed, about B. C. 80, is, as far as we know, the first Greek writer who distinguishes the seventh sign as *Ζυγός*, which is used by Ptolemy indifferently with *Χηλαί*. The term *Libra*, for which Cicero in one passage employs *Jugum*, was first formally adopted by the Romans in the Calendar of Julius Caesar, to whom it was very probably suggested by Sosigenes. The figure, it would seem, was derived from the East, and must be regarded as a symbol of equality introduced into the heavens at the period when the entrance of the sun into that constellation marked the Autumnal Equinox. The scientific Latin writers, such as Vitruvius, Columella, and Pliny, uniformly distinguish this sign by the name *Libra* alone; the poets use either *Libra* or *Chelae*, as may suit their purpose. Manilius combines both into one phrase (*Juga Chelarem*, i. 609), while the ingenious conceit by which Virgil represents the Scorpion as drawing in his claws in order to make room for Augustus, is known to every reader of the first Georgic. (Comp. Ov. *Met.* iii. 195.)

In the commentary of Theon on the *Almagest*, *Libra* is frequently represented by *Αίτρα* or *Αίτρας*, a word originally borrowed by the Romans from the Sicilians, transformed into *Libra*, and then restored to the later Greeks in the new sense of a Balance.

8. THE SCORPION, *Σκορπίος* (Arat. 85. 304), *Scorpius* (Cic. German.), *Scorpius* (Manil. i. 268, et pass.), *Scorpio* (Vitruv.). Cicero, in his translation of Aratus, and Manilius, both make use also of the term *Nepa*, a word, according to Festus, of African origin, sometimes employed to denote a Scorpion and sometimes a Crab (Plaut. *Cas.* ii. 8. 7; Cic. *de Fin.* v. 15); and thus Cicero, in line 460 of his Aratus, distinctly indicates the fourth sign by the word *Nepa*, which elsewhere is put for the Scorpion. Aratus names this constellation *μέγα θρήσκον* and *τέρας μέγα* (84. 402), because, according to the Grecian arrangement, as explained in the last paragraph, it occupied, together with its claws, the space of two signs. (Ov. *Met.* ii. 195.)

Ἀντάρης, now Antares, the name given to the brightest star, is first found in the works of Ptolemy, and probably refers to its colour and brilliancy, rivaling that of the planet *Mars*.

9. THE ARCHER, *τοξευτής*, *τοξευτήρ*, and simply *τόξος* (Arat. 306, 400, 664, 665), *Sagittarius* (Vitruv.), *Sagittipotens* (Cic.), *Sagittifer* (German.), *Arcteneus* (Cic.), and simply *Arcus* (Cic. German.). This Bowman was supposed to be in the shape of a centaur (*Mixtus equo*, Manil. i. 270), hence is frequently termed *Centaurus*, and sometimes indi-

vidualised into *Chiron* (*Haemonis arcus*, Ov. *Met.* ii. 81), thus giving rise to a confusion between this sign and the Centaur among the southern constellations. (Comp. Columell. x. 56; Hygin. *P. A.* ii. 27.)

10. THE GOAT (i. e. the Chamois), *Αἰγόκερος* (Arat. 284), *Aegoceros* (German.), *Capricornus* (Cic. German. Vitruv. Manil. i. 271), *Caper* (Manil. ii. 659), called also *Πάγ* by Eratosthenes. Hyginus, the scholiast on Germanicus, and Isidorus, inform us that some of the ancients represented this creature with the tail of a fish, and in this form it is actually figured on several coins of Augustus, who was born under the sign. No notice of such a peculiarity in shape is taken by Aratus, Eratosthenes, or Ptolemy.

11. THE WATERMAN, *Ἵδρυχός* (Arat. 283), *Hydrochoos* (German.), *Aquarius* (Cic. Vitruv. German. Manil. i. 472), *Aquileneus* (German. 560), *Fundens latices* (German. 388), *Aquoreus juvenis* (Manil. ii. 558), *Juvenis gerens aquam* (Ov. *Fast.* i. 652), and simply *Juvenis* (Manil. iv. 709), was regarded by those who connected the figure with mythical legends sometimes as *Deucalion* (German. 568), sometimes as *Gangymedes*. (Manil. v. 487; comp. Schol. ad Arat. 283.)

The four stars (γ , ζ , η , π) on the right hand were, according to Geminus, named *κλάweis*, which is equivalent to the Latin *Stella*, an Urn.

The WATER STREAM, *Ἵδρωπ* (Arat.), *χρύσιος ὄβριος*, *Aqua* (Cic.), *Effusio Aquae* (Schol. Germ. 119), which ends with the bright star, now known by the Arabic name *Fomalhaut* or *Fomalhaut*, in the mouth of the Piscis Australis (see Manil. i. 446, and comp. Vitruv. ix. 4, *quae vero ab Aquario fundi memoratur Aqua profuit inter Piscis Austrini caput et caudam* (Ceti), is regarded as a separate constellation under the name of "Ἵδρωπ by Aratus (389—399), and also by Geminus, who distinguishes it as the "Ἵδρωπ τὸ ἀπὸ τοῦ Ἵδρυχόου," the Water flowing from the Waterman," in order that it may not be confounded with the constellation Eridanus, the *Ποταμὸς ὁ ἀπὸ τοῦ Ὀρίωνος*, "the River flowing from Orion."

12. THE FISHES, *Ἰχθύες* (Arat. 240) or in the dual *Ἰχθύε*, *Pisces* (Cic. Vitruv.), *Gemini Pisces*, *Imbriferi duo Pisces* (German.). One of these was entitled the Northern (*Aquilonaris Pisces*, Vitruv. ix. 3), the other the Southern Fish (Schol. ad Arat. 240; Ov. *Fast.* iii. 401; Schol. German. Hygin. *P. A.* iii. 29); but in order to prevent the embarrassment which might arise from identifying the latter with the *Ἰχθύς νότιος*, or *Pisces Australis*, a constellation of the southern hemisphere, Ptolemy names the northern of the two *ἐπόμενος*, and the other *ἡγουμένος*, a precaution by no means unnecessary since Manilius actually confounds (i. 272) the fishes of the Zodiac with the *Pisces Australis*. The Scholiast on Aratus remarks that the Northern Fish was represented with a swallow's head, and on that account styled *χελιδορίας* (i. e. *hirundinarius*) by the Chaldaean, a circumstance for which Scaliger accounts by supposing that the name was given in consequence of the entrance of the sun into this constellation, when the swallow appeared in Greece as the herald of Spring.

The legends connected with this constellation (Eratosth. 58; Hygin. *P. A.* ii. 30. 41) bear reference to a Syrian divinity, termed by the Greeks sometimes *Atargatis* a Semitic word signifying *The*

Great Fish), sometimes *Derecto*, sometimes *Derec*. This power they confounded with another Syrian goddess *Astarte*, whom again they identified with their own Aphrodite. The story ran that when fleeing in terror from the violence of Typhon, she plunged into the Euphrates, and was transformed into a fish. (Manil. ii. 33, iv. 580.) Avienus terms these fishes *Bombyci*, for which Grotius has rightly proposed to substitute *Bambycii*, for Atargatis was specially worshipped at *Bambyce* or *Hierapolis* in Cyrrhæstia. (Strab. xvi. p. 517; Plin. *H. N.* v. 23; Selden, *de Diis Syriis*, ii. 3.)

The bright star (α) which is supposed to form the knot of the two bands which connects the fishes by their tails, is by Aratus (245) named *Σύνδεσμος ὑποῦραιος*, by his scholiast *δεσμός οὐραῖος*, by Geminus and Germanicus simply *Σύνδεσμος*, terms variously translated *Nodus* (Cic.), *Nodus Piscium* (Vitruv.), *Nodus coelestis* (Avien.), *Commissura piscium* (Plin. xviii. 31). The bands themselves are called in one passage of Aratus (362) *Δεσμοὶ οὐραῖοι*, more commonly *Αἶνοι* or *Αἶνα*, the *Vincla* of Cicero and Germanicus, the *Alligamentum lineum* of the scholiast on the latter.

From Vitruvius (ix. 4) it appears that the sprinkling of indistinct stars between the Fishes and the Whale, was called by the Greeks *Ἐρημίζουσα*, a word explained by Hesychius to mean *τῶν ἀμυδρῶν ἀστέρων χάσις*.

Southern Signs.

1. THE WHALE, *Κῆτος* (Arat. 353), *Ὀψόψς* (Jul. Firm. Astron. viii. 17), *Cetus* (Vitruv. ix. 4; Manil. i. 440), *Pristis* (German. 644; Manil. i. 363), *Nereia Pistris* (German. 714), *Neptunia Pistris* (Cic., comp. German. 709). The last three designations are different forms of the Greek *Πήστις*, which Suidas interprets to signify *εἶδος κήτους θαλασσίου*. This was the sea-monster, according to Aratus, sent to devour Andromeda.

2. ORION, *Ὠρίων* (Arat. 322), *Ὠαρίων* (Pind. Callim.), *Orion* (Cic. German. Vitruv. Manil. i. 399), *Oarion* (Catull. lxx. sub fin.), *Proles Hyriea* (Ov. *Fast.* vi. 719, comp. v. 495). *Argion* in Julius Firmicus (viii. 9), is probably a corrupt form of *Oarion*.

This is one of the oldest constellations, being noticed in Homer (xviii. 486) and Hesiod (*Erg.* 598, 615, 619), both of whom employ the expression *σθένος Ὀρίωνος*. The figure was supposed to represent an armed warrior (*ἔιφεος ἰφί πεποιθώς*, Arat.), grasping a shield in his left hand and a club in his right (*mans laeva tenens clipeum, clavam altera*, Vitruv. ix. 4), with a glittering belt, from which a sword depended (*Balteus Orionis, Vagina*, German.; *Ensis*, Cic.). The origin of the name is quite unknown, the ordinary derivation from *οὐρον*, to which a mythical legend was adapted, being altogether unworthy of attention. The morning setting of this remarkable cluster, about the beginning of November, pointed out in ancient times to the husbandman and the mariner the approach of the most stormy period of the year. (Hor. *Carm.* i. 28, 21, *Epod.* xv. 7, *Carm.* iii. 27, 18, *Epod.* x. 9; Virg. *Aen.* i. 535, iv. 52.)

An anonymous Greek writer quoted by Scaliger declares that the popular name for Orion was *Ἀλεκτροπόδιον*, which seems a corruption of *Ἀλεκτροπόδιον* i. e. *Cocks-foot*, and Ideler thinks that we can, without any great stretch of fancy, trace a resemblance to a fowl strutting along.

Among the Romans *Jugula* or *Jugulae* seems to have been the indigenous appellation; the former is noticed by Varro and Festus, the latter occurs in Plautus (*Amph.* i. l. 119) —

"Nec Jugulae, neque Vesperugo, neque Vergiliae occidunt:"

but no satisfactory explanation has been proposed. The two bright stars (α , γ) under the head were called *Humeri*. (Var. *L. L.* vi. 3.)

3. THE ERIDANUS, *Ποταμός* (Arat. 358), *Amnis* (Cic. German.). Aratus remarks that it was considered as a remnant of the Eridanus,

Λεῖψανον Ἐριδανίου πολυκαύστου ποταμοῖο,

that mythical non-existent (*τὸν μηδαμῶ ᾗς ὄντα*, Strab.) stream which proved a fruitful source of speculation in ancient as it has done in modern times. The Romans identified the Eridanus with the Po; and hence while Cicero employs the former, Germanicus uses Eridanus and Padus indifferently. (Comp. Vitruv. ix. 4.) From Eratosthenes, the Scholiast on Germanicus and Hyginus (*P. A.* ii. 32), we learn that this constellation was by others called the Nile, that being the only earthly river which flowed from the south towards the north, as this stream of stars appears to do when rising above the horizon.

4. THE HARE, *Λαγώς* (Arat. 338), *Λαγώς*, *Lepus* (Vitruv. ix. 4), *Levipus Lepus* (Cic.), *Auritus Lepus* (German.), *Velox Lepus* (Manil.).

5. THE GREAT DOG, *Κῶν*, *Σείριος* (Arat. 326), *Canis* (Cic.), *Canis Sirius* (German.). Aratus (342) employs the phrase *μεγάλου Κυνός*, but the epithet must be here understood to refer to the magnitude of the principal star and not to the constellation *Procyon*, which the Greeks never call the *Little* or *Lesser* Dog.

The most important star in the Great Dog, perhaps the brightest in the heavens, was frequently specially named *Κῶν*, sometimes emphatically *τὸ ἄστρον*, and by the Romans *Canis* or *Canicula*, but is more frequently designated by the appellation *Σείριος*, *Sirius*, which occurs four times in Hesiod (*Erg.* 417, 587, 619, *Scut.* 397), although, in the first of these passages, the sun, and not a fixed star, is probably indicated. Indeed the word seems to be properly an adjective, signifying *glittering* or *bright*; and Eratosthenes remarks (c. 33), that astronomers were in the habit of denominating other stars *Σειοῦτος διὰ τὴν τῆς φλογὸς κίνησιν*. Homer twice (*Il.* v. 5, xxii. 25) alludes to this star without naming it, in one passage with the epithet *ὀπωρινός*, which will be discussed hereafter.

About four hundred years before our era, the heliacal rising of Sirius at Athens, corresponding with the entrance of the sun into the sign Leo, marked the hottest season of the year, and this observation being taken on trust by the Romans of a later epoch without considering whether it suited their age and country, the *Dies Caniculares* became proverbial among them, as the *Dog Days* are among ourselves, and the poets constantly refer to the Lion and the Dog in connection with the heats of midsummer.

6. THE LITTLE DOG, *Προκύων* (Arat. 450), *Procyon* (German.), or, literally translated, *Antecanem* (Cic.), *Antecanis* (schol. German.), so called because in Greece the constellation in question rises heliacally before the (Great) Dog. The names *Antecanis* and *Antecanem*, however, do not appear

to have been generally adopted, for Pliny (*H. N.* xviii. 28), when speaking of Procyon, remarks, "quod sidus apud Romanos non habet nomen, nisi *Caniculam* hanc velimus intelligi, hoc est, minorem canem ut in astris pingitur," words which do not necessarily imply that Procyon ever was actually termed *Canicula* by the Roman writers, although this was certainly sometimes the case if we can trust the express assertion of Hyginus, "Canem (sc. Icarii) autem sua adpellatione et specie *Caniculam* dixerunt, quas a Græcia, quod ante maiorem canem exoritur, *πρόκυον* adpellatur" (*P. A.* ii. 4). A passage in Pliny (*H. N.* xviii. 69. § 3), would at first sight appear to be decisive: "IV. Kalendas Maii, Canis occidit, sidus et per se vehemens, et cui *præoccidere Caniculam* necesse sit." But since we know that in Northern latitudes the Great Dog not only rises after, but also sets before the Little Dog, it is evident that, unless we suppose Pliny to be involved in inextricable confusion, *Canicula* cannot here signify the sign Procyon. The explanation generally adopted, although somewhat forced, is that a reference is made to the practice of offering a dog in sacrifice on the Robigalia. (See *Ov. Fast.* iv. 936, &c.; Columell. x. 342, and the commentators on Pliny.)

While, as on the whole seems probable, Procyon was sometimes termed *Canicula* by the Romans, so on the other hand, the star Sirius seems to have been occasionally called *Προκύων* by the Greeks because he rose before the rest of the constellation to which he belonged. (See Galen. *Comment. in Hippocrat. Epidem.* i.) We cannot, however, attach this meaning to the words of Horace (*Carm.* iii. 29. 18)—

jam Procyon furit
Et stella vesani Leonis —

for the appearance of Procyon would to his countrymen be in reality a more sure indication of the hottest season than the rising of the Greater Dog.

We have already intimated that the Greeks designate the two constellations simply as *Κύων* and *Προκύων*, not as the Greater and Lesser Dog, a distinction which prevailed among the Romans, as we perceive clearly from Vitruvius (ix. 4): "Geminus autem minusculus Canis sequitur contra Anguis caput: Major item sequitur Minorem."

When Boötes was regarded as Icarus, and Virgo, as his daughter Erigone, Procyon became Maera, the dog of Icarus. (Hygin. *P. A.* ii. 4; comp. *Ov. Fast.* iv. 940.)

7. THE SHIP ARGO, 'Αργώ (Arat. 342), *Argo* (Cic. Manil. i. 420), *Navis* (Cic.), *Argo Navis* (Cic.), *Navis quæ nominatur Argo* (Vitruv.), *Argos pappis* (German.). *Ratis Heroum* (Manil. v. 13). Like Pegasus and the Bull, it was supposed to represent only one half of the object (*ἡμίμας*), the portion namely of the vessel behind the mast (*ἰσθὺν διχόμοσα κατ' αὐτὸν*, Arat. 605. *Pappo trahitur*, German.). The brightest star was by Eudoxus and Aratus (351, 368) distinguished as *πυρόλιον* (*gubernaculum*, Cic.), the rudder, instead of which *Κάνωθος* (*stella Canopi quæ his regionibus est ignota*, Vitruv. ix. 4), a name which appears first in Eratosthenes (c. 37), and Hipparchus, became general. According to the Scholiast on Germanicus, it was called also *Ptolemaeus*, or, as Martianus Capella has it, *Ptolemaeus*, in honour, evidently, of some Egyptian monarch.

This star, as the words of Vitruvius indicate, was not visible in Italian latitudes.

Cicero, in addition to the rudder, distinguishes the mast (*malum*) also, "radiato stipite malum."

8. THE WATER SNAKE, "ῥέση (Arat. 444), "ῥέπος (Eratosth. Gemin. Ptolem.), *Hydra* (Cic. Germ. Hygin. Avien.), *Hydros* (Germ.), *Anguis* (Vitruv. ix. 4; *Ov. Fast.* ii. 243; Manil. i. 422. See also Serv. *ad Virg. Georg.* i. 205; Hygin. *P. A.* ii. 40, iii. 39).

9. THE CUP, *Κράτηρ* (Arat. 448), *Crater* (German. Vitruv. Manil. i. 424), *Fulgens Cratera* (Cic.), *Urna* (Schol. German.).

10. THE RAVEN or CROW, *Εἰδωλον κόρακος* (Arat. 449), *Corvus* (Cic. German. Vitruv.), *Phœbo suzer ales* (Manil. i. 424).

The Cup and the Raven were represented as standing upon the back of the Water Snake, and the whole three are grouped together by Ovid (*Fast.* ii. 243) in the couplet:—

Continuata loco tria sidera, *Corvus* et *Anguis*,
Et medius *Crater* inter utrumque jacet.

11. THE CENTAUR, *Κένταυρος* (Arat. 431, 436), "ἑπτάρα φηρ (Arat. 664), *Xείραυ* (Eratosth.), *Centaurus* (Cic. Vitruv. German.), *Geminus Biformis* (German.), *Sonipes* (German.), *Duplici Centauro imagine* (Manil. i. 425), *Chiron* (German. 418, 624). By Ptolemy he is represented with a thyrsus in his hand, and these stars were, as we are told by Geminus, formed by Hipparchus into a distinct constellation under the name *Θυρσόλογος*.

12. THE WOLF, *Ἐνπιόν* (Arat. 442), *Bestia* (Vitruv. ix. 4), *Hostia* (Hygin. *P. A.* ii. 38). This, according to Aratus (*l. c.*) was a wild beast grasped in the hand of the Centaur, but it received no name from the Greeks or Romans.

13. THE ALTAR, *Θυρήριον* (Arat. 403), *Aræ* (Cic. German. Manil. i. 428), *Apia Altaria sacra* (685), according to Geminus and Ptolemy *Θυμαθήριον*, translated *Turibulum* by Germanicus and Vitruvius (ix. 4). The scholiast on Germanicus furnishes two other names, *Sacrarium* and *Pharus*. In the legend preserved by Manilius (i. 428), it was the altar erected by Jove when heaven was invaded by the giants.

14. THE SOUTHERN CROWN. Not named by Aratus, who merely remarks (401) that under the fore-feet of Sagittarius are some stars sweeping round in a circle (*δυνατοὶ κύκλῳ*), but to these Geminus and Ptolemy give the specific name of *Στέφανος νότιος*. In consequence of no legend being attached to the group, Germanicus (388) describes it as

sine honore Corona
Ante Sagittiferi multum perniciæ crura.

(Comp. Hygin. *P. A.* ii. 28. Manilius takes no notice of it.) Geminus has preserved two other names, *Οὐρανίσκος* and *Κρυκεῖον*; the former Martianus Capella renders by *Coelulum*, the latter, used by Hipparchus, denotes a herald's wand of peace. Others, according to the scholiast on Aratus, regarded it as Ixion's wheel (*Ἰξίωνος τροχόν*).

15. THE SOUTHERN FISH, "Ἰχθὺς νότιος (Arat. 387), *Piscis Notius* (Manil. i. 445; Hygin. *P. A.* iii. 40), *Piscis Australis* (Cic.), *Piscis Austrinus* (Vitruv. ix. 4; Columell. xi. 2).

It appears from Eratosthenes (38), and the scholiast on Germanicus, that it was styled also "Ἰχθὺς μέγας, *Piscis magnus*.

Before quitting this part of our subject, we must add a few words on

Coma Berenices; Berenices Crinis. Milvus.

1. THE HAIR OF BERENICE, Πλόκαμος ἢ Βόστρυχος Βερονίκης (Callim. Schol. ad Arat. 146), *Coma Berenices* (see Catull. lxx.) was, as we have seen above, formed by Conon out of certain unappropriated (ἀμορφοί) stars behind the Lion's Tail, in honour of Berenice, the wife of Ptolemy Euergetes, and afforded a theme for a complimentary elegy by Callimachus, of which we possess a translation by Catullus. The constellation being unknown to Aratus, is not alluded to by his translators, Cicero and Germanicus, nor is it noticed by Manilius. When Pliny (*H. N.* ii. 71) observes "Septemtriones non cernit Troglodytice, et confinis Ægyptus: nec Canopum Italia, et quem vocant Berenices Crinem; item quem sub Divo Augusto cognominavere Caesaris Thronon, insigne ibi stellæ," it is much more probable that he committed a positive blunder, than that, as some have supposed, he intended to indicate under the name of *Berenices Crinem* some southern sign to which no one else makes any allusion.

2. We find in Ovid (*Fast.* ii. 793) the following couplet in reference to the night of the 17th of March:—

Stella Lycaoniam vergit declivis ad Arcton
Milvus. Haec illa nocte videnda venit,

and in Pliny (*H. N.* xviii. 65. § 1), "Caesar et Idus Martias feras sibi annotavit Scorpionis occasu: XV. vero Kalendas Aprilis Italiae Milvum ostendi: duodecimo Kalendas Equum occidere matutino." In the first of these passages we find a constellation named *Milvus* or the Kite described as one of the northern signs, or at least as a sign visible in Italy, and the period of its rising fixed to the 17th of March. The words of Pliny, although more ambiguous than those of Ovid, would lead us to suppose that he was quoting this, as well as the preceding observation, from the Calendar of Caesar; but the abruptness of his ordinary style is such as to prevent us from affirming this with certainty.

Now no Greek and no other Roman writers mention any constellation bearing the above name, nor can we adopt the explanation of Grotius, who supposes that the Swan or the Eagle is indicated, for the rising of these signs is removed by three months from the period here fixed. Ideler has, in all probability, discovered the solution of the enigma. In the *Paraegma* of Geminus, a phenomenon described by the words ἰκτιὸς φαίνεται, i.e. *Milvus* appears, is placed by Eudoxus thirteen days before the vernal equinox, and by Euctemon and Calippus respectively, eight days and one day before the same epoch, while Ptolemy, in his Φάσεις ἀπλανῶν, marks under the 12th of Phamenoth (i.e. according to Ideler 8th March), Εὐδότης χελιδὼν καὶ ἰκτιὸς φαίνεται. But the ἰκτιὸς, rendered *milvus* by the Latins, was, as we are told by Aristotle (*H. A.* viii. 16), a bird of passage, and hence the arrival of the ἰκτιὸς, like that of the swallow, took place at and served to mark a particular season of the year. Ovid and Pliny, being ignorant of this fact, and finding in the calendars which they consulted the words *Milvus* appears, took it for granted, without further inquiry, that *Milvus* was the name of a constellation; for when we consider the context of the naturalist,

as well as the date, but one day later than that fixed by Ovid, we can scarcely doubt that he, as well as the poet, believed *Milvus* to be a "Stella."

II. RISINGS AND SETTINGS OF THE FIXED STARS.

A nation like the Greeks, whose climate permitted them to watch their flocks by night during a considerable part of the year, could not fail to remark that certain fixed stars appeared and disappeared in regular succession, as the sun passed through the different stages of his annual career. Accordingly, we find, that as early as the time of Hesiod, the changes of the seasons, and the more important operations of agriculture, were fixed with reference to the risings and settings of Orion, the Pleiades, the Hyades, Arcturus, and Sirius. Such observations were in the first instance extremely rude; but after Thales had turned the attention of his countrymen to scientific astronomy, these celestial phenomena were determined with great care and accuracy: tables were drawn up in which the risings and settings of the more brilliant stars, with reference to the sun, were fully detailed, together with such notices, touching the winds and weather to be expected at the different epochs, as experience suggested. Copies were engraved on stone or brass, and, being nailed or hung up in the market-places of large towns and other places of public resort, received the name of παραγγματα. Two catalogues of this description have been preserved which are valuable, inasmuch as they frequently quote the authority of the early Greek astronomers, Meton, Euctemon, Eudoxus, Calippus, &c. for their statements. The one was drawn up by Geminus (fl. b. c. 80), the other by the famous Ptolemy (A. D. 140). In the former the risings and settings of the stars are fixed according to the passage of the sun through the signs of the zodiac; in the latter they are ranged under the months and years of the Julian Calendar.

The practice commenced by Hesiod was followed by subsequent writers upon rural economy, and we accordingly find numerous precepts in Virgil, Columella, and Pliny delivered with reference to the risings and settings of the stars, forming a complete *Calendarium Rusticum*. Ovid has combined the *Fasti* of the city with these Rural Almanacs, and has thus gained an opportunity of enlivening his poem by recounting the various myths attached to the constellations. Indeed it would appear that Caesar, when he reconstructed the *Fasti* of Rome, included the risings and settings of the stars, since Pliny frequently quotes the authority of Caesar for his statements on these points. Thus the *Fasti* of Ovid may be considered as a commentary upon the almanac in common use.

The early Grecian *paraegmata* were undoubtedly constructed from actual observation in the countries where they were first exhibited, and must therefore have completely answered the purpose for which they were intended. But this does not by any means hold good of the corresponding compilations of the Romans, who, being little versed in astronomy themselves, copied blindly from others without knowledge or discrimination.

It is necessary to attend to two facts:—

1. The time of the risings and settings of the fixed stars varies for the same place at different epochs. Thus the Pleiades which at Rome rose

along with the sun on the 16th of April, A. C. 44, rose with the sun at Rome several days earlier in the age of Meton, and do not now rise with the sun at Rome until several days later. This is caused by the precession of the equinoxes.

2. The time of the risings and settings of the fixed stars is different on the same day in places whose latitude is different. Thus, in the year when the Pleiades rose along with the sun at Rome on the 16th of April, they did not rise along with the sun at Athens until the 22d of April.

Too little attention was paid to these considerations by the Roman writers; and consequently we not unfrequently discover that they combined the observations of astronomers who lived at times and places remote from them and from each other—that calculations made for the latitude of Athens, or of Rhodes, or of Alexandria, 300 years before, were adopted at once and transferred to their calendars without change or modification.

Another source of confusion is a want of precision in specifying the different kinds of risings and settings, which ought always to be most carefully distinguished from each other by appropriate scientific terms.

The risings and settings of the fixed stars, when considered with reference to the sun's place in his orbit, may be arranged under eight heads:—

(a) When a star rises at sunrise.

(b) When a star rises at sunset.

(c) When a star sets at sunrise.

(d) When a star sets at sunset.

(a) When a star rises shortly before the sun so as to be just visible in the morning twilight as it ascends above the horizon before its rays are overpowered by the light of the more brilliant luminary.

(b) When a star rises shortly after sunset so as to be just visible in the evening twilight as it ascends above the horizon.

(c) When a star sets shortly before sunrise so as to be just visible in the morning twilight as it sinks below the horizon.

(d) When a star sets shortly after sunset so as to be just visible in the evening twilight as it sinks below the horizon.

The names by which these, taken in order, are discriminated by the Greek astronomers Geminus (*logos*. cap. xi.) and Ptolemy (*Math. Syntax*. viii. 4) are the following:—

(a) Ἐπιτολή ἔφα ἀληθινή, G.—Ἐφα συνανατολή ἀληθινή, P.—*Ortus Matutinus Verus*. True morning rising.

(b) Ἐπιτολή ἔσπερα ἀληθινή, G.—Ἐσπερα συνανατολή ἀληθινή, P.—*Ortus Vespertinus Verus*. True evening rising.

(c) Δόσις ἔφα ἀληθινή, G.—Ἐφα συγκάθεσις ἀληθινή, P.—*Occasus Matutinus Verus*. True morning setting.

(d) Δόσις ἔσπερα ἀληθινή, G.—Ἐσπερα συγκάθεσις ἀληθινή, P.—*Occasus Vespertinus Verus*. True evening setting.

(a) Ἐπιτολή ἔφα φαινόμενη, G.—Ἐφα προανατολή φαινόμενη, P.—*Ortus Matutinus Apparens* s. *Ortus Heliacus*. Heliacal rising, i. e. First visible rising of a star in the morning twilight.

(b) Ἐπιτολή ἔσπερα φαινόμενη, G.—Ἐσπερα ἀνατολή φαινόμενη, P.—*Ortus Vespertinus Apparens*. Last visible rising of a star after sunset.

(c) Δόσις ἔφα φαινόμενη, G.—Ἐφα προδόσις

φαινόμενη, P.—*Occasus Matutinus Apparens*. First visible setting of a star before sunrise.

(d) Δόσις ἔσπερα φαινόμενη, G.—Ἐσπερα ἐπικάθεσις φαινόμενη, P.—*Occasus Vespertinus Apparens* s. *Occasus Heliacus*. Heliacal setting, i. e. Last visible setting of a star in the evening twilight.

With regard to the above technicalities we must observe

1. That Geminus (*l. c.*) draws a distinction between the words ἀνατολή and ἐπιτολή. By ἀνατολή he understands the rising of a star considered simply with reference to its elevation above the horizon, which takes place once in twenty-four hours in consequence of the diurnal motion; by ἐπιτολή, the rising of the star considered with reference to its distance from the sun, which depends upon the sun's place in the ecliptic. As to the settings of the stars, he would make δόσις the correlative of ἀνατολή and κρύψις of ἐπιτολή; but to this last definition he does not himself adhere, since he constantly employs δόσις to denote the setting of a star, when considered with reference to its distance from the sun. Ptolemy, while he includes all the risings and settings under the general designation of φάσεις ἀκωνίων, endeavours to introduce an improved nomenclature, by varying the preposition according as the star rises or sets along with (σύν), or before (πρό) or after (ἐπί) the sun, but pays no regard to the rule of Geminus with respect to ἀνατολή and ἐπιτολή.

2. Two terms, in addition to those set down above, are commonly employed by writers on these topics, the COSMICAL rising and setting (*Ortus Cosmicus*, *Occasus C.*), and the ACRONYCHAL rising and setting (*Ortus Acronychus*, *Occasus A.*).

The epithet *Cosmicus*, as applied to this subject, first occurs in a note of Servius on Virg. *Georg.* i. 218, "ortus et occasus duo sunt: unus ἡλιακός, id est, solaris; et alter κοσμικός, id est, πνευματικός, unde fit ut ea signa quae cum sole oriuntur a nobis non possint videri; et ea, quae videmus, quantum ad solis rationem pertinet, videantur occidere." Modern astronomers have for the most part (see Petavius, *Varr. Diss.* p. 3, ed. 1630) adopted the phrase *Ortus Cosmicus* to indicate the rising marked (a), that is, the *Ortus Matutinus Verus*, and *Occasus Cosmicus* to indicate the setting marked (c), that is, the *Occasus Matutinus Verus*, but Ideler (*Historische Untersuchungen*, &c. p. 311), while he interprets *Ortus Cosmicus* in the sense usually received, applies *Occasus Cosmicus* to the setting marked (c), that is, to the *Occasus Matutinus Apparens*.

Again, the epithet ἀκρόνυχος appears to be first used by Theophrastus (*De Signis Pluv. et Vent.* cap. i. § 2) where ἀνατολὰς ἀκρόνυχοι are alone mentioned, and are distinctly explained to mean the rising of a star at sunset, that is, the *Ortus Vespertinus Verus* marked (b), and in this sense the phrase *Ortus Acronychus* is found in the treatises of Petavius and others who employ also the expression *Occasus Acronychus* to indicate the setting marked (d), that is, the *Occasus Vespertinus Verus*. Ideler concurs in the latter, but interprets *Ortus Acronychus* to mean the rising marked (b), that is, the *Ortus Vespertinus Apparens*. This view is certainly at variance with the words of Theophrastus, which are quite explicit and are corroborated by Julius Firmicus (ii. 8); but on the

other hand in the *Parapegma* of Geminus, in the observations ascribed to Eudoxus, ἀφ' ὧν ὅς is the general term applied to all evening settings, and most of these unquestionably refer to the apparent phenomena. Euctemon again makes use of ὥσπερ to express the same meaning. The words Ἀρκτοῖρος ἀφ' ὧν ὅς πάλαι δύνει under Scorpius d. 8. are probably corrupt.

Under these circumstances to prevent all confusion or ambiguity, we have altogether passed over the terms *Cosmicus* and *Acronychus* in our table, but have retained *Heliacus*, which, like *Cosmicus*, first occurs in the passage quoted from Servius, but is applied uniformly by subsequent writers to the phenomenon marked (α) and (δ), and to no others.

3. Pliny (*H. N.* xviii. 25) proposes to designate by *Emersus*, what we have called the Heliacal Rising (α), because the star then for the first time emerges from the sun's rays, and by *Occultatio*, what we have called the *Helicacal Setting* (δ), because this is the last appearance of the star, which is forthwith obscured by the sun's rays, but these terms do not appear to have been ever generally received.

4. It is manifest that of the eight phenomena, named above, the first four are purely matters of calculation, since the true risings and settings never can be visible to the naked eye. These then ought always to have been, and for some time always were, excluded from rural calendars intended for the use of practical men. We find, however, from the fragments of Calippus, preserved in the *Parapegma* of Geminus, when verified by computation, that this astronomer had substituted the true risings and settings for the apparent risings and settings, which were there marked in the tables of Euctemon, Meton and Eudoxus. Hence, great caution would become indispensable in quoting from different authorities, or in advancing an original statement. If the rising of a star was named, it would be necessary not only to specify whether it was the morning or the evening rising, but also whether the true or the apparent rising was indicated, and to proceed in like manner for the setting of a star. Now and then we find in Columella and Pliny some attempt to preserve accuracy in one or other of these essential points, as when the latter observes (xviii. 74): "Pridie Kalendas (Nov.) Caesari Arcturus occidit et Suculae exoriuntur cum sole;" "XVI. Kal. Octob. Ægypto Spica, quam tenet Virgo, exoritur matutino, Etesiaeque desinunt. Hoc idem Caesari XIV. Kalendas XIII. Assyriae significant;" and even in Virgil, as when he defines the *morning setting* of the Pleiads: "Ante tibi Eoae Atlantides abscondantur;" but for the most part both in prose writers and in poets, everything is vague and unsatisfactory; risings and settings of all descriptions, calculated for different epochs and for different latitudes, are thrown together at random. In order to substantiate these charges, we may examine the statements contained in Columella, Ovid, and Pliny with regard to *Lyra*, a constellation to which considerable importance was attached by the Romans, since the beginning of Autumn in the calendar of Caesar was marked by its (true) morning setting. It will suit our purpose particularly well, because from its limited extent every portion of the constellation became visible, within two or three days after the appearance of the first star; and hence no ambiguity

could arise from the heliacal risings of the extreme portions being separated by an interval of some weeks, as was the case with Orion and others stretching over a large space in the heavens, in treating of which it became necessary to specify particular portions of the figure, as when we read "Orionis humerus oritur;" "Gladius Orionis occidere incipit;" "Orion totus oritur," and so forth. In the following quotations, the words *Fidis* and *Fidicula* seem to be absolutely synonymous, there being no reason to believe that the latter was applied exclusively to the peculiarly bright star which in the catalogues of modern astronomers is a *Lyrae*, the δ λαμπρὸς τῆς λύρας of Ptolemy, although to this in all probability most of the observations were directed. We shall set down in regular order first the settings and then the risings.

Settings of *Lyra*.

(1.) Pridie Id. Aug. (12 August) Fidis occidit mane et Auctumnus incipit. *Col.* xi. 2. § 57.

According to Pliny (xviii. 59), the setting of *Fidicula* (*Fidiculae occasus*) marked the commencement of autumn, and took place on the forty-sixth day after the solstice, that is, on the 8th of August, if we include, according to the Roman method of computation, the 24th of June, the day from which he reckoned. In a subsequent chapter (68. § 2) he states that the phenomenon in question took place, according to the Calendar of Caesar, on the 11th of August, but that more accurate observations had fixed it to the 8th, and this he soon after repeats (69. § 4).

(2.) XIII. Kal. Sept. (i. e. 20 August) Sol in Virginem transitum facit... hoc eodem die Fidis occidit. — X. Kal. Sept. (23 August) ex eodem sidere tempestas plerumque oritur et pluvia. *Columell.* xi. 2. § 58.

(3.) XI. Kal. Feb. (22d January) *Fidicula Vespere occidit, dies pluvius. Columell.* x. 2. § 5. Ovid places the setting on 23rd of January.

Fulgebit toto jam *Lyra* nulla polo. *Fast.* i. 653.

(4.) III. Kal. Feb. (30 January) *Fidicula occidit. Columell.* xi. 2. § 6.

(5.) Kal. Feb. (1 February) Fidis incipit occidere. Ventus Eurinus et interdum Auster cum grandine est. *Columell.* xi. 2. § 14.

III. Non. Febr. (3rd February) Fidis tota occidit. *Columell.* Ibid.

Ovid, without alluding to what he had said before, remarks on the 2nd of February (*Fast.* ii. 73):

Illa nocte aliquis tollens ad sidera vultum,
Dicit, ubi est hodie, quae *Lyra* fulsit heri?

Pliny has (xviii. 64) "Et pridie Nonas Februarias (4th February) *Fidicula vespere* (sc. occidit).

Risings of *Lyra*.

(6.) IX. Kal. Mai. (23rd April) prima nocte *Fidicula* apparet, tempestatem significat. *Columell.* xi. 2. § 37.

VI. Kal. Mai. (26th April) Bæotiae et Atticae Canis Vespere occultatur, *Fidicula* mane oritur. *Plin.* xviii. 66. § 1.

(7.) Ovid (*Fast.* v. 415) names the 5th of May as the day on which *Lyra* rises.

(8.) III. Id. Mai. (13th May) Fidis mane exoritur, significat tempestatem. *Columell.* xi. 2. § 40.

III. Id. Mai. Fidiculae exortus. *Plin.* xviii. 67. § 3.

Id. Mai. (15th May) Fidis mane exoritur. *Columell.* xi. 2. § 43.

(9.) III. Non. Novemb. (3rd November) Fidiculae mane exoritur, hiemat et pluit. *Columell.* xi. 2. § 84.

(10.) VIII. Id. Novemb. (6th November) idem sidus totum exoritur, Auster vel Favonius, hiemat. *Columell.* Ibid.

(11.) XVI. Kal. Dec. (16th November) Fidis exoritur mane, Auster, interdum Aquilo magnus. *Columell.* xi. 2. § 88.

(12.) Non. Januar. (5th January) Fidis exoritur mane: tempestas varia. *Columell.* xi. 2. § 97.

Institerint Nonae, missis tibi nubibus atris,
Signa dabunt imbres exoriente Lyra.

OID. *Fast.* i. 315.

Pridie Nonas Januarias (4th January) Caesari Delphinus matutino exoritur et postero die Fidicula. *Plin.* xviii. 64.

The total disregard of precision in the phraseology employed in describing the above appearances is evident in almost every assertion, but the confusion may be considered to have reached a climax when we read the words "Fidis (or Fidicula) exoritur mane," used without variation or explanation to denote a phenomenon assigned to the 26th of April, the 3d and 15th of May, the 3d and 16th of November. By examining each paragraph separately, we shall be still more fully convinced of the carelessness and ignorance displayed.

(1.) The *true morning setting* of *Lucida Lyrae* took place at Rome in the age of Caesar, on the 12th or 13th of August, and therefore the Calendar of Caesar here followed by Columella was more accurate than the authorities quoted by Pliny, unless these referred to a different latitude. Remark, however, that no hint is dropped by either to indicate that the *true*, and not the *apparent morning setting* is meant; and it ought to be borne in mind that the latter happened, at the epoch in question, on that very day at Alexandria. In the Parapegma of Geminus also, we find, under 11th of August (17 Leo), *Εὐκέρημονι Λύρα δύεται*.

(2.) This must be the *apparent morning setting* which took place at Rome on 24th of August for the Julian epoch.

(3.) The *true evening setting*, calculated for Alexandria at the same epoch, took place on 23d of January, the very day named by Ovid.

(4.) This is the *heliacal setting*, which, for *Lucida Lyrae*, took place at Rome on 28th of January.

(5.) These notices seem to be borrowed from old Greek calendars. Eudoxus, as quoted by Geminus, assigns the *evening (δυσπνυχος) setting* of Lyra to the 11th degree of Aquarius, that is, the 4th of February according to the Julian calendar.

It will be seen that the three last paragraphs (2.), (4.), (5.), without any change of expression, spread the setting of Lyra over a space extending from 23d of January to 4th February, the apparent and true settings for Rome being on the 28th January and 9th February respectively.

(6.) The *apparent evening rising*, which seems clearly pointed out by the words of Columella, took place at Rome for the Julian era on 14th of April, at Alexandria on 26th of April: the *true*

evening rising at Rome on 22d April, and to this, therefore, the statement of Columella, from whatever source derived, must, if accurate, apply. Pliny has here fallen into a palpable blunder, and has written *mane* for *vesperi*. In fact he has copied, perhaps at second hand, the observation of Eudoxus with regard to the Lyre and Dog (see Parapeg. of Gem.), except that he has inserted the word *mane* where the Greek astronomer simply says *λύρα επιτέλλει*.

(7.) This will agree tolerably well with the *true evening rising* at Alexandria for the Julian era, but is twenty-one days too late for the *apparent evening setting* at Rome, and thirteen days too late for the *true evening setting*.

(8.) Here all is error. We must manifestly substitute *vespere* for *mane* in both passages of Columella; but even thus the observation will not give anything like a close approximation to any rising of Lyra either at Rome or Alexandria in the Julian age.

(9.) Copied verbatim along with the accompanying prognostic of the weather, from the Parapegma of Geminus, where it is ascribed to Euctemon. The day, however, corresponds closely with the *heliacal rising*, which took place at Rome on 5th of November.

(10.) Copied along with the prognostic "hiemat" (*καὶ ὁ ἀπὸ χειμῆρος γίνεται ὡς ἐπὶ τὰ πολλὰ*) from the same compilation where it is ascribed to Democritus, who fixed upon this day for the *true morning rising* (*λύρα επιβάλλει ἅμα ἡλίου δύσεσσι*). At Rome this *rising* fell upon 23d of October.

(11.) Copied again from the same source, where it is ascribed to Eudoxus. Here the observation can in no way be stretched so as to apply to Rome.

(12.) This, like the last, can in no way be made applicable to Rome; but the *heliacal setting* at Alexandria took place, for that epoch, about four days later, on the 9th or 10th of January.

Having now pointed out the difficulties which the student must expect to encounter in prosecuting his inquiries in this department, we proceed briefly to examine the most remarkable passages in the classical writers, where particular periods of the year are defined by referring to the risings and settings of the stars. We begin with the most important,—the Pleiades, Arcturus, and Sirius, which we shall discuss fully, and then add a few words upon others of less note.

THE PLEIADES.

HESED. — Hesiod indicates the period of harvest by the rising of the Atlas-born Pleiads (*Ery.* 384) after they had remained concealed for forty days and forty nights. Now in the age of Hesiod (B.C. 800), the heliacal rising of the Pleiads took place at Athens, according to the computation of Ideler, on the 19th of May of the Julian Calendar, which is just the season when the wheat crop comes to maturity in that climate. Again (*l.c.*), he indicates the commencement of the ploughing-season, and the close of the season for navigating, by the morning setting of the Pleiads, which in that age and latitude fell about the third of the Julian November. In these and all other passages where Hesiod speaks of the risings and settings of the stars, we must unquestionably assume that he refers to the apparent phenomena. Indeed it is by no means improbable that the precepts which

he inculcates may be the result of the personal observations of himself and his contemporaries.

VARRO, COLUMELLA, PLINY. — *Morning Rising*. — (1.) Varro, where he describes the distribution of the year into eight divisions, according to the calendar of Caesar, states that there was a space of forty-six days from the vernal equinox (25th March) to the rising of the Pleiades (*Vergiliarum exortum*), which is thus fixed to the 8th or 9th of May. (*R. R. i. 28.*)

(2.) Pliny (xviii. 66. § 1) names the 10th of May.

Columella has three distinct notices (*R. R. xi. 2. §§ 36, 39.*)

(3.) *X. Kal. Mai.* (22d April) *Vergiliae cum sole oriuntur.*

(4.) *Nomis Maiis* (7th May) *Vergiliae exoriuntur mane.*

(5.) *VI. Idus sc. Mai* (10th May) *Vergiliae totae apparent*; and this last corresponds with his assertion elsewhere, that the phenomenon takes place forty-eight days after the vernal equinox (ix. 14. § 4).

Now the true morning rising of the Pleiads took place at Rome in the age of the above writers, who are all embraced within the limits of a century, about the 16th of April, the apparent or heliacal rising about the 28th of May. Hence, not one of the above statements is accurate. But (1) (2) (4) (5) approach closely to the observation of Euctemon (B.C. 430), according to whom the Pleiad rises on the 13th of Taurus (8th of May), and (3), which expressly refers to the true rising, although inapplicable to Rome, will suit the latitude of Athens for the epoch in question.

Morning Setting. — (1.) Varro places the setting of the Pleiades (*Vergiliarum occasum*) forty-five days after the autumnal equinox (24th Sept.), that is, on the 6th or 7th of November (*R. R. i. 28.*)

(2.) Pliny names the 11th of November (xviii. 60, 74; the text in c. 59 is corrupt).

Columella, as before, has a succession of notices.

(3.) *XIII. et XII. Kal. Nov.* (20th and 21st Oct.) *Solis exortu Vergiliae incipiunt occidere.*

(4.) *V. Kal. Nov.* (28th Oct.) *Vergiliae occidunt.*

(5.) *VI. Id. Nov.* (8th Nov.) *Vergiliae mane occidunt.*

(6.) *IV. Id. Nov.* (10th Nov.) *hiemis initium.*

These are all taken from his calendar in xi. 2; but in ix. 14. § 11, "*Ab aequinoctio . . . ad Vergiliarum occasum dies XL.*" i.e. 2d or 3d of November. Compare ii. 8. § 1.

Now the true morning setting of the Pleiads took place for Rome at that epoch on the 29th of October, the apparent morning setting on the 9th of November. Hence, it appears that (5) may be regarded as an accurate determination of the apparent morning setting, and that (1) and (2) approach nearly to the truth, especially when we bear in mind that variations to the extent of two or even three days must be allowed in regard to a phenomenon which depends in some degree on the state of the atmosphere. We perceive also that (4) is correct for the true morning setting, while (3), which is inapplicable to Rome, corresponds to the horizon of Athens in the time of Meton. In the passage from Colum. ix. 14, we ought probably to adopt the conjecture of Pontedera, and read xlv. for xl.

Evening Setting and Evening Rising. — The even-

ing setting of the Pleiades took place, according to Columella, on the 6th of April (*VIII. Idus Aprilis Vergiliae Vespere celantur*); according to the calendar of Caesar on the 5th. (Colum. xi. 2. § 34; Plin. *H. N.* xviii. 66.) These statements are not far from the truth, since the apparent evening setting took place at Rome for the Julian epoch on the 8th of April. The apparent evening rising belonged to the 25th of September.

VIRGIL. — Virgil (*Georg.* i. 221) enjoins the husbandman not to sow his wheat until after the morning setting of the Pleiades: —

Ante tibi Eosae Atlantides abecondantur
Gnosiaque ardentis decedat stella Coronae
Debita quam sulcis committas semina.

Hesiod, as we have seen above, fixes the commencement of the ploughing season, without making any distinction as to the particular crop desired, by the (apparent) morning setting of the Pleiades that is, for his age, the beginning of November. But it is impossible to tell whether Virgil intended merely to repeat this precept or had in his eye the calendar of Caesar or some similar compilation. Columella (ii. 8. § 1), in commenting upon these lines, understands him to mean the true morning setting, which, he says, takes place thirty-two days after the equinox, that is, on the 25th or 26th of October, a calculation not far from the truth, since we have pointed out above that the 28th was the real day.

There is another passage where both the rising and the setting of the Pleiades are mentioned in connection with the two periods of the honey harvest. (*Georg.* iv. 231)

Bis gravidos cogunt foetus, duo tempora messis,
Taygete simul os terris ostendit honestum
Pleias et oceani spretos pede repulit amnes.
Aut eadem sidus fugiens ubi Piscis aquosi
Tristior hybernas coelo descendit in undas.

Here, again, there is nothing in the context by which we can ascertain the precise periods which the poet desired to define, we can only make a guess by comparing his injunction with those of others. Columella (xi. 2) recommends that the combs should be cut, *if full*, about the 22nd of April; but, since he adds that if they are not full the operation ought to be deferred, the matter is left quite indefinite. Now, the words of Virgil seem clearly to point to the heliacal rising which took place in his time at Rome about the 28th of May, more than five weeks after the day given by Columella. In like manner the last-named writer advises (xi. 2. § 57) that the autumnal collection of honey should be put off until the month of October, although others were in the habit of beginning earlier. The true morning setting was, as already stated, on the 28th of October, the apparent on the 9th of November.

As to the expression "*sidus fugiens ubi Piscis aquosi*," it will be sufficient to observe that although the "*Piscis*" in question has been variously supposed to be — one of the fishes in the zodiac — the Southern Fish — the Hydra — the Dolphin — or even the Scorpion, no one has yet succeeded in proposing a reasonable or intelligible interpretation, which can be reconciled with any delineation of the heavens with which we are acquainted.

VID. — We are told in the *Fasti* (iv. 165)

that at daybreak on the morning which follows the 1st of April: —

Pleiades incipiunt humeros relevare paternos
Quae septem dici, sex tamen esse solent.

According to the legend, the Pleiades were the daughters of Atlas, who supported the heavens on his shoulders, and hence, when they disappeared from the sky, they might be said to remove a portion of their father's burden "humeros relevare paternos." The apparent morning setting is therefore clearly denoted. But this took place at Rome on the 9th of November, while, on the other hand, the apparent evening (or heliacal) setting fell upon the 8th of April, only six days after the date mentioned. Hence, the poet blundered between the morning setting and the evening setting, which are many months apart.

Again (v. 599), the Pleiades are said to rise visibly in the morning on May 14th, marking the end of spring and the beginning of summer. Now the heliacal rising of the Pleiades did not take place at Rome when Ovid wrote until May 28th; but the phenomenon in question took place at Athens on May 16th in the age of Meton. Hence this observation was evidently copied from a Greek calendar computed for the fifth century B. C.

ARCTURUS.

Considerable difficulty arises in the discussion of the passages which refer to Arcturus, from the circumstance that this name is sometimes applied generally to the whole of the wide-spreading constellation of Boötes, and sometimes confined to the bright star in the knee of the figure.

HOMER. — Homer (*Od.* v. 29) speaks of Arcturus as *ὄψις δόοντα*, because the apparent evening or heliacal setting took place late in the year when winter was nigh at hand, and hence the phrase *ὄψις ἐπ' Ἀρκτοῦρος* for *long nights*. (See Arat. 585.) Another explanation of the phrase has been given above when discussing the constellation Boötes.

HESIOD. — Hesiod (*Erg.* 564) dates the commencement of Spring from the evening rising of Arcturus (*ἐπιτέλλεται ἀρκονόφαιος*) sixty days after the solstice. Now the apparent evening rising for the age and country of Hesiod fell upon the 24th of February, therefore his statement is correct in round numbers.

Again, in the same poem (659) he marks the period of the vintage by the morning (heliacal) rising of Arcturus, which, according to Ideler, fell in that age on the 18th of September.

COLUMELLA, PLINY. — *Morning Rising.* Columella (ix. 14. § 10) places the rising of Arcturus about fifty days after the rising of Canicula; and since the heliacal rising of the latter fell on the 2d of August at Rome in the Julian era, and of the former on the 21st of September, the computation is exact.

PLINY (xviii. 74), *Arcturus vtro medius pridie Idus* (sc. Septembr. oritur), i. e. 12th of September, where the middle portion of the whole constellation is indicated, and the observation is very accurate.

Morning Setting. — (1.) *XI. et X. Kal. Jun.* (22d and 23d May) *Arcturus mane occidit.* Col. xi. 2 § 43.

(2.) *VII. Id. Jun.* (9th June) *Arcturus occidit.* Id. § 45.

(3.) Pliny (xviii. 67. § 3) ascribes the *Arcturi occasus matutinus* to *V. Id. Mai.*, i. e. 11th May.

(4.) Again, in the same section we find that *Arcturus matutino occidit* on the 8th of June.

Now the true morning setting of Arcturus for Rome at this epoch belongs to 28th of May, the apparent morning setting to 10th of June.

But (1) seems to be copied from the observation of Euctemon in the *Paraegma* of Geminus; (2) is a close approximation to the apparent morning setting for Rome; (3) is altogether erroneous, and must be a true morning setting extracted from some old Greek calendar; (4) corresponds with (2), and is nearly correct.

Evening Rising. — (1.) *IX. Kal. Mart.* (21st Feb.) *Arcturus prima nocte oritur.* Col. xi. 2 § 21.

(2.) *Ortus Arcturi qui est ab Idibus Februariis* (13th Feb.). Col. ix. 14.

(3.) *VIII. Kal. Mart.* (22d Feb.) *hirundinis vis et postero die* (23d Feb.) *Arcturi exortus vespertino.* Plin. *H. N.* xviii. 65.

Now the apparent evening rising of Arcturus took place for Rome at the Julian epoch on the 27th of February, the true evening rising on the 6th of March. But since it is evident from (2) that Columella here employed *Arcturus* to denote not merely the star properly so called, but the whole figure of Boötes, a latitude of several days must be allowed in the case of this as of all the larger constellations. See below the remarks on *Ov. Fast.* ii. 153. We may remark, however, that 21st—23d of February will answer for the apparent evening rising of the star Arcturus at Athens in the age of Meton.

Evening Setting. — *IV. Kal. Nov.* (29th Oct.) *Arcturus vespere occidit, ventosus dies.* Col. xi. 2 § 78.

This is taken verbatim from an observation of Euctemon quoted in the *Paraegma* of Geminus. The heliacal setting for Rome was a few days later, about the 4th of November. But the observation of Euctemon is not accurate for the latitude of Athens in his own age, for the phenomenon ought to have been placed about five days earlier, which proves, as Pfaff remarks, that the Greek astronomers are not always to be depended upon in these matters.

We find in Pliny (xviii. 68. § 2), *VIII. Id. Aug.* (6th August) *Arcturus medius occidit.* This is so far removed from any setting of the star in question that Harduin pronounces the text corrupt, and substitutes *VII. Id. Aug. Aquarius occidit medius*, while Pfaff endeavours to refer the expression to the culmination, an explanation which is both in itself forced and completely at variance with the ordinary usage of Pliny.

Again, Pliny (xviii. § 74), *Pridie Kalendas* (Nov.) *Caesari Arcturus occidit*, i. e. 31st of October, and a few lines farther on *IV. Nonas Arcturus occidit vespere*. The latter is not far from the truth; the former, unless it refers to the constellation in general, must have been borrowed from a foreign source.

VIRGIL. — Virgil (*Georg.* i. 229) instructs the husbandman to sow vetches, kidney beans and lentiles, when Boötes sets, by which he probably intends to indicate the heliacal setting of Arcturus on the 4th of November. In like manner Pliny (xviii. 15. § 24) orders the vetch to be sown about the setting of Arcturus, the kidney bean at the setting of Boötes (xviii. 24), the lentile in the

month of November (xviii. 12). Columella assigns the sowing of vetches and kidney beans, and Palladius of kidney beans to the month of October; if the end of the month is meant, then the precept may be considered as identical with those of Virgil and Pliny; if the middle of the month is intended, this will correspond with the heliacal setting of Arcturus for the latitude of Alexandria.

Again, in *Georg.* i. 67. when treating of ploughing, the words

At si non fuerit tellus fecunda, sub ipsum
Arcturum tenui sat erit suspendere sulco,

refer to the morning rising. The true morning rising was on the 8th of September, the apparent on the 21st. The former agrees best with the directions given by Columella (ii. 4. § 11) for the ploughing of very light land, "graciles clivi non sunt acetate arandi, sed circa Septembres Kalendas," and a little lower down, when treating of the same kind of soil, "itaque optime inter Kalendas et Idus Septembres aratur et subinde iteratur."

OVID. — In the second book of the *Fasti* (153) we read,

Tertia nox veniat: custodem protinus Ursaë
Adapicies geminos exseruiſe pedes,

that is, the constellation Arcturus displays both his feet on the 11th of February, where it ought to be observed that from the posture in which Boötes rises his two legs appear above the horizon nearly at the same time. The apparent evening rising of the star Arcturus took place at Rome, on 27th February, the true evening rising on the 6th of March; but the calendar to which Ovid was indebted probably recorded the appearance of the first star in the figure which became visible.

In three passages, the morning setting is clearly described (*Fast.* iii. 403, v. 733, vi. 235). In the first, it is placed on 4th or 5th of March, according as we adopt the reading *quartae* or *quintae*; in the second, on the 26th of May; in the third, on the 7th of June. Now there is no doubt that the setting of Boötes is spread over a considerable period; and hence, the epithet *piger*, applied to him here and elsewhere, but in no way could it be made to occupy three months. The star Arcturus is one of the first which sets in this constellation: its true morning setting took place on 28th May, its apparent morning setting on 10th June; thus the second and third of the above passages will apply to these two. In the first passage he has erroneously substituted the *apparent morning setting* for the *true evening rising*, which really took place, as we have seen, on the 6th of March.

SIRIUS. CANIS. CANICULA.

HOMER. HESIOD. — Homer (*Il.* v. 5, xxii. 25) alludes to Sirius as the star of *ὄρερα*, that is, of the hottest portion of summer, as will be explained more fully below in treating of the ancient division of the year into seasons. The heliacal rising of Sirius in Southern Greece would take place in the age of Homer about the middle of July.

The culmination of Sirius spoken of by Hesiod (*Erg.* 609), as marking along with the morning rising of Arcturus the period of the vintage, would take place in that age about the 20th of September. The passage (*Erg.* 417), where *Ζεῆος δ' ὀρεῖρ* is supposed to denote the sun, has been already noticed. See above p. 152, b.

VARRO, COLUMELLA, PLINY. — *Morning Rising* — (1.) Varro, following the calendar of Caesar, reckons an interval of twenty-four days from the summer solstice to the rising of Sirius (*ad Caniculae signum*) which, according to this calculation, would fall on the 17th or 18th of July (*R. R.* i. 28.)

(2.) Columella (xi. 2. § 53) fixes upon the 26th of July (*VII. Kal. Aug. Canicula apparet*), and in another passage (ix. 15. § 5) makes the interval between the solstice and the rising of Sirius about thirty days (*peracto solstitio usque ad ortum Caniculae, qui fere dies triginta sunt*), that is, on the 24th of July.

(3.) Pliny (xviii. 38. § 2), says, that the epoch "*quod canis ortum vocamus*" corresponded with the entrance of the sun into Leo, that is, according to the Julian calendar, which he professes to follow, the 24th of July.

(4.) In the very next clause he says, that it fell twenty-three days after the solstice, that is, on the 17th of July.

(5.) And a little farther on (§ 4), he refers the same event specifically to the 17th of July (*XVII. Kal. Aug.*).

(6.) Finally, in a different part of his work (xi. 14), he places the rising of Sirius thirty days after the solstice: *ipſo Sirio exſplendeſcente poſt ſolſtitium diebus tricenſis fere*, a passage in which it will be seen upon referring to the original, that he must have been consulting Greek authorities, and in which the words necessarily imply a *visible* rising of the star.

The whole of the above statements may be reduced to two. In (1), (4), (5), the rising of Sirius is placed on the 17th or 18th of July, twenty-three days after the solstice, in (2), (3), (6), about thirty days after the solstice; that is, 24th—26th of July.

Now the true morning rising of Sirius for Rome at the Julian era fell upon the 19th of July, the apparent morning or heliacal rising on the 2d of August, thirty-eight or thirty-nine days after the solstice.

Hence (1), (4), (5), are close approximations to the truth, while (2), (3), (6) are inapplicable to Rome, and borrowed from computations adapted to the horizon of Southern Greece.

Some words in Pliny deserve particular notice: "XVI. Kal. Aug. Assyriae Procyon exoritur: dein poſtridie fere ubique, conſeſſum inter omnes ſidus indicans, quod canis ortum vocamus, ſole partem primam Leonis ingreſſo. Hoc fit poſt ſolſtitium XXIII. die. Sentiant id maria, et terrae, multae vero et ferae, ut ſuis locis diximus. Neque eſt minor ei veneratio quam deſcriptis in deos ſtellis." Although the expressions employed here are far from being distinct, they lead us to infer that certain remarkable periods in the year were from habit and superstition so indissolubly connected in the public mind with certain astronomical phenomena, that even after the periods in question had ceased to correspond with the phenomena, no change was introduced into the established phraseology. Thus the period of most intense heat, which at one time coincided with the heliacal rising of Sirius, would continue to be distinguished in the language of the people, and in almanacs intended for general use, as the *Canis Exortus*, long after the two epochs were removed to a distance from each other, just as among ourselves the term dog-days having once obtained a firm footing, is used and probably will continue to be used for centuries

without the slightest regard to the actual position of the constellation at the time in question. An example still more striking, because it involves an anomaly universally recognised by scientific men, is the practice of denominating the position of the sun at the vernal equinox, as the *first point of Aries*, although two thousand years have elapsed since the intersection of the ecliptic with the equator corresponded with the commencement of the constellation Aries. A necessity has thus arisen of drawing a distinction, which proves most embarrassing to the unlearned, between the signs of the zodiac and the constellations of the zodiac, and thus the sun is said to be in the sign Aries while he is actually traversing the constellation of Pisces, and enters the sign Taurus long before he quits the constellation Aries. Now something of this sort may to a certain extent explain some of the anomalies which recur so perpetually in the calendar of Columella or Pliny. Certain remarkable appearances fixed upon at a very early period to mark the approach of summer and winter, such as the rising and setting of the Pleiades, may have by custom or tradition become so completely identified in the minds of the people with particular days, that the compilers of calendars intended for general use, while they desired to register accurate observations, were compelled at the same time to include those which, belonging to remote ages and foreign lands, had nevertheless acquired a prescriptive claim to attention. We may thus account for inconsistencies so numerous and glaring, that they could scarcely have been altogether overlooked by the writers in whose works they occur, although it is impossible to forgive their carelessness in withholding the necessary explanations, or the gross ignorance which they so often manifest.

Evening Setting. Columella places the evening setting of the Dog on the 30th of April (*Prid. Kal. Mai. Canis ut Vespere celat*), xi. 2. § 37. Pliny on the 28th (*IV. Kal. Mai. Canis occidit, sidus et per se vehemens et cui praecocidere Canicula necesse sit*), xviii. 69.

The heliacal setting at Rome for the Julian era was on the 1st of May, which proves the above statements to be nearly correct. The expression *cui praecocidere Caniculam necesse sit* has been already commented on. See above, p. 153, a.

Morning Setting. Evening Rising.—(1). *VII. Kal. Dec.* (25 Nov.) *Canicula occidit solis ortu*. Col. xi. 2. § 89.

(2). *III. Kal. Jan.* (30 Dec.) *Canicula vespere occidit*. Ibid. § 94.

(3). *III. Kal. Jan.* (30 Dec.) *Matutino canis occidens*. Plin. xviii. 64.

(1) is accurate for the apparent morning setting at Rome, B. C. 44.

(2) and (3) are directly at variance with each other, and are both blunders. The apparent evening rising took place at Rome on the 30th of December, not the evening setting as Columella would have it, nor the morning setting as Pliny has recorded.

VIRGIL.—Virgil instructs the farmer to sow beans, lucerne, and millet:—

*Candidus auratis aperit cum cornibus annum
Taurus et adverso cedens Canis occidit astro.*

Georg. i. 217.

The sun entered Taurus, according to the Julian

calendar, on the 24th of April: the heliacal setting of Sirius was on the 1st of May, six days afterwards. Many interpretations have been proposed for the words "*adverso cedens Canis occidit astro*;" of these the most plausible is that which explains them with reference to the form and attitude under which the constellation of the Dog was depicted, which made him set backwards facing the signs which follow.

Again, in *Georg. iv.* 425, we find

*Jam rapidus torrens sitientes Sirius Indos
Ardebat coelo et medium sol igneus orbem
Hauserat,*

words which are intended to indicate the hottest portion of the day in the hottest season of the year. Here the separate mention of "Sol" is quite sufficient to confute those who would consider Sirius as equivalent in this passage to the sun. See above, p. 152, b. *Comp. Lucan. Phar. x. 209.*

OVID.—In the fourth book of the *Fasti* (x. 901) the rising of Sirius is assigned to the 25th of April, is made coincident with the disappearance of Aries, and marks the epoch of mid-spring:—

*Sex ubi quae restant luces Aprilis habebit
In medio cursu tempora Veris erunt;
Et frustra pecudem quaeres Athamantis Helles
Signaque dant imbres exoriturque Canis.*

A notorious blunder has been here committed by the poet. No rising of Sirius, either real or apparent, in the morning or in the evening, corresponds to this season. But this is the very day fixed by Euctemon (ap. Gemin. Parapeg.) for the heliacal setting (*ἔως κρύπτειται*) of the Dog, which fell at Rome for the Julian era on the 1st of May.

Again, in *Fast. v.* 723, we read—

Nocte sequente diem Canis Erigoneius exit,

that is, on the 22d of May. Now, it is clear from a former passage (iv. 939) that by *Canis Erigoneius* he means the Great Dog; but the true rising of Sirius took place for Rome at this period on the 19th of July, the apparent on the 2d of August.

Not much will be gained by supposing that Procyon is here alluded to; for the risings of that star precede those of Sirius by about eight days only. Here, again, therefore, we have a gross mistake.

PALLADIUS.—Palladius (vii. 9): "*In ortu Caniculae, qui apud Romanos XIV. Kal. Aug. (19th July) die tenetur, explorant (sc. Aegypti) quae semina exortum sidus exurat, quae illaesa custodiat.*" Now this is the exact period of the heliacal rising in Egypt for the Julian epoch; hence the words "*apud Romanos*" must refer to a notice in some Roman Calendar, and not to the real period of the phenomenon.

ORION.

It must be borne in mind that, from the great size of this constellation, its risings and settings are spread over a considerable space; while the brilliant stars which it contains are so numerous that no one can be fixed upon as a representative of the whole, as in the case of Boötes, where the different appearances are usually referred to Arc-turus alone. Hence those writers who aim at precision use such phrases as "*Orion incipit oriri*,"

"Orion totus oritur," "Orion incipit occidere;" and wherever such qualifications are omitted the statements are necessarily vague.

HESIOD. — Hesiod (*Erg.* 598) orders the corn to be thrashed *ἐν τῇ πρώτῃ φανῇ σθέως Ὀρίωνος*. For that age and country the apparent morning or heliacal rising of Orion would be completed about the 9th of July.

The setting of Orion was one of the tokens which gave notice to the farmer that the season for ploughing had arrived, and to the mariner that he must no longer brave the perils of the deep. (*Erg.* 615.) The apparent morning setting extended over the whole month of November.

The culmination of Orion, which coincided with the vintage (*Erg.* 609) took place about the 14th of September.

ARISTOTLE. — Aristotle (*Meteorolog.* ii. 5, *Problem.* xiv. 26) places the rising of Orion at the commencement of *Opora*, and the setting at the beginning of winter, or rather in the transition from summer to winter (*ἐν μεταβολῇ τοῦ θέρος καὶ χειμῶνος*).

Now the two limits which included the beginning and end of the apparent morning or heliacal rising, which alone can be here indicated, were, for the age and country of the writer, 17th of June—14th July; those which embraced the apparent morning setting were, 8th of November—8th of December; while the true morning setting continued from 27th of October—20th of November.

Upon examining the passages in question a very curious contradiction will be perceived, which has long exercised the ingenuity of the commentators. Aristotle distinctly asserts in one place that the rising of Orion is characterised by unsteady stormy weather, and offers an explanation of the fact: in another place he as distinctly avers that the rising of Orion is characterised by the absence of wind (*περὶ Ὀρίωνος ἀνατολὴν μάλιστα γίνεται ἡνεμυία*).

PLINY. — (1) *VIII. Idus (Mart.) Aquilonis piscis exortu, et postero die Orionis.* xviii. 65. § 1.

(2) *Nonis (Apr.) Aegyptio Orion et gladius ejus incipiunt abscondi.* xviii. 66. § 1.

(1) The first date, 8th of March, is so far removed from the rising of Orion, whether in the morning or the evening, that Ideler is probably correct when he supposes that either the text is corrupt or that Pliny himself inserted Orion by mistake instead of the name of some other constellation.

(2) Here also the date, 5th of April, is wide of the truth. The apparent evening setting of the middle star in the belt fell at Alexandria on the 26th of April, seven days later than at Rome, the true evening setting about the 9th or 10th of May.

VIRGIL, HORACE. — Both Virgil and Horace frequently allude to the tempests which accompanied the winter setting of Orion (*Saeuus ubi Orion hibernis conditur undis*, Virg. *Aen.* vii. 719; see also iv. 52; Hor. *Carm.* i. 28. 21, iii. 27. 17, *Epod.* x. 9, xv. 7), just as Hesiod (*Erg.* 617) eight hundred years before had warned the mariner that when the Pleiades, fleeing from the might of Orion, plunge into the dark main:

Δὴ τότε παρτολὼν ἀνέμων δούσουσι δῆται.

The apparent morning setting of Orion, which in the time of Hesiod commenced early in No-

vember, soon after the morning setting of the Pleiades, thus became connected in traditional lore with the first gales of the rainy season, and the association continued for centuries, although the phenomenon itself became gradually further and further removed from the beginning of the stormy period. In the Parapegma of Geminus we find notices by three different astronomers, in which the setting of the Pleiades and of Orion are mentioned as attended by tempests, although each of the three fixes upon a different day. For Rome, at the Julian era, the apparent morning setting commenced about the 12th or 13th of November. In Pliny (xviii. 74) we find, "V. Idus Novembr. (8 Novemb.) gladius Orionis occidere incipit," which is the true morning setting for Alexandria at that epoch.

OVID. — Ovid refers twice in his *Fasti* to the setting of Orion. In one passage (iv. 387) he places it on the day before the termination of the Megalesia, that is, on the 10th of April; in another (v. 493), where the complete disappearance of the figure is expressly noted, on the 11th of May.

Now the apparent evening setting of Rigel, the bright star which marks the left foot, took place for Rome in the age of the poet on 11th April, while the smaller star, now known as κ , set on the previous day, the true evening setting of Betelgeux, which marks the right shoulder, fell on the 11th of May. Hence it is clear that Ovid derived his information from two very accurate calendars, one of which gave the date of the commencement of the apparent evening setting; the other, the date of the termination of the true evening setting.

He refers twice to the rising of Orion also — in the sixth book of the *Fasti* (717), on the 16th of June:

At pater Heliadum radios ubi tinxerit undis,
Et cinget geminos stella serena polos,
Tollet humo validos proles Hyriea lacertos,

and on the festival of Fortuna Fortis, on the 24th of June:

Zona latet tua nunc, et cras fortasse latebit,
Dehinc erit, Orion, adspicienda mihi,

that is, on the 26th of June.

With regard to the first, the date is nearly correct for the true MORNING (NOT EVENING, as the words denote) rising of the two stars (α β) at the extremity of the left hand; with regard to the second, the true morning rising of the middle star in the belt fell on the 21st of June, the apparent on the 13th of July. There is a mistake, therefore, here of five days, as far as Rome is concerned.

HYADES.

In Hesiod (*Erg.* 615), the setting of the Pleiades, of the Hyades, and of mighty Orion, warn the husbandman that the season has arrived for ploughing the earth, and the mariner, that navigation must cease. The apparent morning setting of the Hyades took place, according to the calculation of Ideler, for the age and country of Hesiod, on the 7th of the Julian November, four days after that of the Pleiades, and eight before that of Orion.

Virgil (*Aen.* i. 744, iii. 516) terms this cluster "pluvias Hyadas," and Horace (*Carm.* i. 3. 14)

"tristes Hyades," in reference to their morning setting at the most rainy and stormy season of the year. The true morning setting for Rome at the Julian era happened on the 3d of November, the apparent on the 14th of November. The apparent evening rising, which fell upon the 25th of October, would likewise suit these epithets.

Ovid, in his *Fasti* (iv. 677), places the evening setting of the Hyades on the 17th of April, the day fixed in the Calendar of Caesar (Plin. xviii. 66. § 1), while Columella names the 18th (*R. R.* xi. 2. § 36). These statements are nearly accurate, since the apparent evening, or heliacal setting, took place for Rome at that epoch on the 20th of April.

In the same poem, the morning rising is alluded to five times.

(1.) It is said (v. 163) to take place on the 2nd of May, which was the day fixed in the Calendar of Caesar (Plin. xviii. 66. § 1), and adopted by Columella (xi. 2. § 39), whose words, *Secula cum sole oritur*, indicate the true morning rising.

(2.) On the 14th of May (v. 603), while Columella (*Ibid.* § 43) has, *XII. Kal. Jun.* (21st May) *Seculae exoritur*.

(3.) On the 27th of May (v. &c.).

(4.) On the second of June (vi. 197).

(5.) On the 15th of June (vi. 711).

Now the true morning rising of the Hyades for Rome at that epoch was on the 16th of May, the apparent or heliacal rising on the 9th of June, the true evening setting on the 3d of May.

Hence it is clear that Ovid, Columella, and Pliny, copying in (1) a blunder which had found its way into the Calendar of Caesar, assigned the morning rising to the 2nd of May instead of the true evening setting. The true evening rising lay between the days named in (2). The heliacal rising was thirteen days after (3), seven days after (4), six days before (5).

THE CRETAN CROWN.

We have seen above that Virgil (*Georg.* i. 222), instructs the farmer not to commence sowing wheat until after the Pleiades have set in the morning :

Gnosiaque ardentis decedat stella Coronae,

words which must signify the setting of the Cretan Crown. The apparent evening (or heliacal) setting of this constellation fell at Rome for this epoch upon the 9th of November, the very day after the apparent morning setting of the Pleiades.

Ovid (*Fast.* iii. 459), after having spoken of the rising of Pegasus on the night of March 7th, adds,

Proteus adspicies venienti nocte Coronam —
Gnosida,

words which denote the evening rising ; and, in reality, the apparent evening rising took place on the tenth of March, only two days later than the date here fixed.

THE KIDS.

Virgil (*Georg.* i. 205) when inculcating the utility of observing the stars, declares that it is no less necessary for the husbandman than for the mariner to watch Arcturus and the glistening Snake, and the days of the Kids (*haedorumque dies serena*). Elsewhere (*Aen.* ix. 658) he compares a dense flight of arrows and javelins rattling against shields and helmets to the torrents of rain proceeding from the west under the influence of the watery

kids (*pluvialibus haedis*). Horace (*Carm.* iii. 1. 27) dwells on the terrors of setting Arcturus and the rising Kid, while Ovid (*Trist.* i. 1. 13) and Theocritus (c. 53. See Schol.) speak in the same strain. In Columella's Calendar (xi. 2. § 66) we find *V. Kal. Octob.* (27th Sept.) *Haedi exoritur*, and a little farther on (§ 73) *Pridie Non. Octob.* (4th Nov.) *Haedi oriuntur vespere*. The former date marks the precise day of the true evening rising of the foremost kid at Rome for the Julian era ; and hence the apparent evening rising, which would fall some days earlier, would indicate the approach of those storms which commonly attend upon the autumnal equinox.

III. DIVISION OF THE YEAR INTO SEASONS.

As early as the age of Hesiod the commencement of different seasons was marked by the risings and settings of certain stars ; but before proceeding to determine these limits it will be necessary to ascertain into how many compartments the year was portioned out by the earlier Greeks.

Homer clearly defines three : — 1. Spring (*εαρ*), at whose return the nightingale trills her notes among the greenwood brakes (*Od.* xix. 519). 2. Winter (*χειμῶν*, *χείμα*), at whose approach, accompanied by deluges of rain (*δδίσφατον θυβρον*), the cranes fly screaming away to the streams of ocean (*Il.* iii. 4, comp. Hesiod. *Erg.* 448). 3. Summer (*δέρπος*), to which *χείμα* is directly opposed (*Od.* vii. 118). 4. Three lines occur in the *Odyssey* (xi. 191. *αὐτὰρ ἐπὶν ἔλθοις δέρος τε θαλῦνι τ' ὀπάρῃ*, and also xii. 76, xiv. 384) where the word *δωάρα* seems to be distinguished from *δέρπος*, and is in consequence generally translated *autumn*. Ideler, however, has proved in a satisfactory manner (*Handbuch der Chron.* i. p. 243) that the term originally indicated not a season separate from and following after summer, but the hottest part of summer itself ; and hence Sirius, whose heliacal rising took place in the age of Homer about the middle of July, is designated as *ἀστὴρ θερινός* (*Il.* v. 5 ; see Schol. and Eustath. ad loc. ; compare also *Il.* xxii. 26), while Aristotle in one passage (*Meteorolog.* ii. 5) makes the heliacal rising of Sirius, which he notes as coinciding with the entrance of the sun into Leo, i. e. 24th July of the Julian calendar, the sign of the commencement of *δωάρα* ; and in another passage (*Problem.* xv. 26, xxvi. 14) places the rising of Orion at the beginning of *δωάρα*, and the setting of the same constellation at the beginning of winter — *ἐν μεταβολῇ τοῦ δέρος καὶ χειμῶνος* — an expression which clearly indicates that *δωάρα* was included within the more general *δέρπος*.

Hesiod notices *εαρ* (*Erg.* 462), *δέρπος* (*l. c.*), *χείμα* (450), and in his poem we find the trace of a fourfold division, for he employs the adjective *μεροθερινός* (*Erg.* 415) in reference to the period of the first rains, when the excessive heat had in some degree abated. These rains he elsewhere calls the *θερινὸν θυβρον*, and notices them in connection with the vintage, when he enjoins the mariner to hasten home to port before the serene weather has passed away — *μηδὲ μένειν ὄλον τε νέον καὶ θερινὸν θυβρον*. Moreover, by making *δέρπος* proper end fifty days after the solstice (*Erg.* 663) he leaves a vacant space from the middle of August to the end of October, which he must have intended to fill by a fourth season, which he nowhere specifically names. As late, however, as

Aeschylus (*Prom.* 453) and Aristophanes (*Av.* 710) the seasons are spoken of as three, χειμών, ἔαρ, θέρος by the former; χειμὼν, ἔαρ, ὁπώρα by the latter. Nor can we avoid attaching some weight to the fact that the most ancient poets and artists recognised the Ὀραὶ as three only, bearing, according to the Theogony (901) the symbolical appellation of Order (Εὐνομία), Justice (Δίκη), and blooming Peace (Εἰρήνη). Indeed Pausanias has preserved a record of a time when the Ὀραὶ were known as two goddesses only — Καρπὸς, the patroness of fruits, and Θαλλῶ, the guardian of blossoms (ix. 35. § 2). We may hence safely conclude that the Greeks for many ages discriminated three seasons only, Winter, Spring, and Summer, that the general name for the whole of summer being θέρος, the hottest portion was distinguished as ὁπώρα, and that the latter term was gradually separated from the former, so that θέρος was commonly employed for early summer, and ὁπώρα for late summer.

The first direct mention of autumn is contained in the treatise *De Diaeta* (lib. iii. &c.), commonly ascribed to Hippocrates (B.C. 420), where we are told that the year is usually divided into four parts, Winter (χειμὼν), Spring (ἔαρ), Summer (θέρος), Autumn (φθινόπωρον); and this word with its synonym μετόπωρον occurs regularly from this time forward, proving that those by whom they were framed considered ὁπώρα, not as autumn, but as the

period which immediately preceded autumn and merged in it.

We discover also in the Greek medical writers traces of a sevenfold division, although there is no evidence to prove that it was ever generally adopted. According to this distribution, summer is divided into two parts, and winter into three, and we have, 1. Spring (ἔαρ). 2. Early summer (θέρος). 3. Late summer (ὁπώρα). 4. Autumn (φθινόπωρον α. μετόπωρον). 5. The ploughing or sowing season (ἄροτος α. σπορητός). 6. Winter proper (χειμὼν). 7. The planting season (φυτάλια).

From Varro (*R. R.* i. 28), Columella (ix. 14, xi. 2), and Pliny (xviii. 26) we infer that Julius Caesar, in his Calendar, selected an eight-fold division, each of the four seasons being subdivided into two, after this manner: 1. *Veris Initium*. 2. *Aequinoctium Vernalum*. 3. *Aestatis Initium*. 4. *Solstitium*. 5. *Autumni Initium*. 6. *Aequinoctium Autumni*. 7. *Hemis Initium*. 8. *Bruma*.

We find no trace in Homer of any connection having been established between the recurrence of particular astronomical phenomena, and the return of the seasons. But in Hesiod, as remarked above, and in subsequent writers, the limits of the divisions which they adopt are carefully defined by the risings and settings of particular stars or constellations. The following tabular arrangement will afford a view of the most important systems:

Division of the Seasons according to Hesiod.

Commencement of spring	-	The evening (ἀκρονέφανος) rising of Arcturus 60 days after the winter solstice (<i>Erg.</i> 564).
Commencement of summer (ἔμπερος) or reaping time	-	(Heliacal) rising of the Pleiades after they have remained concealed for 40 days and 40 nights (<i>Erg.</i> 383).
Thrashing time	-	(Heliacal) rising of the first star in Orion (<i>Erg.</i> 595).
Period of most oppressive heat	-	(Heliacal) rising of Sirius (<i>Erg.</i> 582, &c.).
End of summer (θέρος)	-	Fifty days after the solstice (<i>Erg.</i> 663).
Period of the vintage	-	(Heliacal) rising of Arcturus. Culmination of Sirius and Orion (<i>Erg.</i> 609).
Commencement of winter, which coincides with ploughing time (ἄροτος), and the close of navigation	-	The (morning) setting of the Pleiades (<i>Erg.</i> 383), of the Hyades, and of Orion (<i>Erg.</i> 615).

According to the Author of the Treatise "De Diaeta."

Commencement of spring	-	The vernal equinox.
" summer	-	Heliacal rising of the Pleiades.
" autumn	-	Heliacal rising of Arcturus.
" winter	-	Morning setting of Pleiades.

Sevenfold Division, according to Hippocrates and other Medical Writers.

Commencement of spring	-	The vernal equinox.
" early summer (θέρος)	-	Heliacal rising of the Pleiades.
" late summer (ὁπώρα)	-	Heliacal rising of Sirius.
" autumn	-	Heliacal rising of Arcturus.
" ploughing and sowing season (ἄροτος σπορητός).	-	Morning setting of Pleiades.
Commencement of winter proper (χειμὼν)	-	Winter solstice.
" planting season (φυτάλια)	-	Evening rising of Arcturus.

Seasons according to Euctemon, Eudorus, and other Authors quoted in the Parapegma of Geminus.

First breezes of Zephyrus	-	16° or 17° of Aquarius.
Appearance of the swallow	-	2° of Pisces.
Appearance of kite (κίτινός φαιρέται)	-	17° of Pisces (Eud.) — 22° of Pisces (Euctem.).
Commencement of summer	-	13° of Taurus.
Midwinter	-	14° of Capricornus.

According to the Calendar of Julius Caesar.

Commencement of spring -	The breezes of Favonius begin to blow	VII. Id. Feb. (7 February).
Vernal equinox -	- - - - -	VIII. Kal. Apr. (25 March).
Commencement of summer	Heliacal rising of the Pleiades (Vergil)	VII. Kal. Mai. (9 May).
Summer solstice (<i>solstitium</i>)	- - - - -	VIII. Kal. Jun. (24 June).
Commencement of autumn	Morning setting of Fidicula -	III. Id. Aug. (11 August).
Autumnal equinox -	- - - - -	VIII. Kal. Oct. (24 September).
Commencement of winter	Morning setting of the Pleiades -	III. Id. Nov. (11 November).
Winter solstice (<i>bruma</i>) -	- - - - -	VIII. Kal. Jan. (25 December).

Thus assigning to spring, ninety-one days; to summer, ninety-four days; to autumn, ninety-one days; to winter, eighty-four days. [W. R.]

ASTY'NOMI (*ἀστυνόμοι*), public officers in most of the Greek states, who had to preserve order in the streets, to keep them clean, and to see that all buildings, both public and private, were in a safe state, and not likely to cause injury by falling down. (Aristot. *Polit.* vi. 5, ed. Schneider; Plat. *Leg.* vi. pp. 759, 763; Dig. 43. tit. 10. a. 1.) At Athens there were ten astynomi, five for the city and five for the Peiræus, and not twenty, fifteen for the city and five for the Peiræus, as is stated in some editions of Harpocration. (Harpocrat. *Scid.* s. v.; Bekker, *Anecd.* p. 455; Büekh, *Corp. Inscrip.* vol. i. p. 337.) A person was obliged to discharge this burdensome office only once in his life. (Dem. *Proem.* p. 1461.) The extent of the duties of the Athenian astynomi is uncertain. Aristotle states (*op. Harpocr.* l. c.) that they had the superintendence of the scavengers (*καρπολύγοι*), which would naturally belong to them on account of their attending to the cleansing of the streets, and he likewise informs us that they had the superintendence of the female musicians. It is probable, however, that they had only to do with the latter in virtue of their duty of preserving order in the streets, since the regulation of all the public prostitutes belonged to the agoranomi. [AGORANOMI] It would likewise appear from a circumstance related by Diogenes Laërtius (vi. 90) that they could prevent a person from appearing in the streets in luxurious or indecent apparel. It is mentioned on one occasion that a will was deposited with the astynomi (Isæus, *de Cleonyma.* Herod. p. 36, ed. Steph.), a circumstance which does not seem in accordance with the duties of their office. (Meier, *Att. Proc.* p. 93, &c.)

ASY'LUM (*ἄσυλον*). In the Greek states the temples, altars, sacred groves, and statues of the gods generally possessed the privileges of protecting slaves, debtors, and criminals, who fled to them for refuge. The laws, however, do not appear to have recognised the right of all such sacred places to afford the protection which was claimed; but to have confined it to a certain number of temples, or altars, which were considered in a more especial manner to have the *ἀσυλία*, or *jus asyli*. (Servius *ad Virg. Æn.* ii. 761.) There were several places in Athens which possessed this privilege; of which the best known was the Theseum, or temple of Theseus, in the city, which was chiefly intended for the protection of the ill-treated slaves, who could take refuge in this place, and compel their masters to sell them to some other person. (Plut. *Theseus*, 36; Schol. *ad Aristoph. Equit.* 1309; Hesych. and Suidas, s. v. ἄστυον.) The other places in Athens which pos-

seessed the *jus asyli* were: the altar of pity, in the agora, the altar of Zeus Ἄγωνα, the altars of the twelve gods, the altar of the Eumenides on the Areiopagus, the Theseum in the Peiræus, and the altar of Artemis, at Munychia (Meier, *Att. Proc.* p. 404). Among the most celebrated places of asylum in other parts of Greece, we may mention the temple of Poseidon, in Laconia, on Mount Taenarus (Thuc. i. 128, 133; Corn. Nep. *Paus.* c. 4); the temple of Poseidon, in Calauria (Plut. *Demosth.* 29); and the temple of Athena Alcia, in Tegea (Paus. iii. 5. § 6). It would appear, however, that all sacred places were supposed to protect an individual to a certain extent, even if their right to do so was not recognised by the laws of the state, in which they were situated. In such cases, however, as the law gave no protection, it seems to have been considered lawful to use any means in order to compel the individuals who had taken refuge to leave the sanctuary, except dragging them out by personal violence. Thus it was not uncommon to force a person from an altar or a statue of a god, by the application of fire. (Eurip. *Androm.* 256, with Schol.; Plaut. *Mostell.* v. l. 65.)

In the time of Tiberius, the number of places possessing the *jus asyli* in the Greek cities in Greece and Asia Minor became so numerous, as seriously to impede the administration of justice. In consequence of this, the senate, by the command of the emperor, limited the *jus asyli* to a few cities, but did not entirely abolish it, as Suetonius (*Tib.* 37) has erroneously stated. (See Tacit. *Ann.* iii. 60—63, iv. 14; and Ernesti's *Excursus* to Suet. *Tib.* 37.)

The asylum which Romulus is said to have opened at Rome on the Capitoline hill, between its two summits, in order to increase the population of the city (Liv. i. 8; Vell. Pat. i. 8; Dionys. ii. 15), was, according to the legend, a place of refuge for the inhabitants of other states, rather than a sanctuary for those who had violated the laws of the city. In the republican and early imperial times, a right of asylum, such as existed in the Greek states, does not appear to have been recognised by the Roman law. Livy seems to speak of the right (xxxv. 51) as peculiar to the Greeks:—*Templum est Apollinis Delium—eo jure sancto quo sunt templa quæ asyla Græci appellant.* By a constitution of Antoninus Pius, it was decreed that, if a slave in a province fled to the temples of the gods or the statues of the emperors, to avoid the ill-usage of his master, the præses could compel the master to sell the slave (Gaius, i. 53); and the slave was not regarded by the law as a runaway—*fugitivus* (Dig. 21. tit. 1. a. 17.

§ 12). This constitutio of Antoninus is quoted in Justinian's Institutes (1. tit. 8. s. 2), with a slight alteration; the words *ad aedem sacram* are substituted for *ad fana decorum*, since the jus asyli was in his time extended to churches. Those slaves who took refuge at the statue of an emperor were considered to inflict disgrace on their master, as it was reasonably supposed that no slave would take such a step, unless he had received very bad usage from his master. If it could be proved that any individual had instigated the slave of another to flee to the statue of an emperor, he was liable to an action *corrupti servi*. (Dig. 47. tit. 11. s. 5.) The right of asylum seems to have been generally, but not entirely, confined to slaves. (Dig. 48. tit. 19. s. 28. § 7. Comp. Osiander, *De Asylio Gentilium*, in Gronov. *Thesaur.* vol. vi.; Simon, *Sur les Asyles*, in *Mém. de l'Acad. des Inscript.* vol. iii.; Bringer, *De Asylorum Origine, Usu, et Abusu*, Lugd. Bat. 1828; C. Neu, *De Asylio*, Gott. 1837; respecting the right of asylum in the churches under the Christian emperors, see Rein, *Das Criminalrecht der Römer*, p. 896.)

The term ἀσυλία was also applied to the security from plunder (ἀσυλία καὶ κατὰ γῆν καὶ κατὰ θάλασσαν), which was sometimes granted by one state to another, or even to single individuals. (See Böckh, *Corp. Inscript.* i. p. 725.)

ATELEIA (Ἀτελεία), is generally immunity or exemption from some or all the duties which a person has to perform towards the state. Immunities may be granted either as a privilege to the citizens of a state, exempting them from certain duties which would otherwise be incumbent on them, or they are given as honorary distinctions to foreign kings, states, communities or even private individuals. With regard to the latter the ateleia was usually an exemption from custom duties on the importation or exportation of goods, and was given as a reward for certain good services. Thus Croesus received the ateleia at Delphi (Herod. i. 54), the Deceleans at Sparta (Herod. ix. 73), and Leucön, the ruler of Bosphorus, at Athens. (Dem. c. *Lept.* p. 466, &c.) It appears that if a person thus distinguished, or a citizen of a foreign community possessing the ateleia, took up his residence in the state which had granted it, he also enjoyed other privileges, such as the exemption from the protection money, or tax which resident aliens had to pay at Athens. (Harpocrat. s. v. *ισοτελής*) Nay this ateleia might even become equivalent to the full franchise, as, e. g. the Byzantines gave the exemption from liturgies, and the franchise to all Athenians that might go to Byzantium. (Dem. *De Coron.* p. 256.) In many instances a partial ateleia, or an exemption from custom duties, was granted for the purpose of encouraging commerce. (Theophr. *Char.* 23; Schol. ad *Aristoph. Plut.* 905, with Böckh's remarks, *Publ. Econ.* p. 87.) With regard to the inhabitants of a state, we must, as in the case of Athens, again distinguish between two classes, viz. the resident aliens and real citizens. At Athens all resident aliens had to pay a tax (*μετοίκιον*) which we may term protection-tax, because it was the price for the protection they enjoyed at Athens; but as it was the interest of the state to increase commerce, and for that purpose to attract strangers to settle at Athens, many of them were exempted from this tax, i. e. enjoyed the ἀτέλεια μετοίκιου (Dem. c.

Aristocr. p. 691), and some were even exempted from custom duties, and the property tax or *εὐροφόρ*, from which an Athenian citizen could never be exempted. The ateleia enjoyed by Athenian citizens was either a general immunity (ἀτέλεια ἀνδρῶν), such as was granted to persons who had done some great service to their country, and even to their descendants, as in the case of Harmodius and Aristogeiton; or it was a partial one exempting a person from all or certain liturgies, from certain custom duties, or from service in the army. The last of these immunities was legally enjoyed by all members of the council of the Five Hundred (Lycurg. c. *Leocr.* 11), and the archons for the time being, by the farmers of the custom duties (Dem. c. *Neacr.* 1853), and by those who traded by sea, although with them the exemption must have been limited. (Schol. ad *Arist. Plut.* 905, *Achorn.* 399; Suid. s. v. *εὐροφόρος εἰμυ*.) Most information respecting the ateleia is derived from Demosthenes' speech against Leptines. But compare also Wolf's *Prolegom. ad Lept.* p. lxxi. &c.; Böckh, *Publ. Econ.* p. 85, &c.; Westermann, *De publicis Atheniensium Honoribus et Præmiis*, p. 6, &c. [L. S.]

ATELLA'NAE FAB'ULAE. [COMOEDIA.]

ATHENAEUM (ἀθήναιον), a school (*ἵδρυς*) founded by the Emperor Hadrian at Rome, for the promotion of literary and scientific studies (*ingeniarum artium*), and called Athenaeum from the town of Athens, which was still regarded as the seat of intellectual refinement. The Athenaeum was situated on the Capitolin hill. It was a kind of university; and a staff of professors, for the various branches of study, was regularly engaged. Under Theodosius II., for example, there were three orators, ten grammarians, five sophists, one philosopher, two lawyers, or juriconsults. Besides the instruction given by these magistri, poets, orators, and critics were accustomed to recite their compositions there, and these prelections were sometimes honoured with the presence of the emperors themselves. There were other places where such recitations were made, as the Library of Trajan [BIBLIOTHECA]; sometimes also a room was hired, and made into an auditorium, seats erected, &c. The Athenaeum seems to have continued in high repute till the fifth century. Little is known of the details of study or discipline in the Athenaeum, but in the constitution of the year 370, there are some regulations respecting students in Rome, from which it would appear that it must have been a very extensive and important institution. And this is confirmed by other statements contained in some of the Fathers and other ancient authors, from which we learn that young men from all parts, after finishing their usual school and college studies in their own town or province, used to resort to Rome as a sort of higher university, for the purpose of completing their education. (Aur. Vict. *Caes.* 14; Dion Cass. lxxiii. 17; Capitolin. *Pertin.* 11, *Gordian.* Sen. 3; Lamprid. *Alex. Sever.* 35; Cod. Theod. 14. tit. 9. s. 1.) [A. A.]

ATHLETAE (ἀθληταί, ἀθλητῆρες), were persons who contended in the public games of the Greeks and Romans for the prizes (ἀθλα, whence the name of ἀθληταί), which were given to those who conquered in contests of agility and strength. This name was, in the later period of Grecian history and among the Romans, properly confined to those persons who entirely devoted themselves to a course of training which might fit them to excel

in such contests, and who, in fact, made athletic exercises their profession. The athlete differed, therefore, from the *agonistæ* (*ἀγωνιστάς*), who only pursued gymnastic exercises for the sake of improving their health and bodily strength, and who, though they sometimes contended for the prizes in the public games, did not devote their whole lives, like the athlete, to preparing for these contests. In early times there does not appear to have been any distinction between the athlete and agonistæ; since we find that many individuals, who obtained prizes at the great national games of the Greeks, were persons of considerable political importance, who were never considered to pursue athletic exercises as a profession. Thus we read that Phayllus, of Crotona, who had thrice conquered in the Pythian games, commanded a vessel at the battle of Salamis (Herod. viii. 47; Paus. x. 9. § 1); and that Doriæus, of Rhodes, who had obtained the prize in all of the four great festivals, was celebrated in Greece for his opposition to the Athenians. (Paus. vi. 7. § 1, 2.) But as the individuals, who obtained the prizes in these games, received great honours and rewards, not only from their fellow-citizens, but also from foreign states, those persons who intended to contend for the prizes made extraordinary efforts to prepare themselves for the contest; and it was soon found that, unless they subjected themselves to a severer course of training than was afforded by the ordinary exercises of the gymnasia, they would not have any chance of gaining the victory. Thus arose a class of individuals, to whom the term athlete was appropriated, and who became, in course of time, the only persons who contended in the public games.

Athletæ were first introduced at Rome, B. C. 186, in the games exhibited by M. Fulvius, on the conclusion of the Aetolian war. (Liv. xxxix. 22.) Aemilius Paulus, after the conquest of Perses, A. C. 167, is said to have exhibited games at Amphipolia, at which athlete contended. (Liv. xlv. 32.) A *certamen athletarum* (Val. Max. ii. 4. § 7) was also exhibited by Scæurus, in A. C. 59; and among the various games with which Julius Cæsar gratified the people, we read of a contest of athlete, which lasted for three days, and which was exhibited in a temporary stadium in the Campus Martius. (Suet. Jul. 39.) Under the Roman emperors, and especially under Nero, who was passionately fond of the Grecian games, the number of athlete increased greatly in Italy, Greece, and Asia Minor; and many inscriptions respecting them have come down to us, which show that professional athlete were very numerous, and that they enjoyed several privileges. They formed at Rome a kind of corporation, and possessed a *tabularium*, and a common hall—*curia athletarum* (Orelli, *Inscript.* 2688), in which they were accustomed to deliberate on all matters which had a reference to the interests of the body. We find that they were called *Herculei*, and also *epici*, because they were accustomed to exercise, in winter, in a covered place called *xystus* (Vitruv. vi. 10); and that they had a president, who was called *agathorobus*, and also *ἀρχιπρύτας*.

These athlete who conquered in any of the great national festivals of the Greeks were called *harmistes* (*ἡρμιστῆς*), and received, as has been already remarked, the greatest honours and rewards. Such a conqueror was considered to confer honour

upon the state to which he belonged; he entered his native city in triumph, through a breach made in the walls for his reception, to intimate, says Plutarch, that the state which possessed such a citizen had no occasion for walls. He usually passed through the walls in a chariot drawn by four white horses, and went along the principal street of the city to the temple of the guardian deity of the state, where hymns of victory were sung. Those games, which gave the conquerors the right of such an entrance into the city, were called *isolestici* (from *εἰσολαίειν*). This term was originally confined to the four great Grecian festivals, the Olympian, Isthmian, Nemean, and Pythian; but was afterwards applied to other public games, as, for instance, to those instituted in Asia Minor. (Suet. Ner. 25; Dion Cass. lxxiii. 20; Plut. *Symp.* ii. 5. § 2; Plin. *Ep.* x. 119, 120.) In the Greek states the victors in these games not only obtained the greatest glory and respect, but also substantial rewards. They were generally relieved from the payment of taxes, and also enjoyed the first seat (*προεδρία*) in all public games and spectacles. Their statues were frequently erected at the cost of the state, in the most frequented part of the city, as the market-place, the gymnasia, and the neighbourhood of the temples. (Paus. vi. 13. § 1, vii. 17. § 3.) At Athens, according to a law of Solon, the conquerors in the Olympic games were rewarded with a prize of 500 drachmæ, and the conquerors in the Isthmian, with one of 100 drachmæ (Diog. Lært. i. 55; Plut. Sol. 23); and at Sparta they had the privilege of fighting near the person of the king. (Plut. *Lyc.* 22.) The privileges of the athlete were preserved and increased by Augustus (Suet. *Aug.* 45); and the following emperors appear to have always treated them with considerable favour. Those who conquered in the games called *isolestici* received, in the time of Trajan, a sum from the state, termed *oposmia*. (Plin. *Ep.* x. 119, 120; compare Vitruv. ix. *Præf.*) By a rescript of Diocletian and Maximian, these athlete who had obtained in the sacred games (*sacri certaminis*, by which is probably meant the *isolestici ludi*) not less than three crowns, and had not bribed their antagonists to give them the victory, enjoyed immunity from all taxes. (Cod. 10. tit. 53.)

The term athlete, though sometimes applied metaphorically to other combatants, was properly limited to those who contended for the prize in the five following contests:—1. *Running* (*δρόμος, cursus*). 2. *Wrestling* (*πάλη, lucta*). 3. *Boxing* (*πυγμή, pugilatus*). 4. The *pentathlon* (*πένταθλον*), or, as the Romans called it, *quinqvortium*. 5. The *pancratium* (*παγκράτιον*). Of all these an account is given in separate articles. [STADIUM; LUCTA; PUGILATUS; PENTATHLON; PANCRATIUM.] These contests were divided into two kinds—the *severe* (*βαρέα, βαρύτερα*), and the *light* (*κοῦφα, κουφότερα*). Under the former were included wrestling, boxing, and the exercises of the pancratium, which consisted of wrestling and boxing combined, and was also called *pammachion*; and under the latter, running, and the separate parts of the pentathlon, such as leaping, throwing the discus, &c. (Plat. *Leg.* viii. p. 833, *Enthyd.* p. 271.)

Great attention was paid to the training of the athlete. They were generally trained in the palaestras, which, in the Grecian states, were distinct places from the gymnasia, though they

have been frequently confounded by modern writers. [PALAESTRA.] Their exercises were superintended by the gymnasiarch (*γυμνασιάρχης*), and their diet was regulated by the aliptes (*ἀλειπτήης*). [ALIPTEAE.] According to Pausanias (vi. 7. § 3), the athleteae did not anciently eat meat, but principally lived upon fresh cheese (*τυρόν ἐκ τῶν τειλάρων*); and Diogenes Laërtius (viii. 12, 13) informs us that their original diet consisted of dried figs (*κρχδοὶ ξηραῖς*), moist or new cheese (*τυροὶς ὕγροις*), and wheat (*τυροὶς*). The eating of meat by the athleteae is said, according to some writers (Paus. l. c.), to have been first introduced by Dromeus of Stymphalus, in Arcadia; and, according to others, by the philosopher Pythagoras, or by an aliptes of that name. (Diog. Laërt. l. c.) According to Galen (*De Val. Tuend.* iii. 1), the athleteae, who practised the severe exercises (*βαρεῖς ἀθλήματα*), ate pork and a particular kind of bread; and from a remark of Diogenes the Cynic (Diog. Laërt. vi. 49), it would appear that in his time beef and pork formed the ordinary diet of the athleteae. Beef is also mentioned by Plato (*De Rep.* i. p. 338) as the food of the athleteae; and a writer quoted by Athenæus (ix. p. 402, c. d.) relates that a Theban who lived upon goats' flesh became so strong, that he was enabled to overcome all the athleteae of his time. At the end of the exercises of each day, the athleteae were obliged to take a certain quantity of food, which was usually called *ἀναγκοφάγια* and *ἀναγκοτροφία*, or *βλαυος τροφή* (Arist. *Pol.* viii. 4); after which, they were accustomed to sleep for a long while. The quantity of animal food which some celebrated athleteae, such as Milo, Theagenes, and Astydarnas, are said to have eaten, appears to us quite incredible. (Athen. x. pp. 412, 413.) The food which they ate was usually dry, and is called by Juvenal *coliphia* (ii. 53).

The athleteae were anointed with oil by the aliptae, previously to entering the palaestra and contending in the public games, and were accustomed to contend naked. In the description of the games given in the twenty-third book of the *Iliad* (l. 685, 710), the combatants are said to have worn a girdle about their loins; and the same practice, as we learn from Thucydides (i. 6), anciently prevailed at the Olympic games, but was discontinued afterwards.

This subject is one of such extent that nothing but an outline can here be given; further particulars are contained in the articles *ISTHμία*, *NEMEA*, *OLYMPIA*, and *PYTHIA*; and the whole subject is treated most elaborately by Krause, *Die Gymnastik und Agonistik der Hellenen*, Leipzig, 1841.

ATHLOTHETAE. [AGONOTHETAE.]

ATY/MIA (*ἀτιμία*). A citizen of Athens had the power to exercise all the rights and privileges of a citizen as long as he was not suffering under any kind of atimia, a word which in meaning nearly answers to our outlawry, in as much as a person forfeited by it the protection of the laws of his country, and mostly all the rights of a citizen also. The atimia occurs in Attica as early as the legislation of Solon, without the term itself being in any way defined in the laws (Dem. c. *Aristocrat.* p. 640), which shows that the idea connected with it must, even at that time, have been familiar to the Athenians, and this idea was probably that of a complete civil death; that is, an individual labouring under atimia, together with

all that belonged to him (his children as well as his property), had, in the eyes of the state and the laws, no existence at all. This atimia, undoubtedly the only one in early times, may be termed a total one, and in cases where it was inflicted as a punishment for any particular crime, was generally also perpetual and hereditary; hence Demosthenes, in speaking of a person suffering under it, often uses the expression *καθόπαξ ἄτιμος*, or *ἅπλως ἄτιμῶτα* (a. *Mid.* p. 542, c. *Aristot.* p. 779, c. *Mid.* p. 546). A detailed enumeration of the rights of which an atimos was deprived, is given by Aeschines (a. *Timarch.* pp. 44, 46). He was not allowed to hold any civil or priestly office whatever, either in the city of Athens itself, or in any town within the dominion of Athens; he could not be employed as herald or as ambassador; he could not give his opinion or speak either in the public assembly or in the senate, he was not even allowed to appear within the extent of the agora; he was excluded from visiting the public sanctuaries as well as from taking part in any public sacrifice; he could neither bring an action against a person from whom he had sustained an injury, nor appear as a witness in any of the courts of justice; nor could, on the other hand, any one bring an action against him. (Compare Dem. c. *Neaer.* p. 1353, c. *Timocrat.* p. 739, *De Lib. Rhod.* p. 200, *Philip.* iii. p. 122, c. *Mid.* p. 542, *Lys.* c. *Andoc.* p. 222.) The right which, in point of fact, included most of those which we have here enumerated, was that of taking part in the popular assembly (*ἀέγειν* and *γράφειν*). Hence, this one right is most frequently the only one which is mentioned as being forfeited by atimia. (Dem. c. *Timocrat.* pp. 715, 717; Aeschin. c. *Timarch.* p. 54, &c.; Andocid. *De Myst.* p. 36; Dem. c. *Androt.* pp. 602, 604.) The service in the Athenian armies was not only regarded in the light of a duty which a citizen had to perform towards the state, but as a right and a privilege; of which therefore the atimos was likewise deprived. (Dem. c. *Timocrat.* p. 715.) When we hear that an atimos had no right to claim the protection of the laws, when suffering injuries from others, we must not imagine that it was the intention of the law to expose the atimos to the insults or ill-treatment of his former fellow-citizens, or to encourage the people to maltreat him with impunity, as might be inferred from the expression of *ἄτιμοι τοῦ ἐθέλοντος* (Plat. *Gorg.* p. 508); but all that the law meant to do was, that if any such thing happened, the atimos had no right to claim the protection of the laws. We have above referred to two laws mentioned by Demosthenes, in which the children and the property of an atimos were included in the atimia. As regards the children or heirs, the infamy came to them as an inheritance which they could not avoid. [HEIRS.] But when we read of the property of a man being included in the atimia, it can only mean that it shared the lawless character of its owner, that is, it did not enjoy the protection of the law, and could not be mortgaged. The property of an atimos for a positive crime, such as those mentioned below, was probably never confiscated, but only in the case of a public debtor, as we shall see hereafter; and when Andocides (*de Myst.* p. 36) uses the expression *ἄτιμοι ἦσαν τὰ σέματα, τὰ δὲ χρήματα εἶχον*, the contrary which he had in view can only have been the case of a public debtor. On the whole, it appears to have been

foreign to Athenian notions of justice to confiscate the property of a person who had incurred personal atimia by some illegal act. (Dem. c. *Lept.* p. 504.)

The crimes for which total and perpetual atimia was inflicted on a person were as follow:—The giving and accepting of bribes, the embezzlement of public money, manifest proofs of cowardice in the defence of his country, false witness, false accusation, and bad conduct towards parents (Andocid. l. c.); moreover, if a person either by deed or by word injured or insulted a magistrate while he was performing the duties of his office (Dem. c. *Mid.* p. 524, *Pro Megalop.* p. 200); if as a judge he had been guilty of partiality (c. *Mid.* p. 543); if he squandered away his paternal inheritance, or was guilty of prostitution (Diog. Laërt. i. 2. 7), &c. We have above called this atimia perpetual; for if a person had once incurred it, he could scarcely ever hope to be lawfully released from it. A law, mentioned by Demosthenes (c. *Timocrat.* p. 715), ordained that the releasing of any kind of atimoi should never be proposed in the public assembly, unless an assembly consisting of at least 6000 citizens had previously, in secret deliberation, agreed that such might be done. And even then the matter could only be discussed in so far as the senate and people thought proper. It was only in times when the republic was threatened by great danger that an atimos might hope to recover his lost rights, and in such circumstances the atimoi were sometimes restored *en masse* to their former rights. (Xen. *Hellas.* ii. 2. § 11; Andocid. l. c.)

A second kind of atimia, which though in its extent a total one, lasted only until the person subject to it fulfilled those duties for the neglect of which it had been inflicted, was not so much a punishment for any particular crime as a means of compelling a man to submit to the laws. This was the atimia of public debtors. Any citizen of Athens who owed money to the public treasury, whether his debt arose from a fine to which he had been condemned, or from a part he had taken in any branch of the administration, or from his having pledged himself to the republic for another person, was in a state of total atimia if he refused to pay or could not pay the sum which was due. His children during his lifetime were not included in his atimia; they remained *ἐπιτιμοί*. (Dem. c. *Theocris.* p. 1322.) If he persevered in his refusal to pay beyond the time of the ninth prytany, his debt was doubled, and his property was taken and sold. (Andocid. l. c.; Dem. c. *Nicostrat.* p. 1255, c. *Neser.* p. 1347.) If the sum obtained by the sale was sufficient to pay the debt, the atimia appears to have ceased; but if not, the atimia not only continued to the death of the public debtor, but was inherited by his heirs, and lasted until the debt was paid off. (Dem. c. *Androt.* p. 603, compare Böckh, *Publ. Econ. of Athens*, p. 391, 2d ed.; and HERES.) This atimia for public debt was sometimes accompanied by imprisonment, as in the case of Alcibiades and Cimon; but whether in such a case, on the death of the prisoner, his children were likewise imprisoned, is uncertain. If a person living in atimia for public debt petitioned to be released from his debt or his atimia, he became subject to *ἐνδελκίς*: and if another person made the attempt for him, he thereby forfeited his own property; if the proedros even ventured to put the question to the vote, he himself became

atimos. The only but almost impracticable mode of obtaining release was that mentioned above in connection with the total and perpetual atimia.

A third and only partial kind of atimia deprived the person on whom it was inflicted only of a portion of his rights as a citizen. (Andocid. *de Myst.* p. 17 and 36.) It was called the *ἀτίμια κατὰ ἀποράταιν*, because it was specified in every single case what particular right was forfeited by the atimos. The following cases are expressly mentioned:—If a man came forward as a public accuser, and afterwards either dropped the charge or did not obtain a fifth of the votes in favour of his accusation, he was not only liable to a fine of 1000 drachmae, but was subjected to an atimia which deprived him of the right, in future, to appear as accuser in a case of the same nature as that in which he had been defeated or which he had given up. (Dem. c. *Aristog.* p. 803; Harpocrat. s. v. *Δάριον γραφή*.) If his accusation had been a *γραφὴ ἀρετίας*, he also lost the right of visiting particular temples. (Andocid. *de Myst.* p. 17.) Some cases are also mentioned in which an accuser, though he did not obtain a fifth of the votes, was not subjected to any punishment whatever. Such was the case in a charge brought before the first archon respecting the ill-treatment of parents, orphans, or heiresses. (Meier, *de Bon. Domat.* p. 133.) In other cases the accuser was merely subject to the fine of 1000 drachmae, without incurring any degree of atimia. (Pollux, viii. 53.) But the law does not appear to have always been strictly observed. (Böckh, *Publ. Econ. of Athens*, p. 381, 2d ed.) Andocides mentions some other kinds of partial atimia, but they seem to have had only a temporary application at the end of the Peloponnesian war; and the passage (*De Myst.* p. 36) is so obscure or corrupt, that nothing can be inferred from it with any certainty. (Wachsmuth, *Hellen. Alterth.* vol. ii. p. 198, 2d ed.) Partial atimia, when once inflicted, lasted during the whole of a man's life.

The children of a man who had been put to death by the law were also atimoi (Dem. c. *Aristog.* p. 779; compare HERES); but the nature or duration of this atimia is unknown.

If a person, under whatever kind of atimia he was labouring, continued to exercise any of the rights which he had forfeited, he might immediately be subjected to *ἀπαγογή* or *ἐνδελκίς*: and if his transgression was proved, he might, without any further proceedings, be punished immediately.

The offences which were punished at Sparta with atimia are not as well known; and in many cases it does not seem to have been expressly mentioned by the law, but to have depended entirely upon public opinion, whether a person was to be considered and treated as an atimos or not. In general, it appears that every one who refused to live according to the national institutions lost the rights of a full citizen (*δμοιος*, Xenoph. *de Rep. Lac.* x. 7; iii. 3). It was, however, a positive law, that whoever did not give or could not give his contribution towards the *syssitia*, lost his rights as a citizen. (Aristot. *Polit.* ii. 6. p. 59, ed. Götting.) The highest degree of infamy fell upon the coward (*τρεπτός*) who either ran away from the field of battle, or returned home without the rest of the army, as Aristodemus did after the battle of Thermopylae (Herod. vii. 231), though in this case the infamy itself, as well as its humili-

liating consequences, were manifestly the mere effect of public opinion, and lasted until the person labouring under it distinguished himself by some signal exploit, and thus wiped off the stain from his name. The Spartans, who in Sphacteria had surrendered to the Athenians, were punished with a kind of atimia which deprived them of their claims to public offices (a punishment common to all kinds of atimia), and rendered them incapable of making any lawful purchase or sale. Afterwards, however, they recovered their rights. (Thuc. v. 34.) Unmarried men were also subject to a certain degree of infamy, in so far as they were deprived of the customary honours of old age, were excluded from taking part in the celebration of certain festivals, and occasionally compelled to sing defamatory songs against themselves. No atimos was allowed to marry the daughter of a Spartan citizen, and was thus compelled to endure the ignominies of an old bachelor. (Plut. *Agesil.* 30; Müller, *Dor.* iv. 4. § 3.) Although an atimos at Sparta was subject to a great many painful restrictions, yet his condition cannot be called outlawry; it was rather a state of infamy properly so called. Even the atimia of a coward cannot be considered equivalent to the civil death of an Athenian atimos, for we find him still acting to some extent as a citizen, though always in a manner which made his infamy manifest to every one who saw him.

(Lelyveld, *De Infamia ex Jure Attico*, Amstelod. 1835; Wachsmuth, *Hellen. Alterth. &c.* vol. ii. p. 195, &c., 2d edit.; Meier, *De Bonis Damnat.* p. 101, &c.; Schömann, *De Comit. Ath.* p. 67, &c. transl.; Hermann, *Polit. Ant. of Greece*, § 124; Meier und Schömann, *Att. Proc.* p. 563. On the Spartan atimia in particular, see Wachsmuth, &c., vol. ii. p. 155, &c., 2d ed.; Müller, *Dor.* iii. 10. § 3.) [L. S.]

ATLANTES (ἀτλαντες) and **TELAMO'NES** (τελαμώνες), are terms used in architecture, the former by the Greeks, the latter by the Romans, to designate those male figures which are sometimes fancifully used, like the female *Caryatides*, in place of columns (Vitruv. vi. 7. § 6, Schneid.). Both words are derived from τλῆναι, and the former evidently refers to the fable of Atlas, who supported the vault of heaven, the latter perhaps to the strength of the Telamonian Ajax.

The Greek architects used such figures sparingly, and generally with some adaptation to the character

of the building. They were much more freely used in tripods, thrones, and so forth.

They were also applied as ornaments to the sides of a vessel, having the appearance of supporting the upper works; as in the ship of Hiero, described by Athenaeus (v. p. 208. b).

A representation of such figures is given in the preceding woodcut, copied from the *tepidarium* in the baths at Pompeii: another example of them is in the temple of Jupiter Olympius at Agrigentum.

(Müller, *Archäol. d. Kunst*, § 279; Mauch, *die Griech. u. Röm. Bau-Ordnungen*, p. 88.) [P. S.]

ATRAMENTUM, a term applicable to any black colouring substance, for whatever purpose it may be used (Plaut. *Modell.* i. 3. 102; Cic. *de Nat. Deor.* ii. 50), like the μέλας of the Greeks. (Dem. *de Cor.* p. 313.) There were, however, three principal kinds of atramentum, one called *librarium*, or *scriptorium* (in Greek, γραφικὸν μέλαν), another called *sutorium*, the third *tectorium*. *Atramentum librarium* was what we call writing-ink. (Hor. *Ep.* ii. 1. 236; Petron. 102; Cic. *ad Qu. Fr.* ii. 15.) *Atramentum sutorium* was used by shoemakers for dyeing leather. (Plin. *H. N.* xxxiv. 12. s. 32.) This *atramentum sutorium* contained some poisonous ingredient, such as oil of vitriol; whence a person is said to die of atramentum sutorium, that is, of poison, as in Cicero (*ad Fam.* ix. 21.) *Atramentum tectorium*, or *pictorium*, was used by painters for some purposes, apparently as a sort of varnish. (Plin. *H. N.* xxxvi. 5. s. 25, &c.) The Scholiast on Aristophanes (*Plut.* 277) says that the courts of justice, or δικαστήρια, in Athens were called each after some letter of the alphabet: one alpha, another beta, a third gamma, and, so on, and that against the doors of each δικαστήριον, the letter which belonged to it was written ρύβρον βάμματι, in "red ink." This "red ink," or "red dye," could not of course be called atramentum. Of the ink of the Greeks, however, nothing certain is known, except what may be gathered from the passage of Demosthenes above referred to, which will be noticed again below. The ink of the Egyptians was evidently of a very superior kind, since its colour and brightness remain to this day in some specimens of papyri. The initial characters of the pages are often written in red ink. Ink among the Romans is first found mentioned in the passages of Cicero and Plautus above referred to. Pliny informs us how it was made. He says, "It was made of soot in various ways, with burnt resin or pitch: and for this purpose," he adds, "they have built furnaces, which do not allow the smoke to escape. The kind most commended is made in this way from pine-wood:—It is mixed with soot from the furnaces or baths (that is, the hypocausts of the baths); and this they use *ad volumina scribenda*. Some also make a kind of ink by boiling and straining the lees of wine," &c. (Plin. *H. N.* xxxvi. 5. s. 25.) With this account the statements of Vitruvius (vii. 10. p. 197, ed. Schneider) in the main agree. The black matter emitted by the cuttle-fish (*sepia*), and hence itself called *sepia*, was also used for atramentum. (Cic. *de Nat. Deor.* ii. 50; Persius, *Sat.* iii. 12, 13; Ausonius, iv. 76.) Aristotle, however, in treating of the cuttle-fish, does not refer to the use of the matter (σολός) which it emits, as ink. (Aelian, *H. A.* i. 34.) Pliny observes (xxvii. 7. s. 28) that an infusion of wormwood with ink preserves a manuscript from mice. On the whole,

perhaps, it may be said that the inks of the ancients were more durable than our own; that they were thicker and more unctuous, in substance and durability more resembling the ink now used by printers. An inkstand was discovered at Herculaneum, containing ink as thick as oil, and still usable for writing.

It would appear also that this gummy character of the ink, preventing it from running to the point of the pen, was as much complained of by the ancient Romans as it is by ourselves. Petaus (*Sat.* iii. 12) represents a foppish writer sitting down to compose, but, as the ideas do not run freely, —

*Tunc queritur, crassus calamo quod pendeat humor;
Nigra quod infusa vaneat sepius lympa."

They also added water, as we do sometimes, to thin it.

From a phrase used by Demosthenes, it would appear as if the colouring ingredient was obtained by rubbing from some solid substance (τὸ μέλαν ῥπίδευ, *Dem. de Cor.* p. 313), perhaps much as we rub Indian ink. It is probable that there were many ways of colouring ink, especially of different colours. Red ink (made of *minium*, vermilion) was used for writing the titles and beginnings of books (*Ovid, Trist.* i. l. 7), so also was ink made of *rubrica*, "red ochre" (*Sidon.* vii. 12); and because the headings of *laws* were written with *rubrica*, the word *rubric* came to be used for the civil law. (*Quintil.* xii. 3.) So *album*, a white or whited table, on which the praetors' edicts were written, was used in a similar way. A person devoting himself to *album* and *rubrica*, was a person devoting himself to the law. [*ALBUM*.] There was also a very expensive red-coloured ink with which the emperor used to write his signature, but which any one else was by an edict (*Cod.* l. tit. 23. a. 6) forbidden to use, excepting the sons or near relations of the emperor, to whom the privilege was expressly granted. But if the emperor was under age, his guardian used a green ink for writing his signature. (*Montfaucon, Palaeog.* p. 3.) On the banners of Crassus there were *purple* letters — ποικιλὰ γράμματα. (*Dion Cass.* xl. 18.) On pillars and monuments letters of gold and silver, or letters covered with gilt and silver, were sometimes used. (*Cic. Ferr.* iv. 27; *Suet. Aug.* 7.) In writing also this was done at a later period. *Suetonius* (*Ner.* 16) says, that of the poems which Nero recited at Rome one part was written in gold (or gilt) letters (*auris litteris*), and consecrated to Jupiter Capitinus. This kind of illuminated writing was more practised afterwards in religious compositions, which were considered as worthy to be written in letters of gold (as we say even now), and therefore were actually written so. Something like what we call sympathetic ink, which is invisible till heat, or some preparation be applied, appears to have been not uncommon. So *Ovid* (*Art. Am.* iii. 67, &c.) advises writing love-letters with fresh milk, which would be unreadable, until the letters were sprinkled with coal-dust. *Ausonius* (*Epist.* xiii. 21) gives the same direction. *Pliny* (*xxvi.* 8) suggests that the milky asp contained in some plants might be used in the same way.

An inkstand (στυλὸν, μέλανόδεχον, *Pollux*, iv. 18, x. 59) was either single or double. The double inkstands were probably intended to contain both black and red ink, much in the modern fashion. They were also of various shapes, as for example,

round or hexagonal. They had covers to keep the dust from the ink. The annexed cuts represent inkstands found at Pompeii. [*CALAMUS*.] (*Cane- parius, De Atramentis cujusque Generis*, Lond. 1660; *Beckmann, History of Inventions*, vol. i. p. 106, vol. ii. p. 266, London, 1846; *Becker, Charikles*, vol. ii. p. 222, &c., *Gallus*, vol. i. p. 166, &c.)

[A. A.]

ATRIUM is used in a distinctive as well as collective sense, to designate a particular part in the private houses of the Romans [*DOMUS*], and also a class of public buildings, so called from their general resemblance in construction to the atrium of a private house. There is likewise a distinction between atrium and area; the former being an open area surrounded by a colonnade, whilst the latter had no such ornament attached to it. The atrium, moreover, was sometimes a building by itself, resembling in some respects the open basilica [*BASILICA*], but consisting of three sides. Such was the Atrium Publicum in the capitol, which, *Livy* informs us, was struck with lightning, a. c. 214. (*Liv.* xxiv. 10.) It was at other times attached to some temple or other edifice, and in such case consisted of an open area and surrounding portico in front of the structure, like that before the church of St. Peter, in the Vatican. Several of these buildings are mentioned by the ancient historians, two of which were dedicated to the same goddess, *Libertas*; but an account of these buildings belongs to Roman topography, which is treated of in the *Dictionary of Geography*. [A. R.]

ATTICURGES (Ἀττικουργίς, in the *Attic style*), is an architectural term, which only occurs in *Vitruvius* (iii. 5. § 2, iv. 6. § 1. 6, *Schn.*: as a common adjective, the word only occurs in a fragment of *Menander*, No. 628, *Meineke*). The word is evidently used not to describe a distinct order of architecture, but any of those variations which the genius of the Athenian architects made upon the established forms. In the former passage, *Vitruvius* applies it to a sort of base of

a column, which he describes as consisting of two tori divided by a scotia or trochilus, with a fillet

above and below, and beneath all a *plinth*: but in several of the best examples the plinth is wanting. (For the exact proportions, see Vitruvius.) This form of base seems to have been originally an Athenian simplification of the Ionic base; but it was afterwards used in the other orders, especially the Corinthian and the Roman Doric; and it is usually regarded as being, from its simple elegance, the most generally applicable of all the bases [SPIRA].

In the second of the passages above referred to, Vitruvius applies the term *Atticorum* to a particular form of door-way, but it differed very little from that which he designates as the Doric: in fact, though Vitruvius enumerates three kinds of doorways to temples, the Doric, Ionic, and Attic, we only find in the existing building two really distinct forms. (Mauch, *die Griech. u. Röm. Bau-Ordnungen*. p. 97.) According to Pliny (*H. N.* xxxvi. 23. s. 56) square pillars were called *Atticæ columnæ*. [P. S.]

AUCTIO signifies generally "an increasing, an enhancement," and hence the name is applied to a public sale of goods, at which persons bid against one another. The term *auctio* is general, and comprehends the species *auctio*, *bonorum emtio* and *sectio*. As a species, *auctio* signifies a public sale of goods by the owner or his agent, or a sale of goods of a deceased person for the purpose of dividing the money among those entitled to it, which was called *auctio hereditaria*. (*Cic. Pro Caecin.* 5.) The sale was sometimes conducted by an *argentarius*, or by a *magister auctionis*; and the time, place, and conditions of sale, were announced either by a public notice (*tabula, album, &c.*), or by a crier (*præco*).

The usual phrases to express the giving notice of a sale are *auktionem proscrivere, prædicare*; and to determine on a sale, *auktionem constituere*. The purchasers (*emptores*), when assembled, were sometimes said *ad tabulam adesse*. The phrases signifying to bid are, *liceri, licitari*, which was done either by word of mouth, or by such significant hints as are known to all people who have attended an auction. The property was said to be knocked down (*addici*) to the purchaser who either entered into an engagement to pay the money to the *argentarius* or *magister*, or it was sometimes a condition of sale that there should be no delivery of the thing before payment. (*Gaius* iv. 126; *ACTIO*, pp. 9, 10.) An entry was made in the books of the *argentarius* of the sale and the money due, and credit was given in the same books to the purchaser when he paid the money (*expensa pecunia lata, accepta relata*). Thus the book of the *argentarius* might be used as evidence for the purchaser, both of his having made a purchase, and having paid for the thing purchased. If the money was not paid according to the conditions of sale, the *argentarius* could sue for it.

The *præco*, or crier, seems to have acted the part of the modern auctioneer, so far as calling out the biddings (*Cic. De Offic.* ii. 23), and amusing the company. Slaves, when sold by auction, were placed on a stone, or other elevated thing, as is sometimes the case when slaves are sold in the United States of North America; and hence the phrase *homo de lapide emtus*. It was usual to put up a spear, *hasta*, in auctions, a symbol derived, it is said, from the ancient practice of selling under a spear the booty acquired in war. Hence the

phrase "sub hasta vendere" (*Cic. De Off.* ii. 8) signified an auction. The expression "*asta publica*" is now used in Italy to signify an auction: the expression is "*vendere all' asta publica*," or "*vendere per subasta*." By the *auctio*, the Quiritarian ownership in the thing sold was transferred to the purchaser. [BONORUM EMTIO; SECTIO.] [G. L.]

AUCTOR, a word which contains the same element as *aug-eo*, and signifies generally one who enlarges, confirms, or gives to a thing its completeness and efficient form. The numerous technical significations of the word are derivable from this general notion. As he who gives to a thing that which is necessary for its completeness, may in this sense be viewed as the chief actor or doer, the word *auctor* is also used in the sense of one who originates or proposes a thing; but this cannot be viewed as its primary meaning. Accordingly, the word *auctor*, when used in connection with *lex* or *senatus consultum*, often means him who originates and proposes, as appears from numerous passages. (*Liv.* vi. 36; *Cic. Pro Dom.* c. 30.) When a measure was approved by the senate before it was confirmed by the votes of the people, the senate were said *auctores fieri*, and this preliminary approval was called *senatus auctoritas*. (*Cic. Brutus*, c. 14.)

The expressions "*patres auctores fiunt*," "*patres auctores facti*," have given rise to much discussion. In the earlier periods of the Roman state, the word "*patres*" was equivalent to "*patricii*;" in the later period, when the patricians had lost all importance as a political body, the term *patres* signified the senate. But the writers of the age of Cicero, when speaking of the early periods, often used the word *patres*, when they might have used *patricii*, and thus a confusion arose between the early and the later signification of the word *patres*.

The expression "*patres auctores fiunt*" means that the determinations of the populus in the *comitia centuriata* were confirmed by the patricians in the *comitia curiata*. To explain this fully, as to the earliest periods, it is necessary to show what the *lex curiata de imperio* was.

After the *comitia curiata* had elected a king (*rex*), the king proposed to the same body a *lex curiata de imperio*. (*Cic. De Rep.* ii. 13, 17, 18, 20.) At first it might appear as if there were two elections, for the patricians, that is the populus, first elected the king, and then they had to vote again upon the imperium. Cicero (*De Leg. Agr.* ii. 11) explains it thus—that the populus had thus an opportunity to reconsider their vote (*reprehendendi potestas*). But the chief reason was that the imperium was not conferred by the bare election, and it was necessary that the king should have the imperium: consequently there must be a distinct vote upon it. Now Livy says nothing of the *lex curiata* in his first book, but he uses the expression "*patres auctores fierent*," "*patres auctores facti*," (*Liv.* i. 17, 22, 32.) In this sense the *patres* were the "*auctores comitiorum*," an expression analogous to that in which a tutor is said to be an *auctor* to his pupillus. In some passages the expression "*patricii auctores*" is used, which is an additional proof that in the expression "*patres auctores*," the patrician body is meant, and not the senate, as some have supposed.

Cicero, in the passages quoted, does not use the

expression "patres auctores fiunt," nor does Livy, in the passages quoted, speak of the *lex curiata de imperio*. But they speak of the same thing, though they use different expressions. This explains why Dionysius sometimes uses an expression equivalent to "patricii auctores fiunt," for patricii of course means the curiae, and not the senate. (*Antiq. Rom.* ii. 60, vi. 90.)

Till the time of Servius Tullius there were only the comitia curiata, which, as already explained, first elected a king, and then by another vote conferred the imperium. The imperium could only be conferred on a determinate person. It was, therefore, necessary to determine first who was to be the person who was capable of receiving the imperium; and thus there were two separate votes of the patres. Servius Tullius established the comitia centuriata, in which the plebs also voted. When his constitution was in full force after the exile of the last Tarquin, the patres had still the privilege of confirming at the comitia curiata the vote of the comitia centuriata, that is, they gave to it the "patrum auctoritas" (*Cic. De Repub.* ii. 30); or, in other words, the "patres" were "auctores facti." (*Cic. Pro Plancio*, c. 3.) That this was the practice under the early Republic, we see from Livy (*ix.* 38, 39).

In the fifth century of the city a change was made. By one of the laws of the plebeian dictator Q. Publilius Philo, it was enacted (*Liv.* viii. 17) that in the case of leges to be enacted at the comitia centuriata, the patres should be auctores, that is, the curiae should give their assent before the vote of the comitia centuriata. If we take this literally, the comitia curiata might still reject a proposed law by refusing their previous sanction; and this might be so: but it is probable that the previous sanction became a matter of form. By a *lex Maenia* of uncertain date (*Cic. Brutus*, c. 14), the same change was made as to elections, which the Publilia lex had made as to the enacting of leges. This explains the passage of Livy (*i.* 17). Accordingly, after the passing of the *lex Maenia*, the "patrum auctoritas" was distinct from the *lex curiata de imperio*, while, before the passing of the *lex Maenia*, they were the same thing. Thus the *lex Maenia* made the *lex curiata de imperio* a mere form, for the imperium could not be refused, and so in the later Republic, in order to keep up a shadow of a substance, thirty lictors exhibited the ceremony of holding the curiata comitia; and the auctoritas patrum, which was the assent of the senate, appears as the mode in which the confirmation of the people's choice, and the conferring of the imperium, were both included.

This explanation which is founded on that of Becker (*Handbuch der Röm. Alterthümer*), and appears to be what he understands by the phrase "patres auctores," is at least more consistent with all the authorities than any other that has been proposed.

In the imperial time, auctor is often said of the emperor (*princeps*) who recommended any thing to the senate, and on which recommendation that body passed a *senatus-consultum*. (*Gaius*, i. 30, § 1; *Sexton. Vesp.* 11.)

When the word auctor is applied to him who recommends, but does not originate a legislative measure, it is equivalent to *suasor*. (*Cic. Ad. Att.* i. 19; *Brutus*, c. 25, 27.) Sometimes both auctor and *suasor* are used in the same sentence, and

the meaning of each is kept distinct. (*Cic. Off.* iii. 30.)

With reference to dealings between individuals, auctor has the sense of owner (*Cic. Pro Caecina*, 10), and is defined thus (*Dig.* 50. tit. 17. a. 175): *Auctor meus a quo jus in me transit*. In this sense auctor is the seller (*venditor*), as opposed to the buyer (*emptor*): the person who joined the seller in a warranty, or as security, was called *auctor secundus*, as opposed to the seller or *auctor primus*. (*Dig.* 19. tit. 1. a. 4, 21; tit. 2. a. 4, 51.) The phrase *a malo auctore emere* (*Cic. Verr.* 5. c. 22); *auctorem laudare* (*Gell.* ii. 10) will thus be intelligible. The testator, with respect to his heir, might be called auctor. (*Ex Corp. Hermogen.* Cod. tit. 11.)

Consistently with the meanings of auctor as already explained, the notion of consenting, approving, and giving validity to a measure affecting a person's status clearly appears in the following passage. (*Cic. Pro Dom.* c. 29.)

Auctor is also used generally to express any person under whose authority any legal act is done. In this sense, it means a tutor who is appointed to aid or advise a woman on account of the infirmity of her sex (*Liv.* xxiv. 2; *Cic. Pro Caecina*, c. 25; *Gaius*, i. 190, 195): it is also applied to a tutor whose business it is to approve of certain acts on behalf of a ward (*pupillus*). (*Paulus, Dig.* 26. tit. 8. a. 3.)

The term auctores juris is equivalent to jurisperiti (*Dig.* 1. tit. 2. a. 2. § 13; *Gellius*, ii. c. 10): and the law writers or leaders of particular schools of law were called *scholae auctores*. It is unnecessary to trace the other significations of this word. [G.L.]

AUCTORAMENTUM. [GLADIATORES.]

AUCTORITAS. The technical meanings of this word correlate with those of auctor.

The auctoritas senatus was not a *senatus-consultum*; it was a measure, incomplete in itself, which received its completion by some other authority.

Auctoritas, as applied to property, is equivalent to legal ownership, being a correlation of auctor. (*Cic. Top.* c. 4; *Pro Caecina*, c. 26.) It was a provision of the laws of the Twelve Tables that there could be no uncapcion of a stolen thing (*Gaius*, ii. 45), which is thus expressed by Gellius in speaking of the Atinian law (*xvii.* c. 7): *Quod subreptum erit ejus rei aeterna auctoritas esto*; the ownership of the thing stolen was still in the original owner. (*Cic. De Off.* i. c. 12; *Dirksen, Uebersicht, &c. der Zwölf-Tafel-Fragmente*, p. 417.) (As to the expression *Usus Auctoritas*, see *USU-CAPIO*.)

Auctoritas sometimes signifies a warranty or collateral security; and thus correlated to auctor secundus. Auctoritatis actio means the action of eviction. (*Paulus, Sentent. Recpt.* lib. 2. tit. 17.) The *instrumenta auctoritatis* are the proofs or evidences of title.

The auctoritas of the praetor is sometimes used to signify the judicial sanction of the praetor, or his order, by which a person, a tutor for instance, might be compelled to do some legal act (*Gaius*, i. 190; *Dig.* 27. tit. 9. a. 5), or, in other words, "auctor fieri." The tutor, with respect to his wards both male and female (*pupilli, pupillae*), was said *negotium gerere*, and *auctoritatem interponere*: the former phrase is applicable where the tutor does the act himself; the latter, where he gives his ap-

probation and confirmation to the act of his ward. Though a pupillus had not a capacity to do any act which was prejudicial to him, he had a capacity to receive or assent to any thing which was for his benefit, and in such case the *autoritas* of the tutor was not necessary.

The authority of decided cases was called *similiter judicatorum auctoritas*. The other meanings of *autoritas* may be easily derived from the primary meaning of the word, and from the explanations here given. [G. L.]

AUDITORIUM, as the name implies, is any place for hearing. It was the practice among the Romans for poets and others to read their compositions to their friends, who were sometimes called the auditorium (Plin. *Ep.* iv. 7); but the word was also used to express any place in which any thing was heard, and under the empire it was applied to a court of justice. Under the republic the place for all judicial proceedings was the comitium and the forum. (Ni pagunt in comitio aut in foro ante meridiem causam conicio quum perorant ambo praesentes. Dirksen, *Uebersicht*, &c. p. 725.) But for the sake of shelter and convenience, it became the practice to hold courts in the Basilicae, which contained halls, which were also called auditoria. In the dialogue de Oratoribus (c. 39), the writer observes that oratory had lost much by cases being generally heard in "auditoria et tabularia." It is first under M. Aurelius that the auditorium principis is mentioned, by which we must understand a hall or room in the imperial residence; and in such a hall Septimius Severus and the later emperors held their regular sittings when they presided as judges. (Dig. 36. tit. 1. s. 22, 49. tit. 9. s. 1; Dion Cass. lxxvi. 11; Dig. 4. tit. 4. s. 18.) The provincial governors also under the empire sometimes sat on their tribunal as in the republic, and sometimes in the praetorium or in an auditorium. Accordingly, the latest jurists use the word generally for any place in which justice was administered. (Dig. 1. tit. 22. s. 5.) In the time of Diocletian, the auditorium had got the name of *secretarium*; and in a constitution of Constantine (Cod. Th. i. tit. 16. s. 6), the two words seem to be used as equivalent, when he enacts that both criminal and civil cases should be heard openly (before the tribunal), and not in auditoria or secretaria. Valentinianus and Valens allowed causes to be heard either before the tribunal or in the secretarium, but yet with open doors. From the fifth century, the secretarium or secretum was the regular place for hearing causes, and the people were excluded by lattice-work (*cancelae*) and curtains (*vela*); but this may have been as much for convenience as for any other purpose, though it appears that at this late period of the empire there were only present the magistrate and his officers, and the parties to the cause. Only those whom the magistrate invited, or who had business, or persons of certain rank (*honorati*) had admission to the courts, under the despotic system of the late empire. (Cod. 1. tit. 48. s. 3; Hollweg, *Handbuch des Civilprozesses*, p. 215.) [G. L.]

AUGUR, AUGURIUM; AUSPEX, AUSPICIUM. *Augur* or *auspex* meant a diviner by birds, but came in course of time, like the Greek *oluvós*, to be applied in a more extended sense: his art was called *augurium* or *auspicium*. Plutarch relates that the *augures* were originally termed *auspices* (*Quaest. Rom.* c. 72), and there seems no

reason to doubt this statement as Hartung does (*Die Religion der Römer*, vol. i. p. 99), on the authority of Servius (*ad Virg. Aen.* i. 402, iii. 20). The authority of Plutarch is further supported by the fact, that in Roman marriages the person who represented the diviner of ancient times, was called *auspex* and not *augur*. (Cic. *de Div.* i. 16). Rubino (*Römisch. Verfassung*, p. 45) draws a distinction between the meaning of the words *auspex* and *augur*, though he believes that they were used to indicate the same person, the former referring simply to the observation of the signs, and the latter to the interpretation of them. This view is certainly supported by the meaning of the verbs *auspicari* and *augurari*, and the same distinction seems to prevail between the words *auspicium* and *augurium*, when they are used together (Cic. *de Div.* ii. 48, *de Nat. Deor.* ii. 3), though they are often applied to the same signs. The word *auspex* was supplanted by *augur*, but the scientific term for the observation continued on the contrary to be *auspicium* and not *augurium*. The etymology of *auspex* is clear enough (from *avis*, and the root *spec* or *spic*), but that of *augur* is not so certain. The ancient grammarians derived it from *avis* and *gero* (Festus, s. v. *augur*; Serv. *ad Virg. Aen.* v. 523), while some modern writers suppose the root to be *aug*, signifying "to see," and the same as the Sanscrit *akshat*, the Latin *oculus*, and the German *auge*, and *ur* to be a termination; the word would thus correspond to the English *seer*. Others again believe the word to be of Etruscan origin, which is not incompatible with the supposition, as we shall show below, that the auspices were of Latin or Sabine origin, since the word *augur* may thus have been introduced along with Etruscan rites, and thus have superseded the original term *auspex*. There is, however, no certainty on the point; and, although the first mentioned etymology seems improbable, yet from the analogy of *au-spec* and *au-cops*, we are inclined to believe that the former part of the word is of the same root as *avis*, and the latter may be connected with *gero*, more especially as Priscian (l. 6. § 36) gives *auger* and *augeratus*, as the more ancient forms of *augur* and *auguratus*. By Greek writers on Roman affairs, the augurs are called *οἰωνοπόλοι*, *οἰωνοσκόποι*, *οἰωνισταί*, *οἱ ἐν οἰωνοῖς λεγείς*. The augurs formed a collegium at Rome, but their history, functions, and duties will be better explained after we have obtained a clear idea of what the auspices were, and who had the power of taking them.

An acquaintance with this subject is one of primary importance to every student of Roman history and antiquities. In the most ancient times, no transaction took place, either of a private or a public nature, without consulting the auspices, and hence we find the question asked in a well-known passage of Livy (vi. 14), "*Auspicia hanc urbem conditam esse, auspiciis bello ac pace, domo militiaeque omnia geri, quis est, qui ignoret?*" An outline of the most important facts connected with the auspices, which is all that our limits will allow, therefore, claims our attentive consideration.

All the nations of antiquity were impressed with the firm belief, that the will of the gods and future events were revealed to men by certain signs, which were sent by the gods as marks of their favour to their sincere worshippers. Hence, the arguments of the Stoics that if there are gods,

they care for men, and that if they care for men they must send them signs of their will (Cic. *de Leg.* ii. 13), expressed so completely the popular belief, that whoever questioned it, would have been looked upon in no other light than an atheist. But while all nations sought to become acquainted with the will of the gods by various modes, which gave rise to innumerable kinds of divination, there arose in each separate nation a sort of national belief that the particular gods, who watched over them, revealed the future to them in a distinct and peculiar manner. Hence, each people possessed a national *μαντική* or *divinatio*, which was supported by the laws and institutions of the state, and was guarded from mixture with foreign elements by stringent enactments. Thus, the Romans looked upon astrology and the whole prophetic art of the Chaldeans as a dangerous innovation; they paid little attention to dreams, and hardly any to inspired prophets and seers. They had on the contrary learnt from the Etruscans to attach much importance to extraordinary appearances in nature — *Prodigia*; in common with other neighbouring nations they endeavoured to learn the future, especially in war, by consulting the entrails of victims; they laid great stress upon favourable or unfavourable omens, and in times of danger and difficulty were accustomed to consult the Sibylline books, which they had received from the Greeks; but the mode of divination, which was peculiar to them, and essentially national, consisted in those signs included under the name of *auspicia*. The observation of the auspices was, according to the unanimous testimony of the ancient writers, more ancient even than Rome itself, which is constantly represented as founded under the sanction of the auspices, and the use of them is therefore associated with the Latins, or the earliest inhabitants of the city. There seems therefore no reason to assign to them an Etruscan origin, as many modern writers are inclined to do, while there are several facts pointing to an opposite conclusion. Cicero, who was himself an augur, in his work *De Divinatione*, constantly appeals to the striking difference between the auspices and the Etruscan system of divination; and, while he frequently mentions other nations which paid attention to the flight of birds as intimations of the divine will, he never once mentions this practice as in existence among the Etruscans. (Cic. *de Div.* i. 41, ii. 35, 38; *de Nat. Deor.* ii. 4.) The belief that the flight of birds gave some intimation of the will of the gods seems to have been prevalent among many nations of antiquity, and was common to the Greeks, as well as the Romans; but it was only among the latter people that it was reduced to a complete system, governed by fixed rules, and handed down from generation to generation. In Greece, the oracles supplanted the birds, and the future was learnt from Apollo and other gods, rarely from Zeus, who possessed very few oracles in Greece. The contrary was the case at Rome: it was from Jupiter that the future was learnt, and the birds were regarded as his messengers. (*Aves internuntiae Jovis*, Cic. *de Divin.* ii. 34; *Interpretes Jovis optimi maximi publici augures*, Cic. *de Leg.* ii. 8). It must be remarked in general, that the Roman auspices were essentially of a practical nature; they gave no information respecting the course of future events, they did not inform men *what was to happen*, but simply taught them *what they were to do*, or *not*

to do; they assigned no reason for the decision of Jupiter, — they simply announced, yes or no.

The words *ausurium* and *auspicium* came to be used in course of time to signify the observation of various kinds of signs. They were divided into five sorts: *ex caelo*, *ex avibus*, *ex tripudiis*, *ex quadrupedibus*, *ex diris*. Of these, the last three formed no part of the ancient auspices. The observation of signs in the heavens, such as lightning, was naturally connected with observing the heavens in order to watch the birds; and therefore, must in early times have formed part of the auspices; for in an early stage of society, lightning and similar phenomena have been always looked upon as sent by the gods. A few words must be said on each of these five kinds of augury.

1. *Ex caelo*. This included the observation of the various kinds of thunder and lightning, and was regarded as the most important, *maximam auspicium*. (Serv. *ad Virg. Aen.* ii. 693; Cic. *de Div.* ii. 18, &c.; Festus, *s. v. Coelestia*.) The interpretation of these phenomena was rather Etruscan than Roman; and the only point connected with them which deserves mention here, is, that whenever it was reported by a person authorised to take the auspices, that Jupiter thundered or lightened, the comitia could not be held. (Cic. *de Div.* ii. 14, *Philipp.* v. 3.)

2. *Ex avibus*. It was only a few birds which could give auguries among the Romans. (Cic. *de Div.* ii. 34.) They were divided into two classes: *Oscines*, those which gave auguries by singing, or their voice, and *Alites*, those which gave auguries by their flight. (Festus, *s. v. Oscines*). To the former class, belonged the raven (*corvus*) and the crow (*cornix*), the first of these giving a favourable omen (*auspicium ratum*) when it appeared on the right, the latter, on the contrary, when it was seen on the left (Plaut. *Asin.* ii. 1. 12; Cic. *de Div.* i. 39); likewise the owl (*noctua*, Festus, *s. v. Oscines*), and the hen (*gallina*, Cic. *de Div.* ii. 26). To the *aves alites* belonged first of all the eagle (*aquila*), who is called pre-eminently the bird of Jupiter (*Jovis ales*), and next the vulture (*vultur*), and with these two the *avis sangualis*, also called *osifraga*, and the *immutusculus* or *immutusculus* are probably also to be classed. (Comp. Virg. *Aen.* i. 394; Liv. i. 7, 34; Festus, *s. v. sangualis*; Plin. *H. N.* x. 7.) Some birds were included both among the *oscines* and the *alites*: such were the *Picus Martius*, and *Feronius*, and the *Parrha* (Plin. *H. N.* x. 18. a. 20; Hor. *Carm.* iii. 27. 15; Festus, *s. v. Oscinum tripudium*). These were the principal birds consulted in the auspices. Every sound and motion of each bird had a different meaning, according to the different circumstances, or times of the year when it was observed, but the particulars do not deserve further notice here. When the birds favoured an undertaking, they were said *adducere*, *admittere* or *secundare*, and were then called *adductivae*, *admissivae*, *secundae*, or *praepetes*: when unfavourable they were said *adducere*, *arceere*, *refragari*, &c., and were then called *adversus* or *alterus*. The birds which gave unfavourable omens were termed *funebres*, *inhibilia*, *lugubres*, *malae*, &c., and such auspices were called *clivis* and *clamatoria*.

3. *Ex Tripudiis*. These auspices were taken from the feeding of chickens, and were especially employed on military expeditions. It was the doctrine of the augurs that any bird could give a tripudium (Cic. *de Div.* ii. 34); but it be-

came the practice in later times to employ only chickens (*pulli*) for the purpose. They were kept in a cage, under care of a person called *pullarius*; and when the auspices were to be taken, the pullarius opened the cage and threw to the chickens pulse or a kind of soft cake. If they refused to come out or to eat, or uttered a cry (*occinerent*), or beat their wings, or flew away, the signs were considered unfavourable. (Liv. x. 40; Val. Max. i. 4. § 3.) On the contrary, if they ate greedily, so that something fell from their mouth and struck the earth, it was called *tripudium solistimum* (*tripudium quasi terripotium, solistimum*, from *solum*, according to the ancient writers, Cic. de Div. ii. 34), and was held a favourable sign. Two other kinds of *tripudia* are mentioned by Festus, the *tripudium oscinum*, from the cry of birds, and *sonitium*, from the sound of the pulse falling to the ground: in what respects the latter differed from the *tripudium solistimum*, we are not informed. (Cic. ad Fam. vi. 6; see also Festus, s. v. *puls, tripudium, oscinum tripudium*.)

4. *Ex quadrupedibus*. Auguries could also be taken from four-footed animals; but these formed no part of the original science of the augurs, and were never employed by them in taking auspices on behalf of the state, or in the exercise of their art properly so called. They must be looked upon simply as a mode of private divination, which was naturally brought under the notice of the augurs, and seems by them to have been reduced to a kind of system. Thus, we are told that when a fox, a wolf, a horse, a dog, or any other kind of quadruped ran across a person's path or appeared in an unusual place, it formed an augury. (See e. g. Hor. Carm. iii. 27.) The *juge auspiciu* belonged to this class of auguries. (Cic. de Div. ii. 36; Fest. s. v. *juge auspiciu*; Serv. ad Virg. Aen. iii. 537.)

5. *Ex diris, sc. signis*. Under this head was included every kind of augury, which does not fall under any of the four classes mentioned above, such as sneezing, stumbling, and other accidental things. (Comp. Serv. ad Virg. Aen. iv. 453.) There was an important augury of this kind connected with the army, which was called *ex acuminibus*, that is, the flames appearing at the points of spears or other weapons. (Cic. de Div. ii. 36, de Nat. Deor. ii. 3; Dionys. v. 46.)

The ordinary manner of taking the auspices, properly so called (i. e. *ex caelo* and *ex avibus*), was as follows: The person who was to take them first marked out with a wand (*lituus*) a division in the heavens called *templum* or *tescum*, within which he intended to make his observations. The station where he was to take the auspices was also separated by a solemn formula from the rest of the land, and was likewise called *templum* or *tescum*. He then proceeded to pitch a tent in it (*tabernaculum capere*), and this tent again was also called *templum*, or, more accurately, *templum minus*. [TEMPLUM.] Within the walls of Rome, or, more properly speaking, within the pomerium, there was no occasion to select a spot and pitch a tent on it, as there was a place on the Arx on the summit of the Capitoline hill, called *Auguraculum*, which had been consecrated once for all for this purpose. (Festus, s. v. *Auguraculum*; comp. Liv. i. 18, iv. 18; Cic. de Off. iii. 16.) In like manner there was in every Roman camp a place called *augurale* (Tac. Ann. ii. 13, xv. 30), which an-

swered the same purpose; but on all other occasions a place had to be consecrated, and a tent to be pitched, as, for instance, in the Campus Martius, when the comitia centuriata were to be held. The person who was then taking the auspices waited for the favourable signs to appear; but it was necessary during this time that there should be no interruption of any kind whatsoever (*silentium*), and hence the word *silentium* was used in a more extended sense to signify the absence of every thing that was faulty. Every thing, on the contrary, that rendered the auspices invalid was called *vitium* (Cic. de Div. ii. 34; Festus, s. v. *silentio surgere*); and hence we constantly read in Livy and other writers of *vitio magistratus creati, vitio lex lata, &c.* The watching for the auspices was called *specio* or *servare de coelo*, the declaration of what was observed *nuntiatio*, or, if they were unfavourable, *obnuntiatio*. In the latter case, the person who took the auspices seems usually to have said *alio die*, by which the business in hand, whether the holding of the comitia or any thing else, was entirely stopped. (Cic. de Leg. ii. 12.)

Having explained what the auspices were and how they were taken, we have now to determine who had the power of taking them. In the first place it is certain that in ancient times no one but a patrician could take the auspices, and that a plebeian had no power of doing so. The gods of the Roman state were the gods of the patricians alone, and it was consequently regarded as an act of profanation for any plebeian to attempt to interpret the will of these gods. Hence the possession of the auspices (*habere auspicia*) is one of the most distinguished prerogatives of the patricians: they are said to be *penes patrum*, and are called *auspicia patrum*. (Liv. vi. 41, x. 8*, comp. iv. 6.) It would further appear that every patrician might take the auspices; but here a distinction is to be observed. It has already been remarked that in the most ancient times no transaction, whether private or public, was performed without consulting the auspices (*nisi auspiciato*, Cic. de Div. i. 16; Val. Max. ii. 1. § 1); and hence arose the distinction of *auspicia privata* and *auspicia publica*. One of the most frequent occasions on which the *auspicia privata* were taken, was in case of a marriage (Cic., Val. Max. ll. cc.); and hence after private auspices had become entirely disused, the Romans, in accordance with their usual love of preserving ancient forms, were accustomed in later times to employ *auspices* in marriages, who, however, acted only as friends of the bridegroom, to witness the payment of the dowry and to superintend the various rites of the marriage. (Plant. Cas. prol. 85; Suet. Claud. 26; Tac. Ann. xi. 27.) The employment of the auspices at marriages was one great argument used by the patricians against *connubium* between themselves and the plebeians, as it would occasion, they urged, *perturbationem auspicioꝝ publicoꝝ privatoꝝque*. (Liv. iv. 2.) The possession of these private auspices is expressed in another passage of Livy by *privatum auspicia habere*. (Liv. vi. 41.) In taking these private auspices, it would appear that any patrician

* There can be no reasonable doubt that by *patres* in these passages the whole body of the patricians is meant, and not the senators, as Rubino asserts. (Comp. Becker, Röm. Alterth. vol. ii. part i. p. 304, &c.)

was employed, who knew how to form *templis* and was acquainted with the art of augury, and was therefore called *auspex* or *augur*: it does not appear to have been necessary nor usual in such cases to have recourse to the public augurs, the members of the collegium, who are therefore frequently called *augures publici*, to distinguish them from the private augurs. (Cic. *de Leg.* ii. 8, *ad Fam.* vi. 6; Festus, *s. v. quinque genera.*) The case, however, was very different with respect to the *auspicia publica*, generally called *auspicia* simply, or those which concerned the state. The latter could only be taken by the persons who represented the state, and who acted as mediators between the gods and the state; for though all the patricians were eligible for taking the auspices, yet it was only the magistrates who were in actual possession of them. As long as there were any patrician magistrates, the auspices were exclusively in their hands; on their entrance upon office, they received the auspices (*accipiebant auspicia*, Cic. *de Div.* ii. 36); while their office lasted, they were in possession of them (*habebant* or *erant eorum auspicia*, Gell. xiii. 15); and at the expiration of their office, they laid them down (*ponebant* or *deponebant auspicia*, Cic. *de Nat. Deor.* ii. 3). In case, however, there was no patrician magistrate, the auspices became vested in the whole body of the patricians, which was expressed by the words *auspicia ad patres redeunt*. (Cic. *Brut.* 5.) This happened in the kingly period on the demise of a king, and the patricians then chose an interrex, who was therefore invested by them with the right of taking the auspices, and was thus enabled to mediate between the gods and the state in the election of a new king. In like manner in the republican period, when it was believed that there had been something faulty (*vitium*) in the auspices in the election of the consuls, and they were obliged in consequence to resign their office, the auspices returned to the whole body of the patricians, who had recourse to an *interregnum* for the renewal of the auspices, and for handing them over in a perfect state to the new magistrates: hence we find the expressions *repetere de integro auspicia* and *renovare per interregnum auspicia*. (Liv. v. 17, 31, vi. 1.)

It will be seen from what has been said that the Roman state was a species of theocracy, that the gods were its rulers, and that it was by means of the auspices that they intimated their will to the representatives of the people, that is, the magistrates. It follows from this, as has been already remarked, that no public act could be performed without consulting the auspices, no election could be held, no law passed, no war waged; for a neglect of the auspices would have been equivalent to a declaration that the gods had ceased to rule the Roman state.

There still remain three points in connection with the auspices which require notice:—1. The relation of the magistrates to the augurs in taking the auspices. 2. The manner in which the magistrates received the auspices. 3. The relation of the different magistrates to one another with respect to the auspices. We can only make a few brief remarks upon each of these important matters, and must refer our readers for fuller information to the masterly discussion of Rubino (*Röm. Verfassung*, p. 48, &c.), to whom we are indebted for a great part of the present article.

1. The distinction between the duties of the magistrates and the augurs in taking the auspices is one of the most difficult points connected with this subject, but perhaps a satisfactory solution of these difficulties may be found by taking an historical view of the question. We are told not only that the kings were in possession of the auspices, but that they themselves were acquainted with the art and practised it. Romulus is represented to have been the best of augurs, and from him all succeeding augurs received the chief mark of their office, the *lituus*, with which that king exercised his calling. (Cic. *de Div.* i. 2, ii. 17; Liv. i. 10.) He is further stated to have appointed three augurs, but only as his assistants in taking the auspices, a fact which is important to bear in mind. (Cic. *de Rep.* ii. 9.) Their dignity gradually increased in consequence of their being employed at the inauguration of the kings, and also in consequence of their becoming the preservers and depositaries of the science of augury. Formed into a collegium, they handed down to their successors the various rules of the science, while the kings, and subsequently the magistrates of the republic, were liable to change. Their duties thus became twofold, to assist the magistrates in taking the auspices, and to preserve a scientific knowledge of the art. They were not in possession of the auspices themselves, though they understood them better than the magistrates; the lightning and the birds were not sent to them but to the magistrates; they discharged no independent functions either political or ecclesiastical, and are therefore described by Cicero as *privati*. (*De Divin.* i. 40.) As the augurs were therefore merely the assistants of the magistrates, they could not take the auspices without the latter, though the magistrates on the contrary could dispense with their assistance, as must frequently have happened in the appointment of a dictator by the consul on military expeditions at a distance from the city. At the same time it must be borne in mind, that as the augurs were the interpreters of the science, they possessed the right of declaring whether the auspices were valid or invalid, and that too whether they were present or not at the time of taking them; and whoever questioned their decision was liable to severe punishment. (Cic. *de Leg.* ii. 8.) They thus possessed in reality a veto upon every important public transaction. It was this power which made the office an object of ambition to the most distinguished men at Rome, and which led Cicero, himself an augur, to describe it as the highest dignity in the state (*de Leg.* ii. 12). The augurs frequently employed this power as a political engine to vitiate the election of such parties as were unfavourable to the exclusive privileges of the patricians. (Liv. vi. 27, viii. 23.)

But although the augurs could declare that there was some fault in the auspices, yet, on the other hand, they could not, in favour of their office, declare that any unfavourable sign had appeared to them, since it was not to them that the auspices were sent. Thus we are told that the augurs did not possess the *specio*, that is, the right of taking the state-auspices. This *specio*, of which we have already briefly spoken, was of two kinds, one more extensive and the other more limited. In the one case the person, who exercised it, could put a stop to the proceedings of any other magistrate by his *obnuntiatio*: this was called *specio* of

nuntiatio (perhaps also *spectio cum nuntiatiōne*), and belonged only to the highest magistrates, the consuls, dictators, interreges, and, with some modifications, to the praetors. In the other case, the person who took the causes only exercised the *spectio* in reference to the duties of his own office, and could not interfere with any other magistrate: this was called *spectio sine nuntiatiōne*, and belonged to the other magistrates, the censors, aediles, and quaestors. Now as the augurs did not possess the auspices, they consequently could not possess the *spectio* (*habere spectationem*); but as the augurs were constantly employed by the magistrates to take the auspices, they exercised the *spectio*, though they did not possess it in virtue of their office. When they were employed by the magistrates in taking the auspices, they possessed the right of the *nuntiatio*, and thus had the power, by the declaration of unfavourable signs (*obnuntiatio*), to put a stop to all important public transactions (Cic. *de Leg.* ii. 12). In this way we are able to understand the assertion of Cicero (*Philipp.* ii. 32), that the augurs possessed the *nuntiatio*, the consuls and the other (higher) magistrates both the *spectio* and *nuntiatio*; though it must, at the same time, be borne in mind that this right of *nuntiatio* only belonged to them in consequence of their being employed by the magistrates. (Respecting the passage of Festus, s. v. *spectio*, which seems to teach a different doctrine, see Rubino, p. 58.)

2. As to the manner in which the magistrates received the auspices, there is no reason to suppose, as many modern writers have done, that they were conferred upon them in any special manner. It was the act of their election which made them the recipients of the auspices, since the comitia, in which they were appointed to their office, were held *auspicato*, and consequently their appointment was regarded as ratified by the gods. The auspices, therefore, passed immediately into their hands upon the abdication of their predecessors in office. There are two circumstances which have given rise to the opinion that the magistrates received the auspices by some special act. The first is, that the new magistrate, immediately after the midnight on which his office began, was accustomed to observe the heavens in order to obtain a happy sign for the commencement of his duties (Dionys. ii. 6). But he did not do this in order to obtain the auspices; he already possessed them, and it was in virtue of his possession of them, that he was able to observe the heavens. The second circumstance to which we have been alluding, was the *inauguratio* of the kings on the Arx after their election in the comitia (Liv. i. 18). But this inauguration had reference simply to the priestly office of the king, and, therefore, did not take place in the case of the republican magistrates, though it continued in use in the appointment of the rex sacrorum and the other priests.

3. The auspices belonging to the different magistrates were divided into two classes, called *auspicia maxima* or *majora* and *minora*. The former, which belonged originally to the kings, passed over to the consuls on the institution of the republic, and likewise to the extraordinary magistrates, the dictators, interreges, and consular tribunes. When the consuls were deprived in course of time of part of their duties, and separate magistrates were created to discharge them, they naturally received the *auspicia maxima* also: this was the case with the cen-

sors and praetors. The quaestors and the curule aediles, on the contrary, had only the *auspicia minora*, because they received them from the consuls and praetors of the year, and their auspices were derived from the *majora* of the higher magistrates. (Messalla, *op. Gall.* xiii. 15.)

It remains to trace the history of the college of augurs. We have already seen that it was a common opinion in antiquity that the augurship owed its origin to the first king of Rome, and it is accordingly stated, that a college of three augurs was appointed by Romulus, answering to the number of the early tribes, the Ramnes, Tities, and Lucereses. This is the account of Cicero (*de Rep.* ii. 9), who supposed Numa to have added two more (ii. 14), without, however, stating in what way these latter corresponded to the tribes. On the other side stand different statements of Livy, first, one (iv. 4) which is probably an error, in which the first institution of augurs is attributed to Numa, seemingly on the theory that all the Roman religion was derived from the second king: secondly, a statement of far more importance (x. 6), that at the passing of the Ogulnian law the augurs were but four in number, which Livy himself, who recognised the principle of the number of augurs corresponding to that of the tribes, supposes to have been accidental. This is improbable, as Niebuhr has shown (*Hist. of Rome*, vol. iii. p. 352), who thinks the third tribe was excluded from the college of augurs, and that the four, therefore, represented the Ramnes and Tities only. It is hard to suppose, however, that this superiority of the Ramnes and Tities over the third tribe could have continued down to the time of the Ogulnian law (a. c. 300): moreover, as two augurs apiece were appointed from each of the two first tribes, and the remaining five from the plebs, it does not appear how the Luceres could ever have obtained the privilege. A different mode of reconciling the contradictory numbers four and three is sought for in another statement of Cicero (*de Div.* i. 40), that the kings were augurs, so that after their expulsion another augur may have been added instead of them to the original number which represented the tribes. Probably this is one of the many cases in early Roman history in which the only conclusion we can come to is, that the theory of what *ought* to have been according to antiquarians of a later age differed from what actually *was* according to the earliest accounts to which Livy had recourse.

The Ogulnian law (a. c. 300), which increased the number of pontiffs to eight, by the addition of four plebeians, and that of the augurs to nine by the addition of five plebeians, may be considered a sort of aera in Roman history. The religious distinction between the two orders which had been so often insisted upon was now at an end, and it was no longer possible to use the auspices as a political instrument against the plebeians. The number of nine augurs which this law fixed, lasted down to the dictatorship of Sylla, who increased them to fifteen, a multiple of the original three, probably with a reference to the early tribes. (Liv. *Epit.* 89.) A sixteenth number was added by Julius Caesar after his return from Egypt. (Dion Cass. xlii. 51.)

The members of the college of augurs possessed self-election (*cooptati*). At first they were appointed by the king, but as the king himself was

an augur, their appointment by him was not considered contrary to this principle. (*Romulus cooperavit augures, de Rep.* ii. 9.) They retained the right of co-optation until a.c. 103, the year of the Domitian law. By this law it was enacted that vacancies in the priestly colleges should be filled up by the votes of a minority of the tribes, i.e. seventeen out of thirty-five chosen by lot. (*Cic. de Leg. Agr.* ii. 7; *Vell. Pat.* ii. 12; *Suet. Ner.* 2.) The Domitian law was repealed by Sulla a.c. 81 (*Pseudo-Ascon. in Cic. Dio.* p. 102, ed. Orelli), but again restored a.c. 63, during the consulship of Cicero, by the tribune T. Annius Labienus, with the support of Caesar (*Dion Cass.* xxxvii. 37). It was a second time abrogated by Antony a.c. 44 (*Dion Cass.* xlv. 53); whether again restored by Hirtius and Pansa in their general annulment of the acts of Antony, seems uncertain. The emperors possessed the right of electing augurs at pleasure.

The augurs were elected for life, and even if capitally convicted, never lost their sacred character. (*Plin. Ep.* iv. 8.) When a vacancy occurred, the candidate was nominated by two of the elder members of the college (*Cic. Phil.* ii. 2), the electors were sworn, and the new member was then solemnly inaugurated. (*Cic. Brut.* 1.) On such occasion there was always a splendid banquet given, at which all the augurs were expected to be present. (*Cic. ad Fam.* vii. 26, *ad Att.* xii. 13, 14, 15.) The only distinction in the college was one of age; an elder augur always voted before a younger, even if the latter filled one of the higher offices in the state. (*Cic. de Sen.* 18.) The head of the college was called *magister collegii*. It was expected that all the augurs should live on friendly terms with one another, and it was a rule that no one was to be elected to the office, who was known to be an enemy to any of the college. (*Cic. ad Fam.* iii. 10.) The augur, who had inaugurated a younger member, was always to be regarded by the latter in the light of a parent (*in parentis eum loco colere, Cic. Brut.* 1).

As insignia of their office the augurs wore the *togas*, or public dress (*Serv. ad Aen.* vii. 612), and carried in their hand the *lituus* or curved wand. [*LENTIVS*] On the coins of the Romans, who filled the office of augur, we constantly find the *lituus*, and along with it, not unfrequently, the *capit*, an earthen vessel which was used by them in sacrifices. (*Liv.* x. 7; *Varr. L. L.* v. 121, ed. Müller.) Both of these instruments are seen in the unexecuted coin of Lentulus.

The science of the augurs was called *jus augurum* and *jus augurium*, and was preserved in books (*libri augurales*), which are frequently mentioned in the ancient writers. The expression for consulting the augurs was *referre ad augures*, and their answers were called *decreta* or *responsa augurum*. The science of augury had greatly declined in the time of Cicero; and although he frequently deplores its neglect in his *De Divinatione*, yet neither

he nor any of the educated classes appears to have had any faith in it. What a farce it had become a few years later is evident from the statement of Dionysius (ii. 6), who informs us that a new magistrate, who took the auspices upon the first day of his office, was accustomed to have an augur on his side, who told him that lightning had appeared on his left, which was regarded as a good omen, and although nothing of the kind had happened, this declaration was considered sufficient. (Masov, *De Jure Auspicis apud Romanos*, Lips. 1721; Werther, *De Auguriis Romanis*, Lemgo, 1835; Crenzer, *Symbolik*, vol. ii. p. 935, &c.; Müller, *Etrusker*, vol. ii. p. 110, &c.; Hartung, *Die Religion der Römer*, vol. i. p. 98, &c.; Götting, *Geschichte der Röm. Staatsverf.* p. 198, &c.; Becker, *Röm. Alterth.* vol. ii. part i. p. 304; but above all Rubino, *Röm. Verfassung*, p. 34, &c.)

AUGURACULUM. [*AUGUR*, p. 176, a.]

AUGURALE. [*AUGUR*, p. 176, a.]

AUGUSTALES (sc. *iudi*, also called *Augustalia*, sc. *certamina ludicra*, and by the Greek writers and in Greek inscriptions, *Σέβαστα*, *Σέβαστα*, *Ἀγούστιά*), were games celebrated in honour of Augustus, at Rome and in other parts of the Roman empire. After the battle of Actium, a quinquennial festival (*πεντηήτης πανηγυρίς*) was instituted; and the birthday (*γενέθλια*) of Augustus, as well as that on which the victory was announced at Rome, were regarded as festival days. (*Dion Cass.* li. 19.) In the provinces, also, in addition to temples and altars, quinquennial games were instituted in almost every town. (*Suet. Aug.* 59.) The Roman equites were accustomed of their own accord to celebrate the birthday of Augustus in every alternate year (*Suet. Aug.* 57); and the praetors, before any decree had been passed for the purpose, were also in the habit of exhibiting games every year in honour of Augustus. (*Dion Cass.* liv. 26, 30.) It was not, however, till a.c. 11, that the festival on the birthday of Augustus was formally established by a decree of the senate (*Dion Cass.* liv. 34), and it is this festival which is usually meant when the Augustales or Augustalia are mentioned. It was celebrated iv. Id. Octobr. At the death of Augustus, this festival assumed a more solemn character, was added to the Fasti, and celebrated to his honour as a god. (*Tac. Ann.* i. 13; *Dion Cass.* lvi. 46.) Hence, Tacitus speaks of it as first established in the reign of Tiberius (*Ann.* i. 54.) It was henceforth exhibited annually in the circus, at first by the tribunes of the plebs, at the commencement of the reign of Tiberius, but afterwards by the praetor peregrinus. (*Tacit. Ann.* i. 15; *Dion Cass.* lvi. 46.) These games continued to be exhibited in the time of Dion Cassius, that is, about a.d. 230 (*liv.* 34).

The augustales, or augustalia, at Neapolis (Naples), were celebrated with great splendour. They were instituted in the lifetime of Augustus (*Suet. Aug.* 98), and were celebrated every five years. According to Strabo (v. p. 246), who speaks of these games without mentioning their name, they rivalled the most magnificent of the Grecian festivals. They consisted of gymnastic and musical contests, and lasted for several days. At these games the Emperor Claudius brought forward a Greek comedy, and received the prize. (*Suet. Claud.* 11; compare *Dion Cass.* lx. 6.)

Augustalia (*Σέβαστα*) were also celebrated at Alexandria, as appears from an inscription in

Gruter (316. 2); and in this city there was a magnificent temple to Augustus (*Ἀυγουστῆον, Augustale*). We find mention of *angustalia* in numerous other places, as Pergamus, Nicomedia, &c.

AUGUSTALES, the name of two classes of priests, one at Rome and the other in the municipia, frequently mentioned in inscriptions.

I. The *Augustales* at Rome, properly called *sodales Augustales*, which is the name they always bear in inscriptions, were an order of priests (*Augustalium sacerdotium*) instituted by Tiberius to attend to the worship of Augustus and the Julia gens. They were chosen by lot from among the principal persons of Rome, and were twenty-one in number, to which were added Tiberius, Drusus, Claudius, and Germanicus, as members of the imperial family. (Tacit. i. 54.) They were also called *sacerdotes Augustales* (Tacit. *Ann.* ii. 83); and sometimes simply *Augustales*. (Tacit. *Hist.* ii. 95.) Similar priests were appointed to attend to the worship of other emperors after their decease; and we accordingly find in inscriptions mention made of the *sodales Flavii, Hadrianales, Aeliani, Antonini*, &c. It appears that the *flamines Augustales* ought to be distinguished from the *sodales Augustales*. We find that *flamines* and *sacerdotes* were appointed, in the lifetime of Augustus, to attend to his worship; but we have the express statements of Suetonius and Dion Cassius that this worship was confined to the provinces, and was not practised in Rome, or in any part of Italy, during the lifetime of Augustus. (Tacit. *Ann.* i. 10; Suet. *Aug.* 52; Dion Cass. li. 20.) Women even were appointed priestesses of Augustus, as appears from an inscription in Gruter (320. 10): this practice probably took its origin from the appointment of Livia, by a decree of the senate, to be priestess to her deceased husband. (Dion Cass. lvi. 46.) It seems probable that the *sodales Augustales* were entrusted with the management of the worship; but that the *flamines Augustales* were the persons who actually offered the sacrifices and performed the other sacred rites. A member of the *sodales Augustales* was sometimes a *flamen* also (Orelli, *Inscrip.* 2366, 2368); and it is not improbable that the *flamines* were appointed by the *sodales*.

II. The *Augustales* in the municipia are supposed by most modern writers, in consequence of the statement of the scholiast on Horace (*Sat.* ii. 3. 281), to have been a class of priests selected by Augustus from the *libertini* to attend to the religious rites connected with the worship of the *Lares*, which that emperor was said to have put up in places where two or more ways met. (Orelli, *Inscrip.* vol. ii. p. 197.) But A. W. Zumpt, in an excellent essay on this subject, brings forward good reasons for rejecting this opinion. [Compar. COMPITALIA.] He thinks it much more probable that this order of priests was instituted in the municipia in imitation of the *Augustales* at Rome, and for the same object, namely, to attend to the worship of Augustus. From the numerous inscriptions in which they are mentioned, we learn the following facts respecting them. They formed a collegium and were appointed by the *decuriones*, or senate of the municipia. They were generally *libertini*, which is easily accounted for by the fact, that none but the freeborn (*ingenui*), could obtain admission into the *curia* of the municipia; and as there seem to have been many expences connected with the discharge of the duties of the *Augustales*, the *decuriones*

would not be anxious to obtain this distinction, while the *libertini* on the contrary, who were generally a wealthy class and were not invested with any honour, would naturally covet it. The *Augustales* ranked next in dignity to the *decuriones*; and as they were mostly men of property, they came in course of time to form a middle class between the *decuriones* and *plebs*, like the equestrian order at Rome. Thus, in the inscriptions of many municipia, we find the *decuriones*, *Augustales*, and *plebs*, mentioned together as the three classes into which the community was divided. The six principal members of the college were called *Seviri*, a title which seems to have been imitated from the *Seviri* in the equestrian order at Rome. (Egger, *Examen Critique des Historiens anciens de la Vie et du Règne d'Auguste*, Paris, 1844, Appendix II., treats of the *Augustales*; but see especially A. W. Zumpt, *De Augustalibus et Seviris Augustalibus Commentatio Epigraphica*, Berol. 1846.)

AUGUSTUS, a name bestowed upon Octavianus in a.c. 27, by the senate and the Roman people. It was a word used in connection with religion, and designated a person as sacred and worthy of worship; hence the Greek writers translate it by *Ἀεαυρός*. (Dion Cass. liii. 16, 18; Suet. *Aug.* 7; Vell. Pat. ii. 91; Flor. iv. 12; Oros. vi. 20; Censorin. 22; Ov. *Fast.* i. 607.) It was not a title indicative of power, but simply a surname; and is hence called by Suetonius (*Tit.* 26) *nomen hereditarium*. It was, however, borne not only by Tiberius and the other emperors connected with the family of Augustus, but was likewise adopted by all succeeding emperors, as if descended, either by birth or adoption, from the first emperor of the Roman world (*in ejus nomen velut quadam adoptione aut jure hereditario succedere*, Lämprid. *Alex. Sever.* 10). The name of *Augusta* was frequently bestowed upon females of the imperial family, the first instance of which occurs in the case of Livia, who received this title upon her adoption into the Julia gens on the death of her husband Octavianus (Tac. *Ann.* i. 8); but *Augustus* belonged exclusively to the reigning emperor till towards the end of the second century of the Christian era, when M. Aurelius and L. Verus both received this surname (Spartian. *Ael. Verus*, 5, M. *Ant. Phil.* 7). From this time we frequently find two or even a greater number of *Augusti*; and though in that and in all similar cases the persons honoured with the title were regarded as participators of the imperial power, still the one who received the title first was looked upon as the head of the empire. When there were two *Augusti* we find on coins and inscriptions A V G G, and when three A V G G G. From the time of Probus the title became *perpetuus Augustus*, and from Philippus or Claudius Gothicus *semper Augustus*, the latter of which titles was borne by the so-called Roman emperors in Germany. (Eckhel. vol. viii. p. 354, &c.) [CAESAR.]

AULAEUM. [SIPARIUM.]

AU'REUS. [AURUM.]

AURIGA. [CIRCUS.]

AURUM (*χρυσός*), gold. The remarks made under ARGENTUM apply to a great extent to gold as well as silver, and the sources of information respecting both the precious metals are specified in

that article. It would appear from a passage in the *Antigone* (v. 1038), that in the time of Sophocles gold was rare at Athens. Indeed throughout the whole of Greece, though gold was by no means unknown, it appears to have been obtained chiefly through the Greek cities of Asia Minor, and the adjacent islands, which possessed it in abundance. The Homeric poems speak constantly of gold as being laid up in treasuries, and used in large quantities for the purposes of ornament; but this is sufficiently accounted for by the fact that Homer was an Asiatic Greek. The chief places from which the Greeks procured their gold were India, Arabia, Armenia, Colchia, and Troas. It was found mixed with the sands of the Pactolus and other rivers.

Almost the only method of purifying gold, known to the ancients, seems to have been that of grinding and then roasting it, and by this process they succeeded in getting it very pure. This is what we are to understand by the phrase χρυσίου ἀπέφθου in Thucydides (ii. 13), and by the word *obruissam* in Pliny (*H. N.* xxxiii. 3. a. 19), and elsewhere (Forcellini s. v. *obruissa*). Respecting the use of gold in the fine arts, especially in the chryselephantine statues, see ΤΟΚΡΥΤΙΚΗ. The art of gilding was known to the Greeks from the earliest times of which we have any information. (*Hom. Od.* iii. 425, vi. 232; *Plin. H. N.* xxxiii. 3. a. 19, 6. a. 32.)

GREEK GOLD MONEY. — The time when gold was first coined at Athens is very uncertain. Aristophanes speaks in the *Frogs* (406 B. C.) of τὸ *νέον χρυσίον*, "the new gold money" (v. 719), which he immediately afterwards calls *πομπὰ χαλκία* (v. 724). The Scholiast on this passage states that in the preceding year the golden statues of Victory had been coined into money, and he quotes Hellanicus and Philochorus as authorities for this statement. It would appear from the language both of Aristophanes and the Scholiast, and it is probable from the circumstances of Athens at the time (it was the year before the battle of Aegospotami), that this was a greatly debased gold coinage, or perhaps only gilt money, struck to meet a particular exigency. This matter is distinct from the general question respecting the Athenian gold coinage, for the Attic money was proverbial for its purity, and the grammarians, who state that Athens had a gold coinage at an early period, speak of it as very pure. There are other passages in Aristophanes in which gold money is spoken of; but in them he is referring to Persian money, which is known to have been imported into Athens before the Athenians had any gold coinage of their own, and even this seems to have been a rarity. (See *Aristoph. Acharn.* v. 102, 108, *Equit.* v. 470, *Av.* v. 574.) Demosthenes always uses ἀργύριον for money, except when he is speaking of foreign gold. In the speech against Phormio, where he repeatedly uses the word χρυσίον, we are expressly told what was the money he referred to, namely, 120 staters of Cyzicus (p. 914; compare his speech τὸς Λακέρ. p. 935). Isocrates, who uses the word in the same way, speaks in one passage of buying gold money (χρυσονομίαν) in exchange for silver (*Trapezit.* p. 367). In many passages of the orators, gold money is expressly said to have been imported from Persia and Macedonia. If we look at the Athenian history, we find that the silver mines at Laurion were regarded as one of the

greatest treasures possessed by the state; but no such mention is made of gold. Thucydides (ii. 13) in enumerating the money in the Athenian treasury at the beginning of the Peloponnesian war, does not mention gold; and Xenophon speaks of the money of Athens in a manner which would lead us to suppose that it had no gold coinage in his time (*Vectigal.* iv. 10). The mines of Scaptahyle, in Thrace, were indeed worked some years before this period (Thucyd. iv. 105); but the gold procured from them does not appear to have been coined, but to have been laid up in the treasury in the form of counters (φθοῖδες, Böckh, *Inscrip.* vol. i. pp. 145, 146). Foreign gold coin was often brought into the treasury, as some of the allies paid their tribute in money of Cyzicus. The gold money thus introduced may have been allowed to circulate, while silver remained the current money of the state.

The character of the Attic gold coins now in existence, and their small number (about a dozen), is a strong proof against the existence of a gold currency at Athens at an early period. There are three Attic staters in the British Museum, and one in the Hunterian Museum at Glasgow, which there is good reason to believe are genuine; their weights agree exactly with the Attic standard. In the character of the impression they bear a striking resemblance to the old Attic silver; but they differ from it by the absence of the thick bulky form, and the high relief of the impression which is seen in the old silver of Athens, and in the old gold coins of other states. In thickness, volume, and the depth of the die from which they were struck, they closely resemble the Macedonian coinage. Now, as upon the rise of the Macedonian empire, gold became plentiful in Greece, and was coined in large quantities by the Macedonian kings, it is not improbable that Athens, like other Grecian states, may have followed their example, and issued a gold coinage in imitation of her ancient silver. On the whole, it appears most probable that gold money was not coined at Athens in the period between Pericles and Alexander the Great, if we except the solitary issue of debased gold in the year 407.

A question similar to that just discussed arises with respect to other Greek states, which we know to have had a silver currency, but of which a few gold coins are also found. This is the case with Aegina, Thebes, Argos, Carystus in Euboea, Acarnania, and Aetolia. But of these coins all, except two, bear evident marks, in their weight or workmanship, of belonging to a period not earlier than Alexander the Great. There is great reason, therefore, to believe that no gold coinage existed in Greece Proper before the time of that monarch.

But from a very early period the Asiatic nations, and the Greek cities of Asia Minor and the adjacent islands, as well as Sicily and Cyrene, possessed a gold coinage, which was more or less current in Greece. Herodotus (i. 94) says that the Lydians were the first who coined gold, and the stater of Croesus appears to have been the earliest gold coin known to the Greeks. The Daric was a Persian coin. Staters of Cyzicus and Phocaea had a considerable currency in Greece. There was a gold coinage in Samos as early as the time of Polycrates. (Herod. iii. 56.) The islands of Siphnos and Thasos, which possessed gold mines, appear to have had a gold coinage at an early period. In most of the coins of the Greek cities of Asia Minor the metal is very base. The Macedonian gold coinage

came into circulation in Greece in the time of Philip, and continued in use till the subjection of Greece to the Romans. [DARICUS; STATER.]

ROMAN GOLD MONEY.—The standard gold coin of Rome was the *aureus summus*, or *denarius aureus*, which, according to Pliny (*H.N.* xxxiii. 3. s. 13) was first coined 62 years after the first silver coinage [ARGENTUM], that is in the year 207 B.C. The lowest denomination was the *scrupulum*, which was made equal to 20 sestertii. The weight of the scrupulum, as determined by Mr. Hussey (*Ancient Weights and Money*) was 18.06 grs. In the British Museum there are gold coins of one, two, three, and four scrupula, the weights of which are 17.2, 34.5, 51.8, and 68.9 grains respectively. They bear a head of Mars on one side, and on the other an eagle standing on a thunderbolt, and beneath the inscription "ROMA." The first has the mark xx (20 sestertii); the second, xxx (40 sestertii); the third, ψ x (60 sestertii). Of the last we subjoin an engraving:—

Pliny adds that afterwards aurei were coined of 40 to the pound, which weight was diminished, till under Nero (the reading of this word is doubtful) they were 45 to the pound. This change is supposed, from an examination of extant specimens, to have been made in the time of Julius Caesar. The estimated full weight of the aurei of 40 to the pound is 130.1 grains, of those of 45 to the pound 115.64 grains. No specimens exist which come up to the 130.1 grains; the heaviest known is one of Pompey, which weighs 128.2 grains. The average of the gold coins of Julius Caesar is fixed by Letronne at 125.66 grains, those of Nero 115.39 grains. Though the weight of the aureus was diminished, its proportion to the weight of the denarius remained about the same, namely, as 2 : 1 (or rather, perhaps, as 2.1 : 1). Therefore since the standard weight of the denarius, under the early emperors, was 60 grains, that of the aureus should be 120. The average weight of the aurei of Augustus, in the British Museum, is 121.26 grains: and as the weight was afterwards diminished, we may take the average at 120 grains. There seems to have been no intentional alloy in the Roman gold coins, but they generally contained a small portion of native silver. The average alloy is $\frac{1}{10}$. The aureus of the Roman emperors, therefore, contained $\frac{10}{11}$ = .4 of a grain of alloy, and therefore 119.6 grains of pure gold. Now a sovereign contains 113.12 grains of pure gold. Therefore the value of the aureus in terms of the sovereign is $\frac{119.6}{113.12}$ = 1.0564 = 1*l.* 1*s.* 1*d.* and a little more than a halfpenny. This is its value according to the present worth of gold; but its current value in Rome was different from this, on account of the difference in the worth of the metal. The aureus passed for 25 denarii; therefore, the denarius being 8*d.*, it was worth 17*s.* 8*d.* The ratio of the value of gold to that of silver is given in the article ARGENTUM. The following cut represents an aureus of Augustus in the British Museum, which weighs 121 grains.

Alexander Severus coined pieces of one-half and one third of the aureus, called *Semissis* and *Tremissis* (Lamprid. *Alex. Sev.* c. 39), after which time the aureus was called *solidus*.

Constantine the Great coined aurei of 72 to the pound; at which standard the coin remained to the end of the empire. (Cod. x. tit. 70. s. 5; Hussey, *On Ancient Weights and Money*; Wurm. *De Pond.* &c.) [P.S.]

AURUM CORONARIUM. When a general in a Roman province had obtained a victory, it was the custom for the cities in his own provinces, and for those from the neighbouring states, to send golden crowns to him, which were carried before him in his triumph at Rome. (Liv. xxxviii. 37, xxxix. 7; Festus, s. v. *Triumphales Coronae*.) This practice appears to have been borrowed from the Greeks; for Chares related, in his history of Alexander (ap. Athen. xii. p. 539. a.), that after the conquest of Persia, crowns were sent to Alexander, which amounted to the weight of 10,500 talents. The number of crowns which were sent to a Roman general was sometimes very great. Cn. Manlius had 200 crowns carried before him in the triumph which he obtained on account of his conquest of the Gauls in Asia. (Liv. xxxix. 7.) In the time of Cicero, it appears to have been usual for the cities of the provinces, instead of sending crowns on occasion of a victory, to pay money, which was called *aureum coronarium*. (Cic. *Leg. Agr.* ii. 22; Gell. v. 6; Monum. Ancyr.) This offering, which was at first voluntary, came to be regarded as a regular tribute, and seems to have been sometimes exacted by the governors of the provinces, even when no victory had been gained. By a law of Julius Caesar (Cic. *in Pis.* 37), it was provided that the *aureum coronarium* should not be given unless a triumph was decreed; but under the emperors it was presented on many other occasions, as, for instance, on the adoption of Antoninus Pius. (Capitolin. *Anton. Pius.* c. 4.) It continued to be collected, apparently as a part of the revenue, in the time of Valentinian and Theodosius. (Cod. 10. tit. 74.)

Servius says (*ad Virg. Aen.* viii. 721), that *aureum coronarium* was a sum of money exacted from conquered nations, in consideration of the lives of the citizens being spared; but this statement does not appear to be correct.

AURUM LUSTRALE was a tax imposed by Constantine, according to Zosimus (ii. 38), upon all merchants and traders, which was payable at every lustrum, or every four years, and not at every five, as might have been expected from the original length of the lustrum. This tax was also called *auri et argenti collatio* or *prostatio*, and thus in Greek ἡ συντάξεις ἡ τοῦ χρυσίου ἀργύρου. (Cod. 11. tit. 1; Cod. Theod. 13. tit. 1.)

AURUM VICESIMARIUM. [ANNUARIUM p. 23, b.]

AUSPEX. [AUGUR.]

AUSPICIUM. [AUGUR.]

AUTHE'NTICA. [NOVELLAE.]

AUTHEPSA (αὐθής), which literally means "self-boiling" or "self-cooking," was the name of a vessel, which is supposed by Böttiger to have been used for heating water, or for keeping it hot. Its form is not known for certain; but Böttiger (*Sabina*, vol. ii. p. 30) conjectures that a vessel, which is engraved in Caylus (*Recueil d'Antiquités*, vol. ii. tab. 27), is a specimen of an authepsa. Cicero (*pro Rosc. Amerin.* 46) speaks of authepsae among other costly Corinthian and Delian vessels. In later times they were made of silver. (*Lamprid. Heliogab.* 19; but the reading is doubtful.) The *authepsa* seems to have been a vessel of a similar kind.

AUTOMOLIAS GRAPHE' (αὐτομολίας γράφη), the accusation of persons charged with having deserted and gone over to the enemy during war (Pollux, vi. 151). There are no speeches extant upon this subject. Petrus, however, collects (*Leg. Att.* p. 674) from the words of a commentator upon Demosthenes (Ulpian), that the punishment of this crime was death. Meier (*Att. Proc.* p. 365) awards the presidency of the court in which it was tried to the generals; but the circumstance of persons who left the city in times of danger without any intention of going over to the enemy, being tried by the Areiopagus as traitors (*Lycurg. c. Leocrat.* p. 177), will make us pause before we conclude that persons not enlisted as soldiers could be indicted of this offence before a military tribunal. [J. S. M.]

AUTONOMI (αὐτὸνομος), the name given by the Greeks to those states which were governed by their own laws, and were not subject to any foreign power. (*Thuc.* v. 18, 27; *Xen. Hell.* v. i. § 31.) This name was also given to those cities subject to the Romans, which were permitted to enjoy their own laws, and elect their own magistrates (*Omnes, suis legibus et iudiciis usae, αὐτονομίας ἀπέλας, reviviscunt*, Cic. *Ad Att.* vi. 2). This permission was regarded as a great privilege, and mark of honour; and we accordingly find it recorded on coins and medals, as, for instance, on those of Antioch ANTIOXEON MHTPOIOA. ATTONOMOT, on those of Halicarnassus AAIKAP. MACCEON ATTONOMON, and on those of many other cities. (Spanheim, *De Praes. et Usu Numism.* p. 789. Amst. 1671.)

AVU'LSIO. [CONFUSIO.]

AUXILIA'RES. [SOCIL.]

AXAMENTA. [SALIX.]

AXINE (ἀξίνη). [SECURIA.]

AXIS. [CURRUS.]

AXONES (ἄξονες), also called *kerbeis* (κέρβεις), wooden tablets of a square or pyramidal form made to turn on an axis, on which were written the laws of Solon. According to some writers the *axones* contained the civil, and the *kerbeis* the religious laws; according to others the *kerbeis* had four sides and the *axones* three sides. But at Athens, at all events, they must have been identical, since such is the statement of Aristotle (*op. Plat. Sol.* 25). They were at first preserved in the acropolis, but were afterwards placed, through the advice of Ephialtes, in the agora, in order that all persons might be able to read them. A small portion of them was preserved in the time of Plutarch in the prytaneum. (*Plut. Sol.* 25; *Schol. ad Aristoph. Av.* 1360; *Schol. ad Apoll. Rhod.* iv. 280; Harpocrat. δ κατὰ τὴν νόμον; Her-

mann, *Griech. Staatsalterth.* § 107, n. 1; Wachsmuth *Hell. Alterthumsk.* vol. i. p. 491, 2nd ed.)

B.

BACCHANA'LIA. [DIONYSIA.]

BAKTE'RIA (βακτηρία), a staff borne by the dicasts at Athens. [DICASTRA.]

BA'LATRO, a professional jester, buffoon, or parasite. (*Hor. Sat.* i. 2. 2.) In Horace (*Sat.* ii. 8. 21) Balatro is used as a proper name—Servilius Balatro. An old Scholiast, in commenting on this word, derives the common word from the proper names; buffoons being called balatrones, because Servilius Balatro was a buffoon: but this is opposed to the natural inference from the former passage, and was said to get rid of a difficulty. Festus derives the word from blatae, and supposes buffoons to have been called balatrones, because they were dirty fellows, and were covered with spots of mud (*blatae*), with which they got spattered in walking; but this is opposed to sound etymology and common sense. Another writer has derived it from barathrum, and supposes buffoons to have been called balatrones, because they, so to speak, carried their jesting to market, even into the very depth (*barathrum*) of the shambles (*barathrum macelli*, *Hor. Ep.* i. 15. 31). Perhaps balatro may be connected with *blata-re* (to bleat like a sheep, and hence) to speak sillily. It is probably connected with *blaturo*, a busy-body. (*Gell.* i. 15.) Balatrones were paid for their jests, and the tables of the wealthy were generally open to them for the sake of the amusement they afforded. [A. A.]

BALISTA. [TORMENTUM.]

BA'LINEAE, *Balinea*, *Balneum*, *Balneum*, *Thermae* (ἀσδμνθος, βαλανεῖον, λουτήριον, λουτήριον). These words are all commonly translated by our general term bath or baths; but in the writings of the earlier and better authors they are used with discrimination. *Balneum* or *balneum*, which is derived from the Greek *βαλανεῖον* (Varro, *De Ling. Lat.* ix. 68, ed. Müller), signifies, in its primary sense, a bath or bathing-vessel, such as most persons of any consequence amongst the Romans possessed in their own houses (*Cic. Ad Att.* ii. 3), and hence the chamber which contained the bath (*Cic. Ad Fam.* xiv. 20), which is also the proper translation of the word *balnearium*. The diminutive *balneolum* is adopted by Seneca (*Ep.* 86) to designate the bath-room of Scipio, in the villa at Liternum, and is expressly used to characterize the modesty of republican manners as compared with the luxury of his own times. But when the baths of private individuals became more sumptuous, and comprised many rooms, instead of the one small chamber described by Seneca, the plural *balnea* or *balinae* was adopted, which still, in correct language, had reference only to the baths of private persons. Thus Cicero terms the baths at the villa of his brother Quintus (*Ad Q. Frat.* iii. 1. § 1) *balnearia*. *Balnea* and *balinae*, which according to Varro (*De Ling. Lat.* viii. 25, ix. 41, ed. Müller) have no singular number*, were the public baths. Thus Cicero (*Pro Caes.* 25) speaks of *balnea Senae*, *balnea publicae*, and in *vestibulo*

* *Balnea* is, however, used in the singular to designate a private bath in an inscription quoted by Reinesius. (*Inscr.* xi. 115.)

balnearum (1b. 26), and Aulus Gellius (iii. 1, x. 3) of *balneae Sittias*. But this accuracy of diction is neglected by many of the subsequent writers, and particularly by the poets, amongst whom *balneae* is not uncommonly used in the plural number to signify the public baths, since the word *balneae* could not be introduced in an hexameter verse. Pliny also, in the same sentence, makes use of the neuter plural *balneae* for public, and of *balneum* for a private bath. (*Ep.* ii. 17.) *Thermae* (ἑρμαί, hot springs) meant properly warm springs, or baths of warm water; but came to be applied to those magnificent edifices which grew up under the empire, in place of the simple *balneae* of the republic, and which comprised within their range of buildings all the appurtenances belonging to the Greek gymnasia, as well as a regular establishment appropriated for bathing. (*Juv. Sat.* vii. 233.) Writers, however, use these terms without distinction. Thus the baths erected by Claudius Etruscus, the freedman of the Emperor Claudian, are styled by Statius (*Syle.* i. 5. 13) *balneae*, and by Martial (vi. 42) *Etrusci thermulae*. In an epigram by Martial (ix. 76)—*subice balneum thermis*—the terms are not applied to the whole building, but to two different chambers in the same edifice.

Greek Baths.—Bathing was a practice familiar to the Greeks of both sexes from the earliest times, both in fresh water and salt, and in the natural warm springs, as well as vessels artificially heated. Thus Nausicaa, daughter of Alcinous, king of Phaeacia, goes out with her attendants to wash her clothes; and after the task is done, she bathes herself in the river. (*Od.* vi. 58, 65.) Ulysses, who is conducted to the same spot, strips and takes a bath, whilst Nausicaa and her servants stand aside. (*Od.* vi. 210—224.) Europa also bathes in the river Anaurus (*Mosch. Id.* ii. 81), and Helen and her companions in the Eurotas. (*Theocr. Id.* vii. 22.) Warm springs were also resorted to for the purpose of bathing. The Ἡράκλεια λουτρά shown by Hephaestus or Athens to Hercules are celebrated by the poets. Pindar speaks of the hot baths of the nymphs—*Ἑρμῆ Νυμφῶν λουτρά* (*Olymp.* xii. 27), and Homer (*Il.* xxii. 149) celebrates one of the streams of the Scamander for its warm temperature. The artificial warm bath was taken in a vessel called ἀσάμυνθος by Homer, and ἔμβασις by Athenaeus (i. p. 25). It would appear from the description of the bath administered to Ulysses in the palace of Circe, that this vessel did not contain water itself, but was only used for the bather to sit in while the warm water was poured over him, which was heated in a large caldron or tripod, under which the fire was placed, and when sufficiently warmed, was taken out in other vessels and poured over the head and shoulders of the person who sat in the ἀσάμυνθος. (*Od.* x. 359—365.) Where cleanliness merely was the object sought, cold bathing was adopted, which was considered as most bracing to the nerves (*Athen.* i. c.); but after violent bodily exertion or fatigue warm water was made use of, in order to refresh the body, and relax the over tension of the muscles, (*Id.* ib.; comp. *Hom. Il.* x. 576, *Od.* iv. 48, et alibi.)

The ἀσάμυνθος was of polished marble, like the basins (*labra*) which have been discovered in the Roman baths, and sometimes of silver. Indulgence in the warm bath was considered, in Homer's time, a mark of effeminacy (*Od.* viii. 248).

The use of the warm bath was preceded by bathing in cold water (*Il.* x. 576). The later custom of plunging into cold water after the warm bath mentioned by Aristides (vol. i. *Orat.* 2. *Sacr. Serm.* p. 515), who wrote in the second century of our era, was no doubt borrowed from the Romans.

After bathing, both sexes anointed themselves with oil, in order that the skin might not be left harsh and rough, especially after warm water. (*Od.* vi. 96; *Athen.* i. c.; *Plin. H. N.* xiii. 1.; see also *Il.* xiv. 172, xxiii. 186.) The use of precious unguents (μύρα) was unknown at that early period. In the heroic ages, as well as later times, refreshments were usually taken after the bath. (*Od.* vi. 97.)

The Lacedaemonians, who considered warm water as enervating and effeminate, used two kinds of baths; namely, the cold daily bath in the Eurotas (*Xen. Hell.* v. 4. § 28; *Plut. Alc.* 23), and a dry sudorific bath in a chamber heated with warm air by means of a stove (*Dion Cass.* liii. p. 515, ed. Hannover. 1606); and from them the chamber used by the Romans for a similar purpose was termed *Lacomicum* (compare *Strabo*, iii. p. 413, ed. Siebenkees, and *Cassan.* *ad loc.*).

At Athens the frequent use of the public baths was regarded in the time of Socrates and Demosthenes as a mark of luxury and effeminacy. (*Demosth. c. Polycl.* p. 1217.) Accordingly Phocion was said to have never bathed in a public bath (ἐν βαλανείῳ δημοσιεύοντι, *Plut. Phoc.* 4), and Socrates to have made use of it very seldom. (*Plato, Symp.* p. 174.) It was, however, only the warm baths (βαλανεία, called by Homer *ἑρμῆ λουτρά*) to which objection was made, and which in ancient times were not allowed to be built within the city. (*Athen.* i. p. 18, b.) The estimation in which such baths were held, is expressed in the following lines of Hermippus (*ap. Athen.* i. c.)

Μὰ τὸν Δι', οὐ μέντοι μεθύειν τὸν ἄνδρα χρὴ
τὸν ἀγαθόν, οὐδὲ θερμολουτεῖν, ἂν ποιεῖς.

In the Clouds of Aristophanes the δίκαιος λόγος warns the young man to abstain from the baths (βαλανείων ἀπέχεσθαι, l. 978), which passage, compared with l. 1028—1037, shows that warm baths are intended by the word βαλανεία.

The baths (βαλανεία) were either public (δημόσια, δημοσιεύοντα) or private (ἴδια, ἰδιωτικά). The former were the property of the state, but the latter were built by private individuals, and were opened to the public on the payment of a fee (ἐπ'λουτρον). Such private baths are mentioned by Plutarch (*Demetr.* 24) and Isaeus (*De Dicaeog. her.* p. 101), who speaks of one which was sold for 3000 drachmae. (*De Philoct. her.* p. 140.) Baths of this kind may also have been intended sometimes for the exclusive use of the persons to whom they belonged. (*Xen. Rep. Ath.* ii. 10.) A small fee appears to have been also paid by each person to the keeper of the public baths (βαλανεύς), which in the time of Lucian was two oboli. (*Lucian, Lexiph.* 2. vol. ii. p. 320.)

We know very little of the baths of the Athenians during the republican period; for the account of Lucian in his *Hippias* relates to baths constructed after the Roman model. On ancient vases, on which persons are represented bathing, we never find any thing corresponding to a modern bath in which persons can stand or sit; but there is always

a round or oval basin (*λουτήρ* or *λουτήριον*), resting on a stand (*ὀδύστανον*), by the side of which those who are bathing are represented standing undressed and washing themselves, as is seen in the following woodcut taken from Sir W. Hamilton's vases. (Tischbein, i. pl. 58.) The word *ΔΗΜΟΣΙΑ* upon it shows that it belonged to a public bath.

The next woodcut is also taken from the same work (i. pl. 59), and represents two women bathing. The one on the right hand is entirely naked, and holds a looking-glass in her right hand; the one on the left wears only a short kind of *χιτώνιον*. Eros is represented hovering over the bathing vessel.

Besides the *λουτήρες* and *λουτήρια* there were also the vessels for bathing, large enough for persons to sit in, which, as stated above, are called *ἀνδροβάς* by Homer and *πύλοι* by the later Greeks (Schol. ad *Aristoph. Equit.* 1055; Hesych. s. v. *Πύλος*; Pollux, vii. 166, 168). In the baths there was also a kind of sudorific or vapour bath called *πυρία* or *πυριετήριον*, which is mentioned as early as the time of Herodotus (iv. 75). (Compare Pollux, vii. 168; Athen. v. p. 207, f., xii. p. 519, e.; Plut. *Civ.* 1.)

The persons who bathed probably brought with them strigils, oil, and towels. The strigil, which was called by the Greeks *στραγγίς* or *ξύστρα*, was usually made of iron, but sometimes also of other materials. (Plut. *Inst. Lac.* 32; Aelian, xii. 29.) One of the figures in the preceding woodcut is represented with a strigil in his hand;

several strigils are figured below. The Greeks also used different materials for cleansing or washing themselves in the bath, to which the general name of *ρύμμα* was given, and which were supplied by the *βαλανεύς*. (Aristoph. *Lysistr.* 377.) This *ρύμμα* usually consisted of a lye made of lime or wood-ashes (*κονία*), of nitrum, and of fuller's earth (*γῆ κιμωλία*, Aristoph. *Ran.* 710 and Schol.; Plut. *Rep.* iv. p. 430).

The bath was generally taken shortly before the *δείπνον* or principal meal of the day. It was the practice to take first a warm or vapour, and afterwards a cold bath (Plut. *de primo frig.* 10; Paus. ii. 34. § 2), though in the time of Homer the cold bath appears to have been taken first and the warm afterwards. The cold water was usually poured on the back or shoulders of the bathers by the *βαλανεύς* or his assistants, who are called *παραχύται*. (Plut. *Rep.* i. p. 344; Lucian, *Demosth. Encom.* 16. vol. iii. p. 503; Plut. *de Isid.* 6, *Apophth. Lac.* 49.) The vessel, from which the water was poured, was called *ἀρύτωνα*. (Aristoph. *Equit.* 1087; Theophr. *Char.* 9.) In the first of the preceding woodcuts a *παραχύτης* is represented with an *ἀρύτωνα* in his hands.

Among the Greeks a person was always bathed at birth, marriage, and after death [*Funus*]; whence it is said of the Dardanians, an Illyrian people, that they bathe only thrice in their lives, at birth, marriage, and after death. (Nicol. *Damasc. ap. Stob.* v. 51. p. 152, Gaiss.) The water in which the bride was bathed (*λουτήριον νυμφικόν*, Aristoph. *Lysistr.* 378) at Athens, was taken from the fountain of Kallirrhoe, which was called from the time of Peisistratus *Ἐννέδκρονος*. (Thucyd. ii. 15.) Compare Pollux, iii. 43; Harpocrat. s. v. *Λουτροφόρος*, who says that the water was fetched by a boy, who was the nearest relation, and that this boy was called *λουτροφόρος*. He also states that water was fetched in the same way to bathe the bodies of those who had died unmarried, and that on the monuments of such, a boy was represented holding a water-vessel (*ὄδρια*). Pollux (l. c.), however, states that it was a female who fetched the water on such occasions, and Demosthenes (c. *Leochar.* p. 1089. 23; compare p. 1086. 14. &c.) speaks of ἡ *λουτροφόρος* on the monument of a person who had died unmarried. In remains of ancient art we find girls represented as *λουτροφόροι*, but never boys. (Brünsted, *Brief Description of thirty-two ancient Greek Vases*, pl. 27. The best account of the Greek baths is given by Becker, *Charikles*, vol. ii. pp. 135—146, pp. 459—462.)

Roman Baths.—The Romans, in the earlier periods of their history, used the bath but seldom, and only for health and cleanliness, not as a luxury. Thus we learn from Seneca (*Ep.* 86) that the ancient Romans washed their legs and arms daily, and bathed their whole body once a week. (Comp. *Cat. de Lib. Educ.* ap. Non. iii. s. v. *Ephippium*; Colum. *R. R.* i. 6. § 20.)

It is not recorded at what precise period the use of the warm bath was first introduced amongst the Romans; but we learn from Seneca (l. c.) that Scipio had a warm bath in his villa at Liternum; which, however, was of the simplest kind, consisting of a single chamber, just sufficient for the necessary purposes, and without any pretensions to luxury. It was "small and dark," he says "after the manner of the ancients." Seneca also

describes the public baths as *obscura et gregali tectorio induta*, and as so simple in their arrangements that the aedile judged of the proper temperature by his hands. These were baths of warm water; but the practice of heating an apartment with warm air by flues placed immediately under it, so as to produce a vapour bath, is stated by Valerius Maximus (ix. 1. § 1) and by Pliny (*H. N.* ix. 54. s. 79) to have been invented by Sergius Orata, who lived in the age of L. Crassus, the orator, before the Marsic war. The expression used by Valerius Maximus is *balnea pensilia*, and by Pliny *balineae pensiles*, which is differently explained by different commentators; but a single glance at the plans inserted below will be sufficient in order to comprehend the manner in which the flooring of the chambers was *suspended* over the hollow cells of the hypocaust, called by Vitruvius *suspensura caldarium* (v. 11), so as to leave no doubt as to the precise meaning of the invention, which is more fully exemplified in the following passage of Ausonius (*Mosell.* 337):—

“Quid (memorem) quae sulphurea substructa crepidine fumant

Balnea, ferventi cum Mulciber haustus aperta,
Volvit anhelatas tectoria per cava flammae,
Inclusum glomerans aestu expirante vaporem?”

By the time of Cicero, the use of baths, both public and private, of warm water and hot air, had become general (*Epist. ad Q. Frat.* iii. 1); and we learn from one of his orations that there were already baths (*balneae Seniae*) at Rome, which were open to the public upon payment of a small sum (*Pro Cael.* 25, 26).

In the earlier ages of Roman history a much greater delicacy was observed with respect to bathing, even amongst the men, than was usual among the Greeks; for according to Valerius Maximus (ii. 1. § 7) it was deemed indecent for a father to bathe in company with his own son after he had attained the age of puberty, or a son-in-law with his father-in-law. (*Comp. Cic. De Off.* i. 35, *De Orat.* ii. 55.) But virtue passed away as wealth increased; and when the *thermae* came into use, not only did the men bathe together in numbers, but even men and women stripped and bathed promiscuously in the same bath. It is true, however, that the public establishments often contained separate baths for both sexes adjoining to each other (Vitruv. v. 10; Varro, *De Ling. Lat.* ix. 68), as will be seen to have been the case at the baths of Pompeii. Aulus Gellius (x. 3) relates a story of a consul's wife who took a whim to bathe at Teanum (Teano), a small provincial town of Campania in the men's baths (*balneae virilibus*); probably, because in a small town, the female department, like that at Pompeii, was more confined and less convenient than that assigned to the men; and an order was consequently given to the Quaestor, M. Marius, to turn the men out. But whether the men and women were allowed to use each other's chambers indiscriminately, or that some of the public establishments had only one common set of baths for both, the custom prevailed under the Empire of men and women bathing indiscriminately together. (Plin. *H. N.* xxxiii. 12. s. 54.) This custom was forbidden by Hadrian (*Spart. Hadr.* c. 1), and by M. Aurelius Antoninus (*Capitolin. Anton.* c. 23); and Alexander Severus prohibited any baths, common to both sexes (*balneae*

mixtae), from being opened in Rome. (Lamprid. *Alex. Sev.* c. 42.)

When the public baths (*balneae*) were first instituted, they were only for the lower orders, who alone bathed in public; the people of wealth, as well as those who formed the equestrian and senatorian orders, used private baths in their own houses. But as early even as the time of Julius Caesar we find no less a personage than the mother of Augustus making use of the public establishments (*Suet. Aug.* 94); and in process of time even the emperors themselves bathed in public with the meanest of the people. (*Spart. Hadr.* c. 17; Trebell. Pollio, *De Gallien.* duob. c. 17.)

The baths were opened at sunrise, and closed at sunset; but in the time of Alexander Severus, it would appear that they were kept open nearly all night. (Lamp. *Alex. Sev.* l. c.) The allusion in Juvenal (*balneae nocte subit*, *Sat.* vi. 419) probably refers to private baths.

The price of a bath was a quadrans, the smallest piece of coined money, from the age of Cicero downwards (*Cic. Pro Cael.* 26; *Hor. Sat.* i. 3. 137; *Juv. Sat.* vi. 447), which was paid to the keeper of the bath (*balneator*); and hence it is termed by Cicero, in the oration just cited, *quadrantaria permutatio*, and by Seneca (*Ep.* 86) *res quadrantaria*. Children below a certain age were admitted free. (*Juv. Sat.* ii. 152.)

Strangers, also, and foreigners were admitted to some of the baths, if not to all, without payment, as we learn from an inscription found at Rome, and quoted by Pitiacius. (*Ins. Antiq.*)

L. OCTAVIO. L. F. CAM.

RUFO. TRIB. MIL.

QUI LAVATIONEM GRATUITAM MUNIFICENTIA,
INCOLIS

HOSPITIBUS ET ADVENTORIBUS.

The baths were closed when any misfortune happened to the republic (*Fabr. Descr. Urb. Rom.* c. 18); and Suetonius says that the Emperor Caligula made it a capital offence to indulge in the luxury of bathing upon any religious holiday. (*ib.*) They were originally placed under the superintendence of the aediles, whose business it was to keep them in repair, and to see that they were kept clean and of a proper temperature. (*ib.*; *Sen. Ep.* 86.) In the provinces the same duty seems to have devolved upon the quaestor, as may be inferred from the passage already quoted from Aulus Gellius (x. 3).

The time usually assigned by the Romans for taking the bath was the eighth hour, or shortly afterwards. (*Mart. Ep.* x. 48, xi. 52.) Before that time none but invalids were allowed to bathe in public. (Lamprid. *Alex. Sev.* 24.) Vitruvius reckons the hours best adapted for bathing to be from mid-day until about sunset (v. 10). Pliny took his bath at the ninth hour in summer, and at the eighth in winter (*Ep.* iii. 1, 8); and Martial speaks of taking a bath when fatigued and weary, at the tenth hour, and even later. (*Epig.* iii. 36, x. 70.)

When the water was ready, and the baths prepared, notice was given by the sound of a bell—*aes thermaeum*. (*Mart. Ep.* xiv. 163.) One of these bells, with the inscription *FIRMI BALNEATORIS*, was found in the *thermae* Diocletianae, in the year 1548, and came into the possession of the learned Fulvius Ursinus. (*Append. ad Cinecon. de Triclin.*)

Whilst the bath was used for health merely or cleanliness, a single one was considered sufficient

at a time, and that only when requisite. But the luxuries of the empire knew no such bounds, and the daily bath was sometimes repeated as many as seven and eight times in succession — the number which the Emperor Commodus indulged himself with. (Lamprid. *Com. c. 2.*) Gordian bathed seven times a day in summer, and twice in winter. The Emperor Gallienus six or seven times in summer, and twice or thrice in winter. (Capitolin. *Gall. c. 17.*) Commodus also took his meals in the bath (Lamprid. *l. c.*); a custom which was not confined to a dissolute Emperor alone. (Comp. Martial, *Epig. xii. 19.*)

It was the usual and constant habit of the Romans to take the bath after exercise, and previously to their principal meal (*coena*); but the debauchees of the empire bathed after eating as well as before, in order to promote digestion, so as to acquire a new appetite for fresh delicacies. Nero is related to have indulged in this practice. (Suet. *Nero, 27*; comp. *Juv. Sat. i. 142.*)

Upon quitting the bath it was usual for the Romans as well as the Greeks to be anointed with oil; but a particular habit of body, or tendency to certain complaints, sometimes required this order to be reversed; for which reason Augustus, who suffered from nervous disorders, was accustomed to anoint himself before bathing (Suet. *Aug. 82*); and a similar practice was adopted by Alexander Severus. (Lamprid. *Alex. Sev. l. c.*) The most usual practice, however, seems to have been to take some gentle exercise (*exercitatio*), in the first instance, and then, after bathing, to be anointed

either in the sun, or in the tepid or thermal chamber, and finally to take their food.

The Romans did not content themselves with a single bath of hot or cold water; but they went through a course of baths in succession, in which the agency of air as well as water was applied. It is difficult to ascertain the precise order in which the course was usually taken, if indeed there was any general practice beyond the whim of the individual. Under medical treatment, the succession would, of course, be regulated by the nature of the disease for which a cure was sought, and would vary also according to the different practice of different physicians. It is certain, however, that it was a general practice to close the pores, and brace the body after the excessive perspiration of the vapour bath, either by pouring cold water over the head, or by plunging at once into the *pisces*, or into a river. (Auson. *Mosell. 341.*) Musa, the physician of Augustus, is said to have introduced this practice (Plin. *H. N. xxv. 7 s. 38*), which became quite the fashion, in consequence of the benefit which the emperor derived from it, though Dion (l. iii. p. 517) accuses Musa of having artfully caused the death of Marcellus by an improper application of the same treatment. In other cases it was considered conducive to health to pour warm water over the head before the vapour bath, and cold water immediately after it. (Plin. *H. N. xxviii. 4. s. 14*; Cels. *De Med. i. 3*); and at other times, a succession of warm, tepid, and cold water was resorted to.

The two physicians Galen and Celsus differ in

some respects as to the order in which the baths should be taken; the former recommending first the hot air of the *Laconicum* (ἑρμι δευμῶ), next the bath of warm water (ὑδρὸν θερμὸν and λουτρον*), afterwards the cold, and finally to be well rubbed

* λουτρον. In this passage it is plain that the word λουτρον is used for a warm bath, in which sense it also occurs in the same author. Vitruvius (v. 11), on the contrary, says that the Greeks used the same word to signify a cold bath (*frigida locutio, quam Graeci λουτρον vocitant*). The contradiction between the two authors is here pointed out, for the purpose of showing the impossibility, as well as impropriety, of attempting to affix one precise meaning to each of the different terms

(Galen, *De Methodo Medendi*, x. 10. p. 708, 709, ed. Kühn); whilst the latter recommends his patients first to sweat for a short time in the tepid chamber (*tepidarium*), without undressing; then to proceed into the thermal chamber (*calidarium*), and after having gone through a regular course of perspiration there, not to descend into the warm bath (*solium*), but to pour a quantity of warm water over the head, then tepid, and finally cold; afterwards to be scraped with the strigil (*perfricari*), and finally rubbed dry and anointed. (Cels. *De Med. i. 4.*) Such, in all probability, was the usual habit of the Romans when the bath was resorted

made use of by the ancient writers in reference to their bathing establishments.

placed underneath the portico (a, α). This compartment answers exactly to the first, which is described by Lucian (l. c. 5). Within this court the keeper of the baths (*balneator*) who exacted the *quadrons* paid by each visitor, was also stationed; and the box for holding the money was found in it. The room (4), which runs back from the portico, might have been appropriated to him; or, if not, it might have been an *oculus* or *œœdra*, for the convenience of the better classes whilst awaiting the return of their acquaintances from the interior, in which case it will correspond with the chambers mentioned by Lucian (l. c. 5), adjoining to the servants' waiting-place (ἐν ἀποστρεφῇ δὲ τῶν ἐς τραπεζιστῶν ἀποστρεφόμενον οἰκημάτων). In this court likewise, as being the most public place, advertisements for the theatre, or other announcements of general interest, were posted up, one of which, announcing a gladiatorial show, still remains. (5) Is the corridor which conducts from the entrance E, into the same vestibule. (6) A small cell of similar use as the corresponding one in the opposite corridor (1). (7) A passage of communication which leads into the chamber (8), the *frigidarium*, which also served as an *apodyterium*, or *apodictorium*, a room for undressing; and which is also accessible from the street by the door D, through the corridor (9), in which a small niche is observable, which probably served for the station of another *balneator*, who collected the money from those entering from the north street. In this room all the visitors must have met before entering into the interior of the baths; and its locality, as well as other characteristic features in its fittings up, leave no room to doubt that it served as an undressing room. It does not appear that any general rule of construction was followed by the architects of antiquity, with regard to the locality and temperature best adapted for an *apodyterium*. The word is not mentioned by Vitruvius, nor expressly by Lucian; but he says enough for us to infer that it belonged to the *frigidarium* in the baths of Hippias (l. c. 5). "After quitting the last apartment there are a sufficient number of chambers for the bathers to undress, in the centre of which is an *oculus* containing three baths of cold water." Pliny the younger says that the *apodyterium* at one of his own villas adjoined the *frigidarium* (Ep. v. 6), and it is plain from a passage already quoted, that the *apodyterium* was a warm apartment in the baths belonging to the villa of Cicero's brother, Quintus (also in *alterum apodyterii angulum promissi*), to which temperature Celsus also assigns it. In the *thermae* at Rome the hot and cold departments had probably each a separate *apodyterium* attached to it; or if not, the ground plan was so arranged that one *apodyterium* would be contiguous to, and serve for both, or either; but where space and means were circumscribed, as in the little city of Pompeii, it is more reasonable to conclude that the *frigidarium* served as an *apodyterium* for those who confined themselves to cold bathing, and the *apodyterium* for those who commenced their ablutions in the warm apartments. The bathers were expected to take off their garments in the *apodyterium*, and not being permitted to enter into the interior unless naked. (Cic. *Pro Caed.* 26.) They were then delivered to a class of slaves, called *caparii* (from *capere*, the small case in which children carried their books to school), whose duty it was to

take charge of them. These men were notorious for dishonesty, and leagued with all the thieves of the city, so that they connived at the robberies they were placed there to prevent. Hence the expression of Catullus—*O furum optime balneariorum!* (Carm. xxxiii. 1) and Trachilo in the *Rudens* of Plautus (ii. 33. 51), complains bitterly of their roguery, which, in the capital, was carried to such an excess that very severe laws were enacted against them, the crime of stealing in the baths being made a capital offence.

To return into the chamber itself—it is vaulted and spacious, with stone seats along two sides of the wall (δ, δ), and a step for the feet below, slightly raised from the floor (*palaestras et gradus*, Vitruv. v. 10). Holes can still be seen in the walls, which might have served for pegs on which the garments were hung when taken off. It was lighted by a window closed with glass, and ornamented with stucco mouldings and painted yellow. A sectional drawing of this interior is given in Sir W. Gell's *Pompeii*. There are no less than six doors to this chamber; one led to the entrance E, another to the entrance D, a third to the small room (11), a fourth to the furnaces, a fifth to the tepid apartment, and the sixth opened upon the cold bath (10), named indifferently by the ancient authors, *natalio*, *natorium*, *piscina*, *baptisterium**, *puteus*, *λουτήριον*. The bath, which is coated with white marble, is 12 feet 10 inches in diameter, and about 3 feet deep, and has two marble steps to facilitate the descent into it, and a seat surrounding it at the depth of 10 inches from the bottom, for the purpose of enabling the bathers to sit down and wash themselves. The ample size of this basin explains to us what Cicero meant when he wrote—*Latiorem piscinam voluissim, ubi jactata brachia non offenderentur*. It is probable that many persons contented themselves with the cold bath only, instead of going through the severe course of perspiration in the warm apartments; and as the *frigidarium* alone could have had no effect in baths like these, where it merely served as an *apodyterium*, the *natalio* must be referred to when it is said that at one period cold baths were in such request that scarcely any others were used. (Gell's *Pompeii*, l. c.) There is a platform, or ambulatory (*schola*, Vitruv. v. 10) round the bath, also of marble, and four niches of the same material disposed at regular intervals round the walls, with pedestals, for statues probably, placed in them.† The ceiling is vaulted, and the chamber lighted by a window in the centre. The annexed woodcut represents a *frigidarium* with its cold bath (*piscina*, Plin. Ep. v. 6) at one extremity, supposed to have formed a part of the Formian villa of Cicero, to whose age the style of

* The word *baptisterium* (Plin. Ep. v. 6) is not a bath sufficiently large to immerse the whole body, but a vessel, or *labrum*, containing cold water for pouring over the head. Compare also Plin. Ep. xvii. 2.

† According to Sir W. Gell (l. c.) with seats, which he interprets *scholae*, for the accommodation of persons waiting an opportunity to bathe—but a passage of Vitruvius (v. 10), hereafter quoted, seems to contradict this use of the term—and seats were placed in the *frigidarium* adjoining, for the express purpose of accommodating those who were obliged to wait for their turn.

construction, and the use of the simple Doric order, undoubtedly belong. The bath itself, into

which the water still continues to flow from a neighbouring spring, is placed under the alcove, and the two doors on each side opened into small chambers, which probably served as *apodyteria*. It is still to be seen in the gardens of the Villa Caposelli, at Mola di Gaeta, the site of the ancient Formiae.

In the cold bath of Pompeii the water ran into the basin through a spout of bronze, and was carried off again through a conduit on the opposite side. It was also furnished with a waste-pipe under the margin to prevent it from running over. No. 11 is a small chamber on the opposite side of the *frigidarium*, which might have served for shaving (*tonetrina*), or for keeping unguents or *strigiles*; and from the side of the *frigidarium*, the bather, who intended to go through the process of warm bathing and sudation, entered into (12) the *tepidarium*.

This chamber did not contain water either at Pompeii or at the baths of Hippias, but was merely heated with warm air of an agreeable temperature in order to prepare the body for the great heat of the vapour and warm baths, and, upon returning, to obviate the danger of a too sudden transition to the open air. In the baths at Pompeii this chamber served likewise as an *apodyterium* for those who took the warm bath; for which purpose the fittings up are evidently adapted, the walls being divided into a number of separate compartments or recesses for receiving the garments when taken off, by a series of figures of the kind called *Atlantes* or *Telamones*, which project from the walls, and support a rich cornice above them. One of these divisions, with the *Telamones*, is represented in the article ATLANTES. Two bronze benches were also found in the room, which was heated as well by its contiguity to the hypocaust of the adjoining chamber, as by a brazier of bronze (*foculus*), in which the charcoal ashes were still remaining when the excavation was made. A representation of it is given in the annexed woodcut. Its whole length was seven feet, and its breadth two feet six inches.

In addition to this service there can be little doubt that this apartment was used as a depository for unguents and a room for anointing (ἀλειψήριον,

unctuarium, elaothesium), the proper place for which is represented by Lucian (*l. a.*) as adjoining to the

tepidarium, and by Pliny (*Ep. ii. 17*) as adjoining to the hypocaust; and for which purpose some of the niches between the *Telamones* seem to be peculiarly adapted. In the larger establishments a separate chamber was allotted to these purposes, as may be seen by referring to the drawing taken from the *Thermae* of Titus; but as there is no other spot within the circuit of the Pompeian baths which could be applied in the same manner, we may safely conclude that the inhabitants of this city were anointed in the *tepidarium*; which service was performed by slaves called *unctores* and *aliptae*. [ALIPTAE.] For this purpose the common people used oil, sometimes scented; but the more wealthy classes indulged in the greatest extravagance with regard to their perfumes and unguents. These they either procured from the *elaothesium* of the baths, or brought with them in small glass bottles *ampullas olearias*; hundreds of which have been discovered in different excavations made in various parts of Italy. [AMPULLA.] The fifth book of Athenaeus contains an ample treatise upon the numerous kinds of ointments used by the Romans; which subject is also fully treated by Pliny (*H. N. xiii.*).

Caligula is mentioned by Suetonius (*Cal. 37*) as having invented a new luxury in the use of the bath, by perfuming the water, whether hot or cold, by an infusion of precious odours, or as Pliny states (*l. c.*), by anointing the walls with valuable unguents; a practice, he adds, which was adopted by one of the slaves of Nero, that the luxury might not be confined to royalty (*ne principale videatur hoc bonum*).

From this apartment, a door, which closed by its own weight, to prevent the admission of the cooler air, opened into No. 13, the thermal chamber or *concamerata sudatio* of Vitruvius (*v. 11*); and which, in exact conformity with his directions, contains the warm bath—*balneum*, or *caldæ lavatio* (Vitruv. *l. c.*), at one of its extremities; and the semicircular vapour-bath, or *Laconicum* at the other; whilst the centre space between the two ends, termed *sudatio* by Vitruvius (*l. c.*), and *sudatorium* by Seneca, is exactly twice the length of its width, according to the directions of Vitruvius. The object in leaving so much space between the warm bath and the *Laconicum* was to give room for the gymnastic exercises of the persons within the chamber, who were accustomed to promote a full flow of perspiration by rapid movements of the arms and legs, or by lifting weights. (Juv. *Sat. vi. 420*.) In larger establishments the conveniences contained in this apartment occupied two separate cells, one of which was appropriated to the warm bath, which apartment was then termed *caldarium*, *cella caldaria*, or *balneum*, and the other comprised the *Laconicum* and sudatory—*Laconicum sudationæque* (Vitruv. *l. c.*), which part alone was then designated under the name of *concamerata sudatio*.

This distribution is represented in the painting on the walls of the *Thermae of Titus*; in which there is also another peculiarity to be observed, viz., the passage of communication (*intercapedo*) between the two chambers, the flooring of which is suspended over the hypocaust. Lucian informs us of the use for which this compartment was intended, where he mentions as one of the characteristic conveniences in the baths of Hippias, that the bathers need not retrace their steps through the whole suite of apartments by which they had entered, but might return from the thermal chamber by a shorter circuit through a room of gentle temperature (*δὲ ἡμέρα δευτέρου αἰσχυρῶτος*, l. c. 7), which communicated immediately with the *frigidarium*.

The warm-water bath, which is termed *caldæ lavatio* by Vitruvius (l. c.), *balneum* by Cicero (*Ad Att.* ii. 3), *piscina* or *calida piscina* by Pliny (*Epi.* ii. 17) and Suetonius (*Nero*, 27), as well as *labrum* (Cic. *Ad Fam.* xiv. 16), and *solum* by Cicero (*in Pisone*, 27), appears to have been a capacious marble vase, sometimes standing upon the floor, like that in the picture from the *Thermae of Titus*; and sometimes either partly elevated above the floor, as it was at Pompeii, or entirely sunk into it, as directed by Vitruvius (v. 10). His words are these:—"The bath (*labrum*) should be placed underneath the window, in such a position that the persons who stand around may not cast their shadows upon it. The platform which surrounds the bath (*scholæ labrorum*) must be sufficiently spacious to admit of the surrounding observers, who are waiting for their turn, to stand there without crowding each other. The width of the passage or channel (*alveus*), which lies between the parapet (*plateus*), and the wall, should not be less than six feet, so that the space occupied by the seat and its step below (*pulvinus* at *gradus inferior*) may take off just two feet from the whole width." The subjoined plans given by Marini, will explain his meaning.

A, *labrum*, or bath; B, *schola*, or platform; C, *plateus*, or parapet; D, *alveus*, passage between the platform and wall; F, *pulvinus*, or seat; and E, the

lower step (*gradus inferior*), which together take up two feet.

The warm bath at Pompeii is a square basin of marble, and is ascended from the outside by two steps raised from the floor, which answered to the parapet or *plateus* of Vitruvius. Around ran a narrow platform (*schola*); but which, in consequence of the limited extent of the building, would not admit of a seat (*pulvinus*) all around it. On the interior another step allowed the bathers to sit down and wash themselves. The annexed section will render this easily intelligible.

A, *labrum*; B, *schola*; C, *plateus*; D, the step on the inside, probably called *solum*. (Fulv. Ursinus, *Append. in Ciaccon. de Triclin.*) In the women's baths of the opulent and luxurious capital, the *solia* were sometimes made of silver. (Plin. *H. N.* xxxiii. 12. s. 54.)

We now turn to the opposite extremity of the chamber which contains the *Laconicum* or vapour bath, so called because it was the custom of the Lacedaemonians to strip and anoint themselves without using warm water after the perspiration produced by their athletic exercises. (Dion Cass. liii. p. 516; comp. Martial. *Epig.* vi. 42. 16.) It is termed *assa* by Cicero (*Ad Quint. Frat.* iii. l. § 1), from *ἄσας*, to dry; because it produced perspiration by means of a dry, hot atmosphere; which Celsus (iii. cap. ult.) consequently terms *sudatione assas*, "dry sweating," which he afterwards adds (xi. 17) was produced by dry warmth (*calore sicco*). It was called by the Greeks *τροπιανθήπιον* (Voss. *Lex. Etym.* s. v.) from the fire of the hypocaust, which was extended under it; and hence by Alexander Aphrodis. *ἐν τῷ δολῶ*, "a dry vaulted chamber."

Vitruvius says that its width should be equal

to its height, reckoning from the flooring (*suspensura*) to the bottom of the thole (*imam curvaturam*)

hemisphaerii), over the centre of which an orifice is left from which a bronze shield (*clipeus*) was suspended. This regulated the temperature of the apartment, being raised or lowered by means of chains to which it was attached. The form of the cell was required to be circular, in order that the warm air from the hypocaust might encircle it with greater facility. (Vitruv. v. 10.) In accordance with these rules is the *Laconicum* at Pompeii, a section of which is given in the previous page, the *clipeus* only being added in order make the meaning more clear.

A, The suspended pavement, *suspensura*; B, the junction of the hemisphaerium with the side walls, *ima curvatura hemisphaerii*; C, the shield, *clipeus*; E and F, the chains by which it is raised and lowered; D, a *labrum*, or flat marble vase, into which a supply of water was introduced by a single pipe running through the stem. Its use is not exactly ascertained in this place, nor whether the water it contained was hot or cold.

It would not be proper to dismiss this account of the *Laconicum* without alluding to an opinion adopted by some writers, amongst whom are Galiano and Cameron, that the *Laconicum* was merely a small cupola, with a metal shield over it, rising above the flooring (*suspensura*) of the chamber, in the manner represented by the drawing from the *Thermae* of Titus, which drawing has, doubtless, given rise to the opinion. But it will be observed that the design in question is little more than a section, and that the artist may have resorted to the expedient in order to show the apparatus belonging to one end of the chamber, as is frequently done in similar plans, where any part which required to be represented upon a larger scale is inserted in full development within the general section; for in none of the numerous baths which have been discovered in Italy or elsewhere, even where the pavements were in a perfect state, has any such contrivance been observed. Besides which it is manifest that the *clipeus* could not be raised or lowered in the design alluded to, seeing that the chains for that purpose could not be reached in the situation represented, or, if attained, could not be handled, as they must be red-hot from the heat of the hypocaust into which they were inserted. In addition to which, the remains discovered tally exactly with the directions of Vitruvius, which this does not.

After having gone through the regular course of perspiration, the Romans made use of instruments

called *strigiles* (or *strigles*, Juv. Sat. iii. 263), to scrape off the perspiration, much in the same way as we are accustomed to scrape the sweat off a horse with a piece of iron hoop, after he has run a

heat, or comes in from violent exercise. These instruments, some specimens of which are represented in the previous woodcut, and many of which have been discovered amongst the ruins of the various baths of antiquity, were made of bone, bronze, iron, and silver; all corresponding in form with the epithet of Martial, "*curvo distringere ferro*" (Epig. xiv. 51). The poorer classes were obliged to scrape themselves, but the more wealthy took their slaves to the baths for the purpose; a fact which is elucidated by a curious story related by Spartianus (*Hadrian*. c. 17).

The strigil was by no means a blunt instrument, consequently its edge was softened by the application of oil, which was dropped upon it from a small vessel called *guttus*, which had a narrow neck, so as to discharge its contents drop by drop, from whence the name is taken. A representation of a *guttus* is given in the preceding woodcut. *Angustus* is related to have suffered from an over-violent use of the strigil. (Suet. Aug. 30.) Invalids and persons of a delicate habit made use of sponges, which Pliny says answered for towels as well as strigils. They were finally dried with towels (*lintea*), and anointed. (Juv. Sat. iii. 262; Apuleius, *Met.* ii.; Plin. H. N. xxxi. 11. s. 47.)

The common people were supplied with these necessities in the baths, but the more wealthy carried their own with them (Pers. Sat. v. 126). Lucian (*Leisiph.* vol. ii. p. 320. ed. Reiz.) adds also soap and towels to the list.

After the operation of scraping and rubbing dry, they retired into, or remained in, the *tepidarium* until they thought it prudent to encounter the open air. But it does not appear to have been customary to bathe in the water, when there was any, which was not the case at Pompeii, nor in the baths of Hippias (Lucian, l. c.), either of the *tepidarium* or *frigidarium*; the temperature only of the atmosphere in these two chambers being of consequence to break the sudden change from the extreme of hot to cold.

Returning now back into the *frigidarium* (8), which, according to the directions of Vitruvius (v. 11), has a passage (14) communicating with the mouth of the furnace (e), which is also seen in the next woodcut under the boilers, called *præfurnium*, *propigneum* (Plin. Ep. ii. 17), *προπνεύσιον* (from *πρό*, before, and *πνεύς*, a furnace), and passing down that passage, we reach the chamber (15) into which the *præfurnium* projects, and which has also an entrance from the street at B. It was appropriated to the use of those who had charge of the fires (*fornacatores*). There are two staircases in it; one of which leads to the roof of the baths, and the other to the coppers which contained the water. Of these there were three: one of which contained the hot water—*caldarium* (sc. *vas*, or *ahenum*); the second the tepid—*tepidarium*; and the last the cold—*frigidarium*. The warm water was introduced into the warm bath by means of a conduit pipe, marked on the plan, and conducted through the wall. Underneath the *caldarium* was placed the furnace (*furnus*, Hor. Ep. i. 11. 12), which served to heat the water, and give out streams of warm air into the hollow cells of the *hypocaustum* (from *ὕδω* and *καίω*). It

* It was also called *ampulla*, *ἀγκυθος*, *υποθήκιον*, *ἐλαιόφορον*. (Rupert, *Ad Juv. Sat.* iii. 262.) [AMPULLA.]

passed from the furnace under the first and last of the caldrons by two flues, which are marked upon the plan. These coppers were constructed in the same manner as is represented in the engraving from the *Thermae of Titus*; the one containing hot water being placed immediately over the furnace; and, as the water was drawn out from thence, it was supplied from the next, the *tepidarium*, which was already considerably heated from its contiguity to the furnace and the hypocaust below it, so that it supplied the deficiency of the former without materially diminishing its temperature; and the vacuum in this last was again filled up from the farthest removed, which contained the cold water received directly from the square reservoir seen behind them; a principle which has at length been introduced into the modern bathing establishments, where its efficacy, both in saving time and expense, is fully acknowledged. The boilers themselves no longer remain, but the impressions which they have left in the mortar in which they were embedded are clearly visible, and enable us to ascertain their respective positions and dimensions, the first of which, the *caldarium*, is represented in the annexed cut.

Behind the coppers there is another corridor (16), leading into the court or atrium (17) appropriated to the servants of the bath, and which has also the convenience of an immediate communication with the street by the door at C.

We now proceed to the adjoining set of baths, which were assigned to the women. The entrance is by the door A, which conducts into a small vestibule (18), and thence into the *apodyterium* (19), which, like the one in the men's bath, has a seat (*pulcinus et gradus*) on either side built up against the wall. This opens upon a cold bath (20), answering to the *natatio* of the other set, but of much smaller dimensions, and probably similar to the one denominated by Pliny (*L. c.*) *puteus*. There are four steps on the inside to descend into it. Opposite to the door of entrance into the *apodyterium* is another doorway which leads to the *tepidarium* (21), which also communicates with the thermal chamber (22), on one side of which is a warm bath in a square recess, and at the further extremity the *Laconicum* with its *labrum*. The floor of this chamber is suspended, and its walls perforated for flues, like the corresponding one in the men's baths.

The comparative smallness and inferiority of the fittings-up in this suite of baths has induced some Italian antiquaries to throw a doubt upon the fact of their being assigned to the women; and amongst

these the Abbate Iorio (*Plan de Pompeii*) ingeniously suggests that they were an old set of baths, to which the larger ones were subsequently added when they became too small for the increasing wealth and population of the city. But the story, already quoted, of the consul's wife who turned the men out of their baths at Teanum for her convenience, seems sufficiently to negative such a supposition; and to prove that the inhabitants of ancient Italy, if not more selfish, were certainly less gallant than their successors. In addition to this, Vitruvius expressly enjoins that the baths of the men and women, though separate, should be contiguous to each other, in order that they might be supplied from the same boilers and hypocaust (v. 10); directions which are here fulfilled to the letter, as a glance at the plan will demonstrate.

It does not come within the scope of this article to investigate the source from whence, or the manner in which, the water was supplied to the baths of Pompeii. But it may be remarked that the suggestion of Mazois, who wrote just after the excavation was commenced, and which has been copied from him by the editor of the volumes on Pompeii published by the Society for the Diffusion of Useful Knowledge, was not confirmed by the excavation; and those who are interested in the matter may consult the fourth appendix to the *Plan de Pompeii*, by the Abbate Iorio.

Notwithstanding the ample account which has been given of the plans and usages respecting baths in general, something yet remains to be said about that particular class denominated *Thermae*; of which establishments the baths in fact constituted the smallest part. The *thermae*, properly speaking, were a Roman adaptation of the Greek *gymnasium* [*GYMNASIUM*], or *palaestra*, as described by Vitruvius (v. 11); both of which contained a system of baths in conjunction with conveniences for athletic games and youthful sports, *exedrae* in which the rhetoricians declaimed, poets recited, and philosophers lectured — as well as porticoes and vestibules for the idle, and libraries for the learned. They were decorated with the finest objects of art, both in painting and sculpture, covered with precious marbles, and adorned with fountains and shaded walks and plantations, like the groves of the Academy. It may be said that they began and ended with the Empire, for it was not until the time of Augustus that these magnificent structures were commenced. M. Agrippa is the first who afforded these luxuries to his countrymen, by bequeathing to them the *thermae* and gardens which he had erected in the Campus Martius. (Dion Cass. liv. vol. i. p. 759; Plin. *H. N.* xxxvi. 25. a. 64.) The Pantheon, now existing at Rome, served originally as a vestibule to these baths; and, as it was considered too magnificent for the purpose, it is supposed that Agrippa added the portico and consecrated it as a temple. It appears from a passage in Sidonius Apollinaris (*Carm.* xxiii. 495), that the whole of these buildings, together with the adjacent *Thermae Neronianae*, remained entire in the year A. D. 466. Little is now left beyond a few fragments of ruins, and the Pantheon. The example set by Agrippa was followed by Nero, and afterwards by Titus; the ruins of whose *thermae* are still visible, covering a vast extent, partly under ground and partly above the Esquiline Hill. *Thermae* were also erected by Trajan, Caracalla, and Diocletian, of the two last of which

ample remains still exist; and even as late as Constantine, besides several which were constructed by private individuals, P. Victor enumerates sixteen, and Panvinus (*Urb. Rom. Descript.* p. 106) has added four more.

Previously to the erection of these establishments for the use of the population, it was customary for those who sought the favour of the people to give them a day's bathing free of expense. Thus, according to Dion Cassius (xxxvii. p. 143), Faustus, the son of Sulla, furnished warm baths and oil gratis to the people for one day; and Augustus on one occasion furnished warm baths and barbers to the people for the same period free of expense (*Id.* liv. p. 755), and at another time for a whole year to the women as well as the men. (*Id.* xlix. p. 600.) Hence it is fair to infer that the quadrans paid for admission into the *balneæ* was not exacted at the *thermæ*, which, as being the works of the emperors, would naturally be opened with imperial generosity to all, and without any charge, otherwise the whole city would have thronged to the establishment bequeathed to them by Agrippa; and in confirmation of this opinion it may be remarked that the old establishments, which were probably erected by private enterprise (comp. Plin. *H. N.* ix. 54. s. 79), were termed *moritoria*. (Plin. *Ep.* ii. 17.) Most, if not all, of the other regulations previously detailed as relating to the economy of the baths, apply equally to the *thermæ*; but it

is to these establishments especially that the dissolute conduct of the emperors, and other luxurious indulgences of the people in general, detailed in the compositions of the satirists and later writers, must be considered to refer.

Although considerable remains of the Roman *thermæ* are still visible, yet, from the very ruinous state in which they are found, we are far from being able to arrive at the same accurate knowledge of their component parts, and the usages to which they were applied, as has been done with respect to the *balneæ*; or indeed to discover a satisfactory mode of reconciling their constructive details with the description which Vitruvius has left of the baths appertaining to a Greek *palaestra*, or to the description given by Lucian of the baths of Hippias. All, indeed, is doubt and guess-work; the learned men who have pretended to give an account of their contents differing in almost all the essential particulars from one another. And yet the great similarity in the ground-plan of the three which still remain cannot fail to convince even a superficial observer that they were all constructed upon a similar plan. Not, however, to dismiss the subject without enabling our readers to form something like a general idea of these enormous edifices, which, for their extent and magnificence, have been likened to provinces—(*in modum provinciarum constructæ*, Amm. Marc. xvi. 6)—a ground-plan is annexed of the *Thermæ* of Caracalla, which

are the best preserved amongst those remaining, and which were perhaps more splendid than all the rest. Those apartments, of which the use is ascertained with the appearance of probability, are alone marked and explained. The dark parts represent the remains still visible, the open lines are restorations.

A, Portico fronting the street made by Caracalla when he constructed his *thermae*. — B, Separate bathing-rooms, either for the use of the common people, or perhaps for any persons who did not wish to bathe in public. — C, Apodyteria attached to them. — D, D, and E, E, the porticoes. (Vitruv. v. 11.) — F, F, Exedrae, in which there were seats for the philosophers to hold their conversations. (Vitruv. l. c.; Cic. *De Orat.* ii. 5.) — G, Hypæthrae, passages open to the air. — *Hypæthrae ambulationes* quas Graeci περιδρομίδας, nostri *xystos* appellant. (Vitruv. l. c.) — H, H, Stadia in the palaestra — *quadrata sive oblonga*. (Vitruv. l. c.) — I, I, Possibly schools or academies where public lectures were delivered. — J, J, and K, K, Rooms appropriated to the servants of the baths (*balsabores*). In the latter are staircases for ascending to the principal reservoir. — L, Space occupied by walks and shrubberies — *ambulationes inter plantationes*. (Vitruv. l. c.) — M, The arena or stadium in which the youth performed their exercises, with seats for the spectators (Vitruv. l. c.), called the *theatridium*. — N, N, Reservoirs, with upper stories, sectional elevations of which are given in the two subsequent woodcuts. — O, Aqueduct which supplied the baths. — P, The cistern or *piscina*. This external range of buildings occupies one mile in circuit.

We now come to the arrangement of the interior, for which it is very difficult to assign satisfactory destinations. — Q, represents the principal entrances, of which there were eight. — R, the *natatio*, *piscina*, or cold-water bath, to which the direct entrance from the portico is by a vestibule on either side marked S, and which is surrounded by a set of chambers which served most probably as rooms for undressing (*apodyteria*), anointing (*unctuaria*), and stations for the *capsearii*. Those nearest to the peristyle were perhaps the *conisteria*, where the powder was kept which the wrestlers used in order to obtain a firmer grasp upon their adversaries: —

"Ille cavis hausto spargit me pulvere palmis,
Inque vicem fulvae tactu flavescit arenae."
(Ovid, *Met.* ix. 35.)

See also Salmas. *Ad Tertull. Pall.* p. 217, and *Mercurialis, De Art. Gymn.* i. 8.) The inferior quality of the ornaments which these apartments had, and the staircases in two of them, afford evidence that they were occupied by menials. It is considered to be the *tepidarium*, with four baths (u, v, u, v) taken out of its four angles, two *labra* on its two flanks. There are steps descending into the baths, in one of which the conduit are still manifest. Thus it appears that the centre part of this apartment was as a *tepidarium*, having a *balsneum* or *caldarium* in four of its corners. The centre part, like that of the preceding apartment, is supported by immense columns.

apartments beyond this, which are too much ruined to be restored with any degree of certainty, contained of course the laconicum and caldarium, for which the round chamber W, and

its appurtenances seem to be adapted, and which are also contiguous to the reservoirs, Z, Z. (Vitruv. v. 11.)

e, e, probably comprised the *ephebia*, or places where the youth were taught their exercises, with the appurtenances belonging to them, such as the *sphaeristerium* and *corymbæum*. The first of these takes its name from the game at ball, so much in favour with the Romans, at which Martial's friend was playing when the bell sounded to announce that the water was ready. (Mart. xiv. 163.) The latter is derived from *κόρυκος*, a sack (Hesych. s. v.), which was filled with bran and olive husks for the young, and sand for the more robust, and then suspended at a certain height, and swung backwards and forwards by the players. (Aulus, *De Gymn. Const.* p. 9; Antill. *op. Oribas. Coll. Med.* 6.)

The chambers also on the other side, which are not marked, probably served for the exercises of the palaestra in bad weather. (Vitruv. v. 11.)

These baths contained an upper story, of which nothing remains beyond what is just sufficient to indicate the fact. They have been mentioned and eulogized by several of the Latin authors. (Spartian. *Caracall.* c. 9; Lamprid. *Heliogab.* c. 17, *Alex. Sever.* c. 25; Eutropius, viii. 11; Olymp. *apud Phot.* p. 114, ed. Aug. Vindel. 1601.)

It will be observed that there is no part of the bathing department separated from the rest, which could be assigned for the use of the women exclusively. From this it must be inferred either that both sexes always bathed together promiscuously in the *thermae*, or that the women were excluded altogether from these establishments, and only admitted to the *balsneae*.

It remains to explain the manner in which the immense body of water required for the supply of a set of baths in the *thermae* was heated, which has been performed very satisfactorily by Piranesi and Cameron, as may be seen by a reference to the two subjoined sections of the *castellum aquaeductus* and *piscina* belonging to the *Thermae* of Caracalla.

A, Arches of the aqueduct which conveyed the water into the *piscina* B, from whence it flowed into the upper range of cells through the aperture at C, and thence again descended into

the lower ones by the aperture at D, which were placed immediately over the hypocaust E; the prefurnion of which is seen in the transverse section, at F in the lower cut. There were thirty-two of these cells arranged in two rows over the hypocaust, sixteen on each side, and all communicating with each other; and over these a similar number similarly arranged, which communicated with those below by the aperture at D. The parting walls between these cells were likewise perforated with flues, which served to disseminate the heat all around the whole body of water. When the water was sufficiently warm, it was turned on to the baths through pipes conducted likewise through flues in order to prevent the loss of temperature during the passage, and the vacuum was supplied by tepid water from the range above, which was replenished from the piscina; exactly upon the principle represented in the drawing from the *Thermae of Titus*, ingeniously applied upon a much larger scale. (The most important modern works on the Roman baths are the following: Winkelmann, numerous passages in his works; the descriptions of the Roman baths by Cameron, Lond. 1772, and Palladio and Scamozzi, Vicenza, 1785; Stieglitz, *Archäologie der Baukunst*, vol. ii. p. 267, &c.; Hirt, *Lehre der Gebäude*, p. 233, &c.; Weinbrenner, *Entwürfe und Ergänzungen antiker Gebäude*, Karlsruhe, 1822, part I; the editors of Vitruvius, especially Schneider, vol. ii. pp. 375—391; for the baths of Pompeii, Bechi, *Mus. Borbon.* vol. ii. pp. 49—52; Gell, *Pompeiana*; *Pompeii* in the *Lib. Ent. Know.*; and for the best summary of the whole subject, Becker, *Gallus*, vol. ii. p. 11, &c.) [A. R.]

BA'LTEUS, or BA'LTEA in the plural (τελαμών), a belt, a shoulder-belt, a baldric, was used to suspend the sword; and, as the sword commonly hung beside the left hip, its belt was supported by the right shoulder, and passed obliquely over the breast, as is seen in the beautiful cameo here introduced from the Florentine Museum. In the Homeric times the Greeks also

used a belt to support the shield; and this second belt lay over the other, and was larger and broader than it (*Il.* xiv. 404—406); but as this shield-belt was found inconvenient, it was superseded by the invention of the Carian *δχανον* [CLIPBUS]. The very early disuse of the shield-belt accounts

for the fact, that this part of the ancient armour is never exhibited in paintings or sculptures. A third use of the balteus was to suspend the quiver, and sometimes together with it the bow. (Nemes. *Cyneg.* 91.) The belt was usually made of leather, but was ornamented with gold, silver, and precious stones, and on it subjects of ancient art were frequently embroidered or embossed. (Herod. i. 171; *χρόσεος τελαμών*, *Od.* xi. 610; *φαινός*, *Il.* xii. 401; *Virg. Aen.* v. 312.) The belts of the Roman emperors were also magnificently adorned, and we learn from inscriptions that there was a distinct officer — the *baltarius* — who had the charge of them in the imperial palace. (Trebell. Poll. *Gallien.* 16.)

BA'LTEUS, in architecture. Vitruvius applies the term "baltei" to the bands surrounding the volute on each side of an Ionic capital. (*De Arch.* iii. 5. ed. Schneider; Genelli, *Briefe über Vitruv.* ii. p. 35.) [COLUMNA.] Other writers apply it to the *præcinctiones* of an amphitheatre. (Calpurn. *Ecl.* vii. 47; Tertullian, *De Spectac.* 3; AMPHITHEATRUM.) In the amphitheatre at Verona the baltei are found by measurement to be 2½ feet high, the steps which they enclose being one foot two inches high. [J. Y.]

BAPTISTE'RIUM. [BALNEUM.]

BARATHRON (βάραθρον), also called ORUGMA (δρυγμα), was a deep pit at Athens, with hooks on the sides, into which criminals were cast. It was situate in the demus *Κεραϊδαι*. It is mentioned as early as the Persian wars, and continued to be employed as a mode of punishment in the time of the orators. The executioner was called *ὁ ἐνὶ τῷ δρυγματι*. (Schol. ad *Aristoph. Plut.* 431; Harpocrat. s. vv.; Herod. vii. 133; Xen. *Hell.* i. 7. § 21; Lycurg. c. *Leocrat.* p. 221; Deinarch. c. *Dem.* p. 49; Wachsmuth, *Hellen. Alterthumsk.* vol. ii. p. 204, 2nd edit.) It corresponded to the Spartan *Ceadas*. [CEADAS.]

BARBA (πώγων, γένειον, ὀπίρη, *Aristoph. Lysist.* 1072), the beard. The fashions which have prevailed at different times, and in different countries, with respect to the beard, have been very various. The most refined modern nations regard the beard as an encumbrance, without beauty or meaning; but the ancients generally cultivated its growth and form with special attention; and that the Greeks were not behind-hand in this, any more than in other arts, is sufficiently shown by the statues of their philosophers. The phrase *πώγωνοτροφεῖν*, which is applied to letting the beard grow, implies a positive culture. Generally speaking, a thick beard, *πώγων βαβύς*, or *δαρύς*, was considered as a mark of manliness. The Greek philosophers were distinguished by their long beards as a sort of badge, and hence the term which Persius (*Sat.* iv. 1) applies to Socrates *magister barbatus*. The Homeric heroes were bearded men. So Agamemnon, Ajax, Menelaus, Ulysses (*Il.* xxii. 74, xxiv. 516, *Od.* xvi. 176). According to Chrysippus, cited by Athenæus (xiii. p. 565), the Greeks wore the beard till the time of Alexander the Great, and he adds that the first man who was shaven was called ever after *κόρσην*, "shaven" (from *κείρω*). Plutarch (*Thea.* c. 5) says that the reason for the shaving was that they might not be pulled by the beard in battle. The custom of shaving the beard continued among the Greeks till the time of Justinian, and during that period even the statues of the philosophers

were without the beard. The philosophers, however, generally continued the old badge of their profession, and their ostentation in so doing gave rise to the saying that a long beard does not make a philosopher (*παρανοήτοια φιλόσοφος οὐ ποιεῖ*), and a man, whose wisdom stopped with his beard, was called *ἐκ πάγαντος σοφός*. (Compare Gell. ix. 2; Quint. xi. 1). The Romans in early times were the beard uncult, as we learn from the insult offered by the Gaul to M. Papirius (Liv. v. 41), and from Cicero (*Pro Cael.* 14); and according to Varro (*De Re Rust.* ii. 11) and Pliny (vii. 59), the Roman beards were not shaven till a. c. 300, when P. Ticinius Maenas brought over a barber from Sicily; and Pliny adds, that the first Roman who was shaved (*ravus*) every day was Scipio Africanus. His custom, however, was soon followed, and shaving became a regular thing. The lower orders, then as now, were not always able to do the same, and hence the jeers of Martial (vii. 95, xii. 59). In the later times of the republic there were many who shaved the beard only partially, and trimmed it, so as to give it an ornamental form; to them the terms *bene barbati* (Cic. *Catil.* ii. 10) and *barbatuli* (Cic. *ad Att.* i. 14, 16, *Pro Cael.* 14) are applied. When in mourning all the higher as well as the lower orders let their beards grow.

In the general way in Rome at this time, a long beard (*barba promissa*, Liv. xxvii. 34) was considered a mark of slovenliness and *squalor*. The censors, L. Veturius and P. Licinius, compelled M. Livius, who had been banished, on his restoration to the city, to be shaved, and to lay aside his dirty appearance (*tonderi et squalorem depomere*), and then, but not till then, to come into the senate, &c. (Liv. xxvii. 34.) The first time of shaving was regarded as the beginning of manhood, and the day on which this took place was celebrated as a festival. (Juv. *Sat.* iii. 186.) There was no particular time fixed for this to be done. Usually, however, it was done when the young Roman assumed the toga virilis (Suet. *Calig.* 10). Augustus did it in his 24th year; Caligula in his 20th. The hair cut off on such occasions was consecrated to some god. Thus Nero put his up in a gold box, set with pearls, and dedicated it to Jupiter Capitolinus. (Suet. *Ner.* 12.)

With the emperor Hadrian the beard began to revive (Dion Cass. lxxviii. 15). Plutarch says that the emperor wore it to hide some scars on his face. The practice afterwards became common, and till the time of Constantine the Great, the emperors appear in busts and coins with beards. The Romans let their beards grow in time of mourning; so Augustus did (Suet. *Aug.* 23) for the death of Julius Caesar, and the time when he had it shaved off he made a season of festivity. (Dion Cass. xlviii. 34; comp. Cic. *in Verr.* ii. 12.) The Greeks, on the other hand, on such occasions shaved the beard close. Tacitus (*Germ.* c. 3) says that the Catti let their hair and beard grow, and would not have them cut till they had slain an enemy (Compare Becker, *Charikles*, vol. ii. p. 387, &c.)

BARBERS. The Greek name for a barber was *σχοπεύς*, and the Latin *tonsor*. The term employed in modern European languages is derived from the low Latin *barbatorius*, which is found in Petronius. The barber of the ancients was a far more important personage than his modern repre-

sentative. Men had not often the necessary implements for the various operations of the toilet; combs, mirrors, perfumes, and tools for clipping, cutting, shaving, &c. Accordingly the whole process had to be performed at the barber's, and hence the great concourse of people who daily gossiped at the *tonastrina*, or barber's shop. Besides the duties of a barber and hairdresser, strictly so called, the ancient *tonsor* discharged other offices. He was also a nail-parer. He was, in fact, much what the English barber was when he extracted teeth, as well as cut and dressed hair. People who kept the necessary instruments for all the different operations, generally had also alaves expressly for the purpose of performing them. The business of the barber was threefold. First there was the cutting of hair: hence the barber's question, *πῶς σε κείρω* (Plut. *De Garrul.* 13). For this purpose he used various knives of different sizes and shapes, and degrees of sharpness: hence Lucian (*Adv. Indoct.* c. 29), in enumerating the apparatus of a barber's shop, mentions *ἀλλήθες μαχαίριδων* (*μάχαιρα*, *μαχαίρις*, *κουρίς* are used also, in Latin *cutter*); but scissors, *ψαλῖς*, *διστάλη* *μάχαιρα* (Pollux, ii. 32; in Latin *forfex*, *aricia*) were used too. (Compare Aristoph. *Acharn.* 848; Lucian, *Pis.* c. 46.) *Μάχαιρα* was the usual word. Irregularity and unevenness of the hair was considered a great blemish, as appears generally, and from Horace (*Sat.* i. 3. 31, and *Epist.* i. l. 94), and accordingly after the hair-cutting the uneven hairs were pulled out by tweezers, an operation to which Pollux (ii. 34) applies the term *παράλγισσθαι*. So the hangers-on on great men, who wished to look young, were accustomed to pull out the grey hairs for them. (Arist. *Eq.* 908.) This was considered, however, a mark of effeminacy. (Gell. vii. 12; Cic. *Pro Rosc. Com.* 7.) The person who was to be operated on by the barber had a rough cloth (*ἐμβύλιον*, *involvère* in Plautus, *Capt.* ii. 2. 17) laid on his shoulders, as now, to keep the hairs off his dress, &c. The second part of the business was shaving (*radere*, *rasurare*, *ξυρίειν*). This was done with a *ξυρίον*, a *novacula* (Lamprid. *Heliog.* c. 31), a razor (as we, retaining the Latin root, call it), which he kept in a case, *θήκη*, *ξυροθήκη*, *ξυροδόκης*, "a razor-case" (Aristoph. *Theesm.* 220; Pollux, ii. 32; Petron. 94). Some who would not submit to the operation of the razor used instead some powerful depilatory ointments, or plasters, as *psilothron*. (Plin. xxxii. 10. 47; *acida Creta*, Martial, vi. 93. 9; *Venetum lutum*, iii. 74; *dropax*, iii. 74; x. 65.) Stray hairs which escaped the razor were pulled out with small pincers or tweezers (*πολλήλαι*, *τριχολάβειον*). The third part of the barber's work was to pare the nails of the hands, an operation which the Greeks expressed by the words *δονυχίειν* and *ἀρονυχίειν* (Aristoph. *Eq.* 706; and *Schol.*; Theophrast. *Charact.* c. 26; Pollux, ii. 146). The instruments used for this purpose were called *δονυχιστήρια*, *sc. μαχαίρια*. (Pollux, x. 140.) This practice of employing a man expressly to pare the nails explains Plautus's humorous description of the miserly Euclio (*Aulul.* ii. 4. 34):—

"Quin ipsi quidem tonsor ungues demperat,
Collegit, omnia abstulit praecægmina."

Even to the miser it did not occur to pare his nails himself, and save the money he would have to pay; but only to collect the parings in hope of making

something by them. So Martial, in rallying a fop, who had tried to dispense with the barber's services, by using different kinds of plasters, &c., asks him (*Epig.* iii. 74), *Quid facient ungues? What will your nails do? How will you get your nails pared?* So Tibullus says (i. 8. 11), *quid (prodest) unguis artificis docta subscissae manu; from which it appears that the person addressed was in the habit of employing one of the more fashionable tonsors. The instruments used are referred to by Martial. (Epig. xiv. 36, Instrumenta tonsoria.)* [A. A.]

BA'RBITOS, or BA'RBITON. [LYRA.]

BASANOS (βάσανος). [TORMENTUM.]

BASCA'NIA (βάσκανία). [FASCINUM.]

BASCAUDA, a British basket. This term, which remains with very little variation in the Welsh "basgawd," and the English "basket," was conveyed to Rome together with the articles denoted by it. We find it used by Juvenal (xii. 46) and by Martial (xiv. 99) in connections which imply that these articles were held in much esteem by the luxurious Romans. [J. Y.]

BASILEIA (Βασιλεία), a festival celebrated at Lebadeia, in Boeotia, in honour of Trophonius, who had the surname of Βασιλεύς. This festival was also called Trophonia — Τροφώνια (Pollux, i. 37); and was first observed under the latter name as a general festival of the Boeotians after the battle of Leuctra. (Diod. xv. 53.)

BA'SILEUS (βασιλεύς). [Rex.]

BASI'LICA (sc. *aedes, aula, porticus* — βασιλική, also *regia*, Stat. *Silo.* i. l. 80; Suet. *Aug.* 31), a building which served as a court of law and an exchange, or place of meeting for merchants and men of business. The two uses are so mixed up together that it is not always easy to say which was the principal. Thus the basilica at Fanum, of which Vitruvius himself was the architect, was entirely devoted to business, and the courts were held in a small building attached to it, — the temple of Augustus. The term is derived, according to Philander (*Comment. in Vitruv.*), from βασιλεύς, a king, in reference to early times, when the chief magistrate administered the laws he made; but it is more immediately adopted from the Greeks of Athens, whose second archon was styled ἄρχων βασιλεύς, and the tribunal where he adjudicated στοὰ βασιλείας (Paus. i. 3. § 1; Demosth. c. *Aristogor.* p. 776), the substantive *aula* or *porticus* in Latin being omitted for convenience. The Greek writers who speak of the Roman basilicae, call them sometimes στοὰ βασιλικὰ, and sometimes merely στοὰ.

The name alone would make it highly probable that the Romans were indebted to the Greeks for the idea of the building, which was probably borrowed from the στοὰ βασιλείας at Athens. In its original form it may be described as an *insulated portico*, detached from the *agora* or *forum*, for the more convenient transaction of business, which formerly took place in the porticoes of the *agora* itself; in fact, a sort of *agora* in miniature. The court of the Hellanodicae, in the old *agora* of Elis, was exactly of the form of a basilica. [AGORA.]

The first edifice of this description was not erected until B. C. 184 (*Liv.* xxxix. 44); for it is expressly stated by the historian, that there were no basilicae at the time of the fire, which destroyed so many buildings in the forum, under the consulate of Marcellus and Laevinus, A. C. 210.

(*Liv.* xxvi. 27.) It was situated in the forum adjoining the curia, and was denominated basilica Porcia, in commemoration of its founder, M. Porcius Cato. Besides this, there were twenty others, erected at different periods, within the city of Rome (Pitisc. *Lex. Ant. s. v. Basilica*), of which the following are the most frequently alluded to by the ancient authors: — 1. *Basilica Sempronia*, constructed by Titus Sempronius, B. C. 171 (*Liv.* xlv. 16); and supposed, by Donati and Nardini, to have been between the vicus Tuscus and the Velabrum. 2. *Basilica Opimia*, which was above the comitum. 3. *Basilica Pauli Aemilii*, or *Basilica Aemilia*, called also *Regia Pauli* by Statius (l. c.). Cicero (*Ad Att.* iv. 16) mentions two basilicae of this name, of which one was built, and the other only restored, by Paulus Aemilius. Both these edifices were in the forum, and one was celebrated for its open peristyle of Phrygian columns. A representation of this one is given below from a coin of the Aemilia gens. (Plin. *H. N.* xxxvi. 24; Appian, *B. C.* ii. 26; Plut. *Caes.* 29.) The position of these two basilicae has given rise to much controversy, a brief account of which is given in the *Dict. of Biog.* Vol. II. p. 766. 4. *Basilica Pompeii*, called also *regia* (Suet. *Aug.* 31), near the theatre of Pompey. 5. *Basilica Julia*, erected by Julius Caesar, in the forum, and opposite to the basilica Aemilia. (Suet. *Calig.* 37.) 6. *Basilica Cais et Lucii*, the grandsons of Augustus, by whom it was founded. (Suet. *Aug.* 29.) 7. *Basilica Ulpia*, or *Trajana*, in the forum of Trajan. 8. *Basilica Constantini*, erected by the emperor Constantine, supposed to be the ruin now remaining on the via sacra, near the temple of Rome and Venus, and commonly called the temple of Peace. Of all these magnificent edifices nothing now remains beyond the ground-plan, and the bases and some portion of the columns and superstructure of the two last. The basilica at Pompeii is in better preservation; the external walls, ranges of columns, and tribunal of the judges, being still tolerably perfect on the ground-floor.

The forum, or, where there was more than one, the one which was in the most frequented and central part of the city, was always selected for the site of a basilica; and hence it is that the classic writers not unfrequently use the terms *forum* and *basilica* synonymously, as in the passage of Claudian (*De Honor. Cons.* vi. 645): — *Desuetaque cingit Regius auratis fora fuscibus Ulpia lictor*, where the *forum* is not meant, but the basilica which was in it, and which was surrounded by the lictors who stood in the forum. (Pitisc. *Lex. Ant. l. c.*; Nard. *Rom. Ant.* v. 9.)

Vitruvius (v. 1) directs that the most sheltered part of the forum should be selected for the site of a basilica, in order that the public might suffer as little as possible from exposure to bad weather, whilst going to, or returning from, their place of business; he might also have added, for their greater convenience whilst engaged within, since many of these edifices, and all of the more ancient ones, were entirely open to the external air, being surrounded and protected solely by an open peristyle of columns, as the annexed representation of the basilica Aemilia from a medal of Lepidus, with the inscription, clearly shows.

When, however, the Romans became wealthy and refined, and consequently more effeminate, a wall was substituted for the external peristyle, and

BASILICA.

the columns were confined to the interior; or, if used externally, it was only in decorating the *apertures*, or vestibule of entrance. This was the only change which took place in the form of these buildings, from the time of their first institution, until they were converted into Christian churches. The ground plan of all of them is rectangular, and their width not more than half, nor less than one-third of the length (Vitruv. l. c.); but if the area on which the edifice was to be raised was not proportionally long, small chambers (*chalcidica*) were cut off from one of the ends (Vitruv. l. c.), which served as offices for the judges or merchants. This area was divided into three parts, consisting of a central nave (*media porticus*), and two side aisles, each separated from the centre by a single row of columns—a mode of construction particularly adapted to buildings intended for the reception of a large concourse of people. At one end of the centre aisle was the tribunal of the judge, in form either rectangular or circular, and sometimes cut off from the length of the grand nave (as is seen in the annexed plan of the basilica at Pompeii, which also affords an example of the chambers of the judges, or *chalcidica*, above men-

tioned), or otherwise thrown out from the hinder wall of the building, like the tribune of some of the most ancient churches in Rome, and then called the *hemicycle*—an instance of which is afforded in the basilica Trajani, of which the plan is given below. It will be observed that this was a most sumptuous edifice, possessing a double tribune, and double row of columns on each side of the centre aisle, dividing the whole into five aisles.

The internal tribune was probably the original construction, when the basilica was simply used as a court of justice; but when those spacious halls were erected for the convenience of traders as well as loungers, then the semicircular and external tribune was adopted, in order that the noise and confusion in the basilica might not interrupt the proceedings of the magistrates. (Vitruv. l. c.) In the centre of this tribune was placed the curule chair of the praetor, and seats for the judges, who sometimes amounted to the number of 180 (Plin. Ep. vi. 33), and the advocates; and round the sides of the hemicycle, called the wings (*cornua*), were seats for persons of distinction, and for the parties engaged in the proceedings. It was in the wing of the tribune that Tiberius sat to overawe the judgment at the trial of Granius Marcellus.

BASILICA.

199

(Tacit. Ann. i. 75.) The two side aisles, as has been said, were separated from the centre one by a row of columns, behind each of which was placed a square pier or pilaster (*parastata*, Vitruv. l. c.), which supported the flooring of an upper portico, similar to the gallery of a modern church. The upper gallery was in like manner decorated with

columns of smaller dimensions than those below; and these served to support the roof, and were connected with one another by a parapet-wall or balustrade (*pluteus*, Vitruv. l. c.), which served as a defence against the danger of falling over, and screened the crowd of loiterers above (*subbasilicani*, Plaut. Capt. iv. 2. 35) from the people of business in the area below. (Vitruv. l. c.) This gallery reached entirely round the inside of the building, and was frequented by women as well as men, the women on one side and the men on the other, who went to hear and see what was going on. (Plin. l. c.) The staircase which led to the upper portico was on the outside, as is seen in the plan of the basilica of Pompeii. It is similarly situated in the basilica of Constantine. The whole area of these magnificent structures was covered in with three separate ceilings, of the kind called *testudinatum*, like a tortoise-shell; in technical language now denominated *cooed*, an expression used to distinguish a ceiling which has the general appearance of a vault, the central part of which is, however, flat, while the margins incline by a cylindrical shell from each of the four sides of the central square to the side walls; in which form the ancients imagined a resemblance to the shell of a tortoise.

From the description which has been given, it will be evident how much these edifices were adapted in their general form and construction to the uses of a Christian church; to which purpose many of them were, in fact, converted in the time of Constantine. Hence the later writers of the

empire apply the term *basilicae* to all churches built after the model just described; and such were the earliest edifices dedicated to Christian worship, which, with their original designation, continue to this day, being still called at Rome *basiliche*. A Christian basilica consisted of four principal parts: — 1. *Πρόναος*, the vestibule of entrance. 2. *Ναὺς*, *navis*, and sometimes *gremium*, the nave or centre aisle, which was divided from the two side ones by a row of columns on each of its sides. Here the people assembled for the purposes of worship. 3. *Ἀμβών* (from *ἀναβαίνειν*, to ascend), *chorus* (the choir), and *suggestum*, a part of the lower extremity of the nave raised above the general level of the floor by a flight of steps. 4. *Ἱερατεῖον*, *leporibhna*, *sanctuarium*, which answered to the tribune of the ancient basilica. In the centre of this sanctuary was placed the high altar, under a tabernacle or canopy, such as still remains in the basilica of St. John of Lateran, at Rome, at which the priest officiated with his face turned towards the people. Around this altar, and in the wings of the sanctuary, were seats for the assistant clergy, with an elevated chair for the bishop at the bottom of the circle in the centre. (*Theatr. Basil. Pisae*. cura Josep. Marl. Canon. iii. p. 8; Ciamp. *Vet. Men.* i. ii. et *De Sacr. Ed.*; Stieglitz, *Archäol. d. Baukunst*, vol. iii. pp. 19, &c; Hirt. *Lehre d. Gebäude*, pp. 180, &c; Bunsen, *Die Basiliken des Christlichen Roms*, Munich, 1844.) [A. R.]

BASI/LICA. About A. D. 876, the Greek emperor Basilus, the Macedonian, commenced this work, which was completed by his son Leo, the philosopher, who reigned from A. D. 886 to 911. Before the reign of Basilus, there had been several Greek translations of the Pandect, the Code, and the Institutes; but there was no authorised Greek version of them. The numerous Constitutions of Justinian's successors, and the contradictory interpretations of the jurists, were a further reason for publishing a revised Greek text under the imperial authority. This great work was called *Ἀνακτάσεις τῶν παλαιῶν νόμων, τὸ ἐξηκοντάβιβλιον, ὁ βασιλικὸς (νόμος) and τὰ βασιλικά*. It was revised by the order of Constantinus Porphyrogeneta, about A. D. 945. The Basilica comprised the Institutes, Pandect, Code, the Novellae, and the imperial Constitutions subsequent to the time of Justinian, in sixty books, which are subdivided into titles. For the Institutes the paraphrase of Theophilus was used, for the Digest the *πλάτος* of Stephanus, and the commentary of Cyrillus and of an anonymous author, for the Code the *κατὰ πλάτος* of Thalelaeus and the work of Theodorus, and for the Novellae, except the 168, the Summae of Theodorus, Athanasius, and Philoxenus. The publication of this authorised body of law in the Greek language led to the gradual disuse of the original compilations of Justinian in the East. But the Roman law was thus more firmly established in Eastern Europe and Western Asia, where it has maintained itself among the Greek population to the present day.

The arrangement of the matter in the Basilica is as follows: — All the matter relating to a given subject is selected from the Corpus Juris; the extracts from the Pandect are placed first under each title, then the constitutions of the Code, and next in order the provisions contained in the Institutes and the Novellae, which confirm or complete the provisions of the Pandect. The Basilica does

not contain all that the Corpus Juris contains; but it contains numerous fragments of the opinions of ancient jurists, and of imperial Constitutions, which are not in the Corpus Juris.

The Basilica were published, with a Latin version, by Fabrot, Paris, 1647, seven vols. folio. Fabrot published only thirty-six books complete, and six others incomplete: the other books were made up from an extract from the Basilica and the Scholiasta. Four of the deficient books were afterwards found in MS., and published by Gerhard Meerman, with a translation by M. Otto Reitz, in the fifth volume of his *Thesaurus Juris Civilis et Canonici*; and they were also published separately in London, in 1765, folio, as a supplement to Fabrot's edition. A new critical edition, by C. Guil. E. Heimbach, Leipzig, 1833, &c., 4to., has been commenced. (Böcking, *Institutiones*, vol. i. p. 105.)

BASTERNA, a kind of litter (*lectica*) in which women were carried in the time of the Roman emperors. It appears to have resembled the lectica [*LECTICA*] very closely; and the only difference apparently was, that the lectica was carried by slaves, and the basterna by two mules. Several etymologies of the word have been proposed. Salmasius supposes it to be derived from the Greek *βαστάω* (Salm. *ad Lamprid. Heliog.* 21). A description of a basterna is given by a poet in the *Anth. Lat.* iii. 183.

BAXA, or **BAXEA**, a sandal made of vegetable leaves, twigs, or fibres. According to Isidore (*Orig.* xix. 33), this kind of sandal was worn on the stage by comic, whilst the cithurnus was appropriate to tragic actors. When, therefore, one of the characters in Plautus (*Men.* ii. 3. 40) says, *Qui estergentur baxae!* we may suppose him to point to the sandals on his feet. Philosophers also wore sandals of this description, at least in the time of Tertullian (*De Pallio*, 4) and Appuleius (*Met.* ii. and xi.), and probably for the sake of simplicity and cheapness. Isidore adds, that baxae were made of willow (*ex salice*), and that they were also called *calones*; and he thinks that the latter term was derived from the Greek *κάλων*, wood. From numerous specimens of them discovered in the catacombs, we perceive that the Egyptians made them of palm-leaves and papyrus. (Wilkinson, *Manners and Customs*, vol. iii. p. 336.) They are sometimes observable on the feet of Egyptian statues. According to Herodotus, sandals of papyrus (*πυρροθήματα βύβλινα*, ii. 37) were a part of the required and characteristic dress of the Egyptian priests. We may presume that he intended his words to include not only sandals made, strictly speaking, of papyrus, but those also in which the leaves of the date-palm were an ingredient, and of which Appuleius makes distinct mention, when he describes a young priest covered with a linen sheet and wearing sandals of palm (*linteis amictulis intectum, pedesque palmis baxeis indutum*, *Met.* ii). The accompanying woodcut shows two sandals exactly answering to this description, from the collection in the British Museum. The upper one was worn on the right foot. It has a loop on the right side for fastening the band which went across the instep. This band, together with the ligature connected with it, which was inserted between the great and the second toe, is made of the stem of the papyrus, undivided and unwrought. The lower figure shows a sandal in

which the portions of the palm-leaf are interlaced with great neatness and regularity, the sewing and binding being effected by fibres of papyrus. The three holes may be observed for the passage of the band and ligature already mentioned. [J. Y.]

ΒΕΒΑΙΟ/ΣΕΟΣ ΔΙΚΗ' (*Βεβαιώσεως δίκη*), an action to compel the vendor to make a good title, was had recourse to when the right or possession of the purchaser was impugned or disturbed by a third person. A claimant under these circumstances, unless the present owner were inclined to fight the battle himself (*αὐτομαχεῖν*), was referred to the vendor as the proper defendant in the cause (*εἰς ὑπερῆρα ἀνάγειν*). If the vendor were then unwilling to appear, the action in question was the legal remedy against him, and might be resorted to by the purchaser even when the earnest only had been paid. (Harpocrat. s. v. *Αὐτομαχεῖν*, *Βεβαίωσις*.) From the passages in the oration of Demosthenes against Pantænetus that bear upon the subject, it is concluded by Heraldus (*Animad. in Salm. iv. 3. 6*) that the liability to be so called upon was inherent in the character of a vendor, and therefore not the subject of specific warranty or covenants for title. The same critic also concludes, from the glosses of Hesychius and Suidas, that this action might in like manner be brought against a fraudulent mortgagor. (*Animad. in Salm. iv. 3. in fin.*) If the claimant had established his right, and been by the decision of the dicasts put in legal possession of the property, whether movable or otherwise, as appears from the case in the speech against Pantænetus, the ejected purchaser was entitled to sue for reimbursement from the vendor by the action in question. (Pollux, viii. 6.) The cause is classed by Meier (*Att. Process. p. 526*) among the *δίκαι πρὸς τινα*, or civil actions that fell within the cognizance of the thesmothetæ. [J. S. M.]

ΒΕΜΑ (*βῆμα*), the platform from which the *exarch* spoke in the Athenian *ἐκκλησία*, is described under **ΕΚΚΛΗΣΙΑ**. It is used by the Greek writers on Roman affairs to indicate the Roman tribunal. (See s. g. Plut. *Pomp.* 41.)

BENDIDEIA (*Βενθίδεα*), a festival celebrated in the port town of Peiræus in honour of Bendis, a Thracian divinity, whose worship seems to have been introduced into Attica about the time of Socrates, for Plato (*De Re Publ. init.*) introduces Socrates giving an opinion on the Bendideia, and saying that it was then celebrated for the first time. It was celebrated on the 20th, or according to others, on the 19th of Thargelion. (Schol. ad *Plat. Repub. i. p. 354*; Proclus, ad *Plat. Tim. pp. 2-27*.) The festival resembled, in its cha-

acter, those celebrated in honour of Dionysus (Strab. x. p. 470), though Plato (*l. c. p. 354*) mentions only feasting; but the principal solemnities seem to have consisted in a procession held by the Thracians settled in Peiræus, and another held by the Peiræans themselves, which, according to Plato (*De Re Publ. init.*), were held with great decorum and propriety, and a torch race on horseback in the evening. The Athenians identified Bendis with their own Artemis (Hesych. s. v. *Βένθις*), but the temple of Bendis (*Βενθίδειον*) at Peiræus was near that of Artemis, whence it is clear that the two divinities must have been distinct. (Xenoph. *Hellen. ii. 4. § 11*; comp. Liv. xxxviii. 41; Ruhnken, ad *Tim. Gloss. p. 62*; Clinton, *F. H. vol. ii. p. 402, 3d edit.*) [L. S.]

BENEFICIUM ABSTINENDI. [HERRAS.]

BENEFICIUM, BENEFICIA/RIUS. The word *beneficium* is equivalent to *feodum* or *fief*, in the writers on the feudal law, and is an interest in land, or things inseparable from the land, or things immovable. (*Feud. lib. 2. tit. 1*.) The *beneficiarius* is he who has a *beneficium*. The word *beneficium* often occurs in French historical documents from the fifth to the ninth century, and denotes the same condition of landed property, which at the end of the ninth century is denoted by *feodum*. From the end of the ninth century the two words are often used indifferently. (Guizot, *Histoire de la Civilisation en France*, vol. iii. p. 247.) The term *benefice* is also applied to an ecclesiastical preferment. (Ducange, *Gloss.*)

The term *beneficium* is of frequent occurrence in the Roman law, in the sense of some special privilege or favour granted to a person in respect of age, sex, or condition. But the word was also used in other senses, and the meaning of the term, as it appears in the feudal law, is clearly derivable from the signification of the term among the Romans of the later republican and earlier imperial times. In the time of Cicero it was usual for a general, or a governor of a province, to report to the treasury the names of those under his command who had done good service to the state: those who were included in such report were said *in beneficiis ad aerarium deferri*. (Cic. *Pro Arch. c. 5, Ad Fam. v. 20*, and the note of Manutius.) It was required by a *Lex Julia* that the names should be given in within thirty days after the accounts of the general or governor. *In beneficiis* in these passages may mean that the persons so reported were considered as persons who had deserved well of the state, and so the word *beneficium* may have reference to the services of the individuals; but as the object for which their services were reported, was the benefit of the individuals, it seems that the term had reference also to the reward, immediate or remote, obtained for their services. The honours and offices of the Roman state, in the republican period, were called the *beneficia* of the *Populus Romanus*.

Beneficium also signified any promotion conferred on or grant made to soldiers, who were thence called *beneficiarii*; this practice was common, as we see from inscriptions in Gruter (li. 4, cxxx. 5), in some of which the word *beneficiarius* is represented by the two letters B. F. In this sense we must understand the passage of Caesar (*De Bell. Civ. ii. 18*) when he speaks of the *magna beneficia* and the *magnæ clientelæ* of Pompeius in Citerior Spain. *Beneficiarius* is also used by Caesar (*De Bell. Civ. i. 75*), to express the per-

son who had received a beneficium. It does not, however, appear from these passages, what the beneficium actually was. It might be any kind of honour, or special exemption from service. (*De Bell. Civ.* iii. 88; Sueton. *Tib.* 12; Vegetius, *De Re Militari*, ii. 7.)

Beneficiarius is opposed by Festus (*s. v.*) to munifer, in the sense of one who is released from military service, as opposed to one who is bound to do military service.

Grants of land, and other things, made by the Roman emperors, were called beneficia, and were entered in a book called *Liber Beneficiorum* (Hyginus, *De Limitibus Constit.* p. 193, Goes.). The secretary or clerk who kept this book was called a *commentariis beneficiorum*, as appears from an inscription in Gruter (dlxxviii. 1.) [G. L.]

BESTIARII (*θηριόμαχοι*), persons who fought with wild beasts in the games of the circus. They were either persons who fought for the sake of pay (*auctoramentum*), and who were allowed arms, or they were criminals, who were usually permitted to have no means of defence against the wild beasts. (*Cic. pro Sest.* 64; Sen. *De Benef.* ii. 19, *Ep.* 70; Tertull. *Apol.* 9.) The bestiarii, who fought with the beasts for the sake of pay, and of whom there were great numbers in the latter days of the republic and under the empire, are always spoken of as distinct from the gladiators, who fought with one another. (*Cic. in Patis.* 17; *ad Qu. Fr.* ii. 6. § 5.) It appears that there were schools in Rome, in which persons were trained to fight with wild beasts (*scholas bestiarum* or *bestiariorum*, Tertull. *Apol.* 35.)

BIAION DIKE' (*βίαιον δίκη*). This action might be brought whenever rapes of free persons, or the illegal and forcible seizure of property of any kind were the subject of accusation (Harpocrat.); and we learn from Demosthenes (*a. Pantæm.* p. 976. 11) that it came under the jurisdiction of the Forty. According to Plutarch (*Solon*, 23) the law prescribed that ravishers should pay a fine of 100 drachmae; but other accounts merely state generally that the convict was mulcted in a sum equal to twice that at which the damages were laid (*δικλῆν τὴν βλάβην δρῆσειν*, Lys. *De Caede Eratostr.* p. 33; Dem. *c. Mid.* p. 528. 20; Harpocrat.); and the plaintiff in such case received one half of the fine; and the state, as a party mediately injured, the other. To reconcile these accounts Meier (*Att. Proc.* p. 545) supposes the rape to have been estimated by law at 100 drachmae, and that the plaintiff fixed the damages in reference to other injuries simultaneous with, or consequent upon, the perpetration of the main offence. With respect to aggressions upon property, the action *βίαιον* is to be distinguished from *ἐξούλης*, in that the former implies the employment of actual violence, the latter merely such detention of property as amounted to violence in the contemplation of law (Meier, *Att. Proc.* p. 546), as for instance the nonpayment of damages, and the like, to the successful litigant after an award in his favour by a court of justice. (Dem. *c. Mid.* 540. 24.) [J. S. M.]

BYBASIS (*βιβασίς*). [SALTATIO.]

BIBLIOPOLA. [LIBER.]

BIBLIOTHECA (*βιβλιοθήκη*, or *ἀποθήκη βιβλίων*), primarily, the place where a collection of books was kept; secondarily, the collection itself. (Festus, *s. v.*) Little as the states of an-

tiquity dealt with the instruction of the people, public collections of books appear to have been very ancient. That of Peisistratus was intended for public use (Gell. vi. 17; Athen. i. p. 3); it was subsequently removed to Persia by Xerxes. About the same time, Polycrates, tyrant of Samos, is said to have founded a library. In the best days of Athens, even private persons had large collections of books; the most important of which we know any thing, belonged to Euclid, Euriplides, and Aristotle. Strabo says (xiii. 1) that Aristotle was the first who, to his knowledge, made a collection of books, and taught the Egyptian kings the arrangement of a library. The most important and splendid public library of antiquity was that founded by the Ptolemies at Alexandria, begun under Ptolemy Soter, but increased and re-arranged in an orderly and systematic manner by Ptolemy Philadelphus, who also appointed a fixed librarian and otherwise provided for the usefulness of the institution. The library of the Ptolemies contained, according to A. Gellius (vi. 17), 700,000 volumes; according to Josephus, 500,000; and according to Seneca (*De Transq. As.* 9), 400,000. The different reckoning of different authors may be in some measure, perhaps, reconciled by supposing that they give the number of books only in a part of the library; for it consisted of two parts, one in the quarter of the city called Bruchion, the other in the part called Serapeion. Ptolemy Philadelphus bought Aristotle's collection to add to the library, and Ptolemy Euergetes continued to add to the stock. A great part of this splendid library was consumed by fire in the siege of Alexandria by Julius Caesar: some writers say that the whole was burnt; but the discrepancy in the numbers stated above seems to confirm the opinion that the fire did not extend so far. At any rate, the library was soon restored, and continued in a flourishing condition till it was destroyed by the Arabs A. D. 640. (See Gibbon, c. 51.) Connected with the greater division of the library, in the quarter of Alexandria called Bruchion, was a sort of college to which the name of Mouseion (or Museum) was given. Here many favoured literati pursued their studies, transcribed books, and so forth; lectures also were delivered. The Ptolemies were not long without a rival in zeal. Eumenes, king of Pergamus, became a patron of literature and the sciences, and established a library, which, in spite of the prohibition against exporting papyrus issued by Ptolemy, jealous of his success, became very extensive, and perhaps next in importance to the library of Alexandria. It remained, and probably continued to increase, till Antonius made it a present to Cleopatra. (Plut. *Antom.* 58.)

The first public library in Rome was that founded by Aemilius Pollio (Plin. *H. N.* vii. 30; Isid. *Orig.* vi. 5), and was in the atrium Libertatis on Mount Aventine. Julius Caesar had projected a grand Greek and Latin library, and had commissioned Varro to take measures for the establishment of it; but the scheme was prevented by his death. (Suet. *Jul.* 44.) The library of Pollio was followed by that of Augustus, in the temple of Apollo on the Mount Palatine (Suet. *Aug.* 29; Dion Cass. liii. 1), and another, bibliotheca Octavianæ (so called from Augustus's sister Octavia), forming part of the Porticus Octavia. (Dion Cass. xlix. 43; Plut. *Marcell.* 30.) There were also

libraries on the capitol (Suet. Dom. 20), in the temple of Peace (Gell. xvi. 8), in the palace of Tiberius (Gell. xiii. 18), besides the Ulpian library, which was the most famous, founded by Trajan (Gell. xi. 17; Dion Cass. lxxviii. 16), called Ulpian from his own name, Ulpian. This library was attached by Diocletian, as an ornament, to his *thermae*. (Vopisc. Prob. 2.)

Private collections of books were made at Rome soon after the second Punic war. The zeal of Cicero, Atticus, and others in increasing their libraries is well known. (Cic. *Ad Att.* i. 7, 10, iv. 5; *Ad Quint. Fr.* iii. 4.) The library of Lucullus was very extensive, and he allowed the public free access to it. (Plut. *Lucull.* 42.) Towards the end of the republic it became, in fact, the fashion to have a room elegantly furnished as a library, and reserved for that purpose. However ignorant or unstudious a person might be, it was fashionable to appear learned by having a library, though he might never even read the titles of the books. Seneca (*De Transg. An.* 9) condemns the rage for mere book-collecting, and rallies those who were more pleased with the outside than the inside. Lucian wrote a separate piece to expose this common folly (*πρὸς ἀπαιδευτὸν καὶ πολλὰ βιβλία ἐνέχοντα*).

A library generally had an eastern aspect. (Vitruv. vi. 7.) In Herculaneum a library fully furnished was discovered. Round the walls it had cases containing the books in rolls [LIBER]; these cases were numbered. It was a very small room; so small that a person by stretching out his arms could touch both sides of it. The cases were called either *armaria* (Plin. *Ep.* ii. 17; Vopisc. Tacit. 8), or *loculamenta* (Seneca, *De Transg. An.* 9), or *foruli* (Juv. *Sat.* iii. 219), or *nidi* (Mart. i. 11, 13, vii. 17. 5). Ainius Pollio had set the fashion in his public library of adorning the room with the portraits and busts of celebrated men, as well as statues of Minerva and the Muses. This example was soon followed in the private libraries of the rich. (Juv. iii. 219; Plin. *Ep.* iii. 7, iv. 28; Cic. *ad Fam.* vii. 23; Plin. *H. N.* xxxv. 2; Suet. *Tib.* 70; Mart. ix. *Ep. ad Turan.*; Lipsius, *De Bibliothecis Synagoga*, in *Opera*, vol. iii.; Becker, *Gallus*, vol. i. p. 160, &c.) [A. A.]

BICOS (*βίκος*), the name of an earthen vessel is common use among the Greeks. (Pollux, vi. 14, vii. 162, x. 73.) Hesychius (*s. v.*) defines it as a *στέμνος* with handles. It was used for holding wine (Xen. *Anab.* i. 9. § 25), and salted meat and fish. (Athen. iii. p. 116, f.) Herodotus (i. 194) speaks of *βίκους φοινικίους κατάγουσι* *ὄνον* *ἀλόνος*, which some commentators interpret by "vessels made of the wood of the palm tree full of wine." But as Eustathius (in *Od.* p. 1445) speaks of *ὄνον φοινικίον βίκος*, we ought probably to read in Herodotus *βίκους φοινικίον, κ. τ. λ.*, "vessels full of palm wine."

BIDENS. [RASTRUM.]

BIDENTAL, the name given to a place where any one had been struck by lightning (Festus, *s. v. fulguritum*), or where any one had been killed by lightning and buried. Such a place was considered sacred. Priests, who were called *bidentales* (i. e. *sacerdotes*), collected the earth which had been torn up by the lightning, and everything that had been scorched, and burnt it in the ground with a sorrowful murmur. (Lucan, i. 696.) The officiating priest was said *condere fulgur* (Juv. *Sat.*

vi. 587; compare Orelli, *Inscr.* vol. i. p. 431. No. 2482); he further consecrated the spot by sacrificing a two-year-old sheep (*bidentis*), whence the name of the place and of the priest, and also erected an altar, and surrounded it with a wall or fence. It was not allowable to tread on the place (Persius, ii. 27), or to touch it, or even to look at it. (Amm. Marc. xxiii. 5.) Sometimes a bidental which had nearly fallen to decay from length of time was restored and renovated (Orelli, *Inscr.* No. 2483); but to remove the bounds of one (*movere bidentale*), or in any way to violate its sacred precincts, was considered as sacrilege. (Hor. *Art. Poet.* 471.) From the passage in Horace, it appears to have been believed that a person who was guilty of profaning a bidental, would be punished by the gods with frenzy; and Seneca (*Nat. Quæst.* ii. 53) mentions another belief of a similar kind, that wine which had been struck by lightning would produce in any one who drank it death or madness. Persons who had been struck by lightning (*fulguriti*) were not removed, but were buried on the spot. (Pers. *Sat.* ii. 27; Plin. *H. N.* ii. 54; Hartung, *Religion der Römer*, vol. ii. p. 13.) [A. A.]

BIDIAEI (*βιδίαῖοι*), called in inscriptions *βιδεοί* or *βιδυοί*, were magistrates in Sparta, whose business was to inspect the gymnastic exercises. Their house of meeting (*ἀρχαῖον*) was in the market-place. (Paus. iii. 11. § 2.) They were either five (Paus. *l. c.*) or six in number (Böckh, *Corp. Inscr.* nr. 1271. 1364), and had a president who is called in inscriptions *πρόεδρος βιδέων*. (Böckh, *Corp. Inscr.* vol. i. p. 611.) Böckh conjectures that *βιδεοί* or *βιδυοί* is the Laconian form for *ἰδυοί* or *ἰβδυοί*, and signifies witnesses and judges among the youth. (Comp. Müller, *Dorians*, iii. 7. § 8.) Valckenaer (*ad Herod.* vi. 57) supposes that the *bidiaei* were the same as the *ρομφάλακες*; but the inscriptions given by Böckh show that the *bidiaei* and *ρομφάλακες* were two separate classes of officers.

BIGA or BIGÆ. [CURRUS.]

BIGA/TUS. [DENARIUS.]

BIPA/LIUM. [PALA.]

BIPENNIS. [SECURIS.]

BIREMIS. [NAVIS.]

BIRRU (*βίρρος*), a cape or hood, which was worn out of doors over the shoulders, and was sometimes elevated so as to cover the head. On the former account it is classed by an ancient grammarian with the *laosma*, and on the latter with the cowl, or *occulus*. It had a long nap, which was commonly of sheep's wool, more rarely of beaver's wool. It probably derived its name from the red colour (*πύρρος*) of the wool of which it was made. It is only mentioned by the later writers. (Vopisc. *Carin.* 20; Claudian, *Epigr.* 37.)

BISE/LLIUM. [SELLA.]

BISSEXTUM. [CALENDARUM.]

BLABES DIKE' (*βλάβης δίκη*). This action was available in all cases in which one person had sustained a loss by the conduct of another; and from the instances that are extant, it seems that whether the injury originated in a fault of omission or commission, or impaired the actual fortune of the plaintiff, or his prospective advantage, the action would lie, and might be maintained, against the defendant. It is of course impossible to enumerate all the particular cases upon which it would arise, but the two great classes into which *βλάβη* may

be divided are the *ἐνθεμοὶ* and the *ἄθεμοι*. The first of these will include all causes arising from the nonfulfilment of a contract to which a penal bond was annexed, and those in which the law specified the penalty to be paid by the defendant upon conviction; the second, all injuries of property which the law did not specify nominatim, but generally directed to be punished by a fine equal to twice the estimated damage if the offence was intentional, if otherwise by a bare compensation. (Meier, *Att. Proc.* p. 188, &c., p. 475, &c.; Dem. c. *Mid.* p. 528.) Besides the general word *βλάβης*, others more specific, as to the nature of the case, are frequently added to the names of actions of this kind, as *ἀνδραπόδων*, *τετραπόδων*, *μεταλλικῇ*, and the like. The declaration of the plaintiff seems always to have begun with the words *ἔδλωκε με*, then came the name of the defendant, and next a description of the injury, as οὐκ ἀποδίδους ἐμοὶ τὸ ἀργύριον in Demosthenes (*Pro Phorm.* p. 950. 21). The proper court was determined by the subject of litigation; and when we consider that the damage done by Philocleon to the cake-woman's basket (Aristoph. *Vesp.*), and supposititious testimony given in the name of another, thereby rendering such person liable to an action, *ψευδομαρτυριῶν* (Dem. c. *Aphob.* iii. p. 849. 20), were equally *βλάβη* at Attic law, the variety of the actions, and consequently of the jurisdictions under which they fell, will be a sufficient excuse for the absence of further specification upon this point. [J. S. M.]

BOEDRO'MIA (*βοηδρόμια*), a festival celebrated at Athens on the seventh day of the month of Boëdromion, in honour of Apollo Boëdromius. (Müller, *Dor.* ii. 8. § 5.) The name Boëdromius, by which Apollo was called in Boeotia and other parts of Greece (Paus. ix. 17. § 1; Callimach. *Hymn. Apoll.* 69), seems to indicate that by this festival he was honoured as a martial god, who either by his actual presence or by his oracles afforded assistance in the dangers of war. The origin of the festival is, however, traced by different authors to different events in Grecian story. Plutarch (*Thes.* 27) says that Theseus, in his war against the Amazons, did not give battle till after he had offered a sacrifice to Phobos; and, that in commemoration of the successful battle which took place in the month of Boëdromion, the Athenians, down to his own time, continued to celebrate the festival of the Boëdromia. According to Suidas, the Etymol. Magn. and Euripides (*Ion.* 59), the festival derived its name and origin from the circumstance that when, in the reign of Erechtheus, the Athenians were attacked by Eumolpus, Xuthus or (according to Philochorus in Harpocration, s. v.) his son Ion came to their assistance, and procured them the victory. Respecting the particulars of this festival nothing is known except that sacrifices were offered to Artemis. (Comp. Spanheim, *ad Callim. Hymn. in Apoll.* 69.) [L. S.]

BOEOTARCHES (*Βοιωτάρχης*, or *Βοιωτάρχος*). It is proposed under this head to give a brief account of the Boeotian constitution as well as of the Boeotarchs.

The Boeotians in ancient times occupied Arne in Thessaly. (Thuc. i. 12.) Sixty years after the taking of Troy they were expelled by the Thesalians, and settled in the country then called Cadmeia, but afterwards Boeotia. This country, during their occupation of it, was divided into several

states, containing each a principal city, with its *ἐντελεῖς* or *ἐξυμοροί* (inhabitants of the same *μοῖρα*, or district) living around it. Of these greater states, with dependent territories, there seem to have been in former times fourteen,—a number which frequently occurs in Boeotian legends. (Paus. ix. 3. § 4.) The names are differently given by different writers on the subject; we know, however, for certain that they formed a confederacy called the Boeotian league, with Thebes at its head, the dependencies of which city formed about a third part of the whole of Boeotia. These dependent towns, or districts, were not immediately connected with the national confederacy, but with the neighbouring chief city, as Cynocephalae was with Thebes. In fact, they were obliged to furnish troops and money, to make up the contingent furnished by the state to which they belonged, to the general confederacy. (Arnold, *ad Thuc.* iv. 76.) Of the independent states Thucydides (iv. 93) mentions seven by name; and gives us reasons for concluding that, in the time of the Peloponnesian war they were ten or twelve in number, Thebes being the chief. Plataea had withdrawn from them, and placed itself under the protection of Athens as early as B. C. 519; and in A. C. 374, Thespiae, another member of the league, was destroyed by the Thebans. (Clinton, *F. H.* vol. ii. p. 396; Thuc. iii. 55.)

Each of the principal towns of Boeotia seems to have had its *βουλὴ* and *ἄρχον*. (Xen. *Hell.* v. 2. § 29.) The *βουλὴ* was presided over by an archon, who probably had succeeded to the priestly functions of the old kings; but possessed little, if any, executive authority. The polemarcha, who, in treaties and agreements are mentioned next to the archon, had some executive authority, but did not command forces; e. g. they could imprison (Xen. *Hell.* i. c.), and they directed the levies of troops. But besides the archon of each separate state, there was an archon of the confederacy—*ἄρχων ἐν κοινῇ Βοιωτῶν*, most probably always a Theban. (Böckh, *Inscr.* 1593.) His name was affixed to all alliances and compacts which concerned the whole confederacy, and he was president of what Thucydides (v. 38) calls the four councils, who directed the affairs of the league (*ἄνω τὸ κύριος ἔχουσι*). On important questions they seem to have been united; for the same author speaks of them as *ἡ βουλὴ*, and informs us that the determinations of the Boeotarchs required the ratification of this body before they were valid. The Boeotarchs themselves were properly the military heads of the confederacy, chosen by the different states; but we also find them discharging the functions of an executive in various matters. In fact, they are represented by Thucydides (v. 38) as forming an alliance with foreign states; as receiving ambassadors on their return home; as negotiating with envoys from other countries; and acting as the representatives of the whole league, though the *βουλὴ* refused to sanction the measures they had resolved on in the particular case to which we are now alluding. Another instance in which the Boeotarchs appear as executive is their interference with Agesilaus, on his embarking from Aulis for Asia (A. C. 396), when they prevented him offering sacrifice as he wished. (Plut. *Ages.* 6; Xen. *Hell.* iii. 4. § 4.) Still the principal duty of the Boeotarchs was of a military nature: thus they led into the field the troops of their respective states;

and when at home, they took whatever measures were requisite to forward the military operations of the league, or of their own state: for example, we read of one of the Theban Boeotarchs ordering the Thebans to come in arms to the ecclesia for the purpose of being ready to attack Plataea. (Paus. ix. 1. § 3.) Each state of the confederacy elected one Boeotarch, the Thebans two (Thuc. ii. 2, iv. 91, vii. 30; Diod. xv. 51); although on one occasion, i. e. after the return of the exiles with Pelopidas (a. c. 379), we read of there being three at Thebes. (Plut. *Pelop.* 13.) The total number from the whole confederacy varied with the number of the independent states. Mention is made of the Boeotarchs by Thucydides (iv. 91), in connection with the battle of Delium (a. c. 424). There is, however, a difference of opinion with respect to his meaning: some understand him to speak of eleven, some of twelve, and others of thirteen Boeotarchs. Dr. Arnold is disposed to adopt the last number; and we think the context is in favour of the opinion that there were then thirteen Boeotarchs, so that the number of free states was twelve. At the time of the battle of Leuctra (a. c. 371), we find seven Boeotarchs mentioned (Diod. xv. 52, 53; Paus. ix. 13. § 3); on another occasion, when Greece was invaded by the Gauls (a. c. 279), we read of four. Livy (xlii. 43) states that there were twelve, but before the time (a. c. 171) to which his statement refers, Plataea had been reunited to the league. Still the number mentioned in any case is no test of the actual number, inasmuch as we are not sure that all the Boeotarchs were sent out by their respective states on every expedition or to every battle.

The Boeotarchs, when engaged in military service, formed a council of war, the decisions of which were determined by a majority of votes, the president being one of the two Theban Boeotarchs who commanded alternately. (Thuc. iv. 91; Diod. xv. 51.) Their period of service was a year, beginning about the winter solstice; and whoever continued in office longer than his time, was punishable with death both at Thebes and in other cities (Plut. *Pelop.* 24; Paus. ix. 14. § 3.) Epameinondas and Pelopidas did so on their invasion of Laconia (a. c. 369), but their eminent services saved them; in fact the judges did not even come to a vote respecting the former. At the expiration of the year a Boeotarch was eligible to office a second time, and Pelopidas was repeatedly chosen. From the case of Epameinondas and Pelopidas, who were brought before Theban judges (*δικασταί*), for transgression of the law which limited the time of office, we may conclude that each Boeotarch was responsible to his own state alone, and not to the general body of the four councils.

Mention is made of an election of Boeotarchs by Livy (xxxiii. 27, xlii. 44). He further informs us that the league (*concilium*) was broken up by the Romans a. c. 171. (Compare Polyb. xxviii. 2. § 10 — *τὸ Βοιωτῶν ἔθνος κατελύθη*.) Still it must have been partially revived, as we are told of a second breaking up by the Romans after the destruction of Corinth a. c. 146. (Paus. vii. 16. § 6.) [R. W.]

BOMBYCINUM. [SERICUM.]

BONA. The word bona is sometimes used to express the whole of a man's property (Paulus, *Recept. Sentent.* v. 6, 16; Dig. 37. tit. l. a. 3; 50. tit. 16. a. 49); and in the phrases bonorum

emtio, cessio, possessio, usufructus, the word "bona" is equivalent to property. It expresses all that a man has, whether as owner or merely as possessor; and every thing to which he has any right. But it is said (Dig. 50. tit. 16. a. 83): "Proprie bona dici non possunt quae plus incommodi quam commodi habent." However, the use of the word in the case of universal succession comprehended both the commodum and incommodum of that which passed to the universal successor. But the word bona is simply the property as an object; it does not express the nature of the relation between it and the person who has the ownership or the enjoyment of it, any more than the words "all that I have," "all that I am worth," "all my property," in English show the legal relation of a man to that which he thus describes. The legal expression is *bonis*, as opposed to *dominium*, or *Quiritarian ownership*, and the nature of the distinction will be easily apprehended by any person who is slightly conversant with English law.

"There is," says Gaius (ii. 40), "among foreigners (*peregrini*) only one kind of ownership (*dominium*), so that a man is either the owner of a thing or he is not. And this was formerly the case among the Roman people; for a man was either owner *ex jure Quiritium*, or he was not. But afterwards the ownership was split, so that now one man may be the owner (*dominus*) of a thing *ex jure Quiritium*, and yet another may have it in *bonis*. For instance, if, in the case of a *res mancipi*, I do not transfer it to you by *mancipatio*, nor by the form in *jure cessio*, but merely deliver it to you, the thing indeed becomes your thing (*in bonis*), but it will remain mine *ex jure Quiritium*, until by possession you have it by *usucapion*. For when the *usucapion* is once complete, from that time it begins to be yours absolutely (*pleno jure*), that is, it is yours both in *bonis* and also yours *ex jure Quiritium*, just as if it had been *mancipated* to you, or transferred to you by the *in jure cessio*." In this passage Gaius refers to the three modes of acquiring property which were the peculiar rights of Roman citizens, *mancipatio*, in *jure cessio*, and *usucapion*, which are also particularly enumerated by him in another passage (ii. 65).

From this passage it appears that the ownership of certain kinds of things among the Romans, called *res mancipi* [*MANCIPIMUM*], could only be transferred from one person to another with certain formalities, or acquired by *usucapion*. But if it was clearly the intention of the owner to transfer the ownership, and the necessary forms only were wanting, the purchaser had the thing in *bonis*, and he had the enjoyment of it, though the original owner was *legally* the owner until the *usucapion* was completed, notwithstanding he had parted with the thing.

It thus appears that *Quiritarian ownership* of *res mancipi* originally and properly signified that ownership of a thing which the Roman law recognised as such; it did not express a compound but a simple notion, which was that of absolute ownership. But when it was once established that one man might have the *Quiritarian ownership*, and another the enjoyment, and the sole right to the enjoyment of the same thing, the complete notion of *Quiritarian ownership* became a notion compounded of the strict legal notion of ownership, and that of the right to enjoy, as united

in the same person. And as a man might have both the Quiritarian ownership and the right to the enjoyment of a thing, so one might have the Quiritarian ownership only, and another might have the enjoyment of it only. This bare ownership was sometimes expressed by the same terms (*ex jure Quiritium*) as that ownership which was complete, but sometimes it was appropriately called *nudum jus Quiritium* (Gaius, iii. 100), and yet the person who had such bare right was still called *dominus*, and by this term he is contrasted with the *usufructuarius* and the *bonae fidei possessor*.

The historical origin of this notion, of the separation of the ownership from the right to enjoy a thing, is not known; but it may be easily conjectured. When nothing was wanting to the transfer of ownership but a compliance with the strict legal form, we can easily conceive that the Roman jurists would soon get over this difficulty. The strictness of the old legal institutions of Rome was gradually relaxed to meet the wants of the people, and in the instance already mentioned, the jurisdiction of the praetor supplied the defects of the law. Thus, that interest which a man had acquired in a thing, and which only wanted certain forms to make it Quiritarian ownership, was protected by the praetor. The praetor could not give Quiritarian ownership, but he could protect a man in the enjoyment of a thing—he could maintain his possession: and this is precisely what the praetor did with respect to those who were possessors of public land; they had no ownership, but only a possession, in which they were protected by the praetor's interdict. [AGRICULTURAL LEGES, p. 38.]

That which was in *bonis*, then, was that kind of interest or ownership which was protected by the praetor, which interest may be called bonitarian or beneficial ownership, as opposed to Quiritarian or bare legal ownership. It does not appear that the word *dominium* is ever applied to such bonitarian ownership except it may be in one passage of Gaius (i. 54), the explanation of which is not free from difficulty.

That interest called in *bonis*, which arose from a bare tradition of a *res mancipi*, was protected by the exceptio, and the *actio utilis in rem*. (Dig. 41. tit. 1. s. 52.) *Possessio* is the general name of the interest which was thus protected. The person who had a thing in *bonis* and *ex justa causa* was also entitled to the *actio Publiciana*, in case he lost the possession of the thing before he had gained the ownership by *usucapion*. (Gaius, iv. 36.)

The phrases *bonorum possessio*, *bonorum possessor*, might then apply to him who has had a *res mancipi* transferred to him by tradition only; but the phrase applies also to other cases in which the praetor by the help of fictions gave to persons the beneficial interest to whom he could not give the ownership. When the praetor gave the goods of the debtor to the creditor, the creditor was said in *possessionem rerum*, or *bonorum debitoris mitti*. (Dig. 42. tit. 5. s. 14, &c.) [BONORUM EMPTIO; BONORUM POSSESSIO.]

As to things *nec mancipi*, the ownership might be transferred by bare tradition or delivery, and such ownership was Quiritarian, inasmuch as the Roman law required no special form to be observed in the transfer of the ownership of *res nec mancipi*. Such transfer was made according to

the *jus gentium* (in the Roman sense of that term). (Gaius, ii. 26, 41, 20; Ulp. *Frag.* i. 16.)

(Zimmern, *Ueber das Wesen des sogenannten bonitatischen Eigentums*, Rheinisch. Mus. für Jurispr. iii. 8.) [G. L.]

BONA CADUCA. *Caducum* literally signifies that which falls: thus, *glans caduca*, according to Gaius (Dig. 50. tit. 16. s. 30), is the mast which falls from a tree. *Caducum*, in its general sense, might be any thing without an owner, or what the person entitled to neglected to take (Cic. *De Or.* iii. 31, *Phil.* x. 5); but the strict legal sense of *caducum* and *bona caduca*, is that stated by Ulpian (*Frag.* xvii. *De Caducis*), which is as follows:—

If a thing is left by testament to a person, so that he can take it by the *jus civile*, but from some cause has not taken it, that thing is called *caducum*, as if it had fallen from him; for instance, if a legacy was left to an unmarried person, or a *Latinus Junianus*; and the unmarried person did not within a hundred days obey the law, or if within the same time the *Latinus* did not obtain the *Jus Quiritium*, or had become a *peregrinus* (see Cujacius, *ad Ulpiani Titulos XXIX.* vol. i. ed. Neapol. 1758), the legacy was *caducum*. Or if a *heres ex parte*, or a legatee, died before the opening of the will, the thing was *caducum*. The thing which failed to come to a person in consequence of something happening in the life of the testator was said to be in *causa caduci*; that which failed of taking effect between the death of the testator and the opening of the will, was simply called *caducum*. (Comp. Dig. 28. tit. 5. s. 62, and Dig. 31. s. 51; *Code Civil*, Art. 1039, &c.)

The law above alluded to is the *Lex Julia et Papia Poppaea*, which is sometimes simply called *Julia*, or *Papia Poppaea*. This law, which was passed in the time of Augustus (A. D. 9), had the double object of encouraging marriages and enriching the treasury—*aerarium* (Tacit. *Ann.* iii. 25), and contained, with reference to these two objects, a great number of provisions. Martial (v. *Ep.* 75) alludes to a person who married in order to comply with the law.

That which was *caducum* came, in the first place, to those among the *heredes* who had children; and if the *heredes* had no children, it came among those of the legatees who had children. The law gave the *jus accrescendi*, that is, the right to the *caducum* as far as the third degree of consanguinity, both ascending and descending (Ulp. *Frag.* 18), to those who were made *heredes* by the will. Under the provisions of the law, the *caducum*, in case there was no prior claimant, belonged to the *aerarium*; or, as Ulpian (xxviii. 7) expresses it, if no one was entitled to the *bonorum possessio*, or if a person was entitled, but did not assert his right, the *bona* became public property (*populo deferuntur*), according to the *Lex Julia caducaria*; but by a constitution of the Emperor Antoninus Caracalla it was appropriated to the *fiscus*: the *jus accrescendi* above mentioned was, however, still retained. The lawyers, however (*virī prudentissimi*), by various devices, such as substitutions, often succeeded in making the law of no effect. A case is mentioned in the Digest (28. tit. 4. s. 3), in which *bona caduca* were claimed by the *fiscus* in the time of Marcus Antoninus, and another in which the *fiscus* is mentioned even under Hadrian, where one would expect to find the term *aerarium* used. (Savigny, *System*, &c. ii. 273, note qq.)

He who took the portion of a heres, which became caducum, took it by universal succession: in the case of a legacy, the caducum was a singular succession. But he who took an hereditas caduca, took it with the bequests of freedom, of legacies, and fidei commissa with which it was burthened: if the legata and fidei commissa became caduca, all charges with which they were burthened became caduca also. In the time of Constantine, both the caelebs, and the orbus, or childless person (who was under a limited incapacity), obtained the full legal capacity of taking the inheritance. (Cod. viii. 58.) Justinian (Cod. vi. 51) put an end to the caducum, with all its legal consequences. In this last-mentioned title (*De Caducis tollendis*) it is stated both that the name and the thing (*nomen et materia caducorum*) had their origin in the civil wars, that many provisions of the law were evaded, and many had become obsolete. (Juv. Sat. ix. 88; Gaius, i. 150, ii. 207, iii. 144, 286; Lipsius, Excurs. ad Tacit. Ann. iii. 25; Marezoll, *Lehrbuch der Institut. des Röm. Rechts*.) As to the Dos Caduca, see Dos.

BONA FIDES. This term frequently occurs in the Latin writers, and particularly in the Roman jurists. It can only be defined with reference to things opposed to it, namely, mala fides, and dolus malus, both of which terms, and especially the latter, are frequently used in a technical sense. [**DOLUS MALUS.**]

Generally speaking, bona fides implies the absence of all fraud and unfair dealing or acting. In this sense, bona fides, that is, the absence of all fraud, whether the fraud consists in simulation or dissimulation, is a necessary ingredient in all contracts.

Bona fide possidere applies to him who has acquired the possession of a thing under a good title, as he supposes. He who possessed a thing bona fide, had a capacity of acquiring the ownership by usucapion, and had the protection of the actio Publiciana. Thus a person who received a thing either mancipi, or nec mancipi, not from the owner, but from a person whom he believed to be the owner, could acquire the ownership by usucapion. (Gaius, ii. 43; Ulp. Frag. xix. 8.) A thing which was *furtiva* or *vi possessa*, or the res mancipi of a female who was in the tutela of her agnati, unless it was delivered by her under the auctoritas of her tutor, was not subject to usucapion, and therefore in these cases the presence or absence of bona fides was immaterial. (Gaius, i. 192, ii. 45, &c.; Cic. *Ad Att.* i. 5, *Pro Flacco*, c. 34.) A person who bought from a pupillus without the auctoritas of his tutor, or with the auctoritas of a person whom he knew not to be the tutor, did not purchase bona fide; that is, he was guilty of a legal fraud. A sole tutor could not purchase a thing bona fide from his pupillus; and if he purchased it from another to whom a non bona fide sale had been made, the transaction was null. (Dig. 26. tit. 8. s. 5.)

In various actions arising out of mutual dealings, such as buying and selling, lending and hiring, partnership, and others, bona fides is equivalent to *aquum* and *iustum*; and such actions were sometimes called *bonae fidei actiones*. The formula of the praetor, which was the authority of the iudex, empowered him in such cases to inquire and determine *ex bona fide*, that is according to the real merits of the case: sometimes *aquum melius* was

used instead of *ex bona fide*. (Gaius, iv. 62; Cic. *Off.* iii. 17, *Topic.* c. 17; Brissonus, *De Formulâ*, &c. lib. v.)

BONA RAPTA. [**FURTUM.**]

BONA VACANTIA were originally the property which a person left at his death without having disposed of it by will, and without leaving any heres. Such property was open to occupancy, and so long as the strict laws of inheritance existed, such an event must not have been uncommon. A remedy was, however, found for this by the *bonorum possessio* of the praetor.

It does not appear that the state originally claimed the property of a person who died intestate and without *heredes legitimi*. The claim of the state to such property seems to have been first established by the *Lex Julia et Papia Poppaea*. [**BONA CADUCA.**] The state, that is, in the earlier periods the *aerarium*, and afterwards the *fiscus*, did not take such property as *heres*, but it took it *per universitatem*. In the later periods of the empire, in the case of a soldier dying without heredes, the legio to which he belonged had a claim before the *fiscus*; and various corporate bodies had a like preference in the case of a member of the corporation dying without heredes. (Marezoll, *Lehrbuch der Instit. des Röm. Rechts*; Savigny, *System*, &c. vol. ii. p. 300.) [G. L.]

BONORUM CESSIO. There were two kinds of bonorum cessio, *in jure* and *extra jure*. The *In jure cessio* is treated under its proper head.

The *bonorum cessio extra jure* was introduced by a Julian law, passed either in the time of Julius Caesar or Augustus, which allowed an insolvent debtor to give up his property to his creditors. The debtor might declare his willingness to give up his property by letter or by a verbal message. The debtor thus avoided the *infamia* consequent on the *bonorum emptio*, which was involuntary, and he was free from all personal execution. He was also allowed to retain a small portion of his property for his support. An old gloss describes the bonorum cessio thus: *Cedere bonis est ab universitate rerum suarum recedere*.

The property thus given up was sold, and the proceeds distributed among the creditors. The purchaser did not obtain the Quiritarian ownership of the property by the act of purchase. If the debtor subsequently acquired property this also was liable to the payment of his old debts, with some limitations, if they were not already fully satisfied. A constitution of Alexander Severus (Cod. 7. tit. 71. s. 1) declares that those who made a bonorum cessio were not released, unless the creditors were fully paid; but they had the privilege of not being imprisoned, if judgment was given against them in an action by one of their old creditors.

The benefit of the *lex Julia* was extended by imperial constitutions to the provinces.

The history of the bonorum cessio does not seem quite clear. The Julian law, however, was not the oldest enactment which relieved the person of the debtor from being taken in execution. The *lex Poetelia Papiria* (s. c. 327), exempted the person of the debtor (*nisi qui noxam meruisset*), and only made his property (*bona*) liable for his debts. It does not appear from the passage in Livy (viii. 28) whether this was a bonorum cessio in the sense of the bonorum cessio of the Julian law, or only a bonorum emptio with the privilege of freedom

from arrest. The Tablet of Heracles (Mazocchi, p. 423) speaks of those qui in jure bonam copiam jurabant; a phrase which appears to be equivalent to the bonorum cessio, and was a declaration on oath in jure, that is, before the praetor, by the debtor that his property was sufficient to pay his debts. But this was still accompanied with infamia. So far as we can learn from Livy, no such declaration of solvency was required from the debtor by the Poetelia lex. The Julian law rendered the process of the cessio bonorum more simple, by making it a procedure extra jus, and giving further privileges to the insolvent. Like several other Julian laws, it appears to have consolidated and extended the provisions of previous enactments. The term bonorum cessio is used in the Scotch law, and the early practice was derived from the Roman system. (Gaius, iii. 28; Dig. 42. tit. 3; Cod. vii. tit. 71.) [G. L.]

X **BONORUM COLLATIO.** By the strict rules of the civil law an emancipated son had no right to the inheritance of his father, whether he died testate or intestate. But, in course of time, the praetor granted to emancipated children the privilege of equal succession with those who remained in the power of the father at the time of his death; and this grant might be either contra tabulas or ab intestato. But this favour was granted to emancipated children only on condition that they should bring into one common stock with their father's property, and for the purpose of an equal division among all the father's children, whatever property they had at the time of the father's death, and which would have been acquired for the father in case they had still remained in his power. This was called bonorum collatio. It resembles the old English hotchpot, upon the principle of which is framed the provision in the statute 22 and 23 Charles II. c. 10. s. 5, as to the distribution of an intestate's estate. (Dig. 37. tit. 6; Cod. vi. tit. 20; Thibaut, *System des Pandekten Rechts*, § 901, &c., 9th ed., where the rules applicable to the bonorum collatio are more particularly stated.) [G. L.]

X **BONORUM EMTIO ET EMTOR.** The expression bonorum emtio applies to a sale of the property either of a living or of a dead person. It was in effect, as to a living debtor, an execution. In the case of a living person, his goods were liable to be sold if he concealed himself for the purpose of defrauding his creditors, and was not defended in his absence; or if he made a bonorum cessio according to the Julian law; or if he did not pay any sum of money which he was by judicial sentence ordered to pay, within the time fixed by the laws of the Twelve Tables (Aul. Gell. xv. 13, xx. 1) or by the praetor's edict. In the case of a dead person, his property was sold when it was ascertained that there was neither heres nor bonorum possessor, nor any other person entitled to succeed to it. In this case the property belonged to the state after the passing of the Lex Julia et Papia Pœnæ. If a person died in debt, the praetor ordered a sale of his property on the application of the creditors. (Gaius, ii. 154, 167.) In the case of the property of a living person being sold, the praetor, on the application of the creditors, ordered it to be possessed (possideri) by the creditors for thirty successive days, and notice to be given of the sale. This explains the expression in Livy (ii. 24): "ne quis militis, donec in castris esset,

bona possideret aut venderet." The creditors were said in possessionem rerum debitoris mitti; sometimes a single creditor obtained the possessio. When several creditors obtained the possessio, it was usual to entrust the management of the business to one of them, who was chosen by a majority of the creditors. The creditors then met and chose a magister, that is, a person to sell the property (Cic. *Ad Att.* i. 9, vi. 1; *Pro P. Quintio*, c. 15), or a curator bonorum if no immediate sale was intended. The purchaser, emtor, obtained by the sale only the bonorum possessio: the property was his in bonis, until he acquired the Quiritarian ownership by nuncupatio. The foundation of this rule seems to be, that the consent of the owner was considered necessary in order to transfer the ownership. Both the bonorum possessores and the emtores had no legal rights (directae actiones) against the debtors of the person whose property was possessed or purchased, nor could they be legally sued by them; but the praetor allowed stiles actiones, both in their favour and against them. (Gaius, iii. 77; iv. 35, 65 and 111; Dig. 42. tit. 4, 5; Savigny, *Das Recht des Besizes*, p. 410, 5th ed.) [G. L.]

BONORUM POSSESSIO is defined by Ulpian (Dig. 37. tit. 1. s. 3) to be "the right of suing for or retaining a patrimony or thing which belonged to another at the time of his death." The strict laws of the Twelve Tables as to inheritance were gradually relaxed by the praetor's edict, and a new kind of succession was introduced, by which a person might have a bonorum possessio who could have no hereditas or legal inheritance.

The bonorum possessio was given by the edict both contra tabulas, secundum tabulas, and intestati.

An emancipated son had no legal claim on the inheritance of his father; but if he was omitted in his father's will, or not expressly exheredated, the praetor's edict gave him the bonorum possessio contra tabulas, on condition that he would bring into hotchpot (bonorum collatio) with his brethren who continued in the parent's power, whatever property he had at the time of the parent's death. The bonorum possessio was given both to children of the blood (naturales) and to adopted children, provided the former were not adopted into any other family, and the latter were in the adoptive parent's power at the time of his death. If a freedman made a will without leaving his patron as much as one half of his property, the patron obtained the bonorum possessio of one half, unless the freedman appointed a son of his own blood as his successor.

The bonorum possessio secundum tabulas was that possession which the praetor gave, conformably to the words of the will, to those named in it as heredes, when there was no person intitled to make a claim against the will, or none who chose to make such a claim. It was also given secundum tabulas in cases where all the requisite legal formalities had not been observed, provided there were seven proper witnesses to the will. (Gaius, ii. 147, "si modo defunctus," &c.)

In the case of intestacy (intestati) there were seven degrees of persons who might claim the bonorum possessio, each in his order, upon there being no claim of a prior degree. The three first class were children, legitimi heredes and proximi cognati. Emancipated children could claim as well

as those who were not emancipated, and adoptive as well as children of the blood; but not children who had been adopted into another family.

If a freedman died intestate, leaving only a wife (in manu) or an adoptive son, the patron was entitled to the bonorum possessio of one half of his property.

The bonorum possessio was given either *cum re* or *sine re*. It was given *cum re*, when the person to whom it was given thereby obtained the property or inheritance. It was given *sine re*, when another person could assert his claim to the inheritance by the *ius civile*: as if a man died intestate leaving a *sua heres*, the grant of the bonorum possessio would have no effect; for the heres could maintain his legal right to the inheritance. Or if a person who was named heres in a valid will was satisfied with his title according to the *ius civile*, and did not choose to ask for the bonorum possessio (which he was entitled to if he chose to have it), those who would have been heredes in case of an intestacy might claim the bonorum possessio, which, however, would be unavailing against the legal title of the testamentary heres, and therefore *sine re*.

Parents and children might claim the bonorum possessio within a year from the time of their being able to make the claim; others were required to make the claim within a hundred days. On the failure of such party to make his claim within the proper time, the right to claim the bonorum possessio devolved on those next in order, through the seven degrees of succession.

He who received the bonorum possessio was not thereby made *heres*, but he was placed *heredis loco*; for the praetor could not make a heres. The property of which the possession was thus given was only *In bonis*, until by usucapion the possession was converted into Quiritarian ownership (*dominium*). All the claims and obligations of the deceased person were transferred with the bonorum possessio to the possessor or praetorian heres; and he was protected in his possession by the *interdictum Quorum bonorum*. The benefit of this interdict was limited to cases of bonorum possessio, and this was the reason why a person who could claim the inheritance in case of intestacy by the civil law sometimes chose to ask for the bonorum possessio also. The praetorian heres could only sue and be sued in respect of the property by a legal fiction. He was not able to sustain a *directio actio*; but in order to give him this capacity, he was by a fiction of law supposed to be what he was not *heres*; and he was said *fictio as heredis agere, or intendere*. The actions which he could bring or defend were *actiones utiles*. (Cic. *Ad Fam.* vii. 21; Gaius, iii. 28—38, iv. 34; Ulp. *Frag.* tit. 28, 29; Dig. 37. tit. 4. s. 19; tit. 11; Dig. 38. tit. 6; a good general view of the bonorum possessio is given by Marezoll, *Lehrbuch der Institutionen des Röm. Rechts*, § 174; Thibaut, *System des Pandekten Rechts*, § 843, 9th ed.) [G. L.]

BOŌRUM POSSESSIO. [INTERDICTUM.]
BOŌRUM RAPTORUM ACTIO. [FURTUM.]

BOŌNAE (Βούραι), persons in Athens who purchased oxen for the public sacrifices and feasts. They are spoken of by Demosthenes (c. *Mid.* p. 570) in conjunction with the *λεπονοιοί* and those who presided over the mysteries, and are ranked by Libanius (*Declam.* viii.) with the *sitonae*, generals, and ambassadors. Their office is spoken of as honourable by Harpocration (s. v.); but Pollux

(viii. 114) includes them among the inferior offices or offices of service (ὀνηροτάται, Böckh, *Publ. Econ. of Athens*, p. 216, 2d ed.)

BOREASMI or BOREASMUS (Βορεασμι or Βορεασμός), a festival celebrated by the Athenians in honour of Boreas (Hesych. s. v.), which, as Herodotus (vii. 189) seems to think, was instituted during the Persian war, when the Athenians, being commanded by an oracle to invoke their γαμψὸς ἐρικυrops, prayed to Boreas. The fleet of Xerxes was soon afterwards destroyed by a north wind, near Cape Sepias, and the grateful Athenians erected to his honour a temple on the banks of the Ilissus. But considering that Boreas was intimately connected with the early history of Attica, since he is said to have carried off and married Oreithya, daughter of Erechtheus (Herod. l. c.; Paus. i. 19. § 6), and that he was familiar to them under the name of *brother-in-law*, we have reason to suppose that even previous to the Persian wars certain honours were paid to him, which were perhaps only revived and increased after the event recorded by Herodotus. The festival, however, does not seem ever to have had any great celebrity; for Plato (*Phaedr.* p. 229) represents Phaedrus as unacquainted even with the site of the temple of Boreas. Particulars of this festival are not known, except that it was celebrated with banquets.

Pausanias (viii. 36. § 4) mentions a festival celebrated with annual sacrifices at Megalopolis in honour of Boreas, who was thought to have been their deliverer from the Lacedaemonians. (Comp. Aelian, *V. H.* xii. 61.)

Aelian (l. c.) says that the Thurians also offered an annual sacrifice to Boreas, because he had destroyed the fleet with which Dionysius of Syracuse attacked them; and adds the curious remark, that a decree was made which bestowed upon him the right of citizenship, and assigned to him a house and a piece of land. This, however, is perhaps merely another way of expressing the fact, that the Thurians adopted the worship of Boreas, and dedicated to him a temple, with a piece of land. [L. S.]

BOULE' (Βουλή), a deliberate assembly or council. In the heroic age, represented to us by Homer, the *βουλή* is simply an aristocratical council of the nobles, sitting under their king as president, who, however, did not possess any greater authority than the other members, except what that position gave him. The nobles, thus assembled, decided on public business and judicial matters, frequently in connection with, but apparently not subject to, nor of necessity controlled by, an *ἀγορά*, or meeting of the freemen of the state. (*Il.* ii. 53, 143, xviii. 503, *Od.* ii. 239.) This form of government, though it existed for some time in the Ionian, Aeolian, and Achaean states, was at last wholly abolished. Amongst the Dorians, however, especially with the Spartans, this was not the case; for it is well known that they retained the kingly power of the Heracleidae, in conjunction with the γερουσία [GEROUSIA], or assembly of elders, of which the kings were members. At Athens, there were two councils, one usually called the *Areiopagus* from its meeting on the hill of Ares (ἡ ἐν Ἀρείῳ πάγῳ βουλή), which was more of an aristocratical character, and is spoken of under Ἀρειοπαγεύς, and the other called *The Council or Senate of the Five Hundred* (ἡ τῶν πεντακοσίων βουλή), or simply *The Council or Senate* (ἡ βουλή), which was a

representative, and in most respects a popular body (*δημοτικός*). It is of the latter council that the following article treats.

Its first institution is generally attributed to Solon. There are, however, strong reasons for supposing that, as in the case of the areiopagus, he merely modified the constitution of a body which he found already existing. In the first place it is improbable, and in fact almost inconsistent with the existence of any government, except an absolute monarchy, to suppose that there was no such council. Besides this, Herodotus (v. 71) tells us that in the time of Cylon (a. c. 620), Athens was under the direction of the presidents of the Naucrarias (*ναυκραρίαι*), the number of which was forty-eight, twelve out of each of the four tribes. Moreover, we read of the case of the Alcmaeonidae being referred to an aristocratical tribunal of 300 persons, and that Isagoras, the leader of the aristocratic party at Athens, endeavoured to suppress the council, or *βουλή*, which Cleisthenes had raised to 500 in number, and to vest the government in the hands of 300 of his own party. (Herod. v. 72; Plut. Sol. 12.) This, as Thirlwall (*Hist. of Greece*, vol. ii. p. 41) remarks, can hardly have been a chance coincidence: and he also suggests that there may have been two councils, one a smaller body, like the Spartan *γερονσία*, and the other a general assembly of the Eupatrids; thus corresponding, one to the *senatus*, the other to the *comitia curiata*, or assembly of the burghers at Rome. But be this as it may, it is admitted that Solon made the number of his *βουλή* 400, taking the members from the three first classes, 100 from each of the four tribes. On the tribes being remodelled by Cleisthenes (a. c. 510), and raised to ten in number, the council also was increased to 500, fifty being taken from each of the ten tribes. It is doubtful whether the *βουλευται*, or councillors, were at first appointed by lot, as they were afterwards; but as it is stated to have been Solon's wish to make the *βουλή* a restraint upon the people, and as he is, moreover, said to have chosen (*ἐπιλεξόμενος*, Plut. Sol. 19) 100 members from each of the tribes, it seems reasonable to suppose that they were *elected*, more especially when there is no evidence to the contrary. (Thirlwall, vol. ii. p. 42.) It is at any rate certain that an election, where the eupatrids might have used influence, would have been more favourable to Solon's views, than an appointment by lot. But whatever was the practice originally, it is well known that the appointment was in after times made by lot, as is indicated by the title (*οἱ ἀπὸ τοῦ κλήμου βουλευται*), suggested by the use of beans in drawing the lots. (Thuc. viii. 69.) The individuals thus appointed were required to submit to a scrutiny, or *δοκιμασία*, in which they gave evidence of being genuine citizens (*γνήσιοι ἐξ ἡμῶν*), of never having lost their civic rights by *ἀτιμία*, and also of being above 30 years of age. They remained in office for a year, receiving a drachma (*μισθὸς βουλευτικός*) for each day on which they sat: and independent of the general account, or *εὐθύνα*, which the whole body had to give at the end of the year, any single member was liable to expulsion for misconduct, by his colleagues. (Harpocr. s. v. 'Ἐκφυλλοφορία; Aesch. c. *Timarch.* p. 15, 43, ed. Steph.)

This senate of 500 was divided into ten sections of fifty each, the members of which were called

Prytanes (*πρυτάνεις*), and were all of the same tribe; they acted as presidents both of the council and the assemblies during 35 or 36 days, as the case might be, so as to complete the lunar year of 354 days ($12 \times 29\frac{1}{2}$). Each tribe exercised these functions in turn, and the period of office was called a *Prytany* (*πρυτανεία*). The turn of each tribe was determined by lot, and the four supernumerary days were given to the tribes which came last in order. (Clinton, *F. H.* vol. ii. p. 346.) Moreover, to obviate the difficulty of having too many in office at once, every fifty was subdivided into five bodies of ten each; its prytany also being portioned out into five periods of seven days each: so that only ten senators presided for a week over the rest, and were thence called *Proedri* (*πρόεδροι*). Again, out of these proedri an *Epistates* (*ἐπιστάτης*) was chosen for every day in the week to preside as a chairman in the senate, and the assembly of the people; during his day of office he kept the public records and seal.

The prytanes had the right of convening the council and the assembly (*ἐκκλησία*). The duty of the proedri and their president was to propose subjects for discussion, and to take the votes both of the councillors and the people; for neglect of their duty they were liable to a fine. (Dem. c. *Timocr.* p. 703—707.) Moreover, whenever a meeting, either of the council or the assembly, was convened, the chairman of the proedri selected by lot nine others, one from each of the non-presiding tribes: these also were called proedri and possessed a chairman of their own, likewise appointed by lot from among themselves. On their functions, and the probable object of their appointment, some remarks are made in the latter part of this article.

We now proceed to speak of the duties of the senate as a body. It is observed under the *AREIO-PAGUS* that the chief object of Solon in forming the senate and the areiopagus was to control the democratical powers of the state; for this purpose Solon ordained that the senate should discuss and vote upon all matters before they were submitted to the assembly, so that nothing could be laid before the people on which the senate had not come to a previous decision. This decision, or bill, was called *Probouleuma* (*προβούλευμα*), and if the assembly had been obliged either to acquiesce in any such proposition, or to gain the consent of the senate to their modification of it, the assembly and the senate would then have been almost equal powers in the state, and nearly related to each other, as our two houses of parliament. But besides the option of adopting or rejecting a *προβούλευμα*, or *ψήφισμα* as it was sometimes called, the people possessed and exercised the power of coming to a decision completely different from the will of the senate, as expressed in the *προβούλευμα*. Thus in matters relating to peace and war, and confederacies, it was the duty of the senators to watch over the interests of the state, and they could initiate whatever measures, and come to whatever resolutions they might think necessary; but on a discussion before the people it was competent for any individual to move a different or even contrary proposition. To take an example:—In the Euboean war (a. c. 350), in which the Thebans were opposed to the Athenians, the senate voted that all the cavalry in the city should be sent out to assist the forces then besieged at Tamynae; a *προβούλευμα*

to this effect was proposed to the people, but they decided that the cavalry were not wanted, and the expedition was not undertaken. Other instances of this kind occur in Xenophon. (*Hell.* i. 7. § 9, vii. 1 § 2.)

In addition to the bills which it was the duty of the senate to propose of their own accord, there were others of a different character, viz., such as any private individual might wish to have submitted to the people. To accomplish this it was first necessary for the party to obtain, by petition, the privilege of access to the senate (*πρόσδοον γράψασθαι*), and leave to propose his motion; and if the measure met with their approbation, he could then submit it to the assembly. (*Dem. c. Timocr.* p. 715.) Proposals of this kind, which had the sanction of the senate, were also called *προβουλευματα*, and frequently related to the conferring of some particular honour or privilege upon an individual. Thus the proposal of Ctesiphon for crowning Demosthenes is so styled, as also that of Aristocrates for conferring extraordinary privileges on Charidemus, an Athenian commander in Thrace. Any measure of this sort, which was thus approved of by the senate, was then submitted to the people, and by them simply adopted or rejected; and "it is in these and similar cases, that the statement of the grammarians is true, that no law or measure could be presented for ratification by the people without the previous approbation of the senate, by which it assumed the form of a decree passed by that body." (*Schömann, De Comitibus*, p. 103, transl.)

In the assembly the bill of the senate was first read, perhaps by the crier, after the introductory ceremonies were over; and then the *proedri* put the question to the people, whether they approved of it, or wished to give the subject further deliberation. (*Aristoph. Thes.* 290.) The people declared their will by a show of hands (*προχειροτονία*). Sometimes, however, the bill was not proposed and explained by one of the *proedri*, but by a private individual—either the original applicant for leave to bring forward the measure, or a senator distinguished for oratorical power. Examples of this are given by Schömann (*De Com.* p. 106, transl.). If the *προβούλευμα* of the senate were rejected by the people, it was of course null and void. If it happened that it was neither confirmed nor rejected, it was *ἐντέλειον*, that is, only remained in force during the year the senate was in office. (*Dem. c. Aris.* p. 651.) If it was confirmed it became a *νόμος*, or decree of the people, binding upon all *hellenes*. The form for drawing up such decrees varied in different ages. Before the archonship of Euclides (a. c. 403), they were generally headed the formula—"Ἐδοξε τῇ βουλῇ καὶ τῷ δήμῳ: and the tribe was mentioned in whose prytany the decree was passed; then the names of the *grammateis* or scribe, and chairman; and lastly that of the author of the resolution. Examples of this occur in Andocides (*De Myst.* p. 13): thus—*Ἐστὶ τῇ βουλῇ καὶ τῷ δήμῳ, Ἀλατῆς ἐπρυτανεύοντος, ἡγήσαντος ἡγραμματέως, Βονόδου ἐπιστάτου, τὰςδε πράξεις συντάξασθαι.* (*Comp. Thuc.* iv. 118.) After the archonship of Euclides till about a. c. 350, the decrees commence with the name of the proposer; then come the day of the month, the tribe, and lastly the name of the proposer. The formula for passing the decree is next stated; and follows the decree itself, prefaced with the

formula *δεδοχθαι τῇ βουλῇ καὶ τῷ δήμῳ*. The reader is referred to Demosthenes, *De Corona*, for examples. After a. c. 325, another form was used, which continued unaltered till the latest times. (*Schömann*, p. 136, transl.)

Mention has just been made of the *γραμματεῖς*, whose name was affixed to the *ψηφίσματα*, as in the example given above. He was a clerk chosen by lot by the senate, in every prytany, for the purpose of keeping the records, and resolutions passed during that period; he was called the clerk according to the prytany (*ὁ κατὰ πρυτανείας*), and the name of the clerk of the first prytany was sometimes used to designate the year. (*Pollux*, viii. 98; Böckh, *Publ. Econ. of Athens*, p. 186, 2nd ed.)

With respect to the power of the senate, it must be clearly understood that, except in cases of small importance, they had only the right of originating, not of finally deciding on public questions. Since, however, the senators were convened by the *prytanes* every day, except on festivals or *ἀγῶνες* (*Pollux*, viii. 95), it is obvious that they would be fit recipients of any intelligence affecting the interests of the state, and it is admitted that they had the right of proposing any measure to meet the emergency; for example, we find that Demosthenes gives them an account of the conduct of Aeschines and himself, when sent out as ambassadors to Philip, in consequence of which they propose a bill to the people. Again, when Philip seized on Elateia (a. c. 338), the senate was immediately called together by the *prytanes* to determine what was best to be done. (*Dem. De Fal. Leg.* p. 346, *De Cor.* p. 284.) But, besides possessing the initiatory power of which we have spoken, the senate was sometimes delegated by the people to determine absolutely about particular matters, without reference to the assembly. Thus we are told (*Dem. De Fal. Leg.* p. 389) that the people gave the senate power to decide about sending ambassadors to Philip; and Andocides (*Περὶ Μυστηρίου*) informs us that the senate was invested with absolute authority (*ἢ γὰρ ἀντοκρατορ*), to investigate the outrages committed upon the statues of Hermes, previously to the sailing of the Sicilian expedition.

Sometimes also the senate was empowered to act in conjunction with the *nomothetae* (*συννομοθεταί*), as on the revision of the laws after the expulsion of the Thirty by Thrasybulus and his party, a. c. 403. (*Andoc. De Myst.* p. 12; *Dem. c. Timocr.* p. 708.) Moreover, it was the province of the senate to receive *εἰσαγγελίαι*, or informations of extraordinary crimes committed against the state, and for which there was no special law provided. The senate in such cases either decided themselves, or referred the case to one of the courts of the *heliæa*, especially if they thought it required a higher penalty than it was competent for them to impose, viz., 500 drachmae. It was also their duty to decide on the qualification of magistrates, and the character of members of their own body. But besides the duties we have enumerated, the senate discharged important functions in cases of finance. All legislative authority, indeed, in such matters rested with the people, the amount of expenditure and the sources of revenue being determined by the decrees which they passed; but the administration was entrusted to the senate, as the executive power of the state.

and responsible (*ἀπεύθυνος*) to the people. Thus Xenophon (*De Rep. Ath.* iii. 2) tells us that the senate was occupied with providing money, with receiving the tribute, and with the management of naval affairs and the temples; and Lysias (*c. Nicom.* p. 185) makes the following remark:—"When the senate has sufficient money for the administration of affairs, it does nothing wrong; but when it is in want of funds, it receives informations, and confiscates the property of the citizens." The letting of the duties (*τελώναι*) was also under its superintendence, and those who were in possession of any sacred or public moneys (*τέρα καὶ δῖα*) were bound to pay them into the senate-house; and in default of payment, the senate had the power of enforcing it, in conformity with the laws for the farming of the duties (*οἱ τελωνικοὶ νόμοι*). The accounts of the moneys that had been received, and of those still remaining due, were delivered to the senate by the apodectæ, or public treasurers. [ΑΠΟΔΕΚΤÆ.] "The senate arranged also the application of the public money, even in trifling matters, such as the salary of the poets; the superintendence of the cavalry maintained by the state, and the examination of the infirm (*ἀδύνατοι*) supported by the state, are particularly mentioned among its duties; the public debts were also paid under its direction. From this enumeration we are justified in inferring that all questions of finance were confided to its supreme regulation." (Böckh, *Publ. Econ. of Athens*, p. 154, 2nd ed.) Another very important duty of the senators was to take care that a certain number of triremes was built every year, for which purpose they were supplied with money by the state; in default of so doing, they were not allowed to claim the honour of wearing a crown, or chaplet (*στρόφανος*), at the expiration of their year of office. (*Arg. Orat. c. Androt.*)

It has been already stated that there were two classes or sets of *proedri* in the senate, one of which, amounting to ten in number, belonged to the presiding tribe; the other consisted of nine, chosen by lot by the chairman of the presiding *proedri* from the nine non-presiding tribes, one from each, as often as either the senate or the people were convened. It must be remembered that they were not elected as the other *proedri*, for seven days, but only for as many hours as the session of the senate, or meeting of the people, lasted. Now it has been a question what were the respective duties of these two classes: but it appears clear to us that it was the *proedri* of the presiding tribe who proposed to the people in assembly, the subjects for discussion; recited, or caused to be recited, the previous bill (*προβούλευμα*) of the senate; officiated as presidents in conjunction with their *ἐπιστάτης*, or chairman, and discharged, in fact, all the functions implied by the words *χρηματίζειν πρὸς τὸν δῆμον*. For ample arguments in support of this opinion the reader is referred to Schömann. (*De Com.* p. 83. transl.) It does indeed appear from decrees furnished by inscriptions, and other authorities, that in later time the *proedri* of the nine tribes exercised some of those functions which the orations of Demosthenes, and his contemporaries, justify us in assigning to the *proedri* of the presiding tribe. It must, however, be remarked that all such decrees were passed after B. C. 308, when there were twelve tribes; and that we cannot, from the practice of

those days, arrive at any conclusions relative to the customs of former ages.

If it is asked what, then, were the duties of these *proedri* in earlier times, the answer must be in a great measure conjectural; but the opinion of Schömann on this point seems very plausible. He observes that the *prytanes* had extensive and important duties entrusted to them; that they were all of one tribe, and therefore closely connected; that they officiated for 35 days as presidents of the representatives of the other tribes; and that they had ample opportunities of combining for the benefit of their own tribe at the expense of the community. To prevent this, and watch their conduct whenever any business was brought before the senate and assembly, may have been the reason for appointing, by lot, nine other quasi-presidents, representatives of the non-presiding tribes, who would protest and interfere, or approve and sanction as they might think fit. Supposing this to have been the object of their appointment in the first instance, it is easy to see how they might at last have been united with the proper *proedri*, in the performance of duties originally appropriated to the latter.

In connection with the *proedri* we meet with the expression *ἡ προεδρεύουσα φυλή*. Our information on this subject is derived from the speech of Aeschines against Timarchus, who informs us, that in consequence of the unseemly conduct of Timarchus, on one occasion, before the assembly, a new law was passed, in virtue of which, a tribe was chosen by lot to keep order, and sit as presidents under the *βῆμα*, or platform on which the orators stood. No remark is made on the subject to warrant us in supposing that senators only were elected to this office; it seems more probable that a certain number of persons was chosen from the tribe on which the lot had fallen, and commissioned to sit along with the *prytanes* and the *proedri*, and that they assisted in keeping order. We may here remark that if any of the speakers (*ῥήτορες*) misconducted themselves either in the senate or the assembly, or were guilty of any act of violence to the *ἐπιστάτης*, after the breaking up of either, the *proedri* had the power to inflict a summary fine, or bring the matter before the senate and assembly at the next meeting, if they thought the case required it.

The meetings of the senate were, as we learn from various passages of the Attic orators, open to strangers; thus Demosthenes (*De Fal. Leg.* p. 346) says that the senate-house was, on a particular occasion, full of strangers (*μεστὸν ἦν ἰδιωτῶν*): in Aeschines (*c. Ctes.* p. 71. 20) we read of a motion "that strangers do withdraw" (*μετασπένδμενος τοὺς ἰδιώτας*, Dobree, *Advers.* vol. i. p. 542). Nay, private individuals were sometimes, by a special decree, authorised to come forward and give advice to the senate. The senate-house was called *τὸ βουλευτήριον*, and contained two chapels, one of *Zeus Boulaios*, another of *Ἀθηνᾶ Boulala*, in which it was customary for the senators to offer up certain prayers before proceeding to business. (*Antiph. De Chor.* p. 787.)

The *prytanes* also had a building to hold their meetings in, where they were entertained at the public expense during their *prytany*. This was called the *πρυτανεῖον*, and was used for a variety of purposes. [PRYTANÆION.] Thucydides (ii. 15), indeed, tells us that before the time of Theseus every city of Attica had its *βουλευτήριον* and

πρυτανίων: a statement which gives additional support to the opinion that Solon did not originate the senate at Athens.

The number of tribes at Athens was not always ten; an alteration took place in B.C. 306, when Demetrius Poliorcetes had liberated the city from the usurpation of Cassander. Two were then added, and called Demetrias, and Antigonis, in honour of Demetrius and his father. It is evident that this change, and the consequent addition of 100 members to the senate, must have varied the order and length of the prytanes. The tribes just mentioned were afterwards called Ptolemais and Attalis; and in the time of Hadrian, who beautified and improved Athens (Paus. i. 18. § 6), a thirteenth was added, called from him Hadrianis. An edict of this emperor has been preserved, which proves that even in his time the Athenians kept up the show of their former institutions. (Hermann, *Griech. Staatsalterth.* § 125, &c.; Schömann, *De Comitiis Atheniensium.*) [R. W.]

BOULEU/SEOS GRAPHE' (*Βουλευσεως γραφή*), an impeachment for conspiracy. *Βουλευσεως*, being in this case the abbreviated form of *ἐπιβουλευσεως*, is the name of two widely different actions at Attic law. The first was the accusation of conspiracy against life, and might be instituted by the person thereby attacked, if competent to bring an action; if otherwise, by his or her legal patron (*κύριος*). In case of the plot having succeeded, the deceased might be represented in the prosecution by near kinsmen (*οἱ ἐνδὲς ἀνεψιφίπτος*), or, if they were incompetent, by the *κύριος*, as above mentioned. (Meier, *Att. Proc.* p. 164.) The criminality of the accused was independent of the result of the conspiracy (Harpocrat.), and the penalty, upon conviction, was the same as that incurred by the actual murderers. (Andoc. *De Myst.* p. 46. 5.) The presidency of the court upon a trial of this kind, as in most *δικαι φονικαί*, belonged to the king archon (Meier, *Att. Proc.* p. 312), and the court itself was composed of the ephetae, sitting at the Palladium, according to Isaeus and Aristotle, as cited by Harpocration, who, however, also mentions that the areiopagus is stated by Deinarchus to have been the proper tribunal.

The other action, *βουλευσεως*, was available upon a person finding himself wrongfully inscribed as a state debtor in the registers, or rolls, which were kept by the different financial officers. Meier (*Att. Proc.* p. 339), however, suggests that a magistrate that had so offended, would probably be proceeded against at the *εὐθύναι*, or *ἐπιχειροτονίαι*, the two occasions upon which the public conduct of magistrates was examined; so that generally the defendant in this action would be a private citizen that had directed such an insertion at his own peril. From the passage in Demosthenes, it seems doubtful whether the disenfranchisement (*ἀρμία*) of the plaintiff as a state-debtor was in abeyance while this action was pending. Demosthenes at first asserts (*c. Aristog.* i. p. 778. 19), but afterwards (p. 792. 1) argues that it was not. (See, however, Meier, *Att. Proc.* p. 340, and Böckh's note.) The distinction between this action and the similar one *ψευδεγγραφής*, is explained under the latter title. [J. S. M.]

BOULEUTE'RION. [BOULE, p. 212. *l.*]

BRACAE or **BRACCAE** (*ἀνὰ ὑπὸ ἰδές*), trousers, pantaloons. These, as well as various other

articles of armour and of dress [*ACTINACES*, *ARCUS*, *ARMILLA*], were common to all the nations which encircled the Greek and Roman population, extending from the Indian to the Atlantic ocean. Hence Aristagoras, king of Miletus, in his interview with Cleomenes, king of Sparta, described the attire of a large portion of them in these terms:—"They carry bows and a short spear, and go to battle in trousers and with hats upon their heads." (Herod. v. 49.) Hence also the phrase *Braccati militis arcus*, signifying that those who wore trousers were in general armed with the bow. (Propert. iii. 3. 17.) In particular, we are informed of the use of trousers or pantaloons among the following nations:—the Medes and Persians; the Parthians; the Phrygians; the Sacae; the Sarmatae; the Dacians and Getae; the Teutones; the Belgae; the Britons; and the Gauls.

The Latin word *braccae* is the same as the Scottish "breeks" and the English "breeches." Corresponding terms are used in all the northern languages. Also the Cossack and Persian trousers of the present day differ in no material respect from those which were anciently worn in the same countries. In ancient monuments we find the above-mentioned people constantly exhibited in trousers, thus clearly distinguishing them from Greeks and Romans. An example is seen in the annexed group of Sarmatians, taken from the column of Trajan.

Trousers were principally woollen; but Agathias states (*Hist.* ii. 5) that in Europe they were also made of linen and of leather; probably the Asiatics made them of cotton and of silk. Sometimes they were striped (*virgatae*, Propert. iv. 11. 43), and ornamented with a woof of various colours (*ποικίλαι*, Xen. *Anab.* i. 5. § 8). The Greeks seem never to have worn them. They were also unknown at Rome during the republican period; and in A.D. 69 Caecina gave great offence on his march into Italy, because he wore *braccae*, which were regarded as *tegmen barbarum*. (Tac. *Hist.* ii. 20.) In the next century, however, they gradually came into use at Rome; but they would appear never to have been generally worn. It is recorded of Alexander Severus that he wore white *braccae*, and not crimson ones (*coccineae*), as had been the custom with preceding emperors. The use of them in the city was forbidden by Honorius. (Lamprid. *Alex. Sever.* 40.) [J. Y.]

BRASIDEIA (*βρασιδεΐα*), a festival celebrated

at Sparta in honour of their great general Brasidas, who, after his death, in B.C. 422, received the honours of a hero. (Paus. iii. 14. § 1; Aristot. *Éth. Nic.* v. 7.) It was held every year with orations and contests, in which none but Spartans were allowed to partake.

Brasidaia were also celebrated at Amphipolis, which, though a colony of Athens, transferred the honour of κτεῖν from Hagnon to Brasidas, who was buried there, and paid him heroic honours by an annual festival with sacrifices and contests. (Thucyd. v. 11.) [L. S.]

BRAURO'NIA (Βραυρώνια), a festival celebrated in honour of Artemis Brauronia, in the Attic town of Brauron (Herod. vi. 138), where, according to Pausanias (i. 23. § 9, 33. § 1, iii. 16. § 6, viii. 46. § 2), Orestes and Iphigenia, on their return from Tauris, were supposed by the Athenians to have landed, and left the statue of the Taurian goddess. (See Müller, *Dor.* i. 9. § 5 and 6.) It was held every fifth year, under the superintendence of ten *lepωτοί* (Pollux, viii. 9, 31); and the chief solemnity consisted in the circumstance that the Attic girls between the ages of five and ten years, dressed in crocus-coloured garments, went in solemn procession to the sanctuary (Suidas, s. v. Ἀρκτος; Schol. on *Aristoph. Lysistr.* 646), where they were consecrated to the goddess. During this act the *lepωτοί* sacrificed a goat and the girls performed a propitiatory rite in which they imitated bears. This rite may have arisen simply from the circumstance that the bear was sacred to Artemis, especially in Arcadia (Müller, *Dor.* ii. 9. § 3); but a tradition preserved in Suidas (s. v. Ἀρκτος) relates its origin as follows:—In the Attic town of Phanidae a bear was kept, which was so tame that it was allowed to go about quite freely, and received its food from it and among men. One day a girl ventured to play with it, and, on treating the animal rather harshly, it turned round and tore her to pieces. Her brothers, enraged at this, went out and killed the bear. The Athenians now were visited by a plague; and, when they consulted the oracle, the answer was given that they would get rid of the evil which had befallen them if they would compel some of their citizens to make their daughters propitiate Artemis by a rite called ἀρκτεῖν, for the crime committed against the animal sacred to the goddess. The command was more than obeyed; for the Athenians decreed that from thenceforth all women, before they could marry, should have taken part once in this festival, and have been consecrated to the goddess. Hence the girls themselves were called ἀρκτοι, the consecration ἀρκτεία, the act of consecrating ἀρκτεῖν, and to celebrate the festival ἀρκτεῖσθαι. (Hesych. and Harpocrat. s. v.; Schol. on *Aristoph. l. c.*) But as the girls when they celebrated this festival were nearly ten years old, the verb ἀρκτεῖν was sometimes used instead of ἀρκτεῖσθαι. (Comp. C. F. Hermann, *Handb. der gottesdienstl. Alterth.* § 62. note 9.)

There was also a quinquennial festival called Brauronia, which was celebrated by men and disolute women, at Brauron, in honour of Dionysus. (Aristoph. *Pax*, 870, with the note of the Scholiast; and Suidas s. v. Βραυρών.) Whether its celebration took place at the same time as that of Artemis Brauronia (as has been supposed by Müller, *Dor.* ii. 9. § 5, in a note, which has, however, been omitted in the English translation), must

remain uncertain, although the very different characters of the two festivals incline us rather to believe that they were not celebrated at the same time. According to Hesychius, whose statement, however, is not supported by any ancient authority, the Iliad was recited at the Brauronian festival of Dionysus by rhapsodists. (Comp. Hemsterh. *ad Pollucem*, ix. 74; Welcker, *Dor. Epische Cyclas*, p. 391.) [L. S.]

BREVIARIUM, or BREVIARIUM ALARICIANUM. Alaric the Second, king of the Visigoths, who reigned from A.D. 484 to A.D. 507, in the twenty-second year of his reign (A.D. 506) commissioned a body of jurists, probably Romans, to make a selection from the Roman laws and the Roman law writers, which should form a code for the use of his Roman subjects. The code, when made, was confirmed by the bishops and nobility at Aduris (Aire in Gascony); and a copy, signed by Anianus, the referendarius of Alaric, was sent to each comes, with an order to use no other law or legal form in his court (*ut in foro tuo nulla alia lex neque juris formula proferri vel recipi prassumatur*). The signature of Anianus was for the purpose of giving authenticity to the official copies of the code; a circumstance which has been so far misunderstood that he has sometimes been considered as the compiler of the code, and it has been called Breviarium Aniani. This code has no peculiar name, so far as we know: it was called *Lex Romana Visigothorum*, and at a later period, frequently *Lex Theodosii*, from the title of the first and most important part of its contents. The name Breviarium, or Breviarium Alaricianum, does not appear before the sixteenth century.

The following are the contents of the Breviarium, with their order in the code:—1. Codex Theodosianus, xvi books. 2. Novellae of Theodosius ii, Valentinian iii, Marcian, Majorian, Severus. 3. The Institutions of Gaius, ii books. 4. Pauli Receptae Sententiae, v books. 5. Codex Gregorianus, v books. 6. Codex Hermogenianus, i book. 7. Papinianus, lib. i. Responsorum.

The code was thus composed of two kinds of materials, imperial constitutions, which, both in the code itself and the commonitorium or notice prefixed to it, are called *Leges*; and the writings of Roman jurists, which are called *Jus*. Both the Codex Gregorianus and Hermogenianus, being compilations made without any legal authority, are included under the head of *Jus*. The selections are extracts, which are accompanied with an interpretation, except in the case of the Institutions of Gaius; as a general rule, the text, so far as it was adopted, was not altered. The Institutions of Gaius, however, are abridged or epitomised, and such alterations as were considered necessary for the time are introduced into the text: this part of the work required no interpretation, and accordingly it has none. There are passages in the epitome which are not taken from Gaius. (Gaius, iii. 127, ed. Goeschen.)

This code is of considerable value for the history of Roman law, as it contains several sources of the Roman law which are otherwise unknown, especially Paulus and the five first books of the Theodosian code. Since the discovery of the Institutions of Gaius, that part of this code is of less value.

The author of the Epitome of Gaius in the Breviarium paid little attention to retaining the

words of the original, and a comparison of the Epitome and the MS. of Gaius is therefore of little advantage in this point of view. The Epitome is, however, still useful in showing what subjects were discussed in Gaius, and thus filling up (so far as the material contents are concerned) some of the lacunae of the Verona MS.

A complete edition of this code was published by Richard, in his *Codex Theodosianus*, Basileae, 1528, small folio. (Schulting, *Jurisprudentia Vetus Ante-Justinianea*, Lugd. Bat. 1717; *Jus Civile Antejustinianum*, Berlin, 1815; *Julii Pauli Recept. Sentent.* Lib. v. ed. Arndts, Bonn, 1833; Savigny, *Geschichte des Röm. Rechts im Mittelalter*. ii. c. 8; Böcking, *Institutiones*, i. 90, &c.; Gaius, *Proefatio Prinae Editioni Praemissa*.) [G. L.]

BRUTTIANI, slaves whose duty it was to wait upon the Roman magistrates. They are said to have been originally taken from among the Bruttians, because this people continued from first to last faithful to Hannibal (Festus, s. v. *Bruttiani*; Gell. x. 3); but Niebuhr (*Hist. of Rome*, vol. iii. note 944) is disposed to think that these servants bore this name long before, since both Strabo (vi. p. 255) and Diodorus (xvi. 15) state that this word signified revolted slaves.

BU'CCINA (*Buckyn*), a kind of horn-trumpet, anciently made out of a shell. It is thus happily described by Ovid (*Met.* i. 335):—

“Cava buccina sumitur illi

Tortilis, in latum quae turbine crescit ab imo:
Buccina, quae in medio concepit ut aëra ponto,
Littora voce replet sub utroque jacentia Phoebus.”

The musical instrument *buccina* nearly resembled in shape the shell *buccinum*, and, like it, might almost be described from the above lines (in the language of conchologists), as spiral and gibbous. The two drawings in the annexed woodcut agree with this account. In the first, taken from a frieze (Burney's *History of Music*, vol. i. pl. 6), the *buccina* is curved for the convenience of the performer, with a very wide mouth, to diffuse and increase the sound. In the next, a copy of an ancient sculpture taken from Blanchini's work (*De Musicis Instrum. Veterum*, p. 15. pl. 2, 18), it still retains the original form of the shell.

The inscriptions quoted by Bartholini (*De Tibis*, p. 226) seem to prove that the *buccina* was distinct from the *cornu*; but it is often (as in *Aen.* vii. 519) confounded with it. The *buccina* seems to have been chiefly distinguished by the twisted form of the shell, from which it was originally

made. In later times it was carved from horn, and perhaps from wood or metal, so as to imitate the shell. The *buccina* was chiefly used to proclaim the watches of the day (Senec. *Thyest.* 798) and of the night, hence called *buccina prima, secunda*, &c. (Polyb. xiv. 3; Liv. xxvi. 15; Sil. Ital. vii. 154; Propert. iv. 4. 63; Cic. *Pro Mur.* 9.) It was also blown at funerals, and at festive entertainments both before sitting down to table and after. (Tacit. *Ann.* xv. 30.) Macrobius (i. 8) tells us that tritons holding *buccinae* were fixed on the roof of the temple of Saturn.

The musician who played the *buccina* was called *buccinator*. [B. J.]

BULLA, a circular plate or boss of metal, so called from its resemblance in form to a bubble floating upon water. Bright studs of this description were used to adorn the sword-belt (*asura bullis cingula*, Virg. *Aen.* ix. 359; *bullis asper balteus*, Sid. Apoll. *Carm.* 2). Another use of them was in doors, the parts of which were fastened together by brass-headed, or even by gold-headed nails. (Plaut. *Asin.* ii. 4, 20; Cic. *Verr.* iv. 56.) The magnificent bronze doors of the Pantheon at Rome are enriched with highly ornamented bosses, some of which are here shown.

We most frequently read, however, of *bullae* as ornaments worn by children suspended from the neck, and especially by the sons of the noble and wealthy. Such a one is called *heros bullatus* by Juvenal (*Sat.* xiv. 4). His *bullae* was made of thin plates of gold. Its usual form is shown in the annexed woodcut, which represents a fine *bullae* preserved in the British Museum, and is of the size of the original.

The use of the *bullae*, like that of the *practexta*, was derived from the Etruscans, whence it is called by Juvenal (v. 164) *aureum Etruscum*. It was originally worn only by the children of the patricians, but subsequently by all of free birth (Cic.

Verr. i. 58); while children of the libertini were only permitted to wear an ornament of the same kind made of leather (*modus tantum et signum de paupere loro*, Juv. v. 165; *libertinis scortea*, Ascon. ad Cic. l. c.). The bulla was laid aside, together with the praetexta, and was consecrated on this occasion to the Lares. (Pers. v. 31.) Examples of boys represented with the bulla are not unfrequent in statues, on tombs, and in other works of art. (Spon, *Misc.* p. 299; Middleton, *Ant. Mon.* tab. 3.) [J. Y.]

BURIS. [ARATRUM.]

BUSTUARII. [FUNUS.]

BUSTUM. [FUNUS.]

BUXUM (ῥύκος), properly means the wood of the box tree, but was given as a name to many things made of this wood. The tablets used for writing on, and covered with wax (*tabulae ceratae*), were usually made of this wood. Hence we read in Propertius (iii. 22. 8), "Vulgari buxo sordida cera fuit." These *tabellae* were sometimes called *cerata buxa*. In the same way the Greek ῥύκος, formed from ῥύκος, "box-wood," came to be applied to any tablets, whether they were made of this wood or any other substance; in which sense the word occurs in the Septuagint (τὰ ῥύκια τὰ λθινα, *Exod.* xxiv. 12; compare *Ia.* xxx. 8; *Hab.* ii. 2).

Tops were made of box-wood (*colubile buxum*, Virg. *Aen.* vii. 382; Pers. iii. 51); and also all wind instruments, especially the flute, as is the case in the present day (*Ōv. Es Pont.* i. l. 45, *Met.* xii. 158, *Fast.* vi. 697; Virg. *Aen.* ix. 619). Combs also were made of the same wood; whence Juvenal (xiv. 194) speaks of *caput intactum buxo*.

BYSSUS (βύσσος). It has been a subject of some dispute whether the byssus of the ancients was cotton or linen. Herodotus (ii. 86) says that the mummies were wrapped up in *byssine sindon* (σινδώνος βυσσίνης τελαμῶσι), which Rosellini and many modern writers maintain to be cotton. The only decisive test, however, as to the material of mummy cloth is the microscope; and from the numerous examinations which have been made, it is quite certain that the mummy cloth was made of flax and not of cotton, and therefore whenever the ancient writers apply the term byssus to the mummy cloth, we must understand it to mean linen.

The word byssus appears to come from the Hebrew *butz*, and the Greeks probably got it through the Phoenicians. (See Gesenius's *Thesaurus*.) Pausanias (vi. 26. § 4) says that the district of Elis was well adapted for growing byssus, and remarks that all the people, whose land is adapted for it, sow hemp, flax, and byssus. In another passage (v. 5. § 2) he says that Elis is the only place in Greece in which byssus grows, and remarks that the byssus of Elis is not inferior to that of the Hebrews in fineness, but not so yellow (ξανθῆ). The women in Patrae gained their living by making head-dresses (κεκρυφαῖοι), and weaving cloth from the byssus grown in Elis. (Paus. vii. 21. § 7.)

Among later writers, the word byssus may perhaps be used to indicate either cotton or linen cloth. Böttiger (*Sabina*, vol. ii. p. 105) supposes that the byssus was a kind of muslin, which was employed in making the celebrated Coan garments. It is mentioned in the Gospel of St. Luke (xvi. 9) as part of the dress of a rich man. (Compare *Rec.*

xviii. 12.) It was sometimes dyed of a purple or crimson colour (βύσσινον πορφύρεον, Hesych.). Pliny (xix. 4) speaks of it as a species of flax (*linum*), and says that it served *mulierum maxime deliciis*. (Yates, *Testinium Antiquorum*, p. 267, &c.)

C. K.

CABEIRIA (καβείρια), mysteries, festivals, and orgies solemnised in all places in which the Pelagian Cabeiri, the most mysterious and perplexing deities of Grecian mythology, were worshipped, but especially in Samothrace, Imbros, Lemnos, Thebes, Anthedon, Pergamus, and Berytos. (Paus. ix. 25. § 5, iv. 1. § 5, ix. 22. § 5, i. 4. § 6; Euseb. *Praep. Evang.* p. 31.) Little is known respecting the rites observed in these mysteries, as no one was allowed to divulge them. (Strabo, x. p. 470, &c; Apollon. Rhod. i. 917; Orph. *Argon.* 469; Valer. Flacc. ii. 435.) Diagoras is said to have provoked the highest indignation of the Athenians by his having made these and other mysteries public. (Athenag. *Leg.* ii. 5.) The most celebrated were those of the island of Samothrace, which, if we may judge from those of Lemnos, were solemnised every year, and lasted for nine days. The admission was not confined to men, for we find instances of women and boys being initiated. (Schol. ad Eurip. *Phoen.* 7; Plut. *Alex.* 2; Donatus ad Terent. *Phorm.* i. 15.) Persons on their admission seem to have undergone a sort of examination respecting the life they had led hitherto (Plut. *Laced. Apophth.* *Antalcid.* p. 141. ed. Tauchnitz), and were then purified of all their crimes, even if they had committed murder. (Liv. xiv. 5; Schol. ad Theocr. ii. 12; Hesych. s. v. Κοίτης.) The priest who undertook the purification of murderers bore the name of κοίτης. The persons who were initiated received a purple ribbon, which was worn around their bodies as an amulet to preserve them against all dangers and storms of the sea. (Schol. ad Apollon. l. c.; Diodor. v. 49.)

Respecting the Lemnian Cabeiria we know that their annual celebration took place at night (Cic. *De Nat. Deor.* i. 42), and lasted for nine days, during which all fires of the island, which were thought to be impure, were extinguished, sacrifices were offered to the dead, and a sacred vessel was sent out to fetch new fire from Delos. During these sacrifices the Cabeiri were thought to be absent with the sacred vessel; after the return of which, the pure fire was distributed, and a new life began, probably with banquets. (Schol. ad Apollon. Rhod. i. 608.)

The great celebrity of the Samothracian mysteries seem to have obscured and thrown into oblivion those of Lemnos, from which Pythagoras is said to have derived a part of his wisdom. (Iamblich. *Vit. Pyth.* c. 151; compare Müller's *Prolegomena*, p. 150.) Concerning the celebration of the Cabeiria in other places nothing is known, and they seem to have fallen into decay at a very early period. (Comp. Guthberlet, *De Mysteriis Doctrinae Cabirorum*, Franqueae, 1704, 4to.; Welcker, *Die Aeschyl. Tril.* p. 160, &c.; E. G. Haupt, *De Religione Cabiriaca*, 1834, 4to.; Lobeck, *Aglaophamus*, p. 1281, &c.; Kenrick, *The Egypt of Herod.* p. 264, &c.) [L. S.]

CACABUS. [AUTHESPA.]

KAKEGORIAS DIKE' (*κακηγορίας δίκη*), was an action for abusive language in the Attic courts. This action is likewise called *κακηγορίου δίκη* (Dem. c. *Mid.* p. 544), *λοιδορίας δίκη* (*διδάσκων λοιδορίας*, Aristoph. *Vesp.* 1207), and *κακολογίας δίκη*. This action could be brought against an individual who applied to another certain abusive epithets, such as *ἀνδροφόρος*, *πατραλοίας*, &c., which were included under the general name of *ἐπὶ ὀβρίητα*. [ΑΡΟΡΗΗΤΑ.] It was no justification that these words were spoken in anger. (Lys. c. *Theomn.* pp. 372, 373.) By a law of Solon it was also forbidden to speak evil of the dead; and if a person did so, he was liable to this action, which could be brought against him by the nearest relation of the deceased. (Dem. c. *Leptin.* p. 488, c. *Boeot.* p. 1022; Plut. *Sol.* c. 21.) If an individual abused any one who was engaged in any public office, the offender not only suffered the ordinary punishment, but incurred the loss of his rights as a citizen (*ἀτιμία*), since the state was considered to have been insulted. (Dem. c. *Mid.* p. 524.)

If the defendant was convicted, he had to pay a fine of 500 drachmae to the plaintiff. (Isoc. c. *Loch.* p. 396; Lys. c. *Theomn.* p. 354.) Plutarch, however, mentions that, according to one of Solon's laws, whoever spoke evil of a person in the temples, courts of justice, public offices, or in public festivals, had to pay five drachmae; but as Platner (*Process bei den Attikern*, vol. ii. p. 192) has observed, the law of Solon was probably changed, and the heavier fine of 500 drachmae substituted in the place of the smaller sum. Demosthenes, in his oration against Meidias (p. 543) speaks of a fine of 1000 drachmae; but this is probably to be explained by supposing that Demosthenes brought two actions *κακηγορίας*; one on his own account, and the other on account of the insults which Meidias had committed against his mother and sister. This action was probably brought before the *thesmothetæ* (Dem. c. *Mid.* p. 544), to whom the related *ὕβριος γραφή* belonged. The two speeches of Lysias against Theonnestus were spoken in an action of this kind.

KAKOLOGIAS DIKE'. [KAKEGORIAS DIKE.]

KAKO'SIS (*κάκωσις*), in the language of the Attic law, does not signify every kind of ill-treatment, but

1. The ill-treatment of parents by their children (*κάκωσις γονέων*). 2. Of women by their husbands (*κάκωσις γυναικῶν*). 3. Of heiresses (*κάκωσις τῶν ἐπικληρῶν*). 4. Of orphans and widows by their guardians or any other persons (*κάκωσις τῶν ὀρφανῶν καὶ χηρευσουσῶν γυναικῶν*).

1. *Κάκωσις γονέων* was committed by those who struck their parents, or applied abusive epithets to them, or refused them the means of support when they were able to afford it, or did not bury them after their death and pay them proper honours. (Aristoph. *Av.* 757, 1356; Suidas, s. v. *Πελαργικὸς νόμος*.) It was no justification for children that their parents had treated them badly: If, however, they were illegitimate, or had not received a proper education from their parents, they could not be prosecuted for *κάκωσις*. (Meier, *Att. Process*, p. 288.)

2. *Κάκωσις γυναικῶν* was committed by husbands who ill-treated their wives in any manner or had intercourse with other women (Diog. Laërt. iv. 17; compare Plut. *Alcib.* 8), or denied their

wives the marriage duties; for by a law of Solon, the husband was bound to visit his wife three times every month, at least if she was an heiress. (Plut. *Sol.* 20, *Erotic.* 23.) In the comedy of Cratinus, called the "Wine Flask" (*Πυτρίνη*), Comedy was represented as the wife of Cratinus, who brought an action against him because he neglected her and devoted all his attention to the wine flask. (Schol. ad Aristoph. *Equit.* 399.)

3. *Κάκωσις τῶν ἐπικληρῶν* was committed by the nearest relatives of poor heiresses, who neither married them themselves, nor gave them a dowry in order to marry them to persons of their own rank in life (Dem. c. *Macart.* p. 1076; Harpocr. s. v. *Ἐπίδικος*, *Θήρες*; Suid. Phot. s. v. *Θηρεῖς*); or, if they married them themselves, did not perform the marriage duties. (Plut. *Sol.* 20.)

4. *Κάκωσις τῶν ὀρφανῶν καὶ χηρευσουσῶν γυναικῶν* was committed by those who injured in any way either orphans or widows, both of whom were considered to be in an especial manner under the protection of the chief archon. (Dem. c. *Macart.* p. 1076; δ ἄρχων, ὅστις ἐπεμλεῖτο τῶν χηρῶν καὶ τῶν ὀρφανῶν, Ulpian. ad *Demosth.* c. *Timocr.*) The speech of Iseus on the Inheritance of Hagnias, is a defence against an *εἰσαγγελία κακώσεως* of this kind.

All these cases of *κάκωσις* belonged to the jurisdiction of the chief archon (*ἄρχων ἐπὶ νόμιμος*). If a person wronged in any way orphans, heiresses, or widows, the archon could inflict a fine upon them himself; or if he considered the person deserving of greater punishment, could bring him before the *heliaea*. (Dem. c. *Macart.* p. 1076. *Lex*.) Any private individual could also accuse parties guilty of *κάκωσις* by means of laying an information (*εἰσαγγελία*) before the chief archon, though sometimes the accuser proceeded by means of a regular indictment (*γραφή*), with an *ἀνάκρισις* before the archon. (Dem. c. *Pantand.* p. 980.) Those who accused persons guilty of *κάκωσις* incurred no danger, as was usually the case, if the defendant was acquitted, and they did not obtain the fifth part of the votes of the dicasts. (Harpocr. s. v. *Εἰσαγγελία*.)

The punishment does not appear to have been fixed for the different cases of *κάκωσις*, but it was generally severe. Those found guilty of *κάκωσις γονέων* lost their civil rights (*ἀτιμία*), but were allowed to retain their property (*οὐτοὶ ἔτι μοι ἦσαν τὰ σόματα, τὰ δὲ χρήματα εἶχον*, Andoc. *De Myst.* 36; Xen. *Mem.* ii. 2. § 13): but if the *κάκωσις* consisted in beating their parents, the hands of the offenders might even be cut off. (Meursius, *Them. Attic.* i. 2.)

KAKOTECHNION DIKE (*κακοτεχνίων δίκη*), corresponds in some degree with an action for subornation of perjury. It might be instituted against a party to a previous suit, whose witnesses had already been convicted of falsehood in an action *ψευδομαρτυριῶν*. (Harpocr. s. v.; Dem. c. *Ev.* and *Mnes.* p. 1139. 11.) It has been also surmised that this proceeding was available against the same party, when persons had subscribed themselves falsely as summoners in the declaration or indictment in a previous suit (Meier, *Att. Proc.* p. 385); and if Plato's authority with respect to the terms of Attic law can be considered conclusive, other cases of conspiracy and contrivance may have borne this title. (Plat. *Leg.* xi. p. 936, c.) With respect to the court into which these causes

were brought, and the advantages obtained by the successful party, we have no information. (Meier, *Att. Proc.* pp. 45, 386.) [J. S. M.]

CADAVER. [FUNUS.]

CADISCI (καδίσκοι). [PSEPHUS.]

CADUCEUS (κηρύκειον, κηρύκιον, Thucyd. 53; κηρυκίον, Herod. ix. 100) was the staff or mace carried by heralds and ambassadors in time of war. (Pollux, viii. 138.) This name is also given to the staff with which Hermes or Mercury is usually represented, as is shown in the following figure of Hermes, taken from an ancient vase, which is given in Millin's *Peintures de Vases Antiques*, vol. i. pl. 70.

The caduceus was originally only an olive branch with the στέμματα which were afterward formed into snakes. (Müller, *Archäologie der Kunst*, p. 504.) Later mythologists invented tales about

the snakes. Hyginus tells us that Mercury once found two snakes fighting, and divided them with his wand; from which circumstance they were used as an emblem of peace. (Compare Plin. *H. N.* xxix. 8.)

From caduceus was formed the word *Caduceptor*, which signified a person sent to treat of peace. (Liv. xxxii. 32; Nep. *Hannib.* 11; Amm. Marc. xx. 7; Gell. x. 27.) The persons of the *Caduceptores* were considered sacred. (Cato, *ap. Fest.* s. v.; Cic. *De Orat.* ii. 46.) The *Caduceus* was not used by the Romans. They used instead *verbena* and *sagmina*, which were carried by the *Fetiales*. (Dig. i. tit. 8. s. 8.) [FETIALES.]

CADUCUM. [BONA CADUCA.]

CADUS (κάδος, κάδδός), a large vessel usually made of earthen-ware, which was used for several purposes among the ancients. Wine was frequently kept in it; and we learn from an author quoted by Pollux that the amphora was also called cadus (Pollux, x. 70, 71; Suidas, s. v. Κάδος). The vessel used in drawing water from wells was called cadus (Aristoph. *Eccles.* 1003; Pollux. x. 31), or γαυλός. (Suidas, s. v. Γαυλός.) The name of cadus was sometimes given to the vessel or urn in which the counters or pebbles of the dicasts were put, when they gave their vote on a trial, but the

diminutive καδίσκος was more commonly used in this signification. [PSEPHUS.]

CAELATU'RA (τορευτική), a branch of the fine arts, under which all sorts of ornamental work in metal, except actual statues, appear to be included. The principal processes, which these words were used to designate, seem to have been of three kinds: hammering metal plates into moulds or dies, so as to bring out a raised pattern; engraving the surface of metals with a sharp tool; and working a pattern of one metal upon or into a surface of another: in short, the various processes which we describe by the words *chasing*, *damascening*, &c. Millingen, who is one of the best authorities on such subjects, says "The art of working the precious metals either separately, or uniting them with other substances, was called *loreuticè*. It was known at a very early epoch, as may be inferred from the shield of Achilles, the ark of Cypselus, and other productions of the kind." There is, however, some doubt whether, in their original meaning, the words *τορευτική* and *caelatura* described the first or the second of the above processes: but both etymology and usage are in favour of the latter view. The word *τορεῖν* means originally to bore, to pierce by cutting, and the cognate substantives *τορεῖς* and *τορός* are applied to any pointed instrument, such as the tool of the engraver (*τορευτής*: see Seiler u. Jacobitz, *Handwörterbuch d. Griech. Sprache*, s. vv.). So in Latin, *caelo* (to chase), and *caelum* (the chasing tool), are undoubtedly connected with *caedo* (to cut). It may also be observed that for working metals by hammering other words are used, *ἐλαύνειν*, *σφυρηλατεῖν*, *ἐκτροβεῖν*, *χαλκεύειν*, *εσπεύειν*, and that works in metal made by hammering plates into a raised pattern are called *ἀνάγλυφα*, and *ἐκτυπα* [ANAGLYPHA]. With regard to the usage of the terms, it is enough to remark, that a very large proportion of the ornamental works in metal, alluded to by the ancient writers, from Homer downwards, must have been executed by the process of engraving, and not of hammering. But, whichever process the terms may have been originally intended to designate, in practice both processes were frequently united. For all vessels made out of thin plates of metal, the process seems to have been first to beat out the plate into the raised pattern, and then to chase it with the graving tool. There is an example of this kind of work in the British Museum, noticed by Millingen.

Another question has been raised, whether *τορευτική* and *caelatura* are precisely equivalent: but it is the opinion of the best writers on art that they are so, though Quatremère de Quincy and others suppose *τορευτική* to refer to any work in relief, and even to chryselephantine statues. (See Garatoni, in Cic. *Verr.* iv. 23; Salmas. *Exerc. ad Solin.* p. 736, foll.; Heyne, *Antiquar. Aufzätze*, ii. p. 127.) Quintilian (ii. 21) expressly distinguishes *caelatura* and *sculptura* by saying that the former includes works in gold, silver, bronze, and iron, while the latter embraces, besides these materials, also wood, ivory, marble, glass, and gems. It must therefore be understood as an accommodated use of the term when Pliny says of glass, — "argenti modo caelatur." (*H. N.* xxxvi. 26. s. 66.)

The fact which is implied in the words just quoted, that silver was the chief material on which the *caelator* worked, is expressly stated by

Pliny, at the commencement of the passage which forms one of our chief authorities on the subject (*H. N.* xxxiii. 12. s. 55); where he mentions it as a remarkable fact that many had gained renown for chasing in silver, but none for chasing in gold: it is not however to be inferred that gold was not chased, for works in gold are frequently mentioned by other authors. From the same section, and from other authorities, we learn that works of this kind were also executed in bronze and iron (Quint. l. c.; Forcellini, s. v.). Two examples of chasing in iron deserve especial notice, the one for its antiquity, the other for its beauty: the former is the iron base of the vase dedicated by Alyattes, king of Lydia, at Delphi, which was the work of Glaucus of Chios, and was chased with small figures of animals, insects, and plants (Herod. i. 25; Paus. x. 16. § 1; Ath. v. p. 210, b. c.; *Dict. of Biog. s. v. Glaucus*): the latter is the iron helmet of Alexander, the work of Theophilus, which glittered like silver (Plut. *Alex.* 32): Strabo, moreover, mentions the people of Cibra, in Asia Minor, as noted for their skill in chasing iron (Strab. xiii. p. 631).

The objects on which the *caelator* exercised his art were chiefly weapons and armour—especially shields, chariots, tripods, and other votive offerings, quoits, candelabra, thrones, curule chairs, mirrors, goblets, dishes, and all kinds of gold and silver plate. Arms were often ornamented with patterns in gold (*γρᾶντὰ ἐν ὀλίῳ ἔγχρῳσιν εἰκόν*) (*Corp. Inscr.* vol. i. No. 124; *scutum chrysographatum*, Trebell. *Claud.* 14). Chased bronze helmets and greaves have been found at Pompeii and elsewhere. (*Mus. Borb.* iii. 60, iv. 13, v. 29; Brünsted, *die Bronzen von Siris*.) Chariots, especially those used in the chariot-races and triumphal process, were often made of bronze richly chased [*Curvus*]: under the Roman emperors private carriages (*corrucae*) were often covered with plates of chased bronze, silver, and even gold (Plin. *H. N.* xxxiii. 11. s. 49; Suet. *Claud.* 16; Martial. iii. 72; Lamprid. *Alex.* Sec. 43; Vopisc. *Aurel.* 46; *CARRUCA*). In candelabra, mirrors, and so forth, the remains of Etruscan art are very rich. An elaborate account of ancient tripods is given in Müller's essay, *Ueber die Tripoden*, in the *Amalthæa*, vols. i. and iii. Respecting vessels of gold and silver plate, and other ornaments, among the numerous references of the ancient authors, those of Cicero (*in Verr.* iv.), and Pliny (*H. N.* xxxiii. 11, 12. s. 50—54) are among the most important and interesting.

The ornamental work with which the chaser decorated such objects consisted either of simple running patterns, chiefly in imitation of plants and flowers, or of animals, or of mythological subjects, and, of armour, of battles. To the first class belong the *lances filicæ, pampinatæ, patinæ hederatæ, and disci corymbiati* (Cic. l. c.; Trebell. *Claud.* 17): ornaments of the second class were common on the bronze and gold vases of Corinth (Ath. v. p. 199, e.) and on tripods (*Amalth.* vol. iii. p. 29); and the mythological subjects, which were generally taken from Homer, were reserved for the works of the greatest masters of the art: they were generally executed in very high relief (*anaglypha*). In the finest works, the ornamental pattern was frequently distinct from the vessel, to which it was either fastened permanently, or so that it could be removed at pleasure, the vessel being of silver, and the ornaments of gold, *crustæ aut emblemata*. (Cic.

in Verr. iv. 23; Juv. i. 76; Martial. viii. 51; Ovid. *Met.* v. 81; Ath. v. p. 199; Paull. *Sens.* iii. 6, 8; Senec. *Ep.* 5; comp. *CHRYSÉNDETA*).

The art of ornamental metal-work was in an advanced stage of progress among the Greeks of the heroic period, as we see from numerous passages of Homer. In Italy, also, the Etruscans, as above stated, had early attained to great proficiency in it. In the time of the last dynasty of Lydian kings, a great impulse was given to the art, especially by their magnificent presents to the Delphian temple; and belonging to this period, we have the names of Glaucus, as already mentioned, and of Theodorus of Samos, who made a great silver vessel for Croesus, the ring of Polycrates, and a golden vessel which afterwards adorned the palace of the Persian kings. But its perfection would of course depend on that of the arts of design in general, especially of sculpture; and thus we can readily accept the statement of Pliny that its origin, in the high artistic sense, is to be ascribed to Pheidias, and its complete development to Polyclitus. (Plin. *H. N.* xxxiv. 8. s. 19. § 1, *primusque [Pheidias] artem toreuticam aperuisse aliquo demonstrasse merito judicatur*: ibid. § 2, *Hic [Polyclitus]... judicator toreuticus sic eruditus, ut Pheidias aperuisse*). There can, indeed, be no doubt that the toreutic art was an important accessory to the arts of statuary and sculpture, especially in works executed in bronze and in ivory and gold. In fact, in the latter class of works, the parts executed in gold belonged properly to the department of the *caelator*: and hence has arisen the error of several modern writers who have made the chryselephantine statues a branch of the toreutic art. The intimate connection of this art with statuary and sculpture is further shown by the fact that several of the great artists in these departments were also renowned as silver-chasers, such as Myron and Pasiteles. In the age of Pheidias, the most distinguished name is that of Mys, who engraved the battle of the Lapithæ with the Centaurs on the shield of Pheidias's colossal bronze statue of Athena Promachus in the Acropolis, and who is said to have worked from designs drawn by the hand of Parrhasius; but the latter point involves a chronological difficulty. (See *Dict. of Biog. s. v. Mys, Pasiteles*.) In the period from the time of Pheidias to that of the Roman conquest of Greece, the following names are preserved: Acragas, Boethus, and Mentor, the most distinguished of all the artists in this department; the sculptor Myron and his son Lycius; after them, Calamis, Antipater; and the maker of a work mentioned with especial admiration by Pliny, Stratoniceus; a little later, Tauriscus of Cyzicus, Ariston and Euniceus of Mytilene, and Hecataeus. The Greek kings of Syria, especially Antiochus Epiphanes, were great patrons of the art. (Ath. v. p. 293, d.) In the last age of the Roman Republic, the prevailing wealth and luxury, and the presence of Greek artists at Rome, combined to bring the art more than ever into requisition. Silver-chasers seem to have been regularly employed in the establishments of the great men of Rome; and Pliny mentions, as belonging to the age of Pompey the Great, Pasiteles, Posidonius of Ephesus, Leostatides, Zopyrus, Pytheas, and lastly Teucer. After this period, the art suddenly fell into disuse, so that, in the time of Pliny, chased vessels were valued only for their age, though the chasing was so worn down by use that even the figures could not be distinguished. (*H. N.* xxxiii.

12. a. 55, xxxiv. 8. a. 19; see the articles on the artists above mentioned in the *Dictionary of Biography*.)

The principal ancient writers on this art, whose works Pliny used, were Antigonus, Menaechnus, Xenocrates, Duris, Menander, and especially Pasiteles, who wrote *mirabilia opera*. (Plin. *H. N.* Elench. lib. xxxiii.) The most important modern works on the subject are the following: Winckelmann, *Werke*, passim; Millingen, *Unedited Monuments*, ii. 12; Veltheim, *Etwas über Memnon's Bildsäule, Nero's Smaragd, Toreutik*, &c.; Quatremère de Quincy, *Le Jupiter Olympien*; Welcker, *Zeitsch. f. Gesch. u. Ausleg. d. alt. Kunst*, vol. i. part 2. p. 280; Hirt, *Ueber das Material, die Technik*, &c., in the *Amalthea*, vol. i. p. 239. foll.; Müller, *Handb. d. Archäologie der Kunst*, § 311. [P. S.]

CAELIBA'TUS. [AES UXORIUM; LEX JULIA ET PAPIA POPPAEA.]

CAERITUM TA'BULAE. [AERARIL]

CAESAR, a title of the Roman emperors, was originally a family name of the Julia gens; it was assumed by Octavianus as the adopted son of the great dictator, C. Julius Caesar, and was by him handed down to his adopted son Tiberius. It continued to be used by Caligula, Claudius, and Nero, as members either by adoption or female descent of Caesar's family; but though the family became extinct with Nero, succeeding emperors still retained the name as part of their titles, and it was the practice to prefix it to their own names, as for instance, *Imperator Caesar Domitianus Augustus*. When Hadrian adopted Aelius Varus, he allowed the latter to take the title of Caesar; and from this time, though the title of *Augustus* continued to be confined to the reigning emperor, that of *Caesar* was also granted the second person in the state and the heir presumptive to the throne. (Eckhel, vol. viii. p. 367, &c.) [AUGUSTUS.]

CALAMISTRUM, an instrument made of iron, and hollow like a reed (*calamus*), used for curling the hair. For this purpose it was heated, the person who performed the office of heating it in wood-ashes (*cinis*) being called *ciniflo*, or *cinerarius*. (Hor. *Sat. i.* 2. 98; Heindorf, *ad loc.*) This use of heated irons was adopted very early among the Romans (Plaut. *Asin.* iii. 3. 37), and became as common among them as it has been in modern times. (Virg. *Aen.* xii. 100.) In the age of Cicero, who frequently alludes to it, the Roman youths, as well as the matrons, often appeared with their hair curled in this manner (*calamistrati*). We see the result in many antique statues and busts. [J. Y.]

CALAMUS (*κάλαμος*, Pollux, x. 15), a sort of reed which the ancients used as a pen for writing. (Cic. *ad Att.* vi. 8; Hor. *De Art. Poët.* 447.) The best sorts were got from Aegypt and Cnidus. (Plin. *H. N.* xvi. 36, 64.) So Martial (xiv. 38), "Dat chartis habiles calamos Memphitica tellus." When the reed became blunt, it was sharpened with a knife, *scalprum librarium* (Tac. *Ann.* v. 8; Suet. *Vitell.* 2); and to a reed so sharpened the epithet *temperatus*, used by Cicero, probably refers (Cic. *Ad Qu. F.* ii. 15, "calamo et atramento temperato res agetur"). One of the inkstands given under the article ATRAMENTUM has a calamus upon it. The calamus was split like our pens, and hence Ausonius (vii. 49) calls it *fissipes* or clovenfooted. [A. A.]

CALANTICA. [CUMA.]

CALATHUS, dim. CALATHISCUS (*κάλα-*

CALCEUS.

θος, *καλαθίσκος*), also called *τάλαρος* usually signified the basket in which women placed their work, and especially the materials for spinning. Thus, Pollux (x. 125) speaks of both *τάλαρος* and *κάλαθος* as *τῆς γυναικωνίδιος σκευῆς*: and in another passage (vii. 29), he names them in connection with spinning, and says that the *τάλαρος* and *καλαθίσκος* were the same. These baskets were made of osiers or reeds; whence we read in Pollux (vii. 173) *πλέκειν τάλάρους καὶ καλαθίσκους*, and in Catullus (lxiv. 319) —

"Ante pedes autem candentis mollia lanæ
Vellera virgati custodiebant calathisci."

They appear, however, to have been made in earlier times of more valuable materials, since we read in Homer (*Od.* iv. 125) of a silver *τάλαρος*. They frequently occur in paintings on vases, and often indicate, as Böttiger (*Vasengem.* iii. 44) has remarked, that the scene represented takes place in the gynæceonitis, or women's apartments. In the following woodcut, taken from a painting on a vase (Millin, *Peintures de Vases Antiques*, vol. i. pl. 4), a slave, belonging to the class called *quasillariæ*, is presenting her mistress with the calathus, in which the wool was kept for embroidery, &c.

Baskets of this kind were also used for other purposes (Böttiger, *Salina*, vol. ii. pp. 252, 258), such as for carrying fruits, flowers, &c. (Ovid. *Art. Am.* ii. 264.) The name of calathi was also given to cups for holding wine (Virg. *Ed.* v. 71).

Calathus was properly a Greek word, though used by the Latin writers. The Latin word corresponding to it was *qualus* (Hor. *Carm.* iii. 12. 4), or *quasillus* (Festus s. *Calathus*; Cic. *Philipp.* iii. 4; Prop. iv. 7. 37). From *quasillus* came *quasillaria*, the name of the slave who spun, and who was considered the meanest of the female slaves. (Petrone. 132; Tibull. iv. 10. 3.) [FUSUS; TELA.]

CALCAR (*κάλανος*, *ἐγκεντρῖς*, Pollux, x. 12), a spur. The Greek name for spurs was taken from the flies, which infest horses with their stings: hence the verb *μυστίσειν*, to spur. (Xen. *de Re Eq.* viii. 5. x. 1, 2; Heliodor. ix. p. 432, ed. Commelin.) The Athenian gentry sometimes showed their conceit by walking about the Agora in spurs after riding (Theophrast. *Char.* xxi.) Spurs were early used by the Romans, as appears from the mention of them in Plautus (*Asin.* iii. 3. 118) and Lucretius (v. 1074). They are likewise often alluded to by Cicero (*De Orat.* iii. 9, *ad Att.* vi. 1), Ovid (*De Ponto*, ii. 9. 38; iv. 2. 35), Virgil (*ferrata calce*, *Aen.* xi. 714), and subsequent Roman authors. [J. Y.]

CALCEUS, CALCEAMEN, CALCEAMENTUM (*ὀπδοῖμα*, *πέδιλον*), a shoe or boot,

any thing adapted to cover and preserve the feet in walking. The use of shoes was by no means universal among the Greeks and Romans. The Homeric heroes are represented without shoes when armed for battle. According to the institutions of Lycurgus, the young Spartans were brought up without wearing shoes (*ἀνυπόδητοι*, Xen. *Rep. Lac.* 2), in order that they might have the full use of their feet in running, leaping, and climbing. Socrates, Phocion, and Cato frequently went barefoot (*ἀνυπόδητος*, Aristoph. *Nub.* 103, 362; Xen. *Mem.* i. 6. § 2, *pode nudo*, Hor. *Ep.* i. 19. 12). The Roman slaves had no shoes (*nudo talo*, Juv. vii. 16), their naked feet being marked with chalk or gypsum. The covering of the feet was removed before reclining at meals. [COENA.] To go barefoot also indicated haste, grief, distraction of mind, or any violent emotion, as when Venus goes in quest of Adonis (*ἀνὰ δάδατος*, Bion. i. 21), and when the Vestals flee from Rome with the apparatus of sacred utensils. (Flor. i. 13.) For similar reasons sorceresses go with naked feet, when intent upon the exercise of magical arts (Sen. *Medea*, iv. 2. 14; *nuda pedem*, Ovid. *Mét.* vii. 183; *pedibus nudis*, Hor. *Sat.* i. 8. 24), although sometimes one foot only was unshod (*unum cruda pedem vindis*, Virg. *Aen.* iv. 518), and is so painted on fictile vases. That it was a very rare thing at Rome to see a respectable female out of doors without shoes, is clear from the astonishment experienced by Ovid (*Fast.* vi. 397), until he was informed of the reason of it, in a particular instance.

"Huc pede matronam vidi descendere nudo:
Obstupui tacitus, sustinuique gradum."

The feet were sometimes bare in attendance on funerals. Thus the remains of Augustus were collected from the pyra by noblemen of the first rank with naked feet. (Suet. *Aug.* 100.) A picture found at Herculaneum exhibits persons with naked feet engaged in the worship of Isis (*Ant. d'Ercole*, ii. 320); and this practice was observed at Rome in honour of Cybele (Prudent. *Peria*, 154). In case of drought, a procession and ceremonies, called *Nadipadalia*, were performed with a view to propitiate the gods by the same token of grief and humiliation. (Tertull. *Apol.* 40.)

The idea of the defilement arising from contact with any thing that had died, led to the entire disuse of skin or leather by the priests of Egypt. Their shoes were made of vegetable materials (*calceos ex papyro*, Mart. *Cap.* 2.) [BAXA.]

Those of the Greeks and Romans who wore shoes, including generally all persons except youths, slaves, and ascetics, consulted their convenience, and indulged their fancy, by inventing the greatest possible variety in the forms, colours, and materials of their shoes. Hence we find a multitude of names, the exact meaning of which it is impossible to ascertain; but which were often derived either from the persons who were supposed to have brought certain kinds of shoes into fashion, or from the places where they were procured. We read, for example, of "shoes of Alcibiades;" of "Sicyonian," and "Persian," which were ladies' shoes (Cic. *De Orat.* i. 54; Heaych.); of "Laconian," which were mens' shoes (Aristoph. *Thea*, 149); and of "Cretan," "Milesian," and "Athenian" shoes.

The distinctions depending upon form may be generally divided into those in which the mere sole of a shoe was attached to the sole of the foot by

ties or bands, or by a covering for the toes or the instep [SOLEA; CREPIDA; SANDALIUM; SOCCUS]; and those which ascended higher and higher, according as they covered the ankles, the calf, or the whole of the leg. To calceamenta of the latter kind, i. e. to shoes and boots as distinguished from sandals and slippers, the term "calceus" was applied in its proper and restricted sense.

Besides the difference in the intervals to which the calceus extended from the sole upwards to the knee, other varieties arose from its adaptation to particular professions or modes of life. Thus the CALIGA was principally worn by soldiers; the PERA, by labourers and rustics; and the COTHURNUS, by tragedians, hunters, and horsemen.

Understanding "calceus" in its more confined application, it included all those more complete coverings for the feet which were used in walking out of doors or in travelling. As most commonly worn, these probably did not much differ from our shoes, and are exemplified in a painting at Herculaneum (*Ant. d'Ercoleano*, i. Tav. 21), which represents a female wearing bracelets, a wreath of ivy, and a panther's skin, while she is in the attitude of dancing and playing on the cymbals.

On the other hand, a marble foot in the British Museum exhibits the form of a man's shoe. Both the sole and the upper leather are thick and strong. The toes are uncovered, and a thong passes between the great and the second toe as in a sandal.

The form and colour of the calceus were also among the insignia of rank and office. Those who were elevated to the senate wore high shoes like buskins, fastened in front with four black thongs (*nigris pellibus*, Hor. Sat. i. 6, 27) and adorned with a small crescent. (Mart. ii. 29; Juv. vii. 192.) Hence Cicero (*Phil.* xiii. 13), speaking of the assumption of the senatorial dignity by Asinius, says *mutavit calceos*. Among the calcei worn by senators, those called *mullei*, from their resemblance to the scales of the red mullet (Isid. Or. xix. 14), were particularly admired; as well as others called *alutae*, because the leather was softened by the use of alum. (Mart. Juv. ll. cc.; Lydus, *de Mag.* i. 32; Ovid, *De Art. Am.* iii. 271.) [J. Y.]

CALCULATOR (*λογιστής*) signifies a keeper of accounts in general, but was also used in the signification of a teacher of arithmetic; whence Martial (x. 62) classes him with the *notarius* or writing-master. The name was derived from *calculus*, which were commonly used in teaching arithmetic, and also in reckoning in general. [ABACUS.] Among the Greeks the *λογιστής* and *γραμματιστής* appear to have been usually the same person.

In Roman families of importance there was a *calculator* or account-keeper (Dig. 38. tit. 1. s. 7), who is, however, more frequently called by the name of *dispensator* or *procurator*, who was a kind of steward (Cic. *ad Att.* xi. 1; Plin. *Ep.* iii. 19; Suet. *Galb.* 12, *Vesp.* 22; Becker, *Gallus*, vol. i. p. 109.)

CALCULI were little stones or pebbles, used for various purposes; such, for example, as the Athenians used in voting, or such as Demosthenes put in his mouth when declaiming, in order to mend his pronunciation. (Cic. *De Orat.* i. 61.) Calculi were used in playing a sort of draughts. [LATRUNCULI.] Subsequently, instead of pebbles, ivory, or silver, or gold, or other men (as we call them) were used; but still called *calculi*. The calculi were *bicolores*. (Sidon. *Epist.* viii. 12; Ovid. *Trist.* ii. 477; Mart. *Epig.* xiv. 17, 2, xiv. 20.) Calculi were also used in reckoning, and hence the phrases *calculus ponere* (Colum. iii. 3), *calculus subducere*. (Cic. *De Fin.* ii. 19, &c.) [ABACUS.] [A. A.]

CALDA. [CALIDA.]

CALDA'RIUM. [BALNEAR.]

CALENDA'RIUM, or rather KALENDA'RIUM, is the account-book, in which creditors entered the names of their debtors and the sums which they owed. As the interest on borrowed money was due on the *Calendae* of each month, the name of *Calendarium* was given to such a book. (Senec. *De Benef.* i. 2, vii. 10.) The word was subsequently used to indicate a register of the days, weeks, and months, thus corresponding to a modern almanac or calendar.

1. GREEK CALENDAR. — In the earliest times the division of the year into its various seasons appears to have been very simple and rude, and it would seem that there was no other division except that of summer (*ἔρος*) and winter (*χειμὼν*). To these strongly marked periods there were afterwards added the periods of transition, viz. spring (*ἅρπ*) and autumn (*ὄρεπα*), with certain subdivisions according to the different agricultural pursuits peculiar to each of them. As, however, the seasons of the year were of great importance in regard to agriculture, it became necessary to fix their beginning and end by con-

necting them with the rising or setting of certain stars. Thus Hesiod (*Op. et Dies*, 381) describes the time of the rising of the Pleiades as the time for harvesting (*ἀμνηρος*), and that of their setting as the time for ploughing (*ἀπορος*); the time at which Arcturus rose in the morning twilight as the proper season for the vintage (*l. c.* 607), and other phenomena in nature, such as the arrival of birds of passage, the blossoming of certain plants, and the like, indicated the proper seasons for other agricultural occupations; but although they may have continued to be observed for centuries by simple rustics, they never acquired any importance in the scientific division of the year. [ASTRONOMIA.]

The moon being that heavenly body whose phases are most easily observed, formed the basis of the Greek calendar, and all the religious festivals were dependent on it. The Greek year was a lunar year of twelve months, but at the same time the course of the sun also was taken into consideration, and the combination of the two (Gemin. *Isag.* 6; comp. Censorin. *De Die Nat.* 18; Cic. in *Verr.* ii. 52) involved the Greeks in great difficulties which rendered it almost impossible for them to place their chronology on a sure foundation. It seems that in the early times it was believed that 12 revolutions of the moon took place within one of the sun; a calculation which was tolerably correct, and with which people were satisfied. The time during which the moon revolved around her axis, was calculated at an average or round number of 30 days, which period was called a month (Gemin. *l. c.*); but even as early as the time of Solon, it was well known that a lunar month did not contain 30 days, but only 29½. The error contained in this calculation could not long remain unobserved, and attempts were made to correct it. The principal one was that of creating a cycle of two years, called *τρετηνίς*, or *annus magnus*, and containing 25 months, one of the two years, consisting of 12 and the other of 13 months. The months themselves, which in the time of Hesiod (*Op. et Dies*, 770) had been reckoned at 30 days, afterwards alternately contained 30 days (full months, *ἡμέτεροι*) and 29 days (hollow months, *κοῖλοι*.) According to this arrangement, one year of the cycle contained 354, and the other 384 days, and the two together were about 7½ days more than two tropical or solar years. (Gemin. 6; Censorin. 18). When this mode of reckoning was introduced, is unknown; but as Herodotus (i. 32) mentions it, it is clear that it must have been before his time. The 7½ days, in the course of 4 years, made up a month of 30 days, and such a month was accordingly inserted in every fourth year, and the cycle of four years was called a *τρεταετηρίς*. (Censorin. *l. c.*) But a far more important cycle was the *εὐρεαετηρίς*, or the cycle of 8 years, for it was practically applied by the Greeks to the affairs of ordinary life. The calculation was this: as the solar year is reckoned at 365½ days, 8 such years contain 2922 days, and eight lunar years 2832 days; that is, 90 days less than 8 solar years. Now these 90 days were constituted as three months, and inserted as three intercalary months into three different years of the *εὐρεαετηρίς*, that is, into the third, fifth, and eighth. (Censorin.; Gemin. *ll. cc.*) It should, however, be observed that Macrobius (*Sat.* i. 13) and Solinus (*Polychist.* iii.) state that the three intercalary months were all added to the last year of the *enneaeteris*, which

would accordingly have contained 444 days. But this is not very probable. The period of 8 solar years, further, contains 99 revolutions of the moon, which, with the addition of the three intercalary months, make 2923½ days; so that in every 8 years there is 1½ day too many, which in the course of 100 years, again amounts to one month. The enneacteria, accordingly, again was incorrect. The time at which the cycle of the enneacteria was introduced is uncertain, but its inaccuracy called forth a number of other improvements or attempts at establishing chronology on a sound basis, the most celebrated among which is that of Meton. The number of these attempts is a sufficient proof that none of them was ever sanctioned or adopted by law in any of the Greek republics. These circumstances render it almost impossible to reduce any given date in Greek history to the exact date of our calendar.

The Greeks, as early as the time of Homer, appear to have been perfectly familiar with the division of the year into the twelve lunar months mentioned above; but no intercalary month (*μήν ἐμβόλιμος*) or day is mentioned. Independent of the division of a month into days, it was divided into periods according to the increase, and decrease of the moon. Thus, the first day or new moon was called *νομηνία*. (Hom. *Od.* x. 14, xii. 325, xx. 156, xxi. 258; Hes. *Op. et Dies*, 770.) The period from the *νομηνία* until the moon was full, was expressed by *μηνὸς ἱσταμένου*, and the latter part during which the moon decreased by *μηνὸς φθίνοντος*. (Hom. *Od.* xiv. 162.) The 30th day of a month, i. e. the day of the conjunction, was called *τριακς*, or, according to a regulation of Solon (Plut. *Sol.* 25), *ἐπη καὶ νέα*, because one part of that day belonged to the expiring, and the other to the beginning month. The day of the full moon, or the middle of the month, is sometimes designated by *διχόμενης*. (Pind. *Ol.* iv. 34.)

1. Hecatombeaon (Ἑκατομβαιών)	contained 30 days, and corresponds nearly to our July.
2. Metageitnion (Μεταγεγαιτιών)	— 29 — August.
3. Boedromion (Βοηδρομιών)	— 30 — September.
4. Pyanepsion (Πυανεψιών)	— 29 — October.
5. Maimacterion (Μαιμακτεριών)	— 30 — November.
6. Poseideon (Ποσειδεών)	— 29 — December.
7. Gamelion (Γαμηλιών)	— 30 — January.
8. Anthestion (Ἀνθεστηριών)	— 29 — February.
9. Elaphebolion (Ἐλαφηβολιόν)	— 30 — March.
10. Munychion (Μουνυχιών)	— 29 — April.
11. Thargelion (Θαργηλιών)	— 30 — May.
12. Scirophorion (ΣκIROΦΟΡΙΩΝ)	— 29 — June.

At the time when the Julian Calendar was adopted by the Athenians, probably about the time of the Emperor Hadrian, the lunar year appears to have been changed into the solar year; and it has further been conjectured, that the beginning

The month in which the year began, as well as the names of the months, differed in the different countries of Greece, and in some parts even no names existed for the months, they being distinguished only numerically, as the first, second, third, fourth month, &c. In order, therefore, to acquire any satisfactory knowledge of the Greek calendar, the different states must be considered separately.

The Attic year began with the summer solstice, and each month was divided into three decads, from the 1st to the 10th, from the 10th to the 20th, and from the 20th to the 29th or 30th. The first day of a month, or the day after the conjunction, was *νομηνία*; and as the first decad was designated as *ἱσταμένου μηνός*, the days were regularly counted as *δευτέρα, τρίτη, τετάρτη, &c., μηνός ἱσταμένου*. The days of the second decad were distinguished as *ἐπὶ δέκα, or μεσοῦντος*, and were counted to 20 regularly, as *πρώτη, δευτέρα, τρίτη, τετάρτη, &c., ἐπὶ δέκα*. The 20th itself was called *εἰκάς*, and the days from the 20th to the 30th were counted in two different ways, viz. either onwards, as *πρώτη, δευτέρα, τρίτη, &c., ἐπὶ εἰκάδι*, or backwards from the last day of the month with the addition of *φθίνοντος, παυμένου, λήγοντος, or ἀπλοῦτος*, as *ἐνδότη, δεκάτη, &c., φθίνοντος*, which, of course, are different dates in hollow and in full months. But this mode of counting backwards seems to have been more commonly used than the other. With regard to the hollow months, it must be observed, that the Athenians, generally speaking, counted 29 days, but in the month of Boedromion they counted 30, leaving out the second, because on that day Athena and Poseidon were believed to have disputed about the possession of Attica. (Plut. *De Frat. Am.* p. 489, *Sympos.* ix. 7.) The following table shows the succession of the Attic months, the number of days they contained, and the corresponding months of our year.

1. Hecatombeaon (Ἑκατομβαιών)	contained 30 days, and corresponds nearly to our July.
2. Metageitnion (Μεταγεγαιτιών)	— 29 — August.
3. Boedromion (Βοηδρομιών)	— 30 — September.
4. Pyanepsion (Πυανεψιών)	— 29 — October.
5. Maimacterion (Μαιμακτεριών)	— 30 — November.
6. Poseideon (Ποσειδεών)	— 29 — December.
7. Gamelion (Γαμηλιών)	— 30 — January.
8. Anthestion (Ἀνθεστηριών)	— 29 — February.
9. Elaphebolion (Ἐλαφηβολιόν)	— 30 — March.
10. Munychion (Μουνυχιών)	— 29 — April.
11. Thargelion (Θαργηλιών)	— 30 — May.
12. Scirophorion (ΣκIROΦΟΡΙΩΝ)	— 29 — June.

of the year was transferred from the summer solstice to the autumnal equinox.

The year of the Lacedaemonians, which is believed to have begun at the time of the autumnal equinox, contained the following months:—

1. Herasius (Ἡράσιος),	nearly corresponding to our October.
2. Apellaeus (Ἀπελλαῖος)	— — November.
3. Dioethyus (Διόεθνος)	— — December.
4. Unknown.	— —
5. Eleusinius (Ἐλευσίνιος)	— — February.
6. Gerastius (Γεράσιος)	— — March.
7. Artemisius (Ἀρτεμίσιος)	— — April.
8. Delphinus (Δελφίνιος)	— — May.
9. Phlœsius (Φλωσίσιος)	— — June.
10. Hecatombeus (Ἑκατομβεύς)	— — July.
11. Carneus (Καρνεῖος)	— — August.
12. Panamus (Πάναμος)	— — September.

It should be observed that the order of most of these months is merely conjectural, and of some it is not even certain as to whether they really were Lacedaemonian months. But here, as in the other lists, we follow Hermann's view, which he has

fully explained in the work referred to at the end of this article.

Of the year of the Boeotians, which began at the winter solstice, the following months are known:—

1. Bucatius (Βουκάτιος),	nearly corresponds to our January.
2. Hermaeus (Ἑρμαῖος)	— — February.
3. Prostaterius (Προστατήριος)	— — March.
4. Unknown.	
5. Theiluthius (Θειλούθιος)	— — May.
6. Unknown.	
7. Unknown.	
8. Hippodromius (Ἱπποδρόμιος)	— — August.
9. Panamus (Πάναμος)	— — September.
10. Unknown.	
11. Damatrius (Δαμάτριος)	— — November.
12. Alalcomenius (Ἀλαλκομένιος)	— — December.

The months of the year at Delphi were—

1. Bucatius (Βουκάτιος),	nearly answers to our September.
2. Heraeus (Ἡραῖος)	— — October.
3. Apellaeus (Ἀπελλαῖος)	— — November.
4. Unknown.	
5. Dadaphorius (Δαδαφόριος)	— — January.
6. Poetropius (Ποιτρώπιος)	— — February.
7. Bynius (Βύσιος)	— — March.
8. Artemisius (Ἀρτεμίσιος)	— — April.
9. Heracleius (Ἡράκλειος)	— — May.
10. Boathous (Βοαθόος)	— — June.
11. Ilaeus (Ἰλαῖος)	— — July.
12. Theoxenius (Θεοξένιος)	— — August.

The names of the months at Cyzicus are given in the following order, though the first of them is

founded only on a conjecture, and the last may be either the 10th, 11th, or 12th:—

1. Boedromion (Βοηδρομιών),	nearly answers to our October.
2. Cyanepsion (Κυανεψιόν)	— — November.
3. Apaturion (Ἀπατουριών)	— — December.
4. Poseideon (Ποσειδεών)	— — January.
5. Lenaeon (Ληναῖον)	— — February.
6. Anthesterion (Ἀνθεστηριών)	— — March.
7. Artemision (Ἀρτεμισιόν)	— — April.
8. Calamaeon (Καλαμαῖον)	— — May.
9. Panemus (Πάνημος)	— — June.
10. Taureon (Ταυρεών)	— — July.
11 and 12. are unknown.	

Among the Sicilian months the following are known:—

1. Thesmophorius (Θεσμοφόριος),	probably answers to our October.
2. Dalius (Δάλιος)	— — November.
3. Unknown.	
4. Agrianus (Ἀγριανός)	— — January.
5. Unknown.	
6. Theudasius (Θευδάσιος)	— — March.
7. Artamitius (Ἀρταμίτιος)	— — April.
8. Unknown.	
9. Badromius (Βαδρόμιος)	— — June.
10. Hyacinthius (Υακινθίος)	— — July.
11. Carneius (Καρνεῖος)	— — August.
12. Panamus (Πάναμος)	— — September.

We further know the names of several isolated months of other Greek states; but as it is as yet impossible to determine what place they occupied in the calendar, and with which of our months they correspond, their enumeration here would be of little or no use. We shall therefore confine ourselves to giving some account of the Macedonian months, and of some of the Asiatic cities and islands, which are better known.

On the whole it appears that the Macedonian year agreed with that of the Greeks, and that ac-

cordingly it was a lunar year of twelve months, since we find that Macedonian months are described as coincident with those of the Athenians. (See a letter of King Philip in Demosth. *De Coron.* p. 280; *Plut. Camil.* 19, *Alex.* 3, 16.) All chronologers agree as to the order and succession of the Macedonian months; but we are altogether ignorant as to the name and place of the intercalary month, which must have existed in the Macedonian year as well as in that of the Greek states. The order is as follows:—1. Dios (Δῖος), 2. Apellaeus

(Ἀσπελλῆος), 3. Audynaëus (Ἀδδυνῆος), 4. Peritius (Περτίιος), 5. Dystrus (Δόστρος), 6. Xanthicus (Ξανθικός), 7. Artemisius (Ἀρτεμισίος), 8. Daësius (Δαΐσιος), 9. Panemus (Πάνημος), 10. Lous (Λῶος), 11. Gorpiaëus (Γορπιαῖος), 12. Hyperberetæus (Ἵπερβερετῆος). The difficulty is to identify the Macedonian months with those of the Athenians. From Plutarch (*Camil.* 19, comp. with *Alex.* 16) we learn that the Macedonian Daësius was identical with the Athenian Thargelion; but while, according to Philip, the Macedonian Lous was the same as the Athenian Boedromion, Plutarch (*Alex.* 3) identifies the Lous with the Attic Hecatombaëon. This discrepancy has given rise to various conjectures, some supposing that between the time of Philip and Plutarch a transposition of the names of the months had taken place, and others that Plutarch made a

mistake in identifying the Lous with the Hecatombaëon. But no satisfactory solution of the difficulty has yet been offered. We know that the Macedonian year began with the month of Dios, commencing with the autumnal equinox. When Alexander conquered Asia, the Macedonian calendar was spread over many parts of Asia, though it underwent various modifications in the different countries in which it was adopted. When subsequently the Asiatics adopted the Julian Calendar, those modifications also exercised their influence and produced differences in the names of the months, although, generally speaking, the solar year of the Asiatics began with the autumnal equinox. During the time of the Roman emperors, the following calendars occur in the province of Asia:—

1. Caesarius (Καϊσάριος)	had 30	days, and began on the 24th of September.
2. Tiberius (Τιβέριος)	31	— — 24th of October.
3. Apaturius (Ἀπατούριος)	31	— — 24th of November.
4. Posideon (Ποσιδεών)	30	— — 25th of December.
5. Lennæus (Λένναιος)	29	— — 24th of January.
6. Hierosebastus (Ἱεροσεβαστος)	30	— — 22d of February.
7. Artemisius (Ἀρτεμισίος)	31	— — 24th of March.
8. Evangelius (Εὐαγγελίος)	30	— — 24th of April.
9. Stratonicus (Στρατόνικος)	31	— — 24th of May.
10. Hecatombaëus (Ἑκατόμβαιος)	31	— — 24th of June.
11. Anteus (Ἄντεος)	31	— — 25th of July.
12. Laodicus (Λαοδικίος)	30	— — 25th of August.

Among the Ephesians we find the following months:—

1—4. Unknown.		
5. Apatureon (Ἀπατουρεών),	nearly answers to our November.	
6. Posideon (Ποσιδεών)	— —	December.
7. Lennæon (Λένναιών)	— —	January.
8. Unknown.		
9. Artemision (Ἀρτεμισιών)	— —	March.
10. Calamaeon (Καλαμαιών)	— —	April.
11—12. Unknown.		

At a later time the Ephesians adopted the same names as the Macedonians, and began their year with the month of Dios on the 24th of September.

The following is a list of the Bithynian months:—

1. Heræus (Ἡραῖος),	contained 31	days, and began on the 23rd of September.
2. Hermæus (Ἑρμῆος)	— 30	— — 24th of October.
3. Metrous (Μητρώος)	— 31	— — 23rd of November.
4. Dionysius (Διονύσιος)	— 31	— — 24th of December.
5. Heracleius (Ἡράκλειος)	— 28	— — 24th of January.
6. Dios (Δῖος)	— 31	— — 21st of February.
7. Bendidaeus (Βενδιδαῖος)	— 30	— — 24th of March.
8. Strateius (Στράτειος)	— 31	— — 23rd of April.
9. Periepius (Περειπίος)	— 30	— — 24th of May.
10. Arcius (Ἄρκειος)	— 31	— — 23rd of June.
11. Aphrodisius (Ἀφροδισίος)	— 30	— — 24th of July.
12. Demetrius (Δημήτριος)	— 31	— — 23rd of August.

The following system was adopted by the Cyprians:—

1. Aphrodisius (Ἀφροδισίος),	contained 31	days, and began on the 23rd of September.
2. Apogonicus (Ἀπογονικός)	— 30	— — 24th of October.
3. Aënius (Αἰνικός)	— 31	— — 23rd of November.
4. Julius (Ἰούλιος)	— 31	— — 24th of December.
5. Caesarius (Καϊσάριος)	— 28	— — 24th of January.
6. Sebastus (Σεβαστός)	— 30	— — 21st of February.
7. Autocratoricus (Αὐτοκρατορικὸς)	— 31	— — 23rd of March.
8. Demarchexusius (Δημάρχξεύσιος)	— 31	— — 23rd of April.
9. Plethypatus (Πληθύπατος)	— 30	— — 24th of May.
10. Archiereus (Ἀρχιερεῖος)	— 31	— — 23rd of June.
11. Eethius (Ἑσθίος)	— 30	— — 24th of July.
12. Romæus (Ρωμῆος)	— 31	— — 23rd of August.

The system of the Cretans was the same as that used by most of the inhabitants of Asia Minor, viz. —

1. Thesmophorion (Θεσμοφορίων),	contained 31 days, and began on the 23rd of September.
2. Hermæus (Ἑρμαῖος)	— 30 — 24th of October.
3. Eiman (Εἴμας)	— 31 — 23rd of November.
4. Metarchius (Μετάρχιος)	— 31 — 24th of December.
5. Agyius (Ἄγυιος)	— 28 — 24th of January.
6. Dioscurus (Διόσκουρος)	— 31 — 21st of February.
7. Theodosius (Θεοδόσιος)	— 30 — 23rd of March.
8. Pontus (Πόντος)	— 31 — 23rd of April.
9. Rhabinthius (Ραβίνθιος)	— 30 — 24th of May.
10. Hyperberetus (Ἵπερβέρετος)	— 31 — 23rd of June.
11. Necyrius (Νεκύριος)	— 30 — 24th of July.
12. Basilius (Βασίλειος)	— 31 — 23rd of August.

It should be observed that several of the Eastern nations, for the purpose of preventing confusion in their calculations with other nations, dropped the names of their months, and merely counted the months, as the first, second, third, &c. month. For further information see Corsini, *Fest. Att.*, which however is very imperfect; Ideler, *Handbuch der Mathem. u. technischen Chronol.* vol. i. p. 227, &c.; Clinton, *Fest. Hellen.* vol. ii. Append. xix; and more especially K. F. Hermann, *Ueber Griechische Monatskunde*, Göttingen, 1844, 4to., and Th. Bergk, *Beiträge zur Griechischen Monatskunde*, Giessen, 1845, 8vo. [L. S.]

2. ROMAN CALENDAR. — The Year of Romulus.

—The name of Romulus is commonly attached to the year which is said to have prevailed in the earliest times of Rome; but tradition is not consistent with regard to the form of it. The historians Licinius Macer and Fenestella maintained that the oldest year consisted of twelve months, and that it was already in those days an *annus cirtens*, that is, a year which coincided with the period of the sun's course. Censorinus, however, in whose work this statement occurs (*De Die Natali*, c. 20; compare also the beginning of c. 19), goes on to say that more credit is due to Gracianus, Fulvius (Nobilior), Varro, and others, according to whom the Romans in the earliest times, like the people of Alba from whom they sprang, allotted to the year but ten months. This opinion is supported by Ovid in several passages of his *Fasts* (i. 27, 42, iii. 99, 119, 151); by Gellius (*Noct. Att.* iii. 16), Macrobius (*Saturn.* i. 12), Solinus (*Polyh.* i.), and Servius (*ad Georg.* i. 43). Lastly, an old Latin year of ten months is implied in the fact, that at Laurentum (Macrobius i. 15) a sacrifice was offered to Juno Kalendaris on the first of every month except February and January. These ten months were called Martius, Aprilis, Maius, Junius, Quintilis, Sextilis, September, October, November, December. That March was the first month in the year is implied in the last six names; and even Plutarch, who ascribes twelve months to the Romulan year (*Numa*, c. 18), places Januarius and Februarius at the end. The fact is also confirmed by the ceremony of rekindling the sacred fire in the temple of Vesta on the first day of March, by the practice of placing fresh laurels in the public buildings on that day, and by many other customs recorded by Macrobius (i. 12). With regard to the length of the months, Censorinus, Macrobius, and Solinus agree in ascribing thirty-one days to four of them, called *pleni menses*; thirty to the rest called *cavi menses*. The four longer months were Martius, Maius, Quintilis, and October; and these, as Macrobius ob-

serves, were distinguished in the latest form of the Roman calendar by having their nones two days later than any of the other months. The symmetry of this arrangement will appear by placing the numbers in succession:—31, 30; 31, 30; 31, 30, 30; 31; 30, 30. Ovid, indeed, appears to speak of the months as coinciding with the lunar period:—

“Annus erat decimum cum luna repleverat annum:”

but the language of a poet must not be pressed too closely. On the other hand, Plutarch, in the passage already referred to, while he assigns to the old year twelve months and 365 days, speaks of the months as varying without system between the limits of twenty and thirty-five days. Such an irregularity is not incredible, as we find that even when Censorinus wrote (A. D. 238), the Alban calendar gave 36 days to March, 22 to May, 18 to Sextilis, and 16 to September; while at Tusculum Quintilis had 36 days, October 32; and again at Aricia the same month, October, had no less than 39. (Censorinus, c. 22.) The Romulan year, if we follow the majority of authors, contained but 304 days; a period differing so widely from the real length of the sun's course, that the months would rapidly revolve through all the seasons of the year. This inconvenience was remedied, says Macrobius (i. 13), by the addition of the proper number of days required to complete the year; but these days, he goes on to say, did not receive any name as a month. Servius speaks of the intercalated period as consisting of two months, which at first had no name, but were eventually called after Janus and Februus. That some system of intercalation was employed in the Romulan year, was also the opinion of Licinius Macer. (Macrobius i. 13.) This appears to be all that is handed down with regard to the earliest year of the Romans.

As a year of ten months and 304 days, at once falls greatly short of the solar year, and contains no exact number of lunations, some have gone so far as to dispute the truth of the tradition in whole or part, while others have taxed their ingenuity to account for the adoption of so anomalous a year. Puteanus (*De Nundinis*, in Grævius Thesaurus, vol. viii.), calling to mind that the old Roman or Etruscan week contained eight days*, every eighth

* Hence there are found attached to the successive days in the old calendars the recurring series of letters A, B, C, D, E, F, G, H, no doubt for the purpose of fixing the nundines in the week of eight days; precisely in the same way in which the first seven letters are still employed in ecclesiastical calendars, to mark the days of the Christian week.

day being specially devoted to religious and other public purposes, under the name of *nonas* or *sestinae*, was the first to point out that the number 304 is a precise multiple of eight. To this observation, in itself of little moment, Niebuhr has given some weight, by further noticing that the 38 *nundines* in a year of 304 days tally exactly with the number of *dies fasti* afterwards retained in the Julian calendar. Another writer, Pontedera, observed that 304 bore to 365 days nearly the ratio of 5 to 6, six of the Romulan years containing 1824, five of the longer periods 1825 days; and Niebuhr (*Rom. Hist.* vol. i. p. 271), who is a warm advocate of the ten-month year, has made much use of this consideration. He thus explains the origin of the well-known quinquennial period called the *lustrum*, which Censorinus (c. 18) expressly calls an *annus magnus*, that is, in the modern language of chronology, a cycle. Moreover, the year of ten months, says the same writer (p. 279), was the term for mourning, for paying portions left by will, for credit on the sale of yearly profits; most probably for all loans; and it was the measure for the most ancient rate of interest. [FENUS.] Lastly, he finds in the existence of this short year the solution of certain historical difficulties. A peace, or rather truce, with Veii was concluded in the year 280 of Rome, for 40 years. In 316 Fidene revolted and joined Veii, which implies that Veii was already at war with Rome; yet the Veientes are not accused of having broken their oaths. (*Liv.* iv. 17.) Again, a twenty-years' truce, made in 329, is said, by Livy, to have expired in 347 (iv. 58.) These facts are explained by supposing the years in question to have been those of ten months, for 40 of these are equal to 33½ ordinary years, 20 to 16½; so that the former truce terminated in 314, the latter in 346. Similarly, the truce of eight years concluded with the Volscians in 323, extended in fact to no more than 6½ full years; and hence the Volscians resumed the war in 331, without exposing themselves to the charge of perjury.

These ingenious and perhaps satisfactory speculations of the German critic, of course imply that the decimestrial year still survived long after the regal government had ceased; and in fact he believes that this year, and the lunar year, as determined by Scaliger's proposed cycle of 22 years, co-existed from the earliest times down to a late period. The views of Niebuhr do not require that the months should have consisted of 31 or 30 days; indeed it would be more natural to suppose that each month, as well as the year, contained a precise number of eight-day weeks; eight of the months, for instance, having four such weeks, the two others but three. Even in the so-called calendar of Numa we find the Etruscan week affecting the division of the month, there being eight days between the *nonas* and *ides*, from which circumstances the *nonas* received their name; and again two such weeks from the *ides* to the end of the month; and this, whether the whole month contained 31 or 29 days.

The Year of Numa.—Having described the Romulan year, Censorinus (c. 20) proceeds thus:—"Afterwards, either by Numa, as Fulvius has it, or according to Junius by Tarquin, there was instituted a year of twelve months and 355 days, although the moon in twelve lunations appears to complete but 354 days. The excess of a day was owing either to error, or what I consider more

probable, to that superstitious feeling, according to which an odd number was accounted full (*plenus*) and more fortunate. Be this as it may, to the year which had previously been in use (that of Romulus) one-and-fifty days were now added; but as these were not sufficient to constitute two months, a day was taken from each of the before-mentioned hollow months, which added thereto, made up 57 days, out of which two months were formed, Januarius with 29, and Februarius with 28 days. Thus all the months henceforth were full, and contained an odd number of days, save Februarius, which alone was hollow, and hence deemed more unlucky than the rest." In this passage it is fitting to observe that the terms *pleni* and *cavi menses* are applied in a sense precisely opposite to the practice of the Greek language in the phrases *μήνες πληροί* and *κοίλοι*. The mysterious power ascribed to an odd number is familiar from the *Numero deus impare gaudet* of Virgil. Pliny also (*H. N.* xxviii. 5) observes,—*Impares numeros ad omnia vehementiores credimus*. It was of course impossible to give an odd number of days at the same time to the year on the one hand, and to each of the twelve months on the other; and yet the object was in some measure effected by a division of February itself into 23 days, and a supernumerary period of five days. (See the mode of intercalation below.) The year of Numa then, according to Censorinus, contained 355 days. Plutarch tells us that Numa estimated the anomaly of the sun and moon, by which he means the difference between twelve lunations and the sun's annual course at eleven days, i. e. the difference between 365 and 354 days. Macrobius, too, says that the year of Numa had at first 354, afterwards 355 days. Compare herewith *Liv.* i. 19; *Ovid. Fast.* i. 43, iii. 161; *Aurel. Vict.* c. 3; *Florus*, i. 2; *Solinus*, c. 1.

Twelve lunations amount to 354 days, 8h. 48' 36", so that the so-called year of Numa was a tolerably correct lunar year; though the months would have coincided more accurately with the single lunations, if they had been limited to 30 and 29 days, instead of 31, 29, and 28 days. That it was in fact adapted to the moon's course is the concurrent assertion of ancient writers, more particularly of Livy, who says: (*Numa*) *omnium primum ad cursum lunae in duodecim mensis describit annum*. Unfortunately however, many of the same writers ascribe to the same period the introduction of such a system of intercalation as must at once have dislocated the coincidence between the civil month and the lunar period. At the end of two years the year of Numa would have been about 22 days in arrear of the solar period, and accordingly it is said an intercalary month of that duration, or else of 23 days, was inserted at or near the end of February, to bring the civil year into agreement with the regular return of the seasons. Of this system of intercalation a more accurate account shall presently be given. But there is strong reason for believing that this particular mode of intercalation was not contemporary in origin with the year of Numa.

In antiquarian subjects it will generally be found that the assistance of etymology is essential; because the original names that belong to an institution often continue to exist, even after such changes have been introduced, that they are no longer adapted to the new order of things; thus they survive as useful memorials of the past. In this

way we are enabled by the original meaning of words, aided by a few fragments of a traditional character, to state that the Romans in early times possessed a year which altogether depended upon the phases of the moon. The Latin word *mensis* (Varro, *De Ling. Lat.* vi., or in the old editions, v. 54), like the Greek *μήν* or *μῆς*, and the English *month*, or German *monath*, is evidently connected with the word *moon*. Again, while in the Greek language the name *νοῦμηνία* (new-moon), or *ἔτη καὶ νέα*, given to the first day of a month, betrays its lunar origin, the same result is deduced from the explanation of the word *kalendae*, as found in Macrobius (i. 15). "In ancient times," says that writer, "before Cn. Flavius the scribe, against the pleasure of the patricians, made the fasti known to the whole people (the end of the 4th century B. C.), it was the duty of one of the pontifices minores to look out for the first appearance of the new moon; and as soon as he described it, to carry word to the rex sacrificulus. Then a sacrifice was offered by these priests, after which the same pontifex having summoned the plebs (*calata plebs*) to a place in the capitol, near the Curia Calabra, which adjoins the Casa Romuli, there announced the number of days which still remained to the nones, whether five or seven, by so often repeating the word *καλῶ*." There was no necessity to write this last word in Greek characters, as it belonged to the old Latin. In fact, in this very passage, it occurs in both *calata* and *calabra*; and again, it remained to the latest times in the word *nomenclator*. In regard to the passage here quoted from Macrobius, it must be recollected that while the moon is in the immediate vicinity of the sun, it is impossible to see it with the naked eye, so that the day on which it is first seen is not of necessity the day of the actual conjunction. We learn elsewhere that as soon as the pontifex discovered the thin disc, a hymn was sung, beginning *Jana novella*, the word *Jana* (Macrob. *Sat.* i. 9; Varro, *De Re Rust.* i. 37) being only a dialectic variety of *Diana*, just as *Dispiter* or *Diupiter* corresponds to *Jupiter*; and other examples might readily be given, for the change occurs in almost every word which has the syllables *de* or *di* before a vowel. Again, the consecration of the kalends to Juno (Ovid. *Fasts.* i. 55, vi. 39; Macrob. *Sat.* i. 9. 15) is referred by the latter writer to the fact that the months originally began with the moon, and that Juno and Luna are the same goddess; and the poet likewise points at the same connection in his explanation of Juno's epithet *Lucina*. Moreover, at Laurentum Juno was worshipped as Juno Kalendaria. Even so late as 448 B. C. strictly lunar months were still in use; for Dionysius (*Antiq.* x. 59) says that Appius, in that year, received the consular authority on the ides of May, being the day of full moon, for at that time, he adds, the Romans regulated their months by the moon. In fact, so completely was the day of the month, which they called the ides, associated with the idea of the full moon, that some derived the word *ἰδὲ τοῦ εἰδους*, *quod eo dispensam speciem luna demonstrat*. (Macrob. *ibid.*) Quietly to insert the idea of *plenam*, when the Greek word signified merely *speciem*, is in accordance with those loose notions which prevailed in all ancient attempts at etymology. But though the derivation is of course groundless, it is of historical value, as showing the notion connected with the term *ides*.

For the same reason probably the ides of March were selected for the sacrifice to the goddess Anna Perenna, in whose name we have nothing more than the feminine form of the word *annus*, which, whether written with one *s* or two, whether in its simple form *annus*, or diminutive *annulus*, still always signifies a *circle*. Hence, as the masculine form was easily adopted to denote the *period* of the sun's course, so the feminine in like manner might well be employed to signify, first the moon's revolution, and then the moon herself. The tendency among the Romans to have the same word repeated, first as a male and then as a female deity, has been noticed by Niebuhr; and there occurs a complete parallel in the name *Dianus*, afterwards *Janus*, for the god of *dies*, or light, the sun; *Diana*, afterwards *Jana*, for the goddess of light, the moon; to say nothing of the words *Jupiter* and *Juno*. That the month of March should have been selected arose from its being the first of the year, and a sacrifice to the moon might well take place on the day when her power is fully displayed to man. The epithet *Perenna* itself means no more than *ever-circling*. Nay, Macrobius himself (c. 12) connects the two words with *annus*, when he states the object of the sacrifice to be—*ut annare perennareque commode liceat*.

Another argument in favour of the lunar origin of the Roman month, is deducible from the practice of counting the days backward from the Kalends, Nones, and Ides; for the phrases will then amount to saying—"It wants so many days to the new moon, to the first quarter, to full moon." It would be difficult, on any other hypothesis, to account for the adoption of a mode of calculation, which, to our notions at least, is so inconvenient; and indeed it is expressly recorded that this practice was derived from Greece, under which term the Athenians probably are meant; and by these we know that a strictly lunar year was employed down to a late period. (Macrob. i. 16.)

But perhaps the most decisive proof of all lies in the simple statement of Livy (i. 19), that Numa so regulated his lunar year of twelve months by the insertion of intercalary months, that at the end of every *nineteenth* year it again coincided with the same point in the sun's course from which it started. His words are—*Quem (annum) intercalariis mensibus interponendis ita dispensavit ut vicensimo anno ad metam eandem solis unde orsi sunt, plenis annorum omnium spatiis, dies congruerent*. We quote the text; because editors, in support of a theory, have taken the liberty of altering it by the insertion of the word *quarto*, forgetting too that the words *quarto et vicensimo anno* signify, not *every twenty-fourth year*, which their theory requires, but *every twenty-third*, according to that peculiar view of the Romans which led them to count both the extremes in defining the interval from one point to another; and which still survives in the medical phrases *tertian* and *quartan ague*, as well as in the French expressions *huit jours* for a week, and *quinze jours* for a fortnight. Accordingly, it is not doing violence to words, but giving the strict and necessary meaning to them, when, in our own translation of the passage in Livy, we express *vicensimo anno* by *every nineteenth year*.

Now 19 years, it is well known, constitute a most convenient cycle for the conjunction of a lunar and solar year. A mean lunation, or synodic month, ac-

cording to modern astronomy, is 29d. 12h. 44' 3", and a mean tropical year 365d. 5h. 48' 48". Hence it will be found, that 235 lunations amount to 6939d. 16h. 31' 45", while 19 tropical years give 6939d. 14h. 27' 12", so that the difference is only 2h. 4' 33". Although it was only in the second century a.c. that Hipparchus gave to astronomical observations a nicety which could pretend to deal with seconds*; yet even in the regal period of Rome, the Greek towns in the south of Italy must already have possessed astronomers, from whom the inhabitants of Latium could have borrowed such a rough practical knowledge of both the moon and sun's period, as was sufficient to show that at the end of 19 solar years the moon's age would be nearly what it was at the commencement; and it should be recollected that the name of Numa is often connected by tradition with the learning of *Magna Græcia*. At any rate a cycle of 19 years was introduced by Meton at Athens, in the year 432 a.c.; and the knowledge of it among the learned may probably have preceded by a long period its introduction into popular use, the more so as religious festivals are generally connected with the various divisions of time, and superstition therefore would be most certainly opposed to innovations of the almanack. How the Romans may have intercalated in their 19 lunar years the seven additional months which are requisite to make up the whole number of 235 ($=12 \times 19 + 7$) lunations, is a subject upon which it would be useless to speculate. From a union of these various considerations, it must be deemed highly probable that the Romans at one period possessed a division of time dependent upon the moon's course.

Year of the Decemviri (so called by Ideler).—The motives which induced the Romans to abandon the lunar year are no where recorded; nor indeed the date of the change. We have seen, however, that even in the year 448 a.c., the year was still regulated by the moon's course. To this must be added that, according to Tuditanus and Cassius Hemina, a bill on the subject of intercalation was brought before the people by those decemviri, who added the two new tables to the preceding Ten (Macrob. i. 13), that is in the year 450 a.c. That the attention of these decemviri was called to the calendar is also proved by the contents of the Eleventh Table, wherein it is decreed that "the festivals shall be set down in the calendar." We have the authority of Varro indeed, that a system of intercalation already existed at an earlier date; for he says that there was a very ancient law engraved on a bronze pillar by L. Pinarius and Furius in their consulate *cui mentio intercalaris ascribitur*. We add the last words in Latin from the text of Macrobius (c. 13), because their import is doubtful. If we are right in interpreting them thus—"the date upon which is expressed by a month called *intercalary*," all that is meant may be one of the intercalary lunations, which must have existed even in the old lunar year. At the period of the decemviral legislation there was probably instituted that form of the year of 354 days, which was corrected by the short intercalary month, called *Mercedonius*, or *Mercedinus*; but so corrected as to deprive the year and months of all connection with the moon's course. The length of the several or-

dinary months was probably that which Censorinus has erroneously allotted to the months of Numa's lunar year, viz.:—

Martius	31 days.	September	29 days.
Aprilis	29 "	October	31 "
Maius	31 "	November	29 "
Junius	29 "	December	29 "
Quintilis	31 "	Januarius	29 "
Sextilis	29 "	Februarius	28 "

Such, at any rate, was the number of days in each month immediately prior to the Julian correction; for both Censorinus and Macrobius say that Caesar added two days to Januarius, Sextilis, and December, and one to Aprilis, Junius, September, and November. Hence Niebuhr appears to have made an error when he asserts (vol. ii. note 1179) that July acquired two more days at the reformation of the calendar, and founds thereon a charge of carelessness against Livy. Moreover that November had but 29 days prior to the correction, in other words, that the XVII. Kal. Dec. immediately followed the Idus Nov., appears from a comparison of Cicero's letters to Tiro (*Ad Fam.* xvi. 7. 9); for he reaches Corcyra a. d. V. Id. Nov., and on the XV. Kal. Dec. complains—*Septimum jam diem transibamus*. The seven days in question would be IV. Id., III. Id., Prid. Id., Id. Nov., XVII. Kal. Dec., XVI. Kal. Dec., XV. Kal. Dec. That the place of the nones and ides was in each month the same before the Julian correction as afterwards, is asserted by Macrobius.

The main difficulty is with regard to the mode of intercalation. Plutarch, we have already observed, speaks of an intercalation, by him referred to Numa, of 22 days in alternate years in the month of February. Censorinus, with more precision, says that the number of days in each intercalation was either 22 or 23, and Macrobius agrees with him in substance. Of the point at which the supernumerary month was inserted, the accounts are these:—Varro (*De Ling. Lat.* vi. 55) says, the twelfth month was February; and when intercalations take place, the five last days of this month are removed. Censorinus agrees herewith, when he places the intercalation generally (*potissimum*) in the month of February, between the Terminalia and the Regifugium, that is immediately after the day called by the Romans a. d. VI. Kal. Mart. or by us the 24th of February. This, again, is confirmed by Macrobius. The setting aside of the last five days agrees with the practice which Herodotus ascribes to the Egyptians of considering the five days over the 360 as scarcely belonging to the year, and not placing them in any month. So completely were these five days considered by the Romans to be something extraneous, that the soldier appears to have received pay only for 360 days. For in the time of Augustus the soldier received *deni asses* per day, i.e. $\frac{1}{4}$ of a denarius; but Domitian (Suet. *Dom.* 7) *addidit quartum stipendium aureos ternos*. Thus, as 25 denarii made an aureus, the annual pay prior to Domitian was $(360 \times 10) + 16$ denarii = $(360 \times 10) + (16 \times 25)$ aurei = 9 aurei; and thus the addition of three aurei was precisely a fourth more. Lastly, the festival Terminalia, as its name implies, marked the end of the year, and this by the way again proves that March was originally the first month.

The intercalary month was called *Μερεσιδωρος*, or *Μερεσιδωριος*. (Plutarch, *Numa*, 19; *Cæsar*, 59.)

* His valuation of the synodic month was 29d. 12h. 44' 34". (Ptolem. *Almag.* iv. 2.)

We give it in Greek characters, because it happens somewhat strangely that no Latin author has mentioned the name, the term *mensis intercalaris* or *intercalarius* supplying its place. Thus, in the year of intercalation, the day after the ides of February was called, not as usual a. d. XVI. Kalendas Martias, but a. d. XI. Kalendas interkalares. So also there were the Nonas interkalares, and Idus interkalares, and after this last came either a. d. XV. or XVI. Kal. Mart., according as the month had 22 or 23 days, or rather, if we add the five remaining days struck off from February, 27 or 28 days. In either case the Regifugium retained its ordinary designation a. d. VI. Kal. Mart. (See Asconius, *Ad Orat. pro Milone*, and the *Fasti Triumphales*, 493, A. U. C.) When Cicero writes to Atticus (vi. 1), *Accepi tuas litteras a. d. V. Terminalia* (i. e. Feb. 19); he uses this strange mode of defining a date, because, being then in Cilicia, he was not aware whether any intercalation had been inserted that year. Indeed, he says, in another part of the same letter, *Ea sic observabo, quasi interkalatum non sit*.

Besides the intercalary month, mention is occasionally made of an intercalary day. The object of this was solely to prevent the first day of the year, and perhaps also the nones, from coinciding with the nundinae, of which mention has been already made. (Macrob. i. 13.) Hence in Livy (xlv. 44), *Intercalatum eo anno; postridie Terminalia intercalares fuerunt*. This would not have been said had the day of intercalation been invariably the same; and again Livy (xliii. 11), *Hoc anno intercalatum est. Tertio die post Terminalia Kalendas intercalares fuere*, i. e. two days after the Terminalia, so that the dies intercalaris was on this occasion inserted, as well as the month so called. Nay, even after the reformation of the calendar, the same superstitious practice remained. Thus, in the year 40 B. C., a day was inserted for this purpose, and afterwards an omission of a day took place, that the calendar might not be disturbed. (Dion Cass. xlviii. 33.)

The system of intercalating in alternate years 22 or 23 days, that is ninety days in eight years, was borrowed, we are told by Macrobius, from the Greeks; and the assertion is probable enough, first, because from the Greeks the Romans generally derived all scientific assistance; and secondly, because the decemviral legislation was avowedly drawn from that quarter. Moreover, at the very period in question, a cycle of eight years appears to have been in use at Athens, for the Metonic period of 19 years was not adopted before 432 B. C. The Romans, however, seem to have been guilty of some clumsiness in applying the science they derived from Greece. The addition of ninety days in a cycle of eight years to a lunar year of 354 days, would, in substance, have amounted to the addition of $11\frac{1}{2}$ ($=90 \div 8$) days to each year, so that the Romans would virtually have possessed the Julian calendar. As it was, they added the intercalation to a year of 355 days; and consequently, on an average, every year exceeded its proper length by a day, if we neglect the inaccuracies of the Julian calendar. Accordingly we find that the civil and solar years were greatly at variance in the year 564 A. U. C. On the 11th of Quintilis, in that year, a remarkable eclipse of the sun occurred. (Liv. xxxvii. 4.) This eclipse, says Ideler, can have been no other than the one which

occurred on the 14th of March, 190 B. C. of the Julian calendar, and which at Rome was nearly total. Again, the same historian (xlv. 37) mentions an eclipse of the moon which occurred in the night between the 3rd and 4th of September, in the year of the city 586. This must have been the total eclipse in the night between the 21st and 22nd of June, 168 B. C.

That attempts at legislation for the purpose of correcting so serious an error were actually made, appears from Macrobius, who, aware himself of the cause of the error, says that, by way of correction, in every third octennial period, instead of 90 intercalary days, only 66 were inserted. Again it appears that M'. Acilius Glabrio, in his consulship 169 B. C., that is, the very year before that in which the above-mentioned lunar eclipse occurred, introduced some legislative measure upon the subject of intercalation. (Macrob. i. 13.) According to the above statement of Macrobius, a cycle of 24 years was adopted, and it is this very passage which has induced the editors of Livy to insert the word *quarto* in the text already quoted.

As the festivals of the Romans were for the most part dependent upon the calendar, the regulation of the latter was intrusted to the college of pontifices, who in early times were chosen exclusively from the body of patricians. It was therefore in the power of the college to add to their other means of oppressing the plebeians, by keeping to themselves the knowledge of the days on which justice could be administered, and assemblies of the people could be held. In the year 304 B. C., one Cn. Flavius, a secretary (*scriba*) of Appius Claudius, is said fraudulently to have made the *Fasti publici* (Liv. xi. 46; Cic. *Pro Murena*, c. 11; Plin. *H. N.* xxxiii. 1; Val. Max. ii. 5; A. Gallius, vi. 9; Macrob. i. 15; Pomponius, *De Origine Juris* in the Digest l. tit. 2; and Cicero, *Ad Att.* vi. 1.) It appears however from the last passage that Atticus doubted the truth of the story. In either case, the other privilege of regulating the year by the insertion of the intercalary month gave them great political power, which they were not backward to employ. Every thing connected with the matter of intercalation was left, says Censorinus (c. 20), to the unrestrained pleasure of the pontifices; and the majority of these, on personal grounds, added to or took from the year by capricious intercalations, so as to lengthen or shorten the period during which a magistrate remained in office, and seriously to benefit or injure the farmer of the public revenue. Similar to this is the language employed by Macrobius (i. 4), Ammianus (xxvi. 1), Solinus (c. 1), Plutarch (*Caes.* c. 59), and their assertions are confirmed by the letters of Cicero, written during his proconsulate in Cilicia, the constant burden of which is a request that the pontifices will not add to his year of government by intercalation.

In consequence of this licence, says Suetonius (*Caes.* 40), neither the festivals of the harvest coincided with the summer, nor those of the vintage with the autumn. But we cannot desire a better proof of the confusion than a comparison of three short passages in the third book of *Caesar's Bell. Civ.* (c. 6), *Prædix nonas Januariis novis solvit*—(c. 9) *jamque hiems adpropinquabat*—(c. 25) *multi jam menses transierant et hiems jam præcipitaverat*. Year of Julius Caesar.—In the year 46 B. C. Caesar, now master of the Roman world, crowned

his other great services to his country by employing his authority, as pontifex maximus, in the correction of this serious evil. For this purpose he availed himself of the services of Sosigenes, the peripatetic, and a scriba named M. Flavius, though he himself too, we are told, was well acquainted with astronomy, and indeed was the author of a work of some merit upon the subject, which was still extant in the time of Pliny. The chief authorities upon the subject of the Julian reformation are Plutarch (*Cæs.* c. 59), Dion Cassius (xliii. 26), Appian (*De Bell. Cæ.* ii. ad extr.), Ovid (*Fasti*, iii. 155), Suetonius (*Cæs.* c. 40), Pliny (*H. N.* xviii. 57), Censorinus (c. 20), Macrobius (*Sat.* i. 14), Ammianus Marcellinus (xxvi. 1), Solinus (l. 45). Of these Censorinus is the most precise:—"The confusion was at last," says he, "carried so far that C. Caesar, the pontifex maximus, in his third consulate, with Lepidus for his colleague, inserted between November and December two intercalary months of 67 days, the month of February having already received an intercalation of 23 days, and thus made the whole year to consist of 445 days. At the same time he provided against a repetition of similar errors by casting aside the intercalary month, and adapting the year to the sun's course. Accordingly, to the 355 days of the previously existing year, he added ten days, which he so distributed between the seven months having 29 days, that January, Sextilia, and December received two each, the others but one; and these additional days he placed at the end of the several months, no doubt with the wish not to remove the various festivals from those positions in the several months which they had so long occupied. Hence in the present calendar, although there are seven months of 31 days, yet the four months, which from the first possessed that number, are still distinguishable by having their nones on the seventh, the rest having them on the fifth of the month. Lastly, in consideration of the quarter of a day, which he considered as completing the true year, he established the rule that, at the end of every four years, a single day should be intercalated, where the month had been hitherto inserted, that is, immediately after the Terminalia; which day is now called the *Bissextum*."

This year of 445 days is commonly called by chronologists the year of confusion; but by Macrobius, more fitly, the last year of confusion. The kalends of January, of the year 708 A. U. C., fell on the 13th of October, 47 B. C. of the Julian calendar; the kalends of March, 708 A. U. C., on the 1st of January, 46 B. C.; and lastly, the kalends of January, 709 A. U. C., on the 1st of January, 45 B. C. Of the second of the two intercalary months inserted in this year after November, mention is made in Cicero's letters (*Ad Fam.* vi. 14).

It was probably the original intention of Caesar to commence the year with the shortest day. The winter solstice at Rome, in the year 46 B. C., occurred on the 24th of December of the Julian calendar. His motive for delaying the commencement for seven days longer, instead of taking the following day, was probably the desire to gratify the superstition of the Romans, by causing the first year of the reformed calendar to fall on the day of the new moon. Accordingly, it is found that the mean new moon occurred at Rome on the 1st of January, 45 B. C., at 6h. 16' P. M. In this way alone can be explained the phrase used by Macrobius: *Annum civilem Caesar, habitis*

ad lunam dimensionibus constitutum, edicto palam proposito publicavit. This edict is also mentioned by Plutarch where he gives the anecdote of Cicero, who, on being told by some one that the constellation Lyra would rise the next morning, observed, "Yes, no doubt, in obedience to the edict."

The mode of denoting the days of the month will cause no difficulty, if it be recollected, that the kalends always denote the first of the month, that the nones occur on the seventh of the four months March, May, Quintilis or July, and October, and on the fifth of the other months; that the ides always fall eight days later than the nones; and lastly, that the intermediate days are in all cases reckoned backwards upon the Roman principle already explained of counting both extremes.

For the month of January the notation will be as follows:—

1 Kal. Jan.	17 a. d. XVI. Kal. Feb.
2 a. d. IV. Non. Jan.	18 a. d. XV. Kal. Feb.
3 a. d. III. Non. Jan.	19 a. d. XIV. Kal. Feb.
4 Prid. Non. Jan.	20 a. d. XIII. Kal. Feb.
5 Non. Jan.	21 a. d. XII. Kal. Feb.
6 a. d. VIII. Id. Jan.	22 a. d. XI. Kal. Feb.
7 a. d. VII. Id. Jan.	23 a. d. X. Kal. Feb.
8 a. d. VI. Id. Jan.	24 a. d. IX. Kal. Feb.
9 a. d. V. Id. Jan.	25 a. d. VIII. Kal. Feb.
10 a. d. IV. Id. Jan.	26 a. d. VII. Kal. Feb.
11 a. d. III. Id. Jan.	27 a. d. VI. Kal. Feb.
12 Prid. Id. Jan.	28 a. d. V. Kal. Feb.
13 Id. Jan.	29 a. d. IV. Kal. Feb.
14 a. d. XIX. Kal. Feb.	30 a. d. III. Kal. Feb.
15 a. d. XVIII. Kal. Feb.	31 Prid. Kal. Feb.
16 a. d. XVII. Kal. Feb.	

The letters *a d* are often, through error, written together, and so confounded with the preposition *ad*, which would have a different meaning, for *ad kalendas* would signify *by*, i. e. *on* or *before* the *kalends*. The letters are in fact an abridgement of *ante diem*, and the full phrase for "on the second of January" would be *ante diem quartum nonas Januariæ*. The word *ante* in this expression seems really to belong in sense to *nonas*, and to be the cause why *nonas* is an accusative. Hence occur such phrases as (*Cic. Phil.* iii. 8), *in ante diem quartum Kal. Decembris distuli*, "he put it off to the fourth day before the kalends of December," (*Caes. Bell. Gall.* i. 6) *Is dies erat ante diem V. Kal. Apr.*, and (*Caes. Bell. Civ.* i. 11) *ante quem diem iterum sit, for quo die*. The same confusion exists in the phrase *post paucos dies*, which means "a few days after," and is equivalent to *paucis post diebus*. Whether the phrase *Kalendas Januarii* was ever used by the best writers is doubtful. The words are commonly abbreviated; and those passages where Aprilis, Decembris, &c. occur, are of no avail, as they are probably accusatives. The *ante* may be omitted, in which case the phrase will be *die quarto nonarum*. In the leap year (to use a modern phrase), the last days of February were called—

Feb. 23. = a. d. VII. Kal. Mart.
Feb. 24. = a. d. VI. Kal. Mart. posteriorem.
Feb. 25. = a. d. VI. Kal. Mart. priorem.
Feb. 26. = a. d. V. Kal. Mart.
Feb. 27. = a. d. IV. Kal. Mart.
Feb. 28. = a. d. III. Kal. Mart.
Feb. 29. = Prid. Kal. Mart.

In which the words *prior* and *posterior* are used in

reference to the retrograde direction of the reckoning. Such at least is the opinion of Ideler, who refers to Celsus in the Digest (50. tit. 16. s. 98).

From the fact that the intercalated year has two days called *ante diem sextum*, the name of bissextile has been applied to it. The term *annus bissextilis*, however, does not occur in any writer prior to Beda, but in place of it the phrase *annus bissextus*.

It was the intention of Caesar that the bissextum should be inserted *peracto quadriennio circumsu*, as Censorinus says, or *quinto quoque incipiente anno*, to use the words of Macrobius. The phrase, however, which Caesar used seems to have been *quarto quoque anno*, which was interpreted by the priests to mean every third year. The consequence was, that in the year 8 a. c. the Emperor Augustus, finding that three more intercalations had been made than was the intention of the law, gave directions that for the next twelve years there should be no bissextile.

The services which Caesar and Augustus had conferred upon their country by the reformation of the year, seem to have been the immediate causes of the compliments paid to them by the insertion of their names in the calendar. Julius was substituted for Quinctilis, the month in which Caesar was born, in the second Julian year, that is, the year of the dictator's death (Censorinus, c. 22); for the first Julian year was the first year of the corrected Julian calendar, that is, 45 a. c. The

name Augustus, in place of Sextilis, was introduced by the emperor himself, at the time when he rectified the error in the mode of intercalating (Suet. Aug. c. 31), *anno Augustano a. c.* The first year of the Augustan era was 27 a. c., viz., that in which he first took the name of Augustus, *as vii. et M. Vipsanio Agrippa co. s.* He was born in September; but gave the preference to the preceding month, for reasons stated in the *senatus-consultum*, preserved by Macrobius (i. 12). "Whereas the Emperor Augustus Caesar, in the month of Sextilis, was first admitted to the consulate, and thrice entered the city in triumph, and in the same month the legions, from the Janiculum, placed themselves under his auspices, and in the same month Egypt was brought under the authority of the Roman people, and in the same month an end was put to the civil wars; and whereas for these reasons the said month is, and has been, most fortunate to this empire, it is hereby decreed by the senate that the said month shall be called Augustus." "A plebiscitum, to the same effect, was passed on the motion of Sextus Pacuvius, tribune of the plebs."

The month of September in like manner received the name of Germanicus from the general so called, and the appellation appears to have existed even in the time of Macrobius. Domitian, too, conferred his name upon October; but the old word was restored upon the death of the tyrant.

Our days of the Month.	March, May, July, October, have 31 days.	January, August, December, have 31 days.	April, June, September, November, have 30 days.	February has 28 days, and in Leap Year 29.

The Fasti of Caesar have not come down to us in their entire form. Such fragments as exist may be seen in Gruter's *Inscriptiones*, or more completely in Foggini's work, *Fastorum Anni Romani Reliquiae*. See also some papers by Ideler in the *Berlin Transactions* for 1822 and 1823.

The Gregorian Year.—The Julian calendar supposes the mean tropical year to be 365d. 6h.; but this, as we have already seen, exceeds the real amount by 11' 12", the accumulation of which, year after year, caused at last considerable inconvenience. Accordingly, in the year, 1582, Pope Gregory the XIII., assisted by Aloysius, Lilius, Christoph. Clavius, Petrus Ciacinius, and others, again reformed the calendar. The ten days by which the year had been unduly retarded were struck out by a regulation that the day after the fourth of October in that year should be called the fifteenth; and it was ordered that, whereas hitherto an intercalary day had been inserted every four years, for the future three such intercalations in the course of four hundred years should be omitted, viz., in those years which are divisible without remainder by 100, but not by 400. Thus, according to the Julian calendar, the years, 1600, 1700, 1800, 1900, and 2000 were to have been bissextile; but, by the regulation of Gregory, the years 1700, 1800, and 1900, were to receive no intercalation, while the years 1600 and 2000 were to be bissextile, as before. The bull which effected this change, was issued Feb. 24, 1582. The fullest account of this correction is to be found in the work of Clavius, entitled *Romani Calendarii a Gregorio XIII. P. M. restituti Explicatio*. As the Gregorian calendar has only 97 leap-years in a period of 400 years, the mean Gregorian year is $(303 \times 365 + 97 \times 366) \div 400$, that is 365d. 5h. 49' 12", or only 24" more than the mean tropical year. This difference in 60 years would amount to 24', and in 60 times 60, or 3600 years, to 24 hours, or a day. Hence the French astronomer, Delambre, has proposed that the years 3600, 7200, 10,800, and all multiples of 3600 should not be leap years. The Gregorian calendar was introduced in the greater part of Italy, as well as in Spain and Portugal, on the day named in the bull. In France, two months after, by an edict of Henry III., the 9th of December was followed by the 20th. The Catholic parts of Switzerland, Germany, and the Low Countries, adopted the correction in 1583, Poland in 1586, Hungary in 1587. The Protestant parts of Europe resisted what they called a Papistical invention for more than a century. At last, in 1700, Protestant Germany, as well as Denmark and Holland, allowed reason to prevail over prejudice; and the Protestant cantons of Switzerland copied their example the following year.

In England the Gregorian calendar was first adopted in 1752, and in Sweden in 1753. In Russia, and those countries which belong to the Greek church, the Julian year, or *old style* as it is called, still prevails.

In this article free use has been made of Ideler's work *Lehrbuch der Chronologie*. For other information connected with the Roman measurement of time, see ASTRONOMIA; DIES; HOROLOGIUM; LUSTRUM; NUNDINAE; SÆCULUM. [T. H. K.]

CA'LIDA, or CALDA, the warm drink of the Greeks and Romans, which consisted of warm water mixed with wine, with the addition probably of spices. This was a very favourite kind of drink

with the ancients, and could always be procured at certain shops or taverns, called *thermopolis* (Plant. Cur. ii. 3. 13, Trin. iv. 3. 6, Rud. ii. 6. 45), which Claudius commanded to be closed at one period of his reign (Dion Cass. lx. 6). The vessels, in which the wine and water were kept hot, appear to have been of a very elegant form, and not unlike our tea-urns both in appearance and construction. A representation of one of these vessels is given in the *Museo Borbonico* (vol. iii. pl. 63), from which the following woodcut is taken. In the middle of the vessel there is a small cylindrical furnace, in which the wood or charcoal was kept for heating the water; and at the bottom of this furnace, there are four small holes for the ashes to fall through. On the right hand side of the vessel there is a kind of cup, communicating with the part surrounding the furnace, by which the vessel might be filled without taking off the lid; and on the left hand side there is in about the middle a tube with a cock for drawing off the liquid. Beneath the conical cover, and on a level with the rim of the vessel, there is a moveable flat cover, with a hole in the middle, which closes the whole urn except the mouth of the small furnace.

Though there can be no doubt that this vessel was used for the purpose which has been mentioned,

it is difficult to determine its Latin name; but it was probably called *asthepsa* [AUTHEPSA.] Pollux (x. 66) mentions several names which were applied to the vessels used for heating water, of which the *ἰσπολίδης*, which also occurs in Lucian (*Lexiph.* 8), appears to answer best to the vessel which has been described above. (Böttiger, *Sabina*, vol. ii. p. 34; Becker, *Gallus*, vol. ii. p. 175.)

CALIENDRUM, a peruke or wig, mentioned by Horace. (*Serm.* i. 8. 48.)

CA'LIGA, a strong and heavy shoe worn by the Roman soldiers. Although the use of this species of calceamentum extended to the centu-

rions, it was not worn by the superior officers. Hence the common soldiers, including centurions, were distinguished by the name of *caligati* (Suet. *Aug.* 25, *Vitell.* 7); when Cicero therefore says of Pompey "mihi caligae ejus non placebant" (*Ad Att.* ii. 3), he merely uses the words to indicate his military power. Service in the ranks was also designated after this article of attire. Thus Marius was said to have risen to the consulship *a caliga*, i. e. from the ranks (Sen. *De Benef.* v. 16), and Ventidius *juventam inopem in caliga militari tolerasse* (Plin. *H. N.* vii. 44). The Emperor Caligula received that cognomen when a boy, in consequence of wearing the caliga, which his father Germanicus put on his son in order to please the soldiers. (Tacit. *Ann.* i. 41; Suet. *Calig.* 9.) The triumphal monuments of Rome show most distinctly the difference between the caliga of the common soldier [ARMA] and the calceus worn by men of higher rank. [ABOLLA; ARA.] The sole of the caliga was thickly studded with hobnails (*clavi caligarii*, Plin. *H. N.* xxxiv. 41, ix. 18; Juv. *Sat.* iii. 232, xvi. 26).

The *caliga speculatoria* (Suet. *Calig.* 52), made for the use of spies (*speculatores*), was probably much lighter than the ordinary shoe worn by the soldiers. [J. Y.]

CALIX (κύλιξ, comp. Macrob. *Sat.* v. 21).

1. A small drinking-cup, constantly used at symposia and on similar occasions. It is frequently seen in paintings on ancient vases which represent drinking-scenes, and when empty is usually held upright by one of its handles, as shown in the cut under SYMPOSIUM. (Xen. *Symp.* ii. 26; Cic. *Tusc.* iii. 19; Hor. *Serm.* ii. 8, 35, &c.) 2. A vessel used in cooking (Varr. *L. L.* v. 127, ed. Müller; Ov. *Fast.* v. 509.) 3. A tube in the aqueducts attached to the extremity of each pipe, where it entered the castellum. [AQUAEDUCTUS, p. 115, a.]

CALLIS, a beaten path or track made by the feet of cattle. (Serv. *ad Virg. Aen.* iv. 405; Isidor. *Orig.* xv. 16. § 20.) The sheep-walks in the mountainous parts of Campania and Apulia were the property of the Roman state; and as they were of considerable value, one of the quaestors usually had these *calles* assigned to him as his province, whence we read of the *Callium provincia*. His principal duties were to receive the *scriptura*, or tax paid for the pasturage of the cattle, and to protect life and property in these wild and mountainous districts. When the senate wished to put a slight upon the consuls on one occasion they endeavoured to assign to them as their provinces, the care of the woods (*silvae*) and sheep-walks (*calles*). (Tac. *Ann.* iv. 27; Suet. *Caes.* 19, *Claud.* 29; in the last passage the reading is doubtful.)

CALLISTEIA (καλλιστεία), a festival, or perhaps merely a part of one, held by the women of Leabos; at which they assembled in the sanctuary of Hera, and the fairest received the prize of beauty. (Schol. *ad Il.* ix. 128; Suidas, s. v.; Antholog. Pal. ix. 189; Athen. xiii. p. 610.)

A similar contest of beauty, instituted by Cypselus, formed a part of a festival celebrated by the Parrhasians in Arcadia, in honour of the Eleusinian Demeter. The women taking part in it were called *Χρυσόφοροι*. (Athen. xiii. p. 609.)

A third contest of the same kind, in which, however, men only partook, is mentioned by Athe-

naeus (*L. c.*; compare *Etymol. Magn.* s. v.) as occurring among the Eleans in honour of Athena. The fairest man received as prize a suit of armour which he dedicated to Athena, and was adorned by his friends with ribbons and a myrtle wreath, and accompanied to the temple. From the words of Athenaeus (xiii. p. 610), who, in speaking of these contests of beauty, mentions Tenedos along with Leabos, we must infer that in the former island also Callisteia were celebrated. [L. S.]

CALO'NES, the servants of the Roman soldiers, said to have been so called from carrying wood (*κάλλα*) for their use. (Festus, s. v.; Serv. *ad Virg. Aen.* vi. 1.) They are generally supposed to have been slaves, and they almost formed a part of the army, as we may learn from many passages in Caesar: in fact, we are told by Josephus that, from always living with the soldiers and being present at their exercises, they were inferior to them alone in skill and valour. The word calo, however, was not confined to this signification, but was also applied to farm-servants, instances of which usage are found in Horace (*Epist.* i. 14. 42; *Sat.* i. 6. 103).

In Caesar this term is generally found by itself; in Tacitus it is coupled and made almost identical with *lixa*. Still the *calones* and *lixae* were not the same: the latter, in fact, were freemen, who merely followed the camp for the purposes of gain and merchandise, and were so far from being indispensable to an army, that they were sometimes forbidden to follow it (*no lixae sequerentur exercitum*, Sall. *Bell. Jug.* 46). Thus again we read of the *lixae mercatoresque, qui plaustris merces portabant* (Hirtius, *De Bell. Afr.* 75), words which plainly show that the *lixae* were traders and dealers. Livy also (v. 8) speaks of them as carrying on business. The term itself is supposed to be connected with *lixa*, an old word signifying water, inasmuch as the *lixae* supplied this article to the soldiers: since, however, they probably furnished ready-cooked provisions (*elios cibos*), it seems not unlikely that *their* appellation may have some allusion to this circumstance. (See Sall. *L. c.*) [R. W.]

CALU'MNIA. Calumniari is defined by Marcian (Dig. 48. tit. 16. s. 1), *Falsa crimina intendere*; a definition which, as there given, was only intended to apply to criminal matters. The definition of Paulus (*Sentent. Recept.* i. tit. 5) applies to matters both criminal and civil: *Calumniosus est qui sciens prudensque per fraudem negotium alicui comparat*. Cicero (*de Off.* i. 10) speaks of "calumnia," and of the *nimis callida et malitiosa juris interpretatio*, as things related. Gaius says, *Calumnia in adfectu est, sicut furti crimen*; the criminality was to be determined by the intention.

When an accuser failed in his proof, and the reus was acquitted, there might be an inquiry into the conduct and motives of the accuser. If the person who made this judicial inquiry (*qui cognovit*), found that the accuser had merely acted from error of judgment, he acquitted him in the form *non probasti*; if he convicted him of evil intention, he declared his sentence in the words *calumniatus es*, which sentence was followed by the legal punishment.

According to Marcian, the punishment for calumnia was fixed by the lex Remmia, or, as it is sometimes, perhaps incorrectly, named, the lex Memmia. (Val. Max. iii. 7. § 9.) But it is not

known when this lex was passed, nor what were its penalties. It appears from Cicero (*Pro Sent. Rosc. Amerino*, c. 20), that the false accuser might be branded on the forehead with the letter K, the initial of Kalumnia; and it has been conjectured, though it is a mere conjecture, that this punishment was inflicted by the lex Remmia.

The punishment for calumnia was also *exsilium*, relegatio in insulam, or loss of rank (*ordines amissio*); but probably only in criminal cases, or in matters relating to a man's civil condition. (Paulus, *Sentent. Recapt.* v. l. 5, v. 4. 11.)

In the case of *actiones*, the calumnia of the actor was checked by the calumniae iudicium, the iudicium contrarium, the iururandum calumniae, and the restitutio; which are particularly described by Gaius (iv. 174—181). The defendant might in all cases avail himself of the calumniae iudicium, by which the plaintiff, if he was found to be guilty of calumnia, was mulcted to the defendant in the tenth part of the value of the object-matter of the suit. But the actor was not mulcted in this action, unless it was shown that he brought his suit without foundation, knowingly and designedly. In the contrarium iudicium, of which the defendant could only avail himself in certain cases, the rectitude of the plaintiff's purpose did not save him from the penalty. Instead of adopting either of these modes of proceeding, the defendant might require the plaintiff to take the oath of calumnia, which was to the effect, *Se non calumniae causa agere*. In some cases the defendant also was required by the praetor to swear that he did not dispute the plaintiff's claim, *calumniae causa*. Generally speaking, if the plaintiff put the defendant to his oath (*iururandum ei deferretur*), the defendant might put the plaintiff to his oath of calumny. (Dig. 12. tit. 2. s. 37.) In some actions, the oath of calumny on the part of the plaintiff was a necessary preliminary to the action. In all iudicia publica, it seems that the oath of calumnia was required from the accuser.

If the restitutio poena was required from the actor, the defendant could not have the benefit of the calumniae iudicium, or of the oath of calumny; and the iudicium contrarium was not applicable to such cases.

The edict De Calumniatoribus (Dig. 3. tit. 6.) applied generally to those who received money, calumniae causa, for doing an act or abstaining from doing an act. The edict applied as well to publica crimina as to pecuniariae causae; for instance in the matter of repetundae the edict applied to him who for calumnia received money on the terms of prosecuting or not prosecuting a person. This edict provided for some cases, as threats of procedure against a man to extort money, which were not within the cases provided for by the edict, Quod metus causa (Dig. 4. tit. 2.) [G. L.]

CAMARA (*καμάρα*), or CAMERA, properly signifies any arched or vaulted covering, and any thing with such a covering: Herodotus, for instance, calls a covered carriage *καμάρα* (l. 199). It is chiefly used in the two following senses:—

1. An arched or vaulted ceiling formed by semi-circular bands or beams of wood, over the intervals of which a coating of lath and plaster was spread, resembling in construction the hooped awnings in use amongst us. (Vitruv. vii. 3; Sall. *Cat.* 58; Cic. *ad Q. Fr.* iii. l. § 1; comp. Plin. *H. N.*

xvi. 36. s. 64.) Under the emperors *camaras* were formed with plates of glass (Plin. *H. N.* xxxvi. 25. s. 64); sometimes also the beams were gilt, and the ceiling between them was made of ivory. (Propert. iii. 2. 10.)

2. Small boats used in early times by the people who inhabited the shores of the Euxine and the Bosphorus, and called *καμάρα*, from their having a broad arched deck. They were made with both ends alike so as to work in either direction without turning; and were put together without iron. They continued in use until the age of Tacitus, by whom their construction and uses are described. (Strab. xi. p. 495; Eustath. *ad Dionys. Perieg.* 700; Aul. Gell. x. 25; Tac. *Hist.* iii. 47. Respecting the other uses of the word see Seiler and Jacobitz, *Handwörterbuch d. Griech. Sprache.*) [P. S.]

CAMILLI, CAMILLAE, boys and girls, employed in the religious rites and ceremonies of the Romans. They were required to be perfect in form, and sound in health, free born, and with both their parents alive; or, in other words, according to the expression of the Romans, *pueri seu puellae ingenui, felicissimi, patrum matrumque*. The origin of these words gave rise to various opinions among the ancients. Dionysius supposed them to correspond to the *κάμυλοι* among the Curetes and Corybantes; others connected them with Cadmilus or Camilus, one of the Samothracian Cabeiri; but we know nothing certain on the matter. Respecting the employment of the Camillus at Roman marriages, see MATRIMONIUM. (Dionys. ii. 21, 22; Varr. *L. L.* vii. 34, ed. Müller; Macrobi. *Sat.* iii. 8; Serv. *ad Virg. Aen.* xi. 543; Festus, s. *vv.* Camillus, Cumerus, Flaminius Camillus; Hartung, *Die Religion der Römer*, vol. i. p. 157, vol. ii. p. 71.)

CAMPAGUS, a kind of shoe worn by the later Roman emperors. (Trebell. Poll. *Gallien.* 16, with the note of Salmasius.)

CAMINUS. [DOMUS]

CAMPESTRE (*sc. subligar*) was a kind of girdle or apron, which the Roman youths wore around their loins, when they exercised naked in the Campus Martius (Augustin. *De Civ. Dei.* xiv. 17). The campestre was sometimes worn in warm weather in place of the tunic under the toga (*campestri sub toga cinctus*, Ascon. *ad Cic. pro Scauro*, p. 30. ed. Orell.; Hor. *Ep.* i. 11. 18.)

CAMPIDOCORES were persons who taught soldiers their exercises. (Veget. i. 13.) In the times of the republic this duty was discharged by a centurion, or veteran soldier of merit and distinction. (Comp. Plin. *Pan.* 13.)

CANABUS (*κνάβος*), was a figure of wood in the form of a skeleton, round which the clay or plaster was laid in forming models. Figures of a similar kind, formed to display the muscles and veins, were studied by painters in order to acquire some knowledge of anatomy. (Arist. *Hist. Anim.* iii. 5, *De Gen. Anim.* ii. 6; Pollux, vii. 164, x. 189; Suid. and Hesych. s. *v.*; Müller, *Archäol. der Kunst*, § 305. n. 7.)

CANALIS, and the diminutive *Canaliculus*, which signify a water-pipe or gutter, are used also in architecture for any channel, such as the flutings of a column, and the channel between the volutes of an Ionic capital (Vitruv. x. 14, iii. 3). [P. S.]

CANATHRON (*κνάθρον*), a carriage, the upper part of which was made of basket-work, or more properly the basket itself, which was fixed in

the carriage. (Xen. *Agos.* viii. 7; Plut. *Agos.* c. 19.) Homer calls this kind of basket *welpis*. (*Il.* xxiv. 190, 267; and Eustath. *ad loc.* Compare Sturtz, *Lex. Xenoph.* s. v. *Káβαλλος*; Scheffer, *De Re Fehia* p. 68.)

CANCELLA'RIOUS. [CANCELLI]

CANCELLI, lattice-work, placed before a window, a door-way, the tribunal of a judge, or any other place. (See e. g. Cic. *pro Sest.* 58; Varr. *R. R.* iii. 5; Ov. *Am.* iii. 2. 64; Dig. 30. tit. 41. s. 10; 33. tit. 7. s. 10.) Hence was derived the word *Cancellarius*, which originally signified a porter, who stood at the latticed or grated door of the emperor's palace. The emperor Carinus gave great dissatisfaction by promoting one of his *Cancellarii* to be *Praefectus urbi*. (Vopisc. *Carin.* 16.) The *cancellarius* also signified a legal scribe or secretary, who sat within the cancelli or lattice-work, by which the crowd was kept off from the tribunals of the judges. (Cassiod. *Var.* xi. 6.) The chief scribe or secretary was called *Cancellarius* κατ' ἐξουσίαν, and was eventually invested with judicial power at Constantinople; but an account of his duties and the history of this office do not fall within the scope of the present work. From this word has come the modern Chancellor.

CANDE'LA, a candle, made either of wax (*aeræa*) or tallow (*sebacæa*), was used universally by the Romans before the invention of oil lamps (*lucernæ*). (Varr. *De Ling. Lat.* v. 119, ed. Müller; Martial, xiv. 43; Athen. xv. p. 700.) They used for a wick the pith of a kind of rush called *scirpus* (Plin. *H. N.* xvi. 70). In later times candelæ were only used by the poorer classes; the houses of the more wealthy were always lighted by *lucernæ* (Juv. *Sat.* iii. 287; Becker, *Gallus*, vol. ii. p. 201).

CANDELA'BRUM, was originally a candlestick, but was afterwards used to support lamps (*λυχνούχος*), in which signification it most commonly occurs. The candelabra of this kind were usually made to stand upon the ground, and were of a considerable height. The most common kind were made of wood (Cic. *ad Qu. Fr.* iii. 7; Martial, xiv. 44; Petron. 95; Athen. xv. p. 700); but those which have been found in Herculaneum and Pompeii are mostly of bronze. Sometimes they were made of the more precious metals and even of jewels, as was the one which Antiochus intended to dedicate to Jupiter Capitolinus. (Cic. *Verr.* iv. 28.) In the temples of the gods and palaces there were frequently large candelabra made of marble, and fastened to the ground. (*Museo Pio-Clem.* iv. l. 5, v. l. 3.)

There is a great resemblance in the general plan and appearance of most of the candelabra which have been found. They usually consist of three parts:—1. the foot (*βάσις*); 2. the shaft or stem (*καύλας*); 3. the plinth or tray (*δίσκος*), large enough for a lamp to stand on, or with a socket to receive a wax candle. The foot usually consists of three lions' or griffins' feet, ornamented with leaves; and the shaft, which is either plain or fluted, generally ends in a kind of capital, on which the tray rests for supporting the lamp. Sometimes we find a figure between the capital and the tray, as is seen in the candelabrum on the right hand in the annexed woodcut, which is taken from the *Museo Borbonico* (iv. pl. 57), and represents a candelabrum found in Pompeii. The one on the left hand is also a representation of a

candelabrum found in the same city (*Mus. Borb.* vi. pl. 61), and is made with a sliding shaft, by which the light might be raised or lowered at pleasure.

The best candelabra were made at Aegina and Tarentum. (Plin. *H. N.* xxxiv. 6.)

There are also candelabra of various other forms, though those which have been given above are by far the most common. They sometimes consist of

a figure supporting a lamp (*Mus. Borb.* vii. pl. 15), or of a figure, by the side of which the shaft is placed with two branches, each of which terminates in a flat disc, upon which a lamp was placed. A candelabrum of the latter kind is given in the preceding woodcut (*Mus. Borb.* iv. pl. 59). The stem is formed of a liliaceous plant; and at the base is a mass of bronze, on which a Silenus is seated engaged in trying to pour wine from a skin which he holds in his left hand, into a cup in his right.

There was another kind of candelabrum, entirely different from those which have been described, which did not stand upon the ground, but was placed upon the table. These candelabra usually consist of pillars, from the capitals of which several lamps hang down, or of trees, from whose branches lamps also are suspended. The following woodcut represents a very elegant candelabrum of this kind, found in Pompeii. (*Mus. Borb.* ii. pl. 13.)

The original, including the stand, is three feet high. The pillar is not placed in the centre, but at one end of the plinth, which is the case in almost every candelabrum of this description yet

found. The plinth is inlaid in imitation of a vine, the leaves of which are of silver, the stem and fruit of bright bronze. On one side is an altar with wood and fire upon it; and on the other a Bacchus riding on a tiger. (Becker, *Gallus*, vol. ii. p. 206, &c.)

CANDIDA'TUS. [AMBITUS.]

CANDYS (*κάνδυσ*), a gown worn by the Medes and Persians over their trowsers and other garments. (*Xen. Cyr.* i. 3, § 2, *Anab.* i. 5, § 8; *Diod. Sic.* xvii. 77.) It had wide sleeves, and was made of woollen cloth, which was either purple or of some other splendid colour. In the Persepolitan sculptures, nearly all the principal personages are clothed in it. The three here shown are taken from Sir R. K. Porter's *Travels* (vol. i. pl. 94).

[J. Y.]

CANE'PHOROS (*κανεφόρος*). When a sacrifice was to be offered, the round cake (*τροχία φθός*, *πρόπανον*, *δάη*, *mola salsa*), the chaplet of flowers, the knife used to slay the victim, and sometimes the frankincense, were deposited in a flat circular basket (*κάνειον*, *canistrum*), and this was frequently carried by a virgin on her head to the altar. The practice was observed more especially at Athens. When a private man sacrificed, either his daughter, or some unmarried female of his family, officiated as his canephoros (Aristoph. *Acharn.* 241—252); but in the Panathenaea, the Dionysia, and other public festivals, two virgins of the first Athenian families were appointed for the purpose. Their function is described by Ovid (*Met.* ii. 713—715).

That the office was accounted highly honourable appears from the fact, that the resentment of Harmodius, which instigated him to kill Hipparchus, arose from the insult offered by the latter in forbidding the sister of Harmodius to walk as canephoros in the Panathenaic procession. (Thucyd. vi. 56; Aelian, *V. H.* xi. 8.) An antefixa in the British Museum (see woodcut) represents the two canephoros approaching a candelabrum. Each of them elevates one arm to support the basket, while

she slightly raises her tunic with the other. This attitude was much admired by ancient artists. Pliny (*H. N.* xxxvi. 4. s. 7) mentions a marble canephoros by Scopas, and Cicero (*Verr.* iv. 8) describes a pair in bronze, which were the exquisite work of Polyclitus. [CARYATIS.] [J. Y.]

CANISTRUM. [CANE'PHOROS.]

CANTABRUM, a standard used at the time of the Roman empire, and carried in festive processions. (Tertull. *Apol.* 16; Minuc. Felix, 29.)

CANTE'RII is used by Vitruvius (iv. 2) for the rafters of the roof, extending from the ridge to the eaves. [P. S.]

CAN'THARUS (*κάνθαρος*) was a kind of drinking-cup, furnished with handles (*cantharus amea*, Virg. *Ecl.* vi. 17; Hor. *Carm.* i. 20). It is said by some writers to have derived its name from one Cantharus, who first made cups of this

form. (Athen xi. p. 474, e; Pollux, vi. 96; Plin. *H. N.* xxxiv. 19. § 25.) The cantharus was the cup sacred to Bacchus (Macrob. *Sat.* v. 21; Plin. *H. N.* xxxiii. 53), who is frequently represented on ancient vases holding it in his hand, as in the following woodcut, which is taken from a painting on an ancient vase. (Millingen, *Peintures Antiques*, pl. 53.)

CA'NTICUM. In the Roman theatre, between the first and second acts, flute music appears to have been introduced (Plant. *Pseudol.* i. 5. 160), which was accompanied by a kind of recitative, performed by a single actor, or if there were two, the second was not allowed to speak with the first. Thus Diomedes (iii. p. 489. ed. Putsch.) says:—"In canticis una tantum debet esse persona, aut si duae fuerint, ita debent esse, ut ex occulto una audiat nec colloquatur, sed secum, si opus fuerit, verba faciat." In the canticum, as violent gesticulation was required, it appears to have been the custom, from the time of Livius Andronicus, for the actor to confine himself to the gesticulation, while another person sang the recitative. (Liv. viii. 2; Lucian, *De Saltat.* 30; Isidor. *Orig.* xviii. 44.) The canticum always formed a part of a Roman comedy. Diomedes observes that a Roman comedy consists of two parts, dialogue and canticum (*Latinae comoediae duobus tantum membris constant, diverbio et cantico*). Wolf (*De Canticis*, p. 11) endeavours to show that canticas also occurred in tragedies and the Atellanæ fabulae. There can be no doubt that they did in the latter; they were usually composed in the Latin, and sometimes in the Greek language, whereas the other parts of the Atellanæ plays were written in Oscan.

CAPISTRUM (*φορσειδ*), a halter, a tie for horses, asses, or other animals, placed round the head or neck, and made of osiers or other fibrous materials. In representations of Bacchanalian processions the tigers or panthers are attached to the yoke by capistra made of vine-branches. Thus we read of the *vitis capistratae tigris* of Ariadne (Ovid, *Epist.* ii. 80; Sîdon. *Apoll. Carm.* xxi. 23), and

they are seen on the bas-relief of a sarcophagus in the Vatican representing her nuptial procession. See the annexed woodcut.

The term *φορσειδ* was also applied to a contrivance used by pipers (*αὐλῳγῶν*) and trumpeters to compress their mouths and cheeks, and thus to aid them in blowing. It is often seen in works of ancient art [*CHIRIDOTA*], and was said to be the invention of Marryas. (Simonides, *Brumck. An.* i. 122; Sophocles, *ap. Cic. ad Att.* ii. 16; Aristoph. *Av.* 862, *Vesp.* 580, *Eq.* 1147; Schol. *ad Il.* [J. Y.]

CAPITA'LIS. [CAPUT.]

CA'PITE CENSI. [CAPUT.]

CA'PITIS DEMINU'TIO. [CAPUT.]

CAPITIUM, a portion of a woman's dress, said by Varro to be so called, because it covers (*capit*) the breast. (Varr. *L. L.* v. 131, ed. Müller, and *De Vita P. R.* iv. ap. Nonium, s. v. *capitia*; comp. Gell. xvi. 7; Dig. 34. tit. 2. a. 24.) But the word itself would rather lead us to suppose that it was originally a covering for the head (*caput*).

CAPITOLI'NI LUDI. [LUDI.]

CAPITULUM. [COLUMNA.]

CAPSA (*dim.* CAPSULA), or SCRINIUM, the box for holding books among the Romans. These boxes were usually made of beech-wood (Plin. *H. N.* xvi. 43. a. 84), and were of a cylindrical form. There is no doubt respecting their form, since they are often placed by the side of statues dressed in the toga. The following woodcut, which represents an open capsæ with six rolls of books in it, is from a painting at Pompeii.

There does not appear to have been any difference between the *capsæ* and the *scrinia*, except that the latter word was usually applied to those boxes which held a considerable number of rolls (*scrinia da magna*, Mart. i. 8). Boxes used for preserving other things besides books, were also called capsæ (Plin. *H. N.* xv. 17. a. 18; Mart. xi. 8), while in the *scrinia* nothing appears to have been kept but books, letters, and other writings.

The slaves who had the charge of these book-chests were called *capasarii*, and also *custodes scriniorum*; and the slaves who carried in a capsa behind their young masters the books, &c. of the sons of respectable Romans, when they went to school, were also called *capasarii*. (Juv. x. 117.) We accordingly find them mentioned together with the *pædagog*i. (Suet. *Nor.* 36.)

When the capsa contained books of importance, it was sealed or kept under lock and key (Mart. i. 67); whence Horace (*Ep.* i. 20. 3) says to his work, *Odiſt claves, et grata ſigilla pudico*. (Becker, *Gallus*, vol. i. p. 191; Böttiger, *Sabina*, vol. i. p. 102, &c.)

CAPSA'RII, the name of three different classes of slaves:—1. Of those who took care of the clothes of persons while bathing in the public baths. [BALNEAR, p. 189.] In later times they were subject to the jurisdiction of the *præfectus vigilum*. (Dig. l. tit. 15. s. 3.) 2. Of those who had the care of the capsa, in which books and letters were kept. [CAPSA.] 3. Of those who carried the books, &c. of boys to school. [CAPSA.]

CA'PSULA. [CAPSA.]

CAPULUS (κάπη, λαβή). 1. The hilt of a sword, which was frequently much ornamented. [GLADIUS.] The handles of knives were also much ornamented; and of the beautiful workmanship sometimes bestowed on them, a judgment

may be formed from the three specimens here introduced. (Montfaucon, *Ant. Explicite*, iii. 122. pl. 61.)

2. A bier or coffin. [FUNUS.]

CAPUT, the head. The term "head" is often used by the Roman writers as equivalent to "person," or "human being." (Caes. *Bell. Gall.* iv. 15.) By an easy transition, it was used to signify "life:" thus, *capite damnari, plecti*, &c. are equivalent to capital punishment.

Caput is also used to express a man's civil condition; and the persons who were registered in the tables of the censor are spoken of as *capita*, sometimes with the addition of the word *civium*, and sometimes not. (Liv. iii. 24, x. 47.) Thus to be registered in the census was the same thing as *caput habere*: and a slave and a *filius familias*, in this sense of the word, were said to have no *caput*. The lowest century of Servius Tullius comprised the *proletarii* and the *capite censi*, of whom the

latter, having little or no property, were barely rated as so many head of citizens. (Gell. xvi. 10; Cic. *De Rep.* ii. 22.)

He who changed his condition for an inferior one was said to be *capite minutus, deminutus*, or *capitis minor*. (Hor. *Carm.* iii. 5. 42.) The phrase *ex capite deminutus* was also applicable in case of a voluntary change of condition. (Cic. *Top.* c. 4.) The definition of Festus (*s. v. deminutus*) is, "Deminutus capite appellatur qui civitate mutatus est; et ex alia familia in aliam adoptatus, et qui liber alteri mancipio datus est: et qui in hostium potestatem venit: et cui aqua et igni interdictum est." There has been some discussion whether we should use *capitis deminutio* or *diminutio*, but it is indifferent which we write.

There were three divisions of *Capitis deminutio*—*Maxima*, *Media*, sometimes called *Minor*, and *Minima*. The *maxima capitis deminutio* consisted in the loss of *libertas* (freedom), in the change of the condition of a free man (whether *ingenuus* or *libertinus*) into that of a slave. The *media* consisted in the change of the condition of a *civis* into that of a *peregrinus*, as, for instance, in the case of deportation under the empire; or the change of the condition of a *civis* into that of a *Latinus*. The *minima* consisted in the change of the condition of a *pater familias* into that of a *filius familias*, as by adoption, and, in the later law, by legitimation; and in a wife in *manu*, or a *filius familias* coming into *mancipii causa*; consequently, when a *filius familias* was emancipated or adopted, there was a *capitis deminutio*, for both these ceremonies were inseparably connected with the *mancipii causa* (cum emancipari nemo possit nisi in imaginariam servilem causam deductus. Gaius, i. 134, 162). This explains how a *filius familias*, who by emancipation becomes *sui juris*, and thus improves his social condition, is still said to have undergone a *capitis deminutio*; which expression, as observed, applies to the form by which the emancipation is effected.

Capitis minutio, which is the same as *deminutio*, is defined by Gaius (Dig. 4. tit. 5. s. 1) to be *status permutatio*; but this definition is not sufficiently exact. That *capitis deminutio* which had the most consequence was the *maxima*, of which the *media* or *minor* was a milder form. The *minima*, as already explained, was of a technical character. The *maxima capitis deminutio* was sustained by those who refused to be registered at the census, or neglected the registration, and were thence called *incomenſi*. The *incomenſus* was liable to be sold, and so to lose his liberty; but this being a matter which concerned citizenship and freedom, such penalty could not be inflicted directly, and the object was only effected by the fiction of the citizen having himself abjured his freedom. Those who refused to perform military service might also be sold. (Cic. *Pro Quinctio*, 34; Ulp. *Frag.* xi. 11.) A Roman citizen who was taken prisoner by the enemy, lost his civil rights, together with his liberty, but he might recover them on returning to his country. [POSTLIMINIUM.] Persons condemned to ignominious punishments, as to the mines, sustained the *maxima capitis deminutio*. A free woman who cohabited with a slave, after notice given to her by the owner of the slave, became an ancilla, by a *senatus-consultum*, passed in the time of Claudius. (Ulp. *Frag.* xi. 11; compare Tacit. *Ann.* xii. 53, and Suet. *Vesp.* 11.)

A *judicium capitale*, or *poena capitalis*, was one which affected a citizen's caput. The subject of the *Capitis deminutio* is fully discussed by Becker, *Handbuch der Römischen Alterthümer*, vol. ii. p. 100; and by Savigny, *System*, &c. vol. ii. p. 68, &c. [G. L.]

CAPUT. [FENUS.]

CAPUT EXTORUM. The Roman soothsayers (*haruspices*) pretended to a knowledge of coming events from the inspection of the entrails of victims slain for that purpose. The part to which they especially directed their attention was the liver, the convex upper portion of which seems to have been called the *caput extorum*. (Plin. *H. N.* xi. 37. s. 73.) Any disease or deficiency in this organ was considered an unfavourable omen; whereas, if healthy and perfect, it was believed to indicate good fortune. The haruspices divided it into two parts, one called *familiaris*, the other *hostilis*: from the former, they foretold the fate of friends; from the latter, that of enemies. Thus we read (Liv. viii. 9), that the head of the liver was mutilated by the knife of the operator on the "familiar" part (*caput jecinoris a familiari parte caesum*), which was always a bad sign. But the word "caput" here seems of doubtful application; for it may designate either the convex upper part of the liver, or one of the prominences of the various lobes which form its lower and irregularly concave part. It is, however, more obvious and natural to understand by it the upper part, which is formed of two prominences, called the great and small, or right and left lobes. If no caput was found, it was a bad sign (*nihil tritius accidere potuit*); if well defined or double, it was a lucky omen. (Cic. *De Div.* ii. 12, 13; Liv. xxvii. 26.) [R. W.]

CARACALLA was an outer garment used in Gaul, and not unlike the Roman *lacerna*. [LACERNA.] It was first introduced at Rome by the emperor Aurelius Antoninus Bassianus, who compelled all the people who came to court to wear it, whence he obtained the surname of Caracalla. (Aurel. Vict. *Epit.* 21.) This garment, as worn in Gaul, does not appear to have reached lower than the knee, but Caracalla lengthened it so as to reach the ankle. It afterwards became common among the Romans, and garments of this kind were called *caracallae Antonianae*, to distinguish them from the Gallic *caracallae*. (Aurel. Vict. *De Cues.* 21; Spartian. *Sev.* 21, *Anton. Car.* 9.) It usually had a hood to it, and came to be worn by the clergy. Jerome (*Ep.* 128) speaks of *palliolum miras pulchritudinis in modum caracallarum sed obaque cucullis*.

CARBA'TINA. [PERO.]

CARCER (*herker*, German; *γυργύρα*, Greek), a prison. This word is connected with *ἐρκος* and *ἐργω*, the guttural being interchanged with the aspirate.

1. **GREEK.**—Imprisonment was seldom used among the Greeks as a legal punishment for offences; they preferred banishment to the expense of keeping prisoners in confinement. We do, indeed, find some cases in which it was sanctioned by law; but these are not altogether instances of its being used as a punishment. Thus the farmers of the duties, and their bondsmen, were liable to imprisonment if the duties were not paid by a specified time; but the object of this was to prevent the escape of defaulters, and to insure regularity of payment. (Böckh, *Publ. Econ. of Athens*,

p. 339, &c.) Again, persons who had been mulcted in penalties might be confined till they had paid them. (Dem. *c. Mid.* p. 529, 26.) The *ἄτιμο*, also, if they exercised the rights of citizenship, were subject to the same consequences. (Dem. *c. Timocr.* p. 732, 17.) Moreover, we read of a *δεσμός* for theft; but this was a *προστίμημα*, or additional penalty, the infliction of which was at the option of the court which tried the case; and the *δεσμός* itself was not an imprisonment, but a public exposure in the *ποδοκάκη*, or stocks, for five days and nights—the *τὸ ἐν ἑξέλει δεδέναι*. Still the idea of imprisonment *per se*, as a punishment, was not strange to the Athenians. Thus we find that Plato (*Leg.* x. p. 908) proposes to have three prisons: one of these was to be a *συνφρονιστήριον*, or penitentiary, and another a place of punishment—a sort of penal settlement away from the city.

The prisons in different countries were called by different names: thus there was the *Ἀναγκαῖον*, in Boeotia; the *Κέραμος*, at Cyprus; the *Κῶς*, at Corinth; and, amongst the Ionians, the *γοργύρα*, as at Samos. (Herod. iii. 145; Pollux, ix. 45.) The prison at Athens was in former times called *δεσμοστήριον*, and afterwards, by a sort of euphemism, *οίκημα*. It was chiefly used as a guard-house, or place of execution, and was under the charge of the public officers called the eleven, *οἱ ἑνδεκα*. One gate in the prison, through which the condemned were led to execution, was called *τὸ Χαρνεῖον*. (Pollux, viii. 103; Wachsmuth, *Hell. Alterthüm.* vol. ii. pp. 141, 201, 2d ed.)

The Attic expression for imprisonment was *δεῖν*. Thus in the oath of the *βουλευταί*, or senators, occurs the phrase *οὐδὲ θῆσω Ἀθηναίων οὐδένα*. Hence we have the phrase *ἔδεσμος φυλακή* (Thuc. iii. 54), the "libera custodia" of the Romans, signifying that a party was under strict surveillance and guard, though not confined within a prison.

2. **ROMAN.**—A *carcer*, or prison, was first built at Rome by Ancus Martius, overhanging the forum. (Liv. i. 33.) This was enlarged by Servius Tullius, who added to it a souterrain, or dungeon, called from him the *Tullianum*. Sallust (*Cat.* 55) describes this as being twelve feet under ground, walled on each side, and arched over with stone work. For a long time this was the only prison at Rome (Juv. *Sat.* iii. 312), being, in fact, the "Tower," or state prison of the city, which was sometimes doubly guarded in times of alarm, and was the chief object of attack in many conspiracies. (Liv. xxvi. 27, xxxii. 26.) Varro (*L. L.* v. 151, ed. Müller) tells us that the Tullianum was also named "Lautumiae," from some quarries in the neighbourhood; or, as others think in allusion to the "Lautumiae" of Syracuse, a prison cut out of the solid rock. In later times the whole building was called the "Mamertine." Close to it were the *Scalae Gemoniae*, or steps, down which the bodies of those who had been executed were thrown into the Forum, to be exposed to the gaze of the Roman populace. (Cramer, *Ancient Italy*, vol. i. p. 430.) There were, however, other prisons besides this, though, as we might expect, the words of Roman historians generally refer to this alone. One of these was built by Appius Claudius, the decemvir, and in it he was himself put to death. (Liv. iii. 57; Plin. *H. N.* vii. 36.)

The *carcer* of which we are treating, was chiefly used as a place of confinement for persons under

accusation, till the time of trial; and also as a place of execution, to which purpose the Tullianum was specially devoted. Thus, Sallust (*l. c.*) tells us that Lentulus, an accomplice of Catiline, was hanged there. Livy also (*xxix. 22*) speaks of a conspirator being *delegatus in Tullianum*, which in another passage (*xxxiv. 44*), is otherwise expressed by the words in *inferiorem demissus carcerem, necatusque*.

The same part of the prison was also called "robur," if we may judge from the words of Festus:—*Robur in carceris dicitur is locus, quo praecipitatur maleficorum genus*. This identity is further shown by the use made of it; for it is spoken of as a place of execution in the following passages:—*In robore et tenebris aspirare* (Liv. *xxxviii. 59*; Sallust, *l. c.*). *Robur et saxum* (sc. Tarpeium) *minitari* (Tacit. *Ann. iv. 29*). So also we read of the *catenas*—*et Italum robur*. (Hor. *Carm. ii. 13. 18*.) [R. W.]

CARCERES. [CIRCUS.]

CARCHE'SIUM (καρχήσιον). 1. A beaker or drinking-cup, which was used by the Greeks in very early times, so that one is said to have been given by Jupiter to Alcmena on the night of his visit to her. (Pherecydes, p. 97—100, ed. Sturtz.) It was slightly contracted in the middle, and its two handles extended from the top to the bottom. (Athen. xi. p. 474; Macrob. *Sat. v. 21*.) It was much employed in libations of blood, wine, milk, and honey. (Sappho, *Frag. 70*, ed. Neue; Virg. *Georg. iv. 380*, *Aen. v. 77*; Ovid, *Met. vii. 246*; Stat. *Achill. ii. 6*.) The annexed woodcut represents a magnificent carcheisium, which was presented by Charles the Simple to the Abbey of St. Denys. It was cut out of a single agate, and

richly engraved with representations of bacchanalian subjects. It held considerably more than a pint, and its handles were so large as easily to admit a man's hand.

2. The upper part of the mast of a ship. [NAVIA.]

CARDO (καρδός, στροφεύς, στρόφυγξ, γίγγαμος), a hinge, a pivot. The first figure in the annexed woodcut is designed to show the general form of a door, as we find it with a pivot at the top and bottom (*a, b*) in ancient remains of stone, marble, wood, and bronze. The second figure represents a bronze hinge in the Egyptian collection of the British Museum: its pivot (*b*) is exactly cylindrical. Under these is drawn the threshold of a temple, or other large edifice, with the plan of the folding doors. The pivots move in holes fitted to receive them (*b, b*), each of which is in an angle

behind the antepagmentum (*marmoreo aeratus*

stridens in limine cardo, Virg. *Ciris*, 222; Eurip. *Phoen. 114—116*, Schol. *ad loc.*

The Greeks and Romans also used hinges exactly like those now in common use. Four Roman hinges of bronze, preserved in the British Museum, are here shown.

The form of the door above delineated makes it manifest why the principal line laid down in surveying land was called "cardo" (Festus, *s. v. Decumanus*; Isid. *Orig. xv. 14*); and it further explains the application of the same term to the North Pole, the supposed pivot on which the heavens revolved. (Varr. *De Re Rust. i. 2*; Ovid, *Ex Ponto*, ii. 10. 45.) The lower extremity of the universe was conceived to turn upon another pivot, corresponding to that at the bottom of the door (Cic. *De Nat. Deor. ii. 41*; Vitruv. vi. 1, ix. 1); and the conception of these two principal points in geography and astronomy led to the application of the same term to the East and West also. (Lucan. v. 71.) Hence our "four points of the compass" are called by ancient writers *quatuor cardines orbis terrarum*, and the four principal winds, N. S. E. and W., are the *cardinales venti*. (Serv. *ad Aen. i. 85*.) [J. Y.]

CAR'NA. [NAVIA.]

CARMENTA'LIA, an old Roman festival celebrated in honour of the nymph Carmenta or Carmentis, for an account of whom see *Dict. of Biog. s. v. Camenae*. This festival was celebrated annually on the 11th and the 15th of January, and no other particulars of it are recorded except that Carmenta was invoked in it as *Postorta* and *Antevorta*, epithets which had reference to her power of looking back into the past and forward into the future. The festival was chiefly observed by women. (Ov. *Fast. i. 634*; Macrob. *Sat. i. 7*; Gell. xvi. 16; Serv. *ad Virg. Aen. viii. 339*; Hartung, *Die Religion der Römer*, vol. ii. p. 199.)

CARNEIA (καρνεΐα), a great national festival, celebrated by the Spartans in honour of Apollo

Carneia, which, according to Sosibius (*ap. Athen.* xiv. p. 635), was instituted Olymp. xxvi.; although Apollo, under the name of Carneia, was worshipped in various places of Peloponnesus, particularly at Amyclae, at a very early period, and even before the Dorian migration. (Müller, *Dor.* i. 3. § 8. and ii. 8. § 15.) Wachsmuth (*Hellen. Alterthumsk.* ii. p. 582, 2d ed.), referring to the passage of Athenaeus, above quoted, thinks that the Carneia had long before been celebrated; and that when, in Olymp. xxvi., Therpander gained the victory, musical contests were only added to the martial solemnities of the festival. But the words of Athenaeus, who is the only authority to which Wachsmuth refers, do not allow of such an interpretation, for no distinction is there made between earlier and later solemnities of the festival, and Athenaeus simply says, the institution of the Carneia took place Olymp. xxvi. (Ἐγένετο δὲ ἡ δέσις τῶν Καρπειῶν κατὰ τὴν ἑκτην καὶ εἰκοστὴν Ὀλυμπιάδα, ὡς Σωσιπιδὲς φησιν, ἐν τῇ περὶ χρονοῦ.) The festival began on the seventh day of the month of Carneia = Metageitnion of the Athenians, and lasted for nine days. (Athen. iv. p. 141; Eustath. *ad Il.* xxiv. *sub fin.*; Plut. *Symp.* viii. 1.) It was, as far as we know, a warlike festival, similar to the Attic Boëdromia. During the time of its celebration nine tents were pitched near the city, in each of which nine men lived in the manner of a military camp, obeying in everything the commands of a herald. Müller also supposes that a boat was carried round, and upon it a statue of the Carneian Apollo (Ἀπόλλων στεμματίας), both adorned with lustratory garlands, called δίκην στεμματῶν, in allusion to the passage of the Dorians from Naupactus into Peloponnesus. (*Dorians*, i. 3. § 8. note z.) The priest conducting the sacrifices at the Carneia, was called Ἀγνῆτης, whence the festival was sometimes designated by the name Ἀγνῆθρία or Ἀγνῆθρῆιον (Hesych. s. v. Ἀγνῆθρῆιον); and from each of the Spartan tribes five unmarried men (Καρπειῶται) were chosen as his ministers, whose office lasted four years, during which period they were not allowed to marry. (Hesych. s. v. Καρπειῶται.) Some of them bore the name of Σταφυλοφόροι. (Hesych. s. v.; compare Bekker, *Anecd.* p. 205.) Therpander was the first who gained the prize in the musical contests of the Carneia, and the musicians of his school were long distinguished competitors for the prize at this festival (Müller, *Dor.* iv. 6. § 3), and the last of this school who engaged in the contest was Pericleidas. (Plut. *De Mus.* 6.) When we read in Herodotus (vi. 106, vii. 206) and Thucydides (v. 54, and in other places) that the Spartans during the celebration of this festival were not allowed to take the field against an enemy, we must remember that this restriction was not peculiar to the Carneia, but common to all the great festivals of the Greeks; traces of it are found even in Homer. (*Od.* xxi. 258, &c.)

Carneia were also celebrated at Cyrene (Callimach. *Hymn. in Apoll.* 72. seq.), in Thera (Callimach. *L. c.*; Pindar, *Pyth.* v. 99. seq.), in Gythion, Messene, Sicyon, and Sybaris (Paus. iii. 21. § 7, and 24. § 5, iv. 33. § 5, ii. 10. § 2; Theocrit. v. 83; compare Müller's *Orakom.* p. 327). [L. S.]

CARNIFEX, the public executioner at Rome, who put slaves and foreigners to death (Plaut. *Bacch.* iv. 4. 37; *Capt.* v. 4. 22), but no citizens, who were punished in a manner different from

slaves. It was also his business to administer the torture. This office was considered so disgraceful, that he was not allowed to reside within the city (Cic. *Pro Rabir.* 5), but he lived without the Porta Metia or Esquilina (Plaut. *Pseud.* i. 3. 98), near the place destined for the punishment of slaves (Plaut. *Cas.* ii. 6. 2; Tacit. *Ann.* xv. 60; Hor. *Epod.* v. 99), called Sestertium under the emperors (Plut. *Galb.* 20.)

It is thought by some writers, from a passage in Plautus (*Rud.* iii. 6. 19), that the carnifex was anciently keeper of the prison under the triumviri capitales; but there does not appear sufficient authority for this opinion. (Lipsius, *Excurs.* ad Tacit. *Ann.* ii. 32.)

CARPENTUM, is one of the earliest kind of Roman carriages, of which we find mention. (Liv. i. 34.) It was the carriage in which Roman matrons were allowed to be conveyed in the public festal processions (Liv. v. 25; Isid. *Orig.* xx. 12); and that this was a considerable privilege is evident from the fact, that the use of carriages in the city was entirely forbidden during the whole of the republic. The privilege of riding in a carpentum in the public festivals, was sometimes granted as a special privilege to females of the imperial family. (Dion Cass. lx. 22, 33; Tac. *Ann.* xii. 42.) The form of this carriage is seen in the following medal struck in honour of the elder Agrippina after her death.

The carpentum was also used by private persons for journeys; and it was likewise a kind of state carriage, richly adorned and ornamented. (Prop. iv. 8. 23; Juv. viii. 147, ix. 132.)

This carriage contained seats for two, and sometimes for three persons, besides the coachman. (Liv. i. 34; Medals.) It was commonly drawn by a pair of mules (*carpentum mulare*, Lamprid. *Heliog.* 4); but more rarely by oxen or horses, and sometimes by four horses like a quadriga. For grand occasions it was very richly adorned. Agrippina's carriage, as above represented, shows painting or carving on the panels, and the head is supported by Caryatides at the four corners.

When Caligula instituted games and other solemnities in honour of his deceased mother Agrippina, her carpentum went in the procession. (Suet. *Calig.* 15.) This practice, so similar to ours of sending carriages to a funeral, is evidently alluded to in the alto-relievo here represented, which is preserved in the British Museum. It has been taken from a sarcophagus, and exhibits a close carpentum drawn by four horses. Mercury, the conductor of ghosts to Hades, appears on the front, and Castor and Pollux with their horses on the side panel.

Carpenta, or covered carts, were much used by

the Britons, the Gauls, the Cimbri, the Allobroges, and other northern nations. (Florus, i. 18, iii. 2,

3, and 10.) These, together with the carts of the more common form, including baggage-waggons, appear to have been comprehended under the term *carrī*, or *carrua*, which is the Celtic name with a Latin termination. The Gauls and Helvetii took a great multitude of them on their military expeditions; and, when they were encamped, arranged them in close order, so as to form extensive lines of circumvallation. (Caes. *Bell. Gall.* i. 24, 26.)

[J. Y.]

CARPOU DIKE' (*καρπὸν δίκεν*), a civil action under the jurisdiction of the thesmothetae, might be instituted against a farmer for default in payment of rent. (Meier, *Att. Proc.* p. 531.) It was also adopted to enforce a judicial award when the unsuccessful litigant refused to surrender the land to his opponent (Hudtwalcker, p. 144; Meier, *Att. Proc.* p. 750), and might be used to determine the right to land (*Harpoorat. s. v.*, and *Ὀβολὸς Δίκην*), as the judgment would determine whether the plaintiff could claim rent of the defendant. [J. S. M.]

CARRA'GO, a kind of fortification, consisting of a great number of waggons placed round an army. It was employed by barbarous nations, as, for instance, the Scythians (Trebell. *Poll. Gallien.* 13), Gauls [CARPENTUM], and Goths (Amm. Marc. xxxi. 20). Compare Veget. iii. 10.

Carrago also signifies sometimes the baggage of an army. (Trebell. *Poll. Claud.* 8; Vopisc. *Aurelianus.* 11.)

CARRU'CA, a carriage, the name of which only occurs under the emperors. It appears to have been a species of rheda [RHEDA], whence Martial in one epigram (iii. 47) uses the words as synonymous. It had four wheels, and was used in travelling. Nero is said never to have travelled with less than 1000 carrucae. (Suet. *Ner.* 30.) These carriages were sometimes used in Rome by persons of distinction, like the carpenta [CARPENTUM], in which case they appear to have been covered with plates of bronze, silver, and even gold, which were sometimes ornamented with embossed work. Alexander Severus allowed senators at Rome to use carrucae and rhedae plated with silver (Lamprid. *Alex. Sev.* 43); and Martial (iii. 72) speaks of an *aurata carruca* which cost the value of a farm. We have no representations of carriages in ancient works of art which can be safely said to be carrucae; but we have several representations of carriages ornamented with plates of metal. (See Inghirami, *Museum Etrusc.* iii. 18. 23; Millingen, *Uned. Mon.* ii. 14.) Carrucae were also used for carrying women, and were then, as well, perhaps, as in other cases, drawn by mules (Dig. 34, tit. 2,

a. 13); whence Ulpian (Dig. 21. tit. 1. a. 38. § 8) speaks of *mulas carruarias*.

CARRUS. [CARPENTUM.]

CA'RYA or **CARYATIS** (*καρύα, κaryatis*), a festival celebrated at Caryae, in Laconia, in honour of Artemis Caryatis. (Hesych. s. v. *Καρυαί.*) It was celebrated every year by Lacedaemonian maidens (*Καρυαίδες*) with national dances of a very lively kind (Paus. iii. 10. § 8; iv. 16. § 5; Polux, iv. 104), and with solemn hymns. [L. S.]

CARYA'TIS (*κaryatis*), pl. **CARYATIDES**.

From the notices and testimonies of ancient authors, we may gather the following account:—That Caryae was a city in Arcadia, near the Laconian border; that its inhabitants joined the Persians after the battle of Thermopylae (Herod. viii. 28; Vitruv. i. 1. § 5); that on the defeat of the Persians the allied Greeks destroyed the town, slew the men, and led the women into captivity; and that, as male figures representing Persians were afterwards employed with an historical reference instead of columns in architecture [ATLANTES; PERSAE], so Praxiteles and other Athenian artists employed female figures for the same purpose, intending them to express the garb, and to commemorate the disgrace of the Caryatides, or women of Caryae. (Vitruv. l. c.; Plin. *H. N.* xxxvi. 45 and 11.) Figures of Caryatides are exceedingly common in the remains of ancient architecture. The following specimen is taken from Müller's *Denkmäler der alten Kunst*.

After the subjugation of the Caryatae, their territory became part of Laconia. The fortress (*χεῖριον*, Steph. Byz.) had been consecrated to Artemis (*Diana Caryatis*, Serv. in *Virg. Ecl.* viii. 30), whose image was in the open air, and at whose annual festival (*Καρυαῖς ἐορτή*, Hesych.) the Laconian virgins continued, as before, to perform a dance of a peculiar kind, the execution of which was called *καρυαίειν*. (Paus. iii. 10. § 8; iv. 16. § 5; Lucian, *De Salt.*) [J. Y.]

CASSIS. [GALEA; RING.]

CASTELLUM AQUAE. [AQUAEDUCTUS.]

CASTRÀ. It is well known that Roman armies never halted for a single night without forming a regular entrenchment, termed *castra*, capable of receiving within its limits the whole body of fighting men, their beasts of burden, and the baggage. So essential was this operation considered, that even when preparing for an immediate engagement, or when actually assailed by a hostile force, it was never omitted, but a portion of the soldiers were employed in constructing the necessary works, while the remainder were standing to their arms or resisting the enemy: and so completely was it recognised as a part of the ordinary duties of each march, that *pervenire ad locum tertium . . . quartum . . . septuagesimis castris* are the established phrases for expressing the number of days occupied in passing from one point to another. Whenever circumstances rendered it expedient for a force to occupy the same ground for any length of time, then the encampment was distinguished as *castra stativa*. (Liv. xxvii. 12; Cæsar. B. G. viii. 16, B. C. i. 42; Hirt. B. Af. 51, B. Al. 74.)

When the protracted and distant wars in which the republic became engaged, as its sway was gradually extended first over the whole of Italy, and subsequently over Greece, Asia, and Africa, rendered it impossible for the legions to return home in winter, they usually retired during the months when active military operations were suspended, into some city where they could be protected from the inclemency of the season, and where the comforts of the men could be readily secured; or they were dispersed up and down in detachments among friendly villages (*in hiberna concedere; castrum in hiberna dimittere; castrum per civitates in hiberna dividere*). It is true that extraordinary emergencies, such as a protracted blockade, or the necessity of maintaining a constant watch upon the movements of a neighbouring and vigorous foe, might compel a commander to keep the field for a whole year or even longer, but to order an army, except in case of necessity, to winter under canvass (*hiemare sub pellibus; hiemem sub tentoriis exigere*) was long regarded as a severe punishment, inflicted only in consequence of grievous misconduct. (Frontin. Strat. iv. 1. § 24.) As the boundaries of the empire were gradually pushed forward into wild and barbarian lands, where there were no large towns and no tribes on whose faith reliance could be placed, such arrangements became impracticable, and armies, whether of invasion or occupation, were forced to remain constantly in camps. They usually, however, occupied different ground in summer and in winter, whence arose the distinction between *castra aestiva* and *castra hiberna*, both alike being *stativa*. Such posts were frequently, if situated advantageously, garrisoned permanently; and the peaceful natives who sought to enrich themselves by trading with their conquerors, settled for security in the immediate vicinity. (Cæsar. B. G. vi. 37.) Thus in the distant provinces, these forts formed a centre round which a numerous population gradually clustered; and many important towns, still existing in our own country, indicate their origin by the termination *caester*.

But whether a camp was temporary or permanent, whether tenanted in summer or in winter, the main features of the work were always the

same for the same epoch. In *hiberna*, huts of turf or stone would be substituted for the open tents of the *aestiva* (hence *aedificare hiberna*), and in *stativa* held for long periods the defences would present a more substantial and finished aspect, but the general outline and disposition of the parts were invariable: a camp was laid down, arranged and fortified according to a fixed and well-known plan, modified only by the numbers for whom it was required to provide accommodation, but altogether independent of the nature of the ground or of the fancy of the general, so that each battalion, each company, and each individual, had a place assigned to which they could at once repair without order, question, delay, or confusion.

At what period the practice of throwing up elaborate field-works for the protection of an army engaged in active service was first commenced by the Romans, it is impossible to determine; but we may safely conclude that, like all other parts of their military tactics, it was matured by a slow and gradual process. Livy and Dionysius, indeed, would lead us to suppose that regular camps existed from the most remote epoch to which their annals extend; but the language of these historians is in general so loose upon all matters of antiquarian research, and they are so much in the habit of transferring to the earliest ages the usages of their own contemporaries, that no safe inference regarding points of this nature can be drawn from their words. Frontinus, on the other hand, declares that the idea of a fortified enclosure, calculated to contain a whole army, was first suggested to the Romans by the camp of Pyrrhus, which they captured near Beneventum; but the statements of this author have never been deemed to possess much weight, and in this particular instance many considerations preclude us from admitting his testimony as credible. It is evident, however, from the facts detailed in the article *EXERCITUS* that a camp, such as the earliest of those of which we possess any detailed account, could not have assumed that shape until the tactics of the phalanx were superseded by the manipular divisions; and it may be held as certain that each of the great wars in which the Commonwealth was successively engaged for more than a century—with the Samnites, with Pyrrhus, with the Cisalpine Gauls, and with the Carthaginians, must have led to a series of improvements. The system was probably brought to perfection in the campaigns against Hannibal, and underwent no material alteration until the organic changes in the constitution of the army, which took place not long before the downfall of the constitution, during the civil broils, and under the earlier emperors, rendered a corresponding change in the internal economy of the camp unavoidable. Hence, although it would be at once vain and unprofitable to attempt an investigation of the various changes through which a Roman camp passed before it assumed what may be called its normal shape, it is evidently absolutely necessary for all who desire to obtain even a slight knowledge of the Roman art of war, to make themselves acquainted with this important feature in their system during the best days of the republic and the empire. And fortunately the records of antiquity enable us to supply such information with considerable minuteness. Polybius, the friend and companion of the younger Scipio, has transmitted to us a description of a Roman camp, such as he must have often seen with his own eyes, and a cer-

tain Hyginus, a *gromaticus* or land surveyor, who flourished under Trajan and Hadrian, has left us a technical memoir on the art of castrametation as practised in his own day. To these some might feel inclined to add the remarks of Vegetius, who lived during the reign of Valentinian, but for reasons which are stated elsewhere [EXERCITUS] it will be more safe to neglect him altogether.

We shall proceed to describe these two camps in succession, it being understood that the leading statements with regard to the first are taken di-

rectly from Polybius, and those with regard to the second, from Hyginus, unless when the contrary is distinctly indicated. But while we endeavour to explain clearly all the parts of the camps themselves, we must refer to the article EXERCITUS for everything that concerns the different kinds of troops, their divisions, their discipline, and their officers.

I. CAMP OF POLYBIUS.

The camp described by Polybius is such as would be formed at the close of an ordinary day's

(Fig. 1.)

march by a regular consular army consisting of two Roman legions with the full contingent of Socii. Each legion is calculated at 4200 infantry and 300 cavalry, the Socii furnished an equal number of infantry and twice as many cavalry, so that the whole force would amount to 16,800 foot and 1800 horse.

Choice of the Ground.—Although, as stated above, the general outline, the defences, and the internal economy of a camp were altogether independent of the nature of the ground, yet great importance was attached to the choice of a fitting situation which should admit of being readily laid out in the required form, which should afford no facilities for attack or annoyance, which should be convenient for procuring wood, water, and forage, and which the army might enter and quit without danger of surprise. Skill in the selection of such a spot (*capere locum castris*) was ever considered as a high quality in a general, and we find it recorded among the praises of the most renowned commanders that they were wont in person to perform this duty (e.g. Liv. ix. 17, xxxv. 14, 28; Tacit. Hist. ii. 5, Agric. 20; comp. Quintil. I. O. xii. 5. § 5). Under ordinary circumstances, however, the task was devolved upon one of the military tribunes, and a certain number of centurions appointed from time to time for the purpose. These having gone forward in advance of the army until they reached the place near which it was intended to halt, and having taken a general survey of the ground, selected a spot from whence a good view of the whole proposed area might be obtained, that spot being considerably within the limits of the contemplated enclosure.

Construction.—The spot answering these conditions and which we shall call A (fig. 1.) was marked by a small white flag. The next object was to ascertain in what direction water and fodder might be most easily and securely provided—this direction we indicate by the arrow in the subjoined figure. Upon the position of A and the direction of the arrow depended the disposition of all the other parts of the work; for these two preliminary points being decided, the business of measuring out the ground (*metari castra*) commenced, and was executed, as we learn from various sources, with graduated rods (*decempedae*) by persons denominated *metatores*. The different steps of the process may be most briefly and distinctly set down in the ordinary language of a geometrical construction.

Through A draw a straight line $A_0 A_1$, parallel to the direction of the arrow, a straight line $B_0 B_1$ at right angles to $A_0 A_1$. These two straight lines $A_0 A_1$, and $B_0 B_1$, served as the bases by which the position of all the different divisions of the camp were determined.

Along $A_0 A_1$ set off $A_2 A_3 = 100$ feet; $A_2 A_4 = 50$ feet; $A_4 A_5$; $A_5 A_6$; $A_6 A_7$; $A_7 A_8$; $A_8 A_9$; $A_9 A_{10}$ each = 100 feet; $A_{10} A_{11} = 50$ feet; $A_{11} A_{12}$; $A_{12} A_{13}$; $A_{13} A_{14}$; $A_{14} A_{15}$; $A_{15} A_{16}$ each = 100 feet; $A_{16} A_{17} = 200$ feet.

Along $A_0 A_1$ set off $A_{18} A_{19}$; $A_{19} A_{20}$ each = 100 feet; $A_{18} A_{21} = 167$ feet; $A_{21} A_{22} = 200$ feet.

Through A_2 ; A_4 ; A_5 ; A_6 ; A_7 ; A_8 ; A_9 ; A_{10} draw $C_0 C_1$; $D_0 D_1$; $E_0 E_1$; $F_0 F_1$; $G_0 G_1$; $H_0 H_1$; $K_0 K_1$; $L_0 L_1$, straight lines parallel to $B_0 B_1$, and in like manner draw through A_3 ; A_4 ; . . . A_{16} , straight lines parallel to $B_0 B_1$, as marked in the figure.

On $B_0 B_1$ make $A B_2$; $A B_3$ each = 100 feet. Through B_2 and B_3 draw straight lines parallel to $A_0 A_1$, cutting $C_0 C_1$ in C_2 and C_3 , and cutting $D_0 D_1$ in D_2 and D_3 ; in this manner a square area $C_2 C_3 D_3 D_2$ is determined, each side of which = 200 feet.

Along $A_5 F_0$ set off $A_5 P = 25$ feet; $P Q = 100$ feet; $Q R = 50$ feet; $R S = 50$ feet; $S T = 100$ feet; $T V = 100$ feet; $V W = 50$ feet; $W X = 133\frac{1}{3}$ feet; $X Y = 200$ feet; $Y Z = 200$ feet.

Along $A_6 F_1$ set off $A_6 P'$; $P' Q'$; $Q' R'$. . . $Y' Z'$, equal respectively to $A_5 P$; $P Q$; $Q R$; . . . $Y Z$.

Through $Z Z'$ draw straight lines parallel to $A_0 A_1$, cutting $G_0 G_1$ in z and z' , and cutting $L_0 L_1$ in O and O' . The square area $O O' z' z$ thus determined was the camp.

Again, through P ; Q ; R . . . Y , and through P' ; Q' ; R' . . . Y' draw straight lines parallel to $A_0 A_1$, cutting the parallels to $B_0 B_1$ in the points marked in the figure.

Finally, on $H_0 H_1$ lay off $A_{18} H_2$ and $A_{19} H_4$ each = 25 feet, and through H_2 ; H_4 draw straight lines parallel to $A_0 A_1$, cutting $K_0 K_1$ in K_2 and K_4 .

This construction being completed we now proceed to explain the arrangement of the different parts referring to figure 2, in which the lines no longer necessary are obliterated, the spaces occupied by the troops or officers enclosed by dark lines, and the streets (*vias*) distinctly laid down. In practice the most important points were marked by white poles, some of which bore flags of various colours, so that the different battalions on reaching the ground could at once discover the place assigned to them.

The white flag A, which served as the starting point of the whole construction, marked the position of the consul's tent, or *praetorium*, so called because *praetor* was the ancient term for any one invested with supreme command. The square area $C_2 D_3$ was left open extending, as we have seen, a hundred feet each way from the praetorium. That portion of the camp which lay in the direction of the arrow (*πρὸς τὴν ἐκτὸς ἐμπόδευαν*) from the line $E_0 E_1$ (fig. 1) marked the front or forefront of the camp (*τοῦ πᾶντος σχήματος κατὰ πρόσωπον*).

The number of legions being two and the number of tribunes in each being six, their tents were arranged six and six at equal distances along the line $E_0 E_1$ (fig. 1) exactly opposite to and looking towards the legions to which they belonged. Hence, as will be seen from what follows, they did not extend beyond the points E_2 and E_4 , but whether they were distributed at equal distances along the whole of the line $E_2 E_4$, or whether the space in front of the praetorium was left vacant, as in our figure, as seems most probable, may admit of doubt. The space of fifty feet included between the parallels $C_0 C_1$ and $E_0 E_1$ (fig. 1), immediately behind the tents of the tribunes, was appropriated to their horses, beasts of burden and baggage.

The ten areas marked 1 were set apart for the cavalry of one legion, and the corresponding ten areas marked 1' for the cavalry of the other legion. These all faced towards the street $P P'$, and each area, containing a space of 10,000 square feet, was allotted to one turma or troop of 30 dragoons, with their horses and baggage.

(Fig. 2.)

2027

Back to back with the cavalry, and looking out upon the streets R S, R' S', the Triarii of the two legions were quartered in the areas 2 and 2'. Each area contained 5000 square feet, and was allotted to a maniples of 60 men; hence, according to the calculation here followed, a dragoon and his horse were allowed as much space as 4 foot soldiers.

In the areas marked 3 and 3' facing the Triarii were quartered the principes of the two legions; each of these areas contained 10,000 square feet, and was allotted to a maniples of two centuries, that is, 120 men.

In the areas marked 4 and 4', back to back with the principes, and looking out upon the streets V W, V' W', were quartered the Hastati of the two legions, the number of men being the same as in the Principes, and an equal space being assigned to them.

Facing the legionary Hastati, in the areas marked 5 and 5', were the cavalry of the allies.

The total number was 600 to each legion, but of these $\frac{1}{3}$ or 200 were separated under the name of *extraordinarii*, and quartered in a different part of the camp. Consequently, each of the spaces 5 and 5' was calculated to accommodate 40 dragoons with their horses; and allowing them the same space as the legionary cavalry, each of these areas must have contained somewhat more than 13,333 square feet.

Back to back with the cavalry of the allies, and looking towards the rampart which enclosed the camp, the infantry of the allies were quartered in the areas marked 6 and 6'. The total number was 3000 for each legion, but of these $\frac{1}{3}$ or 600 were separated as *extraordinarii* and quartered in a different part of the camp. Hence there would remain 2400, or 240 for each of the spaces 6 and 6', and these accordingly contained 20,000 square feet.

The open space immediately behind the tents and baggage of the tribunes, extending to the right

and left of the space allotted to the general, was assigned on one side to a forum, and on the other, to the quaestor and his department (*τῷ τε ταμίᾳ, καὶ ταῖς ἄμιας τούτῳ χορηγίαις*). These are marked 7 and 8, but we are not told on which side they respectively stood.

Still further to the right and left of the praetorium in 9, 10, and 9', 10', looking respectively towards the forum and the quaestorium, were a body of cavalry, selected from the extraordinarii equites (*οἱ τῶν ἐπιλέκτων ἱππέων ἀπόλεκτοι*), and a body of cavalry serving as volunteers out of compliment to the general (*καὶ τινες τῶν ἐθελοντηδὸν στρατευομένων τῇ τῶν ὑπᾶτων χάριτι*), analogous, probably, to the *Evocati* of later times. Back to back with these, looking towards the rampart, in 11, 12 and 11' 12', were quartered the foot-soldiers belonging to the same classes as the cavalry just named. On the march, these troops were always near the person of the consul and of the quaestor, and served as a sort of body-guard to them. Their number is nowhere specified, and hence the exact space required for their accommodation cannot be determined.

In 13 and 13', looking towards the quaestorium, praetorium, and forum, were quartered the remainder of the extraordinarii equites. Back to back with these, facing the ramparts in 14 and 14', were the remainder of the extraordinarii pedites. The spaces marked 15, 15' on the flanks of 13, 14, 13', 14', were assigned to foreign troops or to allies not included in the regular contingent, who might chance to be present (*τοῖς ἀλλοφύλοις καὶ τοῖς ἐκ τοῦ καιροῦ προσγιγνομένοις συμμάχοις*).

The form of the camp was an exact square (*τετραγώνον ἰσόπλευρον*), the length of each side being 2017 Roman feet.

The clear space between the ramparts and the tents (*intervallum*) was 200 feet, and this was of the greatest service in facilitating the marching in and out of the soldiers without crowding or confusion. Here, also, cattle and other booty were kept and guarded; and the breadth was sufficient to prevent any ordinary missile or fire-brand hurled into the camp from doing serious injury.

The principal street, stretching right across in front of the tents of the tribunes, was 100 feet wide and was named *Principia*. It will be observed that the lengthened lines of the ten turmae and manipuli in each division is intersected at the termination of the first five by a road fifty feet wide, called the *Via Quintana*. The position of the remaining five vias in the fore-part of the camp, all of which intersect the *Via Quintana* at right angles, will be understood at once by inspecting the plan, the width of each being 50 feet.

When two consular armies encamped together within the same rampart, two ordinary camps were, it may be said, applied to each other at the ends nearest to their respective praetoria. The two praetoria faced in opposite directions, and the legions of the two consuls stretched their lines in front of each praetorium, so that the figure of the camp was now no longer a square, but a rectangle, whose length was twice that of an ordinary camp, the breadth being the same.

Although the words of Polybius are, as a whole, so full and clear that we can have little difficulty in forming a distinct conception of the camp which he describes and in delineating the different parts, it must not be concealed that he has altogether passed

over many important points on which we should desire information, and that occasionally his language is not entirely free from ambiguity.

Under the head of omissions, we must note —

1. The absence of all information with regard to the manner in which the *Velites* were disposed of. These, at the time when Polybius wrote, amounted to 1200, or, at the lowest computation, to 1000 for each legion; and taking the same number for the contingent of the *Socii*, we shall thus have a body of at least 4000 men unprovided for. It is true that he subsequently states, in a passage which we quote below, that the *velites* kept guard by night and by day along the whole extent of the rampart, and that they were stationed in bodies of ten to watch the gates. Hence some have supposed that the light-armed troops always bivouacked outside the camp; others, that they occupied the intervalum; others, that, just as in the line of battle, they did not form a distinct corps, but were distributed among the *hastati*, *principes*, and *triarii*, according to a given ratio, so in like manner they were, in the camp, quartered along with those divisions to which they were attached in the field. The *velites* ceased to form a portion of the legion about the time of Marius, and consequently the later Roman writers throw no light upon the question. It is remarkable, also, that while Polybius passes them over completely in the internal arrangements of his camp, so also he takes no notice whatsoever of them when describing the *agmes* or the order of march in which an army usually advanced.

2. No mention is made of the *legati*. *Lipaeus*, in his plan of a Roman camp after Polybius, assigns to them a compartment next to the praetorium on the side opposite to that where the quaestorium stood; but this is merely a conjecture.

3. The *praefecti sociorum* likewise are passed over. Since they corresponded among the troops of the allies to the *tribuni* in the legions, it seems highly probable that their tents were ranged along a prolongation of the line on which the latter stood, and thus they also would be placed immediately opposite to and looking towards the soldiers under their immediate command.

4. The number of tents allowed to each manipulus or century is nowhere stated, and consequently the number of men in each tent is unknown, nor are we very distinctly told how the centurions and other officers of the infantry and cavalry inferior to the tribunes were provided for; it is merely said that the *ταξίαρχοι* in each manipulus took the first tents on each side, that is, probably, at each end of the row which held one manipulus.

5. With regard to the fortifications of the camp it is stated that the digging of the ditch (*ραπεία*) and the formation of the rampart (*χαρακωρίς*) upon two sides of the camp was assigned to the *socii*, each division taking that side along which it was quartered; while the two remaining sides were in like manner completed by the legionaries, one by each legion. The work upon each side was portioned out among the maniples, the centurions acted as inspectors of the tasks performed by their respective companies, and the general superintendence was undertaken by two of the tribunes. The nature and the dimensions of the defences are not, however, specified. These consisted of a ditch (*fossa*), the earth from which was thrown inwards, and formed, along with turf and

stones, into a mound (*agger*), on the summit of which a strong palisade of wooden stakes (*rudēs, vallē*) was fixed forming the rampart (*Vallum* s. *Vallus*—*χάραξ*). We can scarcely doubt that the depth of the ditch, together with the height and breadth of the *agger*, were, under ordinary circumstances, fixed; but the measurements incidentally mentioned in isolated passages do not perfectly accord with each other. Among the works at Dyrrhachium (*Caes. B. C. iii. 63*) we read of a ditch 15 feet deep, and a vallum 10 feet high and 10 feet broad; in the war against the Bellovaci and other Gaulish tribes we find Caesar (*B. G. viii. 9*) fortifying his camp with a double ditch, 15 feet deep, with perpendicular sides (*directis lateribus*), and a vallum 12 feet high, on the top of which was a breast-work (*loricula*) and numerous towers three stories high connected with each other by bridges, the sides of these bridges next to the enemy being protected by a breast-work of fascines (*viminea loricula*). Both of these, however, as well as several others which we might quote, must be regarded as special cases. The practice of a later period is, as we shall see below, more clearly defined by Hyginus and others.

6. Neither the number nor the names of the openings in the vallum are given. We have abundant evidence to prove that there were four:—(1) *Porta Principalis dextra* and (2) *Porta Principalis sinistra* at the two extremities of the wide street called *Principia*; (3) *Porta Praetoria* s. *Extraordinaria*, so called from being situated on that side of the camp nearest to the *praetorium* and in the immediate vicinity of the quarters of the *extraordinarii*; (4) *Porta Decumana*, so called from being situated on that end where the tenth *turmae* and tenth *maniples* in each division were quartered. This gate was also called *Porta Quaeestoria*, in consequence, it would seem, of the *Quaeestorium* and the *Forum* having been at one time placed in its vicinity, and here unquestionably stood the *Quaeestorium* in the camp of Hyginus, as we shall see below. Festus likewise has the gloss "*Quintana appellatur porta in castris post praetorium, ubi rerum utensilium forum sit*," and from *Quintana* in the sense of *Forum* comes the modern *Quinten*. The perplexity caused by these statements has induced some critics to reverse the positions of the *Porta Praetoria* and the *Porta Decumana* as marked in our plan; but this alteration will give rise to difficulties still more serious, as may be seen from consulting Polybius and the authorities referred to at the end of this paragraph; for we find it expressly stated that the *Porta Decumana* was on that side of the camp most remote from the enemy (*ab eo tergo castrorum; aversa castrorum; decumana maxima petebatur aversa hosti at fugiensibus tutior*), leading out, as will be seen from the construction, in the direction from which wood, water, and other necessary supplies would be most easily and securely provided. (*Liv. xl. 27, iii. 5, x. 32, xxxiv. 47; Tacit. Ann. i. 66, iv. 30; Festus, s. vv. Praetoria porta, Principalis, Quintana; Sueton. Ner. 26.*)

We can scarcely doubt that the *Portae* must have been always defended by barriers of some kind; but when special precautions were required they were closed by regular gates defended by towers (*portis fores altioresque turres imposuit*, *Caes. B. G. viii. 9*).

7. In which direction did the *Praetorium* face?

towards the *Porta Praetoria* or towards the legions and the *Porta Decumana*? On the reply to this question, which can be answered from conjecture only, depends the solution of the problem as to which was the *Porta Principalis dextra* and the *P. P. sinistra*. In like manner we cannot ascertain on which side of the *Praetorium* the *Quaeestorium* was placed. But these are matters of small moment.

The above are the most important omissions in the description of Polybius. Our limits will not permit us to do more than simply to indicate one important point where a certain degree of ambiguity in his phraseology has given rise to doubt, discussion, and an irreconcilable difference of opinion. After detailing the arrangements adopted when two consular armies encamp together, he adds these remarkable words—*ὅταν δὲ χεῖρς ἑτέρα μὲν ὁσάστωρ, τὴν δ' ἡγορᾶν, καὶ τὸ ταμιεῖον, καὶ τὸ στρατηγεῖον, μίαν τιθέναι τῶν διῶν στρατοπέδων*. Taking this sentence by itself, if the text be pure, and if the word *στρατοπέδων* be rendered, as apparently it must be rendered, *legions*, then we should be led to the conclusion that in a single camp, the *Praetorium*, the *Quaeestorium* and the *Forum* were all situated somewhere about the middle of the *Via Quintana*; and this conclusion Schelius, one of the most acute and learned writers on the military affairs of the Romans, has actually adopted. This, however, is so completely at variance with the whole previous narrative of the historian who occupies himself from the commencement with a single consular camp, and lays down the site of the *praetorium*, as we have done above, in a manner so clear as to admit of no cavil, the whole construction, in fact, depending upon the spot thus assigned to the *praetorium*, that we are driven to make choice of one of these alternatives, either that there is a corruption lurking in the text, or that Polybius is here alluding to some peculiar expedient which was resorted to when two consular armies encamped beside each other, but were not actually included within the lines of a single camp. For a full and fair examination of this and of other difficulties which suggest themselves upon a close examination of Polybius and an impartial review of the chief arguments adduced by contending critics, the student may consult a tract entitled "*Polybii Castrorum Romanorum formae interpretatio*," script G. F. Rettig," 4to. Hannover. 1828.

We now proceed to notice various particulars connected with the internal discipline of the camp.

The Camp Oath.—When an army encamped for the first time, the tribunes administered an oath to each individual quartered or employed within its limits, including slaves as well as freemen, to the effect that he would steal nothing out of the camp, but if he chanced to find any property that he would bring it to the tribunes. We must suppose that the solemn promise being once made, was considered as binding during the whole campaign, for it would have been impossible to have repeated a ceremony so tedious at the close of each march.

Distribution of Duty among the Officers.—In each legion the tribunes divided themselves into three sections of two each, and each section in turn undertook for two months the superintendence of all matters connected with the camp. It is not improbable that one tribune in each section assumed the chief command upon alternate days, or perhaps during alternate months, and hence Polybius gene-

rally speaks of one tribune only as acting, or of two when reference is made to both legions.

Officers parade.—Every morning at day-break the centurions and the equites presented themselves before the tents of the tribunes, and the tribunes in like manner, attended perhaps by the centurions and equites, presented themselves at the praetorium. The orders for the day were then issued by the consul to the tribunes, communicated by the tribunes to the centurions and equites, and through the centurions and equites reached the soldiers at the proper time.

Guards, Sentinels, &c.—Out of the twenty maniples of Principes and Triarii in each legion, two were appointed to take charge of the broad passage or street called *Principia*, extending right across the camp in front of the tents of the tribunes. This being the place of general resort during the day, and, as we know from various sources, the part of the camp in which the altars and the eagles stood, great pains were taken that it should be kept perfectly clean and regularly watered, a labour which would fall very light when portioned out among four maniples.

Of the remaining eighteen maniples of Principes and Hastati in each legion, three were assigned by lot to each of the six tribunes, and of these three maniples one in turn rendered each day certain services to the tribune to whom it was specially attached. It took charge of his tent and baggage, saw that the former was properly pitched upon ground duly levelled all round, and protected the latter from damage or plunder. It also furnished two guards (*φυλάκεια*) of four men each, who kept watch, some in front of the tent and some behind, among the horses. We may remark in passing, that four was the regular number for a Roman guard (*φυλάκειον*); of these one always acted as sentinel, while the others enjoyed a certain degree of repose, ready, however, to start up at the first alarm. Compare the Acts of the Apostles, cap. xii. *παράδοις τέσσαροι τετραβίους στρατιωτῶν φυλάσσειν αὐτόν*.

The Triarii were exempted from those duties imposed upon the Principes and Hastati, but each maniple of the Triarii furnished daily a guard of four men to that turma of the Equites which was quartered immediately behind them, in order to watch the horses, and to take care that they did not sustain any injury from getting entangled with their halters and heel ropes, or break loose and cause confusion and mischief.

One maniple was selected each day from the whole legionary force, to keep guard beside the tent of the general, that he might be secured alike from open danger and hidden treachery; this honourable task being devolved upon every maniple in rotation. Three sentinels were usually posted at the tents of the quaestor and of the legati; and by night sentinels kept watch at every maniple, being chosen out of the maniple which they guarded.

The Velites mounted guard by day and by night along the whole extent of the vallum: to them also in bodies of ten was committed the charge of the gates, while strong bodies of infantry and cavalry were thrown forward in advance of each gate, to resist any sudden onset, and give timely notice of the approach of the enemy.

Excubias; excubias agere; excubare; are the general terms used with reference to mounting

guard whether by night or by day. *Vigilias; vigiliis agere; vigilare;* are restricted to night duty: *Excubias* and *Vigilias* frequently denote not only the service itself, but also the individuals who performed it. *Stationes* is used specially to denote the advanced posts thrown forward in front of the gates, *Custodes* or *Custodias* the parties who watched the gates themselves, *Præsidia* the sentinels on the ramparts, but all these words are employed in many other significations also.

Going the Rounds.—In order to ascertain the vigilance of the night sentinels (*νυκτερινα φυλάκα*) an ingenious scheme was devised. Each guard (*φυλάκειον*) consisted, as we have seen, of four men, and each of these in turn stood sentinel for one of the four watches into which the night was divided. The sentinels to whom it fell to go upon duty in the first watch, were conducted in the afternoon to the tent of the tribune by lieutenants of the maniples to which they belonged. Each of these men received from the tribune four small tokens (*κύλῳφια*), numbered from one to four for the four watches, and bearing also marks indicating the legion, and maniple or century from which the guard was taken. The individual who received these tokens retained the one which answered to his own watch, and distributed the rest among his three comrades. The duty of going the rounds (*Vigilias circuire s. circumire*, comp. Fest. s. v. *frangere*) was committed to the Equites, and for this purpose each legion supplied daily four, picked out from each turma in rotation by the commander of the troop. The eight persons thus selected decided by lot in which watch they should make their rounds, two being assigned to each watch. They then repaired to the tribune, and each individual received a written order specifying the posts which he was to visit, every post being visited in each watch by one or other of the two to whom the watch belonged. They then repaired in a body to the first maniple of the Triarii, and there took up their quarters, because it was the duty of one of the centurions of that maniple to give notice of the commencement of each watch by a trumpet blast. At the appointed time each eques, accompanied by some friends, who acted as witnesses, visited all the posts named in his written order, from each sentinel whom he found on the alert he received one of the tokens described above, but if the sentinel was asleep or absent, then the eques of the rounds called upon his companions to witness the fact, and departed. The same process was followed by all the others, and on the following morning the officers of the rounds repaired to the tent of the tribune and delivered up the tokens. If the number of these was found to be complete, then all was well, but if any one was wanting, then it could be at once ascertained to what guard and to what watch the missing token belonged. The centurion of the company was ordered to bring forward the men implicated, and they were confronted with the officer of the rounds. If the latter could prove by means of his witnesses, that he had actually visited the post in question, and found the sentinel asleep or absent, then the guilt of the sentinel could not be a matter of doubt; but if the officer failed to establish this, then the blame fell upon himself, and in either case the culprit was forthwith made over to a court martial. Sometimes we find centurions, tribunes, and even the general in chief represented

as going the rounds, but under ordinary circumstances, the duty was performed as we have described. (Liv. xxii. 1, xxviii. 24; Sall. Jug. 45.; Tacit. Hist. ii. 29.)

Watchword.—The watchword for the night was not communicated verbally, but by means of a small rectangular tablet of wood (*πλατεῖον ἐπιγγραμμίον*—*tessera*—to be carefully distinguished from the *ξύλῃφιον* of the last paragraph), upon which it was written. One man was chosen out of each of those maniples and turmas which were quartered at that extremity of the lines most remote from the Principia. Each of these individuals (*tesserarius*) repaired towards sunset to the tent of the tribune, and received from him a *tessera*, on which the password and also a certain number or mark were inscribed. With this he returned to the maniple or turma to which he belonged, and taking witnesses, delivered it to the officer of the next adjoining maniple or turma, and he to the next until it had passed along the whole line, when it was returned by the person who received it last to the tribune. The regulation was that the whole of the *tesserae* should be restored before it was dark, and if any one was found wanting at the appointed time, the row to which it belonged could be at once discovered by means of the number or mark noticed above, an investigation took place at once into the cause of the delay, and punishment was inflicted upon the parties found to be in fault.

Not only mere passwords were circulated in this manner, but also, occasionally, general orders, as when we read in Livy, xxvii. 46, "*Tessera per castra ab Livio consule data erat, ut tribunum tribunus, centurio centurionem, eques equitem, pedes peditem acciperet.*"

Although the *tesserarius* received the *tessera* from the tribune, it proceeded in the first instance from the commander-in-chief, as we may perceive from the passage just quoted, and many others. Under the empire it was considered the peculiar function of the prince to give the watchword to his guards. (Tacit. Ann. i. 7; comp. Suet. Claud. 42, Ner. 9.)

Breaking up a Camp.—On the first signal being given by the trumpet, the tents were all struck and the baggage packed, the tents of the general and the tribunes being disposed of before the others were touched. At the second signal the baggage was placed upon the beasts of burden; at the third, the whole army began to move.

II. CAMP OF HYGINUS.

Passing over a space of about 250 years, we find ourselves amidst an order of things altogether new. The name *Legiones* still remains, but all the ancient divisions, with the exception of the *Centuriae*, have disappeared. The distribution of the soldiers into *Vexilles*, *Hastati*, *Principes*, and *Triarii* did not endure more than half a century after the era of Polybius; the organisation by maniples was about the same period in a great measure superseded by the cohorts, and the cavalry were detached from the infantry and formed independent corps. In like manner the *Socii*, after the admission of the Italian states to the Roman franchise, ceased to form a separate class, and their place is now occupied by a motley crew of foreigners and barbarians serving in bands, designated by strange titles. We are reminded also that the republican form of government had given way to the dominion of a single individual by the appearance of a mul-

titude of household troops and imperial bodyguards, distinguished by various appellations, and invested with peculiar privileges. A complete Roman army did not now consist of *Romanæ Legiones cum Sociis*, or of *Legiones cum Sociis et Auxiliis*, but of *Legiones cum Supplementis*, the term *Supplementa* including the whole of the various denominations alluded to above. In what follows, we shall attempt to delineate a summer camp (*castra aestivalia*), intended to contain three legions, with their supplements, a force, which in the time of Hyginus corresponded to the regular consular army of the sixth and seventh centuries of the city. It is but right, however, to call attention to the fact, that we do not here tread upon ground so firm as when Polybius was our guide. The text of Hyginus presents many difficulties and many corruptions; and there are not a few passages in which we are thrown too much upon conjecture. This, however, be it understood, applies almost exclusively to the minute details, for the general outline of the whole is clear and well ascertained. The plan sketched below, is taken almost entirely from Schelius, and the proportions of the different parts are carefully preserved. Omitting in this case the geometrical construction, we proceed at once to explain the figure.

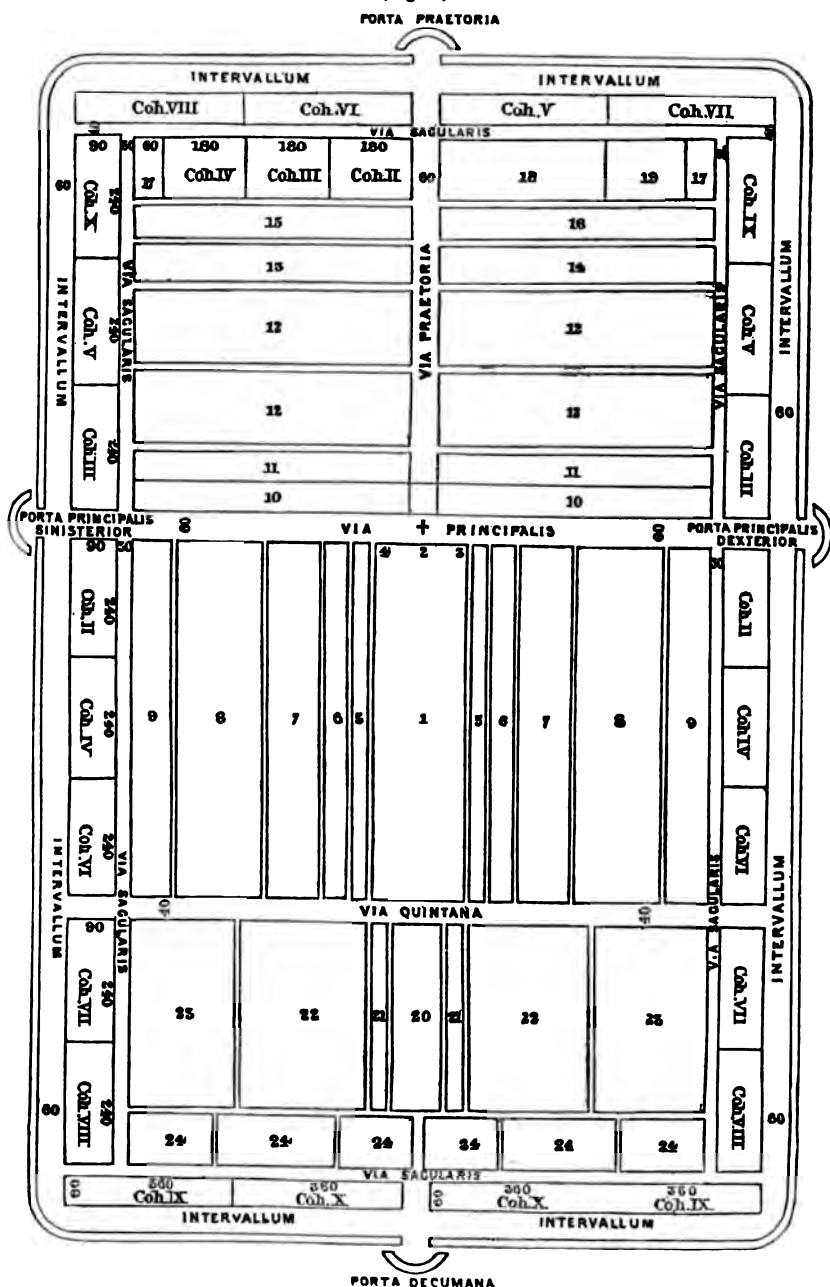

The point from which the whole of the measurements proceeded is marked with a small cross, and was called *Groma*, that being the name of an instrument employed by surveyors, analogous, in its uses at least, to the modern cross staff, plane table and level.

The general form of the inclosure was an oblong, the two longer sides being at equal distances from the *Groma*, rounded off at the angles (*angulus castrorum circumscribere oportet*), 2320 feet in length by 1620 feet in breadth, the general rule being that the length should exceed the breadth by one third (*castra is quantum fieri poterit tertiata esse debent*); when larger it was called *Castra Classica*, because, says Hyginus, the ordinary *Buccinum* or bugle could not be heard distinctly from one extremity to the other.

The *Groma* stood in the middle of the principal street (*Via Principalis*), which was sixty feet wide, extending right across the camp, with the two *Portae Principales* at its extremities. The two remaining gates, which, like the former, retained their ancient names, were the *Porta Praetoria*, which was nearest to the enemy (*porta praetoria semper hostem spectare debet*), and the *Porta Decumana*, and these were placed in the centre of the two shorter sides of the oblong. Immediately behind the *Groma*, a rectangular space, 720 feet long by 180 broad, was set apart for the emperor or commander-in-chief, and, as in the consular camp, termed the *Praetorium*. Immediately behind the *Praetorium*, that is to say, at the extremity most distant from the *Groma*, a street called the *Via Quintana*, 40 feet wide, extended across the camp parallel to the *Via Principalis*. When the camp exceeded the ordinary dimensions, then two additional gates were formed at the extremities of the *Via Quintana*, the breadth of which was in that case increased to 50 feet.

It will be seen at a glance that the camp was divided into three segments by the *Via Principalis* and the *Via Quintana*. Each of these segments had a name. The whole of the middle segment, lying to the right and the left of the *Praetorium*,

(Fig. 3.)

formed the *Latera Praetorii*. The segment included between the *Via Principalis* and that side of the camp in which the *Porta Praetoria* stood formed the *Praetentura*. The segment included between the *Via Quintana* and that side of the camp in which the *Porta Decumana* stood formed the *Retentura*.

The legiones being the most trustworthy of the troops in the provinces, were quartered by cohorts next to the rampart all round the camp, encircling completely with their lines the masses of foreigners, who, together with the imperial guards, formed the supplements.

A clear space of 60 feet (*intervallum*) was left between the tents of the legionaries and the ramparts, and they were separated from the quarters of the other troops, whom they surrounded, by a street called the *Via Sagularis*, which ran completely round the camp, so that the whole of the legionaries, with the exception of the first cohort in each legion, and three ordinary cohorts for whom there is not room in the outer ring, were bounded on one side by the intervallum and on the other by the *Via Sagularis*. The remaining streets not particularly specified were comprehended under the general name *Viae Vicinariae* & *Vicinales*, and their breadth was 20 feet.

The defences of a camp might be fourfold:—1. *Fossa*. 2. *Vallum*. 3. *Cervoli*. 4. *Arma*.

1. The *Fossa* might be of two kinds, *a*. The *Fossa fastigata*, with both sides sloping, so as to form a wedge; or, *b*. the *Fossa Punicia*, of which the outer side was perpendicular, the inner side sloping, as in the fossa fastigata. The breadth in either case was to be at least 5 feet, the depth 3 feet. Outside of each gate a ditch was dug extending on both sides somewhat beyond the gate: this, on account of its shortness, was called *Titulus*, and in front of the titulus was a small semicircular redoubt (*clavicula*).

2. The *Vallum* was formed of earth and turf, or of stone, 6 feet in height, 8 feet broad.

3. When the nature of the ground did not admit of the construction of a sufficient vallum, then a chevaux de frise (*cervoli*) was substituted.

4. When neither a Vallum nor Cervoli could be employed, then the camp was surrounded by a ring of armed men four deep, numerous sentries were posted in each line, and the cavalry patrolled in turn in every direction.

The words of Hyginus would lead us to suppose that when no danger was apprehended, a ditch alone was considered sufficient; and even this was excavated merely for the sake of exercising the men (*causa disciplinae*).

We can now proceed to point out in what manner the three segments were occupied, referring to the numbers on the figure, it being understood that, as before, we shall not enter here into any discussions regarding the origin and character of the different battalions named, all information upon such matters being given in the article EXERCITUS.

A. Praetorium et Latera Praetorii.

1. *Praetorium*. 2. *Arae*, on which public sacrifice was offered. The position assigned to them is conjectural; but they were, at all events, in the immediate vicinity of this spot. 3. *Auguratorium*, in which the Emperor took the auspices—the altars were perhaps erected in front of this place, at least such was the case sometimes. (See Tacit. *Ann.* xv. 30, where the form *Auguralis* is employed.) 4. *Tribunal*, the elevated platform from which addresses were delivered to the troops. Close to the praetorium was a guardhouse (*stationi dari oportet secundum praetorium pedes viginti*). 5. *Comites Imperatoris*, the personal staff of the Emperor, among whom the chief place, next to the *Via Principalis*, was assigned to the Praefectus Praetorio. 6. *Equites singulares Imperatoris et Equites Praetoriani*: the number of these was variable; but Hyginus gives as an average 450 of the former and 400 of the latter. 7. *Cohortes*

praetoriae quatuor. Primpilares. Evocati. Officiales. The praetorians were allowed twice as much space as the troops of the line. 8. *Alae quingenariae quatuor*. 9. In each of the spaces marked 9, on the extreme right and left of the Praetorium, bordering on the *Via Sagularis* (*per rigorem viae sagularis*) was placed the first cohort and the *vesillarii* of one legion. The first cohort and the *vesillarii* of the remaining legion will be found in the Praetentura. The first cohort of a legion contained 960 men, being twice as numerous as the others; the *vesillarii* of a legion amounted to about 500.

B. Praetentura.

10. *Scammum Legatorum*. The quarters of the legati. 11. *Scammum Tribunorum*. Immediately behind the legati, were the legionary tribunes and the tribunes of the praetorian cohorts.

In the language of surveyors, *scammum* was a rectangular figure, whose breadth exceeded its length, *striga* a rectangular figure, whose length exceeded its breadth. So, *Sigma* and *Tabulinum* are the terms used with reference to the direction of the length and breadth respectively: thus, "*Cohors prima caesa signorum et aquilae intra viam sagulariam, et quoniam duplum numerum habet, duplam pedaturam accipiet, ut, puta, signis pedes centum viginti, tabulino pedes trecentos sexaginta, vel signis centum octoginta tabulino pedes ducentos quadraginta.*" It is the more necessary to call attention to this, because these significations have been passed over by the best lexicographers, and we find that some modern exponents of Hyginus imagine *Tabulinum* to have been an office where the books and accounts of the legion were kept. Another example of the use of these words will be given below.

12. *Alae miliariae quatuor*, one in each of these four compartments. 13. *Valetudinarium*, the hospital for the sick soldiers. 14. *Veterinarium*, the hospital for the sick horses. 15, 16. *Classici*, marines employed as pioneers. *Mauri equites sescenti. Paenoni Vexillarii octingenti*. These two bodies of light cavalry were quartered near the classici, because, when the latter were sent in advance to clear the way, they were guarded by the former. 17. *Exploratores*. General Roy in his plan places them in these two small compartments, but it appears more probable from the words of Hyginus, that they were quartered all together on the side next to 19. 18 and 19. The first cohort of the remaining legion and its *Vexillarii*.

On the opposite side of the *Via Praetoria*, three legionary cohorts, for whom there was not sufficient space outside of the *Via Sagularis*.

In the Praetentura stood also the *Fabrica* or workshop of the carpenters and armourers, erected at a distance from the *Valetudinarium*, so that the noise might not disturb the patients.

Within the *scammum* of the legati were the *Scholae* of the first cohorts, the places apparently where the superior officers of the legions assembled in order to receive the general orders of the day.

C. Rotentura.

20. *Quaestorium*. This space corresponded in name only with the Quaestorium of the Polybian camp, for it was no longer assigned to a quaestor (*Quaestorium dicitur quod aliquando ibi quaestores pedaturam acciperint*). It was occupied partly by prisoners of rank, hostages, and plunder, and here

perhaps the Praefectus Castrorum may have been quartered, unless we are to look for him among the *Comites Imperatoris*.

21. *Statorum centuriae duae*, who guarded the rear of the praetorium, and always kept close to the person of the Imperator. These, like the praetorians, had double space assigned to them.

22. *Cohortes equitatus milliariae duae. Cohortes equitatus quingenariae quatuor.*

23. *Cohortes peditatus milliariae tres. Cohortes peditatus quingenariae tres.*

24. *Nationes.* Barbarian troops. *Palmyreni quingenti. Getae nongenti. Daci septingenti. Britones quingenti. Cantabrig septingenti.* Among these we find enumerated *Sumacraes*, a word which no one has succeeded in explaining, but it is in all probability a corrupt form.

Camels with their riders (*camelis cum suis epibatis*) were frequently included among the constituents of an army, being used both in offensive operations, and also in carrying plunder.

Two points strike us forcibly when we compare the camp of Hyginus with that of Polybius; first, the flimsy character of the fortifications, which must be attributed to the disinclination felt by the soldiers to perform regularly and steadily the same amount of labour which was cheerfully executed by soldiers of the republic; and, secondly, the desire every where visible to economise space, and compress every thing within the narrowest possible limits. Although the numbers of an army, such as we have been considering above, cannot be determined with absolute precision, they must, on the lowest computation, have exceeded 40,000 men, and these were crowded together into less than one half the space which they would have occupied according to the ancient system, the proportion of cavalry, moreover, being much larger in the imperial force. The camp of Polybius, calculated for less than 20,000, contains upwards of four millions of square feet, while the camp of Hyginus embraces little more than three millions and seven hundred thousand.

We may conclude with a few words upon a topic entirely passed over by Polybius, but on which Hyginus affords ample information in so far as the usages of his own day are concerned — the number and arrangement of the tents.

A double row of tents (*papiliones*) facing each other, with a space between for piling the arms of the soldiers, and for receiving the beasts of burden and the baggage, was termed *Striga*; a single row, with a corresponding space in front, *Hemistrigium*. The normal breadth of a *Striga* was 60 feet, of a *Hemistrigium* 30 feet, made up as follows: — 10 feet were allowed for the depth of each tent, 6 feet for a passage behind the tent, 5 feet for the arms piled in front of the tent, 9 feet for the *jumenta* and baggage; total 30 feet for the hemistrigium, which doubled for the striga gives 60, the space between the rows being 28 feet. The length of the striga or hemistrigium varied according to circumstances.

A full legionary century (*plena centuria*), when Hyginus wrote, consisted of 80 men, who occupied 10 papiliones. The length allowed for each papilio was 12 feet, 10 feet for the papilio itself, and 2 feet for lateral passages (*incrementum transversae*), and thus the length of the line along which the papiliones of a century stretched was $10 \times 12 = 120$ feet. Out of this the centurion

had a space allotted to him equal to that required for 2 tents, so that the privates of the century occupied 8 tents only, that is, they were quartered at the rate of 10 men to each tent. But since 16 men or 4 guards (*terpadia*) in each century were always out upon duty, there were never more than 8 men actually in a tent at the same time.

(Fig. 4.)

Since a striga 120 feet in length and 60 feet in breadth, containing 7200 square feet, was allotted

(Fig. 5.)

to 2 centuries, and since an ordinary legionary cohort contained 6 centuries, it follows that the space required for each cohort (*pedatura cohortis*) of 480 men was 21,600 square feet.

The troops were usually quartered in cohorts, and these might be variously disposed, it being always desirable that a whole century should always be ranged in an unbroken line.

If the striga was equal to one century in length, then the cohort would occupy three strigae in breadth, that is, a space 120 feet long, by 180 broad = 21,600 square feet. See fig. (6.)

(Fig. 6.)

If the striga was equal in length to two centuries, then the cohort would occupy one whole striga and a hemistrigium, that is, a space 240 feet long by 90 feet broad = 21,600 square feet. See fig. (7.)

(Fig. 7.)

If the striga was equal in length to three centuries, then the cohort would occupy one striga only, or a space 360 feet long by 60 feet broad = 21,600 square feet. See fig. (8.)

(Fig. 8.)

It is to be observed that in the plan of the camp given above, the legionary cohorts on the longer sides are in strigae of 240 feet in length, those on the shorter sides in strigae of 360 feet in length.

When the number of legions in an army was greater in proportion to the supplementa than in the array which we have reviewed, then in order that they might still be ranged outside of the Via Sagularis, the strigae presented their breadth to the vallum instead of their length, or to use the technical phrase, the length which in the former case had been assigned to the *Sigma*, was now given to the *Tabulinum* (*Quodsi legiones plures acoperimus et supplementa pauciora ut necessarium ut cohortes circa vallum crebrius ponere conuertemus palatavimus, QUOD FUERAT SIGNIS TABULINO DARNUM*).

If A B be the line of the vallum, C will represent the position of the cohort in the one case, D in the other.

Josephus, in his account of the Jewish war, takes special notice of the Roman encampments, and, although he does not enter into minute details, his observations, with which we shall conclude this article, form a useful supplement to Hyginus. It is evident from the numerous artificers for whom workshops are provided, from the towers with which the vallum was strengthened, and from the precaution of setting fire to every thing left behind, that the words of the historian refer chiefly to *Castra Stativa*. He begins by remarking (*B. J. iii. 5*) that the Romans when invading an enemy's country never hazard an engagement until they have fortified a camp (*οὐ πρὶν ἀππορταί μάχης ἢ τειχίσαι στρατόπεδον*), which, in form, is a square (*διαμετρεῖται δὲ παρεμβολὴ τετράγωνος*), with four gates, one on each side. The rampart by which it is surrounded exhibits the appearance of a wall furnished with towers at equal distances, and in the spaces between the towers is placed the artillery ready for immediate service (*τοὺς τε δρυβελεῖς, καὶ καταπέλτας, καὶ λιθοβόλα, καὶ πᾶν ἀφειρτήριον ὅργανον τιθάσιν, ἅπαντα πρὸς τὰς βολὰς ἑτοιμα*). The camp is divided conveniently by streets, in the middle are the tents of the officers, and in the very centre of all the praetorium (*τὸ στρατηγικόν*); there is also a forum (*ἀγορὰ τις ἀποδεικνύται*), and a place for artificers (*χειροτέχναις χωρίον*), of whom a great number follow the army with building tools, and seats for the tribunes and centurions (*δικαὶ τε λοχαγοῖς καὶ ταξιδρχοῖς*), where they decide any disputes which may arise. When necessary (*εἰ δὲ ἐρείγοι*) a ditch is dug all round, four cubits deep and four cubits broad.

At day dawn (*ὅπρ δὲ τὴν ἑω*) all the soldiers repair to the tents of their respective centurions (*ἐπὶ τοὺς ἑκατοντάρχας*) and salute them: the centurions repair to the tribunes (*πρὸς τοὺς χιλιάρχους*), along with whom all the centurions

(*ταξιαρχαί*) repair to the commander-in-chief, from whom they receive the watchword (*σημείον*) and the general orders of the day, to be conveyed by them to their respective divisions.

When a camp is broken up, at the first blast of the trumpet the soldiers strike the tents, and pack up the utensils; at the second they load the mules and other beasts of burden, set fire to every thing which could prove serviceable to an enemy, and stand like coursers ready to start forward on a race; the third gives the last warning that all things being now prepared every man must be in his place. Then the herald, standing at the right hand of the general, demands thrice if they are ready for war, to which they all respond with loud and repeated cheers that they are ready, and for the most part, being filled with martial ardour, anticipate the question, and raise their right hands on high with a shout. (*B. J.* iii. 5. § 4.) [W. R.]

CATAGO'GIA (*καταγόγια*). [*ANAGOGIA.*]

CATAGRAPHIA. [*PICTURA.*]

CATÁ'LOGUS (*κατάλογος*), the catalogue of those persons in Athens who were liable to regular military service. At Athens, those persons alone who possessed a certain amount of property, were allowed to serve in the regular infantry, whilst the lower class, the *thetes*, had not this privilege. Thus the former are called *οἱ ἐκ καταλόγου στρατεύοντες*, and the latter *οἱ ἔξω τοῦ καταλόγου*. (*Xen. Hell.* ii. 3. § 20.) Those who were exempted by their age from military service, are called by Demosthenes (*De Synt.* p. 167.) *οἱ ὑπὲρ τὸν κατάλογον*. It appears to have been the duty of the generals (*στρατηγοί*) to make out the list of persons liable to service [*ASTRATÉIAS GRAPHE*], in which duty they were probably assisted by the demarchi, and sometimes by the *βουλευτάι*. (*Dem. c. Polycl.* p. 1208.)

CATÁ'USEOS TOU DEMOU GRAPHE' (*κατάλυσος τοῦ δήμου γραφή*), was an action brought against those persons who had altered, or attempted to alter, the democratical form of government at Athens. A person was also liable to this action who held any public office in the state after the democracy had been subverted. (*Andoc. de Myst.* p. 48.) This action is closely connected with the *προδοσίας γραφή* (*ἐπὶ προδοσίᾳ τῆς πόλεως*, ἢ *ἐπὶ κατάλυσει τοῦ δήμου*, *Demosth. c. Timocr.* p. 748), with which it appears in some cases to have been almost identical. The form of proceeding was the same in both cases, namely, by *εἰσαγγελία*. In the case of *κατάλυσος τοῦ δήμου*, the punishment was death; the property of the offender was confiscated to the state, and a tenth part dedicated to Athens. (*Andoc. De Myst.* p. 48.)

CATAPHRA'CTI (*κατάφρακτοι*). 1. Heavy-armed cavalry, the horses of which were also covered with defensive armour (*Serv. ad Virg. Aen.* xi. 771), whence they are called by Pollux (i. 140) *περιπεφραγμένοι*. The armour of the horses consisted either of scale armour, or of plates of metal, which had different names according to the parts of the body which they protected. Pollux (i. 140) speaks of the *προμετωπίδιον*, *παρόπιον*, *παρήιον*, *προστερνίδιον*, *παρὰπλευρίδιον*, *παρὰμυρτίδιον*, *παρὰκνημίδιον*. Among many of the Eastern nations, who placed their chief dependence upon their cavalry, we find horses protected in this manner; but among the Romans we do not read of any troops of this description till the later times of the

empire, when the discipline of the legions was destroyed, and the chief dependence began to be placed on the cavalry.

This species of troops was common among the Persians from the earliest times, from whom it was adopted by their Macedonian conquerors. (*Liv.* xxxv. 48; xxxvii. 40.) In the army of the elder Cyrus, Xenophon (*Cyr.* vi. 4. § 1) says that the horses were protected by coverings for the forehead and chest (*προμετωπίδιον καὶ προστερνίδιον*); and the same was the case with the army of Artaxerxes, when he fought with his younger brother. (*Xen. Anab.* i. 8. § 7.) Troops of this description were called *dibanarii* by the Persians (*cataphracti equites*, *quos cibbanarios dictitant Persae*, *Amm. Marc.* xvi. 10; compare *Lamprid. Alex. Sev.* 56) We first read of cataphracti in the Roman army in the time of Constantine. (*Amm. Marc.* l. c.)

2. The word was also applied to ships which had decks, in opposition to *Aphracti*. [*NAVIS.*]

CATAPIRA'TER (*καταπειρατήρια*, *βολίς*), the lead used in sounding (*ἐν τῇ βολίᾳ*), or fathoming the depth of water in navigation. The mode of employing this instrument appears to have undergone no change for more than two thousand years, and is described with exactness in the account of St. Paul's voyage and shipwreck at Melite. (*Acts*, xxvii. 28.) A cylindrical piece of lead was attached to a long line, so as to admit of being thrown into the water in advance of the vessel, and to sink rapidly to the bottom, the line being marked with a knot at each fathom, to measure the depth. (*Isid. Orig.* xix. 4; *Eustath. in Il.* v. 396.) By smearing the bottom of the lead with tallow (*sextum*, *Lucilius*, *ap. Isid.* l. c.), specimens of the ground were brought up, showing whether it was clay (*Herod.* ii. 5), gravel, or hard rock. [*J. Y.*]

CATAPULTA. [*TORMENTUM.*]

CATARACTA (*καταβάκτρης*), a portcullis, so called because it fell with great force and a loud noise. According to Vegetius (*De Re Mil.* iv. 4), it was an additional defence, suspended by iron

rings and ropes, before the gates of a city, in such a manner that, when the enemy had come up to the gates, the porticulis might be let down so as to shut them in, and to enable the besieged to assail them from above. In the accompanying plan of the principal entrance to Pompeii, there are two sideways for foot passengers, and a road between them, fourteen feet wide, for carriages. The gates were placed at A, A, turning on pivots [CARDO], as is proved by the holes in the pavement, which still remain. This end of the road was nearest to the town; in the opposite direction, the road led into the country. The porticulis was at B, B, and was made to slide in grooves cut in the walls. The sideways, secured with smaller gates, were roofed in, whereas the portion of the main road between the gates (A, A) and the porticulis (B, B) was open to the sky. When, therefore, an attack was made, the assailants were either excluded by the porticulis; or, if they forced their way into the barbacan and attempted to break down the gates, the citizens, surrounding and attacking them from above, had the greatest possible facilities for impeding and destroying them. Vegetius speaks of the "cataracta" as an ancient contrivance; and it appears to have been employed by the Jews at Jerusalem as early as the time of David. (*Psalm* xxiv. 7, 9; comp. *Jer.* xx. 2. Sept.) [J. Y.]

KATASKOPES GRAPHE' (*κατασκοπή γραφή*), an action brought against spies at Athens. If a spy was discovered, he was placed on the rack, in order to obtain information from him, and afterwards put to death. (*Antiphanes, op. Athen.* ii. p. 66, d.; *Dem. De Cor.* p. 272; *Aeschin. c. Ctesiph.* p. 616; *Plut. Vit. doc. Orat.* p. 848, a.) It appears that foreigners only were liable to this action; since citizens, who were guilty of this crime, were accused of *προδοσία*.

CATASTA. [SERVUS.]

CATEIA, a missile used in war by the Germans, Gauls, and some of the Italian nations (*Virg. Aen.* vii. 741; *Val. Flac.* vi. 83; *Aul. Gell.* x. 25), supposed to resemble the aclea. (*Serv.* in *Aen.* l. c.; *Isid. Orig.* xviii. 7.) It probably had its name from *cutting*; and, if so, the Welsh terms *catai*, a weapon, *cateia*, to cut or mangle, and *catau*, to fight, are nearly allied to it. [J. Y.]

CATELLA. [CATENA.]

CATE'NA, dim. CATELLA (*ἐλυσίς*, dim. *ἐλυσίον*, *ἐλυσίδιον*), a chain. The chains which were of superior value, either on account of the material or the workmanship, are commonly called *cattellae* (*ἐλυσία*), the diminutive expressing their fineness and delicacy as well as their minuteness. The specimens of ancient chains which we have in bronze lamps, in scales [LIBRA], and in ornaments for the person, especially necklaces [MONILE], show a great variety of elegant and ingenious patterns. Besides a plain circle or oval, the separate link is often shaped like the figure 8, or is a bar with a circle at each end, or assumes other forms, some of

platted wire or thread, like the gold chains now manufactured at Venice. This is represented in the lowest figure of the woodcut.

These valuable chains were sometimes given as rewards to the soldiers (*Liv.* xxxiv. 31); but they were commonly worn by women (*Hor. Ep.* i. 17. 55), either on the neck (*πρὸς τὸν τράχηλον ἀλύσιον*, *Menander*, p. 92, ed. *Mein.*), or round the waist (*Plin. H. N.* xxxiii. 12); and were used to suspend pearls, or jewels set in gold, keys, lockets, and other trinkets. [J. Y.]

CATERVA'RII. [GLADIATORES.]

CATHEDRA, a seat; but the term was more particularly applied to the soft seats used by women, whereas *sella* signified a seat common to both sexes (*inter femineas cathedras*, *Mart.* iii. 63, 79; *Hor. Sat.* i. 10. 91; *Prop.* iv. 5. 37). The cathedrae were, no doubt, of various forms and sizes; but they usually appear to have had backs to them, as is the case in the one represented in the annexed woodcut, which is taken from Sir William Hamilton's work on Greek vases. On the cathedra is seated a bride, who is being fanned by a female slave with a fan made of peacock's feathers.

Women were also accustomed to be carried abroad in these cathedrae instead of in lecticae, which practice was sometimes adopted by effeminate persons of the other sex (*sesta cervice feratur cathedra*, *Juv. Sat.* i. 65; compare ix. 51). The word cathedra was also applied to the chair or pulpit from which lectures were read. (*Juv. Sat.* vii. 203; *Mart.* i. 77.) Compare Böttiger, *Sabina*, vol. i. p. 35; Scheffer, *De Re Vehicul.* ii. 4.

CATILLUS. [CATINUS.]

CATINUS, or CATINUM, a large dish, on which fish and meat were served up at table. Hence Horace speaks of an *angustus patinus* as an indication of niggardliness on the part of the host. (*Hor. Ep.* ii. 4. 77; *Pers.* iii. 11.) From this word came the diminutive *catillus* or *catillum*, a small dish.

CAVAE'DIUM. [DOMUS.]

CAVEA. [THEATRUM.]

CAUPO. The nature of the business of a caupo is explained by Gaius (*Ad Edict. Provinc.* Dig. 4. tit. 9. a. 5): "caupo . . . mercedem accipit

which are here shown. The links are also found so closely entwined, that the chain resembles

non pro custodia, sed . . . ut viatores manere in caupona patiatur . . . et tamen custodire nomine tenetur." The caupo lodged travellers in his house, and, though his house was not opened for the safe keeping of travellers' goods, yet he was answerable for their goods if stolen out of his house, and also for damage done to them there. The praetor's edict was in this form: "Nantae (carriers by sea), caupones, stabularii (persons who kept stables for beasts), quod cuiusque saluum fore receperint, nisi restituent, in eos iudicium dabo." By this edict such persons were made generally liable for the things which came into their care; for the words "quod cuiusque saluum fore receperint," are explained thus, "quamcunque rem sive mercem receperint." But if the goods of the traveller were lost or damaged owing to any unavoidable calamity, as robbery, fire, or the like, the caupo was not answerable. The action which the edict gave was "in factum," or an action on the case; and it was Honoraria, that is, given by the praetor. The reason why an Honoraria actio was allowed, though there might be actiones civiles, is explained by Pomponius (quoted by Ulpian, Ad Edictum, Dig. 4. tit. 9. a. 3. § 1): in certain cases there might be an actio locati et conducti, or an actio depositi, against the caupo; but in the actio locati et conducti, the caupo would be answerable only for culpa, and in the actio depositi he would be answerable only for dolus, whereas in this honoraria actio he was liable even if there was no culpa, except in the excepted cases. The English law as to liability of an innkeeper is the same. (Kent v. Shuckard, 2 B. & A. 803.) [G. L.]

CAUPONA, signified, 1. An inn, where travellers obtained food and lodging; in which sense it answered to the Greek words *πανδοκείον*, *καταγύγιον*, and *κατάλυσις*. 2. A shop, where wine and ready-dressed meat were sold, and thus corresponded to the Greek *καπηλείον*. The person who kept a caupona was called *caupo*.

It has been maintained by many writers that the Greeks and Romans had no inns for the accommodation of persons of any respectability, and that their *caupones* and *πανδοκεία* were mere houses of shelter for the lowest classes. That such, however, was not the case, an attentive perusal of the classical authors will sufficiently show; though it is, at the same time, very evident that their houses of public entertainment did not correspond, either in size or convenience, to similar places in modern times.

Greek Inns.—The hospitality of the earliest times of Greece rendered inns unnecessary; but in later times they appear to have been very numerous. The public ambassadors of Athens were sometimes obliged to avail themselves of the accommodation of such houses (Aeschin, *De Fals. Leg.* p. 273), as well as private persons. (Cic. *De Div.* i. 27, *Inv.* ii. 4.) In addition to which, it may be remarked, that the great number of festivals which were celebrated in the different towns of Greece, besides the four great national festivals, to which persons flocked from all parts of the Hellenic world, must have required a considerable number of inns to accommodate strangers, not only in the places where the festivals were celebrated, but also on the roads leading to those places. (Becker, *Charikles*, vol. i. p. 134.)

The word *καπηλείον* signified, as has been already remarked, a place where wine and ready-

dressed provisions were sold. *Κάπηλος* signifies in general a retail trader, who sold goods in small quantities, whence he is sometimes called *παιλγκάπηλος*, and his business *παιλγκαπηλεύειν* (Dem. c. *Dionysodor.* p. 1285; Aristoph. *Plut.* 1156; Pollux, vii. 12); but the term is more particularly applied to a person who sold ready-dressed provisions, and especially wine in small quantities. (Plat. *Gorg.* p. 518.) When a retail dealer in other commodities is spoken of, the name of his trade is usually prefixed; thus we read of *προβατοκάπηλος* (Plat. *Peric.* 24), *ὕλων κάπηλος* (Aristoph. *Pas.* 1175), *ἀσπίδων κάπηλος* (*Id.* 439), *βιβλιοκάπηλος*, &c. In these *καπηλεία* only persons of the very lowest class were accustomed to eat and drink. (Isocr. *Arriop.* c. 18; Becker, *Charikles*, vol. i. p. 259, &c.)

2. *Roman Inns.*—A Roman inn was called not only *caupona*, but also *taberna* and *taberna diversoria*, or simply *diversorium* or *deversorium*. Along all the great roads of Italy there were inns, as we see from the description which Horace gives of his journey from Rome to Brundisium (*Sat.* i. 5), though the accommodation which they offered was generally of a poor kind. We also find mention of public inns in Italy in other passages. (Cic. *pro Cluent.* 59, *Phil.* ii. 31; Hor. *Ep.* i. 11. 11; Propert. iv. 8. 19; *Acts of the Apostles*, xxviii. 15.) At Rome, there must have been many inns to accommodate strangers, but they are hardly ever spoken of. We, however, find frequent mention of houses where wine and ready-dressed provisions were sold, and which appear to have been numerous in all parts of the city. The houses where persons were allowed to eat and drink were usually called *Popinae* and not *caupones*; and the keepers of them, *Popae*. They were principally frequented by slaves and the lower classes (Cic. *Pro Mil.* 24), and were consequently only furnished with stools to sit upon instead of couches, whence Martial (v. 70) calls these places *sellariolas popinae*. This circumstance is illustrated by a painting found at Pompeii in a wine-shop, representing a drinking-scene. There are four persons sitting on stools round a tripod table. The dress of two of the figures is remarkable for the hoods, which resemble

those of the capotes, worn by the Italian sailors and fishermen of the present day. They use cups made of horn instead of glasses, and from their whole appearance evidently belong to the lower orders. Above them are different sorts of eatables hung upon a row of pegs.

The *Thermopolia*, which are spoken of in the article *CALIDA*, appear to have been the same as the *popinae*. Many of these *popinae* were little better than the *Lupanaria* or brothels; whence

Horace (*Sat.* ii. 4. 62) calls them *immundas popinae*. The wine-shop at Pompeii, where the painting described above was found, seems to have been a house of this description; for behind the shop there is an inner chamber containing paintings of every species of indecency. (Gell's *Pompeiana*, vol. ii. p. 10.) The *Gomaeae*, which are sometimes mentioned in connection with the *popinae* (Suet. *Tib.* 34), were brothels, whence they are often classed with the *lustra*. (Liv. xxvi. 2; Cic. *Phil.* xiii. 11, *Pro Sext.* 9.) Under the emperors many attempts were made to regulate the *popinae*, but apparently with little success. Tiberius forbade all cooked provisions to be sold in these shops (Suet. *Tib.* 34); and Claudius commanded them to be shut up altogether. (Dion Cass. lx. 6.) They appear, however, to have been soon opened again, if they were ever closed; for Nero commanded that nothing should be sold in them but different kinds of cooked pulse or vegetables (Suet. *Ner.* 16; Dion Cass. lxiii. 14); and an edict to the same effect was also published by Vespasian. (Dion Cass. lvi. 10.)

Persons who kept inns or houses of public entertainment of any kind, were held in low estimation both among the Greeks and Romans (Theophr. *Char.* 6; Plat. *Leg.* xi. pp. 918, 919); and though the epithets of *perfidus* and *malignus*, which Horace gives to them (*Sat.* i. 1. 29, i. 5. 4), may refer only to particular innkeepers, yet they seem to express the common opinion entertained respecting the whole class. (Zell, *Die Wirthsküner d. Alten*; Stockmann, *De Popinis*; Becker, *Gallus*, vol. i. pp. 227—236.)

CAUSA LIBERA/LIS. [ASSERTOR.]

CAUSAE PROBATIO. [CIVITAS.]

CAUSIA (*καυσία*), a hat with a broad brim, which was made of felt and worn by the Macedonian kings. (Valer. Max. v. 1. § 4.) Its form is seen in the annexed figures, which are taken from a fictile vase, and from a medal of Alexander

I. of Macedon. The Romans adopted it from the Macedonians (Plaut. *Mil. Glor.* iv. 4. 42, *Pers.* i. 3. 75; Antip. Thesa. in *Brunchii Anal.* ii. 111), and more especially the Emperor Caracalla, who used to imitate Alexander the Great in his costume. (Herodian. iv. 8. § 5.) [J. Y.]

CAUTIO, CAVERE. These words are of frequent occurrence in the Roman classical writers and jurists, and have a great variety of significations according to the matter to which they refer. Their general signification is that of security given by one person to another; also security or legal safety which one person obtains by the advice or assistance of another. The general term (*cautio*) is distributed into its species according to the particular kind of the security, which may be by *satidatio*, by a *fidejussio*, and in various other ways. The general sense of the word *cautio* is

accordingly modified by its adjuncts, as *cautio fidejussoria*, *pigneraticia*, or *hypothecaria*, and so on. *Cautio* is used to express both the security which a magistratus or a *judex* may require one party to give to another, which applies to cases where there is a matter in dispute of which a court has already cognizance; and also the security which is given and received by and between parties not in litigation. The words *cautio* and *cavere* are more particularly used in the latter sense.

If a thing is made a security from one person to another, the *cautio* becomes a matter of *pignus* or of *hypotheca*; if the *cautio* is the engagement of a surety on behalf of a principal, it is a *cautio fidejussoria*.

The *cautio* was most frequently a writing, which expressed the object of the parties to it; accordingly the word *cautio* came to signify both the instrument (*chirographum* or *instrumentum*) and the object which it was the purpose of the instrument to secure. (Dig. 47. tit. 2. a. 27.) Cicero (*Ad Div.* vii. 18) uses the expression *cautio chirographi mei*. The phrase *cavere aliquid alicui* expressed the fact of one person giving security to another as to some particular thing or act. (Dig. 29. tit. 2. a. 9; 35. tit. 1. a. 18.)

Ulpian (Dig. 46. tit. 5) divides the praetorian stipulations into three species, *judiciales*, *cautionales*, *communes*; and he defines the *cautionales* to be those which are equivalent to an action (*instar actionis habent*) and are a good ground for a new action, as the stipulations *de legatis*, *tutela*, *ratam rem habere*, and *damnum infectum*. *Cautiones* then, which were a branch of stipulations, were such contracts as would be ground of actions. The following examples will explain the passage of Ulpian.

In many cases a heres could not safely pay legacies, unless the legatee gave security (*cautio*) to refund in case the will under which he claimed should turn out to be bad. (Dig. 5. tit. 3. a. 17.) The *Muciana cautio* applied to the case of testamentary conditions, which consisted in not doing some act, which, if done, would deprive the heres or legatarius of the hereditas or the legacy. In order that the person who could take the hereditas or the legacy in the event of the condition being broken, might have the property secured, he was entitled to have the *Muciana cautio*. (Dig. 35. tit. 1. a. 7, 18, 73.) The heres was also in some cases bound to give security for the payment of legacies, or the legatee was entitled to the *Bonorum Possessio*. Tutores and curatores were required to give security (*satidare*) for the due administration of the property intrusted to them, unless the tutor was appointed by testament, or unless the curator was a *curator legitimus*. (Gaius, i. 199.) A procurator who sued in the name of an absent party, might be required to give security that the absent party would consent to be concluded by the act of his procurator (*Id.* iv. 99); this security was a species *satidationis*, included under the genus *cautio*. (Dig. 46. tit. 8. a. 3, 13, 18, &c.) In the case of *damnum infectum*, the owner of the land or property threatened with the mischief, might claim security from the person who was threatening the mischief. (Cic. *Tbp.* 4; Gaius, iv. 31; Dig. 43. tit. 8. a. 5.)

If a vendor sold a thing, it was usual for him to declare that he had a good title to it, and that

if any person recovered it from the purchaser by a better title, he would make it good to the purchaser; and, in some cases, the cautio was for double the value of the thing. (Dig. 21. tit. 2. a. 60.) This was, in fact, a warranty.

The word cautio was also applied to the release which a debtor obtained from his creditor on satisfying his demand: in this sense cautio is equivalent to a modern receipt; it is the debtor's security against the same demand being made a second time. (Cic. *Brut.* 5; Dig. 46. tit. 3. a. 89, 94.) Thus *cavere ab aliquo* signifies to obtain this kind of security. A person to whom the *usus fructus* of a thing was given, might be required to give security that he would enjoy and use it properly, and not waste it. (Dig. 7. tit. 9.)

Cavere is also applied to express the professional advice and assistance of a lawyer to his client for his conduct in any legal matter. (Cic. *Ad Fam.* iii. 1, vii. 6, *Pro Murena*, c. 10.)

The word *cavere* and its derivatives are also used to express the provisions of a law, by which any thing is forbidden or ordered, as in the phrase, — *Cautum est lege, principalibus constitutionibus, &c.* It is also used to express the words in a will, by which a testator declares his wish that certain things should be done after his death. The preparation of the instruments of cautio was, of course, the business of a lawyer. [G. L.]

CEADAS (Ked̄as) or CAEADAS (Kaid̄as), was a deep cavern or chasm, like the *Barathron* at Athens, into which the Spartans were accustomed to thrust persons condemned to death. (Thuc. i. 134; Strab. viii. p. 367; Paus. iv. 18. § 4; Suidas, s. v. *Βάραθρον*, *Kaid̄as*, *Ked̄as*.)

CREDIT DIES. [LEGATUM.]

CELERES, are said to have been three hundred horsemen, who formed the body-guard of Romulus both in peace and war (Liv. i. 15; Dionys. ii. 13; Plut. *Rom.* 26). There can, however, be little doubt that these Celeres were not simply the body-guard of the king, but were the same as the equites, or horsemen, a fact which is expressly stated by some writers (Plin. *H. N.* xxxiii. 2. a. 9), and implied by others (Dionys. l. c.). [EQUITES.] The etymology of Celeres is variously given. Some writers derived it from their leader Celer, who was said to have slain Remus, but most writers connected it with the Greek *κέλης*, in reference to the quickness of their service. (Serv. *ad Virg. Aen.* xi. 603.) Niebuhr supposes *celer* to be identical with *patricius*, and maintains that the former word was the name of the whole class as distinguished from the rest of the nation (*Hist. of Rome*, vol. i. p. 331); but although the equites were at first undoubtedly chosen from the patricians, there seems no reason for believing that the word *celer* was synonymous with *patricius*.

The Celeres were under the command of a *Triumvir Celerum*, who stood in the same relation to the king, as the *magister equitum* did in a subsequent period to the dictator. He occupied the second place in the state, and in the absence of the king had the right of convoking the comitia. Whether he was appointed by the king, or elected by the comitia, has been questioned, but the former is the more probable. (Lyd. *De Mag.* i. 14; Pompon. *de Orig. Jur.* in Dig. i. tit. 2. a. 2. §§ 15, 19; Dionys. iv. 71; comp. Becker, *Handbuch der Römisch. Alterth.* vol. ii. part i. pp. 239, 338.)

CELLA, in its primary sense, means a store-

room of any kind. (Varr. *De Ling. Lat.* v. 162. ed. Müller.) Of these there were various descriptions, which took their distinguishing denominations from the articles they contained, as, for instance, the *cella penuraria* or *penaria*, the *cella olearia* and *cella vinaria*. The slave to whom the charge of these stores was intrusted, was called *cellarius* (Plant. *Copt.* iv. 2. 115; Senec. *Ep.* 122), or *promus* (Colum. xii. 3), or *condus*, "quia promittit quod conditum est" (compare Hor. *Carm.* i. 9. 7, iii. 21. 8), and sometimes *promus condus* and *procurator pami*. (Plant. *Pseud.* ii. 2. 14.) This answers to our butler and housekeeper.

Any number of small rooms clustered together like the cells of a honeycomb (Virg. *Georg.* iv. 164) were also termed *cellae*; hence the dormitories of slaves and menials are called *cellae* (Cic. *Phil.* ii. 27; Columella, i. 6), and *cellae familiares* (Vitruv. vi. 10. p. 182) in distinction to a bed-chamber, which was *cubiculum*. Thus a sleeping-room at a publichouse is also termed *cella*. (Petron. 55.) For the same reason the dens in a brothel are *cellae*. (Petron. 8; Juv. *Sat.* vi. 128.) Each female occupied one to herself (Ibid. 122), over which her name and the price of her favours were inscribed (Senec. *Controv.* i. 2); hence *cella inscripta* means a brothel. (Mart. xi. 45. l.) *Cella ostiarii* (Vitruv. vi. 10; Petron. 29), or *janitoris* (Suet. *Vitell.* 16), is the porter's lodge.

In the baths the *cella caldaria*, *tepidaria*, and *frigidaria*, were those which contained respectively the warm, tepid, and cold bath. [BALNEAE.]

The interior of a temple, that is the part included within the outside shell, *σῆκος* (see the lower woodcut in *ANTAE*), was also called *cella*. There was sometimes more than one *cella* within the same peristyle or under the same roof; in which case they were either turned back to back, as in the temple of Rome and Venus, built by Hadrian on the Via Sacra, the remains of which are still visible; or parallel to each other, as in the temple of Jupiter Optimus Maximus in the Capitol. In such instances each cell took the name of the deity whose statue it contained, as *cella Jovis*, *cella Junonis*, *cella Minervae*. [A. R.]

CELLARIUS. [CELLA.]

CENOTA'PHIUM, a cenotaph (*κενός* and *τάφος*) was an empty or honorary tomb, erected as a memorial of a person whose body was buried elsewhere, or not found for burial at all. (Comp. Thuc. ii. 34; Virg. *Aen.* iii. 303.)

Cenotaphia were considered as *religiosa*, and therefore *divini juris*, till a rescript of the emperors Antoninus and Verus pronounced them not to be so. (Heinec. *Ant. Rom.* ii. 1.) [R. W.]

CENSITOR. [CENSOR.]

CENSUA'LES. [CENSOR.]

CENSOR (*κυσθητής*), the name of two magistrates of high rank in the Roman republic. Their office was called *Censura* (*κυσθηρία* or *κυσθηρία*). The *Census*, which was a register of Roman citizens and of their property, was first established by Servius Tullius, the fifth king of Rome. After the expulsion of the kings it was taken by the consuls; and special magistrates were not appointed for the purpose of taking it till the year a. c. 443. The reason of this alteration was owing to the appointment in the preceding year of *tribuni militum* with consular power in place of the consuls; and as these tribunes might be plebeians, the patricians deprived the consuls,

and consequently their representatives, the tribunes, of the right of taking the census, and entrusted it to two magistrates, called *Censores*, who were to be chosen exclusively from the patricians. The magistracy continued to be a patrician one till a. c. 351, when C. Marcus Rutilus was the first plebeian censor (Liv. vii. 22). Twelve years afterwards, a. c. 339, it was provided by one of the Publilian laws, that one of the censors must necessarily be a plebeian (Liv. viii. 12), but it was not till a. c. 280 that a plebeian censor performed the solemn purification of the people (*lustrum condidit*, Liv. *Epit.* 13). In a. c. 131 the two censors were for the first time plebeians.

There were always two censors, because the two consuls had previously taken the census together. If one of the censors died during the time of his office, another had at first to be chosen in his stead, as in the case of the consuls. This, however, happened only once, namely, in a. c. 393; because the capture of Rome by the Gauls in this lustrum excited religious fears against the practice (Liv. v. 31). From this time, if one of the censors died, his colleague resigned, and two new censors were chosen. (Liv. vi. 27, ix. 34, xxiv. 43, xxvii. 6.)

The censors were elected in the comitia centuriata held under the presidency of a consul (Gell. xiii. 15; Liv. xl. 45.) Niebuhr supposes that they were at first elected by the comitia curiata, and that their election was confirmed by the centuries; but there is no authority for this supposition, and the truth of it depends entirely upon the correctness of his views respecting the election of the consuls. [CONSUL.] It was necessary that both censors should be elected on the same day; and accordingly if the voting for the second was not finished, the election of the first went for nothing, and new comitia had to be held. (Liv. ix. 34.) The comitia for the election of the censors were held under different auspices from those at the election of the consuls and praetors; and the censors were accordingly not regarded as their colleagues, although they likewise possessed the *maxima auspicia* (Gell. xiii. 15). The comitia were held by the consuls of the year very soon after they had entered upon their office (Liv. xxiv. 10, xxxix. 41); and the censors, as soon as they were elected and the censorial power had been granted to them by a *lex centuriata*, were fully installed in their office. (Cic. *de Leg. Agr.* ii. 11; Liv. xl. 45.) As a general principle the only persons eligible to the office were those who had previously been consuls; but a few exceptions occur. At first there was no law to prevent a person being censor a second time; but the only person, who was twice elected to the office, was C. Marcus Rutilus in a. c. 265; and he brought forward a law in this year, enacting that no one should be chosen censor a second time, and received in consequence the surname of Censorinus. (Plut. *Coriol.* 1; Val. Max. iv. 1. § 3.)

The censorship is distinguished from all other Roman magistracies by the length of time during which it was held. The censors were originally chosen for a whole lustrum, that is, a period of five years; but their office was limited to eighteen months, as early as ten years after its institution (a. c. 433), by a law of the dictator Mam. Aemilius Mamercinus (Liv. iv. 24, ix. 33). The censors also held a very peculiar position

with respect to rank and dignity. No imperium was bestowed upon them, and accordingly they had no lictors. (Zonar. vii. 19.) The *jus censuras* was granted to them by a *lex centuriata*, and not by the curiae, and in that respect they were inferior in power to the consuls and praetors. (Cic. *de Leg. Agr.* ii. 11.) But notwithstanding this, the censorship was regarded as the highest dignity in the state, with the exception of the dictatorship; it was an *ἐπεὶ ἀρχή*, a *sanctus magistratus*, to which the deepest reverence was due. (Plut. *Cat. Maj.* 16, *Flamin.* 18, *Camill.* 2, 14, *Aemil. Paul.* 38; Cic. *ad Fam.* iii. 10.) The high rank and dignity which the censorship obtained, was owing to the various important duties gradually entrusted to it, and especially to its possessing the *regimen morum*, or general control over the conduct and morals of the citizens; in the exercise of which power they were regulated solely by their own views of duty, and were not responsible to any other power in the state. (Dionys. in Mai, *Nova Coll.* vol. ii. p. 516; Liv. iv. 24, xxix. 37; Val. Max. vii. 2. § 6.) The censors possessed of course the *sella curulis* (Liv. xl. 45), but with respect to their official dress there is some doubt. From a well-known passage of Polybius (vi. 53), describing the use of the imagines at funerals, we may conclude that a consul or praetor wore the praetexta, one who triumphed the toga picta, and the censor a purple toga peculiar to him; but other writers speak of their official dress as the same as that of the other higher magistrates. (Zonar. vii. 19; Athen. xiv. p. 660, c.) The funeral of a censor was always conducted with great pomp and splendour, and hence a *fusus censorium* was voted even to the emperors. (Tac. *Ann.* iv. 15, xiii. 2.)

The censorship continued in existence for 421 years, namely, from a. c. 443 to a. c. 22; but during this period many lustra passed by without any censor being chosen at all. According to one statement the office was abolished by Sulla (Schol. Gronov. *ad Cic. Div. in Caecil.* 3, p. 384, ed. Orelli), and although the authority, on which this statement rests, is not of much weight, the fact itself is probable; for there was no census during the two lustra which elapsed from Sulla's dictatorship to the first consulship of Pompey (a. c. 82—70), and any strict regimen morum would have been found very inconvenient to the aristocracy in whose favour Sulla legislated. If the censorship was done away with by Sulla, it was at any rate restored in the consulship of Pompey and Crassus. Its power was limited by one of the laws of the tribune Clodius (a. c. 58), which prescribed certain regular forms of proceeding before the censors in expelling a person from the senate, and the concurrence of both censors in inflicting this degradation. (Dion Cass. xxxviii. 13; Cic. *pro Sext.* 25, *de Prov. Cons.* 15.) This law, however, was repealed in the third consulship of Pompey (a. c. 52), on the proposition of his colleague Caecilius Metellus Scipio (Dion Cass. xl. 57), but the censorship never recovered its former power and influence. During the civil wars which followed soon afterwards no censors were elected; and it was only after a long interval that they were again appointed, namely in a. c. 22, when Augustus caused L. Munatius Plancus and Paulus Aemilius Lepidus to fill the office. (Suet. *Aug.* 37, *Claud.* 16; Dion Cass. liv. 2.) This was the last time that such magistrates were appointed;

the emperors in future discharged the duties of their office under the name of *Præfectura Morum*. Some of the emperors sometimes took the name of censor when they actually held a census of the Roman people, as was the case with Claudius, who appointed the elder Vitellius as his colleague (Suet. *Claud.* 16; Tac. *Ann.* xii. 4, *Hist.* i. 9), and with Vespasian, who likewise had a colleague in his son Titus. (Suet. *Vesp.* 8, *Tit.* 6.) Domitian assumed the title of *censor perpetuus* (Dion Cass. liii. 18), but this example was not imitated by succeeding emperors. In the reign of Decius we find the elder Valerian nominated to the censorship without a colleague (Trebell. Pollio, *Valer.* 1, 2); and towards the end of the fourth century it was proposed to revive the censorship (Symmach. *Ep.* iv. 29, v. 9), but this design was never carried into effect.

The duties of the censors may be divided into three classes, all of which were however closely connected with one another: I. *The Census*, or register of the citizens and of their property, in which were included the *lectio senatus*, and the *recognitio equitum*; II. *The Regimen Morum*; and III. *The administration of the finances of the state*, under which were classed the superintendence of the public buildings and the erection of all new public works. The original business of the censorship was at first of a much more limited kind; and was restricted almost entirely to taking the census (Liv. iv. 8); but the possession of this power gradually brought with it fresh power and new duties, as is shown below. A general view of these duties is briefly expressed in the following passage of Cicero (*de Leg.* iii. 3):—"Censores populi aevitates, soboles, familias pecuniasque censento: urbis templa, vias, aquas, aerarium, vectigalia tuento: populiue partes in tribus distribuunt: exin pecunias, aevitates, ordines partiunt: equitum, peditumque prolem describunt: caelibes esse prohibento: mores populi regunt: probum in senatu ne relinquant."

I. *THE CENSUS*, the first and principal duty of the censors, for which the proper expression is *censum agere* (Liv. iii. 3, 22, iv. 8), was always held in the Campus Martius, and from the year a. c. 435 in a special building called *Villa Publica*, which was erected for that purpose by the second pair of censors, C. Furius Pacilus and M. Geganus Macerinus. (Liv. iv. 22; Varr. *R. R.* iii. 2.) An account of the formalities with which the census was opened is given in a fragment of the *Tabulae Censoriae*, preserved by Varro (*L. L.* vi. 86, 87, ed. Müller). After the auspices had been taken, the citizens were summoned by a public crier (*praeco*) to appear before the censors. Each tribe was called up separately (Dionys. v. 75); and the names in each tribe were probably taken according to the lists previously made out by the tribunes of the tribes. Every paterfamilias had to appear in person before the censors, who were seated in their curule chairs; and those names were taken first which were considered to be of good omen, such as Valerius, Salvius, Statorius, &c. (Festus, s. v. *Lucus Lucrinus*; Schol. Bob. ad Cic. *pro Scour.* p. 374, ed. Orelli.) The census was conducted *ad arbitrium censoris*; but the censors laid down certain rules (Liv. iv. 8, xxix. 15), sometimes called *leges census censendo* (Liv. xliii. 14), in which mention was made of the different kinds of property subject to the census, and in what way

their value was to be estimated. According to these laws each citizen had to give an account of himself, of his family, and of his property upon oath, *ex animi sententia*. (Dionys. iv. 15; Liv. xliii. 14.) First he had to give his full name (*praenomen, nomen, and cognomen*) and that of his father, or if he were a freedman that of his patron, and he was likewise obliged to state his age. He was then asked, *Tu, ex animi tui sententia, uxorem habes?* and if married he had to give the name of his wife, and likewise the number, names, and ages of his children, if any. (Gell. iv. 20; Cic. *de Orat.* ii. 64; Tab. Heracl. 142 (68); Dig. 50. tit. 15. s. 3.) Single women (*viduae*) and orphans (*orbi orbaeque*), were represented by their tutors; their names were entered in separate lists, and they were not included in the sum total of capita. (Comp. Liv. iii. 3, *Epit.* 59.) After a citizen had stated his name, age, family, &c., he then had to give an account of all his property, so far as it was subject to the census. In making this statement he was said *censere* or *censeri*, as a deponent, "to value or estimate himself," or as a passive "to be valued or estimated:" the censor, who received the statement, was also said *censere*, as well as *accipere censum*. (Comp. Cic. *pro Flacc.* 32; Liv. xxxix. 15.) Only such things were liable to the census (*censui censendo*) as were property *ex jure Quiritium*. At first each citizen appears to have merely given the value of his whole property in general without entering into details (Dionys. iv. 15; Cic. *de Leg.* iii. 3; Festus, s. v. *Censores*); but it soon became the practice to give a minute specification of each article, as well as the general value of the whole. (Comp. Cic. *pro Flacc.* 32; Gell. vii. 11; Plut. *Cat. Maj.* 18.) Land formed the most important article in the census; but public land, the *possessio* of which only belonged to a citizen, was excluded as not being Quiritarian property. If we may judge from the practice of the imperial period, it was the custom to give a most minute specification of all such land as a citizen held *ex jure Quiritium*. He had to state the name and situation of the land, and to specify what portion of it was arable, what meadow, what vineyard, and what olive-ground: and to the land thus minutely described he had to affix his own valuation. (Dig. 50. tit. 15. s. 4.) Slaves and cattle formed the next most important item. The censors also possessed the right of calling for a return of such objects as had not usually been given in, such as clothing, jewels, and carriages. (Liv. xxxix. 44; Plut. *Cat. Maj.* 18.) It has been doubted by some modern writers whether the censors possessed the power of setting a higher valuation on the property than the citizens themselves had put; but when we recollect the discretionary nature of the censors' powers, and the necessity almost that existed, in order to prevent fraud, that the right of making a surcharge should be vested in somebody's hands, we can hardly doubt that the censors had this power. It is moreover expressly stated that on one occasion they made an extravagant surcharge on articles of luxury (Liv. xxxix. 44; Plut. *Cat. Maj.* 18); and even if they did not enter in their books the property of a person at a higher value than he returned it, they accomplished the same end by compelling him to pay down the tax upon the property at a higher rate than others. The tax (*tributum*) was usually one per thousand upon the property entered in the books

of the censors; but on one occasion the censors, as a punishment, compelled a person to pay eight per thousand (*octuplicato censu*, Liv. iv. 24).

A person, who voluntarily absented himself from the census, and thus became *incensus*, was subject to the severest punishment. Servius Tullius is said to have threatened the *incensus* with imprisonment and death (Liv. i. 44); and in the republican period he might be sold by the state as a slave. (Cic. *pro Cœcio*, 34.) In the later times of the republic a person who was absent from the census, might be represented by another, and thus be registered by the censors. (Varr. *L. L.* vi. 86.) Whether the soldiers who were absent on service had to appoint a representative, may be questioned. In ancient times the sudden breaking out of a war prevented the census from being taken (Liv. vi. 31), because a large number of the citizens would necessarily be absent. It is supposed from a passage in Livy (xxix. 37), that in later times the censors sent commissioners into the provinces with full powers to take the census of the Roman soldiers there; but this seems to have been only a special case. It is, on the contrary, probable from the way in which Cicero pleads the absence of Archias from Rome with the army under Lucullus, as a sufficient reason for his not having been enrolled in the census (*pro Arch.* 5), that service in the army was a valid excuse for absence.

After the censors had received the names of all the citizens with the amount of their property, they then had to make out the lists of the tribes, and also of the classes and centuries; for by the legislation of Servius Tullius the position of each citizen in the state was determined by the amount of his property. [COMITIA CENTURIATA.] These lists formed a most important part of the *Tabulas Censorias*, under which name were included all the documents connected in any way with the discharge of the censors' duties. (Cic. *de Leg.* iii. 3; Liv. xxiv. 18; Plut. *Cat. Maj.* 16; Cic. *de Leg. Agr.* i. 2.) These lists, as far at least as they were connected with the finances of the state, were deposited in the *ædarium*, which was the temple of Saturn (Liv. xxix. 37); but the regular depositary for all the archives of the censors was in earlier times the *Atrium Libertatis*, near the *Villa publica* (Liv. xliii. 16, xlv. 15), and in later times the temple of the Nymphs. (Cic. *pro Mûl.* 27.)

Besides the arrangement of the citizens into tribes, centuries, and classes, the censors had also to make out the lists of the senators for the ensuing *lustrum*, or till new censors were appointed; striking out the names of such as they considered unworthy, and making additions to the body from those who were qualified. This important part of their duties is explained under *SENATUS*. In the same manner they held a review of the *equites equo publico*, and added and removed names as they judged proper. [EQUITES.]

After the lists had been completed, the number of citizens was counted up, and the sum total announced; and accordingly we find that, in the account of a census, the number of citizens is likewise usually given. They are in such cases spoken of as *capita*, sometimes with the addition of the word *civium*, and sometimes not; and hence to be registered in the census was the same thing as *caput habere*. [CAPUT.]

II. REGIMEN MORUM. This was the most important branch of the censors' duties, and the

one which caused their office to be the most revered and the most dreaded in the Roman state. It naturally grew out of the right which they possessed of excluding unworthy persons from the lists of citizens; for, as has been well remarked, "they would, in the first place, be the sole judges of many questions of fact, such as whether a citizen had the qualifications required by law or custom for the rank which he claimed, or whether he had ever incurred any judicial sentence, which rendered him infamous: but from thence the transition was easy, according to Roman notions, to the decision of questions of right; such as whether a citizen was really worthy of retaining his rank, whether he had not committed some act as justly degrading as those which incurred the sentence of the law." In this manner the censors gradually became possessed of a complete superintendence over the whole public and private life of every citizen. They were constituted the conservators of public and private virtue and morality; they were not simply to prevent crime or particular acts of immorality, but their great object was to maintain the old Roman character and habits, the *mos majorum*. The proper expression for this branch of their power was *regimen morum* (Cic. *de Leg.* iii. 3; Liv. iv. 3, xxiv. 18, xl. 46, xli. 27, xlii. 3; Suet. *Aug.* 27), which was called in the times of the empire *cura* or *præfectura morum*. The punishment inflicted by the censors in the exercise of this branch of their duties was called *Nota* or *Notatio*, or *Animadversio Censoria*. In inflicting it they were guided only by their conscientious convictions of duty; they had to take an oath that they would act neither through partiality nor favour; and, in addition to this, they were bound in every case to state in their lists, opposite the name of the guilty citizen, the cause of the punishment inflicted on him, — *Subscriptio censoria*. (Liv. xxxix. 42; Cic. *pro Cluent.* 42—48; Gell. iv. 20.)

This part of the censors' office invested them with a peculiar kind of jurisdiction, which in many respects resembled the exercise of public opinion in modern times; for there are innumerable actions which, though acknowledged by every one to be prejudicial and immoral, still do not come within the reach of the positive laws of a country. Even in cases of real crimes, the positive laws frequently punish only the particular offence, while in public opinion the offender, even after he has undergone punishment, is still incapacitated for certain honours and distinctions which are granted only to persons of unblemished character. Hence the Roman censors might brand a man with their *nota censoria* in case he had been convicted of a crime in an ordinary court of justice, and had already suffered punishment for it. The consequence of such a *nota* was only *ignominia* and not *infamia* (Cic. *de Rep.* iv. 6) [INFAMIA], and the censorial verdict was not a *judicium* or *res judicata* (Cic. *pro Cluent.* 42), for its effects were not lasting, but might be removed by the following censors, or by a *lex*. A *nota censoria* was moreover not valid, unless both censors agreed. The *ignominia* was thus only a transitory *capitis diminutio*, which does not even appear to have deprived a magistrate of his office (Liv. xxiv. 18), and certainly did not disqualify persons labouring under it for obtaining a magistracy, for being appointed as judges by the praetor, or for serving in the Roman armies. Mann. Aemilius was thus, notwithstand-

ing the *animadversio censoria*, made dictator. (Liv. iv. 81.)

A person might be branded with a censorial nota in a variety of cases, which it would be impossible to specify, as in a great many instances it depended upon the discretion of the censors and the view they took of a case; and sometimes even one set of censors would overlook an offence which was severely chastised by their successors. (Cic. *de Senect.* 12.) But the offences which are recorded to have been punished by the censors are of a threefold nature.

1. Such as occurred in the private life of individuals, *e. g.* (a) Living in celibacy at a time when a person ought to be married to provide the state with citizens. (Val. Max. ii. 9. § 1.) The obligation of marrying was frequently impressed upon the citizens by the censors, and the refusal to fulfil it was punished with a fine [*AER UXORIIUM*]. (b) The dissolution of matrimony or betrothment in an improper way, or for insufficient reasons. (Val. Max. ii. 9. § 2.) (c) Improper conduct towards one's wife or children, as well as harshness or too great indulgence towards children, and disobedience of the latter towards their parents. (Plut. *Cat. Maj.* 17; compare Cic. *de Rep.* iv. 6; Dionys. ix. 8.) (d) Inordinate and luxurious mode of living, or an extravagant expenditure of money. A great many instances of this kind are recorded. (Liv. *Epit.* 14, xxxix. 44; Plut. *Cat. Maj.* 18; Gellius, iv. 8; Val. Max. ii. 9. § 4.) At a later time the *leges sumptuariae* were made to check the growing love of luxuries. (e) Neglect and carelessness in cultivating one's fields. (Gell. iv. 12; Plin. *H. N.* xviii. 3.) (f) Cruelty towards slaves or clients. (Dionys. ix. 8.) (g) The carrying on of a disreputable trade or occupation (Dionys. *l. c.*), such as acting in theatres. (Liv. vii. 2.) (h) Legacy-hunting, defrauding orphans, &c.

2. Offences committed in public life, either in the capacity of a public officer or against magistrates. (a) If a magistrate acted in a manner not befitting his dignity as an officer, if he was accessible to bribes, or forged auspices. (Cic. *de Senect.* 12; Liv. xxxix. 42; Val. Max. ii. 9. § 3; Plut. *Cat. Maj.* 17; Cic. *de Divin.* i. 16.) (b) Improper conduct towards a magistrate, or the attempt to limit his power or to abrogate a law which the censors thought necessary. (Liv. iv. 24; Cic. *de Orat.* ii. 64; Val. Max. ii. 9. § 5; Gellius, iv. 20.) (c) Perjury. (Cic. *de Off.* i. 13; Liv. xxiv. 18; Gell. vii. 18.) (d) Neglect, disobedience, and cowardice of soldiers in the army. (Val. Max. ii. 9. § 7; Liv. xxiv. 18, xxvii. 11.) (e) The keeping of the equus publicus in bad condition. [*EQUITAS*.]

3. A variety of actions or pursuits which were thought to be injurious to public morality, might be forbidden by the censors by an edict (Gellius, xv. 11), and those who acted contrary to such edicts were branded with the nota and degraded. For an enumeration of the offences that might be punished by the censors with ignominia, see Niebuhr, *Hist. of Rome*, vol. ii. p. 399, &c.

The punishments inflicted by the censors generally differed according to the station which a man occupied, though sometimes a person of the highest rank might suffer all the punishments at once, by being degraded to the lowest class of citizens. But they are generally divided into four classes:—

1. *Motio* or *ejectio e senatu*, or the exclusion of a man from the number of senators. This punish-

ment might either be a simple exclusion from the list of senators, or the person might at the same time be excluded from the tribes and degraded to the rank of an aerarian. (Liv. xxiv. 18.) The latter course seems to have been seldom adopted; the ordinary mode of inflicting the punishment was simply this: the censors in their new lists omitted the names of such senators as they wished to exclude, and in reading these new lists in public, passed over the names of those who were no longer to be senators. Hence the expression *præteritis senatoribus* is equivalent to *e senatu ejecti*. (Liv. xxxviii. 28, xxvii. 11, xxxiv. 44; Fest. s. v. *Præteriti*.) In some cases, however, the censors did not acquiesce in this simple mode of proceeding, but addressed the senator whom they had noted, and publicly reprimanded him for his conduct. (Liv. xxiv. 18.) As, however, in ordinary cases an ex-senator was not disqualified by his ignominia for holding any of the magistracies which opened the way to the senate, he might at the next census again become a senator. (Cic. *pro Cluent.* 42, Plut. *Cic.* 17.)

2. The *ademptio equi*, or the taking away the equus publicus from an equea. This punishment might likewise be simple, or combined with the exclusion from the tribes and the degradation to the rank of an aerarian. (Liv. xxiv. 18, 43, xxvii. 11, xxix. 37, xliii. 16.) [*EQUITAS*.]

3. The *motio e tribu*, or the exclusion of a person from his tribe. This punishment and the degradation to the rank of an aerarian were originally the same; but when in the course of time a distinction was made between the *tribus rusticae* and the *tribus urbanae*, the *motio e tribu* transferred a person from the rustic tribes to the less respectable city tribes, and if the further degradation to the rank of an aerarian was combined with the *motio e tribu*, it was always expressly stated. (Liv. xiv. 15; Plin. *H. N.* xviii. 3.)

4. The fourth punishment was called *referre in aerarios* (Liv. xxiv. 18; Cic. *pro Cluent.* 43) or *facere aliquem aerarium* (Liv. xxiv. 43), and might be inflicted on any person who was thought by the censors to deserve it. [*AERARIUS*.] This degradation, properly speaking, included all the other punishments, for an equea could not be made an aerarius unless he was previously deprived of his horse, nor could a member of a rustic tribe be made an aerarius unless he was previously excluded from it. (Liv. iv. 24, xxiv. 18, &c.)

A person who had been branded with a nota censoria, might, if he considered himself wronged endeavour to prove his innocence to the censors (*causam agere apud censores*, Varr. *de Re Rust.* i. 7), and if he did not succeed, he might try to gain the protection of one of the censors, that he might intercede on his behalf.

III. THE ADMINISTRATION OF THE FINANCES OF THE STATE, was another part of the censors' office. In the first place the *tributum*, or property-tax, had to be paid by each citizen according to the amount of his property registered in the census, and, accordingly, the regulation of this tax naturally fell under the jurisdiction of the censors. (Comp. Liv. xxxix. 44) [*TRIBUTUM*.] They also had the superintendence of all the other revenues of the state, the *vectigalia*, such as the tithes paid for the public lands, the salt works, the mines, the customs, &c. [*VECTIGALIA*.] All these branches of the revenue the censors were accustomed to let out

to the highest bidder for the space of a lustrum or five years. The act of letting was called *venditio* or *locatio*, and seems to have taken place in the month of March (Macrob. *Sat.* i. 12), in a public place in Rome (Cic. *de Leg. Agr.* i. 3, ii. 21). The terms on which they were let, together with the rights and duties of the purchasers, were all specified in the *leges censoriae*, which the censors published in every case before the bidding commenced. (Cic. *ad Qu. Fr.* i. 1. § 12, *Verr.* iii. 7, *de Nat. Deor.* iii. 19, *Varr. de Re Rust.* ii. 1.) For further particulars see PUBLICAN. The censors also possessed the right, though probably not without the concurrence of the senate, of imposing new *vectigalia* (Liv. xxix. 37, xl. 51), and even of selling the land belonging to the state (Liv. xxxii. 7). It would thus appear that it was the duty of the censors to bring forward a budget for a lustrum, and to take care that the income of the state was sufficient for its expenditure during that time. So far their duties resembled those of a modern minister of finance. The censors, however, did not receive the revenues of the state. All the public money was paid into the *aerarium*, which was entirely under the jurisdiction of the senate; and all disbursements were made by order of this body, which employed the *quaestors* as its officers. [AERARIUM; SENATUS.]

In one important department the censors were entrusted with the expenditure of the public money; though the actual payments were no doubt made by the *quaestors*. The censors had the general superintendence of all the public buildings and works (*opera publica*); and to meet the expenses connected with this part of their duties, the senate voted them a certain sum of money or certain revenues, to which they were restricted, but which they might at the same time employ according to their discretion. (Polyb. vi. 13; Liv. xl. 46, xlv. 16.) They had to see that the temples and all other public buildings were in a good state of repair (*aedes sacras tueri* and *surtis lecta exigere*, Liv. xxiv. 18, xxix. 37, xlii. 3, xlv. 15), that no public places were encroached upon by the occupation of private persons (*locas tueri*, Liv. xlii. 3, xliii. 16), and that the aqueducts, roads, drains, &c. were properly attended to. [AQUADUCTUS; VIAE; CLOACAE.] The repairs of the public works and the keeping of them in proper condition were let out by the censors by public auction to the lowest bidder, just as the *vectigalia* were let out to the highest bidder. These expenses were called *utrotributa*; and hence we frequently find *vectigalia* and *utrotributa* contrasted with one another. (Liv. xxxix. 44, xliii. 16.) The persons who undertook the contract were called *conductores*, *manicipes*, *redemptores*, *susceptoris*, &c.; and the duties they had to discharge were specified in the *Leges Censoriae*. The censors had also to superintend the expenses connected with the worship of the gods, even for instance the feeding of the sacred geese in the Capitol, which were also let out on contract. (Plut. *Quaest. Rom.* 98; Plin. *H. N.* x. 22; Cic. *pro Rosc. Am.* 20.) Besides keeping existing public works in a proper state of repair, the censors also constructed new ones, either for ornament or utility, both in Rome and in other parts of Italy, such as temples, basilicae, theatres, porticoes, fora, walls of towns, aqueducts, harbours, bridges, cloacae, roads, &c. These works were either performed by them jointly, or they divided between them the money, which

had been granted to them by the senate. (Liv. xl. 51, xlv. 16.) They were let out to contractors, like the other works mentioned above, and when they were completed, the censors had to see that the work was performed in accordance with the contract: this was called *opus probare* or *in acceptum referre*. (Cic. *Verr.* i. 57; Liv. iv. 22, xlv. 15; Lex Puteol. p. 73, Spang.)

The aediles had likewise a superintendence over the public buildings; and it is not easy to define with accuracy the respective duties of the censors and aediles: but it may be remarked in general that the superintendence of the aediles had more of a police character, while that of the censors had reference to all financial matters.

After the censors had performed their various duties and taken the census, the *lustrum* or solemn purification of the people followed. When the censors entered upon their office, they drew lots to see which of them should perform this purification (*lustrum facere* or *condere*, *Varr. L. L.* vi. 86; Liv. xxix. 37, xxxv. 9, xxxviii. 36, xlii. 10); but both censors were obliged of course to be present at the ceremony. [LUSTRUM.]

In the Roman and Latin colonies and in the municipia there were censors, who likewise bore the name of *quinquennales*. They are spoken of under COLONIA.

A census was sometimes taken in the provinces, even under the republic (Cic. *Verr.* ii. 53, 56); but there seems to have been no general census taken in the provinces till the time of Augustus. This emperor caused an accurate account to be taken of all persons in the Roman dominion, together with the amount of their property (*Ev. Lucae*, ii. 1, 2; Joseph. *Ant. Jud.* xvii. 13. § 5, xviii. 1. § 1. 2. § 1.); and a similar census was taken from time to time by succeeding emperors, at first every ten, and subsequently every fifteen years. (Savigny, *Römische Steuerverfassung*, in *Zeitschrift*, vol. vi. pp. 375—383.) The emperor sent into the provinces especial officers to take the census, who were called *Censitores* (Dig. 50. tit. 15. s. 4. § 1; Cassiod. *Var.* ix. 11; Orelli, *Inscr.* No. 3652); but the duty was sometimes discharged by the imperial legati. (Tac. *Ann.* i. 31, ii. 6.) The *Censitores* were assisted by subordinate officers, called *Censuales*, who made out the lists, &c. (Capitol. *Gordian.* 12; Symmach. *Ep.* x. 43; Cod. Theod. 8. tit. 2.) At Rome the census still continued to be taken under the empire, but the old ceremonies connected with it were no longer continued, and the ceremony of the lustration was not performed after the time of Vespasian. The two great jurists, Paulus and Ulpian, each wrote works on the census in the imperial period; and several extracts from these works are given in a chapter in the Digest (50. tit. 15), to which we must refer our readers for further details respecting the imperial census.

The word *census*, besides the meaning of "valuation" of a person's estate, has other significations, which must be briefly mentioned: 1. It signified the amount of a person's property, and hence we read of *census senatorius*, the estate of a senator; *census equestis*, the estate of an eque. 2. The lists of the censors. 3. The tax which depended upon the valuation in the census. The Lexicons will supply examples of these meanings.

(A considerable portion of the preceding article has been taken from Becker's excellent account

of the censorship in his *Handbuch der Römischen Alterthümer*, vol. ii. part ii. p. 191., &c. Compare Niebuhr, *History of Rome*, vol. ii. p. 397; Arnold, *History of Rome*, vol. i. p. 346, &c.; Götting, *Römische Staatsverfassung*, p. 328, &c.; Gerlach, *Die Römische Censur in ihrem Verhältnisse zur Verfassung*, Basel, 1842; Dureau de la Malle, *Economie Politique des Romains*, vol. i. p. 159, &c.)

CENSUS.—1. GREEK.—The Greek term for a man's property as ascertained by the census, as well as for the act of ascertaining it, is *τιμήμα*. The only Greek state concerning whose arrangement of the census we have any satisfactory information, is Athens; for what we know of the other states is only of a fragmentary nature, and does not enable us to form an accurate notion of their census. Previous to the time of Solon no census had been instituted at Athens, as a citizen's rights were always determined by birth; but, as Solon substituted property for birth, and made a citizen's rights and duties dependent upon his property, it became a matter of necessity to ascertain by a general census the amount of the property of the Athenian citizens. According to his census, all citizens were divided into four classes: 1. Πεντακοσιμέδμυοι, or persons possessing landed property which yielded an annual income of at least 500 medimni of dry or liquid produce. 2. Ἴππεις, i. e. knights or persons able to keep a war-horse, were those whose lands yielded an annual produce of at least 300 medimni, whence they are also called *τριακοσιμέδμυοι*. 3. Ζευγίται, i. e. persons able to keep a yoke of oxen (*ζεύγος*), were those whose annual income consisted of at least 150 medimni. 4. The Θῆτες contained all the rest of the free population, whose income was below that of the Zeugitæ. (Plut. *Sol.* 18, and the Lexicographers, s. vv.) These classes themselves were called *τιμήματα*; and the constitution of Athens, so long as it was based upon these classes, was a timocracy (*τιμοκρατία* or *ἀπὸ τιμημάτων πολιτεία*). The highest magistracy at Athens, or the archonship, was at first accessible only to persons of the first class, until Aristides threw all the state offices open to all classes indiscriminately. (Plut. *Arist.* 1, 22.) The maintenance of the republic mainly devolved upon the first three classes, the last being exempted from all taxes. Sometimes we indeed find mention of a *θητικὸν τέλος*, and the expression *θητικὸν τελεῖν*, to pay the tax of Θῆτες (Dem. c. *Macart.* p. 1067; Bekker, *Anecd. Græc.* p. 261; Etym. M. s. v.); but this cannot be understood of a special tax which the fourth class had to pay, but must be explained in a more general sense, for *τέλος τελεῖν* means generally, to perform the duties arising out of persons being connected with one or other of the classes.

In regard to the duties which the above-mentioned census imposed upon the first three of the classes, we must distinguish certain personal obligations or liturgies (*λαειτουργίαι*) which had to be performed by individuals according to the class to which they belonged [ΛΕΙΤΟΥΡΓΙΑÆ], and certain taxes and burdens which were regulated according to the classes; so that all citizens belonging to the same class had the same burdens imposed upon them. As the land in the legislation of Solon was regarded as the capital which yielded an annual income, he regulated his system of taxation by the value of the land which was treated as the taxable

capital. There is a passage in Pollux (viii. 130, 132) in which he says that a pentacosiomedimnus expended one talent on the public account, a *ἵππεος* thirty minæ, and a *ζευγίτης* ten minæ. Now this seems to be impossible; for, as Solon (Plut. *Sol.* 23) reckoned the medimnus of dry produce at one drachma, we must suppose that a member of the first class was reckoned to have an annual income of 500 drachmæ, or the twelfth part of a talent. But the difficulty may be solved in this manner. The valuation which Solon put upon the land of an Athenian citizen was in reality neither the real value of the property, nor the amount of the property tax, but only a certain portion of the real property which was treated as the taxable capital. Solon in his census ascertained a person's landed property from its net annual produce; and the number of medimni which it was supposed to produce were reckoned as so many drachmæ. But the produce was probably not calculated higher than was done when the estate was let out to farm. The rent paid by a farmer was probably not much more than eight per cent, as it was in the time of Isæus. (*De Magn. Hered.* § 42.) Now, if we suppose that in the time of Solon it was $\frac{8}{100}$ per cent, the net produce of an estate was exactly $\frac{1}{12}$ of the value of the property, and accordingly the value of the property of a person belonging to the first class was one talent; in the second, 3600 drachmæ; and in the third, 1800 drachmæ. Solon, in taxing the citizens, was wise enough to see that the same standard could not be applied to all the three classes, for the smaller a person's income is, the smaller ought to be the standard of taxation. Accordingly, a person belonging to the first class, being the wealthiest, had to pay a tax of his entire property, while only a portion of the property of the persons belonging to the two other classes was regarded as taxable capital; viz. persons of the second paid the tax only of $\frac{1}{3}$, and persons of the third class only of $\frac{1}{4}$ of their property. Lists of this taxable property (*ἀπογραφαι*) were kept at first by the naucrari, who also had to conduct the census (Hesych. s. v. *ναυκλαρος*), and afterwards by the demarchi (Harpocrat. s. v. *δημαρχοί*). As property is a fluctuating thing, the census was repeated from time to time, but the periods differed in the various parts of Greece, for in some a census was held every year, and in others every two or four years. (Aristot. *Polit.* v. 8.) Every person had conscientiously to state the amount of his property, and if there was any doubt about his honesty, it seems that a counter-valuation (*ἀντερίμνησις*) might be made. Now, supposing that all the taxable capital of the Athenian citizens was found to be 3000 talents, and that the state wanted 60 talents, or $\frac{1}{50}$ part of it, each citizen had to pay away $\frac{1}{50}$ part of his taxable property; that is, a person of the first class paid 120 drachmæ (the 50th part of 6000), a person of the second, 60 drachmæ (the 50th part of 3000), and a person of the third class, 20 drachmæ (the 50th part of 1000). It is, however, not improbable that persons belonging to the same class had to pay a different amount of taxes according as their property was equal to the minimum or above it; and Böckh, in his *Public Economy of Athens*, has made out a table, in which each class is subdivided into three sections.

This system of taxation according to classes, and based upon the possession of productive estates, underwent a considerable change in the time of the

Peloponnesian war, though the divisions into classes themselves continued to be observed for a considerable time after. As the wants of the republic increased, and as many citizens were possessed of large property without being landed proprietors, the original land-tax was changed into a property-tax. In this manner we must explain the proposal of Euripides, shortly before B. C. 393, to raise 500 talents by imposing a tax of one fortieth part. (Aristoph. *Eccles.* 823, &c.) For the taxable capital, viz. 20,000 talents, far exceeds the amount of all the landed property in Attica. This property tax, which was substituted for the land tax, was called *eisphorê*, concerning which see EISPHORA. Compare *LEITURGIAE*; and for the taxes paid by resident aliens, *METOICI*. (Böckh, *Publ. Econ. of Athens*, p. 495, &c., 2d edit.)

2. ROMAN. [CENSORES.] [L. S.]

CENTE/SIMA, namely *pars*, or the hundredth part, also called *centigal rerum venalium*, or *centesima rerum venalium*, was a tax of one per cent. levied at Rome and in Italy upon all goods that were exposed for public sale at auctions. It was collected by persons called *coactores*. (Cic. *ad Brut.* 18, *pro Rabir.* Post. 11; Dig. l. tit. 16. s. 17. § 2.) This tax, as Tacitus (*Ann.* i. 78) says, was introduced after the civil wars, though its being mentioned by Cicero shows, that these civil wars cannot have been those between Octavian and Antony, but must be an earlier civil war, perhaps that between Marius and Sulla. Its produce was assigned by Augustus to the *aerarium militare*. Tiberius reduced the tax to one half per cent. (*ducentesima*), after he had changed Cappadocia into a province, and had thereby increased the revenue of the empire. (Tac. *Ann.* ii. 42.) Caligula in the beginning of his reign abolished the tax altogether for Italy, as is attested by Suetonius (*Calig.* 16) and also by an ancient medal of Caligula on which we find C. C. R. (i. e. *ducentesima remissa*.) But Dion Cassius (lviii. 16), whose authority on this point cannot outweigh that of Suetonius and Tacitus, states that Tiberius increased the *ducentesima* to a *centesima*, and in another passage he agrees with Suetonius in stating that Caligula abolished it altogether (lix. 9; comp. Burmann, *De Vectig. Pop. Rom.* p. 70). [L. S.]

CENTE/SIMAE USU'RAE. [FENUS.]

CENTUMVIRI. The origin, constitution, and powers of the court of centumviri are exceedingly obscure, and it seems almost impossible to combine and reconcile the various passages of Roman writers, so as to present a satisfactory view of this subject. The essay of Hollweg, *Über die Competenz des Centumviralgerichts* (Zeitschrift, &c., v. 358), and the essay of Tigerström, *De Judiciis quod Romanos*, contain all the authorities on this matter; but these two essays do not agree in all their conclusions.

The centumviri were judges, who resembled other judges in this respect, that they decided cases under the authority of a magistratus; but they differed from other judges in being a definite body or collegium. This collegium seems to have been divided into four parts, each of which sometimes sat by itself. The origin of the court is unknown; but it is certainly prior to the Lex Aebutia, which put an end to the legis actiones, except in the matter of *Dammum Infectum*, and in the *causae centumvirales*. (Gaius, iv. 31; Gell. xvi. 10.) According to Festus (*a. Centumviralia Judicia*),

three were chosen out of each tribe, and consequently the whole number out of the 35 tribes would be 105, who, in round numbers, were called the hundred men; and as there were not 35 tribes till B. C. 241, it has been sometimes inferred that to this time we must assign the origin of the centumviri. But, as it has been remarked by Hollweg, we cannot altogether rely on the authority of Festus, and the conclusion so drawn from his statement is by no means necessary. If the centumviri were chosen from the tribes, this seems a strong presumption in favour of the high antiquity of the court.

The proceedings of this court, in civil matters, were per legis actionem, and by the sacramentum. The process here, as in the other *judicia privata*, consisted of two parts, *in jure*, or before the praetor, and *in judicio*, or before the centumviri. The praetor, however, did not instruct the centumviri by the formula, as in other cases, which is further explained by the fact that the praetor presided in the *judicia centumviralia*. (Plin. *Ep.* v. 21.)

It seems pretty clear that the powers of the centumviri were limited to Rome, or at any rate to Italy. Hollweg maintains that their powers were also confined to civil matters; but it is impossible to reconcile this opinion with some passages (Ovid, *Trist.* ii. 91; Phaedr. iii. 10, 35, &c.), from which it appears that *crimina* came under their cognizance. The substitution of *actio* for *actus* in the passage of Quintilian (*Inst. Orat.* iv. 1. § 57), even if supported by good MSS. as Hollweg affirms, can hardly be defended.

The civil matters which came under the cognizance of this court are not completely ascertained. Many of them (though we have no reason for saying all of them) are enumerated by Cicero in a well-known passage (*De Orat.* i. 38). Hollweg mentions that certain matters only came under their cognizance, and that other matters were not within their cognizance; and further, that such matters as were within their cognizance, were also within the cognizance of a single *judex*. Hollweg maintains that *actiones in rem* or *vindicationes* of the old civil law (with the exception, however, of *actiones praediciales* or *status quaestiones*) could alone be brought before the centumviri; and that neither a personal action, one arising from contract or delict, nor a *status quaestio*, is ever mentioned as a *causa centumvralis*. It was the practice to set up a spear in the place where the centumviri were sitting, and accordingly the word *hasta*, or *hasta centumvralis*, is sometimes used as equivalent to the words *judicium centumvirale*. (Suet. *Octavian.* 36; Quintil. *Inst. Orat.* v. 2. § 1.) The spear was a symbol of *quiritarian* ownership: for "a man was considered to have the best title to that which he took in war, and accordingly a spear is set up in the *centumvralia judicium*." (Gaius, iv. 16.) Such was the explanation of the Roman jurists of the origin of an ancient custom, from which it is argued, that it may at least be inferred, the centumviri had properly to decide matters relating to *quiritarian* ownership, and questions connected therewith.

It has been already said that the matters which belonged to the cognizance of the centumviri might also be brought before a *judex*; but it is conjectured by Hollweg that this was not the case till after the passing of the Aebutia Lex. He considers that the court of the centumviri was established

in early times, for the special purpose of deciding questions of quiritarian ownership; and the importance of such questions is apparent, when we consider that the Roman citizens were rated according to their quiritarian property, that on their rating depended their class and century, and consequently their share of power in the public assemblies. No private judex could decide on a right which might thus indirectly affect the caput of a Roman citizen, but only a tribunal selected out of all the tribes. Consistently with this hypothesis we find not only the rei vindicatio within the jurisdiction of the centumviri, but also the hereditatis petitio and actio confessoria. Hollweg is of opinion that, with the Aebutia Lex a new epoch in the history of the centumviri commences; the legis actiones were abolished, and the formula [ACTIO] was introduced, excepting, however, as to the *causae centumvirales*. (Gaius, iv. 30, 31; Gell. xvi. 10.) The formula is in its nature adapted only to personal actions; but it appears that it was also adapted by a legal device to vindications; and Hollweg attributes this to the Aebutia Lex, by which he considers that the twofold process was introduced:—1. per legis actionem apud centumviro; 2. per formulam or per sponsionem before a judex. Thus two modes of procedure in the case of actiones in rem were established, and such actions were no longer exclusively within the jurisdiction of the centumviri.

Under Augustus, according to Hollweg, the functions of the centumviri were so far modified that the more important vindications were put under the cognizance of the centumviri, and the less important were determined per sponsionem and before a judex. Under this emperor the court also resumed its former dignity and importance. (*Dial. de Caus. Corrupt. Eloq.* c. 38.)

The younger Pliny, who practised in this court (*Ep.* ii. 14), makes frequent allusions to it in his letters. (*Ep.* i. 5, v. 1, ix. 23.) The centumviri are mentioned in two excerpts in the Digest (5. tit. 2. a. 13, 17) and perhaps elsewhere; one excerpt is from C. Scaevola and the other from Paulus.

The foregoing notice is founded on Hollweg's ingenious essay; his opinions on some points, however, are hardly established by authorities. Those who desire to investigate this exceedingly obscure matter may compare the two essays cited at the head of this article. [G. L.]

CENTU'RIA. [COMITIA; EXERCITUS.]
CENTURIA TA COMIT'IA. [COMITIA.]
CENTU'RIO. [EXERCITUS.]
CENTUSSIS. [AS.]

CERA (κνρός), wax. For its employment in painting, see PICTURA, No. 7; and for its application as a writing material, see TABULAE and TESTAMENTUM.

CEREA'LIA, a festival celebrated at Rome in honour of Ceres, whose wanderings in search of her lost daughter Proserpine were represented by women clothed in white, running about with lighted torches. (*Ov. Fast.* iv. 494.) During its continuance, games were celebrated in the Circus Maximus (*Tacit. Ann.* xv. 53), the spectators of which appeared in white (*Ov. Fast.* iv. 620); but on any occasion of public mourning the games and festivals were not celebrated at all, as the matrons could not appear at them except in white. (*Liv.* xxii. 56, xxxiv. 6.) The day of the Cerealia

is doubtful; some think it was the ides or 13th of April, others the 7th of the same month. (*Ov. Fast.* iv. 389.) [R. W.]

CEREVIS'IA, CERVIS'IA (ζῆθος), ale or beer, was almost or altogether unknown to the ancient, as it is to the modern inhabitants of Greece and Italy. But it was used very generally by the surrounding nations, whose soil and climate were less favourable to the growth of vines (*in Gallia, aliisque provinciis*, Plin. *H. N.* xxii. 82; Theophrast. *De Causis Plant.* vi. 11; Diod. Sic. iv. 2, v. 26; Strab. xvii. 2. 5; Tacit. *Germ.* 23). According to Herodotus (ii. 77), the Egyptians commonly drank "barley-wine," to which custom Aeschylus alludes (*ἐκ κριθῶν μέθυ*, *Suppl.* 954; *Pelusiaci pocula zythi*, Colum. x. 116). Diodorus Siculus (i. 20, 34) says, that the Egyptian beer was nearly equal to wine in strength and flavour. The Iberians, the Thracians, and the people in the north of Asia Minor, instead of drinking their ale or beer out of cups, placed it before them in a large bowl or vase (κνρῆρ), which was sometimes of gold or silver. This being full to the brim with the grains, as well as the fermented liquor, the guests, when they pledged one another, drank together out of the same bowl by stooping down to it, although, when this token of friendship was not intended, they adopted the more refined method of sucking up the fluid through tubes of cane. (*Archil. Frag.* p. 67, ed. Liebel; Xen. *Anab.* iv. § 5, 26; Athen. i. 28; Virg. *Georg.* iii. 380; Serv. *ad loc.*) The Suevi, and other northern nations, offered to their gods libations of beer, and expected that to drink it in the presence of Odin would be among the delights of Valhalla. (Keyser, *Antiq. Septent.* p. 150—156.) Βρῦρον, one of the names for beer (*Archil. l. c.*; *Hellenicus*, p. 91, ed. Sturtz; Athen. x. 67), seems to be an ancient passive participle, from the verb to brew. [J. Y.]

CERNERE HEREDITA'TEM. [HERES.]
CERO'MA (κρῆσμα) was the oil mixed with wax (κνρός) with which wrestlers were anointed. After they had been anointed with this oil, they were covered with dust or a soft sand; whence Seneca (*Ep.* 57) says—*A ceromate nos hapshe (ἀφή) excepti in crypta Neapolitana*.

Ceroma also signified the place where wrestlers were anointed (the *elaeothesium*, Vitruv. v. 11), and also, in later times, the place where they wrestled. This word is often used in connection with *palaestra* (Plin. *H. N.* xxxv. 2), but we do not know in what respect these places differed. Seneca (*De Brev. Vit.* 12) speaks of the ceroma as a place which the idle were accustomed to frequent, in order to see the gymnastic sports of boys. Arnobius (*Adv. Gent.* iii. 23) informs us that the ceroma was under the protection of Mercury. (Krause, *Gymnastik und Agonistik der Hellenen*, vol. i. p. 106, &c.)

CERTA'MINA. [ATHLETAE.]

CERTI, INCERTI ACTIO, is a name which has been given by some modern writers to those actions in which a determinate or indeterminate sum, as the case may be, is mentioned in the formula (*condemnatio certae pecuniae vel incertae*, Gaius, iv. 49, &c.).

The expression incerta formula, which occurs in Gaius (iv. 54), implies a certa formula. With respect to the intentio, it may be called certa when the demand of the actor is determinate,

whether it be a certain thing that he demands, or a certain sum of money (Gaius, iv. 45, 47). The intentio is incerta when the claim is not of a definite thing or something, but is expressed by the words *quidquid*, &c. (Gaius, iv. 47, 136, 137.) If the intentio is incerta, the condemnatio must be incerta. If the intentio was certa, the condemnatio might be either certa or incerta (Gaius, iv. 50, 51). In the compilations of Justinian, where the expressions *incerti actio*, *incerta actio*, *incertum judicium* occur, they specially apply to the *actio praecriptis verbis*, which contained an *incerta intentio* and condemnatio. (ACTIO; Savigny, *System*, &c. vol. v. p. 74.) [G. L.]

CERU'CHL. [NAVIS.]

KERUX (κέρυξ). [CADUCEUS; FETTER.]

CESSIO BONO'RUM. [BONORUM CESSIO.]

CESSIO IN JURE. [IN JURE CESSIO.]

CESTRUM. [PICTURA, No. 6.]

CESTUS. 1. The thongs or bands of leather, which were tied round the hands of boxers, in order to render their blows more powerful. These bands of leather, which were called *ιμδρες*, or *ιμδρες πυκτικοί*, in Greek, were also frequently tied round the arm as high as the elbow, as is shown in the following statue of a boxer, the original of which is in the Louvre at Paris. (See Clarac, *Musée d. Sculpt. Ant. et Mod.* vol. iii. pl. 327. n. 2042.)

The cestus was used by boxers from the earliest times. When Epeius and Euryalus, in the *Iliad* (xxiii. 684), prepare themselves for boxing, they put on their hands thongs made of ox-hide (*ιμδρας εντριμψτους βοδς ἀγρᾶλοιου*); but it should be recollected, that the cestus in heroic times appears to have consisted merely of thongs of leather, and differed materially from the frightful weapons, loaded with lead and iron, which were used in later times. The different kinds of cestus were called by the Greeks in later times *μελίσχαι*, *σνείραι βοείαι*, *σφαίραι*, and *μύρμηκες*: of which the *μελίσχαι* gave the softest blows, and the *μύρμηκες* the most severe. The *μελίσχαι*, which were the most ancient, are described by Pausanias (viii. 40. § 3) as made of raw ox-hide cut into

thin pieces, and joined in an ancient manner; they were tied under the hollow or palm of the hand, leaving the fingers uncovered. The *athletae* in the palaestrae at Olympia used the *μελίσχαι* in practising for the public games (*ιμδρων τῶν μαλακωτέρων*, Paus. vi. 23. § 3); but in the games themselves, they used those which gave the severest blows.

The cestus, used in later times in the public games, was, as has been already remarked, a most formidable weapon. It was frequently covered with knots and nails, and loaded with lead and iron; whence Virgil (*Aen.* v. 405), in speaking of it, says,

"Ingentia septem

Terga bonum plumbo insuto ferroque rigebant."

Statius (*Theb.* vi. 732) also speaks of *sagittaria plumbo tegmina*. Such weapons in the hands of a trained boxer, must have frequently occasioned death. The *μύρμηκες* were, in fact, sometimes called *γυνωτόροι*, or "limb-breakers." Figures with the cestus frequently occur in ancient monuments. They were of various forms, as appears by the following specimens, taken from ancient monuments, of which drawings are given by Fabretti (*De Column. Troj.* p. 261).

2. CESTUS also signified a band or tie of any kind (Varr. *De Re Rust.* i. 8); but the term was more particularly applied to the zone or girdle of Venus, on which was represented every thing that could awaken love. (*Il.* xiv. 214; Val. Flacc. vi. 470.) When Juno wished to win the affections of Jupiter, she borrowed this cestus from Venus (*Il.* i. c.); and Venus herself employed it to captivate Mars. (Mart. vi. 18, xiv. 206, 207.)

CETRA, or CAETRA (*καίτρεα*, Hesych.), a target, i. e. a small round shield, made of the hide of a quadruped. (Isid. *Orig.* xviii. 12; Q. Curt. iii. 4.) It was also worn by the people of Spain (*caetratae Hispaniae cohortes*, Caes. *B. C.* i. 39, 48) and Mauritania. By the latter people it was sometimes made from the skin of the elephant. (Strab. xvii. p. 828.) From these accounts, and from the distinct assertion of Tacitus (*Agrie.* 36) that it was used by the Britons, we may with confidence identify the cetra with the target of the Scottish Highlanders, of which many specimens of considerable antiquity are still in existence. It is seen "covering the left arms" (comp. Virg. *Aen.* vii. 732) of the two accompanying figures, which are copied from a MS. of Prudentius, probably written in this country, and as early as the ninth century. (*Cod. Cotton. Cleop.* c. 8.)

It does not appear that the Romans ever wore the cetra. But Livy compares it to the *pelus* of the Greeks and Macedonians, which was also a

small light shield (*ostratos*, *quos peliastas vocant*, xxi. 36). [P.L.T.A.] [J. Y.]

CHALCEIA (*χαλκεία*), a very ancient festival celebrated at Athens, which at different times seems to have had a different character, for at first it was solemnised in honour of Athena, surnamed Ergane, and by the whole people of Athens, whence it was called *Ἀθήναια* or *Πάνθημος*. (Suidas, s. v.; *Etymol. Magn.*; Eustath. *ad Il.* ii. p. 284, 36.) At a later period, however, it was celebrated only by artisans, especially smiths, and in honour of Hephaestus, whence its name was changed into *Χαλκεία*. (Pollux, vii. 105.) It was kept on the 30th day of the month of Pyanepsion. (Suidas, Harpocrat. Eustath. l. c.) Menander had written a comedy called *Χαλκεία*, a fragment of which is preserved in Athen. xi. p. 502. (Comp. Welcker, *Die Aeschyl. Trilog.* p. 290.) [L. S.]

CHALCIDICUM is merely defined by Festus (s. v.) as a sort of building (*genus aedificii*), so called from the city of Chalcis, but what sort is not explained; neither do the inscriptions or the passages of ancient writers, in which the word occurs, give any description from which a conclusion can be drawn with certainty respecting the form, use, and locality of such buildings.

Chalcidica were certainly appurtenances to some *basilicas* (Vitruv. v. 1), in reference to which the following attempts at identification have been suggested:—1. A mint attached to the basilica, from *χαλκός* and *δική*, which, though an ingenious conjecture, is not supported by sufficient classical authority. 2. That part of a basilica which lies directly in front of the tribune, corresponding to the nave in a modern church, of which it was the original, where the lawyers stood, and thence termed *navis consistoria*. 3. An apartment thrown out at the back of a basilica, either on the ground floor or at the extremity of the upper gallery, in the form of a balcony. 4. Internal chambers on each side of the tribune for the convenience of the *judices*, as in the basilica of Pompeii. 5. The vestibule of a basilica, either in front or rear; which interpretation is founded upon an inscription discovered at Pompeii, in the building appropriated to the fullers of cloth (*fullonica*):—

EUMACHIA L. F. SACERD. PUB. ****

***** CHALCIDICUM CRYPTAM PORTICUS

***SUA. PEGUNIA. FECIT. NADEMQUE. DEDICAVIT.

By comparing the plan of the building with this inscription, it is clear that the *chalcidicum* mentioned can only be referred to the vestibule. Its

decorations likewise correspond in richness and character with the vestibule of a basilica described by Procopius (*De Aedific. Justin.* i. 10), which is twice designated by the term *χαλκή*. The vestibule of the basilica at Pompeii is shown upon the plan on page 199, a.

In another sense the word is used as a synonyme with *coenaculum*. "Scribuntur Dii vestri in tricliniis coelestibus atque in *chalcidiciis* aureis coenitare" (Arnobius, p. 149). These words, compared with Hom. *Od.* xxiii. 1,

Γρηθς δ' εἰς ὑπερὶ ἀνεβήσαστο καρχαλδῶσα,
and the translation of *ὑπερῶν* by Ausonius (*Perioch.* xiii. *Odyss.*),

"*Chalcidicum* greasu nutrit superabat anili," together with the known locality of the ancient *coenacula*, seem fully to authorise the interpretation given. (Turneb. *Advers.* xviii. 34; Salmas. in *Spart. Pescon. Nigr.* c. 12. p. 677.)

Finally, the word seems also to have been used in the same sense as *maenium*, a balcony. (Isid. *De Orig.*; Reinesius, *Var. Lect.* iii. 5.) [A. R.]

CHALCIOI/CIA (*χαλκιοίκια*), an annual festival, with sacrifices, celebrated at Sparta in honour of Athena, surnamed *Χαλκίοικος*, i. e. the goddess of the brazen-house. (Pana. iii. 17. § 3, x. 5. § 5; and Goeller *ad Thucyd.* i. 128, &c.) Young men marched on the occasion in full armour to the temple of the goddess; and the ephors, although not entering the temple, but remaining within its sacred precincts, were obliged to take part in the sacrifice. (Polyb. iv. 35. § 2.) [L. S.]

CHALCUS (*χαλκός*), a denomination of Greek copper-money.

Bronze or copper (*χαλκός*) was very little used by the Greeks for money in early times. Silver was originally the universal currency, and copper appears to have been seldom coined till after the time of Alexander the Great. The *χαλκία πομπή* at Athens issued in B. C. 406 (*Schol. ad Aristoph. Ran.* 737) were a peculiar exception; and they were soon afterwards called in, and the silver currency restored. (Aristoph. *Ecclesias.* 815—822; *Aurum.*) It is not improbable, however, that the copper coin called *χαλκός* was in circulation in Athens still earlier. The smallest silver coin at Athens was the quarter obol, and the *χαλκός* was the half of that, or the eighth of an obol. Its value was somewhat more than 3-4ths of a farthing. It seems to have been used on account of the difficulty of coining silver in such minute pieces. The *χαλκός* in later times was divided into *lepta*, of which, according to Suidas (s. v. *Τάλαντον*, *ὀβολός*), it contained seven. There was another copper coin current in Greece, called *σύμβολον*, of which the value is not known. Pollux (iii. 9) also mentions *κόλλυβος* as a copper coin of an earlier age; but, as Mr. Hussey has remarked, this may have been a common name for small money; since *κόλλυβος* signified generally "changing money," and *κολυβιστής*, "a money-changer." In later times, the obol was coined of copper as well as silver. The Greek states of Sicily and Italy had a copper coinage at a very early period [LITRA]. (Hussey, *Ancient Weights and Money*, c. 8; Böckh, *Publ. Econ. of Athens*, p. 592, 2nd ed.; *Ueber Gewichte, Münzfisse*, &c., pp. 142, 342, &c.) [P. S.]

CHARISTIA (from *χαρίζομαι*, to grant a favour or pardon), a Roman feast, to which none but relations and members of the same family were invited, in order that any quarrel or disagreement

which had arisen amongst them might be made up, and a reconciliation effected. It was celebrated every year on the 19th of February. (*Ov. Fast.* ii. 617; *Val. Max.* ii. l. § 8; *Mar. ix.* 55.) [R.W.]

CHARTA. [LIBER.]

CHEIRONOMIA (χειρονομία), a mimetic movement of the hands, which formed a part of the art of dancing among the Greeks and Romans. The word is also used in a wider sense, both for the art of dancing in general, and for any signs made with the hands in order to convey ideas. In gymnastics it was applied to the movements of the hands in pugilistic combat; and it is used in connection with the term *σχημαχεῖν*. (*Athen.* xiv. p. 629. b.; *Hezych.* vol. ii. p. 1547. Alb.; *Herod.* vi. 129; *Aelian.* *V. H.* xiv. 22; *Dion Cass.* xxxvi. 13; *Pana.* vi. 10. § 1; *Heliod.* *Aethiop.* iv. p. 73; *Krause, Gymnastik und Agonistik*, vol. i. c. 6. § 33, vol. ii. c. 3. § 1.) [P.S.]

CHEIROTONIA (χειροτονία). In the Athenian assemblies two modes of voting were practised, the one by pebbles [*Πατρις*], the other by a show of hands (*χειροτονεῖν*). The latter was employed in the election of those magistrates who were chosen in the public assemblies (*ἀρχαίρεσις*), and who were hence called *χειροτονητοί*, in voting upon laws, and in some kinds of trials on matters which concerned the people, as upon *προβολαί* and *ἐισαγγελίαι*. We frequently find, however, the word *ψηφισθεῖν* used where the votes were really given by show of hands. (*Lys.* c. *Eratostr.* p. 124. 16. and p. 127. 8. ed. Steph.; *Dem. Olynth.* i. p. 9.)

The manner of voting by a show of hands is said by Suidas (s. v. *κατεχειροτόνησεν*) to have been as follows:—The herald said: "Whoever thinks that Meidias is guilty, let him lift up his hand." Then those who thought so stretched forth their hands. Then the herald said again: "Whoever thinks that Meidias is not guilty, let him lift up his hand;" and those who were of this opinion stretched forth their hands. The number of hands was counted each time by the herald; and the president, upon the herald's report, declared on which side the majority voted (*ἀναγορεύειν τὰς χειροτονας*, *Aesch.* c. *Cleophr.* § 2).

It is important to understand clearly the compounds of this word. A vote condemning an accused person is *καταχειροτονία*: one acquitting him, *ἀποχειροτονία* (*Dem.* c. *Meid.* pp. 516, 553, 583); *ἐπιχειροτονεῖν* is to confirm by a majority of votes (*Dem.* *De Coron.* pp. 235, 261); *ἐπιχειροτονία τῶν νόμων* was a revision of the laws, which took place at the beginning of every year; *ἐπιχειροτονία τῶν ἀρχῶν* was a vote taken in the first assembly of each Prytany on the conduct of the magistrates: in these cases, those who voted for the confirmation of the law, or for the continuance in office of the magistrate, were said *ἐπιχειροτονεῖν*, those on the other side *ἀποχειροτονεῖν* (*Dem.* c. *Timocr.* p. 706; *Harpocrat.* and *Suidas* s. v. *Κυρία ἐκκλησία*; *Dem.* c. *Theocrin.* p. 1330); *διαχειροτονία* is a vote for one of two alternatives (*Dem.* c. *Androtion.* p. 596; c. *Timocr.* p. 707; c. *Neaer.* p. 1346); *ἀντιχειροτονεῖν*, to vote against a proposition. The compounds of *ψηφίς*(*σθαι*) have similar meanings. (*Schömann, De Censitiis Atheniensium*, pp. 120, 125, 231, 251, 330.) [P.S.]

CHELIDONIA (χελιδνία), a custom observed in the island of Rhodes, in the month of

Boëdromion, the time when the swallows returned. During that season boys, called *χελιδονισταί*, went from house to house collecting little gifts, ostensibly for the returning swallows (*χελιδονίζειν*), and singing a song which is still extant. (*Athen.* viii. p. 360; compare *Ilgel, Opusc. Phil.* i. p. 164, and *Eustath. ad Odys.* xxi. *sub fin.*) It is said to have been introduced by Cleobulus of Lindus, at the same period when the town was in great distress. The chelidonia, which have sometimes been called a festival, seem to have been nothing but a peculiar mode of begging, which on the occasion of the return of the swallows was carried on by boys in the manner stated above. Many analogies may still be observed in various countries at the various seasons of the year. [L.S.]

CHELYS (χέλυς). [LYRA.]

CHEME (χημή), a Greek liquid measure, the capacity of which (as is the case with most of the smaller measures) is differently stated by different authorities. There was a small cheme, which contained two cochlearia, or two drachmae, and was the seventy-second part of the cotyle, = 0068 of a pint English. (*Rhem. Fann.* v. 77.) The large cheme was to the small in the proportion of 3 to 2. Other sizes of the cheme are mentioned, but they differ so much that we cannot tell with certainty what they really were. (*Husey, Ancient Weights, &c.*; *Wurm, De Pond. &c.*) [P.S.]

CHENISCUS. [NAVIS.]

CHERNIPS (χέρνιψ). [LUSTRATIO.]

CHEROSTAE (χηροστᾶι). [HERES.]

CHILIARCHUS. [EXERCITUS.]

CHIRAMA'XIUM (from *χέρη* and *μαξα*), a sort of easy chair or "go-cart," used for invalids and children. (*Petron.* 28.)

CHIRIDOTA. [TUNICA.]

CHIROGRAPHUM (χειρογράφον), meant first, as its derivation implies, a hand-writing or autograph. (*Cic. Phil.* ii. 4.) In this its simple sense, *χέρη* in Greek and *monus* in Latin are often substituted for it.

Like similar words in all languages, it acquired several technical senses. From its first meaning was easily derived that of a signature to a will or other instrument, especially a note of hand given by a debtor to his creditor. In this latter case, it did not constitute the legal obligation (for the debt might be proved in some other way); it was only a proof of the obligation.

According to *Asconius* (in *Verr.* iii. 36) *chirographum*, in the sense of a note-of-hand, was distinguished from *syngrapha*; the former was always given for money actually lent, the latter might be a mere sham agreement (something like a bill of accommodation, though with a different object), to pay a debt which had never been actually incurred. The *chirographum* was kept by the creditor, and had only the debtor's signature; the *syngrapha*, on the contrary, was signed and kept by both parties.

In the Latin of the middle ages (see *Du Fresne*, s. v.) *chirographum* was used to signify tribute collected under the sign-manual of a person in authority, similar to the briefs and benevolences of former times in our own country. It was also used (see *Blackstone*, b. ii. c. 20), till very lately, in the English law for an indenture. Duplicates of deeds were written on one piece of parchment, with the word *chirographum* between them, which was cut in two in a straight or wavy line, and the parts

given to the care of the persons concerned. By the Canonists, Blackstone remarks, the word *syngrapha* or *syngraphus* was employed in the same way, and hence gave its name to these kind of writings. [B. J.]

CHIRURGIA (*χειρουργία*), surgery. The practice of surgery was, for a long time, considered by the ancients to be merely a part of a physician's duty; but as it is now almost universally allowed to be a separate branch of the profession, it will perhaps be more convenient to treat of it under a separate head. It will not be necessary to touch upon the disputed questions, which is the *more ancient*, or which is the *more honourable* branch of the profession; nor even to try to give such a definition of the word *chirurgia* as would be likely to satisfy both the physicians and surgeons of the present day; it will be sufficient to determine the sense in which the word was used by the ancients; and then, adhering closely to that meaning, to give an account of this division of the science and art of medicine, as practised among the Greeks and Romans, referring to the article *MEDICINA* for further particulars.

The word *chirurgia* is derived from *χείρ* the hand, and *ἔργον* a work, and is explained by Celsus (*De Med.* lib. vii. *Praefat.*) to mean that part of medicine *quae manus curat*, "which cures diseases by means of the hand;" in Diogenes Laërtius (iii. 85) it is said to cure *διὰ τοῦ τέμνειν καὶ καλεῖν*, "by cutting and burning;" nor (as far as the writer is aware) is it ever used by ancient authors in any other sense. Omitting the fabulous and mythological personages, Apollo, Aesculapius, Chiron, &c., the only certain traditions respecting the state of surgery before the establishment of the republics of Greece, and even until the time of the Peloponnesian war, are to be found in the *Iliad* and *Odyssey*. There it appears that surgery was almost entirely confined to the treatment of wounds; and the imaginary power of enchantment was joined with the use of topical applications. (*Il.* iii. 218, xi. 515, 828, 843, &c. &c.) The Greeks received surgery, together with the other branches of medicine, from the Egyptians; and from some observations made by the men of science who accompanied the French expedition to Egypt in 1798, it appears, that there are documents fully proving that in very remote times this extraordinary people had made a degree of progress of which few of the moderns have any conception: upon the ceilings and walls of the temples at Tentyra, Karnack, Luxor, &c., basso-reliefes are seen, representing limbs that have been cut off with instruments very analogous to those which are employed at the present day for amputations. The same instruments are again observed in the hieroglyphics, and vestiges of other surgical operations may be traced, which afford convincing proofs of the skill of the ancient Egyptians in this branch of medical science. (Larry, quoted in Cooper's *Surg. Dict.*)

The earliest remaining surgical writings are those of Hippocrates, who was born B. C. 460, and died B. C. 357. Among his reputed works there are ten treatises on this subject, only one of which however is considered undoubtedly genuine. Hippocrates far surpassed all his predecessors (and indeed most of his successors) in the boldness and success of his operations; and though the scanty knowledge of anatomy possessed in those times

prevented his attaining any very great perfection, still, we should rather admire his genius, which enabled him to do so much, than blame him because, with his deficient information, he was able to do no more. The scientific skill in reducing fractures and luxations displayed in his works, *De Fracturis*, *De Articulis*, excites the admiration of Haller (*Biblioth. Chirurg.*), and he was most probably the inventor of the *ambo*, an old chirurgical machine for dislocations of the shoulder, which, though now fallen into disuse, for a long time enjoyed a great reputation. In his work *De Capitis Vulneribus* he gives minute directions about the time and mode of using the trephine, and warns the operator against the probability of his being deceived by the sutures of the cranium, as he confesses happened to himself. (*De Morb. Vulgar.* lib. v. p. 561, ed. Kühn.) The author of the Oath, commonly attributed to Hippocrates, binds his pupils not to perform the operation of lithotomy, but to leave it to persons accustomed to it (*ἐπιδότραι ἀνδράσι πηλίοις τῆσδε*); from which it would appear as if certain persons confined themselves to particular operations.

The names of several persons are preserved who practised surgery as well as medicine, in the times immediately succeeding those of Hippocrates; but, with the exception of some fragments, inserted in the writings of Galen, Oribasius, Aëtius, &c., all their writings have perished. Archagathus deserves to be mentioned, as he is said to have been the first foreign surgeon that settled at Rome B. C. 219. (Cassius Hemina, *apud Plin.* H. N. xxix. 6.) He was at first very well received, the *ius Quiritium* was conferred upon him, a shop was bought for him at the public expense, and he received the honourable title of *Vulnerarius*. This, however, on account of his frequent use of the knife and cautery, was soon changed by the Romans (who were unused to such a mode of practice) into that of *Carnifex*. Asclepiades, who lived at the beginning of the first century B. C., is said to have been the first person who proposed the operation of bronchotomy, though he himself never performed it (*Cael. Aurel. De Morb. Acut.* i. 14, iii. 4); and Ammonius of Alexandria, surnamed *Λιθοτόμος*, who is supposed to have lived rather later, is celebrated in the annals of surgery for having been the first to propose and to perform the operation of *Lithotrixy*, or breaking a calculus in the bladder, when found to be too large for safe extraction. Celsus has minutely described his mode of operating (*De Med.* vii. 26. § 3. p. 436), which very much resembles that lately introduced by Civiale and Heurteloup, and which proves, that however much credit they may deserve for bringing it again out of oblivion into public notice, the praise of having originally thought of it belongs to the ancients. "A hook," says Celsus, "is to be so insinuated behind the stone as to resist and prevent its recoiling into the bladder, even when struck; then an iron instrument is used, of moderate thickness, flattened towards the end, thin, but blunt; which being placed against the stone, and struck on the further end, cleaves it; great care being taken, at the same time, that neither the bladder itself be injured by the instrument, nor the fragments of the stone fall back into it." The next surgical writer after Hippocrates, whose works are still extant, is Celsus, who lived at the beginning of the first

century A. D., and who has devoted the four last books of his work, *De Medicina*, and especially the seventh and eighth, entirely to surgical matters. It appears plainly from reading Celsus, that since the time of Hippocrates surgery had made very great progress, and had, indeed, reached a high degree of perfection. He is the first author who gives directions for the operation of lithotomy (*De Med. vii. 26. § 2. p. 432*), and the method described by him (called *the apparatus minor*, or *Celsus's method*), continued to be practised till the commencement of the sixteenth century. It was performed at Paris, Bordeaux, and other places in France, upon patients of all ages, even as late as a hundred and fifty years ago; and a modern author (Allan *On Lithotomy*, p. 12) recommends it always to be preferred on boys under fourteen. (Cooper's *Dict. of Prac. Surg.*, art. Lithotomy.) He describes (*vii. 25. § 3. p. 428*) the operation of *Isfibulatio*, which was so commonly performed by the ancients upon singers, &c., and is often alluded to in classical authors. (See *Juv. vi. 73, 379*; *Senec. apud Lactant. Divin. Instit. i. 16*; *Mart. Epigr. vii. 82. l. ix. 28. 12, xiv. 215. 1*; *Tertull. De Corona Mil. 11.*) He also describes (*vii. 25. § 1. p. 427*) the operation alluded to by St. Paul (1 Cor. vii. 18) *περιτομή μένεις τῆς ἐκλήθης: μή ἐπι-σπᾶσθαι*. Compare Paulus Aegineta (*De Re Med. vi. 53*), who transcribes from Antyllus a second method of performing the operation.

The following description, given by Celsus, of the necessary qualifications of a surgeon, deserves to be quoted:—"A surgeon," says he (*lib. vii. Præfat.*) "ought to be young, or, at any rate, not very old; his hand should be firm and steady, and never shake; he should be able to use his left hand with as much dexterity as his right; his eye-sight should be acute and clear; his mind intrepid, and so far subject to pity as to make him desirous of the recovery of his patient, but not so far as to suffer himself to be moved by his cries; he should neither hurry the operation more than the case requires, nor cut less than is necessary, but do every thing just as if the other's screams made no impression upon him."

Perhaps the only surgical remark worth quoting from Aretæus, who lived in the first century A. D., is that he condemns the operation of bronchotomy, and thinks "that the wound would endanger an inflammation, cough, and strangling; and that if the danger of being choked could be avoided by this method, yet the parts would not heal, as being cartilaginous." (*De Morb. Acut. Cuv. l. 7. p. 227*, ed. Kühn.)

Omitting Scribonius Largus, Moschion, and Soranus, the next author of importance is Caelius Aurelianus, who is supposed to have lived about the beginning of the second century A. D., and in whose works there is a good deal relating to surgery, though nothing that can be called original. He rejected as absurd the operation of bronchotomy (*De Morb. Chron. iii. 4*). He mentions a case of ascites that was cured by paracentesis (*Ibid. iii. 8*), and also a person who recovered after being shot through the lungs by an arrow. (*Ibid. iii. 12.*)

Galen, the most voluminous and at the same time the most valuable medical writer of antiquity, is less celebrated as a surgeon than as an anatomist and physician. He appears to have practised surgery at Pergamus, but, upon his removal to

Rome (A. D. 165), he entirely confined himself to medicine, following, as he says himself (*De Meth. Med. vi. 20*), the custom of the place. His writings prove, however, that he did not entirely abandon surgery. His Commentaries on the Treatise of Hippocrates, *De Officina Medici*, and his treatise *De Fasciis*, shows that he was well versed even in the minor details of the art. He appears also to have been a skilful operator, though no great surgical inventions are attributed to him.

Antyllus, who lived some time between Galen and Oribasius, is the earliest writer whose directions for performing bronchotomy are still extant, though the operation (as was stated above) was proposed by Aesclepiades about three hundred years before. Only a few fragments of the writings of Antyllus remain, and among them the following passage is preserved by Paulus Aegineta (*De Re Med. vi. 33*):—"Our best surgeons have described this operation, Antyllus particularly, thus: 'We think this practice useless, and not to be attempted where all the arteries and the lungs are affected; but when the inflammation lies chiefly about the throat, the chin, and the tonsils which cover the top of the windpipe, and the artery is unaffected, this experiment is very rational, to prevent the danger of suffocation. When we proceed to perform it, we must cut through some part of the windpipe, below the larynx, about the third or fourth ring; for to cut quite through would be dangerous. This place is the most commodious, because it is not covered with any flesh, and because it has no vessels near it. Therefore, bending the head of the patient backward, so that the windpipe may come more forward to the view, we make a transverse section between two of the rings, so that in this case not the cartilage, but the membrane which incloses and unites the cartilages together, is divided. If the operator be a little fearful, he may first divide the skin, extended by a hook; then, proceeding to the windpipe, and separating the vessels, if any are in the way, he must make the incision.' Thus far Antyllus, who thought of this way of cutting, by observing (when it was, I suppose, cut by chance) that the air rushed through it with great violence, and that the voice was interrupted. When the danger of suffocation is over, the lips of the wound must be united by suture, that is, by sewing the skin, and not the cartilage; then proper vulnerary medicines are to be applied. If these do not agglutinate, an incarnant must be used. The same method must be pursued with those who cut their throat with a design of committing suicide."*

Oribasius, physician to the Emperor Julian (A. D. 361), professes to be merely a compiler; and though there is in his great work, entitled *Συναγεργὰ ἱατρικὰ, Collecta Medicinalia*, much surgical matter, there is nothing original. The same may be said of Aëtius and Alexander Trallianus, both of whom lived towards the end of the sixth century A. D., and are not famous for any surgical inventions. Paulus Aegineta has given up the fifth and sixth books of his work, *De Re Medica*,

* This operation appears to have been very seldom, if ever, performed by the ancients upon a human being. Avenzoar (p. 15) tried it upon a goat, and found it might be done without much danger or difficulty; but he says he should not like to be the first person to try it upon a man.

entirely to surgery, and has inserted in them much useful matter, the fruits chiefly of his own observation and experience. He was particularly celebrated for his skill in midwifery, and female diseases, and was called on that account, by the Arabians, *Al-Kawabali*, "the Accoucheur," (Abulpharaj, *Hist. Dynast.*, p. 181, ed. Pococke). Two pamphlets were published in 1768 at Göttingen, 4to. by Rud. Aug. Vogel, entitled *De Pauli Aeginetæ Moritis in Medicinam, imprimisque Chirurgiam*. Paulus Aegineta lived probably towards the end of the seventh century, A. D., and is the last of the ancient Greek and Latin medical writers whose surgical works remain. The names of several others are recorded, but they are not of sufficient eminence to require any notice here. For further information on the subject both of medicine and surgery, see *MEDICINA*; and for the legal qualifications, social rank, &c., both of physicians and surgeons, among the ancient Greeks and Romans, see *MEDICUS*.

The surgical instruments, from which the accompanying engravings are made, were found by a physician of Petersburg, Dr. Savenko, in 1819, at Pompeii, in Via Consularis (*Strada Consulare*), in a house which is supposed to have belonged to a surgeon. They are now preserved in the museum at Portici. The engravings, with an account of them by Dr. Savenko, were originally published in the *Revue Médicale* for 1821, vol. iii. p. 427, &c. They were afterwards inserted in *Forriep's Notizen aus dem Gebiete der Natur-und-Heilkunde*, for 1822, vol. ii. n. 26. p. 57, &c. The plate containing these instruments is wanting in the copy of the *Revue Médicale* in the library of the College of Surgeons, so that the accompanying figures are copied from the German work, in which some of them appear to be drawn very badly. Their authenticity was at first doubted by Kühn (*De Instrum. Chirurg. Veteribus cognitio, et nuper effossis*, Lips. 1823, 4to.), who thought they were the same that had been described by Bayardi in his *Catal. Antiq. Monument. Herculani effos.*, Nap. 1754. fol. n. 236—294; when, however, his dissertation was afterwards republished (*Opusc. Academ. Med. et Philol.*, Lips. 1827, 1828, 8vo. vol. ii. p. 309) he acknowledged himself to be completely satisfied on this point, and has given in the tract referred to, a learned and ingenious de-

scription of the instruments, and their supposed uses, from which the following account is chiefly abridged. It will, however, be seen at once, that the form of most of them is so simple, and their uses so obvious, that very little explanation is necessary.

1, 2. Two probes (*specillum*, μήλη) made of iron; the larger six inches long, the smaller four and a half. 3. A cantery (*καντήριον*) made of iron, rather more than four inches long. 4, 5. Two lancets (*scalpellum*, σμίλη), made of copper, the former two inches and a half long, the other three inches. It seems doubtful whether they were used for blood-letting, or for opening abscesses, &c. 6. A knife, apparently made of copper, the blade of which is two inches and a half long, and in the broadest part one inch in breadth; the back is straight and thick, and the edge much curved; the handle is so short that Savenko thinks it must have been broken. It is uncertain for what particular purpose it was used: Kühn conjectures that (if it be a surgical instrument at all) it may have been made with such a curved edge, and such a straight thick back, that it might be struck with a hammer, and so amputate fingers, toes, &c. 7. Another knife, apparently made of copper, the blade of which is of a triangular shape, two inches long, and in the broadest part eight lines in breadth; the back is straight and one line broad, and this breadth continues all the way to the point, which, therefore, is not sharp, but guarded by a sort of button. Kühn thinks it may have been used for enlarging wounds, &c., for which it would be particularly fitted by its blunt point and broad back. 8. A needle, about three inches long, made of iron. 9. An elevator (or instrument for raising depressed portions of the skull), made of iron, five inches long, and very much resembling those made use of

in the present day. 10—14. Different kinds of forceps (*vulsella*). No. 10 has the two sides separated from each other, and is five inches long. No. 11 is also five inches long. No. 12 is three inches and a half long. The sides are narrow at

the point of union, and become broader by degrees towards the other end, where, when closed, they form a kind of arch. It should be noticed that it is furnished with a moveable ring, exactly like the tenaculum forceps employed at the present day. No. 13 was used for pulling out hairs by the roots (*τριχολαβίς*). No. 14 is six inches long, and is bent in the middle. It was probably used for extracting foreign bodies that had stuck in the oesophagus (or gullet), or in the bottom of a wound. 15. A male catheter (*œneæ fistula*), nine inches in length. The shape is remarkable from its having the double curve like the letter S, which is the form that was re-invented in the last century by the celebrated French surgeon, J. L. Petit. 16. Probably a female catheter, four inches in length. Celsus thus describes both male and female catheters (*De Med.* vii. 26. § 1. p. 429):—"The surgeon should have three male catheters (*œneæ fistulas*), of which the longest should be fifteen, the next twelve, and the shortest nine inches in length; and he should have two female catheters, the one nine inches long, the other six. Both sorts should be a little curved, but especially the male; they should be perfectly smooth, and neither too thick nor too thin." 17. Supposed by Froriep to be an instrument for extracting teeth (*ὀδονότρυπα*, Pollux, iv. § 181); but Kühn, with much more probability, conjectures it to be an instrument used in amputating part of an enlarged uvula, and quotes Celsus (*De Med.* vii. 12. § 3. p. 404), who says, that "no method of operating is more convenient than to take hold of the uvula with the forceps, and then to cut off below it as much as is necessary." 18, 19. Probably two spatulae. [W. A. G.]

CHITON (χιτών). [TUNICA.]

CHITONIA (χιτώνια), a festival celebrated in the Attic town of Chitone in honour of Artemis, surnamed Chitona or Chitionia. (Schol. *ad Callimach. Hymn. in Artem.* 78.) The Syracusans also celebrated a festival of the same name, and in honour of the same deity, which was distinguished by a peculiar kind of dance, and a playing on the flute. (Athen. xiv. p. 629; Steph. Byz. s. v. *Χιτώνη*.) [L. S.]

CHLAINA (χλαῖνα). [LACNA; PALLIUM.]

CHLAMYS (χλαμύς, *dim.* χλαμύδιον), a scarf. This term, being Greek, denoted an article of the AMICTUS, or outer raiment, which was in general characteristic of the Greeks, and of the Oriental races with which they were connected, although both in its form and in its application it approached very much to the LACERNA and PALUDAMENTUM of the Romans, and was itself to some extent adopted by the Romans under the emperors. It was for the most part woollen; and it differed from the ἱμάτιον, the usual amictus of the male sex, in these respects, that it was much smaller; also finer, thinner, more variegated in colour, and more susceptible of ornament. It moreover differed in being oblong instead of square, its length being generally about twice its breadth. To the regular oblong *a, b, c, d* (see woodcut), goars were added, either in the form of a right-angled triangle *a, e, f*, producing the modification *a, e, g, d*, which is exemplified in the annexed figure of Mercury; or of an obtuse-angled triangle *a, e, b*, producing the modification *a, e, b, c, g, d*, which is exemplified in the figure of a youth from the Panathenaic frieze in the British Museum. These goars were called

πτερόγες, wings, and the scarf with these additions was distinguished by the epithet of Thessalian or Macedonian (*Etym. Mag.*), and also by the name of ἄλαξ or *Alicula*. [ALICULA.] Hence the ancient geographers compared the form of the inhabited earth (*ἡ οἰκουμένη*) to that of a chlamys. (Strabo, ii. 5; Macrobius, *De Somn. Scip.* ii.)

The scarf does not appear to have been much worn by children, although one was given with its brooch to Tiberius Caesar in his infancy. (Suet. *Tib.* 6.) It was generally assumed on reaching adolescence, and was worn by the ephebi from about seventeen to twenty years of age. (Philemon, p. 367, ed. Meineke; *ephebia chlamyde*, Apuleius, *Met.* x; Pollux, x. 164.) It was also worn by the military, especially of high rank, over their body-armour (Aelian, *V. H.* xiv. 10; Plaut. *Pseud.* ii. 4. 45, *Epid.* iii. 3. 55), and by hunters and travellers, more particularly on horseback. (Plaut. *Poen.* iii. 3. 6, 31.)

The scarfs worn by youths, by soldiers, and by hunters, differed in colour and fineness, according to their destination, and the age and rank of the wearer. The *χλαμύς ἐφηβική* was probably yellow or saffron-coloured; and the *χλαμύς στρατιωτική*, scarlet. On the other hand, the hunter commonly went out in a scarf of a dull unobtrusive colour, as best adapted to escape the notice of wild animals. (Pollux, v. 18.) The more ornamental scarfs, being designed for females, were tastefully decorated with a border (*limbus*, Virg. *Aen.* iv. 137; *maeander*, v. 251); and those worn by Phoenicians, Trojans, Phrygians, and other Asiatics, were also embroidered, or interwoven with gold. (Virg. *Il.* co.; iii. 483, 484, xi. 775; Ovid, *Met.* v. 51; Val. Flaccus, vi. 228.) Actors had their chlamys ornamented with gold. (Pollux, iv. 116.)

The usual mode of wearing the scarf was to pass one of its shorter sides (*a, d*) round the neck, and to fasten it by means of a brooch (*fibula*), either over the breast, in which case it hung down the back, reaching to the calves of the legs; or over the right shoulder, so as to cover the left arm, as is seen in the cut on p. 259, and in the well-known example of the Belvidere Apollo. In other instances it was made to depend gracefully from the left shoulder, of which the bronze Apollo in the British Museum (see the annexed woodcut) presents an example; or it was thrown lightly behind the back, and passed over either one arm or shoulder, or over both (see the second figure in the last woodcut, taken from Hamilton's *Vases*, i. 2); or, lastly, it was laid upon the throat, carried behind the neck, and crossed so as to hang down the back, as in the figure of Achilles (p. 196), and sometimes its extremities were again brought forward over the arms or shoulders. In short, the

remains of ancient art of every description, show in how high a degree the scarf contributed, by its endless diversity of arrangement, to the display of the human form in its greatest beauty; and Ovid has told us how sensible the ephēbi were of its advantages in the account of the care bestowed upon this part of his attire by Mercury. (*Mét.* ii. 735.) The aptitude of the scarf to be turned in every possible form around the body, made it useful even for defence. The hunter used to wrap his chlamys about his left arm when pursuing wild animals, and preparing to fight with them. (Pollux v. 18; Xen. *Cyneg.* vi. 17.) Alcibiades died fighting with his scarf rolled round his left hand instead of a shield. The annexed woodcut exhibits a figure of Neptune armed with the trident in his right hand, and having a chlamys to protect the left. It is taken from a medal which was struck in commemoration of a naval victory obtained by Demetrius Poliorcetes, and was evidently designed to express his sense of Neptune's succour in the conflict. When Diana goes to the chase, as she

does not require her scarf for purposes of defence, she draws it from behind over her shoulders, and twists it round her waist, so that the belt of her quiver passes across it, as shown in the statues of this goddess in the Vatican (see woodcut).

It appears from the bas-reliefs on marble vases that dancers took hold of one another by the chlamys, as the modern Greeks still do by their scarfs or handkerchiefs, instead of taking one another's hands.

Among the Romans the scarf came more into use under the emperors. Caligula wore one enriched with gold. (Suet. *Calig.* 19.) Alexander Severus, when he was in the country or on an expedition, wore a scarf dyed with the coccus

(*chlamyde coccinea*, Lamprid. *Al. Sev.* 40; compare *Matt.* xxvii. 28, 31). [J. Y.]

CHLOEIA or CHLOIA (χλόεια or χλοΐα), a festival celebrated at Athens in honour of Demeter Chloë, or simply Chloë, whose temple stood near the Acropolis. (Hesych. s. v. χλοΐα; Athen. xiv. p. 618; Sophocl. *Oed. Col.* 1600, with the Scholiast; Paus. i. 22. § 3.) It was solemnized in spring, on the sixth of Thargelion, when the blossoms began to appear (hence the names χλόη and χλόεια), with the sacrifice of a goat and much mirth and rejoicing. (Eupolis, *apud Schol. ad Soph. Oed. Col.* l. c.) [L. S.]

CHOENIX (χοῖνιξ), a Greek measure of capacity, the size of which is differently given; it was probably of different sizes in the several states. Pollux (iv. 23), Suidas, Cleopatra, and the fragments of Galen (c. 7, 9) make it equal to three cotylae, or nearly 1½ pints English; another fragment of Galen (c. 5), and other authorities (Pausan, *Metrol.* p. 233) make it equal to four cotylae, or nearly 2 pints English; Rhemnius Fannius (v. 69), and another fragment of Galen (c. 8) make it eight cotylae, or nearly 4 pints English. (Wurm, *De Pond. et Mens.* &c., pp. 132, 142, 199; Hussey, *Ancient Weights*, &c. pp. 209, 214. [P. S.]

CHOES (χόες). [DIONYSIA.]

CHOREGIA. [CHOREGUS.]

CHOREGUS (χορηγός), one who had to discharge the duties of the *Choregia* (χορηγία). The Choregia was one of the most expensive of the ordinary or encyclic liturgies at Athens. [LITURGIA.] The choregus was appointed by his tribe, though we are not informed according to what order. The same person might serve as choregus for two tribes at once (Antiph. *de Choregiis*, p. 768; Dem. c. *Lept.* p. 467); and after a. c. 412 a decree was passed allowing two persons to unite and undertake a choregia together. (Schol. *ad Arist. Rom.* 406.) The duties of the choregia consisted in providing the choruses for tragedies and comedies, the lyric choruses of men and boys, the pyrrhicists, the cyclic choruses, and the choruses of flute-players for the different religious festivals at Athens. When a poet intended to bring out a play, he had to get a chorus assigned him by the archon [CHORUS], who nominated a choregus to fulfil the requisite duties. The choregus had in the first place to get the choreutae. In the case of a chorus of boys this was sometimes a difficult matter, since, in consequence of the prevalent paederaestia of the Greeks, parents were frequently unwilling to suffer their boys to be choreutae, lest they should be exposed to corrupting influences during their training. Solon, with the view of lessening the dangers to which they might be exposed, had enacted that choregi should be more than forty years of age. But the law was by no means rigidly observed. (Aesch. c. *Timarch.* p. 391.) If the boys could be obtained in no other way, compulsion was allowable. (Antiph. l. c.) Having procured the choreutae, the choregus had next to provide a trainer for them (χοροδιδάσκαλος). It was of course a matter of great importance to get a good trainer. The apportionment of the trainers was decided by lot, that is, as Böckh imagines, the choregi decided by lot in what order they were to select the trainers, which was in fact the mode of proceeding with respect to the flute-player. (Dem. c. *Meid.* p. 519.) The choregus had to pay, not only the

trainer, but the choreutae themselves, and maintain them while they were in training, providing them with such food as was adapted to strengthen the voice*; and to provide a suitable training place (*χορηγεῖον*) if he had no place in his own house adapted for the purpose. (Antiph. *l. c.*; Athen. xiv. p. 617, b.; Schol. ad Arist. *Nub.* 338, *Acharn.* 1154; Plut. *de Glor. Ath.* p. 349, a.; Xen. *de Republ. Ath.* i. 13; Poll. iv. 106, ix. 41.) He had also to provide the chorus with the requisite dresses, crowns, and masks. (Dem. *c. Meid.* p. 519; Athen. iii. p. 103, f.) It is not to be supposed, however, that the choregus defrayed the whole expense of the play to be represented. The choregus who was judged to have performed his duties in the best manner received a tripod as a prize, the expense of which, however, he had to defray himself; and this expense frequently included the building of a cell or chapel in which to dedicate it. A street at Athens was called the Street of the Tripods, from being lined with these. The tribe to which the choregus belonged shared the honours of the victory with him, and the names of both were inscribed upon the tripod or monument. (Paus. i. 20. § 1; Plat. *Gorg.* p. 472; Plat. *Nic.* 3.) The sums expended by choregi were doubtless in most cases larger than was absolutely necessary. Aristophanes (*Lys. pro Arist.* *bon.* pp. 633, 642) spent 5000 drachmae upon two tragic choruses. From the same orator we learn that another person spent 3000 drachmae upon a single tragic chorus; 2000 for a chorus of men; 5000 for a chorus of men on another occasion, when, having gained the prize, he had to defray the expense of the tripod; 800 drachmae for a chorus of pyrrhichists; 300 drachmae for a cyclic chorus. (*Lys. ἀπολ. δικοῦ* pp. 698, ed. Reiske.)

A chorus of flute-players cost more than a tragic chorus. (Dem. *c. Meid.* p. 565.) In times of public distress, the requisite number of choregi could not always be procured. Thus the tribe Pandionis had furnished no choregus for three years, till Demosthenes voluntarily undertook the office. (Dem. *c. Meid.* pp. 578, 579; comp. Büchh. *Publ. Econ. of Athens*, book iii. c. 22.) [C.P.M.]

CHOROBATES, an instrument for determining the slope of an aqueduct and the levels of the country through which it was to pass. From the description given of it by Vitruvius, it appears to have differed but very slightly from a common carpenter's level, which consists of a straight rule supporting a perpendicular piece, against which hangs a plumb-line. The chorobates had two perpendiculars and plumb lines, one at each end, instead of a single one in the middle. The derivation of the word is from *χώρα* and *βαίνω*, from its use in surveying land minutely. [P.S.]

CHORUS (*χορός*), a word, the original meaning and derivation of which are somewhat uncertain. According to Hesychius the word is equivalent to *κύκλος* or *στέφανος*. If so, the word probably signified originally a company of dancers dancing in a ring. Those who adopt that view of the origin of the word connect it with *χόρτος*, *χορηνός*,

and *κορηνός*. Others suppose that the earliest signification of the word is that of a level, open space, such as would be suited for dancing, and connect it with *χώρα* and *χῶρος*, so that the later and ordinary signification of the word would be derived from such places being employed for dancing. This seems a less likely account of the word than the other. If the name *χορός* was given to such places with reference to their use for dancing, we should still have to look to this latter idea for the origin of the name of the place; if the name was a general one, like *χῶρος*, it seems very unlikely that a body of dancers should derive their name from what is so very little distinctive of them, namely their meeting in an open space. On the other hypothesis it is easy to understand how a word signifying a body of dancers should come to signify the place where they danced, and then, more generally, any place suited for the purpose. As regards the usage of the word, in Homer it commonly means a troop of dancers; in the *Odyssey* (viii. 260, 264, xii. 4) passages are found where it means a place for dancing; *ἐφ' ὅρχος* is found both in Homer and in later writers as an epithet of cities having large open squares or places suited for choral performances. A comparison with the corresponding word *καλλιχορός* shows that the notion of dancing must not be lost sight of. At Sparta the agora was called *χορός* (Paus. iii. 11. § 9).

In later times, a choric performance always implies the singing or musical recitation of a poetical composition, accompanied by appropriate dancing and gesticulation, or at least by a measured march. The choruses that we read of in Homer are merely companies of dancers, who move to the music of a song sung by the minstrel, who accompanies himself on the cithara or phorminx. In the palace of Alcinoüs the dancers perform their evolutions, while Demodocus, to the music of the phorminx, sings the loves of Ares and Aphrodite (*Od.* viii. 256, &c.). In the chorus represented on the shield of Achilles (*Il.* xviii. 590, &c.) a band of youths and maidens dance, holding each other by the hand, sometimes in a ring, sometimes in parallel lines opposite to each other. In the midst of the dancers are two *κυβιστηγῆρες*, or tumblers, who, apparently, by their gesticulations direct and lead off (*ἐξέρχοντες*) the measured movements (*μολπή*) of the dancers. So in the Homeric hymn to the Pythian Apollo (10, &c.) a company of goddesses dance, while the Muses sing, and Apollo plays the cithara. The part of the *κυβιστηγῆρες* is performed by Ares and Hermes, who gesticulate (*βαλῶσι*) in the midst of the dancers. In the description of the nuptial procession in Hesiod (*Shield of Herc.* 272, &c.) it is not quite clear whether the chorus of youths are singing and dancing to the sound of the pipe, or playing the pipe themselves. The band of revellers (*κύμνος*) who follow both dance and sing. That the chorus, in the earliest times, consisted of the whole population of a city assembled for dances and hymns in honour of their guardian-god, might be true if the whole population joined in the dance, but not otherwise, for the term chorus never included the spectators.

Whether the Dorians were the first who had choruses at festive or religious celebrations, or whether Apollo was the deity in connection with whose worship choruses first made their appearance, are points which, in the absence of all evi-

* The speech of Antiphon, *περὶ τοῦ χορευτοῦ*, was composed for a trial which arose out of an action brought by the father of a choreutes against the choregus under whose charge he was, because the boy had died from drinking some mixture given him to improve his voice.

dence, are best left undecided. The war-dances of the Curetes in Crete in honour of Zeus, seem to be quite as ancient as any that we know of in honour of Apollo. However dances may have originated, it was natural that, like music and poetry, they should at a very early period be connected with the worship of the gods; and in that connection it is certainly true that it was among the Dorians, and connected with the worship of Apollo, that the chorus received its earliest development, though there does not appear sufficient evidence to support the conclusion that the worship of Apollo existed nowhere without having been introduced by the Dorians.

The imperfect type of the later chorus appears in the earliest period in the pæan, as sung by a company either sitting still (*Il.* i. 473), or moving along with a measured step (*Il.* xxii. 391). In the Homeric hymn to the Pythian Apollo we have the god himself as leader of the chorus, playing the phorminx, while the chorus of Cretans follow him at a measured pace, and sing the Pæan. [PÆAN]. This exhibits the Pæan in a somewhat later stage of development. In Homer it appears as a less formal and systematic performance. Dancing was very early connected with the worship of Apollo in Delos (Hymn. Apoll. Del. l. 149, &c.), and in Crete. (Hesiod. *Fr.* 94. Göttl.) It was in Crete that the mimetic dance, called Hyporchema, took its origin [HYPORCHEMA; SALTATIO], and it was thence also that the subsequent innovations upon the staid gravity of the Pæan were derived, traces of the origin of which were preserved in the name of the rhythms and dances. (Müller, *Dorians*, ii. 8. § 14.) To Thaletas are attributed the most important improvements. He cultivated the art of dancing no less than that of music, and adapted the evolutions of the chorus to the more spirited movements of the Phrygian style of music. He is said to have composed both pæans and hyporchemæ, the latter of which he adapted for the Pyrrhic or war-dance; and from having given them a more artistic form, he came to be regarded by some as the inventor of them. (Müller, *History of the Literature of Ancient Greece*, p. 160, &c.) Pæans began to be sung with an orchestral accompaniment on the part of the chorus, especially at the festival of the Gymnopaedia [GYMNOPEΔΙΑ], and by degrees became scarcely distinguishable from the hyporcheme. (Müller, *l. c.* p. 160; Bode, *Gesch. der Hellen. Dichtk.* vol. ii. part i. p. 46.) That combination of singing and dancing which we find in the choruses of later times, to which the remark of Lucian applies (*de Salt.* 30), *πάλα μὲν γὰρ οἱ αὐτοὶ καὶ ᾄδον καὶ ὀρχοῦντο*, was probably introduced by degrees. It had taken place before the time of Alcman, who introduced into his choral compositions an antistrophic character. A large number of these he composed for choruses of virgins: in some there was a dialogue between the chorus and the poet. (Müller, *l. c.* p. 194, &c.) In his compositions strophes and antistrophes of the same measure usually succeeded each other in indefinite number. Stesichorus introduced the improvement of adding an epode, during which the chorus were to stand still, to the strophe and antistrophe. (Suidas, *s. v.* *ῥῆμα Στησίχορου*; Müller, *l. c.* p. 199.) In the arrangement of his choruses he seems to have had a great partiality for the octagonal form, or for certain combinations of eight,

whence arose the proverb *πάντα ὀκτώ*. At Catana there was erected to him an octagonal monument with 8 columns and 8 steps. (Suidas, *s. v.* *πάντα ὀκτώ* καὶ *Στησίχορος*.)

In all the Dorian states, especially among the Spartans, these choral performances were cultivated with great assiduity. Various causes contributed to this, as for example, their universal employment in the worship of Apollo, the fact that they were not confined to the men, but that women also took part in them, and that many of the dances had a gymnastic character given them, and were employed as a mode of training to martial exercises. [SALTATIO.] Hence it arose that the Dorian lyric poets directed their labours almost entirely to supply the demand for songs and hymns to be sung as accompaniments to the dances, and that Doric lyric poetry became almost exclusively choral, which was not the case with the other great school of Greek lyric poetry, the Aeolian; so that the Doric dialect came to be looked upon as the appropriate dialect for choral compositions, and Doric forms were retained by the Athenians even in the choral compositions which were interwoven with their dramas. (Müller, *Dorians*, iv. 7. § 9.) Still it is not to be supposed that there was no choral poetry which was not Doric. Several Lesbian lyric poems appear to have had a choral character. (Müller, *Hist. of Lit. of Greece*, p. 165.)

The Spartans had various kinds of dances (Müller, *Dor.* iv. 6. § 8, &c.); but the three principal styles were the Pyrrhic, the Gymnopaedic, and the Hyporchematic (Athenaeus, xiv. p. 631, xv. p. 678), in all of which something of a mimetic character was to be found, but more especially in the last. Müller (*Lit. of Gr.* p. 161) expresses an opinion that the gymnopaedic style, to which the *ἐμμέλεια* of tragedy corresponded, is not to be confounded with the dances of the gymnopaedic festival. The Pyrrhic or war dance (*πύρρικός*. Homer calls hoplites *πυρράες*) was made subservient to gymnastic and martial training. Hence the analogy that may be traced between the construction and evolution of the chorus and of the lochus. (Müller, *Dor.* iii. 12. § 10; Lucian, *de Saltat.* 7.) At the Gymnopaedia large choruses of men and boys appeared, in which great numbers of the citizens would have to take part. (Müller, *Dor.* iv. 6. § 4.) At several of the festivals there were distinct choruses of boys, men, and old men. (Plut. *Lycurg.* 21; Pollux, iv. 107; Müller, *Dor.* iv. 6. § 5, *Hist. of the Lit. of Gr.* p. 194.) Dances in which youths and maidens were intermingled were called *ἑρμοί*. (Lucian, *de Salt.* 12.) It was in the hyporchematic dance especially that the chorus both sang and danced. (Athen. xiv. p. 631.)

The instrument commonly used in connection with the Doric choral poetry was the cithara. In the Pyrrhic dance, however, the flute was employed. (Müller, *Dor.* iv. 6. § 7, *Hist. Gr. Lit.* p. 161.) In the hyporchematic performances at Delos, described by Lucian (*de Salt.* 6), both the cithara and the flute were used. Archilochus speaks of the flute as an accompaniment to the Lesbian pæan (ap. Athen. v. p. 180). It is not, therefore, quite correct to say that wherever we find the flute employed, we have not a proper chorus but a *comus*. (Comp. Bode, vol. ii. part i. pp. 47, 208.) Thaletas, who introduced the Phrygian style, probably made use of the flute as well as the cithara. It was in connection with the hy-

porchæ that flute music was first introduced into the worship of Apollo. (Bode, vol. ii. part ii. pp. 13, 16, 17, 33, 34, 244.) For the *κῶμος*, however, which was a mirthful and irregular procession, in which those who took part in it both sang and danced (as in the *κῶμος* part of the marriage procession described by Hesiod, *Shield of Hera*. 281, &c.), the flute was the regular instrument.

A great impetus was given to choral poetry by its application to the dithyramb. This ancient Bacchanalian performance, the origin of which is at any rate earlier than Archilochus, who in one of the fragments of his poetry, says that "he knows how to lead off the dithyramb, the beautiful song of Dionysus, when his mind is inflamed with wine" (Athen. xiv. p. 628), seems to have been a hymn sung by one or more of a *κῶμος*, or irregular band of revellers, to the music of the flute. Arion was the first who gave a regular choral, or antistrophic form to the dithyramb. This improvement was introduced at Corinth. (Herod. i. 24; Pindar, *Ol.* xiii. 18 or 25, with the notes of the commentators.) The choruses, which ordinarily consisted of fifty men or youths (Simonides, *Epigr.* 58, Br.; Tzetzes, *proleg.* ad *Lyophr.* vol. i. p. 251, ed. Müller), danced in a ring round the altar of Dionysus. Hence they were termed *αἰολοὶ* choruses (*αἰολοὶ χοροί*), and dithyrambic poets were understood by the term *κυκλιοδιδάκται*. This also explains the name *Cycleus*, given to the father of Arion (Müller, *Hist. Gr. Lit.* p. 204). With the introduction of a regular choral character, Arion also substituted the cithara for the flute. The statement that he was the inventor of the *tragic style* (*τραγικὸς ῥόστος*), means probably that he introduced dithyrambs of a gloomy character, having for their subject the sorrows of Dionysus, as well as the more gay and joyous song (Müller, *l.c.* pp. 204, 290). Arion is also said to have been the first to introduce into these choruses satyrs speaking in verse. *Læus*, of Hermione, gave a freer form to the dithyramb, by divesting it of its antistrophic character, and set the example of introducing the dithyrambic style into compositions not immediately connected with the worship of Dionysus. He also united with the representation of the dithyramb taunting jests. It was through him that dithyrambic contests were introduced at Athens, at which the prize for the successful poet was a tripod, and for the chorus a bull. (See the epitaph on Simonides, *Anthol. Pal.* vi. 213, Fr. p. 190, ed. Jacobs; Schol. ad Aristoph. *Ran.* 360, *Vesp.* 1403.) The dance of the cyclic chorus was the Dionysiac variety of the Pyrrhic (Aristoph. *Av.* 153; Athen. xiv. p. 631, &c.). In the time of Simonides, through the innovations of *Læus*, *Crexus*, *Phrynia*, and others, the citharœdic character which Arion had given to the dithyramb had passed into the auloedic. As the dithyramb lost its antistrophic character, it became more and more thoroughly mimetic or dramatic, and as its performance required more than ordinary skill, dithyrambs came to be performed by amateurs (Aristot. *Probl.* xv. 9, *Rhet.* iii. 9; Plut. *de Mus.* 29. p. 1141, b.; Proclus, ap. Phot. cod. 239. p. 320, ed. Bekker; Bode, ii. part ii. p. 312, &c.) For ordinary choruses the universal culture of music and dancing would make it no difficult matter to find a chorus. Wealthy men or tyrants no doubt maintained choreutæ, as they maintained poets and musicians. Poets of distinction would have

choreutæ attached to them. There were also professed chorus-trainers, whose services were in requisition when the poet was unable to drill the chorus himself, and these often had a body of choreutæ attached to them. The recitation of Pindar's second Isthmian ode was undertaken in this way by Nicesippus, with an Agrigentine chorus. The sixth Olympian ode was undertaken by Aeneas, a Boeotian, with a trained chorus which he brought with him (Schol. ad Pind. *Isthm.* ii. 6, *Olymp.* vi. 148). Most of Pindar's epinicia were comus-songs, though not all (Bode, ii. 2. p. 255—257), and the comuses which sang them must frequently have been of a somewhat artificial construction.

Respecting the mode in which tragedy was developed from the dithyramb, and the functions of the chorus in tragedy, the reader is referred to the article TRAGEDY.

From the time of Sophocles onwards the regular number of the chorus in a tragedy was 15. (Schol. ad Aristoph. *Equit.* 586, *Av.* 298; Pollux, iv. 108.) The account given by Suidas (*s. v. Σοφοκλῆς*), that Sophocles raised the number from 12 to 15 is deserving of attention, though there are great difficulties connected with it. Pollux (iv. 110) has an absurd story that the number of the chorus was 50 before the representation of the Eumenides of Aeschylus, and that the number was then reduced by a law on account of the terror produced by the appearance of the 50 Eumenides. It seems scarcely possible to arrive at any definite conclusion with regard to the number of the chorus in the early dramas of Aeschylus. The fact that the number of the dithyrambic chorus was 50, and that the mythological number of the Oceanides and Danaides was the same, tempts one to suppose that the chorus in the Prometheus and the Suppliants consisted of 50. Most writers, however, agree in thinking that such a number was too large to have been employed (Welcker, *Aeschyl. Trilogie*, p. 27, &c.; Hermann, *Dissert. de Choro Eumen.* i. and ii. *Opusc.* vol. ii.) Müller (*Dissertations on the Eumenides of Aeschylus*, I. A.; *Hist. of Gr. Lit.* p. 300) propounds the theory that the dithyrambic chorus of 50, when transferred to tragedy, was reduced to 48, and that a chorus of that number was assigned to the poet for four plays, the trilogy and the satyric drama, and was subdivided into sections of 12, each of which was the chorus for one play. In support of this he endeavours to point out instances of choruses of this number being found in Aeschylus, as that in the Agamemnon, which re-appears as the Areopagites in the Eumenides, and that in the Persæ. But the insufficiency of the evidence brought forward to establish this has been satisfactorily pointed out by Hermann in his review of Müller's edition of the Eumenides (*Opusc.* vol. vi.). The idea that the chorus of the Eumenides consisted of three (Blomfield, *Pref. ad Aesch. Pers.*), has met with very little favour among German scholars, though the arguments brought against it are not all of the most convincing kind, and it is to be borne in mind that the introduction of the Areopagites, &c. into the play, would render the fiveness of such a chorus less striking than would otherwise have been the case. The later chorus of 15 was the only one that the grammarians knew any thing about. It was arranged in a quadrangular form (*τετραγώνος*, Etym. Magn. s. v.

Τραγῳδία; Villosion's *Λεοδόξα*, ii. p. 178), in rank (ζυγά) and file (στίχοι, στοίχοι). It entered the theatre by the passage to the right of the spectators [ΤΗΕΑΤΡΟΝ]. When it entered three abreast it was said to come in κατὰ ζυγά, when five abreast, κατὰ στοίχους (Pollux, iv. 108). Its entrance was termed πᾶροδος; its leaving the stage in the course of the play μεταδασσις; its re-entrance ἐπιπᾶροδος; its exit ἄροδος. (In the Eumenides the chorus entered in an irregular manner σποράδην.) As it entered in three lines, with the spectators on its left, the stage on its right, the middle choreutes of the left row (τρίτος ἀριστεροῦ) was the Coryphaeus or Hegemon, who in early times at least was not unfrequently the choragus himself. (Athen. xiv. p. 633; Suid. s. v. χοραγός.) When they had taken their stations in this order, the row nearest to the spectators bore the name ἀριστεροσύνταται, that towards the stage δεξιόσυνταται, and the middle row λαυροσύνταται. The choreutae at the ends, farthest from the Coryphaeus, were called κρασιπεδῖται. These places were also called ὑποκόλιον τοῦ χοροῦ. (Pollux, ii. 161, iv. 107; Photius, p. 210, ed. Bekker; Plut. *Symp.* v. 5. p. 678, d.; Hesych. s. σ.) Müller arranges them so that the Coryphaeus stands upon the Thymele, or at least upon the steps of it (Eumen. *Dissert.*), and so conversed with the actors over the heads of the chorus. Hermann (*Rev. of Müller's Eumen.* Opusc. vol. vi. p. 143, &c.) denies this, and infers from the accounts of Vitruvius and other ancient authorities that the chorus took its station and performed its evolutions upon a platform one or two feet lower than the stage, and reaching from the stage to the Thymele which stood in the middle of the entire space called κοιλίστρα. On the steps of the Thymele, and therefore below the ὀρχήστρα, properly so called, were stationed the musicians and certain police-officers to keep order. Of course the positions first taken up by the choreutae were only retained till they commenced their evolutions. To guide them in these, lines were marked upon the boards with which the orchestra was floored. The flute as well as the cithara was used as an accompaniment to the choric songs. The dance of the tragic chorus was called ἐμμέλεια, answering to the gymnopaedic dance of the Dorian choruses (Athen. l. c.).

The ordinary number of the chorus in a comedy was 24 (Schol. ad Arist. *Av.* 298, *Acharn.* 210, *Equit.* 586; Pollux, iv. 109; Tzetzes, *prolog. ad Lycophr.* p. 1). Like the tragic chorus it was arranged in a quadrangular form, and entered the orchestra from opposite sides, according as it was supposed to come from the city or from the country. It consisted sometimes half of male and half of female choreutae. It seems to be a mistake of the scholiast on Aristophanes (*Equit.* l. 586) that in such cases the former were 13, the latter 11 in number. At least in the *Birds* of Aristophanes the chorus consists of 12 male and 12 female birds. (297—304.) The dance of the comic chorus was the κόρδαξ, which answered to the Hyporchematic style of the Doric chorus. In the Satyric drama the chorus consisted of Satyrs. Of how many it consisted cannot be determined with any certainty. Its dance was called σίκυρις. It answered to the Pyrrhic. (Athen. i. p. 20, xiv. p. 630.)

When a poet intended to bring forward a play,

he had to apply for a chorus (χορὸν αἰτεῖν) to the archons, to the king archon if the play was to be brought forward at the Lenaee, to the archon eponymus if at the great Dionysia. If the play were thought to deserve it, he received a chorus (χορὸν λαμβάνειν), the expenses of which were borne by a choregus [ΧΟΡΕΓΟΥΣ]. The poet then either trained (διδάσκειν) the chorus himself, which Aeschylus often did (Athen. i. p. 21), or entrusted that business to a professed chorus trainer (χοροδιδάσκαλος), who usually had an assistant (ὑποδιδάσκαλος, Pollux, iv. 106). For training the chorus in its evolutions there was also an ὀρχηστοδιδάσκαλος. The chorus in comedies at first consisted of amateurs (ἐθελονταί, Arist. *Poët.* 5).

[C. P. M.]

CHOUS (χοεύς, χούς), a Greek liquid measure which is stated by all the authorities to be equal to the Roman congius, and to contain six ξίσται or sextarii, nearly 6 pints English. Suidas alone makes a distinction between the χούς and the χοεύς, making the former equal to two sextarii, and the latter equal to six. Now when we remember that the χούς was commonly used as a drinking vessel at Athenian entertainments (Aristoph. *Acharn.* v. 1086), that on the day of the χόες [DIONYSIA], a prize was given to the person who first drank off his χούς, and that Milo of Croton is said to have drunk three χόες of wine at a draught, it is incredible that in these cases the large χούς mentioned above could be meant. It seems, therefore, probable that there was also a smaller measure of the same name, containing, as Suidas states, two sextarii, or nearly 2 pints English. At first it was most likely the common name for a drinking vessel. According to Crates (*Ap. Athen.* xi. p. 496), the χούς had originally a similar form to the Panathenaic amphorae, and was also called *ωέλκη*. (Pollux. x. 73; Wurm, *De Pond. Mens. &c.*, pp. 127, 136, 141, 198; Hussey, *Ancient Weights, &c.* p. 211—213.) [P. S.]

CHREOUS DIKE (χρέους δίκη), a simple action for debt, was, like most of the other cases arising upon an alleged breach of contract, referred to the jurisdiction of the thesmothetae, when the sum in question amounted to more than ten drachmae. If otherwise, it fell under the cognizance of those itinerant magistrates, who were originally thirty in number, and styled accordingly of *τριάκοντα*; but afterwards, in consequence of the odium attaching to this name, which had also served to designate the oligarchic tyrants, received an accession of ten colleagues and a corresponding change of title. (Pollux, viii. 100.) If the cause could be classed among the *ἐμμηνοὶ δίκαι*, as, for instance, when the debt arose upon a mercantile transaction, the thesmothetae would still have jurisdiction in it, though one of the parties to the suit were an alien, otherwise it seems that when such a person was the defendant, it was brought into the court of the polemarch. (Meier, *Att. Proc.* p. 55.) If the cause were treated as a *δίκη ἔμπορικὴ*, as above mentioned, the plaintiff would forfeit a sixth part of the sum contested, upon failing to obtain the votes of one-fifth of the dicasts (Suid. s. v. *Ἐπρωτελία*); but we are not informed whether this regulation was applicable, under similar circumstances, in all prosecutions for debt. The speech of Demosthenes against Timotheus was made in a cause of this kind. [J. S. M.]

CHRONOLOGIA (χρονολογία), is the science

by which time is measured according to the courses of the stars, and more especially of the sun and moon; but in the more limited sense in which we have to treat of chronology here, it is a part of history, and teaches us to assign each historical event to the date to which it belongs. The reduction of any given date in antiquity to the corresponding year, month, or day, in our modern computation of time, is sometimes a matter of great difficulty, and often of absolute impossibility; for nearly all the nations of antiquity began their year at a different time, some used solar and other lunar years, and others again a combination of the two; nearly all, moreover, had different eras, that is, points of time from which subsequent and preceding years are counted; and in addition to this there occur a great many changes and fluctuations in one and the same nation; and the historians whose works have come down to us, are not always very precise in marking the time to which the events belong, so that we must have recourse to all manner of combinations, or are left to conjectures.

For the manner in which the Greeks and Romans calculated their years and months we refer to the article CALENDARUM, and we shall here confine ourselves to an account of the manner in which those nations calculated and stated the events of their history. The Greeks reckoned their years generally according to their magistrates, in the early times according to the years of the reign of their kings, and afterwards according to their annual magistracies. At Athens the year was called by the name of one of the nine archons, who from this circumstance was called ἀρχων ἐτερεύων or the archon par excellence; and at Sparta the years were called after one of the five ephors, who for this reason was likewise termed ἐτερεύων. (Thucyd. ii. 2; Xenoph. Anab. ii. 3. § 10; Polyb. xii. 12; Paus. iii. 11. § 2.) But the years of the Athenian archons and the Spartan ephors, coinciding with the civil year in those states, did not coincide with each other, for the ephors entered upon their office in the Attic month of Boëdromion, while the archons originally entered upon theirs in the beginning of Gamelion, and ever since the year a. c. 490, at the beginning of Hecatombæon. In Argos time was counted according to the years of the high priestess of Hera, who held her office for life (ἡπερίς; Thucyd. ii. 2; Suid. s. v. ἡπερίδες); and the inhabitants of Elis probably reckoned according to the Olympic games, which were celebrated every fifth year during the first full moon which followed after the summer solstice. In this manner every Greek state or city calculated time according to its own peculiar or local era, and there was no era which was used by all the Greeks in common for the ordinary purposes of life. Historians, therefore, down to the middle of the third century a. c., frequently made use of the average age attained by men, in order to fix the time in a manner intelligible to all Greeks. The average age attained by man (γερὰ, αἰσῆ), is calculated by Herodotus (vi. 98) at 33½ years. Timæus, who flourished about a. c. 260, was the first historian who counted the years by Olympiads, each of which contained four years. The beginning of the Olympiads is commonly fixed in the year 3938 of the Julian period, or in a. c. 776. If we want to reduce any given Olympiad to years before Christ, e. g. Ol. 87, we take the number of

the Olympiads actually elapsed, that is, 86, multiply it by 4, and deduct the number obtained from 776, so that the first year of the 87th Ol. will be the same as the year 432 a. c. If the number of Olympiads amounts to more than 776 years, that is, if the Olympiad falls after the birth of Christ, the process is the same as before, but from the sum obtained by multiplying the Olympiads by 4, we must deduct the number 776, and what remains is the number of the years after Christ. This calculation according to Olympiads, however, does not seem to have been ever applied to the ordinary business of life, but to have been confined to literature, and more especially to history. Some writers also adopted the Trojan era, the fall of Troy being placed by Eratosthenes and those who adopted this era, in the year a. c. 1184. After the time of Alexander the Great, several other eras were introduced in the kingdoms that arose out of his empire. The first was the Philipæic era, sometimes also called the era of Alexander or the era of Edessa; it began on the 12th of November a. c. 324, the date of the accession of Philip Arrhidaeus. The second was the era of the Seleucidae, beginning on the 1st of October a. c. 312, the date of the victory of Seleucus Nicator at Gaza, and of his re-conquest of Babylonia. This era was used very extensively in the East. The Chaldaean era differed from it only by six months, beginning in the spring of a. c. 311. Lastly, the eras of Antioch, of which there were three, but the one most commonly used began in November a. c. 49. In Europe none was so generally adopted, at least in literature, as the era of the Olympiads; and as the Olympic games were celebrated 293 times, we have 293 Olympic cycles, that is, 1172 years, 776 of which fall before, and 396 after Christ. But when the Greeks adopted Christianity, they probably ceased to reckon by Olympiads, and adopted the Julian year. (Corisini, *Fasti Attici*, Florence, 1744—56, 4 vols. 4to.; Ideler, *Handbuch der mathem. und technisch. Chronol.* Berlin, 1825, 2 vols. 8vo.; Clinton, *Fasti Hellenici*, Oxford, 1830—1834, 3 vols. 8vo.)

The Romans in the earliest times counted their years by their highest magistrates, and from the time of the republic according to their consuls, whose names were registered in the Fasti. This era, which may be termed the *æra consularia*, however did not begin at all times at the same point, for in the earliest times of the republic, the consuls entered upon their office on the calendæ of Sextilis, at the time of the decemvirate on the ides of May, afterwards on the ides of December, and at a still later time on the ides of March, until in a. c. 153 the consuls began regularly to enter upon their office on the 1st of January. This constant shifting was undoubtedly one of the causes that produced the confusion in the consular era, of which Livy (ii. 18, 21, &c.) complains. The consular era was the one commonly used by the Romans for all practical purposes, the date of an event being marked by the names of the consuls, in whose year of office it had happened. But along with this era there existed another, which as it was never introduced into the affairs of common life, and was used only by the historians, may be termed the historical era. It reckoned the years from the foundation of the city (*ab urbe condita*); but the year of the foundation of the city was a question of uncertainty among the Romans

themselves. M. Terentius Varro placed it on the 21st of April in the third year of the 6th Olympiad, that is, a. c. 753. (Plut. *Rom.* 12; Dionys. i. 88; Cic. *De Dio.* ii. 47; Vell. Pat. i. 8; Censorin. *De Die Nat.* 17.) This era was adopted by Velleius Paterculus, Pliny, Tacitus, A. Gellius, Dion Cassius, Eutropius, and others. Next to the Varronian era, the most celebrated was that of M. Porcius Cato, who placed the foundation of Rome in the first year of the 7th Olympiad, or in the spring of a. c. 752. (Dionys. i. 74; Syncell. *Chronog.* p. 194, a.) The date fixed upon in the *aera Capitolina* (so called from the Fasti Capitolini), by Polybius (Dionys. l. c.; Cic. *De Rep.* ii. 10) and Cornelius Nepos, was one year later; Q. Fabius Pictor placed the foundation in the first year of the 8th Olympiad, i. e. 747 a. c. (Dionys. l. c.), and Cincius Alimentus even placed it in the fourth year of the 12th Olympiad, i. e. a. c. 729. Ennius, on the other hand, placed the building of Rome about 100 or 110 years earlier than most other writers (Varro, *De Re Rust.* iii. 1); and Timaeus went so far as to regard the foundation of Rome contemporaneous with that of Carthage, placing it 38 years before the first Olympiad. But no reliance can be placed on any of these statements; as however it is necessary to have one point to start from, the Varronian era has been most commonly adopted by modern writers. (Comp. Fischer, *Römische Zeitafahn*, p. 4, &c.) [L. S.]

CHRYSE/NETA, costly chased dishes used by the Romans at their entertainments. They are mentioned several times by Martial (ii. 43, 11, vi. 94, xiv. 97), and from the epithet *flava* which he applies to them, as well as from the etymology of the name, they appear to have been of silver, with golden ornaments. Cicero (*Ferr.* iv. 21—23) mentions vessels of this kind. He calls their golden ornaments in general *sigilla*, but again distinguishes them as *crustae* and *emblemata* (c. 23); the former were probably embossed figures or chasings fixed on to the silver, so that they could be removed and transferred to other vessels, and the latter inlaid or wrought into it (comp. c. 24: *Ille, ex patellis et turibulis quae vellerat, ita scite in aureis poculis illigabat, ita apte in scyphis aureis includebat*, &c.). The embossed work appears to be referred to by Paullus (*cymbia argenteis crustis illigata*, Dig. 34. tit. 2. s. 33), and the inlaid ornaments by Seneca (*argentum, in quod solidi auri coelatura descenderit*, *Ep.* v.). [Comp. CAELATURA.] [P. S.]

CRYSOA'SPIDES. [ARGYRASPIDES.]

CHRYSOUS (χρυσός). [AURUM.]

CHTHONIA (χθόνη), a festival celebrated at Hermione in honour of Demeter, surnamed Chthonia. The following is the description of it given by Pausanias (ii. 35. § 4, &c.):—"The inhabitants of Hermione celebrate the Chthonia every year, in summer, in this manner:—They form a procession, headed by the priests and magistrates of the year, who are followed by men and women. Even for children it is customary to pay homage to the goddess by joining the procession. They wear white garments, and on their heads they have chaplets of flowers, which they call *κοσμοδένδαλοι*, which, however, from their size and colour, as well as from the letters inscribed on them recording the premature death of Hyacinthus, seem to me to be hyacinths. Behind the procession there follow persons leading by

strings an untamed heifer just taken from the herd, and drag it into the temple, where four old women perform the sacrifice, one of them cutting the animal's throat with a scythe. The doors of the temple, which during this sacrifice had been shut, are thrown open, and persons especially appointed for the purpose, lead in a second heifer, then a third and a fourth, all of which are sacrificed by the matrons in the manner described. A curious circumstance in this solemnity is, that all the heifers must fall on the same side on which the first fell." The splendour and rich offerings of this festival are also mentioned by Aelian (*Hist. Animal.* xi. 4), who, however, makes no mention of the matrons of whom Pausanias speaks, but says that the sacrifice of the heifers was performed by the priestesses of Demeter.

The Lacedaemonians adopted the worship of Demeter Chthonia from the Hermioneans, some of whose kinsmen had settled in Messenia (Paus. iii. 14. § 5); hence we may infer that they celebrated either the same festival as that of the Hermioneans or one similar to it. [L. S.]

CHYTRA (χύτρα). [OLLA.]

CIDARIS. [TIARA.]

CILI/CIUM (δέφης), a hair-cloth. The material of which the Greeks and Romans almost universally made this kind of cloth, was the hair of goats. The Asiatics made it of camel's-hair. Goats were bred for this purpose in the greatest abundance, and with the longest hair, in Cilicia; and from this country the Latin name of such cloth was derived. Lycia, Phrygia, Spain, and Libya also produced the same article. The cloth obtained by spinning and weaving goat's-hair was nearly black, and was used for the coarse habits which sailors and fishermen wore, as it was the least subject to be destroyed by being wet; also for horse-cloths, tents, sacks, and bags to hold workmen's tools (*fabrilis aesa*), and for the purpose of covering military engines and the walls and towns of besieged cities, so as to deaden the force of the ram, and to preserve the woodwork from being set on fire. (Aristot. *Hist. Anim.* viii. 28; Aelian, xvi. 30; Varr. *De Re Rust.* ii. 11; Virg. *Georg.* iii. 312; Avien. *Ora Mar.* 218—221; Veget. *Arts Vel.* i. 42.) [J. Y.]

CINCTUS GABINUS. [TOGA.]

CINGULUM. [ZONA.]

CINERARIUS. [CALAMISTRUM.]

CINERES. [FUNUS.]

CINIFLO. [CALAMISTRUM.]

CIPPUS. 1. A low column, sometimes round, but more frequently rectangular, used as a sepulchral monument. (Pers. *Sat.* i. 36.) Several of such cippi are in the Townly collection in the British Museum, one of which is given in the woodcut annexed. The inscription is to the memory of Viria Primitiva, the wife of Lucius Virius Helius, who died at the age of eighteen years, one month, and twenty-four days. Below the tablet, a festoon of fruits and flowers is suspended from two rams' heads at the corners; and at the lower corners are two sphinxes, with a head of Pan in the area between them. On several cippi we find the letters S. T. T. L., that is, *Sit tibi terra levis*, whence Persius, in the passage already referred to, says, *Non levior cippus nunc imprimi ossa*. It was also usual to place on the cippus the extent of the burying-ground both along the road (*in fronte*), and backwards to the field (*in agrum*).

and likewise the inscription *hoc monumentum heredes non sequitur*; in order that it might not pass over to the heredes and be sold by them at

any time. (Hor. Sat. i. 8. 12, 13; Orelli, *Inscrip.* No. 4379, 4557, &c.)

2. A boundary-stone set up by the Agrimensores to mark the divisions of lands. (*Scriptores Rei Agr.* p. 88, ed. Goesius.)

3. A military entrenchment made of the trunks of trees and palisades. (Caes. B. G. vii. 73.)

CIRCENSES LUDI. [Circus.]

CIRCINUS (*διαστρηνς*), a compass. The compass used by statuary, architects, masons, and carpenters, is often represented on the tombs of such artificers, together with the other instruments of their profession or trade. The annexed woodcut is copied from a tomb found at Rome. (Gruter, *Corp. Inscrip.* t. i. part ii. p. 644.) It exhibits two kinds of compasses: viz. the common kind used

for drawing circles and measuring distances, and one with curved legs, probably intended to measure the thickness of columns, cylindrical pieces of wood, or similar objects. The common kind is described by the scholiast on Aristophanes (*Nub.* 178), who compares its form to that of the letter A. [See cut under NORMA.] The mythologists sup-

posed this instrument to have been invented by Perdix, who was the nephew of Daedalus, and through envy thrown by him over the precipice of the Athenian acropolis. (Ovid, *Met.* viii. 241—251.) Compasses of various forms were discovered in a statuary's house at Pompeii. [J. Y.]

CIRCITO'RES. [CASTRA.]

CIRCUMLITIO. [PICTURA.]

CIRCUMLU'VIO. [ALLUVIO.]

CIRCUITO'RES. [CASTRA.]

CIRCUS (*ἵπποδρόμος*), a place for chariot-races and horse-races, and in which the Roman races (*Circenses Ludi*) took place. When Tarquinius Priscus had taken the town of Apolias from the Latins, as related in the early Roman legends, he commemorated his success by an exhibition of races and pugilistic contests in the Murcian valley, between the Palatine and Aventine hills; around which a number of temporary platforms were erected by the patres and equites, called *spectacula, fori, or foruli*, from their resemblance to the deck of a ship; each one raising a stage for himself, upon which he stood to view the games. (Liv. i. 35; Festus. s. v. *Forum*; Dionys. iii. p. 192, &c.) This course, with its surrounding scaffoldings, was termed circus; either because the spectators stood round to see the shows, or because the procession and races went round in a circuit. (Varr. *De Ling. Lat.* v. 153, 154, ed. Müller.) Previously, however, to the death of Tarquin, a permanent building was constructed for the purpose, with regular tiers of seats in the form of a theatre. (Compare Liv. and Dionys. *l. cc.*) To this the name of Circus Maximus was subsequently given, as a distinction from the Flaminian and other similar buildings, which it surpassed in extent and splendour; and hence, like the Campus Martius, it is often spoken of as *the Circus*, without any distinguishing epithet.

Of the Circus Maximus scarcely a vestige now remains, beyond the palpable evidence of the site it occupied, and a few masses of rubble-work in a circular form, which may be seen under the walls of some houses in the *Via de' Cerchi*, and which retain traces of having supported the stone seats (Dionys. *l. c.*) for the spectators. This loss is fortunately supplied by the remains of a small circus on the Via Appia, commonly called the Circus of Caracalla, the ground-plan of which, together with much of the superstructure, remains in a state of considerable preservation. The ground-plan of the circus in question is represented in the annexed woodcut; and may be safely taken as a model of all others, since it agrees in every main feature, both of general outline and individual parts, with the description of the Circus Maximus given by Dionysius (iii. p. 192).

Around the double lines (A, A) were arranged the seats (*gradus, sedilia, subcellia*), as in a theatre, termed collectively the *cavea*; the lowest of which were separated from the ground by a *podium*, and the whole divided longitudinally by *præscinctiones*, and diagonally into *cunei*, with their *comitoria* attached to each. Towards the extremity of the upper branch of the *cavea*, the general outline is broken by an outwork (B), which was probably the *pulvinar*, or station for the emperor, as it is placed in the best situation for seeing both the commencement and end of the course, and in the most prominent part of the circus. (Suet. *Claud.* 4.) In the opposite branch, is observed another in-

interruption to the uniform line of seats (C), betokening also, from its construction, a place of distinction; which might have been assigned to the person at whose expense the games were given (*editor spectulorum*).

In the centre of the area was a low wall (D)

running lengthways down the course, which, from its resemblance to the position of the dorsal bone in the human frame, was termed *spina*. (Cassiodor. *Var. Ep.* iii. 51.) It is represented in the wood-cut subjoined, taken from an ancient bas-relief.

At each extremity of the *spina* were placed, upon a base (E, E), three wooden cylinders, of a conical shape, like cypress trees (*metasque imitata cypressus*, Ovid, *Met.* x. 106; compare Plin. *H. N.* xvi. 60), which were called *metas* — the goals. Their situation is distinctly seen in the preceding woodcut, but their form is more fully developed in the one annexed, copied from a marble in the British Museum.

The most remarkable object upon the *spina* were two columns (F) supporting seven conical balls, which, from their resemblance to eggs, were called *ova*. (Var. *De Re Rust.* i. 2. § 11; Liv. xli. 27.) These are seen in the woodcut representing the

spina. Their use was to enable the spectators to count the number of rounds which had been run; for which purpose they are said to have been first introduced by Agrippa (Dion Cass. xlix. p. 600), though Livy (xli. 27) speaks of them long before. They are, therefore, seven in number, such being the number of the circuits made in each race; and as each round was run, one of the *ova* was put up (Cassiodor. *Var. Ep.* iii. 51) or taken down, according to Varro (*De Re Rust.* i. 2. § 11). An egg was adopted for this purpose, in honour of Castor and Pollux. (Tertull. *De Spectac.* c. 8.) At the other extremity of the *spina* were two similar columns (G), represented also in the woodcut, over the second chariot, sustaining seven dolphins, termed *delphinæ*, or *delphinarum columas* (Juv. *Sat.* vi. 590), which do not appear to have been intended to be removed, but only placed there as corresponding ornaments to the *ova**; and the figure of the dolphin was selected in honour of Neptune. (Tertull. *l. c.*) Some writers suppose the columns which supported the *ova* and *delphinæ* to be the *phalæ* or *julæ*, which Juvenal mentions (*l. c.*). But the *phalæ* were not columns, but towers, erected as circumstances required, between the *metas* and *curius*, or extreme circuit of the area, when sham-fights were represented in the circus. (Compare Festus, s. v. *Phalæ*; Serv. ad *Virg. Aen.* ix. 705.) Besides these, the *spina* was decorated with many other objects, such as obe-

* In the Lyons mosaic, subsequently noticed in the text, the *delphinæ* are represented as fountains spouting water; but in a bas-relief of the Palazzo Barberini (Fabretti, *Syntagm. de Column. Trajani*, p. 144), a ladder is placed against the columns which support the dolphins, apparently for the purpose of ascending to take them up and down.

siaka, statues, altars, and temples, which do not appear to have had any fixed locality.

It will be observed in the ground-plan that there is a passage between the *metas* and *spina*, the extreme ends of the latter of which are hollowed out into a circular recess: and several of the ancient sculptures afford similar examples. This might have been for performing the sacrifice, or other offices of religious worship, with which the games commenced; particularly as small chapels can still be seen under the *metas*, in which the statues of some divinities must have been placed. It was probably under the first of these spaces that the altar of the god *Conusus* was concealed (Tertull. *De Spectac.* c. 5), which was excavated upon each occasion of these games. (Dionys. ii. p. 97.)

At the extremity of the circus in which the two horns of the *cavea* terminate, were placed the stalls for the horses and chariots (H, H), commonly called *carceres* at, and subsequently to, the age of Varro: but more anciently the whole line of buildings which confined this end of the circus was termed *oppidum*; because, with its gates and towers, it resembled the walls of a town (Festus, s. v.; Varro, *De Ling. Lat.* v. 153); which is forcibly illustrated by the circus under consideration, where the two towers (I, I) at each end of the *carceres* are still standing. The number of *carceres* is supposed to have been usually twelve (Cassiodor. *Var. Ep.* iii. 51), as they are in this plan; but in the mosaic discovered at Lyons, and published by Artaud (*Description d'un Mosaïque*, &c. Lyon, 1806), there are only eight.* They were vaults, closed in front by gates of open wood-work (*cancelli*), which were opened simultaneously upon the signal being given (Dionys. iii. p. 192; Cassiodor. *l. c.*; compare Sil. Ital. xvi. 316), by removing a rope (*δρακηνή*, Dionys. *l. c.*; compare Schol. ad Theoc. *Idyl.* viii. 57) attached to pilasters of the kind called *Hermas*, placed for that purpose between each stall; upon which the gates were immediately thrown open by a number of men, probably the *armementarii*, as represented in the annexed woodcut, taken from a very curious marble in the Museo Borgiano, at Velletri; which also represents most of the other peculiarities above-mentioned as appertaining to the *carceres*.

In the mosaic of Lyons the man is represented apparently in the act of letting go the rope (*δρακηνή*) in the manner described by Dionysius (*l. c.*). The cut below, which is from a marble in the British Museum, represents a set of four *carceres*, with their *Hermas*, and *cancelli* open, as left after

* This mosaic has several peculiarities. Most of the objects are double. There is a double set of *ova* and *delphines*, one of each sort at each end of the *spina* — and eight chariots, that is a double set, for each colour, are inserted.

the chariots had started; in which the gates are made to open inwards.

The preceding account and woodcuts will be sufficient to explain the meaning of the various words by which the *carceres* were designated in poetical language, namely, *claustra* (Stat. *Theb.* vi. 399; Hor. *Epist.* i. 14. 9), *crypta* (Sidon. *Carm.* xxiii. 319), *foveas* (Cassiodor. *Var. Epist.* iii. 51), *ostia* (Auson. *Epist.* xviii. 11), *fores carceris* (Ovid, *Trist.* v. 9. 29), *repagula* (Ovid, *Met.* ii. 155; Sil. Ital. xvi. 318), *limina equorum* (*Id.* xvi. 317).

It will not fail to be observed that the line of the *carceres* is not at a right angle with the *spina*, but forms the segment of a circle, the centre of which is a point on the right hand of the arena; the reason for which is obviously that all the chariots might have, as nearly as possible, an equal distance to pass over between the *carceres* and mouth of the course. Moreover, the two sides of the circus are not parallel to each other, nor the *spina* to either of them; but they are so planned that the course diminishes gradually from the mouth at (J), until it reaches the corresponding line at the opposite side of the *spina* (K), where it is narrower by thirty-two feet. This might have proceeded from economy, or be necessary in the present instance on account of the limited extent of the circus; for as all the four, or six, chariots would enter the mouth of the course nearly abreast, the greatest width would be required at that spot; but as they got down the course, and one or more took the lead, the same width would be no longer necessary.

The *carceres* were divided into two sets of six each, accurately described by Cassiodorus (*l. c.*) as *bisena ostia*, by an entrance in the centre (L), called *porta pompas*; because it was the one through which the Circensian procession entered, and which, it is inferred from a passage in Ausonius (*Epist.* xviii. 12), was always open, forming a thoroughfare through the circus. Besides this entrance, there were four others, two at the termination of the seats between the *cavea* and the *oppidum* (M, M), another at (N), and the fourth at (O), under the vault of which the fresco decorations are still visible. This is supposed to be the *Porta Triumphalis*, to which its situation seems adapted. One of the others was the *Porta Libitinensis* (Lamprid. *Commod.* 16), so called because it was the one through which the dead bodies of those killed in the games were carried out. (Dion Cass. lxxii. p. 1222.)

Such were the general features of a circus, as far as regards the interior of the fabric. The area had also its divisions appropriated to particular purposes, with a nomenclature of its own attached to each. The space immediately before the *oppidum* was termed *circus primus*; that near the *meta prima*, *circus interior* or *intimus* (Varr. *De Ling. Lat.* v. 154), which latter spot, in the Circus Maximus, was also termed *ad Murum*, or *ad*

Murcia, from the altar of Venus Murtia, or Murcia, placed there. (Compare Apuleius, *Met.* vi. p. 395, ed. Oudendorp; Tertull. *de Spectac.* 8; Müller, *ad Varron. l. c.*) The term *arena* belongs to an amphitheatre; and it is therefore probable that it was applied in the circus to the large open space between the *carceres* and *prima meta*, when the circus was used for the exhibition of athletic games, for which the locality seems best adapted; but in Silius Italicus (xvi. 415) it is put for the part down the *spina*. When the circus was used for racing, the course was termed *spatium* (Juv. *Sat.* vi. 582) or *spatia*, because the match included more than one circuit. (Virg. *Aen.* v. 316, 325, 327, *Georg.* i. 513; Stat. *Theb.* vi. 594; Hor. *Epist.* i. 14, 9; compare Sil. Ital. xvi. 336.) It is also called *campus* (Sil. xvi. 391), and poetically *aquor* (*Id.* 414).

At the entrance of the course, exactly in the direction of the line (J, K), were two small pedestals (*hermuli*) on each side of the *podium*, to which was attached a chalked rope (*alba linea*, Cassiodor. *l. c.*), for the purpose of making the start fair, precisely as is practised at Rome for the horse-races during Carneval. Thus, when the doors of the *carceres* were thrown open, if any of the horses rushed out before the others, they were brought up by this rope until the whole were fairly abreast, when it was loosened from one side, and all poured into the course at once. In the Lyons mosaic the *alba linea* is distinctly traced at the spot just mentioned, and one of the chariots is observed to be upset at the very place, whilst the others pursue their course. The writer has often seen the same accident happen at Rome, when an over-eager horse rushes against the rope and gets thrown down. This line, for an obvious reason (Plin. *H. N.* xxxv. 58), was also called *calx*, and *creta* (Cic. *de Am.* 27; Senec. *Epist.* 108), from whence comes the allusion of Persius (*Sat.* v. 177), *cretata ambitio*. The *metas* served only to regulate the turnings of the course, the *alba linea* answered to the starting and winning post of modern days—"peracto legitimo cursu ad cretam etetere." (Plin. *H. N.* viii. 65; and compare xxxv. 58.) Hence the metaphor of Cicero (*Senect.* 23), "quasi decurso spatium ad carceres a calce revocari;" and of Horace (*Epist.* i. 16, 79), "mors ultima linea rerum." (Comp. Lucret. vi. 92.)

From this description the Circus Maximus differed little, except in size and magnificence of embellishment. But as it was used for hunting wild beasts, Julius Caesar drew a canal called Euripus, ten feet wide, around the bottom of the *podium*, to protect the spectators who sat there (Dionysius. iii. p. 192; Suet. *Jul.* 39), which was removed by Nero (Plin. *H. N.* viii. 7), but subsequently restored by other princes. (Lamprid. *Heliogab.* 23.) It possessed also another variety in three open galleries, or balconies, at the circular end, called *meniana* or *maeniana*. (Suet. *Cal.* 18.) The numbers which the Circus Maximus was capable of containing, are computed at 150,000 by Dionysius (iii. p. 192), 260,000 by Pliny (*H. N.* xxxvi. 24, § 1), and 385,000 by P. Victor (*Regio* xi.), all of which are probably correct, but have reference to different periods of its history. Its very great extent is indicated by Juvenal (*Sat.* xi. 195). Its length, in the time of Julius Caesar, was three stadia, the width one, and the depth of the buildings occupied half a stadium (Plin. *l. c.*), which is

included in the measurements given by Dionysius (iii. p. 192), and thus exactly accounts for the variation in his computation.

When the Circus Maximus was permanently formed by Tarquinius Priscus, each of the thirty curiae had a particular place assigned to it (Dionysius. iii. p. 192); but as the plebeians had no right to a seat in this circus, the Circus Flaminius was afterwards built for their games. (Comp. Niebuhr, *Hist. of Rome*, vol. i. p. 362, vol. ii. p. 360.) Of course, in the latter days of the republic, when the distinction between patricians and plebeians had practically ceased to exist, the plebeians sat in the Circus Maximus. (Suet. *Aug.* 44.) The seats were then marked off at intervals by a line or groove drawn across them (*linea*), so that the space included between two lines afforded sitting room for a certain number of spectators. Hence the allusion of Ovid (*Amor.* iii. 2, 19):—

Quid frustra refugis? cogit nos linea jungi.

(Compare Ovid. *Art. Amat.* i. 141.) As the seats were hard and high, the women made use of a cushion (*pulvinus*), and a footstool (*scamnum, scabellum*, Ovid. *Art. Amat.* i. 160, 162), for which purpose the railing which ran along the upper edge of each *praecinctio* was used by those who sat immediately above it. (Ovid. *Amor.* iii. 2, 64.) But under the emperors, when it became necessary to give an adventitious rank to the upper classes by privileges and distinctions, Augustus first, then Claudius, and finally Nero and Domitian, separated the senators and equites from the common people. (Suet. *Aug.* 44, *Claud.* 21, *Nero*, 11, *Domit.* 8.) The seat of the emperor—*pulvinar* (Suet. *Aug.* 44, *Claud.* 4), *cubiculum* (*Id.* *Nero*, 12), was most likely in the same situation in the Circus Maximus, as in the one above described. It was generally upon the *podium*, unless when he presided himself, which was not always the case (Suet. *Nero*, *l. c.*); but then he occupied the elevated tribunal of the president (*suggestus*), over the *porta pompae*. The consuls and other dignitaries sat above the *carceres* (Sidon. *Carm.* xxiii. 317), indications of which seats are seen in the woodcut on page 285, a. The rest of the *oppidum* was probably occupied by the musicians and persons who formed part of the *pompa*.

The exterior of the Circus Maximus was surrounded by a portico one story high, above which were shops for those who sold refreshments. (Dionysius. iii. p. 192.) Within the portico were ranges of dark vaults, which supported the seats of the *cavea*. These were let out to women of the town. (Juv. *Sat.* iii. 65; Lamprid. *Heliogab.* 26.)

The Circensian games (*Ludi Circenses*) were first instituted by Romulus, according to the legends, when he wished to attract the Sabine population to Rome, for the purpose of furnishing his own people with wives (Val. Max. ii. 4, § 3), and were celebrated in honour of the god Consus, or Neptunus Equestris, from whom they were styled *Consuales*. (Liv. i. 9.) But after the construction of the Circus Maximus, they were called indiscriminately *Circenses* (Servius, *ad Virg. Georg.* iii. 18), *Romani*, or *Magni*. (Liv. i. 35.) They embraced six kinds of games:—I. CURSUS; II. LUDUS TROJAE; III. PUGNA EQUESTRIS; IV. CERTAMEN GYMNICUM; V. VENATIO; VI. NAUMACHIA. The two last were not peculiar to the circus, but were exhibited also in the amphitheatre, or in buildings appropriated for them.

The games commenced with a grand procession (*Pompa Circensis*), in which all those who were about to exhibit in the circus, as well as persons of distinction, bore a part. The statues of the gods formed the most conspicuous feature in the show, which were paraded upon wooden platforms, called *fercula* and *thensae*. (Suet. *Jul.* 76.) The former were borne upon the shoulders, as the statues of saints are carried in modern processions (Cic. *de Off.* i. 36); the latter drawn along upon wheels, and hence the *thensae* which bore the statue of Jupiter is termed *Jovis plaustrum* by Tertullian (*De Spectac.* 7), and *Διὸς ὄχος*, by Dion Cassius (p. 608). The former were for painted images, or those of light material; the latter for the heavy statues. The whole procession is minutely described by Dionysius (vii. pp. 457, 458; comp. Ovid, *Amor.* iii. 2. 43, &c.).

I. CURSUS, the races. The carriage usually employed in the circus was drawn by two or four horses (*biga*, *quadriga*). [CURRUA.]

The usual number of chariots which started for each race was four. The drivers (*aurigae*, *agitatores*) were also divided into four companies, each distinguished by a different colour, to represent the four seasons of the year, and called a *factio* (Festus, s. v.): thus *factio prasina*, the green, represented the spring, whence (Juv. *Sat.* xi. 196) "Eventum viridis quo colligo panni;" *factio ruscata*, red, the summer; *factio veneta*, azure, the autumn; and *factio alba* or *albata*, white, the winter. (Tertull. *de Spectac.* 9; compare the authorities quoted by Ruperti, *ad Juv.* vii. 112.) Originally there were but two factions, *albata* and *ruscata* (Tertull. l. c.), and consequently only two chariots started at each race. Domitian subsequently increased the whole number to six, by the addition of two new factions, *aurata* and *purpurea* (Suet. *Dom.* 7); but this appears to have been an exception to the usual practice, and not in general use. The driver stood in his car within the reins, which went round his back. This enabled him to throw all his weight against the horses, by leaning backwards; but it greatly enhanced his danger in case of an upset, and caused the death of Hippolytus. (Eur. *Hipp.* 1230, ed. Monk; compare Ovid, *Met.* xv. 524.) To avoid this peril a sort of knife or bill-hook was carried at the waist, for the purpose of cutting the reins in a case of emergency, as is seen in some of the ancient reliefs, and is more clearly illustrated in the annexed woodcut, copied from a fragment formerly belonging to the Villa Negroni, which also affords a specimen of the dress of an *auriga*. The torso only remains of this statue; but the head is supplied from another antique, representing an *auriga*, in the Villa Albani.

When all was ready, the doors of the carceres were flung open, and the chariots were formed abreast of the *alba linea* by men called *moratores* from their duty; the signal for the start was then given by the person who presided at the games, sometimes by sound of trumpet (Ovid. *Met.* x. 652; Sidon. *Carm.* xxiii. 341), or more usually by letting fall a napkin (*mappa*, Suet. *Nero.* 22; Mart. *Ep.* xii. 29. 9), whence the Circensian games are called *spectacula mappae*. (Juv. *Sat.* xi. 191.) The origin of this custom is founded on a story that Nero, while at dinner, hearing the shouts of the people who were clamorous for the course to begin throw down his napkin as the signal. (Cas-

siodor. *Var. Ep.* iii. 51.) The *alba linea* was then cast off, and the race commenced, the extent of which was seven times round the *spina* (Varro, *op. Gell.* iii. 10), keeping it always on the left. (Ovid. *Amor.* iii. 2. 72; Sil. Ital. xvi. 362.) A course of seven circuits was termed *unus missus*, and twenty-five was the number of races ran in each day, the last of which was called *missus aearius*, because in early times the expense of it was defrayed by a collection of money (*aes*) made amongst the people. (Serv. *ad Virg. Georg.* iii. 18; compare Dion Cass. lix. p. 908.) Upon one occasion Domitian reduced the number of circuits from seven to five, in order to exhibit 100 *missus* in one day. (Suet. *Dom.* 4.) The victor descended from his car at the conclusion of the race, and ascended the *spina*, where he received his reward (*braevium*, from the Greek *βραβειον*, Paul. 1 *Corinth.* ix. 24), which consisted in a considerable sum of money (Juv. *Sat.* vii. 113, 114, 243; Suet. *Claud.* 21), which accounts for the great wealth of the charioteers to which Juvenal alludes, and the truth of which is testified by many sepulchral inscriptions.

A single horseman, answering to the *κλέης* of the Greeks, attended each chariot, the object of which seems to have been twofold; to assist his companion by urging on the horses, when his hands were occupied in managing the reins, and, if necessary, to ride forward and clear the course, as seen in the cut from the British Museum representing the *metas*, which duty Cassiodorus (*Var. Ep.* iii. 51) assigns to him, with the title of *equus desultorius*. Other writers apply that term to those who practised feats of horsemanship in the circus, leaping from one to another when at their speed. (Compare Suet. *Jul.* 39; Cic. *Pro Muren.* 27; Dionys. p. 462; Panvin. *De Lud. Circens.* i. 9.) In other respects, the horse-racing followed the same rules as the chariots.

The enthusiasm of the Romans for these races exceeded all bounds. Lists of the horses (*libelli*), with their names and colours, and those of the drivers, were handed about, and heavy bets made upon each faction (Ovid, *Art. Amat.* i. 167, 168; Juv. *Sat.* xi. 200; Mart. *Ep.* xi. 1. 15); and some-

times the contests between two parties broke out into open violence and bloody quarrels, until at last the disputes which originated in the circus, had nearly lost the Emperor Justinian his crown. (Gibbon, c. 40.)

II. *LUDUS TROJAE*, a sort of sham-fight, said to have been invented by Aeneas, performed by young men of rank on horseback (Tacit. *Ann.* xi. 11), often exhibited by Augustus and succeeding emperors (Suet. *Aug.* 43, *Nero*, 7), which is described by Virgil (*Aen.* v. 553, &c.).

III. *PUGNA EQUESTRIIS ET PEDESTRIIS*, a representation of a battle, upon which occasions a camp was formed in the circus. (Suet. *Jul.* 39, *Dom.* 4.)

IV. *CERTAMEN GYMNICUM*. See *ATHLETAE*, and the references to the articles there given.

V. [*VENATIO*.] VI. [*NAUMACHIA*.]

The pompa circensis was abolished by Constantine, upon his conversion to Christianity; and the other games of the circus by the Goths (A. D. 410); but the chariot races continued at Constantinople until that city was besieged by the Venetians (A. D. 1204). [A. R.]

CIRRUS. [*COMA*.]

CISIUM, a gig, i. e. a light open carriage with two wheels, adapted to carry two persons rapidly from place to place. Its form is sculptured on the monumental column at Igel, near Treves (see woodcut). It had a box or case, probably under the seat. (Festus, s. v. *Plonistum*.) The cisia were quickly drawn by mules (*cisi volantis*, Virg. *Catal.* viii. 3; Cic. *Phil.* ii. 31). Cicero mentions the case of a messenger who travelled 56 miles in 10 hours in such vehicles, which were kept for hire at the stations along the great roads; a proof that the ancients considered six Roman miles per hour as an extraordinary speed. (*Pro Roscio Amer.* 7.) The conductors of these hired gigs were called *cisiarii*, and were subject to penalties for careless or dangerous driving. (Dig. 19. tit. 2. a. 13.) [J. Y.]

CISTA (*κίστη*), a small box or basket, commonly made of wicker-work, in which any thing might be placed. (Cic. *Verr.* iii. 85; Hor. *Ep.* i. 17. 54.) In the Roman comitia the cista was the ballot-box into which the voters cast their tabellae (Plin. *H. N.* xxxiii. 2. a. 7; Auctor, *ad Herenn.* i. 12; Pseudo-Ascon. *ad Cic. Divin.* 7. p. 108, ed. Orelli). The form of the cista is preserved on a coin of the Cassia gens, which is represented in the annexed cut, and which is evidently made of wicker or similar work. The material of which it was made is alluded to by Tibullus in the line (l. 7. 48) "et *levis* occultis conscia *cista* sacra." The cista has been frequently confounded with the *stella*, but the latter was the urn from which the names of the tribes or centuries were drawn out by lot. [SITTELLA.]

The name of cistae was also given to the small boxes which were carried in procession in the Greek festivals of Demeter and Dionysus. These boxes, which were always kept closed in the public processions, contained sacred things connected with the worship of these deities. (Ovid, *De Art. Amat.* ii. 609; Catull. *lxiv.* 260; Tibull. i. 7. 48.)

In the representations of the Dionysian processions, which frequently form the subject of paintings on ancient vases, women carrying cistae are constantly introduced; they are usually of an oblong form, and thus differ completely from the cistae used in the Roman comitia. From one of these paintings, given by Millin in his *Peintures de Vases Antiques*, the following woodcut is taken.

CISTOPHORUS (*κιστοφόρος*), a silver coin, which belonged to the kingdom of Pergamus, and which was in general circulation in Asia Minor at the time of the conquest of that country by the Romans. (Liv. xxxvii. 46, 58, xxxix. 7; Cic. *ad Att.* ii. 6, xi. 1.) Its value is extremely uncertain, as the only information we possess on the subject is in two passages of Festus, which are at variance with each other, and of which certainly one, and probably the other, is corrupt. (Festus, s. v. *Esboicum Talentum*, and *Talentorum non*, &c.; see Müller's notes.) and, with respect to the existing specimens, it is doubtful whether they are double or single *cistophori*. Böckh supposes them to have been originally didrachms of the Aeginetan standard; others take them for tetradrachms. Mr. Hussey (pp. 74, 75), from existing coins, which he takes for *cistophori*, determines it to be about $\frac{1}{4}$ of the later Attic drachma, or Roman denarius of the republic, and worth in our money about $\frac{1}{4}$ d. The existing specimens are extremely scarce. The general device is, on the one side, the sacred chest (*cista*, whence the name) of Dionysus, half open, with a serpent creeping out of it, surrounded by an ivy wreath, and on the reverse, the car of Demeter, drawn by serpents. The period during which *cistophori* were struck, is supposed to have been from about B. C. 200, down to the battle of Actium. (Panel, *de Cistophoria*, Lugd. 1734; Eckhel, vol. iv. pp. 352—368; Böckh, *Metrol. Untersuch.* pp. 101, 107.) [P. S.]

CITHARA. [*LYRA*.]

CIVILE JUS. [*JUS CIVILE*.]

CIVILIS ACTIO. [*ACTIO*.]

CIVIS. [*CIVITAS*.]

CIVITAS (*πολιτεία*), citizenship. 1. GREEK.

In the third book of the *Politics*, Aristotle commences his inquiry into the nature of states with the question, "What constitutes a citizen?" (πολίτης). He defines a citizen to be one who is a partner in the legislative and judicial power (μέτοχος κρίσεως καὶ ἀρχῆς). No definition will equally apply to all the different states of Greece, or to any single state at different times; the above seems to comprehend more or less properly all those whom the common use of language entitled to the name.

A state in the heroic ages was the government of a prince; the citizens were his subjects, and derived all their privileges, civil as well as religious, from their nobles and princes. Nothing could have been further from the notions of those times, than the ideas respecting the natural equality of freemen which were considered self-evident axioms in the democracies of an after-period. In the early governments there were no formal stipulations; the kings were amenable to the gods alone. The shadows of a council and assembly were already in existence, but their business was to obey. Community of language, of religion, and of legal rights, as far as they then existed, was the bond of union; and their privileges, such as they were, were readily granted to naturalised strangers. Upon the whole, as Wachsmuth has well observed, the notion of citizenship in the heroic age only existed so far as the condition of aliens or of domestic slaves was its negative.

The rise of a dominant class gradually overthrew the monarchies of ancient Greece. Of such a class, the chief characteristics were good birth and the hereditary transmission of privileges, the possession of land, and the performance of military service. To these characters the names γένος, ἡγεῖς, εὐπατρίδας, &c., severally correspond. Strictly speaking, these were the only citizens; yet the lower class was quite distinct from bondmen or slaves. It commonly happened that the nobility occupied the fortified towns, while the θῆμος lived in the country and followed agricultural pursuits: whenever the latter were gathered within the walls and became seamen or handicraftsmen, the difference of rank was soon lost, and wealth made the only standard. The quarrels of the nobility among themselves, and the admixture of population arising from immigrations, all tended to raise the lower orders from their political subjection. It must be remembered, too, that the possession of domestic slaves, if it placed them in no new relation to the governing body, at any rate gave them leisure to attend to the higher duties of a citizen, and thus served to increase their political efficiency.

During the convulsions which followed the heroic ages, naturalisation was readily granted to all who desired it; as the value of citizenship increased, it was, of course, more sparingly bestowed. The ties of hospitality descended from the prince to the state, and the friendly relations of the Homeric heroes were exchanged for the *προσέλαι* of a later period. In political intercourse, the importance of these last soon began to be felt, and the *πρότερος* at Athens, in after times, obtained rights only inferior to actual citizenship. [HOSPITIUM.] The isopolite relation existed, however, on a much more extended scale. Sometimes particular privileges were granted: as *ἐπὶ τρυφῇ*, the right of inter-

marriage; *ἐγκτήσις*, the right of acquiring landed property; *ἀτέλεια*, immunity from taxation, especially *ἀτέλεια μετοικίου*, from the tax imposed on resident aliens. All these privileges were included under the general term *ισοτέλεια*, or *ισοπολίτεια*, and the class who obtained them were called *ισοτέλεις*. They bore the same burthens with the citizens, and could plead in the courts or transact business with the people, without the intervention of a *προστάτης*. (Böckh, *Public Econ. of Athens*, p. 540, 2nd ed.; Niebuhr, *Hist. Rom.* ii. p. 53; Herman, *Lehrbuch d. Griech. Staatsalt.* § 116.) If the right of citizenship was conferred for services done to the state, the rank termed *προεδρία* or *εὐεργεσία* might be added. Naturalised citizens even of the highest grade were not precisely in the same condition with the citizen by birth, although it is not agreed in what the difference consisted. Some think that they were excluded from the assembly (Niebuhr, *l. c.*), others that they were only ineligible to offices, or at any rate to the archonship.

The candidate on whom the citizenship was to be conferred was proposed in two successive assemblies, at the second of which at least six thousand citizens voted for him by ballot: even if he succeeded, his admission, like every other decree, was liable during a whole year to a *γραφὴ παρανόμων*. He was registered in a phyle and deme, but not enrolled in the phratry and gens; and hence it has been argued that he was ineligible to the office of archon or priest, because unable to participate in the sacred rites of Ἀπόλλων Πατρίος or Ζεὺς Ἐρκείος.

The object of the phratræ (which were retained in the constitution of Cleisthenes, when their number no longer corresponded to that of the tribes) was to preserve purity and legitimacy of descent among the citizens. Aristotle says (*Pol.* iii. 2) that for practical purposes it was sufficient to define a citizen as the son or grandson of a citizen, and the register of the phratræ was kept chiefly as a record of the citizenship of the parents. If any one's claim was disputed, this register was at hand, and gave an answer to all doubts about the rights of his parents or his own identity. Every newly married woman, herself a citizen, was enrolled in the phratræ of her husband, and every infant registered in the phratræ and gens of its father. All who were thus registered must have been born in lawful wedlock, of parents who were themselves citizens; indeed, so far was this carried, that the omission of any of the requisite formalities in the marriage of the parents, if it did not wholly take away the rights of citizenship, might place the offspring under serious disabilities. This, however, was only carried out in its utmost rigour at the time when Athenian citizenship was most valuable. In Solon's time, it is not certain that the offspring of a citizen and of a foreign woman incurred any civil disadvantage; and even the law of Pericles (*Plut. Peric.* 37), which exacted citizenship on the mother's side, appears to have become obsolete very soon afterwards, as we find it re-enacted by Aristophanes in the archonship of Eucleides, B. C. 403. (*Athen.* xiii. p. 577.)

It is evident then, from the very object of the phratræ, why the newly-admitted citizen was not enrolled in them. As the same reason did not apply to the children, these, if born of women who were citizens, were enrolled in the phratræ of their

maternal grandfather. (Isæus, *De Apol. Hæred.* c. 15.) Still an additional safeguard was provided by the registry of the deme. At the age of sixteen, the son of a citizen was required to devote two years to the exercises of the gymnasia, at the expiration of which term he was enrolled in his deme; and, after taking the oath of a citizen, was armed in the presence of the assembly. He was then of age, and might marry; but was required to spend two years more as a *τεπρωτος* in frontier service, before he was admitted to take part in the assembly of the people. The admission into the phratia and deme were alike attended with oaths and other solemn formalities: when a *δοκιμασία* or general scrutiny of the claims of citizens took place, it was entrusted to both of them; indeed the registry of the deme was the only check upon the naturalised citizen.

These privileges, however, were only enjoyed while the citizen was *ἐπιτιμος*; in other words, did not incur any sort of *ἐτίμια*, which was of two sorts, either partial or total, and is spoken of at length elsewhere. [ATIMIA.]

Recurring then to Aristotle's definition, we find the essential properties of Athenian citizenship to have consisted in the share possessed by every citizen in the legislature, in the election of magistrates, in the *δοκιμασία*, and in the courts of justice.

The lowest unity under which the citizen was contained, was the *γένος* or clan; its members were termed *γενήται* or *ὁμογένηες*. Thirty *γένη* formed a *φρατρία*, which latter division, as was observed above, continued to subsist long after the four tribes, to which the twelve phraties anciently corresponded, had been done away by the constitution of Cleisthenes. There is no reason to suppose that these divisions originated in the common descent of the persons who were included in them, as they certainly did not imply any such idea in later times. Rather they are to be considered as mere political unions, yet formed in imitation of the natural ties of the patriarchal system.

If we would picture to ourselves the true notion which the Greeks embodied in the word *πόλις*, we must lay aside all modern ideas respecting the nature and object of a state. With us practically, if not in theory, the object of a state hardly embraces more than the protection of life and property. The Greeks, on the other hand, had the most vivid conception of the state as a whole, every part of which was to co-operate to some great end to which all other duties were considered as subordinate. Thus the aim of democracy was said to be liberty; wealth, of oligarchy; and education, of aristocracy. In all governments the endeavour was to draw the social union as close as possible, and it seems to have been with this view that Aristotle laid down a principle which answered well enough to the accidental circumstances of the Grecian states, that a *πόλις* must be of a certain size. (*Pol.* vii. 4; *Nic. Eth.* ix. 10. *Ὁ γὰρ ἐκ δέκα μυριάδων πόλις ἐστὶ ἰστίη.*)

This unity of purpose was nowhere so fully carried out as in the government of Sparta; and, if Sparta is to be looked upon as the model of a Dorian state, we may add, in the other Dorian governments. Whether Spartan institutions in their essential parts were the creation of a single master-mind, or the result of circumstances modi-

fied only by the genius of Lycurgus, their design was evidently to unite the governing body among themselves against the superior numbers of the subject population. The division of lands, the *sysitia*, the education of their youth, all tended to this great object. The most important thing next to union among themselves, was to divide the subject class, and accordingly we find the government conferring some of the rights of citizenship on the helots. Properly speaking, the helots cannot be said to have had any political rights; yet being serfs of the soil, they were not absolutely under the control of their masters, and were never sold out of the country even by the state itself. Their condition was not one of hopeless servitude; a legal way was open to them, by which, through many intermediate stages, they might attain to liberty and citizenship. (Müller, *Dorians*, iii. 3. § 5.) Those who followed their masters to war were deemed worthy of especial confidence; indeed, when they served among the heavy-armed, it seems to have been usual to give them their liberty. The *δεσποσιοναῖται*, by whom the Spartan fleet was almost entirely manned, were freedmen, who were allowed to dwell where they pleased, and probably had a portion of land allotted them by the state. After they had been in possession of their liberty for some time, they appear to have been called *νεοδαμῆες* (Thuc. vii. 58), the number of whom soon came near to that of the citizens. The *μύθωνες* or *μύθωνες* (as their name implies) were also emancipated helots; their descendants, too, must have received the rights of citizenship as Callieratidas, Lysander, and Gylippus were of Mothacian origin. (Müller, *Dorians*, ii. 3. § 6.) We cannot suppose that they passed necessarily and of course into the full Spartan franchise; it is much more probable that at Sparta, as at Athens, intermarriage with citizens might at last entirely obliterate the badge of former servitude.

The perioeci are not to be considered as a subject class, but rather as a distinct people, separated by their customs as well as by their origin from the genuine Spartans. It seems unlikely that they were admitted to vote in the Spartan assembly; yet they undoubtedly possessed civil rights in the communities to which they belonged (Müller, *Dorians*, iii. 2. § 4), and which would hardly have been called *πόλεις* unless they had been in some sense independent bodies. In the army they commonly served as hoplites, and we find the command at sea intrusted to one of this class. (Thuc. viii. 22.) In respect of political rights, the perioeci were in the same condition with the plebeians in the early history of Rome, although in every other respect far better off, as they participated in the division of lands, and enjoyed the exclusive privilege of engaging in trade and commerce. What confirms the view here taken, is the fact, that, as far as we know, no individual of this class was ever raised to participate in Spartan privileges. Nothing, however, can be more erroneous than to look upon them as an oppressed race. Even their exclusion from the assembly cannot be viewed in this light; for, had they possessed the privilege, their residence in the country would have debared them from its exercise. It only remains to consider in what the superiority of the genuine Spartan may have consisted. In the first place, besides the right of voting in the assembly and

becoming a candidate for the magistracies, he was possessed of lands and slaves, and was thus exempt from all care about the necessities of life; secondly, on the field of battle he always served amongst the hoplites; thirdly, he participated in the Spartan education, and in all other Dorian institutions, both civil and religious. The reluctance which Sparta showed to admit foreigners was proportioned to the value of these privileges: indeed Herodotus (ix. 35) says that Sparta had only conferred the full franchise in two instances. In legal rights all Spartans were equal; but there were yet several gradations, which, when once formed, retained their hold on the aristocratic feelings of the people. (Müller, *Dorians*, iii. 5. § 7.) First, as we should naturally expect, there was the dignity of the Heraclidae families; and, connected with this, a certain pre-eminence of the Hyllæan tribe. Another distinction was that between the *ἱπποῖσι* and *ὑπομειλῶσι*, which, in later times, appears to have been considerable. The latter term probably comprehended those citizens who, from degeneracy of manners or other causes, had undergone some kind of civil degradation. To these the *ἱπποῖσι* were opposed, although it is not certain in what the precise difference consisted. It need hardly be added, that at Sparta, as elsewhere, the union of wealth with birth always gave a sort of adventitious rank to its possessor.

All the Spartan citizens were included in the three tribes, Hyllæan, Dymæan or Dymanatae, and Pamphilian, each of which were divided into ten obes or phratries. Under these obes there must undoubtedly have been contained some lesser subdivision, which Müller, with great probability, supposes to have been termed *ῥιπάρδαι*. The citizens of Sparta, as of most oligarchical states, were land-owners, although this does not seem to have been looked upon as an essential of citizenship.

It would exceed the limits of this work to give an account of the Grecian constitutions, except so far as may illustrate the rights of citizenship. What perversions in the form of government, according to Greek ideas, were sufficient to destroy the essential notion of a citizen, is a question which, following Aristotle's example (*Pol.* iii. 5), we may be content to leave undecided. He who, being personally free, enjoyed the fullest political privileges, participated in the assembly and courts of judicature, was eligible to the highest offices, and received all this by inheritance from his ancestors, most entirely satisfied the idea which the Greeks expressed in the word *πολίτης*. [B. J.]

2. ROMAN. Civitas means the whole body of *cives*, or members, of any given state. Civitates are defined by Cicero (*Somm. Scip.* c. 3) to be "concilium cœtusque hominum *jure sociati*." A civitas is, therefore, properly a political community, sovereign and independent. The word civitas is frequently used by the Roman writers to express the condition of a Roman citizen, as distinguished from that of other persons not Roman citizens, as in the phrases *dare civitatem*, *donare civitate*, *usurpare civitatem*.

If we attempt to distinguish the members of any given civitas from all other people in the world, we can only do it by enumerating all the rights and duties of a member of this civitas, which are not rights and duties of a person who is not a member of this civitas. If any rights and duties which belong to a member of this civitas, and do

not belong to any person not a member of this civitas, are omitted in the enumeration, it is an incomplete enumeration; for the rights and duties not expressly included must be assumed as common to the members of this civitas and to all the world, or, to use a Roman expression, they exist *jure gentium*. Having enumerated all the characteristics of the members of any given civitas, we have then to show how a man acquires them, and how he loses them, and the notion of a member of such civitas is then complete.

Some members of a political community (*cives*) may have more political rights than others; a principle by the aid of which Savigny (*Geschichte des Röm. Rechts im Mittelalter*, c. ii. p. 22) has expressed briefly and clearly the distinction between the two great classes of Roman citizens under the republic:—"In the free republic there were two classes of Roman citizens, one that had, and another that had not, a share in the sovereign power (*optimo jure, non optimo jure cives*). That which peculiarly distinguished the higher class was the right to vote in a tribe, and the capacity of enjoying magistracies (*suffragium et honores*)." According to this view, the *jus civitatis* comprehended part of that which the Romans called *jus publicum*, and also, and most particularly, that which they called *jus privatum*. The *jus privatum* comprehended the *jus connubii* and *jus commercii*, and those who had not these had no citizenship. Those who had the *jus suffragiorum* and *jus honorum* had the complete citizenship, or, in other words, they were *optimo jure cives*. Those who had the *privatum*, but not the *publicum jus*, were citizens, though citizens of an inferior class. The *jus privatum* seems to be equivalent to the *jus Quiritium*, and the *civitas Romana* to the *jus publicum*. Accordingly, we sometimes find the *jus Quiritium* contrasted with the *Romana civitas*. (Plin. *Ep.* x. 4. 22; Ulp. *Frag.* tit. 3. § 2.) Livy (xxxviii. 36) says that until a. c. 188, the Formiani, Fundani, and Arpinates, had the *civitas* without the *suffragium*; and, at an earlier time, the people of Anagnis received the "*Civitas sine suffragii latio*." (Livy. ix. 43.)

Ulpian (*Frag.* tit. 5. § 4; 19. § 4; 20. § 8; 11. § 6) has stated a distinction, as existing in his time among the free persons who were within the political limits of the Roman state, which it is of great importance to apprehend clearly. There were three classes of free persons, *Cives*, *Latini*, and *Peregrini*. Gaius (i. 12) points to the same division, where he says that a slave, when made free, might become a *Civis Romanus*, or a *Latinus*, or might be in the number of the *peregrini* *dedictii*, according to circumstances. *Cives*, according to Ulpian, is he who possesses the complete rights of a Roman citizen. The *Peregrinus* had not *commercium* and *connubium*, which were the characteristic rights of a Roman citizen, not viewed in his political capacity; but the *Peregrinus* had a capacity for making all kinds of contracts which were allowable by the *jus gentium*. The *Latinus* was in an intermediate state; he had not the *patria potestas* nor rights of *agnatio*; but he had the *commercium* or the right of acquiring *quiritarian* ownership, and he had also a capacity for all acts incident to *quiritarian* ownership, as *vindicatio*, in *jure cessio*, *mancipatio*, and *testamenti factio*, which last comprises the power of making a will in Roman

form, of becoming heres or legatee under a will, and of being a witness to a will; also he could contract many obligations which a Peregrinus could not. These were the general capacities of a Latinus and peregrinus; but a Latinus or a peregrinus might obtain by special favour certain rights which he had not by virtue of his condition only. The legitima hereditas was not included in the testamenti factio; for the legitima hereditas presupposed agnatio, and agnatio presupposed connubium, or the capacity to contract a Roman marriage.

According to Savigny, the notion of civis and civitas had its origin in the union of the patricii and the plebes as one estate. The peregrinitas, in the sense above stated, originated in the conquest of a state by the Romans, when the conquered state did not obtain the civitas; and he conjectures that the notion of peregrinitas was applied originally to all citizens of foreign states who had a foedus with Rome.

The civitas then, historically viewed, was in brief as follows:—Originally, the Romans divided all persons into Cives and Peregrini: the cives, considered as non-political persons and simply as individuals, had connubium and commercium; the peregrini had neither. But this merely negative description of a peregrinus would apply also to slaves, and to the members of states with which Rome never had any connection, and consequently it is requisite to give to the notion of peregrinus something of a positive character in order to determine what it is. A peregrinus then was one who had no legal capacity according to the jus civile Romanorum, but had a capacity of acquiring rights according to the jus gentium, which rights the Roman courts of justice acknowledged. The following persons then would be included under Peregrini: 1. Before the time of Antoninus Caracalla, the inhabitants of almost all the Roman provinces. 2. The citizens of foreign states which were in friendly relation with Rome. 3. Romans who had lost the civitas in consequence of some legal penalty, as deportatio. (Dig. 48. tit. 19. s. 17. § 1.) 4. Libertini, who were deditionum numero. (Ulpian, *Frag.* tit. 20. § 14.)

The later division of persons was this—Cives, Latini, and Peregrini. The condition of cives and peregrini was unchanged; but a third class, that of Latini, was formed, who had a limited civitas, which consisted in having commercium without connubium. By possessing commercium they approached to the class of cives; by not having connubium they approached the class of peregrini. Yet persons who belonged to the class of Latini or Peregrini might, by grant, receive a higher legal capacity than that which belonged to persons of this class. (Ulpian, *Frag.* tit. 5. § 4, 19. § 4.)

Thus then there were at one time in the Roman state only two classes of persons with different legal capacities—Cives and Peregrini. At another and a later time there were three classes—Cives, Latini, and Peregrini. It remains to explain when the third class, Latini, was established, and what persons were included in the term Peregrini at the two several times.

Before the Social war B.C. 90, the Romans had acquired the dominion of all Italy, and the state then comprehended the following persons:—1. Cives Romani, that is, the inhabitants of Rome, the citizens of the coloniae civium, and the citizens of the municipia without respect to their origin.

2. Latini, that is, the citizens of the old Latin towns, except those which were raised to the rank of municipia; the term Latini also included the numerous Coloniae Latinae. 3. Socii, that is, the free inhabitants of Italy, who were not included in 1 or 2. 4. Provinciales, or the free subjects of Rome beyond the limits of Italy. But these four descriptions of persons were all comprehended under Cives and Peregrini; for the term peregrini comprehended numbers 2, 3, and 4.

After the Social war, and in B.C. 90, by a lex Julia the Roman citizenship was extended to all Italy, properly so called, and even to Gallia Cispadana. The consequence of this change was that the Socii and Latini were merged in the class of cives Romani, and there remained only cives and provinciales, but the provinciales were still peregrini. It was at this time apparently that the class of Latini was established, which did not, as formerly, denote a people, but an artificial class of persons with a particular legal capacity. This legal capacity or half citizenship, as already explained, consisted in the possession of the commercium without the connubium. One object of forming this new class was apparently to prepare a gradual transition to the full civitas for such peregrini as the state might wish to favour. The condition of the class of Latini was expressed by the term Latinitas or Jus Latii. [LATINITAS.]

From this time there existed the three classes, described by Gaius and Ulpian—Cives, Latini, and Peregrini: cives with commercium and connubium, Latini with commercium only, and peregrini without either. Only the cives had the political rights, the suffragium and honores. The names of the three classes existed to the time of Justinian's legislation.

The rights of a Roman citizen were acquired in several ways, but most commonly by a person being born of parents who were Roman citizens. A Roman pater familias, filius familias, mater familias, and filia familias were all cives, though the first only was sui juris and the rest were not. If a Roman citizen married a Latina or a peregrina, believing her to be a Roman citizen, and begot a child, this child was not in the power of his father, because he was not a Roman citizen, but the child was either a Latinus or a peregrinus according to the condition of his mother; and no child followed the condition of his father without there was connubium between his father and mother. By a senatus-consultum, the parents were allowed to prove their mistake (*causam erroris probare*); and, on this being done, both the mother and the child became Roman citizens, and, as a consequence, the son was in the power of the father. (Gaius, i. 67.) Other cases relating to the matter called *causae probatio* are stated by Gaius (i. 29, &c.; i. 66, &c.), from which it appears that the facilities for obtaining the Roman civitas were gradually extended. (See also Ulp. *Frag.* tit. 3. *De Latiniis*.)

A slave might obtain the civitas by manumission (*vindicta*), by the census, and by a testamentum, if there was no legal impediment; but it depended on circumstances, as already stated, whether he became a Civis Romanus, a Latinus, or in the number of the peregrini deditionii. [MANUMISSIO.]

Under the republic and before the Social war, the civitas could, of course, be conferred by a lex, and

upon such terms as the *lex* declared. (Liv. vi. 4; and in the case of the Ferentinates, Liv. xxxiv. 42; Cicero, *pro Balbo*, 13.) The *Julia lex*, a. c. 90, was a comprehensive measure. Cicero, however (*pro Balbo*, c. 8), remarks that many of the people of Heracleia and Neapolis made some opposition to accepting the terms offered by the *lex*, and would have preferred their former relation to Rome as *civitates foederatae* (*foederis sui libertatem*) to the Roman *civitas*. The *lex* gave the Roman *civitas* not only to the natives of the Italian towns, but also to natives of towns out of Italy, who had become citizens of Italian towns before the *lex* was enacted. Thus L. Manlius (Cic. *ad Fam.* xiii. 30), a native of Catina, in Sicily, obtained the Roman *civitas* by virtue of having been enrolled as a citizen of Neapolis (*erat enim in id municipium adscriptus*) before the passing of the *lex*. The *lex* Plautia Papiria, which was proposed by the tribunes M. Plautius Silvanus and C. Papirius Carbo, a. c. 89, contained a provision that persons, who had been enrolled as citizens of the *foederatae civitates*, and who had a domicile in Italy at the time when the law was passed, should have the Roman *civitas*, if they gave in their names to the *praetor* within sixty days (*apud praetorem essent professi*, Cic. *pro Archia*, c. 4). Archias claimed the benefit of this *lex* as having been enrolled a citizen of Heraclea, and having in the other respects complied with the *lex*. The case of L. Manlius appears to show that the *lex Julia* applied to persons not natives of an Italian town if they had become citizens of such town before the passing of the *lex*; and it is not clear what was the precise object of the *lex* Plautia Papiria, whether merely to explain or to limit the operation of the *Julia lex*. If the *Julia lex* merely declared that those who were *adscripti* in the Italian towns before the passing of the *lex* should acquire the Roman *civitas*, it would be necessary to provide some security against fraudulent registrations which might be made after the passing of the *lex*, and this would be effected by requiring *adscripti* to give in their names at Rome within the sixty days.

With the establishment of the imperial power, the political rights of Roman citizens became insignificant, and the commercium and the connubium were the only parts of the *civitas* that were valuable. The constitution of Antoninus Caracalla, which gave the *civitas* to all the Roman world, applied only to communities and not to individuals; its effect was to make all the cities in the empire municipia, and all Latini into cives. The distinction of cives and Latini, from this time forward, only applied to individuals, namely, to freedmen and their children. The peregrinitas in like manner ceased to be applicable to communities, and only existed in the *dediticii* as a class of individuals. The legislation of Justinian finally put an end to what remained of this ancient division into classes, and the only division of persons was into subjects of the Caesar and slaves.

The word *civitas* is often used by the Roman writers to express any political community, as *Civitas Antiochiensis*, &c.

(Savigny, *Zeitschrift*, &c. vol. v., *Ueber die Entstehung, &c., der Latinität*; vol. ix., *Der Römische Volksstamm der Tafel von Heraklea*; vol. xi., *Nachträge zu früheren Arbeiten*; and Savigny, *System des heutigen Römischen Rechts*, vol. ii. p. 23, &c. [G. L.]

CLAUSSICUM. [CORNU.]

CLATHRI. [DOMUS.]

CLAVIS. [JANUA.]

CLAUSTRUM. [JANUA.]

CLAVUS ANNA'LIS. In the early ages of Rome, when letters were yet scarcely in use, the Romans kept a reckoning of their years by driving a nail (*clavus*), on the ides of each September, into the side wall of the temple of Jupiter Optimus Maximus, which ceremony was performed by the consul or a dictator. (Festus, s. v. *Clav. Annal.*; Liv. vii. 3, viii. 18, ix. 28; Cic. *ad Att.* v. 15.)

CLAVUS GUBERNA'CULI. [NAVIS.]

CLAVUS LATUS, CLAVUS ANGUSTUS.

The meaning of these words has given rise to much dispute; but it is now established beyond doubt that the *clavus latus* was a broad purple band, extending perpendicularly from the neck down the centre of the tunic, and that the *clavus angustus* consisted of two narrow purple alips, running parallel to each other from the top to the bottom of the tunic, one from each shoulder. Hence we find the tunic called the *tunica latidavia* and *angusticlavica*. These purple stripes were woven into the tunic (Plin. *H. N.* viii. 48); and this circumstance accounts for the fact that the *clavus* is never represented in works of sculpture. It only occurs in paintings, and those too of a very late period. The *clavus latus* is represented in the annexed cut, which is copied from a painting of

Rome personified, formerly belonging to the Barberini family. The *clavus angustus* is seen in the three figures introduced below, all of which are taken from sepulchral paintings executed subsequently to the introduction of Christianity at Rome. The female figure on the left hand, which is copied from Buonarrotti (*Osservazioni sopra alcuni Frammenti di Vasi antichi di Vetro*, tav. xxix. fig. 1), represents the goddess Moneta. The one on the right hand is from a cemetery on the Via Salara Nova, and represents Priscilla, an early martyr. The next figure is selected from three of a similar kind, representing Shadrach, Meshach,

and Abednego, from the tomb of Pope Callisto on the Via Appia.

The *latus clavus* was a distinctive badge of the senatorial order (*latus demisit pectore clavum*, Hor. Sat. i. 6. 28; Ovid, Trist. iv. 10. 35); and hence it is used to signify the senatorial dignity (Suet. Tib. 35, Vesp. 2, 4); and *laticlavus*, for the person who enjoys it. (Suet. Aug. 38.) In distinction to the *angustus clavus*, it is termed *purpura major* (Juv. Sat. i. 106), *purpura latior* (Plin. H. N. xxxiii. 7); and the garment it decorated, *tunica potens* (Stat. Sylv. v. 2. 29). The *tunica laticlavia* was not fastened round the waist like the common tunic, but left loose, in order that the clavus might lie flat and conspicuously over the chest. (Quinctil. xi. 3. § 138.)

The *angustus clavus* was the decoration of the equestrian order; but the right of wearing the *latus clavus* was also given to the children of equestrians (Ovid, Trist. iv. 10. 29), at least in the time of Augustus, as a prelude to entering the senate-house. This, however, was a matter of personal indulgence, and not of individual right; for it was granted only to persons of very ancient family, and corresponding wealth (Stat. Sylv. iv. 8. 59; Dig. 24. tit. 1. s. 42), and then by special favour of the emperor. (Suet. Vesp. 2; Tacit. Ann. xvi. 17; Plin. Epist. ii. 9.) In such cases the *latus clavus* was assumed with the *toga virilis*, and worn until the age arrived at which the young equestrian was admissible into the senate, when it was relinquished and the *angustus clavus* resumed, if a disinclination on his part, or any other circumstances, prevented him from entering the senate, as was the case with Ovid (compare Trist. iv. 10. 27,

CLIENS.

with 35). But it seems that the *latus clavus* could be again resumed if the same individual subsequently wished to become a senator (Hor. Sat. i. 6. 25), and hence a fickle character is designated as one who is always changing his *clavus* (Hor. Sat. ii. 7. 10).

The *latus clavus* is said to have been introduced at Rome by Tullus Hostilius, and to have been adopted by him after his conquest of the Etruscans (Plin. H. N. ix. 63); nor does it appear to have been confined to any particular class during the earlier periods, but to have been worn by all ranks promiscuously. (Plin. H. N. xxxiii. 7.) It was laid aside in public mourning. (Liv. ix. 7.) [A. R.]

CLEPSYDRA. [HOROLOGIVM.]

CLERU'CHI (κληρῦχοι). [COLONIA.]

CLERUS (κληρος). [HÆRES.]

CLETE'RES or CLE'TORES (κληήρες or κλήτρος), summoners. The Athenian summoners were not official persons, but merely witnesses to the prosecutor that he had served the defendant with a notice of the action brought against him, and the day upon which it would be requisite for him to appear before the proper magistrate, in order that the first examination of the case might commence. (Harpocrat.) In Aristophanes (Nub. 1246, Vesp. 1408) we read of one summoner only being employed, but two are generally mentioned by the orators as the usual number. (Dem. c. Nicoc. p. 1251. 5, pro Corona. 244. 4 c. Boet. p. 1017. 6.) The names of the summoners were subscribed to the declaration or bill of the prosecutor, and were, of course, essential to the validity of all proceedings founded upon it. What has been hitherto stated applies in general to all causes, whether *δίκαι* or *γραφαί*: but in some which commenced with an information laid before magistrates, and an arrest of the accused in consequence (as in the case of an *ἐνδεξις* or *εἰσαγγελία*), there would be no occasion for a summons, nor, of course, witnesses to its service. In the *εὐθύναι* and *δοκιμασίαι* also, when held at the regular times, no summons was issued, as the persons whose character might be affected by an accusation were necessarily present, or presumed to be so; but if the prosecutor had let the proper day pass, and proposed to hold a special *εὐθύνη* at any other time during the year in which the defendant was liable to be called to account for his conduct in office (*ἀπεύθυνος*), the agency of summoners was as requisite as in any other case. Of the *δοκιμασίαι* that of the orators alone had no fixed time; but the first step in the cause was not the usual legal summons (*πρόκλησις*), but an announcement from the prosecutor to the accused in the assembly of the people. (Meier, Att. Process. pp. 212, 575.) In the event of persons subscribing themselves falsely as summoners, they exposed themselves to an action (*ψευδοκληρίας*) at the suit of the party aggrieved. [J. S. M.]

CLIBANA'RII. [CATAPHRACTI.]

CLIENS is supposed to contain the same element as the verb *clare*, to "hear" or "obey," and is accordingly compared by Niebuhr with the German word *höriger*, "a dependant."

In the time of Cicero, we find *patronus* in the sense of adviser, advocate, or defender, opposed to *cliens* in the sense of the person defended, or the consultor; and this use of the word must be referred, as we shall see, to the original character of the *patronus*. (Ovid. Art. Am. i. 88; Hor. Sat. i. 1. 10, Ep. i. 5. 31, ii. 1. 104.) The relation of a

master to his liberated slave (*libertus*) was also expressed by the word *patronus*, and the *libertus* was the *cliens* of his *patronus*. Any Roman citizen who wanted a protector, might attach himself to a *patronus*, and would thenceforward be a *cliens*. Strangers who came into exilium at Rome might do the same (*ius opprobriationis*, Cic. *de Or.* i. 39). Distinguished Romans were also sometimes the patrons of states and cities, which were in a certain relation of subjection or friendship to Rome (Sueton. *Octavian. Caesar*, 17); and in this respect they may be compared to colonial agents, or persons among us, who are employed to look after the interests of the colony in the mother country; except that among the Romans such services were never remunerated directly, though there might be an indirect remuneration. (Cic. *Deo.* 20, *Pro Sulla*, c. 21; Tacit. *Or.* 36.) This relationship between *patronus* and *cliens* was expressed by the word *Clientela* (Cic. *ad Att.* xiv. 12), which also expressed the whole body of a man's *clientes*. (Tacit. *Ann.* xiv. 61.) In the Greek writers on Roman history, *patronus* is represented by *προστάτης*: and *cliens*, by *πελάτης*. (Plut. *Tib. Gracch.* 13, *Marius*, 5.)

The *clientela*, but in a different form, existed as far back as the records or traditions of Roman history extend; and the following is a brief notice of its origin and character, as stated by Dionysius (*Antiq. Rom.* ii. 9), in which the writer's terms are kept:—

Romulus gave to the *ἐνσπριδαί* the care of religion, the honores (*ἀρχαί*), the administration of justice, and the administration of the state. The *δημοῖκοι* (whom in the preceding chapter he has explained to be the *παῖδες*) had none of these privileges, and they were also poor; husbandry and the necessary arts of life were their occupation. Romulus thus entrusted the *δημοῖκοι* to the safe keeping of the *παρτίκιοι* (who are the *ἐνσπριδαί*), and permitted each of them to choose his patron. This relationship between the patron and the client was called, says Dionysius, *patronia*. (Compare Cic. *Rep.* ii. 9.)

The relative rights and duties of the patrons and the *clientes* were, according to Dionysius, as follow (Dionys. ii. 10, and other passages):—

The patron was the legal adviser of the *cliens*; he was the client's guardian and protector, as he was the guardian and protector of his own children; he maintained the client's suit when he was wronged, and defended him when another complained of being wronged by him: in a word, the patron was the guardian of the client's interest, both private and public. The client contributed to the marriage portion of the patron's daughter, if the patron was poor; and to his ransom, or that of his children, if they were taken prisoners; he paid the costs and damages of a suit which the patron lost, and of any penalty in which he was condemned; he bore a part of the patron's expenses incurred by his discharging public duties, or filling the honourable places in the state. Neither party could accuse the other, or bear testimony against the other, or give his vote against the other. The *clientes* accompanied their patroni to war as *vassals*. (Dionys. x. 43.) This relationship between patron and client subsisted for many generations, and resembled in all respects the relationship by blood. It was a connection that was hereditary; the *cliens* bore the gentile name of the *patronus*, and he and his de-

scendants were thus connected with the gens of the *patronus*. It was the glory of illustrious families to have many *clientes*, and to add to the number transmitted to them by their ancestors. But the *clientes* were not limited to the *δημοῖκοι*; the colonies, and the states connected with Rome by alliance and friendship, and the conquered states, had their patrons at Rome; and the senate frequently referred the disputes between such states to their patrons, and abided by their decision.

Dionysius gives a tolerably intelligible statement, whether true or false, of the relation of a patron and client. What persons actually composed the body of *clientes*, or what was the real historical origin of the *clientela*, is immaterial for the purpose of understanding what it was. It is clear that Dionysius understood the Roman state as originally consisting of *patricii* and *plebeii*, and he has said that the *clientes* were the *plebs*. Now it appears, from his own work and from Livy, that there were *clientes* who were not the *plebs*, or, in other words, *clientes* and *plebs* were not convertible terms. This passage, then, has little historical value as explaining the origin of the *clientes*. Still something may be extracted from the passage, though it is impossible to reconcile it altogether with all other evidence. The *clientes* were not *servi*: they had property of their own, and freedom (*libertas*). Consistently with what Dionysius says, they might be Roman citizens in the wider sense of the term *civis*, enjoying only the *commercium* and *connubium*, but not the *suffragium* and honores, which belonged to their *patroni*. [CIVITAS.] It would also be consistent with the statement of Dionysius, that there were free men in the state who were not *patricii*, and not *clientes*; but if such persons existed in the earliest period of the Roman state, they must have laboured under great civil disabilities, and this also is not inconsistent with the testimony of history. Such a body, if it existed, must have been powerless; but such a body might in various ways increase in numbers and wealth, and grow up into an estate, such as the *plebs* afterwards was. The body of *clientes* might include freedmen, as it certainly did: but it seems an assumption of what requires proof, to infer (as Niebuhr does) that, because a *patronus* could put his freedman to death, he could do the same to a client; for this involves a tacit assumption that the *clientes* were originally slaves; and this may be true, but it is not known. Besides, it cannot be true that a patron had the power of life and death over his freedman, who had obtained the *civitas*, any more than he had over an emancipated son. There is also no proof that the *clientela* in which *liberti* stood was hereditary like that of the proper *clientes*. The body of *clientes* might, consistently with all that we know, contain peregrini, who had no privileges at all; and it might contain that class of persons who had the *commercium* only, if the *commercium* existed in the early ages of the state. [CIVITAS.] The latter class of persons would require a *patronus* to whom they might attach themselves for the protection of their property, and who might sue and defend them in all suits, on account of the (here assumed) inability of such persons to sue in their own name in the early ages of Rome.

The relation of the *patronus* to the *cliens*, as represented by Dionysius, has an analogy to the *patria potestas*, and the form of the word *patronus* is consistent with this.

It is stated by Niebuhr, that "if a client died without heirs, his patron inherited; and this law extended to the case of freedmen; the power of the patron over whom must certainly have been founded originally on the general patronal right." This statement, if it be correct, would be consistent with the quasi patria potestas of the patronus.

But if a cliens died *with* heirs, could he make a will? and if he died *without* heirs, could he not dispose of his property by will? and if he could not make, or did not make a will, and had heirs, who must they be? must they be *sui heredes*? had he a familia, and consequently agnati? had he, in fact, that connubium, by virtue of which he could acquire the patria potestas? He might have all this consistently with the statement of Dionysius, and yet be a citizen *non optimo jure*; for he had not the honores and the other distinguishing privileges of the patricii; and consistently with the statement of Dionysius he could not vote in the comitia curiata. It is not possible to prove that a cliens had all this, and it seems equally impossible, from existing evidence, to show what his rights really were. So far as our extant ancient authorities show, the origin of the clientela, and its true character, were unknown to them. There was a body in the Roman state, at an early period of its existence, which was neither patrician nor client, and a body which once did not, but ultimately did, participate in the sovereign power: this was the plebs. The clientes also existed in the earliest period of the Roman state, but our knowledge of the true condition of this body must remain inexact, for the want of sufficient evidence in amount, and sufficiently trustworthy.

It is stated by Livy (ii. 56) that the clientes had votes in the comitia of the centuries: they were therefore registered in the censors' books, and could have quiritarian ownership. [CENTUMVIRI.] They had therefore the commercium, possibly the connubium, and certainly the suffragium. It may be doubted whether Dionysius understood them to have the suffragium at the comitia centuriata; but if such was the legal condition of the clientes, it is impossible that the exposition of their relation to the patricians, as given by some modern writers, can be altogether correct.

It would appear, from what has been stated, that patronus and patricius were originally convertible terms, at least until the plebs obtained the honores. From that time, many of the reasons for a person being a cliens of a patricius would cease; for the plebeians had acquired political importance, had become acquainted with the law and the legal forms, and were fully competent to advise their clients. This change must have contributed to the destruction of the strict old clientela, and was the transition to the clientela of the later ages of the republic. (Hugo, *Lehrbuch*, &c. vol. i. p. 458.)

It has been conjectured (Becker, *Handbuch der Römischen Alterthümer*, vol. ii. p. 125) that the clientela was an old Italian institution, which existed among some of those people, out of which the Romanus Populus arose. When Tatius and his Sabines settled in Rome, their clients settled there with them (Dionys. ii. 46); and Attius Clausus brought to Rome a large body of cliens. (Livy. ii. 16; Dionys. v. 40). It is further conjectured, and it is not improbable, that the clientes were Italiani, who had been conquered and reduced to a state of subjection.

Admitting a distinction between the plebs and the old clientes to be fully established, there is still room for careful investigation as to the real condition of the clientes, and of the composition of the Roman state before the estate of the plebs was made equal to that of the patricians. [G. L.]

CLIENTELA. [CLIMA.]

CLIMA (κλίμα), literally a *slope* or *inclination*, was used in the mathematical geography of the Greeks* with reference to the inclination of various parts of the earth's surface to the plane of the equator. Before the globular figure of the earth was known, it was supposed that there was a general slope of its surface from south to north, and this was called κλίμα. But as the science of mathematical geography advanced, the word was applied to different belts of the earth's surface, which were determined by the different lengths of the longest day at their lines of demarcation. This division into climates was applied only to the northern hemisphere, as the geographers had no practical knowledge of the earth south of the equator.

Hipparchus (about a. c. 160) seems to have been the first who made use of this division; his system is explained at length by Strabo (ii. p. 132). Assuming the circumference of a great circle of the earth to be 252,000 stadia, Hipparchus divided this into 360 degrees, of 700 stadia to each; and then, beginning at the parallel of Meroë, and proceeding northwards, he undertook to describe the astronomical phenomena observed at each degree of latitude, or every 700 stadia: among these phenomena, he observed that the length of the longest day at Meroë was 13 hours, and at Syene 13½. The observations of later astronomers and geographers, such as Geminus, Strabo, Pliny, and Ptolemy, are described in the works cited below. The following table, from Ukert, shows the climates, as given by Ptolemy (*Geogr.* i. 23). It will be observed that there are nineteen climates, the beginning and middle of which are marked by lines called parallels, of which the first marks the equator, and the thirty-third the arctic circle. Up to this point, there are sixteen climates, of which twelve are determined by the increase of half-an-hour in the length of the longest day, the 13th and 14th 1 hour, and the 15th and 16th 2 hours. In the remaining climates, within the arctic circle, the days no longer increase by hours but by months. Elsewhere (*Almag.* ii. 6) he makes ten climates north of the equator, beginning at the parallel of Taprobane in lat. 4° 15', and ending at that of Thule, in lat. 63°; and one to the south, beginning at the equator, or the parallel of Cape Raptum, and ending at the parallel of Antimeros in lat. 16° 25'.

The term κλίμα was afterwards applied to the average temperature of each of these regions, and hence our modern use of the word. (Strab. l. c.; Dion. Hal. i. 9; Plut. *Mar.* 11, *Aem. Paul.* 5, *Moral.* p. 891; Polyb. vii. 6. § 1, x. 1, § 3; Ath. xii. p. 523, e.; Gemin. *Elem. Astron.* 5; Plin. *H. N.* ii. 70–75, a. 73–77; Agathem. i. 3; Cellar. *Geog.* i. 6; Ukert, *Geog.* vol. i. pt. 2, pp. 182, &c.) [P. S.]

* The corresponding Latin word is *inclinatio* (Vitruv. i. 1), also *declinatio*, *devergencia* (comp. Aul. Gell. xiv. 1; Colum. iii. 19). *Clima* was only used at a late period.

CLYPEUS (*κλυπεύς*), the large shield worn by the Greeks and Romans, which was originally of a circular form, and is said to have been first used by Proetus and Acrisius of Argos (Pana. ii. 25. § 6), and therefore is called *clipeus Argolicus* (Virg. *Aen.* iii. 637), and likened to the sun. (Compare also *κλυπεὺς πύργος ἥλιου*, Hom. *Il.* iii. 347, v. 483, *κλυπεὺς κύβητος*, xiv. 428; Varr. *De Ling. Lat.* v. 19, ed. Müller; Festus, s. v.) According to other accounts, however, the Greeks obtained the

shield, as well as the helmet, from the Egyptians (Herod. iv. 180; Plat. *Tim.* p. 24, b.)

The shield used by the Homeric heroes was large enough to cover the whole man. It was sometimes made of osiers twisted together, called *ἱτέα*, or of wood; the wood or wicker was then covered over with ox hides of several folds deep, and finally bound round the edge with metal. (Hom. *Il.* xii. 295.) The outer rim is termed *κλυπεύς* (*Il.* xviii. 479), *frons* (Eur. *Tröad.* 1205),

περιφέρεια αὐτοῦ κύκλος (Il. xi. 33). [ΑΝΤΥΧ.] In the centre was a projection called *δμφάλος* or *μεσομφάλιον*, *umbo*, which served as a sort of weapon by itself, or caused the missiles of the enemy to glance off from the shield. It is seen in the next woodcut, from the column of Trajan. A spike, or some other prominent excrescence, was sometimes placed upon the *δμφάλος*, which was called *ἐπομφάλιον*.

In the Homeric times, the Greeks used a belt to support the shield; but this custom was subsequently discontinued in consequence of its great inconvenience [ΒΑΛΤΕΥΣ], and the following method was adopted in its stead:—A band of metal, wood, or leather, termed *καρόν*, was placed across the inside from rim to rim, like the diameter of a circle, to which were affixed a number of

small iron bars, crossing each other somewhat in the form of the letter X, which met the arm below the inner bend of the elbow joint, and served to steady the orb. This apparatus, which is said to have been invented by the Carians (Herod. i. 171), was termed *δχαον* or *δχαρη*. Around the inner edge ran a leather thong (*πώραξ*), fixed by nails at certain distances, so that it formed a succession of loops all round, which the soldier grasped with his hand (*ἐμβαλὼν πόρπακι γενναίων χεῖρα*, Eur. *Hel.* 1396). The preceding woodcut, which shows the whole apparatus, will render this account intelligible. It is taken from one of the terra cotta vases published by Tischbein (vol. iv. tab. 20).

At the close of a war it was customary for the Greeks to suspend their shields in the temples when the *πόρπακες* were taken off, in order to render them unserviceable in case of any sudden or popular outbreak; which custom accounts for the alarm of Demosthenes in the Knights of Aristophanes (859), when he saw them hanging up with their handles on.

The *δωρίς* was carried by the heavy-armed men (*ὀπλῖται*) during the historical times of Greece, and is opposed to the lighter *πύλῃη* and *γέφυρον*: hence we find the word *δωρίς* used to signify a body of *ὀπλῖται* (Xen. *Anab.* i. 7. § 10).

According to Livy (i. 43), when the census was instituted by Servius Tullius, the first class only used the *clipeus*, and the second were armed with the *scutum* [SCUTUM]; but after the Roman soldier received pay, the *clipeus* was discontinued altogether for the Sabine *scutum*. (Livy. viii. 8; compare ix. 19; Plut. *Rom.* 21; Diod. *Eclog.* xxiii. 3, who asserts that the original form of the Roman shield was square, and that it was subsequently changed for that of the Tyrrhenians, which was round.)

The practice of emblazoning shields with various devices, the origin of armorial bearings, is of considerable antiquity. It is mentioned as early as the time of Aeschylus, who represents the seven chiefs who marched against Thebes with such shields (Aeschyl. *Sept. c. Theb.* 387, &c.; comp. Virg. *Aen.* viii. 658; Sil. Ital. viii. 386). This

custom is illustrated by the preceding beautiful gem from the antique, in which the figure of Victory is represented inscribing upon a *clipeus* the name or merits of some deceased hero.

Each Roman soldier had also his own name inscribed upon his shield, in order that he might readily find his own when the order was given to impale arms (Veget. ii. 17); and sometimes the name of the commander under whom he fought. (Hirt. *Bell. Alex.* 58.)

The *clipeus* was also used to regulate the temperature of the vapour bath. [BALNEAR, p. 192, a.] [A. R.]

CLITELLAE, a pair of panniers, and therefore only used in the plural number. (Hor. *Sat.* i. 5. 47; Plant. *Most.* iii. 2. 91.) In Italy they were commonly used with mules or asses, but in other countries they were also applied to horses, of which an instance is given in the annexed woodcut from the column of Trajan; and Plautus (*Ib.* 94) figuratively describes a man upon whose shoulders a load of any kind, either moral or physical, is charged, as *homo clitellarius*. [A. R.]

CLOACA, a common sewer. The term cloaca is generally used in reference only to those spacious subterraneous vaults, either of stone or brick, through which the foul waters of the city, as well as all the streams brought to Rome by the aqueducts, finally discharged themselves into the Tiber; but it also includes within its meaning any smaller drain, either wooden pipes or clay tubes (Ulpian, Dig. 43. tit. 23. s. 1), with which almost every house in the city was furnished to carry off its impurities into the main conduit. The whole city was thus intersected by subterraneous passages, and is therefore called *urbs pensilis*, in Pliny's enthusiastic description of the *cloacae*. (H. N. xxxvi. l. 5. 24.)

The most celebrated of these drains was the *cloaca maxima*, the construction of which is ascribed to Tarquinius Priscus (Liv. i. 38; Plin. l. c.), and which was formed to carry off the waters brought down from the adjacent hills into the Velabrum and valley of the Forum. The stone of which it is built is a mark of the great antiquity of the work; it is not the peperino of Gabii and the Alban hills, which was the common building-stone in the time of the commonwealth; but it is the "tufa litorea" of Brocchi, one of the volcanic formations which is found in many places in Rome, and which was afterwards supplanted in public buildings by the finer quality of the peperino. (Arnold, *Hist. Rom.* vol. i. p. 52.) This cloaca was formed by three arches, one within the other, the innermost of which is a semicircular vault of

18 Roman palms, about 14 feet in diameter, each of the hewn blocks being 7½ palms long and 4½ high, and joined together without cement. The manner of construction is shown in the annexed woodcut, taken on the spot, where a part of it is uncovered near the arch of Janus Quadrifrons.

The mouth where it reaches the Tiber, nearly opposite to one extremity of the *insula Tiberina*, still remains in the state referred to by Pliny (l. c.). It is represented in the annexed woodcut, with the adjacent buildings as they still exist, the modern fabrics only which encumber the site, being left out.

The passages in Strabo and Pliny which state that a cart (*ἀρὰς, vehes*) loaded with hay, could pass down the *cloaca maxima*, will no longer appear incredible from the dimensions given of this stupendous work; but it must still be borne in mind that the vehicles of the Romans were much smaller than our own. Dion Cassius also states (xlix. 43) that Agrippa, when he cleansed the sewers, passed through them in a boat, to which Pliny probably alludes in the expression *urbs subter navigata*; and their extraordinary dimensions, as well as that of the embouchures through which the waters poured into them, is still further testified by the exploits of Nero, who threw down the sewers the unfortunate victims of his nightly riots. (Suet. *Nero*, 26; compare Dionys. x. 53; Cic. *Pro Sext.* 35.)

The *cloaca maxima*, formed by Tarquin, extended only from the forum to the river, but was subsequently continued as far up as the Subura, of which branch some vestiges were discovered in the

year 1742. (Venuti, *Antichità di Roma*, vol. i. p. 98; Ficoroni, *Vestigia di Roma*, pp. 74, 75.) This was the *crypta Suburae* to which Juvenal refers (*Sat.* v. 106. Comp. *Dict. of Gr. and Rom. Geog.* art. *Roma*.)

The expense of cleansing and repairing these *cloacae* was, of course, very great, and was defrayed partly by the treasury, and partly by an assessment called *cloacarum*. (Ulpian, *Dig.* 7. tit. 1. s. 27. § 3.) Under the republic, the administration of the sewers was entrusted to the censors; but under the empire, particular officers were appointed for that purpose, *cloacarum curatores*, mention of whom is found in inscriptions (*ap. Grut.* p. cxcvii. 5, p. cxcviii. 2, 3, 4, 5; p. cclii. 1; Ulpian, *Dig.* 43. tit. 23. s. 2). The emperors employed condemned criminals in the task. (Plin. *Epist.* x. 41.)

Rome was not the only city celebrated for works of this kind. Diodorus (xi. 25) makes special mention of the sewers (*ὀρενομοί*) of Agrigentum, which were constructed about B.C. 480, by an architect named Phaeax, after whom they were called *phalaeas*.

[A. R.]

KLOPES DIKE' (*κλοπῆς δίκη*), the action for theft was brought in the usual manner before a *diaetes* or a court, the latter of which Meier (*Att. Process*, p. 67) infers to have been under the presidency of the thesmothetae, whether the prosecutor preferred his accusation by way of *γραφὴ* or *δίκη*. We learn from the law quoted by Demosthenes (*c. Timocr.* p. 733), that the criminal upon conviction was obliged to pay twice the value of the theft to the plaintiff if the latter recovered the specific thing stolen; that failing of this, he was bound to reimburse him tenfold, that the court might inflict an additional penalty, and that the criminal might be confined in the stocks (*προβόδιον*) five days and as many nights. In some cases, a person that had been robbed was permitted by the Attic law to enter the house in which he suspected his property was concealed, and institute a search for it (*φωρεῖν*, Aristoph. *Nubes*, 497; Plat. *De Leg.* xii. p. 954); but we are not informed what powers he was supplied with to enforce this right. Besides the above mentioned action, a prosecutor might proceed by way of *γραφὴ*, and when the delinquent was detected in the act, by *ἀπαγωγή* or *ἐφέγησις*. To these, however, a penalty of 1000 drachmae was attached in case the prosecutor failed in establishing his case; so that a diffident plaintiff would often consider them as less eligible means of obtaining redress. (Demosth. *c. Androt.* p. 601.) In the aggravated cases of stealing in the day time property of greater amount than 50 drachmae, or by night any thing whatsoever (and upon this occasion the owner was permitted to wound and even kill the depredator in his flight), the most trifling article from a gymnasium, or any thing worth 10 drachmae from the ports or public baths, the law expressly directed an *ἀπαγωγή* to the Eleven, and, upon conviction, the death of the offender. (Demosth. *c. Timocr.* p. 736. 1.) If the *γραφὴ* were adopted, it is probable that the punishment was fixed by the court; but both in this case, and in that of conviction in a *δίκη*, besides restitution of the stolen property, the disfranchisement (*ἀτιμία*) of the criminal would be a necessary incident of conviction. (Meier, *Att. Process*, p. 358.) [J. S. M.]

COA VESTIS, the Coan cloth, is mentioned by various Latin authors, but most frequently and distinctly by the poets of the Augustan age. (Tibull. ii. 4, ii. 6; Propert. i. 2, ii. 1, iv. 2, iv. 5; Hor. *Carmin.* iv. 13, 13, *Sat.* i. 2, 101; Ovid, *Art. Am.* ii. 298.) From their expressions we learn that it had a great degree of transparency, that it was remarkably fine, that it was chiefly worn by women of loose reputation, and that it was sometimes dyed purple and enriched with stripes of gold. It has been supposed to have been made of silk, because in Cos silk was spun and woven at a very early period, so as to obtain a high celebrity for the manufactures of that island. (Aristot. *Hist. Anim.* v. 19.) In the woodcut under COMA, a female is represented wearing a robe of this kind. [J. Y.]

COACTOR. This name was applied to collectors of various sorts, e. g. to the servants of the publicani, or farmers of the public taxes, who collected the revenues for them (Cic. *Pro Rab. Post.* 11); also to those who collected the money from the purchasers of things sold at a public auction. The father of Horace was a collector of the taxes farmed by the publicani. (Hor. *Sat.* i. 6. 86; Suet. *Vit. Hor.* init.) Moreover, the servants of the money-changers were so called, from collecting their debts for them. (Cic. *Pro Cluent.* 64.) [R. W.]

CO'CHLEA (*κοχλίας*), which properly means a snail, was also used to signify other things of a spiral form.

1. A screw. The woodcut annexed represents a clothes-press, from a painting on the wall of the Chalcidicum of Eumachia, at Pompeii, which is worked by two upright screws (*cochleae*) precisely in the same manner as our own linen presses. (*Mus. Borbonico*, iv. 50.)

A screw of the same description was also used in oil and wine presses. (Vitruv. vi. 9. p. 180, ed. Bipont.; Palladius, iv. 10. § 10, ii. 19. § 1.) The thread of the screw, for which the Latin language has no appropriate term, is called *περικύχλιον* in Greek.

2. A spiral pump for raising water, invented by Archimedes (Diod. Sic. i. 34, v. 37; compare Strab. xvii. 30), from whom it has ever since been called the Archimedean screw. It is described at length by Vitruvius (x. 11).

3. A peculiar kind of door, through which the wild beasts passed from their dens into the arena of the amphitheatre. (Varr. *De Re Rust.* iii. 5. § 3.) It consisted of a circular cage, open on one side like a lantern, which worked upon a pivot and within a shell, like the machines used in the convents and foundling hospitals of Italy, termed *rote*, so that any particular beast could be removed from its den into the arena merely by turning it round, and without the possibility of more than one escaping at the same time; and therefore it is recommended by Varro (*l. c.*) as peculiarly adapted for an aviary, so that the person could go in and out without affording the birds an opportunity of flying away. Schneider (*in Ind. Script. R. R. s. v. Caves*), however, maintains that the *cochlea* in question was nothing more than a portcullis (*cataphracta*) raised by a screw, which interpretation does not appear so probable as the one given above.

[A. R.]

CO'CHLEAR (*κοχλίριον*) was a kind of spoon, which appears to have terminated with a point at one end, and at the other was broad and hollow like our own spoons. The pointed end was used for drawing snails (*cochleas*) out of their shells, and eating them, whence it derived its name; and the broader part for eating eggs, &c. Martial (xiv. 121) mentions both these uses of the cochlear, — "Sum cochleis habilis nec sum minus utilis ovis." (Compare Plin. *H. N.* xxviii. 4; Petron. 33.)

Cochlear was also the name given to a small measure like our spoonful. According to Rhemnius Fannius, it was $\frac{1}{16}$ of the cyathus.

COCHLIS, which is properly a diminutive of *cochlea*, is used as an adjective with *columna*, to describe such columns as the Trajan and Antonine; but whether the term was used with reference to the spiral staircase within the column, or to the spiral bas-relief on the outside, or to both, cannot be said with certainty. (P. Vict. *de Region. Urb. Rom.* 8, 9.)

Pliny applies the word also to a species of gem found in Arabia. (*H. N.* xxxvii. 12. a. 74.)

[P. S.]

CODEX, dim. CODICILLUS, is identical with *caudex*, as *Claudius* and *Clodius*, *claustrum* and *elestrum*, *cauda* and *coda*. Cato (*ap. Front. Epist. ad M. Anton.* i. 2) still used the form *caudex* in the same sense in which afterwards *codex* was used exclusively. (Compare Ovid. *Metam.* xii. 432.) The word originally signified the trunk or stem of a tree (Virg. *Georg.* ii. 30; Columella, xii. 19; Plin. *H. N.* xvi. 30), and was also applied to designate anything composed of large pieces of wood, whence the small fishing or ferry boats on the Tiber, which may originally have been like the Indian canoes, or were constructed of several roughly hewn planks nailed together in a rude and simple manner, were called *naves caudicariae*, or *codicariae*, or *codicariae*. (Fest. and Varro, *ap. Nonium*, xiii. 12; Gellius, x. 25.) The surname of Caudex given to Appius Claudius must be traced to this signification. But the name *codex* was especially applied to wooden tablets bound together and lined with a coat of wax, for the purpose of writing upon them, and when, at a later age, parchment or paper, or other materials were substituted for wood, and put together in the shape of a book, the name of *codex* was still applied to them. (Cic. *Verr.* ii. 1, 36; Dig. 32. tit. 1. a. 52; Sueton. *Aug.* 101.) In the time of Cicero

we find it also applied to the tablet on which a bill was written; and the tribune, Cornelius, when one of his colleagues forbade his bill to be read by the herald or scribe, read it himself (*legit codicem suum*; see Cic. *in Vat.* 2, and Ascon. Ped. *in Argum. ad Cornel.* p. 58. ed. Orelli). At a still later period, during the time of the emperors, the word was used to express any collection of laws or constitutions of the emperors, whether made by private individuals or by public authority. See the following articles.

The diminutive *codicillus*, or rather *codicilli*, was used much in the same way as *codex*. It originally signified tablets of the kind described above, and was subsequently employed to indicate any small book or document, made either of parchment or paper. (Cic. *Phil.* viii. 10, *ad Fam.* vi. 18; Suet. *Claud.* 29.) Respecting its meaning in connection with a person's testament, see TESTAMENTUM.

[L. S.]

CODEX GREGORIANUS and HERMOGENIANUS. It does not appear quite certain if this title denotes one collection or two collections. The general opinion, however, is, that there were two codices compiled respectively by Gregorianus and Hermogenianus, who are sometimes, though incorrectly, called Gregorius and Hermogenes. The codex of Gregorianus was divided into books (the number of which is not known), and the books were divided into titles. The fragments of this codex begin with constitutions of Septimius Severus, A. D. 196, and end with those of Diocletian and Maximian, A. D. 285—305. The codex of Hermogenianus, so far as we know it, is only quoted by titles, and it only contains constitutions of Diocletian and Maximian, with the exception of one by Antoninus Caracalla; it may perhaps have consisted of one book only, and it may have been a kind of supplement to the other. The name Hermogenianus is always placed after that of Gregorianus when this code is quoted. According to the Consultationes, the codex of Hermogenianus also contained constitutions of Valens and Valentinian II., which, if true, would bring down the compiler to a time some years later than the reign of Constantine the Great, under whom it is generally assumed that he lived. These codices were not made by imperial authority; they were the work of private individuals, but apparently soon came to be considered as authority in courts of justice, as is shown indirectly by the fact of the Theodosian and Justinian codes being formed on the model of the Codex Gregorianus and Hermogenianus. (Zimmern, *Geschichte des Römischen Privatrechts*, Heidelberg, 1826; Hugo, *Lehrbuch der Geschichte des Röm. Rechts*, Berlin, 1832; *Frag. Cod. Greg. et Herm.* in Schulting's *Jurisprudentia Vet. &c.*, and in the *Jus Civile Antequin.* Berol. 1815; Böcking, *Institutionen*.)

[G. L.]

CODEX JUSTINIANUS. In February of the year A. D. 528, Justinian appointed a commission, consisting of ten persons, to make a new collection of imperial constitutions. Among these ten were Tribonianus, who was afterwards employed on the Digesta and the Institutiones, and Theophilus, a teacher of law at Constantinople. The commission was directed to compile one code from those of Gregorianus, Hermogenianus, and Theodosius, and also from the constitutions of Theodosius made subsequently to his code, from those of his successors, and from the constitutions of

Justinian himself. The instructions given to the commissioners empowered them to omit unnecessary preambles, repetitions, contradictions, and obsolete matter; to express the laws to be derived from the sources above mentioned in brief language, and to place them under appropriate titles; to add to, take from, or vary, the words of the old constitutions, when it might be necessary; but to retain the order of time in the several constitutions, by preserving the dates and the consuls' names, and also by arranging them under their several titles in the order of time. The collection was to include rescripts and edicts, as well as constitutions properly so called. Fourteen months after the date of the commission, the code was completed and declared to be law (16th April, 529) under the title of the Justinianus Codex; and it was declared that the sources from which this code was derived were no longer to have any binding force, and that the new code alone should be referred to as of legal authority. (*Constit. de Justin. Cod. Confirmando.*)

The Digesta or Pandectae, and the Institutiones, were compiled after the publication of this code, subsequently to which fifty decisiones and some new constitutions also were promulgated by the emperor. This rendered a revision of the code necessary; and accordingly a commission for that purpose was given to Tribonianus, to Dorotheus, a distinguished teacher of law at Berytus in Phoenicia, and three others. The new code was promulgated at Constantinople, on the 16th November 534, and the use of the decisiones, the new constitutions, and of the first edition of the Justinianus Codex, was forbidden. The second edition (*secunda editio, repetita praelectio, Codex repetitae praelectionis*) is the code that we now possess, in twelve books, each of which is divided into titles: it is not known how many books the first edition contained. The constitutions are arranged under their several titles, in the order of time and with the names of the emperors by whom they were respectively made, and their dates.

The constitutions in this code do not go further back than those of Hadrian, and those of the immediate successors of Hadrian are few in number; a circumstance owing in part to the use made of the earlier codes in the compilation of the Justinian code, and also to the fact of many of the earlier constitutions being incorporated in the writings of the jurists, from which alone any knowledge of many of them could be derived. (*Constit. De Emendatione Cod. Dom. Justin.*)

The constitutions, as they appear in this code, have been in many cases altered by the compilers, and consequently, in an historical point of view, the code is not always trustworthy. This fact appears from a comparison of this code with the Theodosian code and the Novellae. The order of the subject-matter in this code corresponds, in a certain way, with that in the Digest. Thus the seven parts into which the fifty books of the Digest are distributed, correspond to the first nine books of the Code. The matter of the three last books of the Code is hardly treated of in the Digest. The matter of the first book of the Digest is placed in the first book of the Code, after the law relating to ecclesiastical matters, which, of course, is not contained in the Digest; and the three following books of the first part of the Digest correspond to the second book of the Code. The

following books of the Code, the ninth included, correspond respectively, in a general way, to the following parts of the Digest. Some of the constitutions which were in the first edition of the Code, and are referred to in the Institutiones, have been omitted in the second edition. (Instit. 2. tit. 20. s. 27; 4. tit. 6. s. 24.) Several constitutions, which have also been lost in the course of time, have been restored by Charondas, Cujacius, and Contina, from the Greek version of them. (Zimmern, &c.; Hugo, *Lehrbuch der Geschichte des Röm. Rechts*, &c.; Böcking, *Institutiones*.) [G. L.]

CODEX THEODOSIANUS. In the year 429, Theodosius II., commonly called Theodosius the younger, appointed a commission, consisting of eight persons, to form into a code all the edicts and generales constitutiones from the time of Constantine, and according to the model of the Codex Gregorianus and Hermogenianus (*ad similitudinem Gregoriani et Hermogeniani Codicis*). In 435, the instructions were renewed or repeated; but the commissioners were now sixteen in number. Antiochus was at the head of both commissions. It seems, however, to have been originally the design of the emperor not only to make a code which should be supplementary to, and a continuation of, the Codex Gregorianus and Hermogenianus; but also to compile a work on Roman law from the classical jurists, and the constitutions prior to those of Constantine. However this may be, the first commission did not accomplish this, and what we now have is the code which was compiled by the second commission. This code was completed, and promulgated as law in the Eastern empire in 438, and declared to be the substitute for all the constitutions made since the time of Constantine. In the same year (438) the code was forwarded to Valentinian III., the son-in-law of Theodosius, by whom it was laid before the Roman Senate, and confirmed as law in the Western empire. Nine years later Theodosius forwarded to Valentinian his new constitutions (*novellae constitutiones*), which had been made since the publication of the code; and these also were in the next year (448) promulgated as law in the Western empire. So long as a connection existed between the Eastern and Western empires, that is, till the overthrow of the latter, the name Novellae was given to the constitutions subsequent to the code of Theodosius. The latest of these Novellae that have come down to us are three of the time of Leo and Anthemius, A. D. 468.

The Codex Theodosianus consists of sixteen books, the greater part of which, as well as his Novellae, exist in their genuine state. The books are divided into titles, and the titles are subdivided into constitutiones or laws. The valuable edition of J. Gothofredus (6 vols. fol. Lugd. 1665, re-edited by Ritter, Lips. 1736—1745, 6 vols. fol.) contains the code in its complete form, except the first five books, for which it was necessary to use the epitome contained in the Breviarium [BREVIARIUM]. This is also the case with the edition of this code contained in the *Jus Civile Ante-justinianum* of Berlin, 1815. But the recent discovery of a MS. of the Breviarium, at Milan, by Clossius, and of a Palimpsest of the Theodosian code at Turin by Peyron, has contributed largely both to the critical knowledge of the other parts of this code, and has added numerous genuine constitutions to the first five books, particularly to the

first. Hñel's discoveries also have added to our knowledge of the later books, and his edition of the Theodosian Code, Bonn, 1837, 4to, is the latest and the best.

The extract or epitome of the first five books in the Breviarium is very scanty; 262 laws, or fragments of laws, were omitted, which the discoveries of Clossius and Peyron reduced to 200. More recent discoveries by Carlo Bandi a Vesme at Turin will add to the 6th, 8th, 9th, 10th, and 16th books.

The Novellae Constitutiones anterior to the time of Justinian are collected in six books in the *Jus Civile AntJustinianicum*, Berlin, 1815, and in Hñel's more recent edition.

The commission of Theodosius was empowered to arrange the constitutions according to their subject, and under each subject according to the order of time; to separate those which contained different matter, and to omit what was not essential or superfluous. The arrangement of the Theodosian code differs in the main from that of the code of Justinian, which treats of *jus ecclesiasticum* in the beginning, while that of Theodosius in the first book treats chiefly of offices; and the second, third, fourth, and beginning of the fifth book treat of *jus privatum*. The order here observed, as well as in the code which it professed to follow as a model, was the order of the writers on the praetorian edict. The eighth book contains the laws as to gifts, the penalties of celibacy, and that relating to the *jus liberorum*. The ninth book begins with crimes. The laws relating to the Christian church are contained in the sixteenth and last book. It is obvious from the circumstances under which the Theodosian and Justinian codes were compiled, and from a comparison of them, that the Justinian code was greatly indebted to the Theodosian. The Theodosian code was also the basis of the edict of Theodoric king of the Ostrogoths; it was epitomised, with an interpretation, in the Visigoth *Lex Romana* [BREVARIUM]; and the Burgundian *Lex Romana*, commonly called *Papieni Liber Responsorum*, was founded upon it. [G. L.] CODICILLUS. [CODEX.]

CODON (*κόδων*), a bell. [TINTINNABULUM.]

COE/MPATIO. [MATRIMONIUM.]

COENA (*δείπνον*), the principal meal of the Greeks and Romans, corresponding to our dinner, rather than supper. As the meals are not always clearly distinguished, it will be convenient to give a brief account of all of them under the present head.

1. GREEK.—The materials for an account of the Greek meals, during the classical period of Athens and Sparta, are almost confined to incidental allusions of Plato and the comic writers. Several ancient authors, termed *δειπνόλογοι*, are mentioned by Athenaeus; but, unfortunately, their writings only survive in the fragments quoted by him. His great work, the *Deipnosophists*, is an inexhaustible treasury of this kind of knowledge, but ill arranged, and with little attempt to distinguish the customs of different periods.

The poems of Homer contain a real picture of early manners, in every way worthy of the antiquarian's attention. As they stand apart from all other writings, it will be convenient to exhibit in one view the state of things which they describe. It is not to be expected that the Homeric meals at all agree with the customs of a later period; indeed it would be a mere waste of time to attempt

adapting the one to the other. Athenaeus (i. p. 8) who has entered fully into the subject, remarks on the singular simplicity of the Homeric banquets, in which kings and private men all partake of the same food. It was common even for royal personages to prepare their own meals (*Il.* ix. 206—218; compare *Gen.* xxvii. 31), and Ulysses (*Od.* xv. 522) declares himself no mean proficient in the culinary art—

Πῦρ τ' εὖ νηῆσαι, διὰ δὲ ξύλα θανά κέδασσαι
Δαιτρεῖσθαι τε καὶ ἐπιτῆσαι καὶ οἰνοχοῆσαι.

Three names of meals occur in the *Iliad* and *Odyssey*—*ἄριστον*, *δείπνον*, *δάρπρον*. This division of the meals is ascribed, in a fragment of Aeschylus quoted by Athenaeus (i. p. 11), to Palamedes. The word *ἄριστον* uniformly means the early (*ἄρ' τοῖς*, *Od.* xvi. 2) as *δάρπρον* does the late meal; but *δείπνον*, on the other hand, is used for either (*Il.* ii. 381, *Od.* xvii. 170), apparently without any reference to time. We should be careful, however, how we argue from the unsettled habits of a camp to the regular customs of ordinary life.

From numerous passages in the *Iliad* and *Odyssey* it appears to have been usual to sit during meal-times. In the palace of Telemachus, before eating a servant brings Minerva, who is habited as a stranger, the *χρῆνιψ* or lustral water "in a golden pitcher, pouring it over a silver vessel." (*Od.* i. 136.) Beef, mutton, and goat's flesh were the ordinary meats, usually eaten roasted; yet from the lines (*Il.* xxi. 363)

Ὅς δὲ λέθης (εἴ ἔδον, ἐπεγέρματος πυρὶ πολλῆ,
Κύλισσιν μολδόμενος ἐπαλοτροφός σιδάλοιο,

we learn that boiled meats were held to be far from unsavoury. Cheese, flour, and occasionally fruits, also formed part of the Homeric meals. Bread, brought on in baskets (*Il.* ix. 217), and salt (*ἅλα*, to which Homer gives the epithet *δείοις*), are mentioned: from *Od.* xvii. 455, the latter appears, even at this early period, to have been a sign of hospitality; in *Od.* xi. 122, it is the mark of a strange people not to know its use.

Each guest appears to have had his own table, and he who was first in rank presided over the rest. Menelaus, at the marriage feast of Hermione, begins the banquet by taking in his hands the side of a roasted ox and placing it before his friends (*Od.* iv. 65.) At the same entertainment music and dancing are introduced:—"The divine minstrel hymned to the sound of the lyre, and two tumblers (*κυβιστηγῆρε*) began the festive strain, wheeling round in the midst." It was not beneath the notions of those early days to stimulate the heroes to battle (*Il.* xii. 311),

Ἔδρη τε, κρέσσιν τε, ἰδὲ πλείους δευασσιν,

and Ajax on his return from the contest with Hector is presented by Agamemnon with the *νῦτα διπρεκέα*.

The names of several articles of the festive board occur in the *Iliad* and *Odyssey*. Knives, spits, cups of various shapes and sizes, bottles made of goat-skin, casks, &c., are all mentioned. Many sorts of wine were in use among the heroes; some of Nestor's is remarked on as being eleven years old. The Maronean wine, so called from Maron, a hero, was especially celebrated, and would bear mingling with twenty times its own quantity of water. It may be observed that wine was seldom, if ever, drunk pure. When Nestor and Machaon

sit down together, "a woman," like unto a goddess, sets before them a polished table, with a brazen tray, *ἐπὶ δὲ κρόμμον πότφ ὕφον*. Then she mingles a cup of Pramnian wine in Nestor's own goblet, and cuts the cheese of goat's milk with a steel knife, scattering white flour over it. The guests drank to one another: thus the gods (*Il.* iv. 4) *δεῖδέχατ' ἀλλήλους*, and Ulysses pledged Achilles, saying, *χαῖρ', Ἀχιλεῦ* (*Il.* ix. 225). Wine was drawn from a larger vessel [CRATER] into the cups from which it was drunk, and before drinking, libations were made to the gods by pouring some of the contents on the ground. (*Il.* vii. 480.)

The interesting scene between Ulysses and the swineherd (*Od.* xiv. 420) gives a parallel view of early manners in a lower grade of life. After a welcome has been given to the stranger, "The swineherd cleaves the wood, and they place the swine of five years old on the hearth. In the goodness of his heart, Eumæus forgets not the immortal gods, and dedicates the firstling lock with a prayer for Ulysses's return. He next smites the animal with a piece of cleft oak, and the attendants sing off the hair. He then cuts the raw meat all round from the limbs, and laying it in the rich fat, and sprinkling flour upon it, throws it on the fire as an offering (*ἀπαρχή*) to the gods, the rest the attendants cut up and pierce with spits, and having cooked it with cunning skill, draw off all, and lay the mess on the tables. Then the swineherd stands up to divide the portions, seven portions in all, five for himself and the guests, and one apiece to Mercury and the nymphs."

There is nothing more worthy of remark in the Homeric manners than the hospitality shown to strangers. Before it is known who they are, or whence they come, it is the custom of the times to give them a welcome reception. (*Od.* i. 125, &c.) When Nestor and his sons saw the strangers, "They all came in a crowd and saluted them with the hand, and made them sit down at the feast on the soft fleeces by the sea shore."

The Greeks of a later age usually partook of three meals, called *ἀκράτεια*, *ἄριστον*, and *δείπνον*. The last, which corresponds to the *δάρκον* of the Homeric poems, was the evening meal or dinner; the *ἄριστον* was the luncheon; and the *ἀκράτεια*, which answers to the *ἄριστον* of Homer, was the early meal or breakfast.

The *ἀκράτεια* was eaten immediately after rising in the morning (*ἐξ εὐνῆς, ἔωθεν*, Aristoph. *Aves*, 1286). It usually consisted of bread, dipped in unmixed wine (*ἀκρατος*), whence it derived its name. (Plut. *Symp.* viii. 6. § 4; Schol. ad *Theocr.* i. 51; Athenæus, i. p. 11.)

Next followed the *ἄριστον* or luncheon; but the time at which it was taken is uncertain. It is frequently mentioned in Xenophon's *Anabasis*, and appears to have been taken at different times, as would naturally be the case with soldiers in active service. Suidas (*s. v.* *Δείπνον*) says that it was taken about the third hour, that is about nine o'clock in the morning; but this account does not agree with the statements of other ancient writers. We may conclude from many circumstances that this meal was taken about the middle of the day, and that it answered to the Roman *prandium*, as Plutarch (*Symp.* viii. 6. § 5) asserts. Besides which the time of the *πλήθοντα ἀγορά*, at which provisions seem to have been bought for the

ἄριστον, was from nine o'clock till noon. This agrees with the account of Aristophanes (*Vesp.* 605—612), who introduces Philocleon describing the pleasure of returning home after attending the courts, and partaking of a good *ἄριστον*. The courts of justice could scarcely have finished their sittings by nine o'clock. Timæus also defines *δείλη πρώτη*, which we know to have been the early part of the afternoon [*Dies*], as the time before the *ἄριστον*. The *ἄριστον* was usually a simple meal, but of course varied according to the habits of individuals. Thus Ischomachus, in describing his mode of life to Socrates, who greatly approves of it, says, *Ἀριστῶ δὲα μήτε κερδὸς μήτε ἔργων πλήρης διημερεύω* (Xen. *Oecon.* xi. 18).

The principal meal, however, was the *δείπνον*. It was usually taken rather late in the day, frequently not before sunset. (Lysias, *c. Eratosth.* p. 26.) Aristophanes (*Ecc.* 652) says,

*Σὺ δὲ μελήσει,
ὅταν ᾖ δεκάπουν τὸ στοιχείον λιπαρὸν χωρεῖν
ἐπὶ δείπνον.*

But in order to ascertain the time meant by *δεκάπουν τὸ στοιχείον*, the reader is referred to the article *HOROLOGIUM*.

The Athenians were a social people, and were very fond of dining in company. Entertainments were usually given, both in the heroic ages and latter times, when sacrifices were offered to the gods, either on public or private occasions; and also on the anniversary of the birthdays of members of the family, or of illustrious persons, whether living or dead. Plutarch (*Symp.* viii. 1. § 1) speaks of an entertainment being given on the anniversary of the birthdays both of Socrates and Plato.

When young men wished to dine together they frequently contributed each a certain sum of money, called *συμβολή*, or brought their own provisions with them. When the first plan was adopted, they were said *ἐκὼ συμβολῶν δεῖπνεῖν*, and one individual was usually entrusted with the money to procure the provisions, and make all the necessary preparations. Thus we read in Terence (*Eunuch.* iii. 4) —

"Heri aliquot adolescentuli coimus in Piræo,
In hunc diem ut de symbolis essemus. Chaeream
ei rei
Praefecimus: dati annuli: locus, tempus consti-
tutum est."

This kind of entertainment in which each guest contributed to the expense, is mentioned in Homer (*Od.* i. 226) under the name of *ἔρανος*.

An entertainment in which each person brought his own provisions with him, or at least contributed something to the general stock, was called *δείπνον ἐκὼ στυγλίδος*, because the provisions were brought in baskets. (Athen. viii. p. 365.) This kind of entertainment is also spoken of by Xenophon (*Mem.* iii. 14. § 1).

The most usual kind of entertainments, however, were those in which a person invited his friends to his own house. It was expected that they should come dressed with more than ordinary care, and also have bathed shortly before; hence, when Socrates was going to an entertainment at Agathon's, we are told that he both washed and put on his shoes, — things which he seldom did. (Plato, *Symp.* c. 2. p. 174.) As soon as the guests arrived

at the house of their host, their shoes or sandals were taken off by the slaves, and their feet washed (*πυλᾶν* and *ἀπολῖναι*.) In ancient works of art we frequently see a slave or other person represented in the act of taking off the shoes of the guests, of which an example is given, from a terra cotta in the British Museum, in p. 308. After their feet had been washed, the guests reclined on the *κλῖναι* or couches (*Καὶ ἔμην ἔφη ἀπολῖναι τὸν ταῖδα, ἵνα κατακλῖντο*, Plato, *Symp.* c. 3. p. 175).

It has already been remarked that Homer never describes persons as reclining, but always as sitting at their meals; but at what time the change was introduced is uncertain. Müller (*Dorians*, iv. 3. § 1) concludes from a fragment of Alcman, quoted by Athenæus (iii. p. 111), that the Spartans were accustomed to recline at their meals as early as the time of Alcman. The Dorians of Crete always sat; but the Athenians, like the Spartans, were accustomed to recline. The Greek women and children, however, like the Roman, continued to sit at their meals, as we find them represented in ancient works of art.

It was usual for only two persons to recline on each couch. Thus Agathon says to Aristodemus, *Σὺ δ', Ἀριστόδημη, παρ' Ἐρυξίμαχον κατακλίνου: σὺ δὲ Σωκράτης, Δεῦρο, Σόκρατες, παρ' ἐμὲ κατέκειτο* (Plato, *Symp.* c. 3. 4. p. 175). Also at a banquet given by Attaginus of Thebes to fifty Persians and fifty Greeks, we are told that one Persian and one Greek reclined on each couch. In ancient works of art we usually see the guests represented in this way; but sometimes there is a larger number on one long *κλίνη*: see the cut under the article *SYMPOSIUM*. The manner in which they reclined, the *σχῆμα τῆς κατακλίσεως*, as Plutarch (*Symp.* v. 6) calls it, will be understood by referring to the woodcut already mentioned, where the guests are represented reclining with their left arms on striped pillows (*παγκρόνια*), and having their right free; whence Lucian (*Λαμπρ.* c. 6) speaks of *ἐν' ἀγκῶνας δεκνῆναι*.

After the guests had placed themselves on the *κλῖναι*, the slaves brought in water to wash their hands (*ὕδωρ κατὰ χεῖρας ἰδόνῃ*). The subsequent proceedings of the dinner are briefly described in two lines of Aristophanes (*Vesp.* 1216),

*"Ὅτῳρ κατὰ χεῖρας τὰς τραπέζας εἰσφέρειν
Δειπνοῦμεν ἀπονεύμεθ' ἥδη σπένδομεν.*

The dinner was then served up; whence we read in Aristophanes, and elsewhere, of *τὰς τραπέζας εἰσφέρειν*, by which expression we are to understand not merely the dishes, but the tables themselves. (Philoxen. *op. Ath.* iv. p. 146, f.) It appears that a table, with provisions upon it, was placed before each *κλίνη*; and thus we find in all ancient works of art, which represent banquets or symposia, a small table or tripod placed before the *κλίνη*, and when there are more than two persons on the *κλίνη*, several of such tables. These tables are evidently small enough to be moved with ease.

In eating, the Greeks had no knives or forks, but made use of their fingers only, except in eating soups or other liquids, which they partook of by means of a spoon, called *μυστὴν*, *μύστρον*, or *μύστρος*. Sometimes they used instead of a spoon, a hollowed piece of bread, also called *μυστὴν*. (Pollux, vi. 87, x. 89; Aristoph. *Eqv.* 1164; *Isidis*, a. v. *μυστὴν*.) After eating they wiped

their fingers on pieces of bread, called *ἀπομαργαλῖαι*. (Pollux, vi. 93.) They did not use any cloths or napkins; the *χειρόμακτρα* and *ἐκμαγῖα*, which are sometimes mentioned (Pollux, l. c.), were towels, which were only used when they washed their hands.

It appears that the arrangement of the dinner was entrusted to certain slaves. (Plato, *Symp.* c. 3. p. 175.) The one who had the chief management of it was called *τραπέζοποιός* or *τραπέζοκόμος* (Athen. iv. p. 170, e.; Pollux, iii. 41, vi. 13).

It would exceed the limits of this work to give an account of the different dishes which were introduced at a Greek dinner, though their number is far below those which were usually partaken of at a Roman entertainment. The most common food among the Greeks was the *μάζα* (Dor. *μάδδα*), a kind of frumenty or soft cake, which was prepared in different ways, as appears by the various names which were given to it. (Pollux, vi. 76.) The *μάζα* is frequently mentioned by Aristophanes. The *φυστή μάζα*, of which Philocleon partakes on returning home from the courts (Aristoph. *Vesp.* 610), is said by the Scholiast to have been made of barley and wine. The *μάζα* continued to the latest times to be the common food of the lower classes. Wheat or barley bread was the second most usual species of food; it was sometimes made at home, but more usually bought at the market of the *ἀροσπῶλαι* or *ἀροσπώλιδες*. The vegetables ordinarily eaten were mallows (*μαλάχην*), lettuces (*δριβαί*), cabbages (*βάφανοι*), beans (*κίανοι*), lentils (*φακῖαι*), &c. Pork was the most favourite animal food, as was the case among the Romans; Plutarch (*Symp.* iv. 5. § 1) calls it *τὸ δικαίτατον κρέας*. Sausages also were very commonly eaten. It is a curious fact, which Plato (*De Rep.* iii. c. 13. p. 404) has remarked, that we never read in Homer of the heroes partaking of fish. In later times, however, fish was one of the most favourite foods of the Greeks, inasmuch so that the name of *ὄψων* was applied to it *κατ' ἐξοχήν*. (Athen. vii. p. 276, e.) A minute account of the fishes which the Greeks were accustomed to eat, is given at the end of the seventh book of Athenæus, arranged in alphabetical order.

The ordinary meal for the family was cooked by the mistress of the house, or by the female slaves under her direction; but for special occasions professional cooks (*μάγειροι*) were hired, of whom there appear to have been a great number. (Diog. Laërt. ii. 72.) They are frequently mentioned in the fragments of the comic poets; and those who were acquainted with all the refinements of their art were in great demand in other parts of Greece besides their own country. The Sicilian cooks, however, had the greatest reputation (Plato, *De Rep.* iii. c. 13. p. 404), and a Sicilian book on cookery by one Mithæacus is mentioned in the Gorgias of Plato (c. 156. p. 518. Compare Maxim. Tyr. *Dias.* iv. 5); but the most celebrated work on the subject was the *Γαστρονομία* of Archestratus. (Athen. iii. p. 104. b.)

A dinner given by an opulent Athenian usually consisted of two courses, called respectively *πρῶται τράπεζαι* and *δεύτεραι τράπεζαι*. Pollux (vi. 83), indeed, speaks of three courses, which was the number at a Roman dinner; and in the same way we find other writers under the Roman empire speaking of three courses at Greek dinners; but before the Roman conquest of Greece

and the introduction of Roman customs, we only read of two courses. The first course embraced the whole of what we consider the dinner, namely, fish, poultry, meat, &c.; the second, which corresponds to our dessert and the Roman *bellaria*, consisted of different kinds of fruit, sweetmeats, confections, &c.

When the first course was finished the tables were taken away (*ἀρπν, ἀρπν, ἐρπν, ἀρπν, ἐκφρπν, βαρπν, τὰς τρπν*), and water was given to the guests for the purpose of washing their hands. Crowns made of garlands of flowers were also then given to them, as well as various kinds of perfumes. (Phyll. *ap. Athen.* ix. p. 408, e.) Wine was not drunk till the first course was finished; but as soon as the guests had washed their hands, unmixed wine was introduced in a large goblet, called *μερπν* or *μερπν*, of which each drank a little, after pouring out a small quantity as a libation. This libation was said to be made to the "good spirit" (*ἀγρπν*), and was usually accompanied with the singing of the pæan and the playing of flutes. After this libation mixed wine was brought in, and with their first cup the guests drank to *Διὸς Σερπν*. (Xen. *Symp.* ii. 1; Plato, *Symp.* c. 4. p. 176; Diod. Sic. iv. 3; Suidas, s. v. *ἀγρπν*.) With the *σρν*, the *δερν* closed; and at the introduction of the dessert (*δερν*) the *πρπν*, *σρν*, or *κρπν* commenced, of which an account is given in the article *SYMPOSIUM*. (Becker, *Charikles*, vol. i. pp. 411—450.)

2. ROMAN. In the following account of Roman meals, we take the ordinary life of the middle ranks of society in the Augustan age, noticing incidentally the most remarkable deviations, either on the side of primitive simplicity or of late refinement.

The meal with which the Roman sometimes began the day was the *jentaculum*, a word derived, as Isidore would have us believe, a *jejunio solvendo*, and answering to the Greek *ἀκρπν*. Festus tells us that it was also called *prandicula* or *silatium*. Though by no means uncommon, it does not appear to have been usual, except in the case of children, or sick persons, or the luxurious, or, as Nonius adds (*De Re Cōb.* i. 4), of labouring men. An irregular meal (if we may so express it) was not likely to have any very regular time: two epigrams of Martial, however, seem to fix the hour at about three or four o'clock in the morning. (Mart. *Ep.* xiv. 233, viii. 67. 9.) Bread, as we learn from the epigram just quoted, formed the substantial part of this early breakfast, to which cheese (Apol. *Met.* i. p. 110, ed. Francof. 1621), or dried fruit, as dates and raisins (Suet. *Aug.* 76) were sometimes added. The *jentaculum* of Vitellius (Suet. *Vit.* c. 7. c. 13) was doubtless of a more solid character; but this was a case of monstrous luxury.

Next followed the *prandium* or luncheon, with persons of simple habits a frugal meal—

"Quantum interpellet inani
Ventre diem durare."

Hor. *Sat.* i. 6. 127, 128.

As Horace himself describes it in another place (*Sat.* ii. 2. 17),

"Cum sale panis
Latrantem stomachum bene leniet,"

agreeably with Seneca's account (*Ep.* 84), *Panis deinde siccus et sine mensa prandium, post quod non sunt lavandae manus*. From the latter passage we learn incidentally that it was a hasty meal, such as sailors (Juv. *Sat.* vi. 101) and soldiers (Liv. xxviii. 14) partook of when on duty, without sitting down. The *prandium* seems to have originated in these military meals, and a doubt has been entertained whether in their ordinary life the Romans took food more than once in the day. Pliny (*Ep.* iii. 5) speaks of Aufidius Bassus as following the ancient custom in taking luncheon; but again (*Ep.* iii. 1), in describing the manners of an old-fashioned person, he mentions no other meal but the *coena*. The following references (Sen. *Ep.* 87; Cic. *ad Att.* v. 1; Mart. vi. 64) seem to prove that luncheon was a usual meal, although it cannot be supposed that there were many who, like Vitellius, could avail themselves of all the various times which the different fashions of the day allowed (Suet. *Vit.* 13). It would evidently be absurd, however, to lay down uniform rules for matters of individual caprice, or of fashion at best.

The *prandium*, called by Suetonius (*Aug.* 78) *cibus meridianus*, was usually taken about twelve or one o'clock. (Suet. *Cal.* 58, *Claud.* 34.) For the luxurious palate, as we gather incidentally from Horace's satires, very different provision was made from what was described above as his own simple repast. Fish was a requisite of the table (*Sat.* ii. 2. 16)—

"Foris est promus, et atrum
Defendens pices hyemat mare,"

to which the choicest wines, sweetened with the finest honey, were to be added—

"Nisi Hymettia mella Falerno
Ne biberis diluta,"

which latter practice is condemned by the learned gastronomer (*Sat.* ii. 4. 26), who recommends a weaker mixture—

"Leni praecordia mulso
Prolucrius melius,"

and gravely advises to finish with mulberries fresh gathered in the morning (*Ibid.* 21—23; see Tate's *Horace*, 2nd ed. pp. 97—106).

The words of Festus, *coena apud antiquos dicebatur quod nunc prandium*, have given much trouble to the critics, perhaps needlessly, when we remember the change of hours in our own country. If we translate *coena*, as according to our notions we ought to do, by "dinner," they describe exactly the alteration of our own manners during the last century. The analogy of the Greek word *δερν*, which, according to Athenaeus, was used in a similar way for *ἀκρπν*, also affords assistance. Another meal, termed *merenda*, is mentioned by Isidore and Festus, for which several refined distinctions are proposed; but it is not certain that it really differed from the *prandium*.

The table, which was made of citron, maple-wood, or even of ivory (Juv. *Sat.* xi.), was covered with a *mantle*, and each of the different courses, sometimes amounting to seven (Juv. *Sat.* i. 95), served upon a *ferculum* or waiter. In the "munda supplex" of Horace, great care was taken

"Ne turpe toral, ne sordida mappa
Corruget nares; ne non et cantharus et lanx
Ostendat tibi te." *Ep.* i. 5. 22—24.

And on the same occasion, the whole dinner, which consisted of vegetables, was served up on a single platter (v. 2).

To return to our description, the dinner usually consisted of three courses: first, the *promulsis* or *antecœna* (Cic. *ad Fam.* ix. 20), called also *gustatio* (Petron. *Sat.* 31), made up of all sorts of stimulants to the appetite, such as those described by Horace (*Sat.* ii. 8. 9),

“Rapula, lactucæ, radices, qualia lassum
Pervellunt stomachum, siser, alec, faecula Coa.”

Eggs also (Cic. *ad Fam.* ix. 20; Hor. *Sat.* i. 3. 6) were so indispensable to the first course that they almost gave a name to it (*ab ovo Usque ad mala*). In the *promulsis* of Trimalchio's supper (Petron. 31) — probably designed as a satire on the emperor Nero — an ass of Corinthian brass is introduced, bearing two panniers, one of white, the other of black olives, covered with two large dishes inscribed with Trimalchio's name. Next come dormice (*gliræ*) on small bridges sprinkled with poppy-seed and honey, and hot sausages (*toma-cula*) on a silver gridiron (*craticula*), with Syrian prunes and pomegranate berries underneath. These, however, were imperial luxuries; the frugality of Martial only allowed of lettuce and Sicilian olives; indeed he himself tells us that the *promulsis* was a refinement of modern luxury (*Ep.* xiii. 14. 1). Macrobius (*Sat.* ii. 9) has left an authentic record of a *cœna pontificum* (see Hor. *Carm.* ii. 14. 28), given by Lentulus on his election to the office of flamen, in which the first course alone was made up of the following dishes: — Several kinds of shell-fish (*echini, ostræe crudæ, pelorides, spondyli, glycomarides, murices purpuræ, balani albi et nigri*), thrushes, asparagus, a fattened hen (*gallina altilis*), beccaficoes (*ficedulæ*), nettles (*urticæ*), the haunches of a goat and wild boar (*tambi capragini, aprugni*), rich meats made into pasties (*altilia ex farina involuta*), many of which are twice repeated in the inventory.

It would far exceed the limits of this work even to mention all the dishes which formed the second course of a Roman dinner, which, whoever likes, may find minutely described in Bulengerus. (*De Conviviis*, ii. and iii.) Of birds, the Guinea hen (*Afra avis*), the pheasant (*phasiana*, so called from Phasis, a river of Colchis), and the thrush, were most in repute; the liver of a capon steeped in milk (Pliny), and beccaficoes (*ficedulæ*) dressed with pepper, were held a delicacy. (Mart. iii. 5.) The peacock, according to Macrobius (*Sat.* ii. 9), was first introduced by Hortensius the orator, at an inaugural supper, and acquired such repute among the Roman gourmands as to be commonly sold for fifty denarii. Other birds are mentioned, as the duck (*anas*, Mart. xiii. 52), especially its head and breast; the woodcock (*otlagæ*), the turtle, and flamingo (*phœnicopterus*, Mart. xiii. 71), the tongue of which, Martial tells us, especially commended itself to the delicate palate. Of fish, the variety was perhaps still greater: the charr (*scurus*), the turbot (*rhombus*), the sturgeon (*acipenser*), the mullet (*mullus*), were highly prized, and dressed in the most various fashions. In the banquet of Nasidienus, an eel is brought, garnished with prawns swimming in the sauce. (Mart. *Xenia*, xiii.) Of solid meat, pork seems to have been the favourite dish, especially sucking-pig (Mart. xiii. 41); the pape

of a sow served up in milk (*sumen*, Ibid. *Ep.* 44), the filch of bacon (*petaso*, *Ep.* 55), the womb of a sow (*vulva*, *Ep.* 56), are all mentioned by Martial. Boar's flesh and venison were also in high repute, especially the former, described by Juvenal (*Sat.* i. 141) as *animal propter convivium natum*. Condiments were added to most of these dishes: such were the *muria*, a kind of pickle made from the tunny fish (Mart. xiii. 103); the *garum sociorum*, made from the intestines of the mackerel (*scomber*), so called because brought from abroad; *alec*, a sort of brine; *fuex*, the sediment of wine, &c., for the receipts of which we must again refer the reader to Catius's learned instructor. (Hor. *Sat.* ii. 4.) Several kinds of *fungi* (Ibid. v. 20) are mentioned, truffles (*boleti*), mushrooms (*tuberæ*), which either made dishes by themselves, or formed the garniture for larger dishes.

It must not be supposed that the *artifices* of imperial Rome were at all behind ourselves in the preparation and arrangements of the table. In a large household, the functionaries to whom this important part of domestic economy was entrusted were four, the butler (*promus*), the cook (*archimagirus*), the arranger of the dishes (*structor*), and the carver (*carptor* or *scisor*). Carving was taught as an art, and, according to Petronius (35, 36), performed to the sound of music, with appropriate gesticulations (Juv. *Sat.* v. 121),

“Nec minimo sane discrimine refert
Quo vultu lepores et quo gallina secetur.”

In the supper of Petronius, a large round tray (*ferculum, repositorium*) is brought in, with the signs of the zodiac figured all round it, upon each of which the *artiste* (*structor*) had placed some appropriate viand, a goose on Aquarius, a pair of scales with tarts (*scribitæ*) and cheesecakes (*placentæ*) in each scale on Libra, &c. In the middle was placed a hive supported by delicate herbage. Presently four slaves come forward dancing to the sound of music, and take away the upper part of the dish; beneath appear all kinds of dressed meats; a hare with wings, to imitate Pegasus, in the middle; and four figures of Marsyas at the corners, pouring hot sauce (*garum piperatum*) over the fish, that were swimming in the Euripus below. So entirely had the Romans lost all shame of luxury, since the days when Cincius, in supporting the Fannian law, charged his own age with the enormity of introducing the *porcus Trojanus* (a sort of pudding stuffed with the flesh of other animals, Macrobius *Sat.* ii. 2).

The *bellaria* or dessert, to which Horace alludes when he says of Tigellius *ab ovo Usque ad mala citaret*, consisted of fruits (which the Romans usually ate uncooked), such as almonds (*amygdalæ*), dried grapes (*uvæ passæ*), dates (*palmulæ, laryotæ, dactyli*); of sweetmeats and confections, called *edulia mellita, dulciaria*, such as cheesecakes (*cupediæ, crustula, tibi, placentæ, artolagani*), almond cakes (*coptæ*), tarts (*scribitæ*), whence the maker of them was called *pistor dulciarius, placentarius, libarius*, &c.

We will now suppose the table spread and the guests assembled, each with his *mappa* or napkin (Mart. xii. 29), and in his dinner dress, called *comatoria* or *cubitaria*, usually of a bright colour (Petron. c. 21), and variegated with flowers. First they took off their shoes for fear of soiling the couch (Mart. iii. 30), which was often inlaid with

ivory or tortoiseshell, and covered with cloth of gold. Next they laid down to eat (Hor. *Sat.* i. 4. 39), the head resting on the left elbow and supported by cushions. (Mart. iii. 8.) There were usually, but not always, three on the same couch (Hor. *Sat.* i. 4. 86), the middle place being esteemed the most honourable. Around the tables stood the servants (*ministri*) clothed in a tunic (Hor. *Sat.* ii. 6. 107), and girt with napkins (Suet. *Cal.* 26): some removed the dishes and wiped the tables with a rough cloth (*gansope*, Hor. *Sat.* ii. 8. 11), others gave the guests water for their hands, or cooled the room with fans. (Mart. iii. 82.) Here stood an Eastern youth (Juv. *Sat.* v. 55) behind his master's couch, ready to answer the noise of the fingers (*digiti crispitus*, Mart. vi. 89), while others bore a large platter (*mazonomum*) of different kinds of meat to the guests. (Hor. *Sat.* ii. 8. 86.)

Whatever changes of fashion had taken place since primitive times, the coena in Cicero's day (*ad Att.* ix. 7) was at all events an evening meal. It was usual to bathe about two o'clock and dine at three, hours which seem to have been observed, at least by the higher classes, long after the Augustan age. (Mart. iv. 8. 6, xi. 53. 3; Cic. *ad Fam.* ix. 26; Plin. *Ep.* iii. 1.) When Juvenal mentions two o'clock as a dinner hour, he evidently means a censure on the luxury of the person named (*Sat.* i. 49, 50),

"Exul ab octava Marius bibit."

In the banquet of Nasidienus, about the same hour is intended when Horace says to Fundanius,

"Nam mihi quaserenti convivam dictus here illic
De medio potare die."

Horace and Maecenas used to dine at a late hour about sunset. (Hor. *Sat.* ii. 7. 33, *Ep.* i. 5. 3.) Perhaps the various statements of classical authors upon this subject can only be reconciled by supposing that with the Romans, as with ourselves, there was a great variety of hours in the different ranks of society.

Dinner was set out in a room called *coenatio* or *diæta* (which two words perhaps conveyed to a Roman ear nearly the same distinction as our dining-room and parlour). The *coenatio*, in rich men's houses, was fitted up with great magnificence. (Sen. *Ep.* 90.) Suetonius (*Nero*, 31) mentions a supper-room in the golden palace of Nero, constructed like a theatre, with shifting scenes to change with every course. In the midst of the *coenatio* were set three couches (*triclinia*), answering in shape to the square, as the long semicircular couches (*sigmata*) did to the oval tables. An account of the disposition of the couches, and of the place which each guest occupied, is given in the article *TRICLINIUM*.

The Greeks and Romans were accustomed, in later times, to recline at their meals; though this practice could not have been of great antiquity in Greece, since Homer never describes persons as reclining, but always as sitting, at their meals. Isidore of Seville (*Orig.* xx. 11) also attributes the same practice to the ancient Romans. Even in the time of the early Roman emperors, children in families of the highest rank used to sit together at an inferior table, while their fathers and elders reclined on couches at the upper part of the room. (Tacit. *Ann.* xiii. 16; Suet. *Aug.* 65, *Claud.* 32.)

Roman ladies continued the practice of sitting at table, even after the recumbent position had become common with the other sex. (Varro, *ap. Isid. Orig.* xx. 11; Val. Max. ii. 1. § 3.) It appears to have been considered more decent, and more agreeable to the severity and purity of ancient manners, for women to sit, more especially if many persons were present. But, on the other hand, we find cases of women reclining, where there was conceived to be nothing bold or indelicate in their posture. In some of the bas-reliefs, representing the visit of Bacchus to Icarus, Erigone, instead of sitting on the couch, reclines upon it in the bosom of her father. In Juvenal (*Sat.* ii. 120) a bride reclines at the marriage supper on the bosom of her husband; which is illustrated by the following woodcut, taken from Montfaucon (*Ant. Exp. Suppl.* iii. 66).

It seems intended to represent a scene of perfect matrimonial felicity. The husband and wife recline on a sofa of rich materials. A three-legged table is spread with viands before them. Their two sons are in front of the sofa, one of them sitting, in the manner above described, on a low stool, and playing with the dog. Several females and a boy are performing a piece of music for the entertainment of the married pair.

It has been already remarked that, before lying down, the shoes or sandals were taken off. In all the ancient paintings and bas-reliefs illustrative of this subject, we see the guests reclining with naked feet; and in those of them which contain the

favourite subject of the visit of Bacchus to Icarus, we observe a faun performing for Bacchus this office. The preceding woodcut, taken from a terra cotta in the British Museum, representing this subject, both shows the naked feet of Icarus, who has partly raised himself from his couch to welcome his guest, and also that Bacchus has one of his feet already naked, whilst the faun is in the act of removing the shoe from the other. COENA/CULUM. [DOMUS.]

COENATIO. [COENA, p. 308, a.]

COENATORIA. [COENA, p. 307, b.; SYNTHESIS.]

COGNATI. The following passage of Ulpian (*Frag. tit. 26. § 1*) will explain the meaning of this term:—

“The hereditates of intestate ingenui belong in the first place to their sui heredes, that is, children who are in the power of the parent, and those who are in the place of children (as grandchildren for instance); if there are no sui heredes, it belongs to the consanguinei, that is, brothers and sisters by the same father (it was not necessary that they should be by the same mother); if there are no consanguinei, it belongs to the remaining nearest agnati, that is, to the cognati of the male sex, who trace their descent through males, and are of the same familia. And this is provided by a law of the Twelve Tables:—*Si intestato mortuus cui unus heres nec exsit, agnatus proximus familiam habeto.*”

Cognati are all those who, according to the *Jus Gentium* or *Jus Naturale*, are sprung from one person, whether male or female (cognati . . . quasi ex uno mati, Dig. 38. tit. 8. a. l. § 1.). Pure *Naturalis Cognatio* exists between a woman, who is not in manu, and her children, whether born in marriage or not; and among all persons who are akin merely through the mother, without any respect to marriage. Consequently, children of one mother begotten in marriage and not begotten in marriage, and children of one mother begotten in marriage by different fathers, are cognati. The natural relationship by procreation was called *naturalis*, as opposed to *cognatio civilis* or *legitima*, which, though founded on the *naturalis cognatio*, received from positive law a distinct character. This *naturalis cognatio* was often simply called *cognatio*, and the *civilis* or *legitima* was called *agnatio*. *Naturalis cognatio* then, simply in itself, was no *civilis cognatio*; but *agnatio* was both *cognatio naturalis* and *civilis*.

A correct notion of the term *agnatus* cannot be had without referring to the notion of the *patria potestas*, and to one of the senses of the word *familia*. In one sense, then, *familia* signifies all those free persons who are in the power (in *patria potestate manuve*) of the same Roman citizen, who was *paterfamilias*, or head of a familia; and in this sense *familia* signifies all those who are united in one body by this common bond. It is a general term which comprehends all the agnati. The legitimate children of sons who were not emancipated were in the *patria potestas*, consequently formed part of the familia, and were agnati. Adopted children were also in the adoptive father's power; and consequently were agnati, though they were not *naturales cognati*. Accordingly, if the legal agnatio, which arose from adoption, was dissolved by emancipation, there remained no cognatio: but if the agnatio, which arose from cognatio, was

dissolved by emancipation, there still remained the *naturalis cognatio*. The *paterfamilias* maintained his power over his familia so long as he lived, except over those who were emancipated, or passed into another familia, or in any way sustained a *deminutio capitis*. On his death, the common bond of the *patria potestas* was dissolved, and his sons became respectively heads of families; that is, of persons who were in their power, or, with respect to one another, were agnati. But all these persons continued to be members of the same familia; that is, they were still agnati, and consequently the agnatio subsisted among persons so long as they could trace back their descent through males to one common *paterfamilias*.

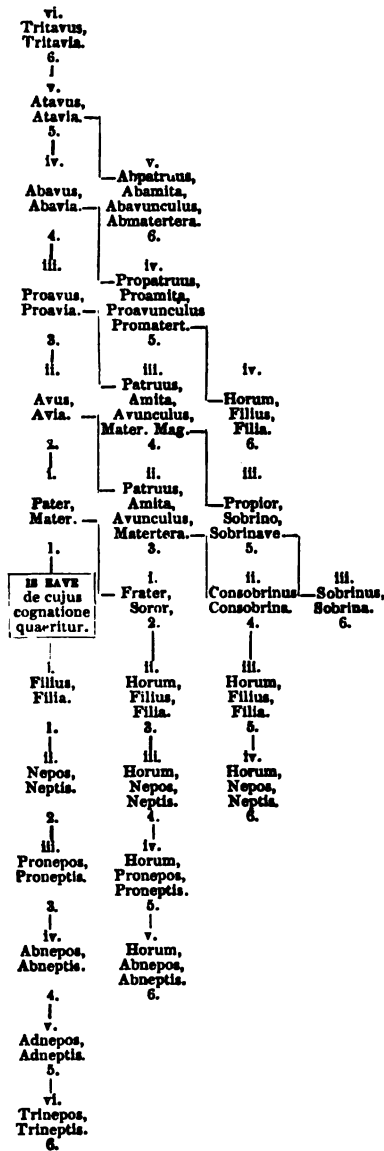

Agnati, then, may be briefly explained to be those “who would be in the *patria potestas*, or *in jus*, as a wife in *manus viri*, or in the *manus* of a son who is in the father's power, if the *paterfamilias* were alive; and this is true whether such persons ever were actually so or not.” (Hugo, *Lehrbuch*, &c.)

The imperfection of an individual, as a living being, is completed, First, by marriage, which unites two persons of different sexes in a society for life. Second, the imperfection of an individual which arises from his limited existence, is completed in the institution of Roman law in the *patria potestas*, to which is attached, partly as a further development, partly as a more natural or less legal analogy, kinship: “as a further development in agnatio, which is only the residuum of a previous existing *patria potestas* with constant continuation; as a natural analogy in cognatio, in which the *jus gentium* recognises the community of individuals which rests on descent, as the *jus civile* in agnatio.” (Savigny, *System*, &c. vol. i. p. 341, &c.)

We must suppose then, in order to obtain a clear notion of agnatio, that if the male from whom the agnati claim a common descent were alive, and they were all in his power, or in his *manus*, or in the *manus* of those who are in his power, they would all be agnati. In order, then, that agnatio may subsist among persons, the male from whom the descent is claimed must have lost his *patria potestas* by death only, and not by any *capitis deminutio*, and consequently not by any of his children passing into any other *patria potestas*, or into the *manus viri*, which would in effect be passing into another agnatio; for a person could not at the same time be an agnatus of two altogether different families. Accordingly, adoption destroyed the former agnatio, and the emancipation of a son took away all his rights of agnatio, and his former agnati lost all their rights against him.

The legal definition (Gaius, iii. 10) that agnati are those who are connected by *legitima cognatio*, and that *legitima cognatio* is the cognatio through persons of the male sex, must be viewed solely with reference to the natural relation; for agnatio, as a civil institution, comprehended those who were adopted into the familia; and further, those who were adopted out of the familia lost their former agnatio.

The meaning of consanguinei has already been given by Ulpian. Those who were of the same blood by both parents, were sometimes called *germani*; and consanguinei were those who had a common father only; and *uterini* those who had a common mother only.

This table shows all the degrees of cognatio. The degree of relationship of any given person in this stemma, to the person with respect to whom the relationship is inquired after (*is eave*, &c.), is indicated by the figures attached to the several words. The Roman numerals denote the degree of cognatio in the canon law; and the Arabic numerals, the degrees in the Roman or Civil law. The latter mode of reckoning is adopted in England, in ascertaining the persons who are entitled as next of kin to the personal estate of an intestate. In the canon law, the number which expresses the collateral degree is always the greater of the two numbers (when they are different) which express

the distance of the two parties from the common ancestor; but in the civil law, the degree of relationship is ascertained by counting from either of the two persons to the other through the common ancestor. All those words on which the same Roman, or the same Arabic, numerals occur, represent persons who are in the same degree of cognatio, according to these respective laws, to the person *is eave*, &c. (Hugo, *Lehrbuch*, &c.; Mare-zoll, *Lehrbuch*, &c.; Dig. 38. tit. 10, *De Gradibus*, &c.; Ulpianus, *Frug.* ed. Böcking; Böcking, *Institutiones*.) [G. L.]

COGNITOR. [ACTIO.]

COGNOMEN. [NOMEN.]

COHERES. [HERES.]

COHORS. [EXERCITUS.]

COLACRETAE (*κολακρέται*, also called *κολαγρέται*), the name of very ancient magistrates at Athens, who had the management of all financial matters in the time of the kings. They are said to have derived their name from collecting certain parts of the victims at sacrifices (*ἐκ τοῦ ἀγέειν τὰς κωλᾶς*). The legislature of Solon left the Colacretae untouched; but Cleisthenes deprived them of the charge of the finances, which he transferred to the Apodectae, who were established in their stead. [APODECTAE.] From this time the Colacretae had only to provide for the meals in the Prytaneum, and subsequently had likewise to pay the fees to the dicasts, when the practice of paying the dicasts was introduced by Pericles. (Aristoph. *Vesp.* 693, 724, with Schol.; Etym. M. Phot. Hesych. Suid. Tim.; Ruhnke *ad Tim. Plat. Les.* p. 171; Böckh, *Publ. Econ. of Athens*, p. 173. &c., 2nd ed.)

COLLATIO BONORUM. [BONORUM COLLATIO.]

COLLEGATARIUS. [LEGATUM.]

COLLEGIUM. The persons who formed a collegium, were called *collegae* or *sodales*. The word collegium properly expressed the notion of several persons being united in any office or for any common purpose (Liv. x. 13, 22; Tacit. *Ann.* iii. 31); it afterwards came to signify a body of persons, and the union which bound them together. The collegium was the *ἐταῖρα* of the Greeks.

The notion of a collegium was as follows:—A collegium or corpus, as it was also called, must consist of three persons at least. (Dig. 50. tit. 16. s. 85.) Persons who legally formed such an association were said *corpus habere*, which is equivalent to our phrase of being incorporated; and in later times they were said to be *corporati*, and the body was called a *corporatio*. Those who farmed the public revenues, mines, or salt works (*salinae*) might have a corpus. The power of forming such a collegium or societas (for this term also was used), was limited by various leges, senatusconsulta, and imperial constitutions. (Dig. 3. tit. 4.) Associations of individuals, who were entitled to have a corpus, could hold property in common; they could hold it, as the Roman jurists remark, just as the state held property (*res communes*). These collegia had a common chest, and could sue and be sued by their syndicus or actor. That which was due to the collegium or universitas (for this was a still more general term), was not due to the individuals of it; and that which the collegium owed, was not the debt of the individuals. The property of the collegium was liable to be seized and sold for its debts. The collegium or universitas was governed by its own regulations,

which might be any regulations that the members agreed upon, provided they were not contrary to law: this provision, as Gaius conjectures (Dig. 47. tit. 22), was derived from a law of Solon, which he quotes. The collegium still subsisted, though all the original members were changed. Collegia of all kinds may be viewed under two aspects, — as having some object of administration either public or not public, which object is often the main purpose for which they exist, or as being capable of holding property and contracting and owing obligations. As having some object of administration, they are viewed as units (magistratus municipales cum unum magistratum administrant, etiam unius hominis vicem sustinent (Dig. 50. tit. 1. s. 25)). As having a capacity to hold property, they are purely fictitious or artificial personages, and, consequently, thus conceived, it is not all the members who are supposed to compose this artificial person, but the members are the living persons by whose agency this artificial person does the acts which are necessary for the acquisition and administration of its property. It is only with reference to the purposes of ownership and contracts, that an artificial person has an existence as a person. There are some further remarks under UNIVERSITAS.

A lawfully constituted collegium was legitimum. Associations of individuals, which affected to act as collegia, but were forbidden by law, were called illicita.

It does not appear how collegia were formed, except that some were specially established by legal authority. (Liv. v. 50, 52; Suet. *Cæsar*. 42, *Aug.* 32; Dig. 3. tit. 4. s. 1.) Other collegia were probably formed by voluntary associations of individuals under the provisions of some general legal authority. This supposition would account for the fact of a great number of collegia being formed in the course of time, and many of them being occasionally suppressed as not legitimæ.

Some of these corporate bodies resembled our companies or guilds; such were the *fabrorum, piscatorum, &c.* collegia. (Lampridius, *Alex. Severus*, 33.) Others were of a religious character; such as the pontificum, augurum, fratrum arvalium collegia. Others were bodies concerned about government and administration; as tribunorum plebis (Liv. xlii. 32), quaestorum, decurionum collegia. The titles of numerous other collegia may be collected from the Roman writers, and from inscriptions.

According to the definition of a collegium, the consuls being only two in number were not a collegium, though each was called collega with respect to the other, and their union in office was called collegium. The Romans never called the individual who, for the time, filled an office of perpetual continuance, a universitas or collegium, for that would have been a contradiction in terms, which it has been reserved for modern times to introduce, under the name of a corporation sole. But the notion of one person succeeding to all the rights of a predecessor was familiar to the Romans in the case of a single heres, and the same notion must have existed with respect to individuals who held any office in perpetual succession.

According to Ulpian, a universitas, though reduced to a single member, was still considered a universitas; for the individual possessed all the rights of the universitas, and used the name by which it was distinguished. (Dig. 3. tit. 4. s. 7.)

When a new member was taken into a collegium, he was said *co-optari*, and the old members were said with respect to him, *recipere in collegium*. The mode of filling up vacancies would vary in different collegia.

Civitates and res publicæ (civil communities) and municipia (in the later sense of the term) were viewed as fictitious persons.

According to Pliny (*Ep.* v. 7; Ulp. *Fr.* tit. 22. s. 5) res publicæ and municipia could not take as heres; and the reason given is, that they were a corpus incertum, and so could not *cernere hereditatem*; that is, do those acts which a heres himself must do in order to show that he consents to be a heres, for the heres could not in this matter act by a representative. A res publica, therefore, as being a fictitious person, could not do the necessary act. Municipia, like other fictitious persons, could, however, acquire property in other ways, and by means of other persons, whether bond or free (Dig. 41. tit. 2. s. 1. § 22): and they could take fideicommissa under the *senatusconsultum* Apronianum which was passed in the time of Hadrian, and extended to licita collegia in the time of M. Aurelius. (Dig. 34. tit. 5. s. 21.) By another *senatusconsultum*, the liberti of municipia might make the municipes their heredes. The gods could not be made heredes, except such deities as possessed this capacity by special *senatusconsulta* or imperial constitutions, such as Jupiter Tarpeius, &c. (Ulp. *Fr.* tit. 22. s. 6.) By a constitution of Leo (Cod. vi. tit. 24. s. 12) civitates obtained the capacity to take property as heredes. As early as the time of Nerva and Hadrian, civitates could take legacies.

Though civitates within the Roman empire could not originally receive gifts by will, yet independent states could receive gifts in that way (Tacit. *Ann.* iv. 43), a case which furnishes no objections to the statement above made by Pliny and Ulpian. In the same way the Roman state accepted the inheritance of Attalus, king of Pergamus, a gift which came to them from a foreigner. The Roman lawyers considered such a gift to be accepted by the *jus gentium*. (Dig. 3. tit. 4; 47. tit. 22; Savigny, *System*, &c. vol. ii. p. 235. &c.) [UNIVERSITAS.] [G. L.]

COLONATUS, COLO'NI. The Coloni of the later Imperial period formed a class of agriculturists, whose condition has been the subject of elaborate investigation.

These Coloni were designated by the various names of Coloni, Rustici, Originarii, Adscriptitii, Inquilini, Tributarii, Censiti. A person might become a Colonus by birth, with reference to which the term Originarius was used. When both the parents were Coloni and belonged to the same master, the children were Coloni. If the father was a Colonus and the mother a slave, or conversely, the children followed the condition of the mother. If the father was free and the mother a Colona, the children were Coloni and belonged to the master of the mother. If the father was a Colonus and the mother free, the children before the time of Justinian followed the condition of the father: afterwards Justinian declared such children to be free, but finally he reduced them to the condition of Coloni. If both parents were Coloni and belonged to different masters, it was finally settled that the masters should divide the children between them, and if there was an odd one, it

should go to the owner of the mother. If a man lived for thirty years as a Colonus, he became the Colonus of the owner of the land on which he lived; and though he was still free, he could not leave the land; and a man who had possessed for thirty years a colonus belonging to another, could defend himself against the claims of the former owner by the *Præscriptio triginta annorum*. A constitution of Valentinian III. declared how free persons might become Coloni by agreement; and though there is neither this nor any similar regulation in the Code of Justinian, there is a passage which apparently recognizes that persons might become Coloni by such agreement. (Cod. xi. tit. 47. s. 22.)

The Coloni were not slaves, though their condition in certain respects was assimilated to that of slaves; a circumstance which will explain their being called *servi terræ*, and sometimes being contrasted with *liberi*. They had, however, *connubium*, which alone is a characteristic that distinguishes them clearly from slaves. (Cod. xi. tit. 47. s. 24.) But, like slaves, they were liable to corporal punishment, and they had no right of action against their master, whose relation to them was expressed by the term *Patronus*. (Cod. Theod. v. tit. 11.) The colonus was attached to the soil, and he could not be permanently separated from it by his own act, or by that of his patronus, or by the consent of the two. The patronus could sell the estate with the coloni, but neither of them without the other. (Cod. xi. tit. 47. s. 2. 7.) He could, however, transfer superabundant coloni from one to another of his own estates. When an estate held in common was divided, married persons and relations were not to be separated. The ground of there being no legal power of separating the coloni and the estate was the opinion that such an arrangement was favourable to agriculture, and there were also financial reasons for this rule of law, as will presently appear. The only case in which the colonus could be separated from the land was that of his becoming a soldier, which must be considered to be done with the patron's consent, as the burden of recruiting the army was imposed on him, and in this instance the state dispensed with a general rule for reasons of public convenience.

The colonus paid a certain yearly rent for the land on which he lived: the amount was fixed by custom and could not be raised; but as the landowner might attempt to raise it, the colonus had in such case for his protection a right of action against him, which was an exception to the general rule above stated. (Cod. xi. tit. 47. s. 5.) There were, however, cases in which the rent was fixed by agreement.

A further analogy between the condition of *Servi* and *Coloni* appears from the fact of the property of Coloni being called their *Peculium*. It is however, distinctly stated that they could hold property (Cod. Theod. v. tit. 11); and the expressions which declare that they could have nothing "*propria*" (Cod. xi. tit. 49. s. 2) seem merely to declare that it was not *propria* in the sense of their having power to alienate it, at least without the consent of their patroni. It appears that a colonus could make a will, and that if he made none, his property went to his next of kin; for if a bishop, presbyter, deacon, &c., died intestate and without kin, his property went to the church

or convent to which he belonged, except such as he had as a colonus, which went to his patronus, who with respect to his ownership of the land is called *Dominus possessionis*. (Cod. Theod. v. tit. 3.) Some classes of Coloni had a power of alienating their property. (Cod. xi. tit. 47. s. 23.)

The land-tax due in respect of the land occupied by the colonus was paid by the dominus; but the coloni were liable to the payment of the poll-tax, though it was paid in the first instance by the dominus who recovered it from the colonus. The liability of the colonus to a poll-tax explains why this class of persons was so important to the state, and why their condition could not be changed without the consent of the state. It was only when the colonus had lived as a free man for thirty years that he could maintain his freedom by a *præscriptio*, but Justinian abolished this *præscriptio*, and thus empowered the dominus to assert his right after any lapse of time. (Cod. xi. tit. 47. s. 23.) With respect to their liability to the poll-tax, the coloni were called *tributarii*, *censiti* or *censibus obnoxii*, *adscriptitii*, *adscriptitios conditionis*, and *censibus adscripti*. This term *adscriptio* appears to have no reference to their being attached to the land, but it refers to their liability to the poll-tax as being rated in the tax-books, and accordingly we find that the Greek term for *Adscriptitius* is *Ἐναγρύπαφος*.

As the Coloni were not *servi*, and as the class of *Latini* and *peregrini* hardly existed in the later ages of the Empire, we must consider the Coloni to have had the *Civitas*, such as it then was; and it is a consequence of this that they had *connubium* generally. A Constitution of Justinian, however (Nov. 22. c. 17), declared the marriage of a colonus, who belonged to another person, and a free woman to be void. The Constitution does not seem to mean any thing else than that in this case the Emperor took away the *Connubium*, whether for the reasons stated by Savigny, or for other reasons, is immaterial. This special exception, however, proves the general rule as to *Connubium*.

The origin of these Coloni is uncertain. They appear to be referred to in one passage of the Digest (Dig. 30. s. 112), under the name of *Inquilinus*, a term which certainly was sometimes applied to the whole class of Coloni. The passage states, that if a man bequeaths, as a legacy, the *inquilini* with the *prædia* to which they adhere (*sine prædiis quibus adhaerent*), it is a void legacy. Savigny conceives that this passage may be explained without considering it to refer to the Coloni of whom we are speaking; but the explanation that he suggests, seems a very forced one, and the same remark applies to his explanation of another passage in the Digest (50. tit. 15. s. 4). The condition of the old *Clients* seems to bear some relation to that of the Coloni, but all historical traces of one class growing out of the other are entirely wanting.

Savigny observes that he does not perceive any historical connection between the *villains* (*villans*) of modern Europe and the Coloni, though there is a strong resemblance between their respective conditions. There were, however, many important distinctions; for instance, the *villain* services due to the lord had nothing corresponding to them in the case of the Coloni, so far as we know. Some modern writers would hastily infer an historical connection of institutions which happen to have

resemblances. Littleton's *Tenures*, section 172, &c., and Bracton (fol. 6. 24), may be consulted as to the incidents of Villeinage.

This view of the condition of the Coloni is from Savigny's Essay on the subject, which is translated in the *Philological Museum*, vol. ii.

The question of the origin of these Coloni is examined at great length by A. W. Zumpt, *Ueber die Entstehung und historische Entwicklung des Colonatus* (*Rheinisches Museum für Philologie*, Neue Folge, 1845). The author is of opinion that the origin of the institution is to be traced to the settlement of Germanic people by the Roman emperors within the limits of the empire. The earliest mention of Coloni, in the sense in which his essay treats of them, is, as he states, a constitution of Constantine A. D. 321 (Cod. Theod. 9. tit. 21. s. 1, 2) which, however, gives no information about their condition. But a later constitution of Constantine, A. D. 332 (Cod. Theod. 5. tit. 3, de fugitivis colonis) does give some information. The condition of these foreign settlers being once established, the author supposes that poor Roman citizens might enter into this condition, partly induced by the advantage of getting land, and partly, as he states, though it is not clearly explained, by legal compulsion. A constitution of Theodosius the Younger (Cod. Theod. 5. tit. 4, de bonis militum, s. 3, ed. Wenck), contains some valuable information on the colonization or settlement of the barbarians, and declares them to belong to the condition expressed by the term *Colonatus*. The term *colonus* often occurs in the writers who are excerpted in the Digest (41. tit. 2. s. 30. § 5; 19. tit. 2. s. 3, 9. § 3; 19. tit. 1. s. 13. § 30, and elsewhere); but these Coloni are supposed to be merely a kind of tenants. The passage in the Digest (30. s. 112) which cites a constitution of Marcus Aurelius and Commodus, is supposed, by Zumpt, to mean ordinary tenants (*miether, pächter*); but it must be admitted, that it is rather difficult to accept this explanation, as already observed. The word *Colonatus*, it is stated, does not occur in the Digest; but that negative fact proves little. The most probable solution of the question is, that the condition of the Coloni mentioned in the Digest was the model of the condition of the barbarians who were settled in the Roman empire; and it is no objection to this, that the condition of the barbarians might be made more burdensome and less free than that of the Coloni, who already existed. Nor is it against this supposition, if the condition of the barbarian Coloni gradually became the condition of all the Coloni. The reasons for fixing the barbarian settlers to the soil are obvious enough. The policy of the emperors was to people the country, and to disperse many of the tribes whose union would have been dangerous. If the results of Zumpt's inquiry cannot be admitted to their full extent, it must be allowed, that he has thrown great light on the subject, and probably approached as near as possible to the solution of the difficulty, with the exception of his hypothesis, that the *colonatus* originated entirely in the settlement of these barbarians. It seems much more probable that the Romans modelled the barbarian settlements upon some institution that already existed, though this existing institution might not be precisely the same as that subsequent institution to which the term *Colonatus* was peculiarly applied. [G. L.]

COLO'NIA, a colony. 1. GREEK. The common Greek word for a colony is *ἀποικία* and for a colonist *ἀποικος*. We also find, but not commonly, *ἐποικία* and *ἐποικος*. (Thuc. ii. 27; Aristoph. *Av.* 1307.) The former words have reference to their being wanderers from their own home; the latter words to their settling in a new home. The term *κληρουχία* indicates a division of conquered lands among Athenian citizens, and those who occupied such lands were called *κληρουχοί*; but as they were thus colonists, we sometimes find the general term of *ἐποικοί* applied to them. (Thuc. v. 116.) (Vömel, *De Diocrimine Vocabulorum κληρουχός, ἐποικος, ἐποικος*, Frankfurt, 1839.)

The earlier Greek colonies were usually composed of mere bands of adventurers, who left their native country, with their families and property, to seek a new home for themselves. Some of the colonies, which arose in consequence of foreign invasion or civil wars, were undertaken without any formal consent from the rest of the community; but usually a colony was sent out with the approbation of the mother country, and under the management of a leader (*οικιστής*) appointed by it. But whatever may have been the origin of the colony, it was always considered in a political point of view independent of the mother country (called by the Greeks *μητρόπολις*), and entirely emancipated from its control. At the same time, though a colony was in no political subjection to its parent state, it was united to it by the ties of filial affection; and, according to the generally received opinions of the Greeks, its duties to the parent state corresponded to those of a daughter to her mother. (Dionys. iii. 7; Polyb. xii. 10. § 3.) Hence, in all matters of common interest, the colony gave precedence to the mother state; and the founder of the colony (*οικιστής*), who might be considered as the representative of the parent state, was usually worshipped, after his death, as a hero. (Herod. vi. 38; Thuc. v. 11; Diod. xi. 66, xx. 102.) Also, when the colony became in its turn a parent, it usually sought a leader for the colony which it intended to found from the original mother country (Thuc. i. 24); and the same feeling of respect was manifested by embassies which were sent to honour the principal festivals of the parent state (Diod. xii. 30; Wesseling, *ad loc.*), and also by bestowing places of honour and other marks of respect upon the ambassadors and other members of the parent state, when they visited the colony at festivals and similar occasions. (Thuc. i. 25.) The colonists also worshipped in their new settlement the same deities as they had been accustomed to honour in their native country; the sacred fire, which was constantly kept burning on their public hearth, was taken from the Prytaneum of the parent city; and, according to one account, the priests who ministered to the gods in the colony, were brought from the parent state. (Schol. *ad Thuc.* i. 25; compare Tacit. *Ann.* ii. 54.) In the same spirit, it was considered a violation of sacred ties for a mother country and a colony to make war upon one another. (Herod. viii. 22; Thuc. i. 38.)

The preceding account of the relations between the Greek colonies and the mother country is elucidated by the history which Thucydides gives us of the quarrel between Corcyra and Corinth. Corcyra was a colony of Corinth, and Epidamnus

a colony of Corcyra; but the leader (*οικιστής*) of the colony of Epidamnus was a Corinthian who was invited from the metropolis Corinth. In course of time, in consequence of civil dissensions and attacks from the neighbouring barbarians, the Epidamnians applied for aid to Corcyra, but their request was rejected. They next applied to the Corinthians, who took Epidamnus under their protection, thinking, says Thucydides, that the colony was no less theirs than the Corinthians': and also induced to do so through hatred of the Corcyraeans, because they neglected them though they were colonists; for they did not give to the Corinthians the customary honours and deference in the public solemnities and sacrifices as the other colonies were wont to pay to the mother country. The Corcyraeans who had become very powerful by sea, took offence at the Corinthians receiving Epidamnus under their protection, and the result was a war between Corcyra and Corinth. The Corcyraeans sent ambassadors to Athens to ask assistance; and in reply to the objection that they were a colony of Corinth, they said "that every colony, as long as it is treated kindly, respects the mother country: but when it is injured, is alienated from it; for colonists are not sent out as subjects, but that they may have equal rights with those that remain at home." (Thuc. i. 34.)

It is true that ambitious states, such as Athens, sometimes claimed dominion over other states on the ground of relationship; but, as a general rule, colonies may be regarded as independent states, attached to their metropolis by ties of sympathy and common descent, but no further. The case of Potidaea, to which the Corinthians sent annually the chief magistrates (*δημουργοί*), appears to have been an exception to the general rule. (Thuc. i. 56.)

The *κληρουχίαι*, of which mention was made above, were colonies of an entirely different kind from the *ἀποικίαι*, of which we have hitherto been speaking. They belonged exclusively to the Athenians; and the earliest example to which the term, in its strict sense, is applicable, is the occupation of the domains of the Chalcidian knights (*ἰσποδῶται*) by four thousand Athenian citizens, B. C. 506. (Herod. v. 77; comp. vi. 100.)

In assigning a date to the commencement of this system of colonisation, we must remember that the principle of a division of conquered lands had existed from time immemorial in the Grecian states. Nature herself seemed to intend that the Greek should rule and the barbarian obey; and hence, in the case of the barbarian, it wore no appearance of harshness. Such a system, however, was more rare between Greek and Greek. Yet the Dorians in their conquest of the Peloponnese, and still more remarkably in the subjugation of Messenia, had set an example. In what then did the Athenian *κληρουχίαι* differ from this division of territory, or from the ancient colonies? In the first place the name, in its technical sense, was of later date, and the Greek would not have spoken of the *κληρουχίαι* of Lycurgus, any more than the Roman of the "Agrarian laws" of Romulus or Ancus. Secondly, we should remember that the term was always used with a reference to the original allotment: as the lands were devised or transferred, and the idea of the first division lost sight of, it would gradually cease to be applied. The distinction, however, between *κληροῦχοι* and

ἀποικοί was not merely one of words but of things. The earlier colonies usually originated in private enterprise, and became independent of, and lost their interest in, the parent state. On the other hand, it was essential to the very notion of a *κληρουχία* that it should be a public enterprise, and should always retain a connection more or less intimate with Athens herself. The word *κληρουχία* conveys the notion of property to be expected and formally appropriated: whereas the *ἀποικοί* of ancient times went out to conquer lands for themselves, not to divide those which were already conquered.

The connection with the parent state subsisted, as has been just hinted, in all degrees. Sometimes, as in the case of Lesbos, the holders of land did not reside upon their estates, but let them to the original inhabitants, while themselves remained at Athens. (Böckh, *Public Econ. of Athens*, p. 431, 2nd ed.) The condition of these *κληροῦχοι* did not differ from that of Athenian citizens who had estates in Attica. All their political rights they not only retained, but exercised as Athenians; in the capacity of landholders of Lesbos they could scarcely have been recognised by the state, or have borne any corporate relation to it. Another case was where the *κληροῦχοι* resided on their estates, and either with or without the old inhabitants, formed a new community. These still retained the rights of Athenian citizens, which distance only precluded them from exercising: they used the Athenian courts; and if they or their children wished to return to Athens, naturally and of course they regained the exercise of their former privileges. Of this we have the most positive proof (Böckh, *Ibid.* p. 429): as the object of these *κληρουχίαι* was to form outposts for the defence of Athenian commerce, it was the interest of the parent state to unite them by a tie as kindly as possible: and it cannot be supposed that individuals would have been found to risk, in a doubtful enterprise, the rights of Athenian citizens.

Sometimes, however, the connection might gradually dissolve, and the *κληροῦχοι* sink into the condition of mere allies, or separate wholly from the mother country. In Aegina, Scione, Potidaea, and other places, where the original community was done away, the colonists were most completely under the control of Athens. Where the old inhabitants were left unmolested, we may conceive their admixture to have had a twofold effect: either the new comers would make common cause with them, and thus would arise the alienation alluded to above; or jealousy and dread of the ancient inhabitants might make the colonists more entirely dependent on the mother state. It seems impossible to define accurately when the isopolite relation with Athens may have ceased, although such cases undoubtedly occurred.

A question has been raised as to whether the *κληροῦχοι* were among the Athenian tributaries. Probably this depended a good deal upon the prosperity of the colony. We cannot conceive that colonies which were established as military outposts, in otherwise unfavourable situations, would bear such a burthen: at the same time it seems improbable that the state would unnecessarily forego the tribute which it had previously received, where the lands had formerly belonged to tributary allies.

It was to Pericles Athens was chiefly indebted

for the extension and permanence of her colonial settlements. His principal object was to provide for the redundancies of population, and raise the poorer citizens to a fortune becoming the dignity of Athenian citizens. It was of this class of persons the settlers were chiefly composed; the state provided them with arms, and defrayed the expenses of their journey. The principle of division, doubtless, was, that all who wished to partake in the adventure, applied voluntarily; it was then determined by lot who should or should not receive a share. Sometimes they had a leader appointed, who, after death, received all the honours of the founder of a colony (*οικιστής*).

The Cleruchiae were lost by the battle of Aegopotami, but partially restored on the revival of Athenian power.

(Spanheim, *De Urs et Praes. Numism.* vol. i. p. 559, &c.; Bougainville, *Quels étoient les droits des métropoles Grecques sur les colonies, &c.*, Paris, 1745; Heyne, *De Veterum Colonialium Jure quaeque Cassia*, Gott. 1766, also in *Opuscula*, vol. i. p. 290; Sainte Croix, *De l'Etat et du Sort des Colonies des anciens Peuples*, Philadelphia, 1779; Hegewisch, *Geogr. und Hist. Nachrichten, die Colonien der Griechen betreffend*, Altona, 1808; Raoul-Rochette, *Histoire critique de l'Etablissement des Colonies Grecques*, Paris, 1815, 4 vols.; Wichers, *De Colonia Veterum*, Groningae, 1825; Pfefferkorn, *Die Colonien der Alt-Griechen*, Königsberg, 1838; Hermann, *Lehrbuch der Griech. Staatsalt.* § 73. &c.; Wachsmuth, *Hellen. Alterthumsk.* vol. i. p. 95, 2nd ed.; Schömann, *Antiq. Juris Publici Graec.* p. 414, &c.; Böckh, *Public Econ. of Athens*, p. 424, &c.) [B. J.]

2. ROMAN. The word colonia contains the same element as the verb *colere*, "to cultivate," and as the word *colonus*, which probably originally signified a "tiller of the earth." The English word colony, which is derived from the Latin, perhaps expresses the notion contained in this word more nearly than is generally the case in such adopted terms.

A kind of colonisation seems to have existed among the oldest Italian nations, who, on certain occasions, sent out their superfluous male population, with arms in their hands (*εὐπρόκτεις*), to seek for a new home. (Dionys. *Antiq. Rom.* i. 16.) But these were apparently mere bands of adventurers, and such colonies rather resembled the old Greek colonies, than those by which Rome extended her dominion and her name.

Colonies were established by the Romans as far back as the annals or traditions of the city extend, and the practice was continued during the republic and under the empire. Sigonius (*De Antiquo Jure Italiae*, p. 215, &c.) enumerates six main causes or reasons which, from time to time, induced the Romans to send out colonies; and these causes are connected with many memorable events in Roman history. Colonies were intended to keep in check a conquered people, and also to repress hostile incursions, as in the case of the colony of Narnia (Liv. x. 10), which was founded to check the Umbri; and Minturnae and Sinuessa (x. 21), Cremona and Placentia (xxvii. 46), which were founded for similar purposes. Cicero (*De Leg. Agr.* ii. 27) calls the old Italian colonies the "propugnacula imperii;" and in another passage (*Pro Font.* c. 1) he calls Narbo Martius (Narbonne), which was in the provincia Gallia, "Colonia nostrorum civium, specula populi Romani et

propugnaculum." Another object was to increase the power of Rome by increasing the population. (Liv. xxvii. 9.) Sometimes the immediate object of a colony was to carry off a number of turbulent and discontented persons. Colonies were also established for the purpose of providing for veteran soldiers, a practice which was begun under the republic (Liv. xxxi. 4), and continued under the emperors: these coloniae were called *militares*.

It is remarked by Strabo (p. 216. ed. Casaub.), when speaking of the Roman colonies in the north of Italy, that the ancient names of the places were retained, and that though the people in his time were all Roman, they were called by the names of the previous occupiers of the soil. This fact is in accordance with the character of the old Roman colonies, which were in the nature of garrisons planted in conquered towns, and the colonists had a portion of the conquered territory (usually a third part) assigned to them. The inhabitants retained the rest of their lands, and lived together with the new settlers, who alone composed the proper colony. (Dionys. *Antiq. Rom.* ii. 53.) The conquered people must at first have been quite a distinct class from, and inferior to, the colonists. The definition of a colonia by Gellius (xvi. 13) will appear, from what has been said, to be sufficiently exact: — "Ex civitate quasi propagatae — populi Romani quasi effigies parvae simulacraque."

No colonia was established without a *lex, plebiscitum*, or *senatusconsultum*; a fact which shows that a Roman colony was never a mere body of adventurers, but had a regular organisation by the parent state. According to an ancient definition quoted by Niebuhr (*Serv. ad Virg. Aen.* i. 12), a colony is a body of citizens, or socii, sent out to possess a commonwealth, with the approbation of their own state, or by a public act of that people to whom they belong; and it is added, those are colonies which are founded by public act, not by any secession. Many of the laws which relate to the establishment of coloniae were *leges agrariae*, or laws for the division and assignment of public lands, of which Sigonius has given a list in his work already referred to.

When a law was passed for founding a colony, persons were appointed to superintend its formation (*coloniam deducere*). These persons varied in number, but three was a common number (*triumviri ad colonos deducendos*, Liv. xxxvii. 46, vi. 21). We also read of *duumviri*, *quinqueviri*, *vigintiviri* for the same purpose. The law fixed the quantity of land that was to be distributed, and how much was to be assigned to each person. No Roman could be sent out as a colonist without his free consent, and when the colony was not an inviting one, it was difficult to fill up the number of volunteers. (Liv. vi. 21, x. 21.)

Roman citizens who were willing to go out as members of a colony gave in their names at Rome (*nomina dederunt*, Liv. i. 11, the first time that he has occasion to use the expression). Cicero (*Pro Dom.* c. 30) says that Roman citizens who chose to become members of a Latin colony must go voluntarily (*auspores facti*), for this was a *capitis deminutio*; and in another passage (*Pro Caecina*, 33) he alleges the fact of Roman citizens going out in Latin colonies as a proof that loss of *civitas* must be a voluntary act. It is true that a member of a Roman colony would sustain no *capitis deminutio*, but in this case also there seems no reason

for supposing that he ever joined such a colony, without his consent.

The colonia proceeded to its place of destination in the form of an army (*sub vexillo*), which is indicated on the coins of some coloniae. An urbs, if one did not already exist, was a necessary part of a new colony, and its limits were marked out by a plough, which is also indicated on ancient coins. The colonia had also a territory, which, whether marked out by the plough or not (*Cic. Phil. ii. 40*), was at least marked out by metes and bounds. Thus the urbs and territory of the colonia respectively corresponded to the urbs Roma and its territory. Religious ceremonies always accompanied the foundation of the colony, and the anniversary was afterwards observed. (Plutarch, *C. Gracchus*, 11; Servius, *ad Aen. v. 755*; *Cic. ad Attic. iv. 1*). It is stated that a colony could not be sent out to the same place to which a colony had already been sent in due form (*auspicato deducta*). This merely means that so long as the colony maintained its existence, there could be no new colony in the same place; a doctrine that would hardly need proof, for a new colony implied a new assignment of lands; but new settlers (*novi adscripti*) might be sent to occupy colonial lands not already assigned. (*Liv. vi. 30*; *Cic. Phil. ii. 40*.) Indeed it was not unusual for a colony to receive a *supplementum*, as in the case of Venusia (*Liv. xxxi. 49*), and in other cases (*Tacit. Ann. xiv. 27*); and a colony might be re-established, if it seemed necessary, from any cause; and under the emperors such re-establishment might be entirely arbitrary, and done to gratify personal vanity, or from any other motive. (*Tacit. Ann. xiv. 27*. Puteoli; and the note in Oberlin's *Tacitus*.)

The commissioners appointed to conduct the colony had apparently a profitable office, and the establishment of a new settlement gave employment to numerous functionaries, among whom Cicero enumerates — apparitores, scribae, librarii, praecones, architecti. The foundation of a colony might then, in many cases, not only be a mere party measure, carried for the purpose of gaining popularity, but it would give those in power an opportunity of providing places for many of their friends.

A colonia was a part of the Roman state, and it had a *res publica*; but its relation to the parent state might vary. In Livy (*xxxix. 55*) the question was whether Aquileia should be a colonia civium Romanorum, or a Latina colonia; a question that had no reference to the persons who should form the colony, but to their political rights with respect to Rome as members of the colony. The members of a Roman colony (*colonia civium Romanorum*) must, as the term itself implies, have always had the same rights, which, as citizens, they would have at Rome. [*CIVITAS*.] They were, as Niebuhr remarks, in the old Roman colonies, "the populus; the old inhabitants, the commonalty." These two bodies may, in course of time, have frequently formed one; but there could be no political union between them till the old inhabitants obtained the commercium and connubium, in other words, the *civitas*; and it is probable that among the various causes which weakened the old colonies, and rendered new supplies of colonists necessary, we should enumerate the want of Roman women; for the children of a Roman were not Roman citizens

unless his wife was a Roman, or unless she belonged to a people with which there was connubium.

It is important to form a precise notion of the relation of an ancient Roman colonia to Rome. That the colonists, as already observed, had all the rights of Roman citizens, is a fact capable of perfect demonstration; though most writers, following Sigonius, have supposed that Roman citizens, by becoming members of a Roman colony, lost the suffragium and honores, and did not obtain them till after the passing of the *Julia lex*. Such an opinion is inconsistent with the notion of Roman citizenship [*CIVITAS*], which was a personal, not a local right; and it is also inconsistent with the very principle of Roman polity apparent in the establishment of Roman colonies. Further, the loss of the suffragium and honores would have been a species of *capitis deminutio*, and it is clear, from what Cicero says of the consequences of a Roman voluntarily joining a Latin colony, that no such consequences resulted from becoming a member of a Roman colony. If a Roman ever became a member of a Roman colony without his consent, it must have been in the early ages of the state, when the colonies still retained their garrison character, and to join a colony was a kind of military service; but such a duty to protect the state, instead of implying any loss of privilege, justifies quite a different conclusion.

Puteoli, Salernum, Buxentum were coloniae civium Romanorum (*Liv. xxxiv. 45*); the Ferentines made a claim, that Latini who should give in their names as willing to join a colonia civium Romanorum, should thereby become *cives Romani*. Some Latini who had given in their names for the coloniae of Puteoli, Salernum, and Buxentum, thereupon assumed to act as *cives Romani*, but the senate would not allow their claim. This shows, if it requires showing, that the *cives* of Roman colonies continued to be *cives Romani*. (*Liv. xxxiv. 42*.)

It is somewhat more difficult to state what was the condition of those conquered people among whom the Romans sent their colonists. They were not Roman citizens, nor yet were they *socii*; still they were in a sense a part of the Roman state, and in a sense they were *cives*, though certainly they had not the suffragium, and perhaps originally not the connubium. It is probable that they had the commercium, but even this is not certain. They might be a part of the Roman *civitas* without being *cives*, and the difficulty of ascertaining their precise condition is increased by the circumstance of the word *civitas* being used loosely by the Roman writers. If they were *cives* in a sense, this word imported no privilege; for it is certain that, by being incorporated in the Roman state as a conquered people, they lost all power of administering their own affairs, and obtained no share in the administration of the Roman state; they had not the honourable rank of *socii*, and they were subject to military service and taxation. They lost all jurisdiction, and it is probable that they were brought entirely within the rules and procedure of the Roman law, so far as that was practicable. Even the commercium and connubium with the people of their own stock, were sometimes taken from them (*Liv. ix. 43*, viii. 14), and thus they were disunited from their own nation and made a part of the Roman state, without having the full *civitas*. So far, then, was the *civitas* (with-

out the suffragium) from being always a desirable condition, as some writers have supposed, that it was in fact the badge of servitude; and some states even preferred their former relation to Rome, to being incorporated with it as complete citizens. It appears that, in some cases at least, a *praefectus juri dicundo* was sent from Rome to administer justice among the conquered people, and between them and the coloni. It appears also to be clearly proved by numerous instances, that the condition of the conquered people among whom a colony was sent, was not originally always the same; something depended on the resistance of the people, and the temper of the Romans, at the time of the conquest or surrender. Thus the conquered Italian towns might originally have the *civitas* in different degrees, until they all finally obtained the complete *civitas* by receiving the suffragium; some of them obtained it before the social war, and others by the *Julia lex*.

The nature of a Latin colony will appear sufficiently from what is said here, and in the articles *CIVITAS* and *LATINITAS*.

Besides these coloniae, there were coloniae Italici jura, as some writers term them; but which in fact were not coloniae. Sigonius, and most subsequent writers, have considered the *Jus Italicum* as a personal right, like the *Civitas* and *Latinitas*; but Savigny has shown it to be quite a different thing. The *jus Italicum* was granted to favoured provincial cities; it was a grant to the community, not to the individuals composing it. This right consisted in quiritarian ownership of the soil (*commercium*), and its appurtenant capacity of *mancipatio*, *usucapio*, and *vindicatio*, together with freedom from taxes; and also in a municipal constitution, after the fashion of the Italian towns, with *dumviri*, *quinquennales*, *aediles*, and a jurisdiction. Many provincial towns which possessed the *jus Italicum*, have on their coins the figure of a standing *Silenus*,

empire was consolidated, the decay of population checked, the unity of the nation and of the language diffused." (Machiavelli, quoted by Niebuhr.) The countries which the Romans conquered within the limits of Italy, were inhabited by nations that cultivated the soil and had cities. To destroy such a population was not possible nor politic; but it was a wise policy to take part of their lands, and to plant bodies of Roman citizens, and also *Latinae coloniae*, among the conquered people. The power of Rome over her colonies was derived, as Niebuhr has well remarked, "From the supremacy of the parent state, to which the colonies of Rome, like sons in a Roman family, even after they had grown to maturity, continued unalterably subject." In fact, the notion of the *patria potestas* will be found to lie at the foundation of the institutions of Rome.

The principles of the system of colonisation were fully established in the early ages of Rome; but the colonies had a more purely military character, that is, were composed of soldiers, in the latter part of the republic, and under the earlier emperors. The first colony established beyond the limits of Italy was Carthago (Vell. ii. 15); Narbo Martius was the next. Nemausus (Nîmes) was made a colony by Augustus, an event which is commemorated by medals (Rasche, *Lesion Rei Numariae*), and an extant inscription at Nîmes.

IMP. M. IVL. PHILIPP.
Philip, A. D. 243—249.

AEL. MUNICIP. CO.
Coela or Coelos (Plin. iv. 11, 12) in the Thracian Chersonesus.
